Now one can surely imagine an opponent responding to the argument of the previous chapter by granting that agency and its correlative phenomena might be empty, yet still denying that awareness itself - the subjectivity that grounds perception - could be empty. For, one might argue, the emptiness of all phenomena still requires that there be a subject for whom they are phenomena. Nāgārjuna articulates this response in the opening verses of this chapter:
ENGLISH TRANSLATIONS

INADA (Skt):
Verse 1 - Of the existence of an entity which sees, hears, etc. or which feels, etc., some people assert that it exists prior to its functions.

JONES (Skt):
[Objection:] Some say that whatever has seeing, hearing, and the other senses and also feelings and the other mental components exists prior to these things.

KALUPAHANA (Skt):
"For whomsoever there exists seeing, hearing, etc., and feeling, etc., he exists prior to these." So do some declare.

MCCAGNEY (Skt):
Some say: “He, whose seeing, hearing, etc., and also feeling, etc., exist, exists prior to these.”

NISHIJIMA (Skt?):
1. Function to see something, function to listen to something, and so forth, Those miscellaneous sense perceptions just exist at the present moment. And proceeding such a perception, it is said that something concrete exists really, Just as some momentary accident, which appears only once.

SPRUNG (Skt):
1. Some hold that prior to seeing, hearing and the other kinds of perceiving as well as to feeling and the other factors of personal existence, the one whose they are must exist.

STRENG (Skt):
1. Certain people say: Prior to seeing hearing, and other sensory faculties together with sensation and other mental phenomena is that to which they belong.
INADA FOOTNOTE

- Note: The functions are distinguished between the five faculties of perception which are darsana (seeing), sravana (hearing), ghrana (smelling), rasana (tasting), and sparsana (touching), and the five constituent elements of being (pancaskandhas) which are rupa (bodily or material form), vedana (feeling, sensation), samjna (awareness, perception), samskara (aggregate of formations or mental conformations), and vijnana (conscious or discriminative thought faculty.)

CANDRAKĪRTI COMMENTARY

It is the view of the Samitiyas that seeing, hearing, smelling, tasting and the other kinds of perceiving as well as feeling, touch, ideation and the other factors of personal existence are of an appropriating perceptor (upadatu) and that he exists prior to appropriative perceiving (upadana). What is their argument? This:
Kārikā IX.2

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 2 - How is it that seeing, etc. come to be of a presently non-existing entity? Consequently, the entity (seemingly) exists abidingly prior to its functions.

JONES (Skt):
[2] For how can there be seeing and so forth by a nonexistent entity? Therefore, an entity existing prior to them is established.

KALUPAHANA (Skt):
How can there be seeing, etc. of an existent who is not evident? Therefore, it is determined that, prior to these things, such an existent is.

MCCAGNEY (Skt):
Indeed, how will there be seeing, etc., belonging to one not present? Therefore, prior to these, he exists as a being that is present.

NISHIJIMA (Skt?):
2. Because there is nothing, which does not exist, The perceptive function to see, and so forth, will be possible to exist even in future. Therefore even the moment just before can exist, And so the existence of the moment just before actually exists in the very stable conditions.

SPRUNG (Skt):
2 How can seeing and the other kinds of perceiving belong to a non-existent entity? Therefore a determinate entity exists prior to these.

STRENG (Skt):
2. They reason: How will there be seeing, etc. of someone (i.e. as the subject seeing) who does not exist? Therefore, there exists a definite (vyavasthita) entity before that seeing, etc..

DOCTOR (Tb):
If there was no thing, How could there be sight and so forth? Hence, prior to these factors, There is an abiding entity. [IX.2]

GARFIELD (Tb):
2. If there were no existent thing, How could seeing, etc., arise? It follows from this that prior to this, There is an existent thing.

GARFIELD-SAMTEN (Tb):
2. If there were no existent thing How could such things as seeing also occur? Therefore, prior to this There must be an enduring thing.

HAGEN (paraphrase):
9.2 If there were no one who sees, etc., how could seeing arise? Therefore it must be concluded that, prior to these things, such an existent is.
PINGALA COMMENTARY

9/2 'The functions of eye, ear etc.' means the functions of eye, ear, nose, tongue, body, and life. 'The dharmas of pain and pleasure etc.' means dharmas of the mind and mental configurations such as reception of pain, reception of pleasure, reception of neither pain nor pleasure, conception, volition, remembrance etc.

Some authors say, 'before the dharmas of eye, etc. come into existence, there must surely be some substrate, and it is dependent on this substrate that the functions of the eye, etc. develop. If there were no substrate, on what would the functions of body and eye, etc. depend for their development? Reply.'

CANDRAKĪRTI COMMENTARY

The thought is that it is an existing Devadatta who effects possession of wealth not the non-existent son of a barren woman. Similarly, in this sense, if there were no person (pudgala) existing as such (vyavasthita) prior to seeing and the other kinds of perceiving he would not have been able to appropriate seeing and the other kinds of perceiving as his own (fn 1 This pleonasm seems appropriate). Therefore, even as Devadatta clearly existed as such prior to his wealth, the person exists prior to perceiving as the one who effects possession of it.

Madhyamika critique of the personalist thesis

We reply:

KALUPAHANA COMMENTARY

While the previous chapter is devoted to the refutation of the Cartesian enterprise adopted later on by some of the Buddhist metaphysicians, the present chapter seems to be taking up specifically the Kantian project, namely, the assumption of a primordial condition for all forms of knowledge, including the cogito. Hence the question regarding prior existence (purva).

He could not have been unaware of the Buddha's attitude toward the problem of the past (pubbanta). For a radical empiricist like the Buddha, knowledge of the past (atitamse nana) is as important as any other knowledge (D 3.275). Indeed, knowledge of "dependent arising" (paticcasamuppada) is invariably based upon such knowledge. Yet, when the pursuit of that knowledge is attempted beyond its limits, that is, when one tries to achieve absolute certainty with regard to such knowledge, one ends up in speculations regarding the past (pubbantanuditthi) rather than knowledge (nana). The Brahmajala-suttanta. refers to a whole host of metaphysical views presented by those who were involved in such speculations (D 1.13 ff.,ubbanta-kappika = purvanta-kalpika). Nagarjuna was thus convinced that the concepts of the cogito, the atman or svabhava were formulated by the metaphysicians who were attempting to know the past with certainty. No other explanation would satisfy their yearning for certainty regarding the past. Permanent self, eternal substance, pie-existing cogito, a transcendental unity of apperception-these could account for any breaks or interruptions in human experience as well as their continuity. The symbolism of the charioteer (Katha Upanisad 3.3-6) as well as the example of the two birds, one enjoying the fruit, the other watching (Mundaka Upanisad 3.1.1), adopted so enthusiastically by the Brahmanical thinkers, were gradually making inroads into Buddhist philosophical thinking. The Sammitiyas (if not identical with, at least related to the Sautrantika school) were accused of permitting such a belief into the Buddhist fold. So says Candarkirti. Yet, Sarvastivada, with its svabhava-metaphysics is no less culpable of this deviation than the Sammitiyas with their pudgala-metaphysics or even the later Theravadins with the bhavanga-metaphysics. Nagarjuna begins the present chapter with a statement, not only of this theory, but also of the rationalizations of those who formulated such a theory.

GARFIELD COMMENTARY

2. That is, without a subject of experience, there can be no experience and no experienced objects. This argument has familiar instances in Descartes and Kant. But Nāgārjuna, siding with Hume on this issue, begins by asking how this entity could be an object of knowledge:
Kārikā IX.3

INADA (Skt):
Verse 3 - If the entity exists abidingly prior to its functions of seeing, hearing, etc., or feeling, etc., then by what means is it known?

JONES (Skt):
[Reply:3] But by what means would an entity existing prior to seeing, hearing, and the other senses, and prior to feelings and so forth be made known?

KALUPAHANA (Skt):
Whatever existent is determined as existing prior to seeing, hearing, etc., and also feeling, etc., by what means is he [it] made known?

MCCAGNEY (Skt):
Whichever being present previous to seeing, hearing, etc., and to feeling, etc., by what means is he caused to be discerned?

NISHIJIMA (Skt?):
3. Relying upon seeing, hearing, and so forth,
And furthermore relying upon knowledge, and so forth,
The moment just before, exists in the very harmonized situations,
And then with what kind of method, is it possible for Reality to be found actually?

SPRUNG (Skt):
3 How can this determinate entity which exists prior to seeing, hearing and the other kinds of perceiving and to feeling and the other factors of personal existence be spoken and thought of sensibly at all?

STRENG (Skt):
3. But that definite entity is previous to sight, hearing, etc., and sensation, etc – How can that entity be known?

WESTERHOFF (Skt):
IX.3 The independent thing which is earlier than seeing, hearing, and so forth, and [also earlier than] feeling and so forth [i.e., the self ], by which means is it known?
9/3 If, separate from the functions of eye, ear etc. and the dharmas of pain, pleasure etc., there were a pre-existent substrate, how could it be described, and how could we know about it? External dharmas such as pots, clothes etc., can be known by the function of the eye, etc. Winner dharmas can be known by the functions of pain and pleasure etc. As it says in the sutras, 'perishability is the characteristic of material form; the ability to receive is the characteristic of reception; to be able to know is the characteristic of consciousness'. You say that there is a pre-existent substrate separate from eye and ear, pain and pleasure etc., but how can we know about it or say that it exists? Question:

(13b22) Some writers say that breathing in and out, looking and winking, lifespan, thinking, pain and pleasure, hate, love, excitement and so on are characteristics of a soul. Without a soul, how could there be characteristics such as breathing in and out, etc? Therefore we should accept that there is a pre-existent substrate separate from the functions of eye, ear, etc., and the dharmas of pain and pleasure.

Reply:

(13b25) If such a soul does exist, then it must be either inside the body, like a pillar within a wall, or outside the body, like armour worn by a man. If it were inside the body, then the body could not be perishable, since the soul would always be dwelling inside it. Therefore to say that a soul dwells in the body is mere words, absurd and unfounded. If it dwells outside the body, covering the body like armour, then the body ought to be invisible, because the soul would closely cover it. Moreover, it should not be perishable, yet we can see now that in reality the body does decay. Therefore we must know that there is no other pre-existent dharma, separate from pain and pleasure, etc.

(13c2) If you say that when an arm is cut off the soul shrinks back inside and cannot be cut off, then when the head is cut off (the soul) should also shrink back in and one should not die, but in fact one does die. Therefore we must know that (to speak of) a soul which is pre-existent and separate from pain and pleasure etc., is mere words, absurd and unfounded.

(13c5) Moreover, if you say that where the body is big, the soul is big, and where the body is small the soul is small, just as when a lamp is big its light is big, and where a lamp is small its light is small, then if the soul follows the body in this way it should not be permanent. If it accords with the body, then when there is no body there will be no soul, just as when a lamp is extinguished the light is extinguished. If the soul is impermanent, then it is the same as the eye, the ear, pain and pleasure etc. Therefore we should know that there is no distinct soul pre-existent and separate from the functions of eye and ear, etc.

(13c10) Moreover, suppose that a man who is crazy, who is not responsible for himself, does something which he should not do. If there is a soul which is master of all one's actions, how can we say that the man is not responsible for himself? If madness does not afflict the soul, then it must be something which acts separately from the soul. Seeking thus in various ways for something which is separate from the functions of eye and ear, and the dharmas of pain and pleasure etc., we find no such pre-existent substrate. Even though you insist that there is a pre-existent substrate apart from the functions of eye and ear and the dharmas of pain and pleasure, no such entity exists, and why?

CANDRAKĪRTI COMMENTARY

In what way can one speak and think sensibly (prajnapayate) about this determinate person who exists prior to perceiving, as perceiving is the basis for the idea (prajnapati) of person? If he is imagined to exist as such prior to perceiving then he would exist independently of it, as cloth is independent of a clay pot. But what is not related to its own material cause, for example wealthy persons who have no relation to wealth, is without a basis in reason. What is more,
KALUPAHANA COMMENTARY

As usual, Nagarjuna's first objection against positing such an entity that exists prior to the experiences such as seeing, hearing, etc. as well as feeling, etc., is epistemological. This objection should serve as warning against those who believe that Nagarjuna recognizes a special intuitive non-sensuous experience through which the so-called "ultimate reality" (paramartha?) is known. In fact, this question on the part of Nagarjuna is a clear indication of the fact that he was quite aware of the sort of empiricism advocated by the Buddha, especially in his "Discourse on Everything (Sabba-sutta, S 4.15; see also Kalupahana, "A Buddhist tract on empiricism," in PEW 19 (1969):65-67).

GARFIELD COMMENTARY

3. So first, Nāgārjuna points out, we have no direct evidence for the existence of such an entity because evidence of it would require that it could be an object, but is supposed by its proponent to be purely subjective. Moreover, Nāgārjuna points out, it is supposed to be independent of and ontologically prior to perception and the perceived. So:
Kārikā IX.4

vināpi darśanādīni yadi cāsau vyavasthitaḥ |
amūny api bhaviṣyanti vinā tena na saṃśayaḥ ||4||
ruò lí yān ér dēng ér yóu bēn zhū zhē |
yí yīng lí bēn zhū ér yóu yān ér dēng |
| | lta ba la sogs med par yaṅ | | gal de ni gnas gyur na |
| | de med par yaṅ de (2) dag ni | | yod par ’gyur bar the tshom med |

INADA (Skt):
Verse 4 - If the abiding entity could exist apart from the functions of seeing, etc., then undoubtedly the functions too could exist without the entity.

JONES (Skt):
[4] In addition, if the entity is established as existing without seeing and so forth, then undoubtedly those faculties would also exist without that entity.

KALUPAHANA (Skt):
If he is determined as existing even without seeing, etc., undoubtedly even these [i.e., seeing, etc.] will exist without him.

MCCAGNEY (Skt):
If this [being] is present without seeing, etc., these will doubtless exist without him.

NISHIJIMA (Skt?):
4. In the case when there were no way to see, and so forth, The situation here and now might continue to exist in the state of completely harmonized situation. And those kinds of situation, might exist even in future. And without such situations, the moment just before the present would never be continuing even in future.

SPRUNG (Skt):
4 If this person exists as such even without seeing and the other kinds of perceiving these will quite certainly exist without him.

STRENG (Skt):
4. And if that entity is determined without sight and other sensory faculties, Then, undoubtedly, those sensory faculties will exist without that entity.

BOCKING (Ch):
9v4 If, apart from eye and ear etc., There were a substrate Then also, without a substrate Eyes and ears, etc., should exist.

BATCHELOR (Tb): If it were present even without seeing etc., there would be no doubt that they would exist even without it.

DOCTOR (Tb):
If this remains in the absence Of sight and these other factors, Then they will undoubtedly be present Even in the absence of that. [IX.4]

GARFIELD (Tb):
4. If it can abide Without the seen, etc., Then, without a doubt, They can abide without it.

GARFIELD-SAMTEN (Tb):
4. If it can endure Without such things as seeing, Then, without a doubt they also Can exist without it.

HAGEN (paraphrase):
9.4 If an abiding entity could exist apart from the functions of seeing, etc., then undoubtedly, such functions could exist without such an abiding entity.
PINGALA COMMENTARY

9/4 If there were a pre-existent substrate, separate from the functions of eye and ear etc., and the dharmas of pain and pleasure etc., then the functions of eye and ear etc., and the dharmas of pain and pleasure etc. should likewise exist apart from this substrate.

Question. It could be that the two things are separate from each other, perhaps only the substrate existing. Reply,

CANDRAKĪRTI COMMENTARY

If you think a so-called person exists prior to perceiving, he will appropriate for himself the appropriative activities of seeing and the other kinds of perceiving. Now if this is so, perceiving will, incontestably, exist without the person.

As a wealthy Devadatta, existing prior to any connection with and apart from wealth in the usual sense, would have to appropriate wealth of a different kind attained in a special way, so the appropriator would have to appropriate a different sort of perceiving because it would be other than usual. But Nagarjuna says this is impossible.

KALUPAHANA COMMENTARY

After questioning the empirical validity of such an assumption, Nagarjuna is here raising a logical objection. If a prior existing entity can be determined without depending upon its experiences such as seeing, then it should also be logically possible that such experiences as seeing can be determined without a prior entity. Indeed, this logical conclusion seems to be so strong that Nagarjuna is willing to use the term asamsaya (“without doubt”) to describe it.

GARFIELD COMMENTARY

4. That is, independence is a two-way street. If the self is independent of its perceiving and perception, then its perceiving and perception are independent of it. Now there is one reading of this claim on which it is straightforwardly and foolishly fallacious. Nāgārjuna is not arguing that all relations are symmetric. It does not follow from the fact that this book is on your table that your table is on the book, and Nāgārjuna is not foolish enough to think that it does. The point is, rather, once again the Humean one that whatever is indeed logically independent is separable. The opponent wants to argue that the self is logically independent of its perceptions and their contents. But if so, then they are separable, and we can imagine not only a nonperceiving subject, but also unperceived perceptions. Just as we can imagine a clear table and a book not on a table. But, Nāgārjuna suggests, the idea of unperceived perceptions is both absurd on its face and contradictory to the opponent’s theoretical framework.

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 5 - An entity is made manifest by its attendant functions and, vice versa, the functions are known by way of the entity to which they belong. How is it possible for an entity to be without its functions and the functions without their entity?

JONES (Skt):
[5] Someone is manifested by some feature, and some feature is manifested by someone. Without some feature, how can someone exist? Without someone, how can some feature exist?

KALUPAHANA (Skt):
Someone is made known by something. Something is made known by someone. How could there be someone without something and something without someone?

MCCAGNEY (Skt):
Someone is driven by something, something is driven by someone. Where is there someone without something, and where is there something without someone?

NISHIJIMA (Skt?):
5. Relying upon some kind of method, something goes ahead. And something might be driven by something perhaps. In the case of there is nothing, where is it possible for something to exist somewhere? How is it possible for anything to exist anywhere when there is no existent possibility?

SPRUNG (Skt):
5 Every effect implies a cause, every cause implies an effect; how can there be an effect without a cause, how can there be a cause without an effect?

STRENG (Skt):
5. Someone becomes manifest by something (i.e. like vision); something is manifest by someone. How would someone exist without something? How would something exist without someone?
PINGALA COMMENTARY

9/5 'Dharmas' means eye, ear, pain, pleasure etc. 'Person' means this substrate. You say that we know there is a person by virtue of there being dharmas, and we know that there are dharmas because there is a person. Now, how can there be a person apart from the dharmas of eye and ear etc., and how can there be dharmas of eye and ear etc., apart from the person?

Further:

CANDRAKĪRTI COMMENTARY

The thought here is that by virtue of a cause, for example a seed, some effect or other, for example a sprout, becomes evident, and by the effect some cause or other is clearly implied: the seed being the cause of the sprout and this being the effect of the seed. Similarly, if by virtue of appropriative perceiving a self-existent person is clearly implied, he would be the appropriator of such perceiving. And if, by virtue of a person, appropriative perceiving is clearly implied, this being what the person appropriates, then in such case the reciprocal dependence of appropriator and what is appropriated would be established. So long as perceiving is accepted as existing in a special way, without the appropriator, then, being without dependence, it would be simply non-existent. It follows that neither of the two has been established. In sum, it makes no sense to say that a determinate (avasthita) appropriator exists separate from seeing and the other kinds of perceiving.

A separate subject for each kind of perceiving

You may counter the statement ‘How can this determinate entity which exists prior to seeing, hearing and the other kinds of perceiving and to feeling and the other elements of personal existence be spoken and thought of sensibly at all?’ (kārikā 3 above) by urging that it would be an error to suppose that a determinate subject exists prior to all perceiving in general. If however,

KALUPAHANA COMMENTARY

Here then is Nagarjuna's method of explaining (vyakhyana) the relationship between substance and attribute. It is a relation of dependence and neither the substance nor the attribute can be understood properly if they were to be conceived of as independent entities, each having its own nature.

GARFIELD COMMENTARY

5. (Something is disclosed by someone” fn 58. The Sanskrit strongly suggests that the “someone” is to be understood as the appropriator (in the sense discussed in the previous chapter) and that the “something” is to be understood as the appropriated object. Later commentators (e.g., Candrakīrti and Tsong Khapa see esp. pp. 210-11) generally treat the verse this way. This would be a reminder that perception is a special case of appropriation. (I thank the Yen. Gareth Sparham for pointing this out.))

Nāgārjuna here emphasizes the corelativity and interdependence of subject and object. (fn 59. But not their identity. Though subject and object as well as internal and external objects are, for Nāgārjuna, all ultimately empty and, in important senses, . interdependent, they are not identical. Physical objects are, as Kant would emphasize, empirically external to the mind in a way that pains are not; and the conventional perceiver is not one with the perceived. When 1 see an elephant, it is not, thereby, the case that I have a trunk!) Subjectivity only emerges when there is an object of awareness. Pure subjectivity is a contradiction in adjecto. Moreover, the idea of an object with no subject is contradictory. The very concept of being an object is that of being the object of a subject. The affinities to Kant and Schopenhauer here are quite strong, but should not be pushed too far. Nāgārjuna would clearly have no truck with the substantialist flavor of their analysis of the subject and object.

_____
Kārikā IX.6

sarvebhyaḥ darśanādibhyah kaścīt pūrvo na vidyate |
ajyate darśanādināṃ anyena punar anyadā ||6||

yī qiè yān òng gēn shì wú yǒu běn zhù
yān ěr òng gēn yī xiàng;xiāng ér fēn bié

| lta la sogs pa thams cad kyi | || sña rol gaṅ žig yod pa min |
| lta sogs nañ (3)nas gźan žig gis | || gźan gyi tshe na gsal bar byed |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 6 - (The opponent contends) No entity could exist prior to all its functions of seeing, etc- By means of the different functions of seeing, etc., the entity appears in different moments.

JONES (Skt):
[6] No one is found prior to all acts of sensing (i.e., seeing and so forth). At other times, one is manifested by another act of sensing.

KALUPAHANA (Skt):
Someone is not evident prior to all of seeing, etc. Again, on different occasions, one could be made known by things different from seeing, etc.

MCCAGNEY (Skt):
Someone does not occur prior to all, to seeing, etc. Again, by contrast, he is driven by means of seeing, etc.

NISHIJIMA (Skt?):
6. Even though relying upon all kinds of sense perceptions, for example vision, It is completely impossible for us to see anything before the time of present moment. But because being driven by seeing and so forth, Because of relying upon the time of different before, there is another time.

SPRUNG (Skt):
6 No one subject exists prior to seeing and other perceiving in general; Each kind of perceiving implies a different prior subject at different times.

STRENG (Skt):
6. The opponent admits: Someone does not exist previous to (purva) sight and all the other faculties together. Rather, he is manifested by any one of them: sight, etc., at any one time.
9/6 In all the functions of eye and ear etc. and all the dharmas of pain and pleasure etc., there is truly no substrate. With the eye as its cause, and form as its condition, seeing consciousness is produced. We know of the existence of all the functions of eye, ear etc. by means of this combination of causes and conditions, and not through some substrate. This is why it says in the verse, "In all the functions of eye, ear etc., there is truly no substrate." Each of the functions of eye, ear etc., can discriminate individually. Question.

CANDRAKĪRTI COMMENTARY

6ab No one subject exists prior to seeing and other perceiving in general;

but rather prior to each kind of perceiving singly; if this is so then

6cd Each kind of perceiving implies a different prior subject at different times.

If a subject of seeing (drasta) is implied by seeing he is not in that case to be thought of as presupposing hearing and the other kinds of perceiving apart from seeing. Your earlier reproach is therefore inappropriate.

Madhyamika critique

We reply. This is not tenable either because it is impossible for something to exist which is bereft of seeing and the other kinds of perceiving, which does not appropriate, lacks causal efficacy (nirhetuka) (fn 2 Or, ‘lacks any basis in reason’) and cannot manifest itself.

KALUPAHANA COMMENTARY

While rejecting the view that there is an entity prior to all forms of experiences such as seeing, Nagarjuna is, at the same time, trying to avoid the other extreme of assuming two different entities when the experiences are different. Avoiding a metaphysical notion of identity does not mean that one is invariably committed to an equally metaphysical notion of difference. Just as much as identity can be explained on the basis of an empirical notion of dependence, Nagarjuna seems to assert that difference can and need to be accounted for on an empirical basis.

GARFIELD COMMENTARY

6. An opponent might at this point argue that although there is no continuous prior entity that endures through time and stands behind all perception, we must posit an entity as the basis of each individual perceptual episode. The self on this model would be a succession of momentary but inherently existent subjects of moments of experience. But, Nāgārjuna argues in the next verse, the same argument against positing a single prior entity can be mobilized against each punctual prior entity:
ENGLISH TRANSLATIONS

INADA (Skt):
Verse 7 - (Nagarjuna asserts) If the entity does not exist prior to all its functions of seeing, etc., then how could it exist prior to each of the functions?

JONES (Skt):
[7] If no one is found prior to all acts of sensing, how can someone existing prior to each such act be evident?

KALUPAHANA (Skt):
If someone existing prior to all of seeing, etc. is not evident, how can someone existing prior to each of seeing, etc. be evident.

MCCAGNEY (Skt):
If someone does not occur prior to all, to seeing, etc., how does he occur prior to a single seeing, etc.

NISHIJIMA (Skt?):
7. Relying upon all kinds of function to see, and so forth, it is impossible for us to recognize the moment just before the present.
Leaving from one by one, how is it possible the moment just before the present to exist?
Relying upon only total oneness of all senses perceptions, the moment just before the moment can be perceived.

SPRUNG (Skt):
7 If there is no subject prior to seeing and other kinds of perceiving in general, How can there be a different subject prior to each kind of perceiving?

STRENG (Skt):
7. Nāgarjuna asserts: But if nothing exists previous to sight and all the other faculties together, How could that being exist individually before sight, etc.?

BOCKING (Ch):
9v7 If in all the functions such as eye etc., there is no substrate. How can eye etc., functioning separately, Know objects?

BATCHelor (Tb):
If it is not evident prior to the totality of seeing etc., how can it be evident prior to [each of them] seeing etc. individually?

DOCTOR (Tb):
Unless it precedes the totality Of sight and the rest, How could it possibly precede Each of them individually? [IX.7]

GARFIELD (Tb):
7. If prior to all of seeing, etc., No prior entity exists, How could an entity prior To each seeing exist?

GARFIELD-SAMTEN (Tb):
7. If it does not exist Prior to all of such things as seeing, How could it exist Prior to each of such things as seeing?

HAGEN (paraphrase):
9.7 Nāgarjuna answers: If no one exists before seeing and all the other sense faculties combined, how can one exist before each separate sensation?
PINGALA COMMENTARY

9/7 If there is no substrate in all the functions of eye and ear etc., and all the dharmas of pain and pleasure etc., then how can these individual functions know objects? There is no thinking in the functions of seeing and hearing etc., so they should not have knowledge, yet—in fact they do know objects. We must realize (from this) that in addition to the functions of eye and ear etc., there is something which has the capacity to know objects.

Reply: If this were so, then either this knowing agent will inhere in each individual function, or there will be one knower in all the functions, but both ideas are erroneous, and why?

CANDRAKĪRTI COMMENTARY

7ab If there is no subject prior to seeing and other kinds of perceiving in general, if this is supposed,

7cd How can there be a different subject prior to each kind of perceiving?

What cannot be a subject (yah) prior to (purvah) all perceiving in general cannot be a subject prior to each kind of perceiving singly either. There is for example no forest before all the trees nor before each of the trees singly; and oil is not extracted from sand in general nor is there oil in any one grain of sand.

What is more, a subject prior to each singly must be accepted as no less prior to all as well; because there is no totality apart from single particulars. That is why it does not make sense to say that the subject is prior to each kind of perceiving singly.

There is a further absurdity.

KALUPAHANA COMMENTARY

It seems that here Nagarjuna is referring to an interesting assumption underlying an identity theory. The notion of self (atman) or substance (svabhava) would generally be presented in order to account for the continuity in a large number of dissimilar experiences. Taking that premise, Nagarjuna is arguing that if it is not possible to discover someone or entity that pre-exists all forms of different experiences, then such a person or entity would not be available even in the case of individual experiential situations. A momentary cogito would be as impossible as a permanent and eternal self (atman).

GARFIELD COMMENTARY

7. That is, given that there is no need to identify an independent self as the basis of all seeing, there is no need to establish one as a basis for each one independently. The same arguments for the relativity and relational character of perception apply, mutatis mutandis, for each perceptual episode. Moreover, even if we did posit such entities, they would get us nowhere toward positing the self that the reifier of self really cares about - a continuous self with which we can really identity and whose fate we can care about.
Kārikā IX.8

draṣṭā sa eva sa śrotā sa eva yadi vedakaḥ |

| re re’i sña rol yod gyur na | | de ni (4)de ltar mi rigs so |

ENGLISH TRANSLATIONS

INADA (Skt):  
Verse 8 - If (it is granted that) an entity which sees is concomitantly an entity which hears or feels, then that entity will exist prior to its functions. But such a situation could not be in accordance with reason.

JONES (Skt):  
[8] If the same one is simultaneously the seer, the hearer, and the feeler, that person would arise prior to each one of these, and this is not admissible.

KALUPAHANA (Skt):  
If a seer is, at the same time, a hearer and feeler, then someone would exist prior to each one [of the functions]. But this is not proper.

MCCAGNEY (Skt):  
If he is a seer while he is a hearer and while he is a feeler, he would be prior to each single one and that is not reasonable.

NISHIJIMA (Skt?):  
8. A person, who looks at something, is real, and at the same time a person, who listen to, was also real. And then such situations become real relying upon information. Leaving from the method of one by one, it is possible for the moment just before the moment to exist, But just at that time this Real World is never be harnessed at all.

SPRUNG (Skt):  
8 If the subject of seeing is the same as the subject of hearing and it the same as the subject of feeling it would be prior to each singly. But this makes no sense either.

STRENG (Skt):  
8. Further, if that being were the "seer," that being were the "hearer," that being were the one who senses, Then one being would exist previous to each. Therefore, this hypothesis is not logically justified.

BOCKING (Ch):  
9v8 "The one who sees is the one who hears. The one who hears is the one who receives. All the functions are like this, Consequently there must be a substrate".

BATCHelor (Tb):  
If the seer itself [were] the hearer and the feeler [were] it too, if it existed prior to each, in that way it would not make sense.

DOCTOR (Tb):  
If that which sees were that which heat’s, And what hears were that which senses, This would exist before every one of them, Yet that does not make sense. [IX.8]

GARFIELD (Tb):  
8. If the seer itself is the hearer itself, And the feeler itself, at different times, Prior to each of these he would have to arise. But this makes no sense.

GARFIELD-SAMTEN (Tb):  
8. If the seer itself is the hearer itself, And the feeler, then For it to exist prior to each of these Would make no sense.

HAGEN (paraphrase):  
9.8 If the one who sees is simultaneously the one who hears and the one who feels, then such a one must be prior to each singly. But this makes no sense.
PINGALA COMMENTARY

9/8 "If the one who sees is also the one who hears, and the one who hears is also the one who receives, then there is one soul. Since all the functions of eye and ear etc., are like this, there must be a pre-existent substrate*. Form, sound, fragrance, etc., not having a fixed, knower, perhaps (the substrate) could use his eye to hear sounds, like a man seeing sounds in six ways152 according to his will? If the hearer and seer were one, he could see sounds at will with the eye function etc., but this is not the case.

CANDRAKIRTI COMMENTARY

8ab If the subject of seeing is the same as the subject of hearing and it the same as the subject of feeling then

8c it would be prior to each singly.

It makes no sense to say that the seeing subject is the same as the hearing subject. If this were so then the subject of hearing would be a subject of seeing even without the activity of seeing and the subject of seeing would be a subject of hearing even without the activity of hearing. But we never observe a seer devoid of the activity of seeing nor a hearer devoid of the activity of hearing. That is why Nagarjuna says:

8d But this makes no sense either.

How could this be as there is a different agent (karaka) for each and every activity (pratikriya), is what Nagarjuna was explaining. And so this thought as well is tenable.

Buddhapalita explained it this way. If there is only one self (atman), it follows that the subject must move from one sense to the other like someone moving from one window to another. Bhavaviveka faulted that explanation in this way: if the self is all-pervasive it need not move from one sense to another, so Buddhapalita’s criticism does not hold. But this itself does not hold because the context of Buddhapalita’s refutation was the doctrine of the separate person (pudgala) as conceived by our fellow Buddhists who do not accept the all-pervasiveness of the self. Thus the fault we pointed out does stand.

 Again, if, attempting to escape the difficulty pointed out, one supposes that

KALUPAHANA COMMENTARY

Only if the seer, hearer, and experiencer are absolutely identical, then he will pre-exist each individual experiential situation. Nagarjuna rightly denies any such absolute identity. He was probably assuming that even in the act of seeing the same object at different times, there cannot be absolute identity, let alone in the acts of seeing different objects. The reason is not that human experiences or even the objects of experience change every moment, but that the circumstances under which such experiences take place could vary. (For a discussion of the perceptual flux, see William James, Some Problems of Philosophy, Cambridge, Massachusetts: Harvard University Press, 1979, p.)

GARFIELD COMMENTARY

8. Moreover, since this proposal is for a distinct prior entity for each perceptual episode, we would need distinct subjects for, for example, hearing and seeing. But as we can do these things at the same time, it would follow that there are multiple simultaneous selves. The unity of experience that is the putative explanandum and motivation for positing this entity in the first place (emphasized in the first two lines) would dissolve. Nāgārjuna emphasizes this conclusion at IX: 9:
Kārikā IX.9

draṣṭānya eva śrotānyo vedako ’nyah punar yadi |
sati syād draṣṭāri śrotā bahutvaṃ cātmanāṃ bhavet ||9||

ruò jiàn wén gè:gè yì shòu zhè yì gè:gè yì |
jiàn shí yì yìng wén rú shì zé shén duō |
| gal te lta po gźan ñid la | | ñan pa po gźan tshor gźan na |
| lta po yod tshe ñan por ’gyur | | bdag kyaṅ maṅ po ñid du ’gyur |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 9 - If again (granted that) the entity which respectively
sees, hears, and feels is individually distinct, then as there
will be an entity which sees there will also be an entity
which hears. But this situation would impose many forms
on the entity.

JONES (Skt):
[9] But if the seer is one, the hearer another, and the feeler a
third, then when there is a seer there may also be a hearer,
and there would be a plurality of selves.

KALUPAHANA (Skt):
If seer and hearer and feeler are different, then, when there
is a seer, there also would be a hearer, and as such there
would be a plurality of selves.

MCCAGNEY (Skt):
Again, if a different seer, a different hearer, a different feeler
exists,
a hearer would be where there is a seer and there would be a
plurality of selves.

NISHIJIMA (Skt?):
9. Not a person, who look at things well, or not a person, who listen
to sounds well,
And a person, who is not skillful to tell informations to others.
Therefore perhaps it might be related with listening to something,
but at the same time it is related with looking at, too.
And so because of both much volume and individual personality
might exist.

SPRUNG (Skt):
9. The subject of seeing, the subject of hearing and the
subject of feeling are each different, The subject of
hearing would exist at the same time as the subject
of seeing and there would be a plurality of selves.

STRENG (Skt):
9. On the other hand, if the "seer" were someone else, or
the "hearer" were someone else, or the one who
senses were someone else, Then there would be a
"hearers when there was already a "seer," and that
would mean a multiplicity of "selves" (atma).

BOCKING (Ch):
3v9 If the seer and the hearer are each separate,
And the one who receives is also separate,
Then when seeing, there should also be hearing,
And thus the soul would be multiple.

BATCHELOR (Tb):
If the seer were different, the hearer different, the feeler
different, at the time the seer exists, there would be a
hearer. Many selves would come about.

DOCTOR (Tb):
If the seer, the hearer, and the one that senses
Were all different from each other,
The hearer could be present at the time of the seer
And there would be multiple selves. [IX.9]

GARFIELD (Tb):
9. If the seer itself is distinct,
The hearer is distinct and the feeler is distinct,
Then when there is a seer there would also be a hearer,
And there would have to be many selves.

GARFIELD-SAMTEN (Tb):
9. If the seer is distinct,
The hearer is distinct, and the feeler is distinct,
Then when there is a seer there would also be a hearer,
And there would have to be many persons.

HAGEN (paraphrase):
9.9  If the one who sees is not the one who hears or
feels, then there is a seer when there is a hearer,
and there would be a multitude of selves.
PINGALA COMMENTARY

9/9 If the seer, the hearer and the receiver are different from each other, then at the time of seeing there should also be hearing, and why? Because the hearer would exist separately from the seer, and in the same way souls ought to be operating simultaneously in the nose, the tongue and the body. If this were so, though the individual were one, his souls would be many, and he would be knowing the world via all his functions simultaneously, but in reality this is not the case. Therefore a seer, a hearer and a recipient are not employed together.

Further.

CANDRAKIRTI COMMENTARY

9ab The subject of seeing, the subject of hearing and the subject of feeling are each different, that would not make sense because if one wished to think in that way,

9cd The subject of hearing would exist at the same time as the subject of seeing and there would be a plurality of selves.

For example, a horse is other than a cow. But it is not the case that because a cow exists a horse cannot exist at the same time. So if the subject of hearing were other than the subject of seeing he would have to be able to exist at the same time as an existing subject of seeing; but this is not what one wished to establish. Thus subjects are not totally different. What is more, on this thesis the plurality of selves is implied because each of the subjects of seeing, hearing and feeling is established entirely separately. Thus there is nothing whatsoever called a person existing prior to seeing and the other kinds of perceiving each taken singly, either.

The concrete individual as subject

At this point you may object: There is indeed a self prior to all the activities of seeing and the other kinds of perceiving generally. Earlier it was asked ‘If there is such how will it be spoken and thought of?’ This should be explained. It is accepted that, prior to seeing and the other kinds of perceiving, the four elements (mahabhuta) (in 3 Earth, air, fire, water) exist in the form of a potential individual as a body-mind entity (namarupavastha). In their turn the six sense faculties, seeing, hearing and the rest, based in the potential individual, arise out of these elements. Therefore the four elements do exist prior to seeing and the other kinds of perceiving as their base.

Madhyamika critique

But this is not tenable either.

KALUPAHANA COMMENTARY

If absolute identity is not a possibility, absolute difference also would be impossible, for in that case within each stream of experience there would be plurality of distinct selves or entities corresponding to the different experiences.
ENGLISH TRANSLATIONS

INADA (Skt):
Verse 10 - Of the arising of the functions of seeing, hearing, feeling, etc. out of the Elements, the entity too cannot be found to exist. - Note: Reference is made to the Four Great Elements of earth, water, fire and wind.

JONES (Skt):
[10] In addition, a prior entity is not found in the elements out of which seeing, hearing, and so forth and feelings and so forth come.

KALUPAHANA (Skt):
It [i.e., the self] is not evident in the elements from which seeing, hearing, and so forth and feelings come to be.

MCCAGNEY (Skt):
Seeing, hearing, etc., and feeling, etc., also exist, but [the self] does not occur from them or in these existents.

NISHIJIMA (Skt?):
10. Action to look at something, or action to listen to something, and so forth, announcing, and so forth, is just at the present moment, and many kinds of pursuits are totally possible to exist just in front of us. However, it is perfectly impossible for what has past to exist really at all.

SPRUNG (Skt):
10 Nor does a self exist in the elements from which seeing, hearing and the other kinds of perceiving and feeling and the other personal factors arise.

STRENG (Skt):
[10] [missing?]

BOCKING (Ch):
9v10 All the functions of eye and ear etc., as well as sensation and so forth—Among the causes from which these emerge, There is no existence of that. [IX.10]

BATCHELOR (Tb):
Also it is not evident in the elements from which seeing and hearing etc. and feeling etc. occur.

DOCTOR (Tb):
Sight, hearing, and the rest—Among the causes from which these emerge, There is no existent there.

GARFIELD (Tb):
10. Seeing and hearing, etc., and feeling, etc., And that from which these are arisen: There is no existent there.

GARFIELD-SAMTEN (Tb):
10. Such things as seeing, hearing, and feeling, And the elements from which they are arisen: These do not exist.

HAGEN (paraphrase):
9.10 A self is not found in the elements from which seeing, hearing, and feeling, etc., arise.
PINGALA COMMENTARY

9/10 If someone says that there is a separate substrate apart from the functions of eye, ear, etc., and the dharmas of pain, pleasure etc., this has already been refuted. Now, as for the four elements which give rise to eye and ear etc., there is no substrate contained in these four elements.

Question. Even if it is true that there is no substrate in all the functions of eye and ear, etc., and all the dharmas of pain and pleasure, surely the functions of eyes, ear, etc., and the dharmas of pain and pleasure exist?

CANDRAKĪRTI COMMENTARY

That is, seeing and the other kinds of perceiving arise from the four elements; but a subject of perceiving which would both exist in the elements and yet be the agent of perceiving them makes no sense for the reason given earlier. This is Nagarjuna’s thought. We may quote the earlier line ‘How can there be an effect without a cause, how can there be a cause without an effect?’ It fits here exactly. A subject which could exist prior to the perceiving of the four elements would be the base of the four elements. But this cannot be so because such a subject would be without any causal efficacy. How can what does not exist appropriate the four elements? As the difficulty of appropriating the four elements is the same as pointed out in the appropriating of seeing, it need not be gone into again.

Perceiving itself proves the existence of the subject

You may object that although in this way the self has been disproved, perceiving exists because it has not been disproved. There is no necessity of seeing and the other kinds of perceiving connected with things whose nature it is to have no self, like pots and such things. It follows that that with which there is this essential connection, namely the subject as self (atman), does exist.

We reply that there would be a subject as self if there were perceiving. But there is no perceiving. If the one for whom perceiving functions does not exist as we have shown, then as this appropriating subject itself does not exist, how, Nagarjuna asks, can perceiving, which is appropriative by nature, exist.

KALUPAHANA COMMENTARY

In the Chapter V on the "elements" (dhatu), Nagarjuna examined the theories presented by the metaphysicians relating to the physical foundations of human experiences such as seeing, hearing, etc. Even though the Abhidharma classified the fast five sensory organs as well as their objects under the category of derived matter (upada rupa), there was no indication that this involved the assertion of any self or substance in the individual elements that go to constitute these sensory organs and objects. The interpreters of the Abhidharma, as reiterated earlier, were responsible for such metaphysics. Nagarjuna is here going back to the analysis in the discourses as well as in the Abhidharma where, not only in the combination of aggregates or elements, but also in each individual element, there is no recognition of such a metaphysical self or substance (see also Chapter IV).

GARFIELD COMMENTARY

10. However, one should not be tempted to try to ground perception, the perceived object, and the perceiver in some more fundamental ontological ground - some intrinsically identical basis for their existence. For the need to develop a substantial foundation for these phenomena should vanish once one sees that not only do they have no ultimate ontic status, but that they need none. They, like all phenomena, emerge relationally and dependently.
Kārikā IX.11

INADA (Skt):
Verse 11 - If the entity which sees, hears, etc., or which feels, etc. cannot be found, then the functions themselves cannot also be found to exist.

JONES (Skt):
[11] If the one to whom there is seeing, hearing, and so forth and feelings and so forth is not found, then they too are not found.

KALUPAHANA (Skt):
If he, to whom belongs seeing, hearing, etc. and feeling, etc., is not evident, then even these would not be evident.

MCCAGNEY (Skt):
If he whose seeing, hearing, etc., and feeling, etc., does not occur then these are also not observed.

NISHIJIMA (Skt):
11. Action to look at something, or action to listen to something, and so forth, Announcing, and so forth, is just at the present moment, And if such a kind of scenery hasn't been seen yet actually, It is completely impossible for everyone to look at the excellent effect of Buddhist monk training in their behavior at all.

SPRUNG (Skt):
11 If the subject of seeing, hearing and the other kinds of perceiving, and of feeling and the other factors of personal existence does not exist, these do not exist either.

STRENG (Skt):
11. When he to whom seeing, hearing, etc., and feeling, etc. belong does not exist, Then certainly they do not exist.

ENGLISH TRANSLATIONS

BOCKING (Ch):
9v11 If the functions of eye and ear, etc., And the dharmas of pain and pleasure Have no substrate. Then the eye, etc. should not exist either.

BATCHELOR (Tb):
If that to which seeing and hearing etc. and feeling etc. belong is not evident, they too could not be evident.

DOCTOR (Tb):
Sight, hearing, and the rest, As well as sensation and so forth— If there is no one to whom these belong, Then they do not exist either. [IX.11]

GARFIELD (Tb):
11. Seeing and hearing, etc., And feeling, etc., If that to which they belong does not exist, They themselves do not exist.

GARFIELD-SAMTEN (Tb):
11. Such things as seeing, hearing, And feeling: If that to which they belong does not exist, They themselves do not exist.

HAGEN (paraphrase):
9.11  If the one who sees, hears, and feels cannot be found, then these functions, too, are not found.
PINGALA COMMENTARY

9/11 If the dharmas of eye and ear, pain and pleasure etc., have no substrate, who has this eye and ear etc., and by what means do they exist? Therefore eye and ear etc., are also non-existent. Moreover:

CANDRAKĪRTI COMMENTARY

If the one of whom seeing and the other kinds of perception are imagined to be does not exist as has been argued, then it has been made evident that seeing and the other kinds of perception do not exist. It follows therefore that because perceiving does not exist the subject as self does not exist.

Conclusion. The subject neither exists nor does not exist

You may ask whether indeed we are certain that there is no subject as self. We explained this in what was just said, namely that because perceiving does not exist there is no perceiving subject as self either. This we said but you have not adequately grasped the purport of the statement. It was that the perceiving subject conceived of as an ontic entity (bhavarupa) cannot have self-existence. What was said was solely to dissipate obstinate clinging to its self-existence. It was a counter-argument using the false concept (viparyasa) ‘non-existence’ (asad). But it is not to be thought of as non-existent (abhava). Both the obsession with things as realities and the obsession with things as unrealities are to be repudiated.

As Aryadeva said (Catuhsataka, X, 3), ‘What for you is self for me is non-self; the self does not exist because it is beyond grasping. Is speculation not born among perishable things?’ Expounding precisely the same point Nagarjuna says

KALUPAHANA COMMENTARY

Nagarjuna starts with the negation of an opponent’s view that there is a prior entity to which the experiences such as seeing and hearing belongs. The implication of the opponent’s view is that the experiences of seeing, etc. are independent elements appropriated by an equally independent prior entity. As such, for Nagarjuna, it is not merely the prior entity that is unacceptable, but also the experiences themselves as conceived of by the opponent. This, therefore, is not a simple denial of any and all forms of description of experience. Rather, it is a particular type of discrimination resorted to by the metaphysician that is rejected.

GARFIELD COMMENTARY

11. Not only has this analysis refuted the inherent existence of the self as a basis for experience, but in virtue of so doing, it has refuted the inherent existence of perception and the perceptual faculties.
Kārikā IX.12

prāk ca yo darśanādibhyah sāmprataṃ cordhvam eva ca | na vidyate ’sti nāśīti nivṛttās tatra kalpanāḥ ||12||
yān dēng wū běn zhū jīn hòu yī fū wū | yī sān shì wū gū yōu wū fēn bié |
| gaṅ žig lta la sogs pa yī | sṅa rol da lphyi na med |
| de la yod do med do žes | rtog pa dag ni ldog par ’gyur |

ENGLISH TRANSLATIONS

INADA (Skt):  
Verse 12 - Of an entity which does not exist prior to, concomitantly, or posterior to the functions of seeing, etc. the notions of existence and non-existence are unnecessary.  
- Note: Prak, samprata, and urdhva are translated by Kumarajiva as the three temporal existences i.e., past, present and future.

JONES (Skt):  
[12] For whomever there is nothing prior to, nor simultaneous with, nor after seeing and so forth, such fabrications as "is" and "is not" are abandoned.

KALUPAHANA (Skt):  
Wherein someone prior to, simultaneous with or posterior to, seeing, etc. is not evident, therein thoughts of existence and non-existence are also renounced.

MCCAGNEY (Skt):  
He who is prior to, simultaneous with, or posterior to seem. g. etc., does not occur and thereby, fictions concerning existence and non-existence are renounced.

NISHIJIMA (Skt?):  
12. And such a kind of scenery has existed before it has been influenced by seeing, and so forth, So the sceneries exist as the situations, which has been established by the harmony with the time. 
Even though it is impossible for us to know the distinction whether such situations exist, or not, 
The very vague scenery exists there, which might be perhaps a product by human conjectures probably.

SPRUNG (Skt):  
12 Speculations concerning existence and non-existence are silenced in the face of something which exists neither before, at the same time as, nor after seeing and the other kinds of perceiving.

STRENG (Skt):  
12. For him who does not exist previous to, at the same time, or after seeing, etc. The conception "He exists," "He does not exist," is dissipated.

WESTERHOFF (Skt):  
IX.12 Where something prior to, simultaneous with, or after seeing and so forth [which could be regarded as a self] is not evident, there conceptions “it exists,” “it does not exist” [with svabhāva] have ceased.

BOCKING (Ch):  
9v12 In eyes, etc. there is no substrate, Now and in the future there will be none. Since there is none in the three periods of time, There is no distinction between existence and non-existence.

BATCHelor (Tb):  
Reject the concepts “it exists,” “it doesn’t exist” about that which is not evident prior to, now or after seeing etc.

DOCTOR (Tb):  
That which does not exist Before, together with, or after sight and the rest Will no longer be thought about As existent or nonexistent. [IX.12]

GARFIELD (Tb):  
12. For whomever prior to, Simultaneous with, or after seeing, etc., there is nothing, For such a one, assertions like "it exists" or "it does not exist" - 
Such conceptions will cease.

GARFIELD-SAMTEN (Tb):  
12. That which does not exist prior to, Simultaneous with, or after seeing does not exist. Conceptions such as “it exists” or “it does not exist” Will cease.

HAGEN (paraphrase):  
9.12 Notions of existence and non-existence will cease when an existent one is not found either before, during, or after seeing, etc.

GOLDFIELD (Tb):  
The one who experiences perceptions does not exist Before, during, or after the experiences of seeing and so forth. 
Knowing this, all thoughts of an experiencer of perceptions either existing or not existing are reversed. (12)
PINGALA COMMENTARY

9/12 (Though we) contemplate and search for a substrate, it never existed in the eye etc., and does not exist now, or in the future. Not existing in any of the three periods of time, it is the nirvana of non-arising, in which there should be no obstacles. If there is no substrate, then how can there be the eye, etc? Debates and vain arguments such as these consequently cease, and when vain arguments have ceased, all dharmas are empty.

CANDRAKĪRTI COMMENTARY

In the first place there is no subject as self prior to seeing and the other kinds of perceiving because it would lack a raison d’être (astiitvabhatat). Nor is there a subject simultaneously with seeing and the other kinds of perceiving because one never experiences simultaneous existence of two things each of which by itself does not exist, like the two horns of a rabbit: subject and perceiving do not exist by themselves, independent of each other. So simultaneity is not possible either. No more is there a subject subsequently. If there were first perceiving and in a later moment a subject, then it would be possible. But it is not so because no act can be without an agent. After a searching investigation it is clear that there is no perceiving subject as self either before, after or simultaneously with seeing and the other kinds of perceiving. What man of insight would in such case ontologize about the existence or non-existence of something whose very nature it is never to be perceived (anupalabdha)? The conclusion is that, exactly like the agent subject and his doing, the subject of appropriation and the activity of appropriating can exist only in reciprocal dependence, not each in its own right (svabhavikī).

KALUPAHANA COMMENTARY

The existence of an independent entity in the experiential process, whether it be prior to experience, simultaneous with it, or posterior to it, is rejected by Nagarjuna. This does not mean that he was willing to accept the independent occurrence of impressions coming one after another in rapid succession with no causal connectoins, as the Sautrantikas believed. In these particular contexts (tatra), Nagarjuna is ready to abandon the thoughts (kalpana) of existence and non-existence (asti nastiti) in the way they were understood by the metaphysicians.

GARFIELD COMMENTARY

12. Nāgārjuna here generalizes the point and offers a diagnosis of the confusion he has worked to resolve: Just as we want to say that the self as pure subject does not exist - nor do perception or perceptual objects exist as entities - yet want to affirm the conventional reality of perception, perceivers, and perceiveds, in general, we want to deny the inherent existence of phenomena and affirm their conventional reality. Just as we want to say that the self neither exists inherently nor that it is nonexistent inherently, we want to refrain from attributing inherent existence or inherent nonexistence to all entities. The apparent paradox involved in saying that things both exist and do not exist in one breath and saying that they neither exist nor do not exist in another - indeed of refusing in another sense to permit even these predications in another mood - arises, Nāgārjuna points out, from the conceptual imputation of inherently existent bases for these predications, which then have to be thought of as having contradictory properties. Absent the bases, we can see these assertions merely as useful analytical tools in various dialectical contexts to help us to see the ultimately empty and conventionally real nature of phenomena; And Nāgārjuna concludes this chapter by asserting that once one ceases hypostasizing the subjective self - that entity that might seem to be, as Descartes notes, the most obviously existent and most easily known entity of all - the temptation to hypostasize other entities dissolves.

Chapter X: Examination of Fire and Fuel
OUTLINE:

We are still in the second part of the second major portion of the text, the extensive explanation of the two selflessnesses, and within that, the distinct explanations of the selflessness of phenomena and the selflessness of the person. We are in the second section of that part—the explanation of the selflessness of the person. We have completed the first of its two parts: the refutation of the essential existence of the person. We are now beginning the second part: the refutation of the argument for the essential existence of the person. This section has two parts: The
refutation of the example in the premises and the refutation of the reasoning in the premises. This chapter is the first of these two parts.

EXPLANATION:

Here someone might say it does not make sense to say that the appropriator and appropriated do not exist inherently in virtue of being mutually dependent, because dependent entities are seen to exist inherently. Although fire arises in dependence on fuel, the essences of heat and combustibility are seen as the effect; and although fuel depends upon fire, that which is burned has the essence of the four great elements. Therefore, like fire and fuel, both that which is appropriated and the appropriator also exist inherently.

The refutation of this has three parts: the refutation of the inherent existence of fire and fuel, applying this reasoning to other phenomena, and condemnation of their view of the point of the refutation.

SUMMARY:

So, when the self and that which is possessed by the self, and such things as cause and effect and part and whole, are established as identical or different, using the example of fire and fuel, one might ask, “Are these established as inherently, or are they established through the power of nominal convention?” Then, if one analyzes using the previously explained arguments in the first case, realizing that there would be no grounds for designating anything as that which is to be burned and the burner, etc., grasping them as truly existent is refuted. But in the latter case, realizing that all these conventions are completely tenable, it should be ascertained that they are dependently arisen.

INADA (Chapter Introductions)

CHAPTER X - Examination of Wood and Fire

This chapter is one of the more significant expositions of the central concept of pratityasamutpada. The terms, fire and wood, are critically analyzed into whether they are the same or different. In other words, a pair of terms relating to the Madhyamika Credo, i.e., anekartham anandrtham, is under review. The Credo comes to full light in this chapter but, as the 15th verse indicates, the same critical analysis thus employed can be extended to other entities, notably that of the self and its seizing or grasping function.

Special mention must be made here with respect to a novel job of interpreting the meaning of the technical term mutual togetherness as used in this chapter by Prof. Y. Ueda. He is the first scholar to interpret and employ a principle which he claims to be central or basic to the unique type of "logic" employed in Madhyamika philosophy. The unique logical principle in brief is that of any two concepts, e.g., fire and wood, there are inherent conditions in each such that their ultimate relationship into a whole or unity entails a mutual denial of each other. With this principle he arrives at the solution to the baffling statement that nothing is identical or differentiated as expressed in the Credo.

The germ of this logical thought had already been hinted at by Chinese as well as Japanese scholars, especially by those in the field of Zen, but this is not entirely a surprise because of the closeness or perhaps an ultimate identity, in the final analysis, of the foundations of Zen and Sunyavada. D. T. Suzuki, for example, speaks of the logic of immediate negation, H, Ui speaks of the logic of immediate negation-affirmation and even as far back as the 12th Century A.D., Dogen, the patriarch of Japanese Soto Zen, remarks on the union of the self and the other self Despite these antecedent thoughts, due credit must go to Prof. Ueda for carrying out a clear and systematic exposition of the peculiar, if not unique, type of logic in use.

KALUPAHANA (CHAPTER OVERVIEWS)

10. Fire and fuel (agnindhana). The futility of employing the example of the fire (agni) and fuel (indhana) in order to illustrate the relationship between a substantial action and a substantial agent is shown in Chapter X. It is indeed the most important metaphor used by the substantialists to establish the conception of a metaphysical person. The manner in which the Pudgalavadin utilized this metaphor is explained in detail by Vasubandhu in the final chapter of his Abhidharmakosa-bhasya (see annotation on Chapter X). Finally he refuses to recognize those who admit the reality of a self (atman, pudgala) as well as those who uphold discrete substantial entities (bhava), as people who are conversant with the true meaning of the Buddha's teachings (X. 16). It is clear that the reference here is not to the non-Buddhist metaphysicians, but rather to the Buddhist metaphysicians who claimed themselves to be the true interpreters of the Buddha-word, namely the Sautrantikas (= pudgalavadins) and the Sarvastivadins (= svabhavavadins).
BATCHELOR (POETIC “TRANSLATION”)

Fire

Were the fire its flames,
Act and actor would be one.
Were flames something else,
They could not have lit this fire.

Independent and alone,
Eternal flames would burn forever –
Actors with no acts.

Were the fire a fire
Only when it burns -
How could you light this fire?

Were your flames something else,
They would never touch my fire,
ever light it and never die.
They would burn and burn and burn.

Though they are different,
Flames touch fires
As a woman touches a man
And a man a woman.
Flame and fire merge.

They unite despite being different.
If flames depend on fires
And fires upon flames,
What comes first?
Were the fire already there,
The flame that lit it would flare again
Or that fire would flicker flamelessly.

If what flames depend on
Depend on flames,
What depends on what?
How can flames-to-be
Depend on anything?
What would do the depending?

Flames do not depend on fires
Nor are they independent of them.
Fires do not depend on flames
Nor are they independent of them.

Flames and fires explain everything:
The self and what it grasps
And also jugs and rolls of cloth.
Identity and difference? Of self? Of things?

JONES (COMMENTARY)

10. Fire and Fuel

This example comes from the Buddhist Pudgala-vadins who used it to illustrate the relation of the person (pudgala) to the various physical and mental bodily aggregates (v. 16). But in Nagarjuna’s characterization of self-existence metaphysics, fire and fuel in the process of burning are either identical or distinct. They cannot be identical - the wood that is labeled “fuel” exists independently of being on fire. But if they are distinct, then one could exist without the other, and clearly fire cannot exist without fuel.

Verses 1-5 show how Nagarjuna sees the world if self-existence prevails. If fire and fuel are real, then they are distinct entities, and one would occur without the other since real entities do not depend on any other entities. Thus, fire would be eternal since it does not depend on having fuel. And conversely, fuel would be untouched by fire and thus never consumed, and so it too would last forever.

The double dependency of verse 9 is this: in order for fuel to be “fuel,” a fire must already exist. Thus, to claim that the fire is dependent upon fuel would be to claim that the fire exists dependently upon something that already presupposes the existence of the fire.

Verse 10 means that if entity A is dependent upon entity B for its existence, then establishing the existence of A establishes the existence of B – but to Nagarjuna, this makes entity B dependent upon entity A. So then, he asks, what is dependent upon what? This is true for both the idea of “establishing” and of “dependence.”

Examples amenable to this analysis include the relation of a pot to the clay that it is made of and the relation between a cloth and the threads that comprise it (v. 15) - for example, a clay pot is more than simply any old pile of clay molecules - it also has a particular structure. But the pot is not different from the clay material either. So, if we bifurcate the pot in our mind by our conceptualizations into two distinct entities - the clay and the pot – then we end up with the same sort of problems as with fire and fuel.
An Examination of Fire and Firewood

In the sutras, the Buddha explained:

When one’s hands, two sticks, and one’s effort of rubbing the sticks come together, From these conditions, fire arises, And after arising and performing its function, it quickly ceases.

But when the wise ones ask, “Where did it come from and where did it go?” They look in all directions, but never find any occurrence of its coming or going.

So it is with the aggregates, sources of consciousness, and potentials—

They do not exist inside and they do not exist outside; All are free of self-entity, And they do not abide anywhere.

The defining characteristic of phenomena is that they are of the essence of space.

WHEN OUR HANDS rub two sticks together, that produces a fire that will eventually cease, but this fire does not come from anywhere to the sticks when it first begins to burn them and it does not go anywhere when it goes out. Fire is empty of coming and going.

Similarly, ignorance, clinging to the belief in self, mental afflictions, and suffering do not come from anywhere and they do not go anywhere. We can apply this to the experience of dreams as well and see that whatever appears in dreams, whatever happiness or suffering, it does not come from anywhere and it does not go anywhere. In the very same way, all phenomena are empty of coming and going.

Nagarjuna composed this chapter in answer to those who did not accept his refutation of the self of the individual from the last chapter. These people claimed that the self exists in relation to the five aggregates in the same way that fire exists in relation to the wood that it burns, just as the fire is the burning agent and firewood is the object burned, so it is that the self is the appropriator and the aggregates are the objects that it appropriates. In order to help these people abandon their belief that the self was real, Nagarjuna therefore had to examine fire and firewood and demonstrate that they do not truly exist.

One way that Nagarjuna does this is by showing that two things like fire and firewood (in The term firewood here means wood that is actually being consumed by fire.) that must depend upon each other for their existence cannot truly exist. This is the topic of verse ten:

If something exists in dependence upon something else, But that thing upon which it depends Must also depend upon it,
Then which one of these exists in dependence upon which?

If fire and the wood that it burns truly exist, they have to exist either independently or dependently—there is no third alternative. The fire and the wood that it burns cannot exist independent of each other, however, because if they could, then fire could exist even in the absence of anything to burn, and burning wood could exist without any fire burning it. So the first possibility is eliminated.

The fire and firewood cannot actually exist dependently either. If they did, then one of the two would have to first exist and then serve as a cause to bring the other into existence. Neither fire nor the wood that it burns can fulfill that function, however, because each depends upon the other for its own existence. Fire can exist only if there is something burning, but that burning substance (the firewood) cannot exist unless there is some fire burning it! So even though the fire relies on the burning wood for its existence, the burning wood itself cannot exist first and then bring the fire into existence, because for it to exist there must be a fire burning it in the first place. Similarly, the fire cannot first exist and then serve as a supporting cause to bring the burning wood into existence, because the fire itself cannot exist unless there is some wood burning in the first place. In his commentary, Mipham Rinpoche gives the example of two rocking boats—since neither boat is steady to begin with, it is impossible for either one to be the cause of steadying the other. Similarly, when one thing must depend upon another for its existence, but that other one must in turn depend on the first for its own existence, in genuine reality it is impossible for either one to be the support for the other’s existence. Therefore, neither one of them truly exists—they are mere interdependent appearances.

Another way to prove that fire and firewood lack inherent existence is to examine the five possible ways that fire and firewood could exist in relation to one another, and see that in fact none of them are possible. This is what Nagarjuna does in verse fourteen:

The firewood itself is not the fire, There is no fire that exists apart from the firewood, The fire does not possess the firewood, The fire does not support the firewood, and the firewood does not support the fire.
Second, it is impossible for the fire and the firewood to be different things, because if they were, they would exist independent of each other. Fire could burn in the sky without burning anything at all, and wood would burn without any fire burning it.

The last three possibilities—that the fire possesses the firewood, that the fire supports the firewood, or that the firewood supports the fire—all depend upon the fire and firewood being different entities, because there have to be two different things in order for one to possess or support the other. Since fire and firewood cannot be different entities, however, these last three possibilities are also impossible.

Thus, all five relationships that fire and firewood could possibly have with each other are logically untenable, and therefore, fire and firewood do not truly exist.

The next step is to apply this analysis to the self, the appropriator, and the five aggregates that it appropriates. Then we can apply it to all other phenomena as well. Nagarjuna does this in verse fifteen:

*This examination of fire and firewood Refutes the self and the aggregates it appropriates in all five ways. Similarly, examining vases, blankets, and so forth, It is perfectly explained that none of them exist in any of these five ways.*

Just as fire and firewood cannot exist in relation to each other in any of the five possible ways, the same is true for the self and the aggregates it appropriates. The self is not the same as the aggregates, because it would be illogical for the appropriator and the objects it appropriates to be the same thing. Nor can the self be different from its aggregates, because the self cannot exist apart from the aggregates, which compose its body and mind, and these aggregates cannot exist apart from the self, for if they did they would be a body and mind that did not belong to anyone. The remaining three possibilities are all variants of the second one, so they too are logically untenable (fn For further explanation of why the self does not truly exist because it cannot exist as the same as or different from the five aggregates, see the first verse of chapter 18, “An Examination of Self and Phenomena.”).

If we go through the five possibilities one by one with regard to the aggregate of forms, we would say:

*The self is not forms,*  
*The self is not something different from forms,*  
*The self does not have or possess any forms,*  
*The self does not exist in dependence upon forms,*  
*And forms do not exist in dependence upon the self.*

If we connect this with the other four aggregates of feelings, discriminations, formations, and consciousnesses, then we have twenty-five different ways to analyze the selflessness of the individual. It would be very good for you to go through them on your own.

We should also apply the same analysis to vases, blankets, our own bodies, our possessions, friends, enemies, causes, results, and so forth. Whatever it is, it does not truly exist because it cannot exist in relation to the parts that compose it in any one of these five possible ways. Therefore, all composite things are only dependently existent mere appearances—just like fire and firewood, just like the self and the aggregates that compose it. All phenomena are therefore empty of self-nature—their defining characteristic is that they are of the essence of space.

What is it like for yogis and yoginis who directly realize this? Their realization brings them incredible power and freedom, as the Buddha taught in the King of Samadhi Sutra:

*Fire can blaze hot for hundreds of aeons  
But it will never be able to burn space.  
Similarly, fire will never be able to burn  
Those who know that phenomena are equivalent to space.*

When you dream and you know that you are dreaming, harmful things may appear, but they will not harm you. You can sit in the middle of a rushing river or in the middle of a blazing fire and not get hurt in the slightest way. Yogis and yoginis who directly realize the union of appearance and emptiness have this same experience during the day—the biographies of the great siddhas are filled with stories of how they performed such miraculous feats for the benefit of others. That they had such power was a direct result of their realization of emptiness, and the first step toward achieving that direct realization is to gain certainty in emptiness using our intelligence, our power of analysis. The reasonings Nagarjuna presents in his *Fundamental Wisdom of the Middle Way* help us to do that, and that is why they are so important.

PINGALA COMMENTARY

10/0 Question. Surely receiving and a recipient exist, like fire and fuel, the recipient being the fire, and what is received being the fuel, which is to say the five skandhas.

Reply. This is not so, and why? Because neither fire nor fuel can be established. Fire and fuel may either be established as one dharma or established as two dharmas, but neither can (in fact) be established.

(14b18) Question. Let us leave aside for now the unity or difference of (these) dharmas, for if you say that fire and fuel are nonexistent, how can you refute them by means of the characteristics of unity or difference? It is like a hare’s horns or a tortoise’s hair; being non-existent they cannot be refuted. We can see with our worldly eyes that things do exist, and we can subsequently examine them, just as there is metal, which can then be heated and forged. If there were no fire or fuel, we would not be able to examine them in terms of identity and difference. If you allow that there is unity and difference of dharmas, then you must recognize that fire and fuel exist, and if you allow that they exist, then this is to consider them as already existent.

Reply:

(14b24) In terms of conventional worldly expression, there would be no error, but whether one speaks of fire and fuel as one, or as different, they are not to be considered as (one) receiving (the other). Apart from conventional worldly expressions, there is nothing with which to argue. If we did not speak of fire and fuel, how could anything be refuted? If nothing is spoken about, then meanings cannot be clarified. Thus, if a commentator wishes to refute existence and non-existence, inevitably he has to speak of existence and non-existence. He takes up (the terms) existence and non-existence but does not thereby accept
existence and non-existence. He is following conventional worldly usage so there is no error involved. If putting words in one's mouth was at once to accept them, then for you to say 'destroy' would constitute self destruction. It is the same with 'fire' and 'fuel'. Although the expressions exist, these are not accepted either. Therefore we may consider whether fire and fuel are one dharma or different dharmas, and say that neither can be established, and why?

CANDRAKĪRTI COMMENTARY

[Chapter XI]

The initial alternative: identical or different

Some may object that what we have just stated, ‘Exactly like agent subject and his doing, neither the subject of appropriation nor the activity of appropriating exists in its own right’, does not make sense. This is because even dependent things are observed to be self-existent; fire (agni) is dependent on fuel (indhanam) yet it is not lacking self-existence, as heat and the capacity to burn something are directly experienced as its peculiar effects. In the same way fuel is dependent on fire, yet it is not lacking in self-existence because the four material elements are self-existent. Similarly the subject of appropriation, though dependent on what is appropriated, exists in his own right; and what is appropriated is dependent on the appropriator like fuel and fire. These two, appropriator and appropriated, exist as a pair.

We reply that this would be so if fire and fuel existed as such; but they do not. How is that? The thinking is that if fire and fuel exist they must be either identical with (ekatva) or different from (anyatva) one another. But Nagarjuna says that neither makes sense:

KALUPAHANA COMMENTARY

Chapter Ten Examination of Fire and Fuel (Agnindhana-pariksa)

GARFIELD COMMENTARY

Chapter X Examination of Fire and Fuel

This chapter, the only one in this set of chapters ostensibly addressing an external phenomenon, is in fact concerned entirely with a standard counterexample to the kind of arguments Nāgārjuna offered in the two previous chapters on subjectivity in action and in perception. Recall that in those discussions Nāgārjuna argues that subject and object cannot be intrinsically and distinctly identified as entities because of their mutual dependence. Buddhist schools asserting substantial identity in the context of dependent coorigination, such as Vaibhāsika and Sautrāntika schools, used the example of fire and fuel to demonstrate the compossibility of substantial independent identity and dependent origination, as well as the possibility of the one-way dependence relation that these schools assert that actions and perception bear to the self. Just as fire depends on fuel but not vice versa, they would argue, and just as fire and fuel have distinct identities despite the fact that the former depends for its existence on the latter, action and perception can depend on the subject but not vice versa. Despite this dependence, proponents of this view would argue each relatum can be individually established as an entity. (In 60. See Tsong Khapa’s comments on this verse (p. 219).) In this chapter, Nāgārjuna undertakes the task of demonstrating that the example does not demonstrate those possibilities. ...
Kārikā X.1

INADA (Skt):
Verse 1 - If wood is the same as fire, then likewise the doer and his deed will be identical. If fire is distinct from wood, then it will exist without wood.

JONES (Skt):
[1] If fire is the fuel, then the action and actor are one. If fire is other than the fuel, then fire would occur without the fuel.

KALUPAHANA (Skt):
If fire were to be fuel, then there would be identity of agent and action. If fire were to be different from fuel, then it would exist even without the fuel.

MCCAGNEY (Skt):
If fuel is fire, there is identity of agent and action. If fire is different from fuel, then it would surely exist without fuel.

NISHIJIMA (Skt?):
1. When what is called burning is actually fire,
And what has become into one, is oneness of a person, who ignites, and an effort to ignite itself.
What is different from burning is fire, Just leaving from burning, something, which is moving on, is going.

SPRUNG (Skt):
1 If fire is fuel that would be identity of agent and act.
If fire is wholly other than fuel then it could exist even without fuel.

STRENG (Skt):
1. If fire is identical to its kindling, then it is both producer and product. And if fire is different from kindling, then surely fire exists without kindling (i.e. separate).

ROBINSON (Skt):
If the fire is identical with the fuel, then there is oneness of agent and affectee. If the fire were different from the fuel, then the fire would exist even without the fuel.

BOCKING (Ch):
10v1 If fire is the same as fuel, Then the deed and the doer are one If fire is different from fuel Then fire would exist without fuel.

BATCHelor (Tb):
If firewood were fire, actor and act would be one. If fire were other than wood, it would occur even without wood.

DOCTOR (Tb):
If fuel were the same as fire, Then agent and object would be the same. If fire were different from fuel, Then it would burn even without it. [X.1]

GARFIELD (Tb):
1. If fuel were fire Then agent and action would be one. If fire were different from fuel, Then it could arise without fuel.

GARFIELD-SAMTEN (Tb):
1. If fuel were fire, Agent and object would be one. If fire were different from fuel, Then it could arise without fuel.

HAGEN (paraphrase):
If fire were to be fuel, then there would be identity of agent and action. If fire were to be different from fuel, then it would exist even without the fuel.
PINGALA COMMENTARY

10/1 'Fire' is the flames, 'fuel' is the firewood. 'The doer' is the person, 'the deed' is the act. If fire and fuel are one, then doer and deed also should and deed are one, then the potter and his pot being the potter and the deed being the pot is not the pot and the pot is not the potter, regarded as one? Therefore, because the doer not one, fuel and fire are also not one. If doer are one, the doer (but) the potter so how can they be and the deed are (14c10) If you say that, oneness being impossible, they must be different, this too is incorrect, and why? If fire and fuel are different, then there should be fires which exist quite separately from fuel. If we distinguish this thing as a fire and that thing as fuel, then everywhere there would be fires without fuel, but in reality this does not happen, and consequently, they cannot be different.

Further.

CANDRAKĪRTI COMMENTARY

In this argument fuel is what is ignited and consists of wood and such things which are to be burned. That which burns the fuel is the agent, fire. If one thinks that the fuel itself is the fire then agent and act would be identical. But things are not taken this way because the untenable consequence would be the identity of the pot and the potter and of the woodcutter and the wood, and because this is not commonly found to be so. On the other hand it is no better if they are wholly other (anyatva). If fire were wholly other than fuel then we would directly perceive fire as being independent of fuel. There is no cloth, wholly other than a pot, which is not seen to be independent of it. But fire is not independent of fuel in this way and so this does not make sense. Furthermore, if fire were wholly other than fuel then

KALUPAHANA COMMENTARY

Chapter IX, as pointed out, was devoted to an examination of the cause or foundation of the speculations that eventually led to the belief in metaphysical notions such as "self" (atman) or "substance" (svabhava). Such speculations per-mined to the "past" (purva). Why should that analysis be followed by an examination of the metaphor of "fire and fuel" (agnindhana)? What is its relevance?

Only a glance at the controversies going on during Nagarjuna's day can provide justification for this chapter. Once again, Vasubandhu comes to our assistance. In his Abhidharmakosa-bhasya, he was recording a controversy among the Buddhists that was continued for centuries before him. And that controversy could not have escaped the attention of Nagarjuna.

The ninth chapter of the Abhidharmakosa is an appendix (Akb p; translated into English by T. I. Stcherbatsky, The Soul Theory of the Buddhists, in the Bulletin de l'Academie des Sciences de Russie, Petrograd, 1920, reprinted 1970, Bharatiya Vidya Prakasan, Varanasi). It deals with the controversial views of the Vatsiputriyas (considered to be the same as the Arya-Sammitiyas, see Sakv) who propounded the view that there is a "real person" (santam pudgalam). In the discussion that follows, the Vatsiputriyas are made to admit that this "person" is neither a substance (dravya), like material form (rupa), etc., nor a mere designation (prajnapti), a mere name like "milk" (ksira), this latter being nothing more than an aggregate of substances (dravya). When the Sautrantika Vasubandhu pressed his questions as to whether the person is real or nominal, the Vatsiputriyas fell back upon the metaphor of "fire and fuel" (agnindhana) in order to illustrate their point of aview (Akb). This metaphor is then discussed at length and seems to have been the most important means by which the Vatsiputriyas attempted to justify their conception of a "person."

Therefore, it is understandable why Nagarjuna, after dealing with the question regarding a substantial agent (karaka, Chapter VIII) and also the motivation for such a theory (namely, the desire to trace one's identity to the past, purva, Chapter IX), would settle down to an examination of a singularly important metaphor used by the substantialists to justify their conception of an agent.

It may be necessary to keep in mind that Vasubandhu, who wrote the Abhidharmakosa, was a Sautrantika who believed that a "person" (pudgala) is a mere designation (prajnapti) without any reality. Hence his agreement with the nominalist position (Akb, atha prajnapth, vayam apy evam brumah). The substantialist position (dravya-vada) was therefore identified with the Sarvastivada view. Even though the Sarvastivadins did not actually propound a substantialist theory of a person, their conception of
substance (svabhava) could not escape such implications (see Sakv, svabhavata ity atmatah).

However, even if by implication, the Sarvastivada theory were to be identified with the substantialist view of a person (pudgala), what sort of conception were the Vatsiputriyas upholding? They were looking for a middle position between substantialism (dravya) and nominalism (prajnapti). The discussion in terms of the metaphor of “fire and fuel” was, therefore, intended to overcome such duality.

The argument follows thus: "Without fuel, there would be no designation of fire. Yet, fire cannot be designated as something different from fuel, nor as something identical," (Akb, Na hi vinendhananagnih prajnapyate, na canya indhanad agnih sakyate prajnapayitum napy ananyah). Similarly, a person is neither identical nor different from the aggregates. (If we are to accept the negative interpretation of the Nagarjunian dialectic, as is often presented by most modern scholars, the Madhyamika position would be no different from that of the Vatsiputriyas as described above.) When the question was raised as to which of the six sense organs provide knowledge of the "person," the Vatsiputriyas answered: "By means of all six," (sadbhir api, Akb). They argued: "A 'person' is recognized depending upon visually cognized material form (caksur-vijneyani rupani). As such a person should be declared as being visually cognizable and visually not cognizable; it is neither material form nor not material form."

These and other arguments seem to indicate that the Vatsiputriyas were following a dialectical method at arriving at a higher synthesis by avoiding the dichotomies of thesis and antithesis. This, unfortunately, is the view attributed to Nagarjuna. The contents of the present chapter needs to be carefully evaluated in the light of the Vatsiputriya conception of a person. When the Vatsiputriyas maintained that fire and fuel are neither identical nor different, they were actually admitting both. For them, both fire and fuel are each constituted of four substances (ubhayam astadharmakam), the only difference is that in the case of fire the heat element (usnam) predominates, whereas in the fuel it is latent. In this way, they are both identical or non-different. Yet they are different in terms of the difference in time (bhinnakalatvat). Thus, the negative description of the Vatsiputriyas is not meant as a negation of metaphysical views, as it was in the case of Nagarjuna (see above, commentary on the dedicatory verses), but an assertion of both identity and difference in order to arrive at a higher synthesis. No such move is found in Nagarjuna when he criticizes the identity of fire and fuel in the above verse. For him identity of fire and fuel means identity of agent and action. If they were different, then each could be independent.

GARFIELD COMMENTARY

1. (“Then it could arise without fuel” fn 61. The intended sense of “fuel” here is material that is actually burning - not, for instance, firewood neatly stacked outside.) The opponent does not want to assert the identity of fire and fuel, first, since it would contradict common sense, but second, since that, by the intended analogy, would identify agent and action, self and perception. On the other hand, if they are identified as intrinsically different - as having distinct and independent essential identities - they should be able to arise independently. Fuel should count as fuel even if there were no fire; fire should be possible without fuel. This follows from drawing the distinction at the level of intrinsic identity. Of course, distinguishing them conventionally permits their mutual dependence, but fails to establish the intrinsic identity intended by the reificationist.

10/2 If fire and fuel were different, then fires would burn permanently without depending on fuel. If they burned permanently they would be self-subsistent and not dependent on causes and conditions, and human effort would be in vain. But in fact, human effort may, by feeding a fire cause it to burn; this effect manifestly exists, and therefore we know that the fire is not different from the fuel. Moreover, if fire were different from fuel then fire would be ineffecutal, for what is burnt by a fire apart from its fuel? If this were so, fire would be ineffecutal, but no such thing as ineffecutal fire exists.

(14c22) Question: Why is it that, if fire arose independent of causes and conditions, human effort would also be in vain?

Reply:

CANDRAKĪRTI COMMENTARY

If fire is conceived of as existing independently (prthagbhuta) of fuel then it would burn forever; and it would not be caused by rekindling; it would be pointless to start it afresh. In such case it would be an act that did not act on anything.

Desiring to explain this very meaning Nagarjuna says

KALUHAHANA COMMENTARY

The identity of fire and fuel recognized by the Vatsiputriyas (as explained in terms of the eight elements, astadharmaka, see above) would lead to the view that both fire and fuel are burning all the time (nitya-pradipta), for the caloric element (usna) is found in both, the difference being quantitative rather than qualitative. This further leads to the denial of the empirical fact of starting a fire. If fire and fuel are always burning, then fire would be deprived of any specific function. Indeed, the Buddha's use of the metaphor of the fire at M 1.487 is non-substantialist in implication. He wanted to show that just as fire is not stored up anywhere when it is extinguished, even so a "freed one" (tathagata) does not exist in eternal bliss after death (param marana). Nagarjuna's criticism of the metaphor of "fire and fuel" seems to follow closely the Buddha's own explanation of the phenomenon of fire.

GARFIELD COMMENTARY

2. The second and third verses spell out the consequences of attributing inherent existence to fire: It would be independent of all conditions, including its fuel; it would burn causelessly, since there would be no condition under which it would not burn. So all fire would, in that case, be eternal. Moreover, it would not consume anything, having no connection to the presence or absence of fuel. Moreover, Nāgārjuna asserts in the final two lines of X: 3, the activity of starting a fire would be nonsensical:
Kārikā X.3

paratra nirapekṣatvād apradīpanahetukah
punarārampbhāvaitathāṃ nityadīptaḥ prasajyate [3]

rāṇ būtā kē rāṇ zē bū cóng yuán shēng
huō ruō chāng rān zhē rén gōng zē yīng kōng

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 3 - Being unrelated to an other, it (i.e. fire) will be something without a cause for burning. Moreover, it will follow that a constantly burning fire would have no purpose of starting (i.e. burning) again.

JONES (Skt):
[3] Because fire is not dependent upon another thing, it would exist without being lit; and being eternally aflame, starting it would be rendered pointless.

KALUPAHANA (Skt):
A burning without a cause, because it is not contingent on another and, therefore, eternally aflame, would imply the meaninglessness of its commencement.

MCCAGNEY (Skt):
Igniting without a cause is independent from the sequel. But thus the beginning is without purpose and a pennant burning follows.

NISHIJIMA (Skt?):
3. In future, when we have left even having any kind of desire, It might be reasonable that there might be no light. In that situations also again, losing the aim will begin, And the native brightness will be occupied.

SPRUNG (Skt):
3 Because it is unrelated to anything else it is not caused by bursting into flame; as it burns forever it follows that it is pointless to kindle it again.

STRENG (Skt):
3. Fire is without a cause, namely kindling, if it were independent of anything else; In which case another beginning would be pointless, and there is perpetual burning.
PINGALA COMMENTARY

10/3 If fire and fuel were different, then there would be fire independent of any fuel. If there were fire independent of fuel, then fire would not be a dharma dependent on a cause, and consequently it would not have arisen from causes and conditions. Moreover, if fire and fuel were different then there ought to be permanent fire, but if there were permanent fire we should see this fire, separate and apart from fuel, and without any need at all of human effort, and why?

CANDRAKĪRTI COMMENTARY

The thinking is that what actually flames is the fuel bursting into flame; bursting into flame is the ‘cause’ (hetu) of fire; that is what ‘caused by bursting into flame’ means. ‘Not caused by bursting into flame’ means that bursting into flame is not the cause of fire. If fire were something entirely different than bursting into flame then it would be independent of fuel. What is wholly other than something else is in fact seen to be independent of it, as cloth is other than a clay pot.

Therefore fire, being independent (nirapeksatva) of anything else, would not have bursting into flame as its cause. But if fire were dependent on bursting into flame it would go out if this failed. Yet if it were independent of ignition, not subject to the possibility of extinction, it would be alight forever. If fire burns forever then it would be pointless to try to prevent its extinction by fanning or blowing on the embers. In such case fire would be an agent without acting on anything (akarmaka). But no agent can be active if there is nothing for it to act on: the son of a barren woman does not exist. For this reason it is not tenable that fire is wholly other than fuel.

You may object that what was said earlier (kārikā 1) ‘If fire is wholly other than fuel then it could exist even without fuel’ does not make sense. The thought here is that if fire and fuel were wholly different fire could exist without fuel. But the object which is enveloped in flames is the fuel and its definition is ‘what is being burned’ and fire is directly perceived to be dependent on it. Now if this is correct then fuel must be defined in terms of a necessary connection with fire. Fire is, in our experience, seen to be dependent on fuel and not separate from it. It follows that your statement if fire is wholly other than fuel then it could exist even without fuel’ draws an absurd conclusion which is not appropriate.

Exposing the untenability of this line of thought Nagarjuna says

KALUPAHANA COMMENTARY

A substantialist view of fire makes it independent of other elements or things. Hence, all the implications mentioned at X.2 will follow from such a view.
Kārikā X.4

**ENGLISH TRANSLATIONS**

**INADA (Skt):**
Verse 4 - Thus, if it is granted that there is wood in the burning (process) and that only wood is burning, then by what means will it burn?

**JONES (Skt):**
[4] Because this is so, if you now say “What is currently burning is the fuel,” then by what is the fuel being burned?

**KALUPAHANA (Skt):**
Herein, if it is assumed that fuel is the present burning and, therefore, that [i.e., burning] is merely this [i.e., fuel], by what is fuel being burnt?

**MCCAGNEY (Skt):**
In that case, therefore, if “the fuel is presently being ignited,” by what means other than the fuel is that by which this is here so much as [ignited]?

**NISHIJIMA (Skt?):**
4. Then it might be just the state of being burnt, And the situation of being burnt exists like that. And when we think why fuel is so much burnt, We can say only that the big volume of burning has appeared actually just at that time.

**SPRUNG (Skt):**
4 If fuel is what bursts into flame, what will ignite the fuel as that is its essential nature. (In Lattavannmatram. That is, fuel is what is already alight.)

**STRENG (Skt):**
4. If it is maintained: Kindling is that which is being kindled, By what is kindling kindled, since kindling is only that kindling? It is inherent existence that would make extinguishing /liberation impossible
PINGALA COMMENTARY

10/4 If you say that what was previously firewood is (only) called fuel; when it is burning, this is not correct. But if fuel exists separately apart from fire, how can you say that when it is afire it is (still) to be regarded as fuel?

Further.

CANDRAKĪRTI COMMENTARY

If you think that fuel is what is enveloped in flames and is defined as ‘what is burning’ and that fire is based on that; if you speculate thus it is not logically possible to say that fire burns fuel because ‘what will ignite the fuel as that is its essential nature’ (fn 1 i.e. if fire burns only fuel that is already ignited, what ignites the fuel initially?).

If one imagines, as is usual, that ‘fire burns fuel’ then fuel is what is being burned, enveloped in flames. But we never experience a fire entirely separate and distinct by which the fuel is burned; as fuel is of such a nature as to be perceived directly as enveloped in flames and nothing but what is being burned. If then fire is not separate, what is it that will burn the fuel?

The expression ‘as that is its essential nature’ means to be nothing but what is in flames. Fire does not therefore burn fuel because a fire which is separate (vyatirikta) from fuel does not exist. If this is so then how would the idea of something being enveloped in flames not trouble you for the same reason?

The problem of interaction

Further, if we assume the complete otherness (anyatva) of fire and fuel, what is usually called ‘burning’ does not exist. How can fuel be burning and how will fire burn fuel? Nagarjuna expounds this saying

KALUPAHANA COMMENTARY

The substantialist point of view expressed at X.2 is further analysed here. If fuel already has the caloric element (usna) and, therefore, is already burning (idhyamana), one could not only raise the question as to when it started burning but also inquire as to what it is that brings about that burning.

GARFIELD COMMENTARY

4. Nāgārjuna now sets up a destructive dilemma: Either the process of burning is identical to the fuel or different. In X: 4, he considers the possibility that they are identical. If so, he suggests, we have a problem in explaining how the fuel is consumed. The ordinary explanation of that is the presence of fire. But by identifying the burning process with the fuel, we have left the fire out of the picture. This analysis hence provides no explanation of combustion. After all, fuel by itself does not burn. It must be ignited, that is, fire must be introduced. If, as Nāgārjuna argues in X: 5, they are completely different, there won’t be any fire at all. For then the burning would be dissociated from and independent of the fuel, and the unburned fuel would not be consumed by the burning. We could make no sense of the transition from unburned to burned fuel. The general moral is that we cannot make sense of interactive processes such as combustion without attending to the mutual dependence of the interacting phenomena that constitute those processes:

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 5 - A different thing (i.e., fire distinguished from wood)
is never effected and a non-effected thing will never burn.
And, in turn, a non-burning thing will never extinguish itself while a non-extinguishing thing, having its own characteristics, will continue to endure itself.

JONES (Skt):
[5] If fuel and fire are different, fuel is not yet reached by the fire, and what is not reached will not burn. Not being burned, the fuel will not cease, and not ceasing, it continues to maintain its own characteristics forever.

KALUPAHANA (Skt):
[Fuel] that is different is not reached; the unreached is not ignited. Furthermore, that which is not ignited does not cease. That which does not cease remains, like one that has its own mark.

MCCAGNEY (Skt):
If it is not fuel that is not reached by what is other than fuel, the unburnable will not burn.
Preserving the likeness of its own nature [permanent burning] will not be maintained by the nonextinction of the extinguished.

NISHIJIMA (Skt?):
5. As a different problem, something, which cannot be accomplished, can be possible a job, which can never be accomplished even in future.
Something, which can never be destroyed, might be also impossible to be destroyed even in future.
Something, which can never become balanced or serene, will be impossible to become balanced or serene even in future.
And a grammatical gender of each thing, which will maintain its gender, will also never change its grammatical gender without fail in future.

SPRUNG (Skt):
5 Fire, being wholly other than fuel, cannot interact with it; not interacting it cannot burn; what does not burn cannot go out; and, not going out, it will persist in its own nature.

STRENG (Skt):
5. Fire, when different and not obtained through kindling, will not obtain; not burning, it will not burn later; Without extinction, it will not be extinguished; if there is no extinction, then it will remain with its own characteristics.

WESTERHOFF (Skt):
X.5 [Fuel] which is different [from fire] is not reached; unreached it does not burn; moreover, not burning it will not be blown out. Not blown out it will continue to blaze, like something having a property essentially.

BOCKING (Ch):
10v5 If different, there would be no contact
And without contact there would be no burning.
Without burning there would be no extinguishing.
And with no extinguishing there would be permanence.

BATCHelor (Tb):
Because [fire] is other, it would not connect; if it did not connect, it would not ignite; if it did not ignite, it would not die; if it did not die, it would also remain in possession of its own characteristic.

DOCTOR (Tb):
If they are distinct, they do not touch;
If they do not touch, nothing is burned;
If nothing is burned, nothing dies out;
If nothing dies out, it will remain with its mark. [X.5]

GARFIELD (Tb):
5. If they are different, and if one not yet connected isn't connected,
The not yet burned will not be burned.
They will not cease. If they do not cease
Then it will persist with its own characteristic.

GARFIELD-SAMTEN (Tb):
5. Because of difference, they do not touch. If they do not touch,
It will not be burned. If it is not burned,
It will not be extinguished. If it is not extinguished,
It will endure with its own identity as well.
HAGEN (paraphrase):
[Fuel] that is different is not reached; the unreached is not ignited. Furthermore, that which is not ignited does not cease. That which does not cease remains, like one that has its own mark.

PINGALA COMMENTARY

10/5 If fire were different from fuel then fire would never come into contact with fuel, and why? Because they would not be established interdependently. But fire, if not established by interdependence, would be self-subsistent, and then what use would it have for fuel? Therefore, there would be no contact, but without contact there would be no fire and fuel. Why is this? Because there is nothing which can burn without contact. If there is no burning, there will be no extinguishing, which would mean permanence and own-mark, and this is not correct. Question:

CANDRAKĪRTI COMMENTARY

If fire were wholly other than fuel it could never, because of this otherness, interact (fn 2 Prapsyate, ‘be affected by’, or literally, ‘reached by’. The problem of prapti, how one entity can have an essential relationship to another, is endemic to the Buddhist doctrine of separate reals (dharmas).) with fuel as it can never interact with darkness, nor will it burn fuel because it has not acted upon fuel. It is as if it were situated in a remote region. That is why it is simply not logically possible to say ‘fuel bursts into flames’. It follows that fire cannot be extinguished and being unextinguished it would enjoy its own specific nature, that is, it will remain alight. The word ‘and’ in the kārikā offers alternative possibilities. It may mean either-or, that is, either that fire will persist in its own nature or that there is no difference in this respect between fire and fuel. It may mean conjunction, that is, that fire, wholly other, neither interacts, nor burns, nor goes out and persists in its own essential nature. It is therefore untenable that fire is wholly other than fuel.

Though other, fire and fuel are not independent of each other

You may object that it does not make sense to say that the otherness of fire and fuel is untenable because ‘fire cannot interact with fuel; not interacting it cannot burn; what does not burn . . .’. It is, after all, common experience that a man and a woman, though different, do interact with one another. In the same way there can be interaction of fire and fuel.

We reply

KALUPAHANA COMMENTARY

If it is assumed that fire and fuel are different, a further series of questions arise. Difference in the present case implies absolute distinction or independence. As such, one entity cannot reach up to another. Fire cannot reach the fuel. When fire cannot reach the fuel, it cannot burn. That which does not burn remains for ever and does not cease. This explains the vicious circle the metaphysical speculations can lead to.
any evendhanād agnir indhanaṃ prāpnuyād yadi |

**Kārikā X.6**

**ENGLISH TRANSLATIONS**

INADA (Skt):
Verse 6 - (The opponent contends) If fire which is distinct from wood should unite with wood, it would be like a woman uniting with a man and, vice versa, a man uniting with a woman. - Note: Kumarajiva translates this union as between this person and that person but the Sanskrit definitely refers to a man and a woman. Both, however, carry the meaning across. At any rate, this opposition must never be confused with the union of husband and wife which are inseparable or correlative concepts.

JONES (Skt):
[Objection:6] If fire is other than fuel, then it could connect to the fuel, just as a woman connects to the man or a man to a woman.

KALUPAHANA (Skt):
If fire is different from fuel it would reach the fuel, just as a woman would reach for a man and a man for a woman.

MCCAGNEY (Skt):
If fire is different from fuel, it would reach for fuel, just as a woman reaches for a man and a man for a woman.

NISHIJIMA (Skt?):
6. As another example, in a case that fire has left from burning, Burning has strongly hoped to meet with fire again, And the female (burning) has arrived at the male (fire) perfectly, And so in such a situation, the male (fire) is very familiar to the female (burning) at that time.

SPRUNG (Skt):
6 Fire, though wholly other than fuel, would interact with fuel if it were as it is with the woman interacting with the man and the man with the woman.

STRENG (Skt):
6. The opponent claims: If fire is different from kindling it could obtain the kindling As a woman obtains a husband, and a man obtains a wife.

BOCKING (Ch):
10v6 Fire may be different from fuel
Yet it can come together with fuel
Just as this person comes together with that person, And that other comes together with this person.

BATCHelor (Tb):
Just as a woman connects with a man and a man too with a woman, although fire is other than wood, it is fit to connect with wood.

DOCTOR (Tb):
Just as a woman touches a man And a man touches a woman, Fire can be different from fuel, And yet still touch it. [X.6]

GARFIELD (Tb):
6. Just as a man and a woman Connect to one another as man and woman, So if fire were different from fuel, Fire and fuel would have to be fit for connection.

GARFIELD-SAMTEN (Tb):
6. Just as a man touches a woman And a woman touches a man, So if fire were different from fuel, Fire and fuel would have to be suited to touch.

HAGEN (paraphrase):
If fire is different from fuel it would reach the fuel, just as a woman would reach for a man and a man for a woman.
Pingala Commentary

10/6 Fire might be different from fuel, yet it could come in contact with fuel, just as a man comes together with a woman, and a woman comes together with a man.

Candrakīrti Commentary

This would be so if fire and fuel existed independently of each other as man and woman do. But Nagarjuna says they do not:

Kalupahana Commentary

If fire and fuel were considered to be different yet complementary, then Nagarjuna is willing to allow some sort of mutual relationship. He perceives such a relationship between a man and a woman. Unfortunately, here again we have a negative interpretation from Candrakīrti. Without taking much trouble to examine the import of the metaphor of "man and woman" used by Nagarjuna, Candrakīrti assumes that the relationship exemplified by it is meaningless (drstanta-vaiyarthyam). On the contrary, Nagarjuna is throwing the gauntlet at his opponent asking him to show that the sort of relationship that exists between a man and a woman can also be obtained between fire and fuel as the opponent has conceived of them.

Indeed, there could not be much difficulty in understanding the empirical relationship between a man and a woman. Because of their complementarity, they are attracted to each other. Such a relationship is clearly expressed by the Buddha in the fast two discourses in the Anguttara-nikaya (1.1-2). Yet the Buddha never attempted to go beyond that empirical relationship to inquire as to how it all happened. Such an inquiry was undoubtedly the foundation of the speculations recorded in the Upanisads. Describing the origin of the universe from a single unitary "self" (atman), the Brhadaranyaka Upanisad (1.4.3-4) says:

He, verily, had no delight. Therefore he who is alone has no delight. He desired a second. He became as large as a woman and a man in close embrace. He caused that self to fall into two parts. From that arose husband and wife. . . . He became united with her. From that human beings were produced.

She thought, "How can he unite with me after having produced me from himself?" Well, let me hide myself. She became a cow, the other became a bull and was united with her and from that cows were born. . . . Thus, indeed, he produced everything whatever exists in pairs, down to the ants. This is the sort of answer that emerges from an inquiry that is not only directed at understanding the absolute origin of things, but also their substantiality. The metaphor of the fire and fuel were utilized by the Vatsiputriyas, not merely to understand the relationship between two empirical events, but also to justify the conception of a prior existent "person" (pudgala), no different from the pre-existent "self" (atman) assumed in the Upanisads, which is clearly expressed in the metaphor of "man and woman."

Perceptive Nagarjuna was thus aware of the motivations of those who presented the metaphor. In the present verse he was therefore allowing the possibility of fire and fuel having a complementary relationship. However, if any other implication is drawn from such a relationship, Nagarjuna was ready to expose its untenability. This he does in the verses that follow.

Garfield Commentary

6. Here the opponent suggests that just as males and females are suited to connect in special ways in virtue of their particular anatomical structures, despite existing independently of one another, fire and fuel may be similarly suited to some special kind of connection. In that case, we would have the bizarre picture of fire being independent of fuel, yet peculiarly suited to coming together with it, and vice versa. (fn 62. See also Kalupahana (1986), p. 199.) Moreover, since on this model fire and fuel are distinct from one another in nature, yet interactive (they “preclude” each other in the sense that causes and effects preclude one another - that is, in virtue of being connected yet incapable of simultaneous copresence), there must still be some account of how they connect, an account by no means easy to envisage.
Kārikā X.7

anyā evendhanādagnir indhanam kāmam āpnuyāt |
agnīndhane yadi syātām anyo’nyena tiraskṛte ||7||
ruò wèi rán kě rán èr jù:jù xiàng;xiāng lí zhě
rú shì rán zé néng zhi yū;yū;wū bì kě rán

INADA (Skt):
Verse 7 (Nagarjuna asserts) Fire which is distinct from wood will unite with the latter freely as you contend, if and only if, the two have mutually distinct existences.

JONES (Skt):
[Reply:7] Fire that indeed is different from fuel could connect with the fuel, if fire and fuel existed separately.

KALUPAHANA (Skt):
The fire that is different from fuel may reach the fuel only if fire and fuel were to exist mutually separated.

MCCAGNEY (Skt):
Fire is different from fuel for fuel would be reached only if a separation of one from the other would exist in fire and fuel.

NISHIJIMA (Skt?):
7. In another case, fire has left burning absolutely, And burning has begun to get everything as far as burning likes to get it.
In the case when fire and burning have been fused into one completely, Aha! It might be possible that fire and burning have enter into the common state, where it might be possible that both fire and burning do not notice with each other at all.

SPRUNG (Skt):
7 Fire, though wholly other than fuel, would interact with fuel naturally if fire and fuel existed in isolation from each other.

STRENG (Skt):
7. Nāgarjuna answers: Though fire is different from kindling, it could indeed obtain the kindling, On the condition that both fire and kindling can be reciprocally differentiated —but, this is impossible.
PINGALA COMMENTARY

10/7 If there were fuel separate from fire, and fire separate from fuel, and each was established individually, there could be fire coming in contact with fuel; but in reality this is not so, and why? Because there is no fuel apart from fire, and no fire apart from fuel. But there are women apart from men, and men apart from women, and for this reason your illustration is not right. Since your example does not succeed, fire does not contact fuel.

Question: Fire and fuel are interdependent yet existent. Fire exists on account of fuel, and fuel exists on account of fire. The two dharmas are established interdependently.

Reply:

CANDRAKĪRTI COMMENTARY

It is, however, not possible that fire exist independently (nirapeksa) of fuel and fuel independently of fire. The example given is therefore invalid. The example adduced must be valid for such beings as, even though wholly other, are inherently dependent on one another, and between whom alone interaction could take place (in 3 i.e. fire and fuel). Such are not, however, possible; your statement ‘though different they do interact with one another’ is not tenable.

You may object that, even though fire and fuel do not exist in reciprocal independence as man and woman do, none the less there is at least reciprocal dependence. Therefore both fire and fuel, because of their reciprocal dependence, do have a nature of their own. After all, reciprocal dependence is never empirically observed between a non-existent son and daughter of a barren woman.

Fire and fuel as reciprocally dependent

We reply that this too is untenable.

KALUPAHANA COMMENTARY

Here again, Nagarjuna is qualifying the sort of relationship that may obtain between fire and fuel if they are attracted to one another. One of the first conditions would be that they are separate. Without such separation it would be meaningless to speak of one reaching for the other. It is an attempt to destroy the belief in a mysterious underlying unity, any substantial connection. Nagarjuna is willing to allow for the empirical differences and the relationship of dependence among such events. However, he is not prepared to leave any room for any speculation about underlying substances (svabhava).

7. Fire and fuel hence appear to be mutually dependent. Indeed the central point of Nāgārjuna’s argument is that they are. But here the question arises: Don’t they then have either to depend upon some third more fundamental thing or to be asymmetrically dependent, one of them established independently of the other?

GARFIELD COMMENTARY
**ENGLISH TRANSLATIONS**

**INADA (Skt):**
Verse 8 - If fire is dependent on wood and wood on fire, then each one must have had a prior completed state and to which the other depends.

**JONES (Skt):**
[8] If fire depends upon fuel, and if fuel depends upon lire, which is established first so that fire could be dependent upon fuel?

**KALUPAHANA (Skt):**
If fire is contingent upon fuel and fuel upon fire, which of them is preaccomplished so that fire could be contingent upon fuel?

**MCCAGNEY (Skt):**
If fire is dependent on fuel, and fuel is dependent on fire which is descended from which so that fire and fuel are dependent?

**NISHIJIMA (Skt?):**
8. Just at the time, when burning has been recognized as fire, What has been accepted as fire must be just as burning. Before the time, when fire or burning can manifest itself as fire or burning, What is recognized as fire must be inevitably exists as burning.

**SPRUNG (Skt):**
8 If fire is dependent on fuel and fuel is dependent on fire, which of the two arises prior, that on which fire is dependent or that on which fuel is dependent?

**STRENG (Skt):**
8. If the fire is dependent on the kindling, and if the kindling is dependent on the fire Which is attained first, dependent on which they are fire and kindling?

**BOCKING (Ch):**
10v8 If fire exists because of fuel And fuel exists because of fire, Then what fixed dharma pre-existed That there should be fire and fuel?

**BATCHelor (Tb):**
If fire were dependent on wood and wood were dependent on fire, of what becomes fire and wood dependently, which would be established first?

**DOCTOR (Tb):**
If fire depends on fuel And fuel depends on fire, Of fire and fuel, the two dependents, Which is established first? [X.8]

**GARFIELD (Tb):**
8. If fire depends on fuel, And fuel depends on fire, On what are fire and fuel established as dependent? Which one is established first?

**GARFIELD-SAMTEN (Tb):**
8. If fire exists in dependence on fuel, And fuel exists in dependence on fire, Depending on what do fire and fuel exist? Which one exists first?

**HAGEN (paraphrase):**
If fire is contingent upon fuel and fuel upon fire, which of them is preaccomplished so that fire could be contingent upon fuel?
PINGALA COMMENTARY

10/8 If fire is established because of fuel, then fuel too should be established on account of fire. In this case, if a fixed (entity) of fuel existed first, then fire would be established on account of the fuel. If a fixed (entity) ‘fire’ existed first then fuel would be established on account of the fire. Now, if fire is established on account of fuel, this means that first there is fuel, and subsequently there is fire, but then the fuel must have existed independently of the fire a What? Because the fuel came first, and the fire afterwards. If the fire was not burning the fuel, then the fuel would not be established (as fuel). The same goes for fuel, since it is not found anywhere apart from with fire. If fuel is not established then neither is fire. If (you say that) fire comes first and the fuel exists afterwards, then there is the same error as with fire. Therefore, neither fire nor fuel is established.

Further.

CANDRAKĪRTI COMMENTARY

Fire is what burns fuel, it is the ‘agent’ (karta). If fire is defined as dependent on fuel, that is, if this very fuel is the ‘object’ (karma) of fire what fire acts upon and so if fuel is in this way dependent on fire, which of these two arises prior? Would it be fuel on which fire depends? Or would it be fire on which fuel depends? It would be absurd to think that fuel exists prior because there can be no fuel for a fire which is independent of it and which is burning nothing; and because it would follow that grass and absolutely everything would be fuel. On the other hand if one thinks that fire exists prior and fuel subsequently that too would be absurd because it is impossible for fire to exist prior to fuel because this would entail fire being without a material basis, and because dependence on what is subsequent is meaningless. There is therefore no prior existence of either in dependence on which the other could base its existence.

If you still think that fuel is prior and fire subsequent there is this further thought:

KALUPAHANA COMMENTARY

The motivation of the substantialists who were utilizing the metaphors of “fire and fuel” (agnīndhana) as well as “woman and man” (stri-purusa), as explained at X.6, are brought to the forefront here. Let fire and fuel be related by way of contingency (apeksa). Nagarjuna has no objection to it and this is clearly indicated by the manner in which Candrakīrti himself utilizes this particular conception of contingency on numerous occasions. In the present case, Nagarjuna is not rejecting the mutual contingency (parasparapeksa) of phenomena, but only the inquiry relating to the preaccomplishment or prior existence (purva-nispanna) of any one of them. Chapter IX made it abundantly clear that speculations regarding the prior entity led to most metaphysical speculations. Having raised the question as to which one of these two things-fire and fuel-is prior, a question that a substantialist cannot resist asking, Nagarjuna proceeds to analyse the possible answers and explain their unsatisfactory implications.

GARFIELD COMMENTARY

8. If either is established as an entity first, without any reliance on the existence or nature of the other, that member of the pair would have a claim to being the basis in an asymmetrical dependency relation, and the opponent would have the counterexample necessary to refute the analysis in Chapters VIII and IX. The most obvious form that such an asymmetric dependence could take would involve the dependence of fire on fuel. Nāgārjuna argues that this is impossible to maintain:
INADA (Skt):
Verse 9 - If fire is dependent on wood then an already existing fire will again be effectuating itself. If that is so then wood also will exist without fire.

JONES (Skt):
[91 II' fire depends upon fuel, then a fire that is already established would be established, and the fuel would exist without the fire.

KALUPAHANA (Skt):
If fire were to be contingent upon fuel, there would be proof of fire that is already proved [to exist]. When that is the case, even fuel would exist without fire.

MCCAGNEY (Skt):
If fire is dependent on fire’s fuel, the establishment of proof will thus be the existence of fuel where there is no fire.

NISHIJIMA (Skt?):
9. When burning has been considered as fire, Everything, which has been accomplished with fire, can be accepted that the products have been accomplished by fire without fail.
But at the same time, even though there were actually existence of fire, The usage of fire has been cut off and hasn’t been used actually, even though the keeping fire were so clear.

SPRUNG (Skt):
9 If fire depends on fuel, the existence of fire is presupposed. This being so fuel will exist as fuel without relation to fire.

STRENG (Skt):
9. If fire is dependent on kindling, so is the proof of the proved fire. Thus, being kindling it will exist without fire.

BOCKING (Ch):
10v9 If fire exists on account of fuel, Then fire already established is established again.
If it were in the fuel It would be non-existent fire.

BATCHelor (Tb):
If fire were dependent on wood, [already] established fire would be established [again]. Firewood also would be [such] even without fire.

DOCTOR (Tb):
If fire depended on fuel, An established fire would be reestablished, And fuel would end up Existing without fire. [X.9]

GARFIELD (Tb):
9. If fire depends on fuel, It would be the establishment of an established fire. And the fuel could be fuel Without any fire.

GARFIELD-SAMTEN (Tb):
9. If fire exists in dependence on fuel, It would be the establishment of an established fire, And the fuel would also exist Without there being any fire.

HAGEN (paraphrase):
If fire were to be contingent upon fuel, there would be proof of fire that is already proved [to exist]. When that is the case, even fuel would exist without fire.
PINGALA COMMENTARY

10/9 If you want to say that fire is established on account of fuel, then an already-established fire is being established again, and why? Fire abides as itself in fire. If you say that fire is not self-subsistent, but is established from fuel, no such thing exists. Therefore, if fire is established from fuel, then the fire, having been established, would be again established, and there errors like this. Moreover, there is the error of fuel which exists while fire does not exist. Why is this? Because fuel would be self-subsistent and separate from fire. Therefore, it is not—the case that fuel and fire are mutually interdependent.

Further.

CANDRAKĪRTI COMMENTARY

9ab If fire depends on fuel, the existence of fire is presupposed.

If it is supposed that fire is dependent on fuel this would be to establish the existence of an already existing fire. The dependence of an existing thing of established nature makes sense; but a non-existent Devadatta cannot be dependent on anything in his home. So if there were no existing fire, fuel could not be dependent on it. The existence of fire is thus presupposed. What then is achieved by a second dependence on fuel? As an existing fire is not re-lighted by fuel its dependence on fuel would be totally meaningless. In sum, it does not make sense to say that fire is dependent on fuel.

If one supposes that fire is dependent on fuel there is a further point:

9cd This being so fuel will exist as fuel without relation to fire.

If fuel did not exist fire could not be related to it because of the impossibility of relation to the non-existent. Then the existence of fuel unrelated to fire must be posited; but this cannot be the case and is untenable.

You may offer this possibility: Fire comes into existence simultaneously (yaugapadya) with the coming into existence of fuel and fuel comes into existence simultaneously with the coming into existence of fire. Because the priorness of neither is presupposed, what was asked does not make sense, namely ‘which of the two arises first, that on which fire is dependent or that on which fuel is dependent?’ We reply. Even if one attempts to think in this way neither can be established. Because:

KALUPAHANA COMMENTARY

Frustrating any attempt on the part of the substantialist, Nagarjuna insists that if fuel were to be the prior entity (purva-nispanna), and that fire is contingent upon it, then what is to be established is already established. In other words, the substantialist interpretations of contingency (parasparapeksa) would mean that fire is already existent in the fuel, which is itself the prior entity. If it is already existent in the fuel, then the implication is that it will need no fuel for its real existence. If so, fire and fuel could not be mutually contingent and one can conceive of fuel without fire (nir-agnikam).

GARFIELD COMMENTARY

9. There are two arguments here. In the first two lines, Nāgārjuna argues that if fire were to depend upon fuel, fire would be doubly established. The point is that in order for the fuel to count as fuel, the existence of the fire must have already been established; indeed, the fuel depends upon the fire for its character as fuel. So to say then that the fire is dependent upon the fuel would be to argue that something whose existence is already presupposed if the fuel is to exist depends for its existence on that fuel. Note that this is only problematic for the opponent. That is, for one who accepts, as Nāgārjuna does, the mutual interdependence of phenomena, it is in fact true that fire depends upon fuel and that fuel depends upon fire. But the opponent at this stage in the argument argues that fire exists only dependently, but dependently on independent fuel. So Nāgārjuna only needs to show that position to be untenable. And the problem for the opponent is simply that the fuel he wants to exist independently can only do so in the presence of fire, which itself is merely dependent.

Second, Nāgārjuna argues, this would entail the absurd independent establishment of fuel as fuel. For fuel to be established independently as fuel in the absence of fire would be for there to be some characteristic of fuel that could be specified independently of fire that makes it fuel. But there is none. What makes fuel fuel is that it is combustible.

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 10 - If an entity depends on another entity in order to manifest itself, the latter will also depend on the former for its manifestation. If what is to be dependent on for manifestation already exists, then (the question is) what depends on what?

JONES (Skt):
[10] When an entity is established by being dependent upon another entity, then its existence establishes that other entity. If that upon which the entity depends has yet to be established, what is dependent upon what?

KALUPAHANA (Skt):
(not translated)

MCCAGNEY (Skt):
What demonstrates the dependence demonstrated by the dependence of which being?

If what is to be depended upon is what has demonstrated that which is dependent on which?

NISHIJIMA (Skt?):
10. What has been produced as it was expected, is existence, and how is it possible that what is actually not accomplished, can be seen as if it were accomplished?
And when what has been just expected, were realized, What are the accomplished, and what is the expected?

SPRUNG (Skt):
10 One thing is established as dependent on the very thing which is dependent on it. If what is to be dependent is posited as already existing, which depends on which?

STRENG (Skt):
10. When a thing (bhava) is proved by being dependent on something else, then it proves the other by being dependent on it. If that which is required for dependence must be proved, then what is dependent on what?

BOCKING (Ch):
10v10 When a dharma is established by dependence, This dharma in return establishes dependence Now, where there is no dependence, There will be no dharmas established either.

BATCHelor (Tb):
If a thing (A) is established dependently (on B), [but] if what it depends upon (B) is established also in dependence on that very thing (A), what would be established in dependence on what?

DOCTOR (Tb):
If an entity is established in dependence, And is itself depended on By that upon which it depends, What is established in dependence on what? [X.10]

GARFIELD (Tb):
10. If that on which an entity depends Is established on the basis Of the entity depending on it, What is established in dependence on what?

GARFIELD-SAMTEN (Tb):
10. If an entity that depends on another Exists in dependence on That on which it depends, What exists in dependence on what?

HAGEN (paraphrase):
(not translated)

GOLDFIELD (Tb):
If something exists in dependence upon something else, But that thing upon which it depends Must also depend upon it, Then which one of these exists in dependence upon which?

(10)
PINGALA COMMENTARY

10/10 When a dharma is established through dependence, this dharma in return establishes the original (dharma) on which it depends. Thus, these are not two fixed entities. It is like fire being established on account of fuel, while in return the fuel is established on account of the fire. Thus these two entities are not fixed, and because they are not fixed they are untenable, and why?

CANDRAKĪRTI COMMENTARY

That is, if an entity called fire exists in dependence on an entity called fuel and this entity called fuel is that with respect to which the independent existence of fire is to be established; and if this fuel is to exist in dependence on this very entity fire, in such case, pray tell, which exists in dependence on which? There is no fuel strictly speaking so long as fire is nonexistent, as there can be no fuel which is not the cause of fire. How will fire, whose material base is fuel, be established as existent?

In the same way let there be an entity called fuel which exists in dependence on an entity called fire and this entity called fire is that dependent on which the independent existence of fuel is to be established. Now if this fire is to exist in dependence on the entity called fuel, in such case, pray tell, which exists in dependence on which? As there is no fire so long as fuel does not exist — as there can be no fire which does not burn fuel — how will fuel, whose raison d'être is fire, be established as existent?

Further, fire and fuel do not exist in dependence on one another because there is no dependence either of what is real or of what is not real. Nagarjuna, expounding, says

KALUPAHANA COMMENTARY

If events are to be truly contingent, then they should be mutually contingent or dependent. If any one of two mutually contingent entities is to be found in a substantial or essential way in the other, then the notion of contingency is nullified. One becomes the essential and the other the superficial. The problem then would be: which depends upon what? The Vatsiputriyas, as mentioned earlier, were not looking for means of dissolving identity and difference. They are struggling to retain both identity and difference, and then move on to a higher synthesis. Nagarjuna's attempt here is not to allow the metaphysician the very concepts of identity and difference, which they were going to utilize as a springboard for leaping toward the notion of a metaphysical "person" (pudgala).

GARFIELD COMMENTARY

10. So in order to establish the existence of fuel as fuel, we must establish the existence of fire. In order for something to be fire, it must be consuming fuel. Neither depends asymmetrically on the other.
Kārikā X.11

yo ’pekṣya sidhyate bhāvaḥ so ’siddho ’pekṣate katham |  
athāpy apekṣate siddhas tv apekṣāsyā na yujyate ||11||

| ci ste gñub pà lños sè na | | de ni lños par mì rigs so |

ENGLISH TRANSLATIONS

INADA (Skt):  
Verse 11 - An entity depends on another for realization (i.e., manifestation) but, in an unrealized (i.e., unmanifested) state, what is the manner of dependence? And again, even though (the entity) is already in a dependency manifested state, the nature of dependence is not possible.

JONES (Skt):  
[i] But how can the entity that is brought about dependently upon another thing depend upon what is not yet brought about? However, how can what is already brought about be dependent? Dependence then would make no sense.

KALUPAHANA (Skt):  
Whatever existent that is established through contingency, how can that, if it is not yet established be contingent? Even so [how can] that which is already established be contingent? For, its contingency is not proper.

MCCAGNEY (Skt):  
How is that dependence demonstrated by the being who is not established in dependence? But the demonstration of dependence does not occur in dependence.

NISHIJIMA (Skt?):  
11. What has been hoped, has been accomplished, is existence, And how is it possible that something, which has been expected, actually realized? In such a situation, what has been accomplished, is expected, And then, even looking at around, does not belong to attachment.

SPRUNG (Skt):  
11. If that thing is proved by being dependent, how can that which has not been proved be dependent? So, that which is proved is dependent; but the dependence is not possible.

BOCKING (Ch):  
10v11 If dharmas are dependently established, When non-yet established, how can they depend? If established, they are already dependent; Being already established, what use have they for dependence?

BATCHELOR (Tb):  
How can a thing (A) which is established dependently (on B) be dependent (on B) when it (A) is not established? If one asks, "how can establishment be dependent?" It is not reasonable for it (A) to be dependent.

DOCTOR (Tb):  
How could an entity that is established in dependence Depend on something when it is not established? If it is said that it depends while established, Its dependence does not make any sense. [X.11]

GARFIELD (Tb):  
11. What entity is established through dependence? If it is not established, then how could it depend? However, if it is established merely through dependence, That dependence makes no sense.

GARFIELD-SAMTEN (Tb):  
11. If the entity that exists through dependence Does not exist, how could it depend? However, if you say that the existent depends, That dependence makes no sense.

HAGEN (paraphrase):  
Whatever existent that is established through contingency, how can that, if it is not yet established be contingent? Even so [how can] that which is already established be contingent? For, its contingency is not proper.
PINGALA COMMENTARY

10/11 If dharmas are established by means of dependence, such dharmas are initially not yet established, and being not yet established do not exist. When they are non-existent, how can there be dependence? If such dharmas have already been established previously, then being already established, what need do they have for dependence? Neither is (in need) of mutual dependence. Therefore it is not the case that, as you said earlier, fuel and fire are established through mutual interdependence.

Therefore

CANDRAKĪRTI COMMENTARY

Something called fire depends on something called fuel: it will be dependent on the fuel either in so far as it the fire - exists or does not exist. If it is non-existent then because of its non-existence it will not, like the horns of a rabbit, be dependent on the fuel. Again let it be the case that it exists. Then because it already exists how could it depend on fuel? So not even as existing does it exist in dependence because that would be meaningless. The case of fuel is to be demonstrated in the same way. In sum, fire and fuel cannot exist in dependence on one another simultaneously either.

From this it follows:

KALUPAHANA COMMENTARY

X.10 refers to the fire that is already established (siddha), that is, something that is really existent (sad-bhuta ). If one were to move to the other extreme and speak about events that are not established (asiddha), that is, those that are really non-existent (asad-bhuta), how can such events be contingent (apeksya sidhyate)? Thus, neither the already established (siddha) nor the unestablished (asiddha) can be related by way of mutual contingency. Contingence (apeksa) is not established in this substantialist way.

GARFIELD COMMENTARY

11. Now Nāgārjuna draws the general ontological moral from this discussion of the putative counterexample. If an entity is inherently existent, it must be independently established as an entity and with its own nature. So no entity could be established as inherently existent through dependence on any other entity. Only inherently existent entities could be independent. To establish something as inherently existent through its dependence on something else is incoherent. So since entities can be established neither through independence nor through dependence, there is no way to establish anything as an entity in its own right.
Kārikā X.12

INADA (Skt):
Verse 12 - Fire does not exist by dependence on wood nor does it exist by non-dependence on wood. Likewise, wood does not exist by dependence or non-dependence on fire.

JONES (Skt):
[12] Fire is not dependent upon fuel; fire is not independent of fuel. Fuel is not dependent upon fire; fuel is not independent of fire.

KALUPAHANA (Skt):
Fire is not contingent upon fuel; fire is not non-contingent upon fuel. Fuel is not contingent upon fire; fuel is not non-contingent upon fire.

MCCAGNEY (Skt):
Fire is not dependent on fuel and fire is not independent of fuel.
Fuel is not dependent on fire and fuel is not independent of fire.

NISHIJIMA (Skt?):
12. To notice burning is not fire, Or not to notice fire is not burning. Being innocent to burning does not produce fire, Or not to be ignorant of fire does not produce burning.

SPRUNG (Skt):
12 Fire does not depend on fuel. Fire is not independent of fuel. Fuel is not dependent on fire and fuel is not independent of fire.

STRENG (Skt):
12. Fire does not exist in relation to kindling; and fire does not exist unrelated to kindling. Kindling does not exist in relation to fire; and kindling does not exist unrelated to fire.

BOCKING (Ch):
10v12 Fire does not exist through dependence on fuel, Nor does fire exist independently of fuel. Fuel does not exist through dependence on fire Nor does fuel exist independently of fire.

BATCHelor (Tb):
There is no fire that is dependent on wood; there is also no fire that is not dependent on wood. There is no wood that is dependent on fire; there is also no wood that is not dependent on fire.

DOCTOR (Tb):
There is no fire that depends on fuel, There is no fire that does not depend on fuel. There is no fuel that depends on fire, There is no fuel that does not depend on fire. [X.12]

GARFIELD (Tb):
12. Fire is not dependent upon fuel. Fire is not independent of fuel. Fuel is not dependent upon fire. Fuel is not independent of fire.

GARFIELD-SAMTEN (Tb):
12. Fire is not dependent on fuel Fire is not independent of fuel. Fuel is not dependent on fire. Fuel is not independent of fire.

HAGEN (paraphrase):
Fire is not contingent upon fuel; fire is not non-contingent upon fuel. Fuel is not contingent upon fire; fuel is not non-contingent upon fire.
PINGALA COMMENTARY

10/12 Now, fire is not established by dependence on fuel, nor is it established by non-dependence on fuel. It is the same with fuel, whether (one says it is) dependent on fire or independent of fire, in neither way can it be established. This error has already been discussed. Further.

CANDRAKĪRTI COMMENTARY

12a Fire does not depend on fuel.

You might think that therefore fire will exist independently. But Nagarjuna says this is not tenable either:

12b Fire is not independent of fuel.

Because its separate existence has been refuted and because it would follow that fire was uncaused. As fire is impossible either dependent on, or independent of, fuel, so fuel shares the same incapacity. Nagarjuna says:

12cd Fuel is not dependent on fire and fuel is not independent of fire.

This argument is the same as that just given and to expound it again would be superfluous.

Fire is not latent in fuel. Rejection of Samkhya

You may ask: What is the purpose of this overly subtle analysis for us? We claim that fuel is directly perceived by the senses to be burned by fire; and that therefore both fire and fuel exist.

We reply: This would be so if fire did burn fuel. If fire were possible in fuel it would burn fuel. But Nagarjuna says it is not possible:

KALUPAHANA COMMENTARY

If the ideas expressed in the present verse were to be examined independent of what went before, it would be easy to leap to the conclusion that Nagarjuna is here expressing the "inexpressible"; that the negations such as "non-ceasing" (anirodham) and "non-arising" (anutpadam) were supposed to clear the way for the "nonconceptual," "non-dual" ultimate reality (paramartha?). On the contrary, if these thoughts are placed in their proper context, namely, the metaphysical explanations of "mutal contingence" (parasparapeksa), then these negative statements can be understood as outright rejections of such metaphysical explanations. As is evident from several quotations from Candrakīrti himself (see X.7), "contingence" (apeksa) can be explained in a non-metaphysical or empirical way, just as much as the notion of cause or condition (pratyaya) or the idea of motion (gati) can be elucidated without falling into the quagmire of metaphysics (see Chapters I,II).

GARFIELD COMMENTARY

12. That is, neither fuel nor fire can be established as independent bases of predication separate from one another that then stand in accidental relations to one another. There are not two entities, fire and fuel, which then are related either by dependence or interdependence.
Kārikā X.13

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 13 - Fire does not come from something else nor does it exist in the wood. With respect to wood the remaining issues have been taken up in the discussion of present passing away, that which has transpired, and that which has not transpired. - Note: Reference is to Chapter II.

JONES (Skt):
[13] Fire does not come out of something other than fuel; fire is not found in the fuel. Everything else about fuel was said in the analysis of motion in Chapter 2.

KALUPAHANA (Skt):
Fire does not come out of something different nor is fire seen to be in the fuel. Herein, with regard to fuel, the rest is stated as in the case of present moving, the moved and the not moved.

MCCAGNEY (Skt):
Where fire does not come from something other than fuel, fire does not occur. Certainly what has been said about gone, going, and not gone, and the rest applies in the case of fuel.

NISHIJIMA (Skt?):
13. What is going on a different way, is different from fire, And in burning, it is impossible for fire to be found. There, inside burning, what has been maintained, can be explained, Relying upon the method of "is going," "has gone" and "will go."

SPRUNG (Skt):
13 Fire does not exist in the fuel; fire does not spring from any other source. The remaining arguments as given for motion and rest apply in this case to fuel.

STRENG (Skt):
13. Fire does not come from something else; and fire does not exist in kindling. The remaining analysis in regard to kindling is described by the analysis of "that which is being gone to," "that which is gone to" and "that which is not yet gone to."

WESTERHOFF (Skt):
X.13b In the place of ‘fire,’ all the other cases can be expressed by ‘what is presently moving,’ ‘what has moved,’ ‘what has not moved.’

BOCKING (Ch):
10v13 Fire does not come from some other place, And there is no fire in the place occupied by fire. The same applies to fuel, And the rest is as explained in ‘going and coming’.

BATCHelor (Tb):
Fire does not come from something else; fire also does not exist in wood. Likewise, the remainder of wood has been shown by gone, not-gone and going.

DOCTOR (Tb):
Fire does not come from anything else, Nor is there any fire in the fuel. The rest about fuel has been explained By what was, will be, and is being traversed. [X.13]

GARFIELD (Tb):
13. Fire does not come from something else, Nor is fire in fuel itself. Moreover, fire and the rest are just like The moved, the not-moving, and the moving.

GARFIELD-SAMTEN (Tb):
13. Fire does not come from something else. Nor is fire even in fuel. Moreover, everything else concerning fuel is presented through Where one has gone, where one has not gone, and where one goes.

HAGEN (paraphrase):
Fire does not come out of something different nor is fire seen to be in the fuel. Herein, with regard to fuel, the rest is stated as in the case of present moving, the moved and the not moved.
PINGALĀ COMMENTARY

10/13 Fire does not come from some other quarter and enter the fuel, but there is no fire in the fuel either, for if you cut up the firewood and look for fire you will not be able to find it. It is the same with fuel. It does not come from some other place and enter into fire, but there is no fire in

Therefore.

CANDRAKĪRTI COMMENTARY

13ab Fire does not exist in the fuel; fire does not spring from any other source.

Fire does not derive from any source at all distinct from fuel because such source is never observed; and because no fire can arise which is without a cause, without relation to fuel; and because there would be no purpose in a fire starting up which was already connected with fuel. Nor again does fire exist in the fuel because the same objections would apply equally and would lead to an infinite regress. Fire does not arise from elsewhere than the fuel. Nor is it possible to be in the fuel because it is never observed there.

It may be argued (the Samkhya view) that an existing fire is not at first observed [in fuel] because the conditions which would make it manifest (abhivyanyakapratyayya) are lacking as in the case of underground water and such things. Subsequently, however, from the rubbing of sticks together, because the conditions which make fire manifest are realized, it is observed.

This theory should first be clarified. What is additionally effected by the conditions of manifestation in the case of underground water and such things? Their intrinsic nature (svaṟūpa) is not at first brought into being by the conditions of their manifestation, because it exists already. If you say that it is the manifestation (abhivyakāti) itself which is brought into being, what is this which is called manifestation? If it is ‘becoming visible’ then this becoming visible itself is what is created because it did not exist previously. To think this way is to abandon the theory according to which something exists in its intrinsic nature prior to its being caused, because the manifestation is created, at one time not existing and at a later time existing. If the intrinsic nature of a thing is independent of the conditions of its coming into being these would be, like a flower in the sky, without reality.

Further, this manifestation itself would have to be conceived as either of something already manifested or of something not yet manifested. In the first case something already manifest cannot be manifested because of the meaninglessness of its manifestation and because it would entail undesirable logical consequences. Again, what is not manifest can equally well not be manifested because of its not being manifested. It would be like a flower in the sky. Thus manifestation is not possible.

You may argue again that it is the coarse form (staulya) of a pre-existing thing which is brought into being by the conditions of manifestation. Here again, the coarse form itself does at a prior time not exist but is brought into being later. But how can there be manifestation as the actual production of the coarse form? Because the subtle form (sauksmya) (in 1 The ‘intrinsic nature of. The coarse form is the manifestation of this.) lying outside causal efficacy, cannot exist, of what would there be a manifestation consisting of the production of the coarse form? It is thus clear that in no way is there a potentiality of fire in fuel: fire does not exist in fuel. Nor can the burning of fuel arise from a fire that does not exist. So what you claim to perceive is quite unreal.

Further, there are the objections developed earlier (Chapter IV) in connection with motion and rest.

13cd The remaining arguments as given for motion and rest apply in this case to fuel.

‘In this case’ refers to the statement ‘Fuel is perceived to be burned by fire.’ With reference to fuel, that is, it should be understood that all the remaining objections are the same as those given for motion and rest. To adapt the passage referred to: What has burned is not burning, nor is what has not burned burning, and what is being burned something other than what has burned and what has not burned is not burning. In this way it is to be understood that fire does not burn fuel.

Review of the five possibilities

Nagarjuna, in order to sum up what has been expounded, now says:
KALUPAHANA COMMENTARY

After dealing with the metaphysical interpretations of "contingence" (apeksa) assumed between fire and fuel, Nagarjuna returns to the more familiar substantialist theories of self-causation (svata utpatti) and external causation (parata utpatti). Fire is not inherent in the fuel nor does it issue out of something external. If any further explanations are to be provided which are themselves founded upon such substantialist ideas, all such explanations can be analysed in terms of the methods adopted in Chapter II dealing with motion (gati).

GARFIELD COMMENTARY

13. Though, as verse 12 grants, fire exists only in relation to fuel, it would not be correct to assert that fuel as an independent entity somehow produces fire. The analysis and the conclusion are strictly analogous to that regarding motion and the mover. We neither can say that motion is the same as the mover nor that they are different entities. We cannot say that motion is present in the unmoved, the moving, or the yet-to-move. Similarly we cannot say that fire is the same as the fuel nor that it is different. Nor can we say that it is present in the unburned, the burning, or the yet-to-be-burned fuel. The next verse emphasizes this point: ___
Kārikā X.14

indhanaṃ punar agnir na nāgnir anyatra cendhanāt |
nāgnir indhanavān nāgnāv indhanāni na teṣu saḥ ||14||

kē rān jī fēi rān lǐ kē rān wǔ rān

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 14 - Again, fire is not wood nor is it in something else than wood. Fire does not contain wood. There is neither wood in fire nor fire in wood.

JONES (Skt):
[14] In addition, the fuel is not the fire, nor is there fire apart from fuel. Fire does not possess fuel. Pieces of fuel are not in the fire, nor is the fire in them.

KALUPAHANA (Skt):
Furthermore, fuel is not fire. Apart from fuel there is no fire. Fire is not possessed of fuel. Fuel is not in the fire, nor is it [i.e., fire] in them.

MCCAGNEY (Skt):
Again, fire is not fuel and there is no fire other than from fuel.
Fire is not possessed by fuel and the fuels are not in the fire, nor is it in them.

NISHIJIMA (Skt?):
14. Burning is not fire itself again,
And fire even in another place, has never left from burning.
Fire has not separated from burning or from fire,
And miscellaneous kinds of burnings are never real because of them.

SPRUNG (Skt):
14 Fire is not identical with fuel; nor does fire arise elsewhere than from fuel; fire is not of the nature of fuel; fuels are not in fire nor fire in them.

STRENG (Skt):
14. Fire is not identical to kindling, but fire is not in anything other than kindling. Fire does not have kindling as its property; also, the kindling is not in fire and vice versa.
PINGALA COMMENTARY

10/14 Fuel is not the same as fire, and why? Because of the error previously discussed (of saying) that doer and deed are one. There is no fire apart from fuel, because of the error of 'permanently existing fire' and so forth. Fire not fuel, there is no fuel in fire, and there is no fire in fuel. Since these would involve the error of (fuel and fire being different entities, none of the three can be established.

Question: Why are you discussing fuel and fire?

Reply: In the same way that fire depends for its existence on fuel, so the recipient depends for his existence on receiving. 'Receiving' stands for the five skandhas, 'the recipient' means the person. Since fuel and fire are not established, receiving and recipient also are not established (as existent) and why?

CANDRAKĪRTI COMMENTARY

(fn 2 This fivefold formula is introduced again in the Chapter 'The Perfectly Realized One'. Cf. p. 193.)

It was stated earlier (kārikā 1), 'If fuel is fire that would be identity of agent and act.' In this way the identity of fire and fuel was refuted; fuel is not fire. It was further stated 'If fire is wholly other than fuel it could exist even without fuel.' In this and other arguments the complete otherness of fire and fuel was refuted. Fire cannot arise elsewhere than from fuel. From the refutation of both theses, that of identity and that of complete otherness, the various other theses: that fire is of the nature of fuel, that fire contains fuel, that fuel contains fire are, by implication, refuted. Summarizing them Nagarjuna says, 'fire is not of the nature of fuel; fuels are not in fire nor is fire in them'.

Fire is said not to be of the nature of fuel (indhanavan); 'of the nature of' means either that fuel is of fire or that fire is in fuel. Here fire is either separate, or it is not separate except in an etymological sense. An example of the first would be 'Devadatta has a cow'. An example of the second would be 'Devadatta has a body, a mind and so on'. The refutation of the two theses - identity or complete otherness concerning fire and fuel entails the refutation of fire being of the nature of fuel.

It is commonly said that the dish, the completely other, is the container of the curd. But Fire is not completely other than fuel so it does not make sense that fuel is contained in fire. Nor can fire be in fuel because their complete otherness has been refuted. So, in this way, the theses of container and contained have been implicitly refuted.

Extension of the argument to the self and all objects

As fire, on being thoroughly investigated in the five ways, is not possible, so it is, Nagarjuna says, extending his argument, with the self as well.

KALUPAHANA COMMENTARY

The refutation of all metaphysical formulations of the notion of identity as applied to fire and fuel is presented here. This is done in terms of the analytical methods followed in Chapter I.
**Kārikā X.15**

INADA (Skt):
Verse 15 - By means of the analysis of fire and wood, the total relationship between atman and upadana, and along with the (notions of) earthen jar, cloth, etc., have all been explained without fail.

JONES (Skt):
[15] Through this analysis of fire and fuel - together with similar examples of the clay and the pot, the thread and the cloth, and so forth - the entire method of analyzing the self and its acquiring a new rebirth is explained.

KALUPAHANA (Skt):
Through the examples of fire and fuel, together with the examples of pot (& clay), cloth [& thread], etc. every method of analysis of the self and grasping have been explained without exception.

MCCAGNEY (Skt):
The process of self and grasping is explained from fire, and fuel, along with the jar and cloth, etc., and all the rest without exception.

NISHIJIMA (Skt?):
15. An idea that fire and burning are one, is a content of explanation, And relying upon the oneness between mind and sense perception, the process is Â@going on. Â@Everything in the world has never surplus or scarcity, And to increase more half is concentrated intentionally like a kind of clothes.

SPRUNG (Skt):
15 Everything expounded in terms of fire and fuel is, without exception, applicable to self and the factors of personal existence. And to pot, cloth, and so on.

STRENG (Skt):
15. By the analysis of fire and kindling the syllogism of the individual self (atma) and "the acquiring" (upadana) is fully and completely explained, as well as "the jar" and "the cloth" and other analogies.

**ENGLISH TRANSLATIONS**

WESTERHOFF (Skt):
X.15 With [the investigation] of fire and fuel, the way [for the solution of the problem of] the self and of grasping is completely described.

ROBINSON (Skt):
By the [example of the] fire and fuel is explained the whole method, omitting nothing, for [the examination of] self and appropriation, as well as for the pot, the cloth, and so on.

BOCKING (Ch):
10v15 By means of the dharmas of fire and fuel, We may explain the dharmas of receiving and recipient. And we explain pots and cloth. And all the various dharmas.

BATCHelor (Tb):
Through fire and wood is explained without exception all the stages of self and the grasped and at the same time jugs, cloth, and so on.

DOCTOR (Tb):
Through the treatment of fire and fuel, The self and its appropriation, Along with vases, woolen garments, and so forth, Have all been explained without exception. [X.15]

GARFIELD (Tb):
15. Through discussion of fire and fuel, The self and the aggregates, the pot and cloth All together, Without remainder have been explained.

GARFIELD-SAMTEN (Tb):
15. Through the discussion of fire and fuel, The order of self and appropriation, Together with the pot and cloth, all Without remainder have been explained.

HAGEN (paraphrase):
Through the examples of fire and fuel, together with the examples of pot [& clay], cloth [& thread], etc. every method of analysis of the self and grasping have been explained without exception.
This examination of fire and firewood refutes the self and the aggregates it appropriates in all five ways.

Similarly, examining vases, blankets, and so forth, it is perfectly explained that none of them exist in any of these five ways. (15)

Note: Atman and upadana refer to man and his five basic functions (skandhas). This verse is a summation of the analysis of wood and fire, and the analysis, Nagarjuna contends, can be employed to all "entities" (dharmas) including the self (atman) and its functions in order to show the fallacies involved in maintaining preconceived notions.

Just as fuel is not fire, so receiving is not the recipient, because of the error of deed and doer being one. But also, there is no recipient without receiving, because no difference can be found, (between them). Because of the error of 'difference', none of the three is established.

Just as with receiving and the recipient, so it is with all the external dharmas such as cloth, pots, and all the various dharmas, which are to be explained in the same way as above, as non-arising and utterly empty.

Therefore:

Everything expounded in terms of fire and fuel is, without exception, applicable to self and the factors of personal existence.

What the self (atman) possesses is what is appropriated (upadana), namely, the five appropriative factors of personal existence. What is commonly thought of as being based on these factors is the appropriator, the concever, the active agent and this is said to be the self. Because the i-me' sense (ahamkara) is made into an object, the illusion of the 'I' is conceived as in and of personal existence. The argumentation concerning the self and what it possesses is to be understood as exactly parallel to that expounded for fire and fuel.

What is the distinction between 'everything' and 'without exception'? The term 'everything' means the five theories taken consecutively. All these five theories are to be tied together in an orderly way for self and the factors of personal existence as they were for fire and fuel. The expository argumentation given earlier applied to the refutation of self and the factors of personal existence with nothing omitted is what is meant by 'without exception'. This is the meaning. It should be understood that Nagarjuna said 'everything without exception' with a view to emphasizing that the refutation of the self and the factors of personal existence is identical in every essential with that of fire and fuel. It is not tenable to say that the factors of personal existence are the same as the self because it would follow, absurdly, that agent and act were identical. Nor are the factors of personal existence one thing and the self another, because from that it would follow that the self could be perceived apart from the factors of personal existence and because it would follow, absurdly, that the self was without relation to anything other than itself. Because of the refutation of both identity and difference the self cannot be of the nature of the factors of personal existence. Because they are not wholly other the factors of personal existence are not 'in' the self nor is the self in them. It is clear, thus, that in none of the five ways is the self a reality. The reciprocally dependent existence of self and factors of personal existence, exactly like agent and act, is thus beyond doubt.

However, this extension of the argument is not limited to self and the factors of personal existence.

And to pot, cloth, and so on.

The exposition is to be understood as applying to all things without exception in every respect (in 3 It is characteristically Buddhist to apply the same kind of argument to the self and to things. This seems restrictive, but it serves to expose the inadequacy of relational thinking sweepingly.). Pots and other things may be thought of in terms of cause and effect, or of part and whole, or of characteristic and the bearer of characteristics, or of quality and the possessor of quality. In the first case clay, stick, turntable, thread, water, the strength of the potter and so on would be the causes of the pot; the pot would be the effect. In the
second case the bare pot, its blue colour and so on would be the parts; the pot would be what the parts are in, the whole. Again, a broad base, turned-down edge, long neck and so on would be the characteristics of the pot; the pot would be the bearer of the characteristics. Last, colour and so on would be the qualities; the pot would be the possessor of qualities. In these ways the conclusions concerning fire and fuel are to be applied in extension. Concerning both self and the factors of personal existence, and such things as pots, the exposition may be found in the Madhyamakavatara. In this way the existence of self and the factors of personal existence as well as of pots and such things has been established as reciprocally dependent existence like agent and act.

Some, in their arrogance, believing they are aware of the true teaching of the realized one, in their confusion of mind conclude that the categories of things established by non-Buddhists accord with the true teaching.

Dependent origination

KALUPAHANA COMMENTARY

The metaphysical interpretations of "self" (atman) and "grasping" (upadana) are exposed, here, especially in relation to the metaphor of fire and fuel (agnindhana). Does this mean that there could be non-metaphysical explanations of both "self" and "grasping?" The answer would be in the positive, especially in view of what Nagarjuna has said in reference to "grasping" and the "one who grasps" (upadatr) or the action and the agent (karma-karaka). This analysis is not confined to the metaphor of "fire and fuel" alone. It applies to all other metaphors used during this period of speculation, such as "clay and the pot," and "thread and the cloth."

GARFIELD COMMENTARY

15. The fire and fuel example is used as an analogy for a number of different cases of relations between bases and their attributes, including the relation between the putative self and its aggregates that is, the components of the personality. But there are other stock examples - the relation between the pot and its properties and between the cloth and its thread - that are used to try to defend these asymmetrical dependence relations between inherently existent bases and the properties they support. Nāgārjuna is simply asserting the complete generality of this argument: It applies, mutatis mutandis, to all of these cases.
Kārikā X.16

INADA (Skt):
Verse 16 - Insofar as I am concerned, those who speak of the reality of entities and who assign them distinct existences cannot be considered truly knowledgeable of the (Buddha's) teachings.

JONES (Skt):
[16] I do not consider those who teach that the self is the same or different from the entities to be skilled in the meaning of the Buddha's teachings.

KALUPAHANA (Skt):
Those who posit the substantiality of the self as well as of discrete existents—these I do not consider to be experts in the meaning of the [Buddha's] message.

MCCAGNEY (Skt):
Those who speak about the self and existence as different from beings do not have, I think, knowledge about the meaning of the teaching [of the Buddha].

NISHIJIMA (Skt?):
16. The spiritual existence and the material substances, They are miscellaneous existences and at the same time existence of one by one. However they do not indicate themselves as if they were something, And so they have completely killed something, which has been much related with some kind of study.

SPRUNG (Skt):
16 Those who teach either that the self and entities coexist or that they exist separately I do not hold to understand the doctrine.

STRENG (Skt):
16. Those who specify the nature of the individual self and of existing things (bhava) as radically different—Those people I do not regard as ones who know the sense of the teaching.

ENGLISH TRANSLATIONS

BOCKING (Ch):
10v16 If a person says that he has a self And that all the dharmas each have different characteristics. You will know that such a man Has not acquired the flavor of the Buddha-dharma.

BATCHelor (Tb):
I do not think those who teach the identity or difference of self and things are wise in the meaning of the teaching.

DOCTOR (Tb):
Those who teach that self and entities Are the same or different I do not consider knowledgeable About the meaning of the teachings. [X.16]

GARFIELD (Tb):
16. I do not think that Those who teach that the self Is the same as or different from the entities Understand the meaning of the doctrine.

GARFIELD-SAMTEN (Tb):
16. I do not think that Those who teach that the self And the entities can be identical or different Understand the meaning of the doctrine.

HAGEN (paraphrase):
Those who posit the substantiality of the self as well as of discrete existents—these I do not consider to be experts in the meaning of the [Buddha's] message.
PINGALA COMMENTARY

10/16 All dharma s from the beginning have been non-arising, having the characteristic of utter nirvana. This is why he utters this verse at the end of the chapter. If a person asserts that there is a characteristic of 'self' as the Vatsiputriya school teaches, he cannot say that form is the self, and he cannot say that there is a self apart from form, but only that self resides in the 'fifth indescribable storehouse'. This is like the Sarvastivadins who teach that each of the dharmas has its own characteristics, distinguishing this one as skillful, this one as unskillful, this as neutral, this as outflowing or not outflowing, active or inactive, and so on. Such people as these do not attain the nirvana-quality of dharmas, but fabricate various kinds of sophistries, using the Buddha's words.

CANDRAKĪRTI COMMENTARY

To exist by virtue of something else is the meaning of 'coexist' (satat). A co-existing entity enjoys co-existence. The thought is that it is not separate, not wholly other, but makes a unity. Those who give this account of co-existence Nagarjuna does not consider to be well-versed in the Buddhist doctrine. For example the self is conceived of in terms of the factors of personal existence and only together with these is it possible. This means that self does not exist separately, apart from the factors of personal existence. In the same way a pot is conceived in terms of its causes — clay, potter and so on; it exists un-separated from them, not isolated by itself. Those who give this account of the co-existence of self and of entities do not discern the truth of the surpassingly deep idea of dependent origination - the way things really are — which is free of both ontology and nihilism and which is known as an idea based on the everyday but which conduces to enlightenment.

Those who espouse the separate existence of things see the self and the factors of personal existence each as separate and cause and effect as separate and so on: they see only complete otherness. Nagarjuna does not believe that such understand the meaning of the Buddhist doctrine. As it has been said, 'You should be aware of the world as neither eternal nor perishable and the things of the world as neither identical nor different but like echoes, and so be beyond reproach.' When the yogi has comprehended the supreme truth of the teaching by means of this analysis of fire and fuel then his body cannot be burned by the world holocaust nor by the flames of passion, hatred and delusion.

KALUPAHANA COMMENTARY

Here then is a clear and unequivocal assertion on the part of Nagarjuna. Those who assert the substantial existence (satattvam), whether that be of a monistic "self" (atman) or of distinct entities (prthak prthak bhavanam) are not conversant with the teachings of the Buddha. When Nagarjuna makes that assertion with the statement: "[I] do not consider" ([aham] na manye), what sort of self was he recognizing? It certainly could not be anything like what he was refuting. The answer to this question will be provided later.

GARFIELD COMMENTARY

16. This colophon verse reminds us that when existence is understood in terms of emptiness and when entities are regarded as purely relational in character, identity and difference can only be understood conventionally. This applies not only with respect to apparently distinct entities, but also to the relation between parts and wholes, things and their attributes, events and their causes, and as Nāgārjuna emphasizes here, self and the objects of awareness. Strict identity and difference as determined by reference to phenomena themselves are only conceivable from the incoherent standpoint of inherent existence.
Chapter XI

पूर्वपरकोटिपरिक्षा एकादशम प्रकरणम्

中論観本際品第十一(八偈)

pūrvāparakoti-parīkṣā nāmaikādāśamaṃ prakaraṇaṃ

Chapter XI: Examination of the Initial and Final Limits
Chapter XI
MAJBA (TOPICAL OUTLINE)

OUTLINE:
We are still in the second part of the second major portion of the examination of the two selflessnesses—
the explanation of the selflessness of the person. We have completed the first of its two parts: the refutation of the essential existence of the person. We are now still in the second part: the refutation of the argument for the essential existence of the person. We have completed the first part, the refutation of the example in the premises. [231] We now begin the second part, the refutation of the reasoning in the premises. This part has two sections: the refutation of the argument that the activity of birth and death exists and the refutation of the argument that, dependent on the self, suffering exists. This chapter is the first of these two parts.

EXPLANATION:
Here one might say the self exists essentially because cyclic existence exists. If there were no self, then in this cycle of five transmigrations, of migration proceeding to the next from this one, and coming from the previous one to this one, who would have the nature of transmigrating from one birth and death to another? The teacher has also said that the cycle of birth, aging, and death is without beginning or end. The origin of sentient beings who, clouded by ignorance, completely enmeshed with attachment, and bound by the chain of attachment, transmigrate, hurtling, is not apparent. Here the Buddha says that sentient beings, through continuous birth and death, transmigrate. Thus, the transmigrator exists, and that is the self.

The refutation of this has two parts: the refutation of the essential existence of cyclic existence and the application of the argument to other phenomena.

SUMMARY:
If the transmigrating person and the activity of transmigration—birth, aging, and death—and all things such as cause and effect, existed inherently, there would be no way to call them “birth,” etc. Therefore, it should be ascertained that the statement that the transmigrator is born and dies continuously is only tenable when taken as merely posited through convention.
CHAPTER XI - Examination of Antecedent and Consequent States in the Empirical Realm

In the Tibetan Dhu na rtsa bahi hgrel pa ga las hjigs med (Mulamadhyamakavrttyakutobhaya), the Chinese Pan-jo-teng-lun-shih and the Ta-ch'eng-chung-kuan-shih-lun, the title is the Examination of Samsara (lun hui 輪廻 life-death cycle). An investigation of the content of the present chapter reveals that this title is quite justifiable. However, Candrakirti’s Sanskrit title is not without a basis since it suggests that the discussion of samsara should be carried to its extremes, hence the term, koti, and exhibit its impossibility. Here again, as in previous chapters, the argument develops by breaking up the doctrine of samsara into separate elements, i.e., into the three temporal moments of prior, posterior and simultaneity, and by showing the ultimate obscurity and uncertainty of these elements. All existences in truth are instances of the fact of sunyata which does not lend itself to analysis and description.

KALUPAHANA (CHAPTER OVERVIEWS)

11. Prior and posterior ends (purvaparakoti). The refutation of the prior existence of a substantial being or entity would still leave open the question regarding the beginning and end of things. Speculations regarding the beginning (purva-koti) and the final end (apara-koti) have occupied the attention of philosophers from the dawn of history. These speculations have given rise to a wide variety of beliefs, one of which is the substantial existence of a being (such as God) or an ultimate entity (such as primordial matter, prakṛti, sometimes referred to as svabhava). Realizing the epistemological problems involved in these speculations, the Buddha refrained from making any statements regarding such issues.

Chapter XI is intended to explain the Buddha’s attitude towards such questions. Nagarjuna was aware that the Buddha refused to make any statements about the prior end of the life-process. Hence his statement: “The Great Sage has declared that the prior end of the life-process is not known” (XI.1). However, the Sanskritization of the Prakrit term anamatagga (="inconceivable is the beginning") as anavaragra (="without beginning and end") had already appeared in the Buddhist texts that Nagarjuna was familiar with. Taking this latter version of the Buddha’s statement, Nagarjuna maintains that there is neither a beginning nor an end, whereas the Buddha’s own statement pertained to the epistemological difficulties.

Yet, Nagarjuna’s ingenuity was such that he was able to indicate the logical difficulties involved in any denial of either the beginning or the end. For he finds that “no middle can be conceived of that which is without beginning or end” (XI.2). Because of such logical difficulties, he maintains that prior and posterior as well as simultaneous states (of samsara) are not appropriate. These logical difficulties arise primarily because entities are conceived of in a rather substantialist way. Thus, if birth were to be considered as being prior to old age and death, and birth as well as old age and death are substantial, that is, existing in their own nature (svabhava), then there will be birth without old age and death, which implies immortality (XI.3). Moreover, if they were to be selfexistent, there would be no causal connection between them (XI.4). Similar logical difficulties arise if they were considered as being simultaneous.

While the Buddha was unwilling to discuss the absolute origin and end of the life-process (samsara) and yet continued to speak of things arising and passing away on the basis of causal dependence, Nagarjuna had to deal with the notion of the life-process interpreted in a more substantialist way by the Buddhist metaphysicians. Therefore, after making the remark that the prior end of samsara is not evident, a position upheld by the Buddha himself, Nagarjuna proceeds to maintain that “the prior end of all existents is also not evident” (sarvesam api bhavanam purva koti na vidyate, XI.8), thereby rejecting all the views of the substantialists.
BATCHELOR (POETIC “TRANSLATION”)

Before

Was there a before before?

If life has no beginning and no end,
No before and no after,
How can it be centered in a present?

Were birth before and death after,

I would be immortal with no history.
Were death first and birth later,
The dead would be unborn.

I cannot be born and die at once:
If birth were death,
They would both be unoriginated.

Why am I transfixed by them?

JONES (COMMENTARY)

11. The Limits of the Past and Future

This chapter involves “samsara,” which can refer to our cycle of births, deaths, and rebirths, or it can refer to the entire phenomenal world, which in Buddhist metaphysics is also constantly cycling. As Nagarjuna acknowledges (v. 1; R106), when the Buddha was asked questions concerning the age and size of the universe, he left these matters unanswered (avyakrita) (Digha Nikaya 1.13, 111.137; Majjhima Nikaya 1.427; Anguttara Nikaya 11.80). There are three popular explanations within Buddhism for why these questions were left unanswered: any answer would be misconstrued by the unenlightened and would have adverse consequences for the student; asking these questions focuses the mind on matters that are irrelevant to the successful practice of the Buddhist path, and one should focus one’s mind solely on more soteriologically important issues; and they are metaphysically misguided because they involve incoherent presuppositions of self-existence (Garfield 1995: 197 n. 65). Notice that this is not a matter of “mystical ineffability of ultimate reality.” Rather, it is only about certain factual matters that may or may not have an answer but either way are irrelevant to the Buddhist quest.

Nagarjuna, however, does not follow the Buddha’s approach here. He bases his argument on the premise that samsara is beginningless and endless (v.1), i.e., without limits in the past or future. So too from verse 7: entities also have an infinite or at least indefinite past since no limit to them is found. He then proceeds with the conceptual interconnections of beginning, middle, and end. For example, if “birth” is a distinct reality from “aging and death,” then birth never ages or dies, and one who is born would be immortal (v. 3). So too, the young by definition cannot become old (v. 13; R 68) - life is divided up into discrete entities that cannot change or be related to one another. (The second half of verse 2 does not follow from the first half: there still may be the sequence to particular events of “before, after, and simultaneous” of events within a series even if there is no “beginning or end” to the total series. If Nagarjuna had said “before” and “after” in the first line, the second half would follow, but the Sanskrit does not justify such a translation.)
An Examination of Samsara

In the Prajñāparamita Sutras, the Buddha taught:

No beginning is perceptible,
No end is perceptible,
And nothing in between is perceptible either.

THE REASON THE WORD perceptible is used here is that if we examine with our eye of wisdom, we cannot perceive any earlier, middle, or later period of time in samsara, because these things do not inherently exist. Even the buddhas in all their wisdom never perceived any earlier, middle, or later period of time, because there have never been any of these three times to perceive.

Nagarjuna composed this chapter because those who believed in the true existence of things said to him, “Follower of the Middle Way, you may have attempted to refute the true existence of the self of the individual with your clever examples of fire and firewood, but you have not succeeded in doing so, because samsara exists. Since samsara exists, there must be someone to go around in samsara, and therefore the self does exist after all. Furthermore, since the self exists, the sources of consciousness, aggregates, and potentials that compose the self must also exist.” Thus, Nagarjuna had to prove to these people that samsara does not truly exist, because if he had not done so, he would not have been able to help them overcome their confused belief in the true existence of the self.

If samsara actually existed, it would have to have a beginning, an end, and some span of time in the middle. Analysis, however, cannot find any beginning to samsara. Whatever our current situation in samsara, it had to have its own causes, and those causes had to have their own causes, and so on—nothing in the cycle of existence occurs without causes to bring it into being. We can therefore never find an “original cause” that would constitute the beginning of cyclic existence, because if there were one, it would have arisen without a cause itself, which is impossible. Thus, there was no point when samsara began, and how could something that never began ever end? Without a beginning or an end, how could there be any period of time in the middle? Since it has neither beginning, middle, nor end, samsara does not truly exist.

Another way to analyze samsara is to look at the relationship between samsara and the ones who supposedly wander around within it. Which of these comes first? If samsara existed before the ones who wander within it, there would be a samsara with nobody there. If the ones in samsara existed before samsara itself did, then where would they be? There would be nowhere for them to exist.

On the other hand, if samsara and the ones who wander in samsara existed simultaneously and they were inherently existent, they would have no connection with each other. They would each be able to go their own separate way independent of the other. It is not like that with respect to samsara and the beings within it, however. They cannot exist independently or separately because each needs and depends upon the other to exist.

Once we discover that samsara does not truly exist, we find out what samsara actually is: a mistake. Samsara is not really there; it is just a mistake that we make, and nirvana is simply the correction of that mistake. We could also say that samsara is similar to dreaming and not knowing it is a dream—it is simply a misperception or mistaken understanding of the events that appear to be happening. Nirvana, in contrast, is like recognizing the dream for what it is.

In this chapter Nagarjuna also analyzes birth and death, and, by logically demonstrating that neither one of them actually takes place, he proves that the cycle of repeated births and deaths that constitutes samsara actually does not occur. In the chapter there is both a brief and an extensive explanation of this point, the former being given in the sixth verse:

Since one cannot happen before the others,
And they cannot happen simultaneously,
Why would you ever think
That birth, aging, and death truly exist?

If we put this verse in the form of a logical reasoning, we would say: As for birth, aging, and death, they have no nature of their own, they do not truly exist, because one cannot happen before the others and they cannot occur simultaneously. They cannot occur sequentially because, first of all, birth cannot precede death. This is the case because the arising of one moment cannot occur before the cessation of the previous moment. Death cannot precede birth either, because if it did there would be death without anything having been born. They cannot occur simultaneously either, for they are opposites—how can one thing arise and cease at the same time?

Here we are not considering the coarse level of appearances, for example, a baby being born and then growing old and dying. Rather, we must look at the more subtle level of existence of any particular thing, at how it arises and ceases instant by instant. For example, snap your fingers and see if you can distinguish between the arising and the cessation of that finger snap.

When did it arise? When did it cease? Even that finger snap is an incredibly coarse entity, and its arising and ceasing are equally coarse events. If we think about how many hundreds, thousands, and millions of subtle instants
that arise and cease are included within the finger snap, then we start to realize that we cannot authentically distinguish between arising and ceasing. These events do not exist as independent, identifiable entities. Their existence is not perceptible to the eye of wisdom.

Birth, aging, and death are therefore like appearances in dreams. They are dependently arisen mere appearances that have no true existence. At the end of the verse, Nagarjuna asks, “Why would you ever think that birth, aging, and death truly exist?” There is not a single reason that can prove that birth, aging, and death are real, and there are so many reasons that prove that they are not real, so why would anyone who knew that continue to think of them as being truly existent?

What is the benefit of thinking that birth and death are real? How does that help? It only results in suffering. For example, when we dream, to believe that the birth, aging, and death that appear in the dream are real is not only unnecessary but harmful because it results in suffering. That is why it is so important to apply these reasonings and gain certainty that birth and death in samsara do not really exist, that they are just mere appearances that are like appearances in dreams and illusions.

Then you will see that samsara is just the erroneous belief that suffering is real, the erroneous belief that birth and death are real. Once we are free from the thought that suffering is real, we are no longer in samsara. Once we are free from the thought that birth and death are real, we will no longer be in samsara. In fact, since suffering, birth, and death do not really exist in the first place, samsara is just a mistake, just our making the mistake of thinking something is there that really is not there at all. Once we stop making that mistake, we are in nirvana.

That samsara is just a mistake and nirvana is when you simply stop making that mistake is the reason samsara and nirvana are actually undifferentiable, why they are of the nature of equality. The example of the dream makes this point clear. When you dream and do not know you are dreaming, the ignorance of the fact that it is a dream leads to attachment to some dream appearances and aversion to others, and this causes suffering. Once you realize that it is a dream, attachment and aversion dissolve and everything becomes open, spacious, and relaxed. From the perspective of the dream appearances themselves, however, nothing has changed at all. There was nothing wrong with those appearances in the first place, and therefore there were no flaws within them that needed to be abandoned or corrected, nor any positive qualities that needed to be added to them to make them better. They were originally pure and originally free, meaning that in their nature they transcended the characterizations of both confusion and realization, both suffering and bliss. Since from their own perspective there was never any confusion to begin with, there could be no liberation from confusion either. Since there was never any suffering inherent in them in the first place, they transcend the notion of the bliss that is the freedom from that suffering as well. In this way, the example of dream appearances illuminates the equality of ignorance and realization, of samsara and nirvana.

GARFIELD COMMENTARY

Chapter XI Examination of the Initial and Final Limits

But suppose that one could see that the self, considered as agent or as subject, lacks inherent existence, and still one argued that nonetheless it must do so in virtue of its impermanence and being subject to change. Then, one might argue, birth, aging, and death must be real as the conditions of the self’s unreality. This is the position with which Nāgārjuna concerns himself in this chapter. But he is also concerned with the generalization of this question to the birth, aging, and death of all of cyclic existence. (fn 63. In Buddhist philosophy, the entire phenomenal world is referred to as cyclic existence ('khor-ba, Skt: saṃsāra). This term indicates not only the endless cycle of birth and death posited by the Buddhist doctrine of rebirth, but also the universally cyclic character of phenomena: Perception and action form a cycle; motivation and action form a cycle; the seasons are cyclic; chains of interdependence of phenomena are cyclic; interpersonal relations are cyclic; craving and acquisition are cyclic. It is this metaphor, suggesting that all of unenlightened existence amounts to going around in circles despite the illusion of progress, that most poignantly captures the sense in which all of human existence is suffering. See Sogyal Rinpoche 1992, pp. 18-22, for an excellent discussion.) And it is this more general problem with which he actually opens the chapter, developing the account of individual impermanence as a special case: (fn 64. This is, as the Yen. Sherab Gyatso pointed out in conversation, not the only possible reading of the import of this chapter. It could perfectly well be read simply as a discussion of the problem of the beginning of personal existence and as an argument to the effect that cyclic existence and the predicament of suffering is beginningless, or at least that it is pointless or impossible to discuss and ponder its beginning. On the other hand, given the parallels between the analysis here and that in Chapter XXVII, where the questions concerning the finitude or infinitude of personal existence and of the world’s existence are explicitly juxtaposed and receive identical treatment, there is good reason to see this chapter as implicitly addressing both as well.)
Kārikā XI.1

INADA (Skt):
Verse 1 - The great wise one (i.e., Sakyamuni) has said that the state anterior to samsara (i.e., life-death cycle or the empirical realm) cannot be grasped. For, samsara has no beginning and end; that is to say, no definite points of commencement and conclusion.

JONES (Skt):
[I] The great sage, the Buddha, has stated that a limit to the past is not known. The cycling of rebirths is without beginning or end. Indeed, there is no beginning nor end to it.

KALUPAHANA (Skt):
The Great Sage has stated that the prior end is not known. The life-process is without beginning and end. There is neither a beginning nor an end.

MCCAGNEY (Skt):
The great sage said, “The prior limit is unknown. Samsāra is without beginning or end. Indeed, there is no beginning or end.”

NISHIJIMA (Skt?):
1. Before noticing the end of his life,
The great saint Gautama Buddha has never say anything at all. Because our usual daily life is never inferior, but excellent, Even rains, and so forth, can never be placed behind.

STRENG (Skt):
1. The great ascetic Buddha said: "The extreme limit (koti) of the past cannot be discerned." "Existence-in-flux" (samsara) is without bounds; indeed, there is no beginning nor ending of that existence.

BOCKING (Ch):
11v1 The Great Sage has said
That no original limit is conceivable.
Birth and death had no beginning
And likewise will have no end.

BATCHelor (Tb):
When asked, “is a before-extreme evident?” the great Muni said, “it is not.” Samsara has no beginning, no end; it has no before, no after.

DOCTOR (Tb):
When asked whether any beginning can be seen,
The Able One answered in the negative.
Cyclic existence has no beginning or end;
There is no before and there is no after. [XI.1]

GARFIELD (Tb):
1. When asked about the beginning,
The Great Sage said that nothing is known of it.
Cyclic existence is without end and beginning.
So there is no beginning or end.

GARFIELD-SAMTEN (Tb):
1. When asked if the beginning is known,
The great sage said “no.”
Cyclic existence is without origin or terminus.
Because there is no beginning or end.

HAGEN (paraphrase):
11.1 [axiomatic] The Great Sage has said, "the extreme limit of the past cannot be discerned." Samsara is without bounds. That is to say, no definite beginning or ending point can be found.
PINGALA COMMENTARY

11/1 Sages are of three kinds. Firstly there are the non-Buddhist sages with their five supernatural powers, secondly the Arhats and Pratyekabuddhas, and thirdly the great bodhisattvas who have attained supernatural powers. Because the Buddha is supreme amongst these three kinds we call him 'The Great Sage'. In whatever the Buddha has said there is nothing which is not the truth. Birth and death has no beginning, and why? A beginning or end of birth and death is inconceivable. This is why we say that it has no beginning. If you say that, even though it has no beginning and end, it must have a middle, this too is wrong, and why?

KALUPAHANA COMMENTARY

The criticism of the "self" (atman) as a substantial entity continued in the last few chapters brings up more related issues for discussion. If there is no such entity, how can the life process consisting of reputed births and deaths be explained?

Rebirth or rebecoming (punabdhava) was an important element in the Buddhist doctrine, even though the Buddha was concerned more with the problems of the print life than of the past. As mentioned earlier (see commentary on IX. 1-2), for the Buddha, the knowledge of the past (atitamse nana) was an important means of understanding the present. Yet he did not encourage speculation regarding the past as he feared that this would eventually lead to all sorts of metaphysical views. For this reason, he remained aloof from speculating on the absolute origin of things. That aloofness is clearly implied in his statement: "Inconceivable is the beginning of this life-process. The prior end is not evident." (Anamataggo 'yam . . . samsaro pubbakoti na pannayati S 2.178, 193; 3.144.151). There is here no denial of the prior end or the fret beginning of things, but only of its conceivability or perceptibility.

However, with the problems that emerged during the scholastic period in the matter of explaining any form of origin (utpada), not merely of the tint beginning (purva koti), some Buddhists were compelled to deny outright any form of beginning. While the Sarvastivada conception of substance left no room for origin and cessation, the Sautrantikas had difficulties explaining the origin and cessation of momentary events. The difficulties involved in providing an explanation seems to have led the metaphysicians to assume the absence of a prior end, rather than of its inconceivability. Hence the term anamatagga ("inconceivable is the beginning") came to be replaced by anavaragra ("without end and beginning"). As such, Nagarjuna proceeds with the examination of the view current during his day, only to revert back to the Buddha's own approach to this problem in the end. Candrakirti, confining, himself to the literary tradition of his day and influenced by a transcendentalist approach in his interpretation of Nagarjuna, does not seem to recognize the above mentioned change taking place in the Buddhist conception of the life-process (samsara).

GARFIELD COMMENTARY

1. ("When asked about the beginning, The Great Sage said that nothing is known of it") In 65, thub-pa chen-pas min zhes gsungs. In an alternative Tibetan translation, this reads thub-pa chen-pas mi gsungs zhu,i.e., “The Great Sage did not answer.” See the Pothagāda Sutra 25: “Tell me. Is the world eternal? Is only this true and the opposite false? Potthapada, I have not declared that the world is eternal and that the opposite view is false. Well, Lord, is the world not eternal? I have not declared that the world is not eternal. ... Well, Lord, is the world infinite, ... not infinite ... ? I have not declared that the world is not infinite and that the opposite view is false.” (Walsh, trans., 1987, p. 164) There are three popular readings of the Buddha’s refusal to answer the “unanswerable questions.” On one reading this was an example of his great skill in teaching: any answer he would have given would have been misconstrued and would have had adverse consequences for the student. On another reading, by refusing to answer, the Buddha was indicating that asking these questions does not conduce to successful practice of the Buddhist path and that one should focus one’s mind on more soteriologically efficacious issues. On a third reading - the one adopted here - these questions are in fact metaphysically misguided. They all involve incoherent essentialist presuppositions that, when rejected, render the questions meaningless.)

The question about the existence and nature of the origin of the world is one of the questions that Sakyamuni Buddha declared to be unanswerable. Nāgārjuna here interprets that to mean that there is nothing coherent that can be said about the origin of the world. Given the striking similarity between the questions that the Buddha declared unanswerable and those that Kant argues to be unanswerable by reason in the Antinomies of Pure Reason, there is much to be said for this diagnosis. (fn 66. The Buddha pronounced unanswerable questions regarding whether the world has an origin or an end in time or space, whether the individual continues to exist after entering nirvāṇa, whether there is some entity that transmigrates, and whether there is temporal beginning or end to the continuum of consciousness. Kant pronounces unanswerable questions regarding the substantiality, simplicity, personal identity, and primacy of the self, as well as questions regarding the finiteness or infinitude of the world in space and time, the ultimate divisibility of the world, the freedom of the will, and the existence of God. Murti (1985) makes a bit too much of this parallel, however, arguing that Nāgārjuna follows Kant in asserting that “the aim in cosmological speculation (Rational Cosmology) is to reach the unconditioned ground of

646
empirical objects by means of a regressive claim of reasoning (i.e. arguing from effect to cause) stretched illegitimately, as Kant points out, beyond the possibility of experience.... The question regarding the Tathāgata is in fact about the ultimate ground of both the soul and objects - about the unconditioned in general. The Tathāgata as the Perfect Man is the ultimate essence of the universe. His position is analogous to that of God of Rational Theology.... The formulation of the problems in the thesis-antithesis form is itself evidence of the conflict in Reason, that the conflict is not on the empirical level and so not capable of being settled by appeal to facts is realized by the Buddha when he declares them unsoluble ...” (pp. xiii-xv). While Nāgārjuna shares with Kant a critical approach to philosophy - each seeks to limn the bounds of thought - and while Kant posits an unconditioned realm that is the unknowable but necessary ground of the empirical world, Nāgārjuna eschews just such a ground. His treatment of the unanswerable questions, then, differs from Kant’s, despite the many genuine parallels, in that while for Kant the antinomies represent the application of concepts beyond their range, for Nāgārjuna they represent sheer nonsense: These antinomies are not for him insoluble problems, but rather pairs of apparently coherent but in fact nonsensical verbal formulations.) So Nāgārjuna here claims that we cannot make sense of the beginning or end of all of cyclic existence - beginnings and ends are beginnings and ends of actual, conventionally designated and delimited processes within cyclic existence.

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 2 - As there are no beginning and end, how could there be a middle? Therefore, the simultaneity, anterior, and posterior states (of samsara) are not possible.

JONES (Skt):
[2] And how could there be a middle to what has no beginning or end? Therefore, thinking in terms of “before, after, and simultaneous” is inappropriate.

KALUPAHANA (Skt):
How could there be the middle of that which has neither a beginning nor an end? Therefore, the methods of (distinguishing) the prior, the posterior or both together (i.e., the middle) are not appropriate.

MCCAGNEY (Skt):
Where would the middle of what has no beginning or of what has no end be? Therefore, the processes of the past, the present, and the future do not take place here.

NISHIJIMA (Skt?):
2. Belonging to not the highest, or belonging to not to the lowest, They belong to the middle class without reason. Therefore without reason miscellaneous things and phenomena manifest themselves. And so before and after, there are only strong progresses.

STRENG (Skt):
2. How could there be a middle portion of that which has no "before" and "after"; It follows that "past," "future," and "simultaneous events" do not obtain. Birth and death are not separate/different, not simultaneous/the same.

BOCKING (Ch):
11v2 If there is no beginning or end How can there be a middle? Therefore within this (process) There is no before, no after, and no simultaneity.

BATCHelor (Tb):
For that without beginning [and] end, where can a middle be in that? Therefore, it is not possible for it to have before, after, and simultaneous phases.

DOCTOR (Tb):
When something has neither beginning nor end, How could it possibly have a middle? Therefore, cyclic existence cannot Be either sequential or simultaneous. [XI.2]

GARFIELD (Tb):
2. Where there is no beginning or end, How could there be a middle? It follows that thinking about this in terms of Prior, posterior, and simultaneous is not appropriate.

GARFIELD-SAMTEN (Tb):
2. For that which has neither origin nor terminus, How could there be a middle? Therefore it is not tenable that it is ordered as prior, posterior, or simultaneous.

HAGEN (paraphrase):
11.2 Where there is no beginning or end, how could there be a middle? For this reason, regarding Reality as a whole, distinctions of "before," "after," and "during," make no sense.
11/2 Beginning exists because of middle and end, and end exists because of beginning and middle. Where there is no beginning and no end, how can there be a middle?

Within samsara there is no beginning and no end, hence we say that before, after and simultaneity cannot be. Why is this?

Starting with the current assumption that there is neither a prior nor a posterior end, Nagarjuna raises the question as to how, in the absence of these two extremities, one can speak of a “middle” (madhya). He then proceeds to apply this criticism to the conception of the life-process (samsara) as understood and interpreted by the metaphysicians.

2. The concept of a middle, Nāgārjuna argues, is bound up with those of beginnings and ends. We can say that we and all phenomena are within cyclic existence, but to posit determinate absolute spatiotemporal locations is senseless.
Kārikā XI.3

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 3 - If birth is anterior and old age-death posterior, then there will be birth without old age-death and this will entail the rise of a deathless being.

JONES (Skt):
[3] If birth came first, and aging and death came later, then birth would be without aging and death, and one would be born immortal.

KALUPAHANA (Skt):
If birth were to come first and decay and death were to follow, then birth would be without decay and death, and an immortal would thus emerge.

MCCAGNEY (Skt):
If birth is first, old age and death would be later then birth would be without old age and death and an immortal would have been born.

NISHIJIMA (Skt?):
3. Before the time when birth has existed, Aging and death had belonged to future. There are young ages, death, or birth, There are expectations of birth, and even expectation of eternity.

STRENG (Skt):
3. If birth is regarded as the former, and growing old and dying are regarded as coming into being later, Then birth exists without growing old and dying, and something is born without death.

BOCKING (Ch):
11v3 If we suppose that first there is birth. And afterwards there is old age and death; Then there will be birth with no old age and death. And old age and death with no birth.

BATCHelor (Tb):
If birth were before and aging/death after, there would be birth without aging/death and also without dying one would be born.

DOCTOR (Tb):
If birth came first And aging and death followed later, There would be birth without aging and death, As well as birth without anyone having died. [XI.3]

GARFIELD (Tb):
3. If birth came first, And then old age and death, Then birth would be ageless and deathless, And a deathless one would be born.

GARFIELD-SAMTEN (Tb):
3. If birth came first, And then aging and death, Then birth would be ageless and deathless And a deathless one would be born.

HAGEN (paraphrase):
11.3 If birth came first, followed by old age and death, then birth would be without aging and death, and a deathless being would arise.
The difficulties created by the Sarvastivadins and the Sautrantikas in the matter of explaining causal continuity have been discussed at length. The linear view of the causal process broken up into discrete events, one following the other, left these events without any possible relations. If the same model were to be used in explaining events such as birth (jati) decay-death (jara-marana), then the implication would be that birth has nothing to do with decay-death. There is no necessary connection between them. If this argument were to be carried to its conclusion, then it could be maintained that there is immortality (amrta), for there could be something that continues without decay-death. Here, Nāgārjuna is not insisting that decay-death should be inherent in birth. Rather, he is exposing the difficulties confronted by the metaphysicians who upheld a linear view of the causal process.

3. Birth, old age, and death here are to be understood in an absolute sense. Of course, conventionally, the birth of a particular human being comes before her/his aging, which precedes her/his death. But that should not lead us to think of that birth as the origin of an entity, that aging as the midpoint in the life of that entity, or that death as the end of that entity. If one adopts a doctrine of rebirth, as does Nāgārjuna and as do all of his interlocutors, the point can be made quite straightforwardly: For any sentient continuum, every birth is preceded by an aging and a death, and so forth.

But even setting aside the particular doctrine of rebirth, we can elucidate, this insight with equal force: To see particular entities as having determinate, nonconventional beginnings of existence and determinate, nonconventional termini and, hence, that there are distinct times at which there is a clear fact of the matter about whether or not they exist, independent of conventions for their individuation, is to see those entities as having necessary and sufficient characteristics for their identity, that is, as having essences. But the central thesis Nāgārjuna is defending is that this very conception of what it is to exist is incoherent - that things are empty of such essences and that the boundaries of objects are conventional and indeterminate. There is no fixed boundary between the existence of a seed, the tree to which it gives rise, a piece of wood from that tree, and a table fashioned therefrom or between the existence of an intact table, a broken table, wooden table parts, ashes, earth, the nutrients for a seed, that seed, the sapling to which it gives rise, and another tree.

Once we see the world from the standpoint of emptiness of inherent existence, the history of any conventionally designated entity is but an arbitrary stage carved out of a vast continuum of interdependent phenomena. (fn 67. One must not, however, take this to mean that for Nāgārjuna there is an inherently existent continuum out of which we carve the merely conventional. Rather just as any totality is dependent upon its parts, the totality of empirical reality depends upon its empty components and, so, is itself empty. Ontology presupposes conventional categories. Nor is this to say that the conventions we adopt are from our perspective arbitrary. They reflect our needs, our biological, psychological, perceptual, and social characteristics, as well as our languages and customs. Given these constraints and conventions, there are indeed facts of the matter regarding empirical claims and regarding the meanings of words. But there is no transcendent standpoint, Nāgārjuna would insist, from which these conventions and constraints can be seen as justified.) The arising of any phenomenon, human, nonhuman sentient being, or inanimate object is the consequence of the disintegration of others. That disintegration succeeds their arising and aging. Once we give up the intrinsic identity of entities, the constant cycle of death, birth, aging, and rebirth of entities is unavoidable.
Kārikā XI.4

INADA (Skt):
Verse 4 - If birth is posterior and old age-death anterior, that would constitute a state of non-causal connection. For, of something yet to be born, how could there be old age-death?

JONES (Skt):
[4] However, if birth came after, and aging and death came before, then aging and death would be causeless, and how could they exist for something not yet born?

KALUPAHANA (Skt):
If birth were to be posterior and decay-death anterior, then the latter would be without a cause. How could there be decay-death of one who is not born?

MCCAGNEY (Skt):
If birth is later, there would be old age and death from the beginning.

How could the old age and death of the unborn be without a cause?

NISHIJIMA (Skt?):
4. After a birth has existed, Aging and death, and so forth, exist. Because it might be impossible for anything illogical to exist really, What is the real meaning of becoming older, or death?

STRENG (Skt):
4. If birth were later, and growing old and dying were earlier, How would there be an uncaused growing old and dying of something unborn?

BOCKING (Ch):
11v4 If old age and death come first, And afterwards there is birth.

Then this constitutes causelessness. For without birth, there is old age and death.

BATCHelor (Tb):
If birth were after and aging/death before, how could there be an uncaused aging/death which has no birth?

DOCTOR (Tb):
If birth occurred later, And aging and death before, How could this causeless aging and death Happen to someone who was never born? [XI.4]

GARFIELD (Tb):
4. If birth were to come after, And old age and death first, How could there be a causeless aging and death Of one not born?

GARFIELD-SAMTEN (Tb):
4. If birth were to come after, And aging and death first, How could there be a causeless aging and death Without birth?

HAGEN (paraphrase):
11.4 If birth followed death, the latter would be without cause. How could something unborn grow old and die?
PINGALA COMMENTARY

11/4 If all the beings in samsara were first born, then gradually became old and afterwards died, then in their being born there would be no old age or death. As a dharma, birth should involve old age and death and old age and death should involve birth. Moreover, if there were birth without old age and death this too would be wrong, and so too if there were old age and death not caused by birth. If old age and death came first, and birth afterwards, then old age and death would be uncaused, because birth would only come afterwards. Also, without birth how can there be old age and death? If you say that birth, old age and death coming either before or after each other is untenable, and assert that they are established simultaneously, this is also erroneous, and why?

KALUPAHANA COMMENTARY

Placing birth after decay-death in this linear view of the life-process, the logical conclusion is inevitable that birth cannot relate itself to anything prior and, therefore, is uncaused. If birth cannot be explained, just as much as decay-death could not be accounted for (as stated at XI.3), then we are left with the unborn (ajata). Nagarjuna considers it inappropriate to speak of decay-death of something/someone who is not born.

GARFIELD COMMENTARY

4. But birth has to precede death as well, on pain of the absurdity of something that is unborn dying. And, as Nāgārjuna points out in the next verse, we must think conventionally of these things in sequence because any conventionally designated object undergoes them in order:
Kārikā XI.5

na jarāmaranāṃ caiva jātiṣ ca saha yujyate |
mriyeta jāyamānaś ca syāc cāhetukatobhayoh ||5||

shēng jí yū;yū;wū lǎo sì bù dé yī shì gōng |
shēng shì zé yǒu sì shì èr jù;jù wú yín |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 5 - Indeed, birth is never conceived to be simultaneous with old age-death. For, what is in the process of being born must die and both life and death are non-causally related.

JONES (Skt):
[5] But birth together with aging and death is not admissible - if they were so, one would be dying while being born, and both would occur without a cause.

KALUPAHANA (Skt):
Indeed, decay-death as concomitant of birth is not proper. [In that case,] what is in the process of being born will also be dying and both would be rendered causeless.

MCCAGNEY (Skt):
Birth does not occur simultaneously with old age and death. He would die by being born and both would be without a cause.

NISHIJIMA (Skt?):
5. Never completely the same as the cases of aging, or death, The cases of birth, and so forth, might be exactly governed, Therefore perhaps in the case of death, or the birth of babies, They might be both unreasonable probably together.

STRENG (Skt):
5. And a birth which is simultaneous with growing old and dying is likewise impossible; For, that which is being born would die, and both would be without cause.
PINGALA COMMENTARY

11/5 To say that birth, old age and death are simultaneous is incorrect, and why? Because there would be death in the moment of birth, and dharms ought to exist at the moment of birth and not exist at the moment of death. For there to be death in the moment of birth, is not correct. If they arose simultaneously they would be independent of each other, just as an ox's horns growing simultaneously are independent of each other.

Therefore,

KALUPAHANA COMMENTARY

As mentioned in commentary on XI.4, one way of explaining the problems raised at XI.4-5 would be to assume that decay-death (jara-marana) is inherent in birth (jati). This relationship of inherence would mean that decay-death begins at the same time as birth, and as such it would be appropriate to say that one who is being born is at the same time dying. If so, neither one of them could be the cause of the other. Being uncaused, their occurrence would be rather spontaneous.
Kārikā XI.6

ENGLISH TRANSLATIONS

INADA (Skt): Verse 6 - Where states of anterior, posterior, and simultaneity (of samsara) do not exist, how could the concepts of birth and old age-death be projected?

JONES (Skt): [6] Where the series of “before and after” do not prevail, why would we think in terms of such “birth” and “aging and death”?

KALUPAHANA (Skt): Wherever such methods of (discriminating) the prior, the posterior and the simultaneous do not arise, why be obsessed by such birth and such decay-death?

MCCAGNEY (Skt): Where the processes of the past, the future, and the present do not come forth, what do they explain in detail about birth, old age, and death?

NISHIJIMA (Skt?): 6. In such situations, anything does not appear in this world, Before being not so far, but common progress. However at the same time, miscellaneous things and phenomena, have been born, And so what is the reason, why those aging and death are produced?

STRENG (Skt): 6. Since the past, future, and simultaneous activity do not originate, To what purpose do you explain in detail the existence of birth, growing old and dying?

WESTERHOFF (Skt): XI.6 Where the earlier, the later, and the simultaneous do not appear, how [is there] a proliferation [of the concepts] “birth,” “ageing,” and “death”?

BOCKING (Ch): 11v6 If you admit that beginning, end and simultaneity are all incorrect Why do you (pursue) sophistries And say that there is birth, old age and death?

BATCHelor (Tb): Why fixate on that birth, that aging/dying, for which the phases of before, after, simultaneity are impossible?

DOCTOR (Tb): As it is impossible for them to occur In sequence or simultaneously, Why would anyone think In terms of birth, aging, and death? [XI.6]

GARFIELD (Tb): 6. When the series of the prior, simultaneous, and posterior Is not possible, Why are you led to posit This birth, aging, and death?

GARFIELD-SAMTEN (Tb): 6. Since the framework of sequence and simultaneity Does not make sense for Birth, aging, and death, Why do you fabricate them?

HAGEN (paraphrase): 11.6 When “before,” “after,” and “during” do not arise, why assume the notions of birth, aging, and death?

GOLDFIELD (Tb): Since one cannot happen before the others, And they cannot happen simultaneously, Why would you ever think That birth, aging, and death truly exist? (6)
PINGALA COMMENTARY

11/6 On investigation of birth, old age and death, all three (interpretations) are found to be erroneous; they are simply non-arising and utterly empty. Why do you tenaciously cling to vain arguments about birth, old age and death, claiming that they have fixed, definite characteristics?

Further.

KALUPAHANA COMMENTARY

The speculation that is questioned here is specifically related to the sort of succession discussed previously. It is not every form of reflection that is rejected. Even if the verb prapañcayanti were to mean "conceptualizing", as understood by a majority of modern translators of Buddhist texts, in this context, it does not mean the emptying of the mind of all concepts of birth and decay-death. It is the particular form of conceptualization mentioned in the previous statements as well as the earlier verses that is to be avoided.

GARFIELD COMMENTARY

6. The birth, aging, and death that the opponent has in mind can be represented at two levels: At the most general level, it is the birth, aging, and death of cyclic existence, the examination of which frames this discussion. At that level, Nāgārjuna is pointing out that these conceptions, having legitimate employment only within the empirical realm, are nonsense. But the opponent could also be interpreted as positing birth, aging, and death as determinate, intrinsically identifiable moments in the evolution of empirical phenomena or, specifically, of sentient beings. Nāgārjuna rejects that as well, arguing that moments intrinsically prior to, simultaneous with, or posterior to the existence of entities cannot be identified, given the lack of intrinsic identity of the entities themselves. So long as one in conceiving of phenomena thinks of them as temporally determinate and bounded, and thinks of the identity of things as intrinsic to them, one will have to identify their beginnings, middles, and ends. But this leads to paradox, given the indeterminateness, interdependence, and interpenetration of things. Nāgārjuna hence advises the rejection of this ontology:
Kārikā XI.7

INADA (Skt):
Verse 7 - Cause and effect, characteristics and characterization, feeler and feeling, and also whatever other things exist...(This verse continues on to the next.)

JONES (Skt):
[7-8] Like the cycling of rebirth, no prior limit to all entities is found. So too, no prior limit is found for cause and effect, being characterized or characteristic, feeling and the feeler, or any other thing.

KALUPAHANA (Skt):
Effect and cause as well as characterized and characteristic, together with feeling and feeler or whatever fruits there are,

MCCAGNEY (Skt):
Cause and effect, characteristic and characterized feeler and feeling, and whatever else, do not meaningfully exist.

NISHIJIMA (Skt?):
7. Something, which has been produced, and the reason, why it was produced, are commonly the same,
And what has been produced, and the characteristics, which has been accomplished, are absolutely similar to.
Sense perception and the efforts to transmit it to others, are also constructed perfectly as the same,
Even though there is some kind of aim, but at the same time it is just something, which can not be described with words.

STRENG (Skt):
7. That which is produced and its cause, as well as the characteristic and that which is characterized, The sensation and the one who senses, and whatever other things there are –

BOCKING (Ch):
11v7 Every cause and effect which exists, Marks and marked dharmas Receiving and recipient etc.. All existing dharmas ...

BATCHELOR (Tb):
It is not just samsara alone that has no before-extreme, cause and fruit themselves, and characteristics and the basis for characteristics themselves,

DOCTOR (Tb):
Not only does cyclic existence Have no beginning, But also cause and effect, Characteristics and their bearers, [XI.7]

GARFIELD (Tb):
7. Not only is cyclic existence itself without beginning, No existent has a beginning: Neither cause and effect; Nor character and characterized….

GARFIELD-SAMTEN (Tb):
7. Not only is cyclic existence Without a prior limit— Neither cause and effect; Nor characteristic and characterized.

HAGEN (paraphrase):
11.7 & 11.8 Not only is no beginning of samsara ever found, all entities, together with cause and effect, characteristic and characterized, feeling and feeler, are found without a prior end.

GARFIELD COMMENTARY

7. The alternative, both with respect to cyclic existence as a whole and with respect to individual entities, is to reject the ontology of entities and characteristics altogether, along with the boundaries and determinate relations that ontology requires:
Kārikā XI.8

INADA (Skt):
Verse 8 - .... not only is there not an anterior state in samsara
but this state is not possible for all existences.

JONES (Skt):
[8] [see above]

KALUPAHANA (Skt):
the prior end of these is not evident. Of the entire life-
process as well as of all existents, the prior end is not
evident.

MCCAGNEY (Skt):
The prior limit of saṃsāra does not only not occur,
but also every place prior to the limits of beings does not
occur.

NISHIJIMA (Skt?):
8. Before the time hasn’t been grasped in its true meaning yet,
Wandering in our daily life is never lonely at all yet.
All things and phenomena seem to be exist really,
Before we do not recognize the existence of time.

STRENG (Skt):
8. Not only is the former limit of existence-in-flux
(samsara) not to be found, But the former limit of all
those things is not to be found.

BOCKING (Ch):
11v8 Not only does birth and death.
Have no conceivable original limits -
All dharmas are like this.
No original limits exist at all.

BATCHelor (Tb):
feeling and the feeler, whatever is suitable to bear
meaning, also all things have no before-extreme.

DOCTOR (Tb):
Feelings and those that feel—
Whatever there may be.
The same applies to all things;
None have a beginning. [XI.8]

GARFIELD (Tb):
8. Nor feeling and the feeler;
Whatever there is:
All entities
Are without beginning.

GARFIELD-SAMTEN (Tb):
8. Nor feeling and the feeler;
Whatever there is—
All entities
Are without a prior limit.

HAGEN (paraphrase):
11.8 [see XI.7]

PINGALA COMMENTARY

11/8 'All dharmas' refers to cause and effect, marks and
what is marked, receiving, recipient and so on. All are
without original limits. It is not only birth and death that
has no ultimate limits, but in order to summarize all the
details he talks only about birth and death having no
original limits.

KALUPAHANA COMMENTARY

It is not suprizing to see Nagarjuna concluding his
analysis of extremities (koti) of events, whether they be of
came and effect, or the characterized and the
characteristic, of experiences, of the life-process, and even
of all existents (bhava), with the assertion that they are not
evident (na vidyate). He does not maintain that these
events are without extremities.

Chapter XII: Examination of Suffering
Chapter XII

MAJBA (TOPICAL OUTLINE)

Chapter Twelve: Analysis of Suffering

1. The chapter's context
2. The content of the chapter
3. Summary of the chapter's significance

1. Stating the assertions of the logicians
2. Refuting these assertions
3. Extending this analysis to other topics

1. A concise thesis
2. Explanation of the refuting reasoning

1. Refutation of suffering as arising either due to self or other
2. Refutation of the notion that suffering is created by both self and other
3. Refutation of the idea that suffering has no cause

1. Refutation of production by self and other with reference to suffering
2. Refutation of production by self and other with reference to the person
3. Refutation of production by something other for the reason that nothing is produced by itself

1. Looking at suffering so as to refute that it produces itself
2. Considering the process of appropriation so as to refute the notion that suffering is produced by something other than itself

1. Refutation of the idea that suffering is produced by a person who is identical with it
2. Refutation of the idea that suffering is produced by a different person

1. The absence of an appropriator
2. The absence of a donor

1. Refutation where self and other are understood in terms of the person
2. Self and other in terms of the appropriated
OUTLINE:

We are still in the second part of the examination of the two selflessnesses— the explanation of the selflessness of the person. We have completed the first of its two parts: the refutation of the essential existence of the person. We are now still in the second part: the refutation of the argument for the essential existence of the person. We have completed the first part, the refutation of the example, in the premises. We are still in the second part, the refutation of the reasoning in the premises. We have completed the first part—the refutation of the argument that the activity of birth and death exists. [243:1] This chapter is the second of these two parts: the refutation of the argument that that dependent on the self—suffering—exists.

EXPLANATION:

INADA (Chapter Introductions)

CHAPTER XII - Examination of Suffering

As the chapter indicates, the discussion is on the investigation of pain or suffering (dukkha). The problem is stated in the opening verse which asserts the four possible ways of viewing the causes of suffering, i.e., self-cause, other-cause, both self and other cause, and non-causal. In each instance the usual logic of reductio ad absurdum (prasanga) is applied to exhibit the untenability of each causal view.

Nagarjuna concludes by making reference to the fact that the four-fold possible views can equally be applied to demonstrate the impossibility of asserting elements of the external world.

KALUPAHANA (CHAPTER OVERVIEWS)

12. Suffering (dukkha ). After analysing the nature of existence and adopting a middle position between the two extreme views presented by his fellow Buddhist philosophers, Nagarjuna focussed his attention on the problem of human suffering (dukkha ). Here again, it is difficult to believe that Nagarjuna was unaware of the statements of the Buddha as recorded in the Nikayas and Agamas. His analysis of suffering follows exactly the line that was followed by the Buddha in the Acela-kassapa-sutta of the Samyutta-nikaya.83 Herein, when a disciple by name Kassapa questioned the Buddha as to whether suffering is self-caused (sayam katam dukkham ), the Buddha, without saying: “It is not so” (no h’etam ), which is a formal negation, merely remarks that “he should not speak so,” or “should not put it that way” (ma h’evam ). Kassapa elicits the same response from the Buddha when he questions him as to whether “suffering is caused by another” (param katam dukkham ) or whether it is “caused by both self and other” (sayam katan ca param katan ca) or whether it is “caused neither by oneself nor by another” (asayamkaram aparamkaram ) and, therefore, of “spontaneous origin” (adhiccasamuppannam ).

The reason why the Buddha discouraged Kassapa from reflecting on the cause of suffering in this manner was that he felt that the first two views led to beliefs in permanence (sassata) and annihilation (uccheda) respectively. In the background in which the Buddha preached, to say that “one acts and the same person experiences the consequences” (so karoti so patisamvediyati ) implied the existence of an eternal soul or self, and to maintain that “one acts and another experiences the consequences” (añño karoti añño patisamvediyati ) was taken to mean annihilation, that is, absence of any connection between act and consequence. This was tantamount to a denial of moral responsibility. Avoiding these two extremes, the Buddha explained the relation between action and consequences as one of dependence. It would be necessary to keep in mind that in the above context the Buddha was not denying the four theories of the causation of suffering. He was merely stating that the theories as presented were not satisfactory, because of the implications drawn by the metaphysicians. However, after warning that one should avoid such implications and explaining the dependence of such phenomena, the Buddha used similar linguistic expressions in order to explain his view of the causation of suffering. Recognizing one’s responsibility for one’s own actions, he was even willing to say: “An action is performed by oneself” (attana va katam kammam ),84 so long as one
does not assume the existence of a metaphysical agent or ignore any other factor that contributes to the situation.

Following the same method, Nagarjuna (XII.1), instead of denying these possibilities, merely says that they are not proper (na yujyate). The reason for this is that “if [suffering] were to be considered self-caused, then it will not be dependently arisen” (XII.2). Here then is a distinction between self-causation and dependence, a distinction based upon the assumption or the non-assumption of a metaphysical agent respectively. Therefore, Nagarjuna maintains: “These aggregates appear dependent upon these other aggregates.” However, this latter view should not be taken as meaning “external causation” (parakrta).

Subsequently Nagarjuna proceeds to show the logical difficulties involved in accepting either self-causation or external causation. And this criticism is then applied to the self-causation or external causation of any other existent (bhava).

**BATCHelor (Poetic “Translation”)**

Anguish

If anguish created itself,
It would not be contingent,
For the pain depends
On what I’m doing now.

Were it other than me
And I other than it,
The pain would be caused
By someone else.

Who am I if I create
My own suffering?
How can I be apart
From pain I cause myself?

Who am I if I can feel
The suffering you create?
Can I be apart
From pain you cause me?

Who are you who hurt me?

How can you be apart
From pain you cause me?

Anguish is not caused by me.
How can it be caused by you?
Anguish caused by you
Is caused by your me too.

Suffering is not caused by me,
For I do not cause myself.
If uncaused by another me,
How could it be caused by you?

If both of us cause pain,
Would not it be caused
By we who have no part in it?
Can anguish be uncaused?

Suffering is nothing special.
Even jugs and rolls of cloth
Do not come from themselves,
Others, both or nothing.

**JONES (Commentary)**

12. **Suffering**

In Buddhism, suffering (duhkha) does not necessarily mean direct pain. Not all things are painful. Many experiences in fact are pleasurable. But even the pleasurable ones come to an end, and so they are ultimately not satisfying but frustrating, leaving us in a state of “dis-ease.”

The chapter begins with four options: suffering is self-caused, caused by another, caused by both itself and another, or uncaused (v. 1). Nagarjuna is trying to exhaust all the possibilities to show that suffering is not something that can be connected to the concept of causation in any way (since neither suffering nor causation is self-existent).

If a person is the cause of suffering, then he or she must be distinct from suffering in order to cause it. But as the analyses in chapters 2, 6, and 8 show, we cannot conceive a sufferer to be distinct from the suffering that gives him or her that characterization. It also leaves suffering to be self-created in that person (v. 4) and so still self-existent; or suffering is given by another person who is distinct from the suffering too (v. 5).

Because the self-existent cannot change, it cannot suffer or be related to suffering since that would be a change. So too, suffering cannot be self-caused or it would be unrelated to anything that suffers. If suffering cannot be self-caused, then it cannot be caused by another, for it would have to be self-caused in that other person (v. 7). (See “other-existence” in verse 15·3). So it cannot be caused by itself, by another, by
both (since causation by itself or another has been eliminated), or by neither (which is dependent upon both itself and another being possible causes) (vv. 8-10). Only if emptiness prevails does the Buddhist first noble truth - “All is suffering” - prevail.

GYAMTSO (COMMENTARY)

An Examination of Suffering

In the Prajnaparamita Sutras, the Buddha taught:

Suffering is empty of suffering.

THIS PARTICULAR TEACHING of the Buddha is a good example of teachings from the perspective of the Rang-tong, or “empty of self,” school (in The Rang-tong school is the branch of the Middle Way that bases its view on the second turning of the wheel of Dharma. It is composed of the Middle Way Autonomy and Middle Way Consequence schools.). Whatever phenomenon it is, it is empty of its own essence; it is empty of what it appears to be; it is empty of itself. In this chapter, Nagarjuna proves the validity of this teaching with logical reasoning.

Nagarjuna composed this chapter in answer to those who believed that the self exists because suffering exists. Since there is suffering, there has to be someone to experience the suffering, these people claimed. If Nagarjuna did not then prove to them that suffering was not real, it would have been impossible for him to help them see that there really is no self. That is why he analyzes suffering in this chapter and proves that it does not truly exist.

We can formulate many logical reasonings that prove that suffering is not real. For example: Suffering does not truly exist because there is not really anyone there to suffer—the self who supposedly suffers does not truly exist. Therefore, the suffering itself has no existent essence, and, just like in a dream, suffering is just our imagination. Isn’t that good?

Furthermore, suffering does not truly exist because it does not come from anywhere and it does not go anywhere, and because it does not arise and it does not cease.

And further, suffering does not truly exist because the one who suffers, namely, the self, and the suffering that the self experiences cannot be the same thing and they cannot be different things. If they were the same thing, then the one who suffers would always be suffering. If they were different things, they would exist in different places with no connection between them. Therefore, they cannot be the same and they cannot be different, and since there is no other possibility for how they could be, they cannot truly exist.

What’s more, suffering does not truly exist because the causal conditions that bring it about do not truly exist, as is the case with future suffering, for example. The causes of future suffering do not exist because they are in the future, and since they do not exist, future suffering that is their result does not exist, either.

When we know that suffering does not truly exist, it becomes clear that suffering in apparent reality is the mere lack of knowledge that suffering is not real. It is the mistaken belief that suffering is real when in fact it is not. It is like when we dream and do not know that we are dreaming.

If suffering were real, if it objectively existed, it would have to display some signs of that. There are no signs of its true existence, however, because suffering does not exist inherently or independently. Rather, it only appears to exist when certain causes and conditions come together. What is more, suffering cannot exist apart from any thought of it—it must depend upon the thought of the suffering in order to exist. Without the concept of suffering, there is no suffering in the slightest. Since it cannot exist on its own, it cannot have any objective or true existence.

The fact that suffering is just a thought and nothing else is something we definitely know from our own experience. For example, people can be very upset before they go to sleep, but when they are in deep sleep they do not suffer at all, because they do not have the thought of suffering. Then when they wake up again in the morning, they do not suffer at all until they start thinking of their suffering. Once they start thinking of it, then it begins, but not before.

If we examine in this way, we will understand what characteristics suffering would have to have if it were real, and we will understand that since it does not have those characteristics, it is not real.

Verse ten of this chapter explains how the analysis of suffering can be applied to everything else as well:

That which is only suffering does not arise
From any of the four extremes, and not only that,
All outer phenomena do not arise
From any of the four extremes either.

“That which is only suffering” refers to the five aggregates that constitute the individual. In the Shravaka tradition, these are taught to be “only suffering” because they are both the result of defiled karmic action and the basis for the arising of the mental afflictions, which are suffering in and of themselves as well as being the cause of further karmic actions that produce even more suffering in the future. This is why the goal of the Shravakayana is to abandon the five aggregates and attain the state of nirvana, where not even the slightest trace of them remains. The nirvana of the Shravaka tradition is described as being like when a candle flame goes out—it is the peace that is the
complete cessation of the defiled aggregates and samsara as well.

The Mahayana does not present things in this way, however. The Buddha taught many times in the Mahayana sutras that the five aggregates, and the suffering that goes along with them, are of the nature of original and perfect purity. There is not the tiniest bit of impurity anywhere within them that needs to be abandoned. Therefore, Mahayana practitioners do not want to be rid of their samsaric existence, but rather they aspire to take birth in samsara in as many bodies, in as many lifetimes as possible to be of benefit to sentient beings. In Vajrayana practice, one cultivates the understanding that the five aggregates are of the nature of the five buddha families and that suffering is of the nature of bliss. Since that is the case, why would one ever want to abandon them? They are of the very essence of enlightenment.

The key to understanding the Mahayana and Vajrayana views lies in Nagarjuna’s reasonings. This is because the reason the aggregates and suffering can be described as being pure by nature is that they are empty by nature—they are unborn. They never actually come into existence. Something that never really comes into existence cannot possibly be impure, for what is there to be impure in the first place? It is like getting covered with filth in a dream—no matter how dirty you might seem to be, since not a single particle of the filth is real, in fact there is no impurity at all. Since there is no impurity, there cannot actually be any purity either, just as when you take a bath in the dream after having gotten so filthy, your cleanliness after the bath is just as lacking in reality as the dirtiness that preceded it. Therefore, the true nature of the dream transcends both purity and impurity, and this is given the name “original purity.” We have to understand that what original purity refers to is the freedom from all fabrications, the emptiness in which we can gain certainty by using Nagarjuna’s reasonings.

If we now examine suffering in the way that is described in this verse, we can determine that it is of the nature of emptiness because it does not arise from any of the four extremes. The first of these extremes would be to think that suffering came from itself, that suffering produced itself. If it did that, however, then it would have to exist first and then bring itself into existence once more. It would have to exist and then it would arise. That is obviously not what happens, however, because we can be incredibly happy and then all of a sudden, great suffering can occur—the suffering can arise very quickly where it did not exist before in any way. So the suffering does not produce itself because it occurs anew.

Suffering does not arise from a cause that is different from itself either, because “difference” implies that there are two things simultaneously existent to compare with each other. At the time that the suffering itself exists, however, the causal conditions that bring it into existence do not exist, and thus there is no cause existent for the suffering to be different from. As we learned in chapter 1, cause and result do not exist simultaneously: When the cause exists the result does not, and when the result exists the cause does not, as is the case with a seed and its sprout. Therefore, results cannot arise from things that are different from themselves, because at the time they exist, there are no causes for the results to be different from; and therefore, suffering does not arise from something different from itself, because there is nothing for it to be different from.

The third possibility is that suffering would come from both itself and something other than itself. That is impossible, however, because all of the flaws in saying that suffering comes from itself and all the flaws of saying that it comes from something other than itself accrue to this third alternative.

The fourth extreme is to believe that suffering occurs without any cause at all. That is also impossible, because nothing can arise without causes and conditions. Whatever we perceive in the world, whatever suffering we experience, we know that it does not appear without causes and conditions.

Therefore, suffering does not really happen after all because it does not arise from any of the four extremes, and there are no other possibilities. All outer things are the same—they actually do not arise because they do not arise from any of the four extremes.

When you snap your fingers, that finger snap does not come from itself, does not come from something different from itself, does not come from both itself and something different from itself, and does not arise without any cause at all.

The same is true for all the thoughts that appear in the mind. Whether they are good or bad, profound or base, these thoughts do not come from themselves, do not come from something other than themselves, do not come from both themselves and something other than themselves, and do not arise without any cause at all. Rather, they are dependently arisen mere appearances, just like thoughts in a dream.

If thoughts were real, they would have to arise. If they arose, they would have to arise from one of these four possibilities. Since they do not arise from any one of these four possibilities, and these four are all the possibilities there are, thoughts do not truly arise, and therefore thoughts are not real.

Suffering does not ever really happen because it does not arise from any one of the four extremes. Nevertheless, there is the thought that thinks that suffering is real. Since this thought that thinks suffering is real does not arise from any one of the four extremes either, it is said to be self-liberated—its true nature is freedom.

Chapter Twelve Examination of Suffering (Duhkhaparīkṣa)

**GARFIELD COMMENTARY**

Chapter XII Examination of Suffering

The first of the Four Noble Truths is that "all this is suffering." So one can imagine an interlocutor granting all that has gone before, but in defense of Buddhist orthodoxy, insisting that suffering is inherently existent. After all, the Four Noble Truths are, from a Buddhist perspective, *truths*. Nāgārjuna, of course, is a Buddhist and accepts the Four Noble Truths. (In fact, the principal chapter of this work, Chapter XXIV, is devoted to an exposition of the Four Noble Truths from the standpoint of emptiness and to the argument that only on Nāgārjuna’s analysis can these truths be maintained at all.) So he must, without denying the reality of suffering, explain its emptiness.
Kārikā XII.1

svayaṃ kṛtaṁ parakṛtaṁ dvābhyaṁ kṛtam ahetukam |
duḥkham ity eka icchanti taś ca kāryam na yujyate ||1

svayaṃ kṛtaṃ parakṛtaṃ dvābhyaṁ kṛtam ahetukam |
duḥkham ity eka icchanti taś ca kāryam na yujyate ||1

Inada (Skt):
Verse 1 - Some assert that suffering arises by virtue of being self-caused, other-caused, both self and other-caused or non-causal. Such an assertion which treats suffering as an effect is not justifiable.

Jones (Skt):
[1] Some maintain that suffering is self-caused, caused by another, caused by both itself and another, or is uncaused. But suffering as something that can be caused is not admissible.

Kalupahana (Skt):
Some assume that suffering is self-caused, caused by another, caused by both or without a cause. [Suffering as] such an effect is indeed not appropriate.

Mccagney (Skt):
Some say, “Suffering is self-caused, caused by another, caused by both or uncaused.” But suffering does not occur as an effect.

Nishijima (Skt?):
1. My own Action, and others’ Action, and Action, which is done by myself and the others together, are not reasonable.
Only one aim called Pain has been desired, and the Pain and what has been done actually, are not combined into one.

Streng (Skt):
1. Some say: Sorrow (dukkha) is produced by oneself (i), or by another (ii), or by both itself and another (iii), or from no cause at all (iv); But to consider that sorrow (dukkha) as what is produced is not possible.

Westerhoff (Skt):
XII.1 Some say that suffering is caused by itself, or by something else, or from both, or that it arises in an uncaused way. To consider [suffering] as produced is not appropriate.

Bocking (Ch):
12v1 'Self-created, created by another Jointly created, or created by no cause'. In these ways they describe suffering But in fact these are wrong.

Batchelor (Tb):
Some assert that anguish arises from being made by self, made by other, by both, without cause. To do that is not suitable.

Doctor (Tb):
Some say that suffering is produced by itself, by something other, by both, or that it arises without a cause. Such production is not possible.

Garfield (Tb):
1. Some say suffering is self-produced, Or produced from another or from both. Or that it arises without a cause. It is not the kind of thing to be produced.

Garfield-Samteng (Tb):
1. Some maintain that suffering is self-created. Some maintain that it is created by another; others that it is created by both, or that it arises without a cause. Such creation is impossible.

Hagen (paraphrase):
12.1 Some claim that dukkha is self-caused, other-caused, both self and other-caused, or that it is without a cause. But treating dukkha as an effect cannot be sustained.
PINGALA COMMENTARY

12/1 Some people say that suffering is self-created, or that it is created by something else, or that it is created by both self and other, or that it is created by no cause, but in fact none of these is the case. None of these being the case (means that sentient beings bring about suffering through causality, and disliking pain, desire to extinguish it. Being ignorant of the true causes and conditions of suffering, they have these four kinds of mistaken ideas. Thus he says that in fact they are all wrong, and why?

KALUPAHANA COMMENTARY

The discussion of the life-process (samsara) leads Nagarjuna to an examination of the problem of suffering (duhkha). It seems that when compiling this chapter Nagarjuna had a copy of the Buddha's discourse to Acela-Kassapa (S 2.18-22; Tsa 12.20 [Taisho 2.86a]) in front of him. The Buddha's discourse to Acela-Kassapa begins with the four theories of the causation of suffering referred to by Nagarjuna in almost identical terms. The only difference is with regard to the explanation of the fourth. Where Nagarjuna has ahetukam, the Buddha's discourse refers to adhiccasamuppannam (see XII.9 below). Another difference is that while the Buddha's advises Kassapa not to get involved in such speculations, insisting, "Do not [say] so," (ma h'evam), Nagarjuna maintains that these theories are not appropriate.

GARFIELD COMMENTARY

1. These are the four possibilities with regard to inherently existent suffering. The echo of I: 1 is obvious, and the argument here will depend heavily upon the analysis of dependent arising developed in that chapter and in Chapter VII.
Kārikā XII.2

svayaṃ kṛtaṃ yadi bhavet pratiṣṭyā na tato bhavet |
skandhān imān amī skandhāḥ saṃbhavanti pratītyā hi ||2||

kù ruò zi zuò zhě zé bù cóng yuán shèng |
yīn yǒu cǐ yīn gǔ ér yǒu bǐ yīn shèng |

| gaṅ phyir phuṅ po 'di dag la || brten nas phuṅ po de dag 'byuṅ |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 2 - If suffering is self-caused, it will not have a relational condition in arising. For, surely, these (present) skandhas are relationally conditioned in the arising of those (future) skandhas.

JONES (Skt):
[2] If suffering were self-caused. it then would not arise dependently, since aggregates arise dependent upon other aggregates.

KALUPAHANA (Skt):
If [suffering were to be] self-caused, then it could not occur dependently. Indeed, depending upon these aggregates, these other aggregates occur.

MCCAGNEY (Skt):
If it would be self-caused, it would not be dependent. Skandhas [separate heaps of conditionings that make up a sense of personality] arise dependent on these boundless skandhas.

NISHIJIMA (Skt?):
2. In the case, when my Action exists, It is clear that what has expanded does not exist clearly. And what have been accumulated are accumulations. Because something clearly aggregated, is conspicuously clear in front of us.

STRENG (Skt):
2. If it were produced by itself (i.e. self-causation), it would not exist dependent on something else. Certainly those "groups of universal elements" (skandhas) exist presupposing these "groups."

BOCKING (Ch):
12v2 If suffering were self-created
Then it would not arise from conditions.
(But) it is on account of 'these skandhas' That 'those skandhas' arise.

BATCHelor (Tb):
If it were made by self, therefore it would not be contingently arising, because those aggregates arise contingently on these aggregates.

DOCTOR (Tb):
If suffering were produced by itself
It could not arise in dependence, Because, based on these aggregates, Those aggregates arise. [XII.2]

GARFIELD (Tb):
2. If suffering came from itself, Then it would not arise dependently. For those aggregates Arise in dependence on these aggregates.

GARFIELD-SAMTEN (Tb):
2. If suffering was created by itself, Then it would not arise dependently. For those aggregates Arise in dependence on these aggregates.

HAGEN (paraphrase):
12.2 If dukkha is self-caused, it would not arise dependently. Surely those aggregates arise dependent upon these aggregates.
PINGALA COMMENTARY

12/2 If suffering is self-created, then it does not arise from conditions. 'Self (-created)' means to arise from its own nature, but this is not correct. Why is this? It is because of the previous five skandhas that the subsequent five skandhas arise, and therefore suffering cannot be self-created.

Question. If you say 'these skandhas create those skandhas', this is creation by another.

Reply. This is not the case, and why?

KALUPAHANA COMMENTARY

The notion of self-causation of suffering is further elaborated by the Buddha as the view expressed in the statement, "He acts and he [himself] reaps the consequences," (so karoti so patisamvediyati). The Buddha's reason for not accepting such a view is that it leads to the belief in eternalism (sassatam etam pareti). Nagarjuna certainly knew that the Buddha was utilizing the conception of dependence (paticcasamuppada) to avoid any metaphysical theory of eternalism. This was the basic theme, not only in the discourse to Kaccayana, but also in the discourse to Acela-Kassapa, where it is once again presented as the middle position between the extremes of eternalism and annihilationism (S 2.20). It is, therefore, not surprising to see Nagarjuna rejecting the conception of self-causation of suffering on the grounds that in such a case suffering would not be dependently arisen (na pratitya bhavet).

Furthermore, the eternalism that comes to be embodied in a theory of self-causation of suffering pertains more to the individual self or soul (atman), and not the substance (svabhava). Therefore, Nagarjuna insists that what is being asserted as a self or soul is nothing other than the arising of a set of aggregates depending upon (pratiya) another set of aggregates.

GARFIELD COMMENTARY

2. Self-arising suffering would indeed be a candidate for inherent existence. But for the proponent of a Buddhist analysis of suffering, that is little help since suffering on a Buddhist analysis is the consequence of delusion, attachment, craving, action, and so forth. So such an analysis is not open to anyone wanting to defend the inherent existence of the suffering explored in the Four Noble Truths.
Kārikā XII.3

yādy amābhyā ime ’nye syur ebhyo vāmā pare yadi |
bhavet parakṛtaṃ duḥkham parair ebbhir amī kṛtāḥ ||3||

ruò wèi wèi yīn yì wǔ yīn zhē

| sdug bsṅal gžan gyis byas ’gyur žiṅ | | gžan de dag gis de byas ’gyur |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 3 - If these (present) skandhas are different from those (future) skandhas or if the latter is other than the former, then there will be suffering caused by something else and those (future) skandhas will also be caused by it.

JONES (Skt):
[3] If things arise from things they were different from, or if the latter arose from the former, then suffering could be caused by another, since things then could be caused by other things.

KALUPAHANA (Skt):
If from these those that are different were to come to be, or if from those these different [things] were to come to be, then suffering would be caused by another, for these are mused by those that are different.

MCCAGNEY (Skt):
If these are different from those or those would be some place other than these, suffering would be caused by others and those caused by means of these others.

NISHIJIMA (Skt?):
3. When this world is different from what is seen now, The similarity and difference of the world might be bound then by the miscellaneous things and phenomena.
It might be true that something, which has been produced by others, can be painful,
But even being produced by either by others, or by oneself, they are the same to be produced by production.

STRENG (Skt):
3. If these were different from those, or if those were different from these, Sorrow (dukkha) would be produced by something other than itself (i.e. other-causation), because those would be made by these others.
12/3 If these five skandhas are different from those five skandhas, and those five skandhas are different from these five skandhas, then (you say that) this must be 'creation by another'. But by way of example, if thread were different from cloth, then there ought to be cloth apart from thread, but as there is no cloth apart from thread, then cloth is not different from thread. In the same way if those five skandhas differ from these five skandhas, then those five skandhas ought to exist apart from these five skandhas, and if those five skandhas do not exist apart from these five skandhas, then these five skandhas are not different from those five skandhas. Consequently, you should not say that suffering is 'creation by another'.

Question. 'Self creation' means that everybody creates of himself his own suffering and of himself receives his suffering.

Reply.

Here we find a definition of "external causation" (para-kṛta). Nagarjuna has already explained the relationship between self-nature or substance (svabhava) and other-nature (parabhava)(see I.3). There he maintained that without self-nature there cannot be other-nature (avidyamane svabhave parabhavo na vidyate). In the present verse, Nagarjuna applies the same principle to explain "causation by another." Thus, we find him utilizing the ablative case (amibhyah, ebhyah), expressive of "source" or "origin," in order to explain the arising of something different from within something that preceded.

In other words, even though the effect is different from the cause, it arises from the cause; that is, external causation is invariably related to selfcausation.

It is important to distinguish this statement from that found at XII.2 which, instead of using the ablative case, employs the accusative (iman skandhan pratiya) in order to highlight the principle of dependence. Indeed, the very term idappaccayata (idam-pratyayata) utilized by the Buddha to express the principle of dependence is couched in the accusative case (idam), instead of the ablative of source.

3. The next alternative - that suffering arises from another requires that there be essential difference. For since suffering does arise from previous conditions, if there is genuine otherness, that would characterize the relation between suffering and its grounds.
Kārikā XII.4

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 4 - If suffering is caused by the individual himself, then the individual is separated from suffering. Who is this individual self which self-causes suffering?

JONES (Skt):
[4] If suffering is caused by a person himself, then that person exists without suffering. But then what is that person by whom suffering is self-created?

KALUPAHANA (Skt):
If suffering is caused by one's own person, then that own person can exist without suffering. Who is he by whom suffering is self-caused?

MCCAGNEY (Skt):
If suffering is caused by the person himself, then [he would exist] without suffering.
Who is this person himself by means (‘If whom suffering is self-created?)

NISHIJIMA (Skt?):
4. When the personality of myself has produced Pain, Then it might be similar to as if there were no Pain, too.
The personality of myself is also only one among many people, And so what has produced Pain, is also my Action itself.

STRENG (Skt):
4. If sorrow (dukkha) is made through one's own personality (ı) (svapudgala), then one's own personality would be without sorrow (dukkha); Who is that "own personality" by which sorrow (dukkha) is self-produced (ı?)

BOCKING (Ch)
12v4 If the person himself creates suffering -
What person is there apart from suffering?
That you could say of that person,
He is able to create his own suffering?

BATCHelor (Tb):
If anguish were made by one’s own person, who would that person be who has made anguish by himself, but is not included in the anguish?

DOCTOR (Tb):
If the person itself produces suffering, Then what, apart from suffering, Is this person who produces suffering? [XII.4]

GARFIELD (Tb):
4. If suffering were caused by a person himself, Then who is that person - By whom suffering is caused - Who exists distinct from suffering?

GARFIELD-SAMTEN (Tb):
4. If suffering were caused by a person himself, Then who is that self who created the suffering— That person— Apart from suffering?

HAGEN (paraphrase):
12.4  If dukkha were caused by one’s own self, then such a one is separate from dukkha. Who is this person by whom dukkha is self-caused?
PINGALA COMMENTARY

12/4 You may say that the person himself creates his own suffering, but in what other situation, apart from in the suffering of the five skandhas, do you find a person who could create his own suffering? You should give an account of such a person, but you cannot give an account of him. Therefore, suffering is not self-created by the person. If you say that, although a person does not self-create his own suffering, another person creates the suffering and transfers it to this person, this also is incorrect, and why?

KALUPAHANA COMMENTARY

As shown before, the Buddhist metaphysicians who adopted a theory of moments had difficulty explaining personal continuity or identity in a more empirical way. They were confronted with the problem of explaining good and bad, suffering and happiness as part of the personal continuity. Thus, the Sarvastivadins would maintain that suffering, etc. are mere qualities (laksana) that characterize the substance (dravya), or they would, along with the Sautrantikas, maintain that qualities are appropriated or become part of the stream (svasamtnapa-patita, AK 2.36; Akb; Poussin, L'Abhidharmakosa, vol. 1.). Such a perspective inevitably leads to a distinction between the person or the stream of personal identity, on the one hand, and qualifies like suffering on the other. What Nagarjuna is attempting to do in the present verse is to bring out the metaphysical implications of this theory. According to this theory, suffering is something external to the individual. It is an entity having its own reality. It is something caused by a person, as a carpenter would produce a piece of furniture. As such, Nagarjuna questions the very nature of that person who, being independent of suffering, causes suffering on its own.

GARFIELD COMMENTARY

4. But who is that other? It must be the sufferer himself at another stage, or another individual altogether. If it is the person himself, then as the cause of suffering, he must be distinct from suffering. This poses two problems: First, as per the analysis of motion, desire, and agency in Chapters II, VI, and VIII above, we cannot conceive of the sufferer as inherently different from the suffering he experiences. For part of his identity is constituted by that very suffering, and that suffering is his suffering. But second, given the framework of the first of the Four Noble Truths, a Buddhist philosopher such as Nāgārjuna would share with any Buddhist interlocutor the assumption that in samsāra sentient beings not only suffer, but are literally constituted of suffering - that every aggregate of a sentient being’s existence is a cause, an effect, and a basis of misery. So on either score, to distinguish sufferer from suffering for the purpose of such an analysis would be impossible.
Kārikā XII.5

INADA (Skt):
Verse 5 - If suffering is caused by another individual, where is 
this self which is separated from suffering but which is 
( seemingly) the recipient of the suffering caused by 
another?

JONES (Skt):
[5] If suffering is caused by one person and then given to 
another, then the suffering is caused by the former - how 
can he then be without suffering?

KALUPAHANA (Skt):
If suffering were to be produced by one person and given 
over to another, that suffering is caused by the former. 
How can the latter be identified without suffering?

MCCAGNEY (Skt):
If suffering is produced by another person, 
to whom does this suffering caused by another apply since 
he is without suffering?

NISHIJIMA (Skt?):
5. When the personality of others have produced Pain, 
Then the Pain has been illuminated by other's light. 
What are created by others, might be the Pain, 
And where is it possible for Reality to exist without Pain?

STRENG (Skt):
5. If sorrow (dukkha) were produced by a different 
personality (ii) (parapudgala), How would he, to whom 
is given that sorrow (dukkha) by another after he had 
produced it, be without sorrow (dukkha)?

BOCKING (Ch):
12v5 If suffering is created by another person 
And yet is transferred to this person, 
Then, if he is separate from the suffering 
How can this person receive it?

BATCHELOR (Tb):
If anguish arose from another person, how could it be 
suitable for there to be [someone] not included in the 
anguish, who has been given it by another who made 
the anguish?

DOCTOR (Tb):
If suffering comes from a different person, 
Then how, when produced by another person, 
Could it be given to somebody 
Who is something other than suffering? [XII.5]

GARFIELD (Tb):
5. If suffering comes from another person, 
Then who is that person - 
When suffering is given by another - 
Who exists distinct from suffering?

GARFIELD-SAMTEN (Tb):
5. If suffering arose from another person, 
Then that other one would create the suffering. 
What could that which comes to fruition be 
Apart from the suffering?

HAGEN (paraphrase):
12.5 If dukkha were caused by another, then who is 
the recipient that could exist distinct from dukkha?
PINGALA COMMENTARY

12/5 If another person creates the suffering and transfers it to this person, there can be no reception by this person apart from the five skandhas.

Further.

KALUPAHANA COMMENTARY

If one were to accept the separation of suffering from the person who produces it (i.e., the theory criticized at XII.4), then it will lead to difficulties not only for one who adopts self-causation of suffering (svayam krtam duhkham), but also for one who upholds the opposite view, namely, suffering is caused by another (parakrtam duhkham). The latter will have to maintain that suffering is caused by one person and passed on to another. But that other would himself be independent of suffering, in the same way as the person who caused it. The question still remains as to how that person can be identified.

GARFIELD COMMENTARY

5. Another alternative is that the suffering is caused not by earlier stages of one’s own life, but by another individual. That other individual of course could be someone else entirely, in the ordinary sense, or it could be an earlier moment of what is ordinarily regarded as oneself, but which is for the purposes of this analysis regarded as substantially other. That is, taken in this way, Nāgārjuna can be seen to be arguing on each side of a dilemma with regard to the identity of persons across time. But if this were so, it would have to be the case that the person in whom suffering was caused by that other could be identified and that that person could be distinguished from her suffering. But then the same problems developed above apply. Nāgārjuna emphasizes this in XII: 6: (fn 68. In this case, there is a second difficulty as well: For one person to cause suffering for another, that first must already be suffering. For to cause suffering is a very serious wrong, which could only be done by someone who him/herself is suffering. So there is a possible regress.)
Kārikā XII.6

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 6 - If suffering is caused by another individual, what is (the nature of) this individual which is separated from and yet causes and bestows suffering on the recipient?

JONES (Skt):
[6] If suffering is caused by another person, who is that other person who is without suffering and who causes the suffering?

KALUPAHANA (Skt):
If suffering is caused by another person, who is that other person who, himself without suffering, causes it and bestows it on another?

MCCAGNEY (Skt):
If suffering is produced by another person, who is the other person Without suffering who caused and bestows it on another?

NISHIJIMA (Skt?):
6. When the personality of others have produced Pain, Then what is just the personality, which is called other's personality? The situation, which does not have any Pain, might be the states, which have been produced. Therefore it is the state, which has been grasped by the facts.

STRENG (Skt):
6. If sorrow (dukkha) is produced by a different personality, who is that different personality Who, while being without sorrow (dukkha), yet makes and transmits that sorrow (dukkha) to the other?

BOCKING (Ch):
12v6 If that person creates suffering, And bestows it on this person, What person could exist, apart from suffering Who could give it to this person?

BATCHelor (Tb):
If anguish arose [from] another person, who would that other person be who, having made it, gives it to someone else, but is not included in the anguish?

DOCTOR (Tb):
If suffering occurs because of another person, Then who is this producer, Tins other who gives suffering to another, Yet who is not that very suffering? [XII.6]

GARFIELD (Tb):
6. If another person causes suffering, Who is that other one Who bestowed that suffering, Distinct from suffering?

GARFIELD-SAMTEN (Tb):
6. If another person gave rise to suffering, Who would that other person be Who created it and gave that suffering, Other than suffering?

HAGEN (paraphrase):
12.6 If dukkha were caused by another, who is that one that, distinct from dukkha, can bestow dukkha on another?

PINGALA COMMENTARY

12/6 Suppose you say that that person creates suffering and gives it to this person; what person is there apart from the suffering of the five skandhas, to create suffering and give it to this person? If such a one exists you should describe his characteristics. Further,

KALUPAHANA COMMENTARY

This is similar to the arguments presented before. The sharp dichotomy between the agent of suffering and suffering itself prompts Nagarjuna to question the nature of that other person (para-pudgala) who is supposed to be the author of suffering and who passes it on to another.
Kārikā XII.7

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 7 - As self-cause cannot be established, where can an other-caused suffering be? For, surely, an other-caused suffering is caused by that other itself.

JONES (Skt):
[7] Because self-causation is not established, how can there be suffering caused by another? For the suffering that the other would create would be self-caused in him.

KALUPAHANA (Skt):
With the non-establishment of self-causation, how can there be suffering caused by another? For, indeed, if another were to cause that suffering, in relation to him it would be self-caused.

MCCAGNEY (Skt):
Since the self-nature of cause is unexplained for suffering, where is there cause by another?
Indeed the other, from whose cause there is suffering, his suffering would be self-caused.

NISHIJIMA (Skt?):
7. Because our products haven’t been accomplished yet, It is impossible for us to say that the Pain has come from others’ efforts. Because even though other people have also created their Pain actually, Their work might be done as their own products separately.

STRENG (Skt):
7. It is not established that sorrow (dukkha) is self-produced (i), but how is sorrow (dukkha) produced by another (ii)? Certainly the sorrow (dukkha), which would be produced by another (ii), in his case would be self-produced (i').

BOCKING (Ch):
12v7 If self-creation is not established How can there be creation of suffering by another? If another person creates suffering Then this is also termed 'self-creation'.

BATCHelor (Tb):
Since it is not established as made by self, how can anguish have been made by other? [For] whatever anguish is made by other, that has been made by his self.

DOCTOR (Tb):
As it cannot be established to be produced by a self, How could suffering be the product of another? The suffering produced by the other Is the product of that other itself. [XII.7]

GARFIELD (Tb):
7. When self-caused is not established, How could suffering be caused by another? Whoever caused the suffering of another Must have caused his own suffering.

GARFIELD-SAMTEN (Tb):
7. When it does not exist as self-created, How could suffering be created by another? Any suffering created by another Must have been self-created.

HAGEN (paraphrase):
12.7 When self-causation is not established, how can there be dukkha caused by another? Dukkha, caused by another, would, to that other, be self-caused.
PINGALA COMMENTARY

12/7 Neither other nor self-creation of suffering can be established for various reasons, yet you say that suffering is created by another. This too is incorrect, and why? Because 'this' and 'that' are mutually dependent. If that (person) creates suffering then for that (person) it will constitute self-creation of suffering. Self-creation of suffering has already been refuted, and since you have accepted that self-creation of suffering cannot be established, other-creation cannot be established either. Moreover:

GARFIELD COMMENTARY

7. But the suffering of that other person must either be caused by someone else or be self-caused. The former alternative leads to a regress: The whole point from the standpoint of the opponent who is the target of this argument is to find the independent explanatory ground for suffering. The second alternative leads back to the problem scouted in the opening verses: Self-caused suffering is both inconceivable within a general Buddhist soteriological framework and runs afoul of the arguments against self-causation generally. Finally, it is rather embarrassingly ad hoc. Nāgārjuna sums this up in the next verse:
Kārikā XII.8

Verse 8 - In truth then, there is no self-caused suffering for it cannot come about by itself. If another does not bring about its own suffering, why is there an other-caused suffering?

JONES (Skt):
[8] Suffering is not self-caused, for it is not created by itself. So too, if any other one is not self-created, how can suffering be created by that one?

KALUPAHANA (Skt):
So long as suffering is not self-caused, it is, indeed, not caused by oneself. If the other were not to do it by himself, how could suffering be caused by another?

MCCAGNEY (Skt):
Therefore, suffering is not self-caused, indeed it is not caused by means of itself.
How can [suffering] be caused by another if [his] suffering would not be caused by an other not the self?

NISHIJIMA (Skt?):
8. What I have sacrificed for producing something, is not so painful. Because without relying upon such efforts the article might not be produced at all.
Because in this case another person must be different from the person himself, Therefore how is it possible for Pain to come from another's behavior?

STRENG (Skt):
8. Sorrow (dukkha) is not self-produced (i), for that which is produced is certainly not produced by that personality. If the "other" (para) is not produced by the individual self (atma), how would sorrow (dukkha) be that produced by another?

WESTERHOFF (Skt):
XII.8 Suffering is not self-caused insofar as nothing is self-caused. If the other is not self-caused, how can suffering be caused by another?
PINGALA COMMENTARY

12/8 There is no self-creation of suffering, and why? Just as a cannot cut itself, so a dharma cannot create, of itself, a dharma. Therefore, there cannot be self-creation. There is no other-creation of suffering either, and why? There is no own-nature of an 'other' apart from suffering. If there were another own-nature, we would have to say that this other created suffering, but this other is itself also suffering, and how can suffering itself create suffering?

Question: Even if there is neither self-creation nor other-creation, surely there is 'joint creation'?

Reply:

KALUPAHANA COMMENTARY

The implications of XII.3 discussed earlier are stated once more clearly and explicitly in these two verses. If some other person were to cause suffering, then that suffering, in relation to that particular person, would be self-mused.

Thus, if one perspective is not valid then the other too would be invalidated. This, as pointed out earlier, is the method adopted at I.3 to reject both self-nature (svabhava) and other-nature (parabhava).

GARFIELD COMMENTARY

8. But, as Nāgārjuna points out in XII: 9, it can’t be caused by both since we have seen that neither can be causally relevant at all to inherently existent suffering of a kind relevant to Buddhist doctrine. And it is absurd to suppose that it is uncaused:

______
INADA (Skt):
Verse 9 - If suffering could be caused individually by one's self and by an other, then there should also be suffering caused jointly. Where is this non-causal suffering which is neither caused by itself nor by an other?

JONES (Skt):
[9ab] If suffering were created by oneself and another, it would be made by both. [9cd] How could there be suffering that is not self-created or created by another or causeless?

KALUPAHANA (Skt):
If suffering were to be caused by both, it would be caused by each individually. Whence can there be suffering that is caused neither by another nor by oneself and is without a cause?

MCCAGNEY (Skt):
If suffering would be caused by both, it would be caused one by one.
Where IS the uncaused suffering that is not self-caused or caused by another?

NISHIJIMA (Skt?):
9. In the case that a work has been done by the two members, Then the Pain might be separated into two, one by one.
If Pain has not been produced by either others, or by himself, Why Pain is so unreasonable actually like that?

STRENG (Skt):
9. Sorrow (dukkha) could be made by both self and the "other" (iii) if it could be produced by either one. But not produced by another, and not self-produced (iv) — how can sorrow (dukkha) exist without a caused

WESTERHOFF (Skt):
XII.9a If suffering was caused by both [itself and others] it could be caused by each individually.

ENGLISH TRANSLATIONS

BOCKING (Ch):
12v9 'if the suffering of this (person) and that (person) is established.
Then surely there is joint creation of suffering?
But this and that person do not create.
How much less is there creation without a cause.

BATCHELOR (Tb):
If it is made by each, anguish would be made by both. Not made by self, not made by other, how can anguish have no cause?

DOCTOR (Tb):
If suffering were produced by each of these, Then suffering would be the product of both.
Neither produced by self nor other, How could suffering be uncaused? [XII.9]

GARFIELD (Tb):
9. If suffering were created by each, Suffering could be caused by both.
Not caused by self or by other, How could suffering be uncaused?

GARFIELD-SAMTEN (Tb):
9. If suffering were created by each, Suffering could be created by both.
Not created by self or by other, How could uncaused suffering occur?

HAGEN (paraphrase):
12.9  If dukkha were caused by either self or another, it could also be caused by both together. How can dukkha that is neither self- nor other-caused be without cause?
PINGALA COMMENTARY

12/9 Even self-creation and creation by another are erroneous. How much more so creation with no cause? Causelessness involves numerous errors, as has already been explained in the chapter refuting the deed and the doer (chapter 8). Furthermore:

KALUPAHANA COMMENTARY

The third theory of the causation of suffering referred to in the discourse to Acela-Kassapa is a combination of causation by oneself and causation by another (sayam katan ca param katan ca). This is understood by Nagarjuna as causation by each individual (ekaika-krtam). However, he has already rejected both types of causation.

If suffering were not caused by oneself or another, then according to the Buddha it would "arise one top of another" (adhiccasamuppanna). Such arising is contrary to "arising by moving towards or depending upon another" (paticcasamuppanna). This implies arising without any causal connection. Hence, adhiccasamuppanna becomes a synonym for ahetuka (cause-less). For Nagarjuna, there is no such uncaused suffering.
Kārikā XII.10

na kevalaṁ hi duḥkhasya cāturvidhyam na vidyate |
bāhyānām api bhāvānāṃ cāturvidhyam na vidyate ||10||

Not only is the four-fold causal view of suffering impossible but the same is not possible with respect to the external elements of being.

INADA (Skt):
Verse 10 - Not only is the four-fold causal view of suffering impossible but the same is not possible with respect to the external elements of being.

JONES (Skt):
[10] Not only are the four modes listed in verse 1 not found for suffering, they are not found for entities in general either.

KALUPAHANA (Skt):
It is not that the fourfold theory applied exclusively to suffering is not evident. The fourfold theory pertaining to other existents too is not evident.

MCCAGNEY (Skt):
Indeed, not only does the fourfold account of suffering not occur, but the fourfold account of the downfall of beings also does not occur.

NISHIJIMA (Skt?):
10. Some special condition, which is peculiarly individual, does not belong to Pain, The four kinds of recognition, that is, life, aging, disease, and death, are difficult to realize. And even though what are existents out of doors, are also existence, The four kinds of recognition, that is, life, aging, disease, and death, are difficult to realize.

STRENG (Skt):
10. Not only are the four causal interpretations not possible in respect to sorrow (dukkha), but also none of the four causal interpretations is possible even in respect to external things (bhava).

WESTERHOFF (Skt):
XII.10 Not only does suffering not exist in any of the four possible ways described, but no other external entity exists in these ways either.

BOCKING (Ch):
12v10 It is not only in the explanation of suffering That these four ways of thinking cannot be established. But also in regard to all external things These four ideas cannot be established.

BATCHelor (Tb):
Not only does anguish alone not have the four aspects, external things too do not have the four aspects.

DOCTOR (Tb):
Not only does suffering Not exist in any of these four ways, External entities as well Do not exist in any of the four ways. [XII.10]

GARFIELD (Tb):
10. Not only does suffering not exist In any of the fourfold ways: No external entity exists In any of the fourfold ways.

GARFIELD-SAMTEN (Tb):
10. Not only does suffering not exist In any of the fourfold ways: No external entity exists In any of the fourfold ways.

GOLDFIELD (Tb):
That which is only suffering does not arise From any of the four extremes, and not only that, All outer phenomena do not arise From any of the four extremes either. (10)

HAGEN (paraphrase):
12.10 Not only are these four ways of explaining the cause of dukkha unsound, causal explanations for the existence of any mind object are equally unsound.
PINGALA COMMENTARY

12/10 Although it is stated in the Buddha’s teaching that the five receptive skandhas constitute suffering, there are non-Buddhists who say that suffering is the reception of suffering. For this reason he says that it is not only in the explanation of suffering that the four kinds of ideas cannot be established, but they cannot be established for any external objects including earth, water, mountains, trees and so on or any of the dharmas.

KALUPAHANA COMMENTARY

Inada’s explanation that these are the “four-fold possible views” (caturvidhyam) seems to leave no room for a fifth view which both the Buddha (in his discourse to Kassapa) and Nagarjuna (at XII.2) were very clearly and unequivocally upholding, namely, “dependent arising of suffering.” Hence his conclusion that these four possible views can equally be applied to demonstrate the impossibility of asserting elements of the external world. On the contrary, Nagarjuna (as well as the Buddha) were merely criticizing the futility of adopting these four particular views in explaining suffering as well as other elements in the world of experience. Indeed, Nagarjuna was clearly aware of the fact that these four are not the only views explicating the causation of suffering. Hence his statement in the very first verse in this chapter, “Some assert” (eke icchanti), which means that it is not everyone that asserts such theories.

GARFIELD COMMENTARY

10. The fourfold analysis is, of course, that in terms of the tetralemma of causation. And Nāgārjuna is simply emphasizing that this refutation of the existence of inherently existing suffering is perfectly general. No entity can arise from itself, from another, from both, or from a noncause. This was the burden of the first chapter. We must, of course, recall that this is not a refutation of the existence of the suffering we all experience and wish to avoid. Rather it is a demonstration of its emptiness of inherent existence. For just as the analysis in Chapter I has provided the key to dismissing the inherent existence of suffering, the positive side of that same analysis can be used to recover its conventional existence. If by suffering we mean something dependently arisen, impermanent, and conventional, existing only as imputed and only in relation to its empty subjects, there is plenty of suffering to go around. But moreover, not only is the existence of suffering rendered comprehensible on this analysis, but so is the possibility of the alleviation of suffering. For if the proponent of the inherent existence of suffering were correct, while it might seem that suffering would then have a more solid status than that vouchsafed it by Nāgārjuna’s analysis in terms of emptiness, that very substantial existence and hence independence of other conditions would make its alleviation impossible. For if it exists independently, then there are no conditions in the absence of which it fails to exist. So Nāgārjuna’s analysis not only makes good sense of the first truth that of suffering - and by implication of the second - that of the cause of suffering - but also opens the door for an analysis of the third and fourth truths - those of cessation and of the means to cessation.

中論観行品第十三(九偈)

saṃskāraparīkṣā nāma trayodaśamaṇaḥ prakaraṇam

Chapter XIII: Examination of Compounded Phenomena
Chapter XIII
MAJBA (TOPICAL OUTLINE)

OUTLINE:
We have now completed the first part of the section on the distinct presentation of the selflessness of the person and the selflessness of phenomena—that discussing the selflessness of the person. [250: 4] We now begin the second part of that section, the demonstration that mere phenomena are essentially empty. This section has two parts: the refutation of the essential existence of things and the refutation of the argument for the essential existence of things. This chapter is the first of those two parts.

EXPLANATION:
This section has three parts: the explanation of essencelessness through treatises renowned to others, rebutting the refutations claiming that these explanations are not tenable, and refutation of the claim that these treatises have different meanings.

SUMMARY:
The sense in which that which is false is false is that although they appear to do so, things do not exist through their own characteristics. Since all agents and actions are tenable in this sense, [262] "false" should not be taken to mean empty of the phenomena of agent and action. Impermanence and transformation should be understood in the same way. Emptiness, that is, the negation of the true existence of that which is false, does not truly exist. However, it is not the case that it is nonexistent. Those who aspire to liberation must ascertain perfectly the objects of the path on which one should concentrate in meditation in order to eliminate the obscurations.
CHAPTER XIII - Examination of Mental Conformation

At the outset, Nagarjuna strikes at the heart of the matter by saying that the Buddha condemned all conceptions arising from false discrimination of realities. This is, in fact, attributed to the nature of samskara or mental conformation. The discussion then goes into the conceptions of self-nature (svabhava) and varying nature, and their possible relationship. In neither case, however, does the argument prove any of their respective existences. Youth does not age in the strict sense and milk does not turn into butter. In other words, in the true Zen manner, youth is youth, age is age, milk is milk, and butter is butter. There is no strict conversion from one to the other. Thus the discussion inevitably arrives at the nature of thusness, sunyata, as the only true view of existence, but Nagarjuna is quick to caution that sunyata is not subject to conceptualization.

KALUPAHANA (CHAPTER OVERVIEWS)

13. Dispositions (samskara). The Buddha never claimed that all phenomena (dharmah) lead to suffering (duhkha). For him, all dispositions (samskarah) or everything conditioned by dispositions (samskrtah) are subject to suffering or are unsatisfactory. Thus, after explaining the conceptions of suffering, Nagarjuna deems it necessary to discuss the conception of dispositions (samskara). Chapter XIII is devoted to this question.

The non-absolutist standpoint of early Buddhism is clearly manifest in the Buddha’s rejection of the sharp dichotomy between truth (satya) and falsehood (asatya) recognized in the Indian philisophical tradition. Instead of the true/false dichotomy, the Buddha spoke of truth (sacca = satya) and confusion (musa = mrsa), indicating thereby that he was not advocating a notion of absolute or ultimate truth, comparable to the Atman/Brahman of the pre-Buddhist traditions. Nagarjuna was faithfully following the Buddha and the early Buddhists when he began his analysis of “dispositions” (samskara) with a reference to this idea of “confusion” (mrsa). The relationship between “dispositions” and “confusion” needs to be carefully examined before any attempt to understand the Buddha’s as well as Nagarjuna’s disposition on the nature of dispositions.

A careful reading of the early discourses will reveal that dispositions are an inalienable part of the human personality. In the case of an ordinary unenlightened person, they are not eliminated even at death. Hence the possibility of his being reborn. However, they are completely eliminated in the tathagata when he attains parinirvana, that is, when he dies. Yet, there is no mention of the dispositions being completely eliminated in the enlightened one (buddha, tathagata) while he is still alive. What is achieved with the attainment of freedom (nirvana) is the “appeasement of dispositions” (samskaropasama). This very subtle distinction will become extremely important when we try to understand Nagarjuna’s treatment of “dispositions” (samskara) in the present chapter.

William James explains human knowledge and understanding in the following manner: “The intellectual life of man consists almost wholly in his substitution of a conceptual order for the perceptual order in which his experience originally comes.” Elaborating upon this statement, he says:

The substitution of concepts and their connections, of a whole conceptual order, in short, for the immediate perceptual flow, thus widens enormously our mental panorama. Had we no concepts we should live simply “getting” each successive moment of experience, as the sessile sea-anemone on its rock receives whatever nourishment the wash of the waves may bring. With concepts we go in quest of the absent, meet the remote, actively turn this way or that, bend our experience, and make it tell us wither it is bound. We change its order, run it back-wards, bring far bits together and separate near bits, jump about over its surface instead of ploughing through its continuity, string its stems on as many diagrams as our mind can frame.

Unless we attribute “omniscience” (sarvajnata) to the Buddha, and that is knowledge of everything that has occurred, is occurring and will occur in this world, a knowledge he refused to claim for himself, we may end up turning him into a “sessile sea-anemone,” if we are to deny him the need to conceptualize. In this process of conceptualizing, in “putting things together” (which is the literal meaning of samskara), our interests play a dominant role. Interests are easily converted to likes and dislikes, and these latter are causes of most human suffering. We are, therefore, in a double-bind. We need the samskaras in order to live. On the contrary, they can contribute to most of our suffering (duhkha). Realizing this fact, the Buddha emphasized the need to pacify our dispositions rather than eliminate them completely. Thus, on the basis of experience we come to know that things are “dependently arisen” (pratityasamutpanna) and then adopt the view that in the dim past this may have been the case and that in the future it may be the case.

In the eyes of the Buddha this represents a more comprehensive and, therefore, a more appropriate view
rather than the more limited views: (1) which says: “Suffering is self-caused” (svayamkrtam), which is the result of our believing in a self (atman) to the exclusion of every other factor, and (2) which says: “Suffering is caused by another” (duhkham parakrtam), which is, in some sense, the result of our reluctance to admit our own responsibility. In both cases, our likes and dislikes have dominated our dispositions, and hence our perspectives push us in two different directions. Such dispositions, dominated by our likes and dislikes, eventually contribute to our suffering and frustrations. In the Buddha’s view, therefore, the cessation of suffering is synonymous with “nongrasping” after views which comes about as a result of the appeasement of dispositions. Cessation of suffering is not synonymous with not having views or not having dispositions. Rather, it is synonymous with the appeasement of dispositions.

It is very appropriate, therefore, that Nagarjuna decided to write a chapter on the dispositions (samskara) after his analysis of suffering (dukhha). However, what is more important is that this chapter is entirely devoted to an examination of “views” (drsti) as well as of the condition that give rise to “wrong” or “confused views” (mithya drsti), namely, confusion (mrsa). In fact, the term samskara occurs in the first verse only.

The entire chapter is devoted to an examination of the notions of the “existent” (bhava), the “non-existent” (abhava), “self-nature” (svabhava), etc. and the manner in which these could be avoided by adopting the conception of “emptiness” (sunyata), without allowing that notion of emptiness to be an obsession. Hence his conclusion: “The Victorious Ones have announced that emptiness is the relinquishing of all views. Those who are possessed of the view of emptiness are said to be incorrigible.”

We have rendered the term nihsarana occurring in the above verse as “relinquishing” in order to bring out the specific meaning that Nagarjuna probably had in mind. Many interpreters of Nagarjuna have explained “emptiness” (sunyata) as a “provisional view,” thereby implying that the ultimate truth is beyond conceptualization. The foregoing analysis of the Buddha’s as well as Nagarjuna’s thoughts would mean that they indeed did not recognize a “non-conceptual truth or reality.” For them, there is no way in which a “truth” could be understood non-conceptually, because, as mentioned earlier, truth in its most comprehensive sense pertains to statements and thus involves conceptualization. However, conceptualizations can be comprehensive and therefore right (samyak), or limited and confused and therefore wrong (mithya), and these depend upon the amount of prejudice that has gone into the formulation of the concepts. Thus, “emptiness” is a “view,” a view not without identification, but which is identified with “the empty” (idam sunyam). It is a view that helps the individual to attain freedom from views and upholding it as the absolute or ultimate truth without any reference to “the empty” would be the last thing either the Buddha or Nagarjuna would advocate.

---

**BATCHelor (poetic “translation”)**

Change

A thing doesn’t change into something else –
Youth does not age,
Age does not age.

If something changed into something else –
Milk would be butter
Or butter would not be milk.

Were there a trace of something,
There would be a trace of emptiness.
Were there no trace of anything,
There would be no trace of emptiness.

Buddhas say emptiness
Is relinquishing opinions.
Believers in emptiness
Are incurable.

---

689
13. What is Compounded

What is compounded (samskṛta) is anything made of parts. It can be any sort of composite, not just something mechanically assembled. In early Buddhism, all compounded things are considered impermanent. The question arose for the Abhidharmists of whether the component parts - the dharmas - were also impermanent or were in fact permanent.

Notice in the first verse that Nagarjuna states that “All phenomena that are put together are characterized by deception and thus they all are false.” Everything in the “conventional world” is compounded - so, is everything in the conventional world false? Are there no “conventional truths”? Since Nagarjuna is connecting falsity with deception here, he probably means that the conventional perception that what is compounded as distinct, self-existent entities is the deception and thus only that conventional claims about self-existent realities are false from the ultimate point of view.

Verse 3 is a succinct statement of Madhyamaka empirical and metaphysical claims: “Since we see change, all entities lack self-existence. Without self-existence, no entity can exist - thus the emptiness of all entities.” Nothing is real since anything “real” is self-existent and so all entities are empty. The self-existent has an “essence” or “own-nature” that cannot change, for if it changed it would not have that nature any more.

There also is the distinction here between “real entities” (self-existent, permanent, eternal, changeless) and “entities” in the conventional world (dependent, impermanent, and constantly changing). If there is no self-existence, there is no real thing that could change; and if there is self-existence, nothing could change (v. 4). To the opponent, there must be something real for any change to occur. But to Nagarjuna, anything real cannot change (vv. 5-6) - it cannot retain its nature and yet be different at the same time. Thus, either point of view, a “young man” does not grow old (v. 5): from the point of view of self-existence metaphysics, no real (self-existent) entity ever changes and so the young man cannot grow old; from the point of view of emptiness metaphysics, there is no real change - change itself is not a self is not a self-existent reality, nor are any real entities to change. In verse 7, emptiness as an entity is denied. There is nothing real in the world that we could point to and call “emptiness.” It is not a self-existent entity, nor do any entities without self-existence have “emptiness” as a property. Nor would real entities have emptiness as a property - to be real, they would have to have self-existence. This leads to the denial of all views (drishtis) in verse 8. (This is important for understanding v. 27.30: Nagarjuna always connects the nature of a “view” to the idea of the metaphysics of self-existence.) To hold “emptiness” as a view is to treat it as a self-existent entity, and anyone who does this is “incurable (asadhyan).”

GYAMTSO (COMMENTARY)

On the other hand, noble buddhas and bodhisattvas who have directly realized the true nature of reality know that the appearances of phenomena arising, abiding, and ceasing are just mere appearances that have no inherent nature. They are like the adults watching the movie, who reassure the children that nothing on the screen can actually hurt them in any way because none of it is real. By teaching the children in this way, the adults impart to the children the knowledge they need so that they too can be unafraid. This is a good analogy for what the buddhas and bodhisattvas do for ordinary individuals who take up the path of Dharma.

Therefore, even though it is the case that all phenomena are of the nature of emptiness, it is nevertheless important for us to be able to distinguish between the way of appearance and the way of reality, because it is as a result of not knowing the way of reality that we ordinary beings mistakenly think that appearances are real, and that is what causes all our problems.

The dream is also a good example to refer to here. The difference between how we regard appearances when we know we are dreaming and how we regard them when we do not is similar to the difference between the way noble beings
who have realized emptiness, and ordinary beings who have not done so, relate to the appearances they perceive.

As the glorious Chandrakirti states in his text Entering the Middle Way:

*There are two ways of seeing every thing,*  
The perfect way and the false way,  
*So each and every thing that can ever be found*  
Holds two natures within.*

*And what does perfect seeing see?*  
It sees the suchness of all things.  
*And false seeing sees what appears, no more—*  
*This is what the perfect Buddha said.*

The Mahayana practice of the samadhi that sees everything to be like an illusion, the Vajrayana illusory body practice, and the Dzogchen practices of korde rushin all have as their purpose the dissolution of thoughts that cling to appearances as being real (in Dzogchen, like Mahamudra, is a set of teachings that describes the true nature of reality and how to meditate upon it. *Korde rushin* is one of the Dzogchen practices.).

That is a description of the first reason Nagarjuna composed this chapter: to help us to distinguish between the mode of appearance and the mode of genuine reality, and thereby to stop thinking that they are the same thing—to stop mistaking the way things appear for the way things really are.

Even while accepting this distinction, however, there were those who claimed that apparent reality must have some true existence to it because genuine reality truly exists as “authentic undeceiving reality,” as the Buddha taught. If there is genuine reality, they claimed, if there is emptiness that is the nature of apparent phenomena, then those apparent phenomena that have that emptiness as their nature must also exist. Otherwise, emptiness would have nothing to be the nature of, and therefore it could not exist either. This was their argument.

Therefore, the second reason Nagarjuna composed this chapter was to examine emptiness and demonstrate that in fact it does not truly exist after all. This effectively refutes the claim that apparent things truly exist because emptiness truly exists.

Nagarjuna takes up the analysis of emptiness in verse seven:

*If there were the slightest thing not empty,*  
*There would be that much emptiness existent.*  
*Since, however, there is not the slightest thing not empty,*  
*How could emptiness exist?*

We can put this verse in the form of a logical reasoning in the following way: Given the true nature of reality, emptiness does not exist anywhere within it, because if there were something that was not empty, there would be that much emptiness as well, but in fact there is not the slightest thing that is not empty. Since there is not the slightest thing not empty, there can be no emptiness either, because emptiness can exist only in dependence upon there being something that is not empty, and something that is not empty can only exist if there is emptiness. These two notions of empty and not empty exist only in dependence upon each other, which means that neither one of them truly exists. Therefore, neither the conceptual fabrication of empty nor that of not empty applies to genuine reality. Therefore, in order to realize the nature of essential reality beyond conceptual fabrication, we must leave behind even our notion of emptiness. This will also be explained in chapter 22, “An Examination of the Tathagatha.”
9

Language

In contrast to such topics as causation, motion, the self, and the theory of knowledge, language is not given much explicit discussion in Nāgārjuna’s works. This does not mean that such matters were not important to Nāgārjuna but merely that his extant writings do not contain an extended connected discussion of the impact of his theory of emptiness on our view of language. Nevertheless it is possible to extract some of Nāgārjuna’s views on this philosophically highly interesting issue from remarks found at different places in his works.

9.1. Nāgārjuna’s View of Language and the “No-Thesis” View

A good starting point for the discussion of Nāgārjuna’s conception of how the theory of emptiness affects our view of language is his so-called no-thesis view. This is without a doubt one of the most immediately puzzling philosophical features of Nāgārjuna’s thought and is also largely responsible for ascribing to him either sceptical or mystical leanings (or indeed both). The locus classicus for this view is found in verse 29 of the VV:

If I had some thesis the defect [just mentioned] would as a consequence attach to me. But I have no thesis, so this defect is not applicable to me.¹

¹. yādī kācana pratijñā syān me tata eṣa me bhaved doṣah. / nāsti ca mama pratijñā tasmān naivāsti me doṣah.

That this absence of a thesis is to be regarded as a positive feature is stressed in YS. 50, where Nāgārjuna remarks about the Buddhas:

For these great beings there is no position, no dispute. How could there be another’s [opposing] position for those who have no position?²

Now it is important to observe that when these passages are considered in isolation, it is very hard to make any coherent sense of them, for even if we assume that the Buddhas do not hold any philosophical position anymore (having perhaps passed beyond all conceptual thinking), how are we to make sense of the first quotation which, in the middle of a work full of philosophical theses, claims that there is no such thesis asserted at all?

In fact this first statement is even more difficult to interpret than the famous last sentence of Wittgenstein’s Tractatus, which is preceded by the equally famous ladder-metaphor.³ Although Wittgenstein here denies that his preceding statements are of anything but instrumental value, claims that they turn out to be nonsensical after they have fulfilled their instrumental role, and that there is something outside of the grasp of these statements, at least he does not deny making any statements at all!

9.2. VV 29 in Context

In order to get a clearer understanding of what these passages might mean, it is important to consider them in the argumentative context in which they occur. The VV, which contains the first passage given above, is a work of seventy verses, accompanied by Nāgārjuna’s autocommentary. As its title—which translates as “The Dispeller of Objections”—suggests, its main aim is to answer objections which had been advanced concerning Nāgārjuna’s theses. Its being of a rather technical and specific nature makes it plausible to assume that the VV was written later than his main work, the MMK, and was meant to deal with particular problems arising from the arguments set out there.⁴ The first twenty verses and their commentaries contain criticisms of Nāgārjuna’s

². che ba’i bdag nyid can de dag / rnams la phyogs med rtsod pa med / gang rnams la ni phyogs med pa / de la gzhon phyogs ga la yod.

³. 6.54 My propositions serve as elucidations in the following way: anyone who understands me eventually realizes them as nonsensical, when he has used them—as steps—to climb up beyond them. (He must, so to speak, throw away the ladder after he has climbed up it.)[. . .] 7. Whereof one cannot speak, thereof one must be silent.

position, which are answered in the remaining verses and their commentaries. Verse 29, given above, specifically addresses the problem raised by the opponent in verse 4.

The principal point the opponent makes at the beginning of the VV concerns the status of Nāgārjuna’s claim of universal emptiness. The opponent argues that Nāgārjuna faces a dilemma whose horns are inconsistency and impotence. If he assumes his claim not to be empty, he has contradicted his own thesis of universal emptiness (because there is now at least one thing that is not empty). If, on the other hand, Nāgārjuna takes his own claim to be empty too, the opponent argues, this claim is then unable to deny the existence of independently existing phenomena that the opponent asserts. As becomes clear later in verse 22, Nāgārjuna accepts the second horn of the dilemma: everything is empty, and his claim that everything is empty is empty too. As he stresses in the next verse, this reasoning, however, does not entail that the claim could not carry out its philosophical function. A key can open a door in a film even though it is only a key in the film, not a real key.\(^5\) Verse 4 now considers a specific comeback Nāgārjuna could make in reply to the difficulty arising from accepting this second alternative, the charge of the argumentational impotence of his claim of universal emptiness. Nāgārjuna could argue that if universal emptiness renders his own claim impotent, the opponent’s claims, being also subsumed under the universal statement of everything being empty, are similarly impotent and therefore cannot act as a refutation of Nāgārjuna’s claim either. But as the opponent is quick to point out, this thinking involves a blatant petitio principii: only if we already accept that everything is empty will the opponent’s arguments be rendered empty and impotent. But this is exactly the thesis the opponent denies. For him at least, some things are not empty, and in particular his own statements are not subject to Nāgārjuna’s claim of universal emptiness. The difficulty the opponent raised is one that arises because of the specific character (laksana) of Nāgārjuna’s system, namely the claim that everything is empty. It does not apply to someone who does not make that assumption.

Verse 29 then is made in reply to this supposed counterargument and its rejection as a petitio. There Nāgārjuna claims that the particular defect (of his thesis of universal emptiness rendering his own philosophical assertions impotent) would indeed apply if he had any position. But given that he has no position, the difficulty therefore does not apply to him.

Now it will strike the reader that this is a rather curious reply to make. It is evident that the opponent’s criticisms formulated in verse 4 as well as in the preceding verses rest on a misunderstanding of the central term “emptiness.” What exactly this misunderstanding amounts to is less clear. In fact the above set of arguments would make sense if we assumed that the opponent understood “empty” to mean “false,” or “meaningless,” or even “nonexistent.”\(^6\) But as a reply to a criticism based on misunderstanding of this kind Nāgārjuna’s reply in verse 29 seems a little extreme, given that it would have been perfectly sufficient and far less controversial for him to point out that emptiness entailed neither falsity nor meaninglessness nor non-existence and that he thereby could assert that his claims both are empty and simultaneously are able to refute the opponent’s objections (in fact he makes exactly these points in verses 21 and 22). Even if we agree with Mabbett that it may be the case that the objection addressed by a given verse has already been essentially refuted, but in turning to each new objection Nāgārjuna seeks to make a fresh rebuttal in order to administer the coup de grâce\(^7\)

Nāgārjuna here seems to use a sledgehammer to crack a nut. Why deny holding any proposition whatsoever if it would have been perfectly sufficient to point out that since “empty” does not mean “non-existent,” it is completely unproblematic to claim that one’s own position is as empty as everything else?

We can distinguish at least three different ways in which Nāgārjuna’s crucial statement that he has no position can be interpreted. I will refer to these as the semantic, argumentational, and transcendent interpretations.

According to the semantic interpretation Nāgārjuna does not claim to hold no thesis whatsoever, but claims only to accept no statements that are taken to have a particular semantics. If we follow the argumentational interpretation, Nāgārjuna makes a claim about how one should proceed in debates, namely by always refuting

6. Indeed we might think that the argumentative context makes it most likely that the opponent misunderstands “empty” as “nonexistent.” In this case the problem that nonexistent statements cannot really refute anything seems to be most pressing. But in the case of the other two alternatives other problems become more serious. If Nāgārjuna meant “meaningless” when he said “empty,” his claim that everything is empty would obviously just be false, given that we perfectly well understand the claim he makes (in the same way as somebody saying “all statements, including this one, are not grammatically well formed” would be uttering a falsehood). If, however, “empty” meant “false,” Nāgārjuna’s thesis of universal emptiness would reduce to the liar paradox and there is no good textual evidence that this is the problem the opponent had in mind. On this last point compare also the discussion in Mabbett (1996) and Sagal (1992).

opponents via *reductio* arguments, without ever adopting any thesis oneself. The *transcendent* interpretation finally reads Nāgārjuna’s statement as the assertion of the existence of an inexpressible reality beyond concepts and language.

All three of these interpretations have historical predecessors in the commentarial tradition. The semantic and argumentational interpretation can be found in works of the dGe lugs tradition, in particular those of Tsong kha pa and mKhas grub rje, while a variety of views which can all be regarded as some kind of transcendental interpretation can be found in the writings of scholars like rNgog blo ldan shes rab, Go rams pa, and dGe ’dun chos ’phel. The following discussion will be restricted to an exposition of the semantic interpretation, primarily because this appears to give us the clearest understanding of the role of verse 29 in the context of Nāgārjuna’s arguments.

The argumentational and transcendental interpretations tend to use Nāgārjuna’s denial of a thesis as a textual peg on which to hang an argument concerned with quite different matters from those dealt with in the VV. Tsong kha pa, for example, refers to this verse in the context of expounding the distinction between Śvātantrikas and Prāsaṇikas; Sa skya Pandita offers the transcendental interpretation in the context of a debating manual (advising the reader on how to debate with somebody who does not put forward a position); dGe ’dun chos ’phel’s work, despite its title, is not a study of Nāgārjuna’s thought in particular, but is concerned mainly with criticizing the then prevalent dGe lugs interpretation of Madhyamaka philosophy more generally.

This is not to say, of course, that the argumentational and transcendental interpretations are for this reason deficient or lacking in interest within the context in which they are presented. However, it is important to be aware that these contexts were not Nāgārjuna’s context. There is certainly no reason for suspicion toward later Indian or indeed non-Indian works as not giving a valid interpretation of Nāgārjuna’s thoughts. Nevertheless, the most interesting of these for the present purpose of a philosophical analysis of Nāgārjuna’s thoughts are those that allow us to understand passages from his works in their argumentative context, rather than using them as a starting point for presenting their own ideas on a particular topic.

The key to understanding the point made in these commentaries lies of course in a precise understanding of what it means for a position or statement to be empty. An object is empty if it does not exist from its own side and is therefore dependent on other objects, so that its existence is not grounded in its “own-nature” (*svabhāva, rang bzhin*). The Buddhist commentarial tradition considers a variety of dependence relations in which objects stand and which prevent them from existing in a non-empty way. These dependence relations include causal dependence, dependence of a whole on its parts, as well as dependence on a cognizing subject. While in the case of certain objects their independent existence seems at least a *prima facie* plausibility which the Mādhyamika then attempts to refute by appropriate arguments, the emptiness of statements appears to be entirely uncontroversial. Material objects might be considered to exist in causal and mereological dependence, but independent of a cognizing subject; abstract objects, platonistically conceived, will be assumed to be independent in all three ways. Statements, however, can hardly be taken to “exist from their own side” in any of the three senses.

As even Nāgārjuna’s opponent affirms in VV 1, *token* utterances are events that arise in dependence on causes and conditions like all other events. When we consider utterances as *types*, it is equally clear that, assuming a compositional semantics, these are mereologically dependent on their parts, since the meaning of the sentence type is a function of the meanings of its constituents or parts. Finally, considering a constituent like the expression “red,” we realize that its referring to the color red is no property the word “red” has independent of everything else: the connection of this particular phonetic or typographic object with the property is a convention that holds for speakers of English; for speakers of French the same property is connected (by a different set of conventions) with “rouge,” for speakers of Tibetan with “dmar po,” and so forth. That

14. “It is not being said that the Mādhyamika has no theses; he merely has not theses that inherently exist.” Hopkins (1983: 471). The same point is made in mKhas grub rje’s commentary on this passage; see Ruegg (2000: 179).
16. A particular utterance of a sentence is a sentence-token, what is expressed by several such utterances that say the same thing is a sentence-type.

---

14. The semantic interpretation

If we consider the major dGe lugs pa commentaries on verse 29 it becomes evident that these usually regard Nāgārjuna’s statement as elliptical. What Nāgārjuna *really* means when saying that he has no position, these commentators claim, is that he has no positions that are non-empty. The following discussion will be restricted to an exposition of the semantic interpretation, primarily because this appears to give us the clearest understanding of the role of verse 29 in the context of Nāgārjuna’s arguments.

The argumentational and transcendental interpretations tend to use Nāgārjuna’s denial of a thesis as a textual peg on which to hang an argument concerned with quite different matters from those dealt with in the VV. Tsong kha pa, for example, refers to this verse in the context of expounding the distinction between Śvātantrikas and Prāsaṇikas; Sa skya Pandita offers the transcendental interpretation in the context of a debating manual (advising the reader on how to debate with somebody who does not put forward a position); dGe ’dun chos ’phel’s work, despite its title, is not a study of Nāgārjuna’s thought in particular, but is concerned mainly with criticizing the then prevalent dGe lugs interpretation of Madhyamaka philosophy more generally.

This is not to say, of course, that the argumentational and transcendental interpretations are for this reason deficient or lacking in interest within the context in which they are presented. However, it is important to be aware that these contexts were not Nāgārjuna’s context. There is certainly no reason for suspicion toward later Indian or indeed non-Indian works as not giving a valid interpretation of Nāgārjuna’s thoughts. Nevertheless, the most interesting of these for the present purpose of a philosophical analysis of Nāgārjuna’s thoughts are those that allow us to understand passages from his works in their argumentative context, rather than using them as a starting point for presenting their own ideas on a particular topic.

---

“red” refers to the color red depends on a complex framework of conventions connecting a community of cognizing subjects that share a language. Unless we mistakenly consider “empty” to mean “false” or “meaningless” or “nonexistent,” the claim that utterances conceived of as either tokens or types are not empty seems to be a position it is hard to make sense of.

Despite the prima facie strangeness of their claims, theories of the nonemptiness of language have found their defenders. Perhaps the most extreme example is the view of the Vedas. As opposed to the Naiyāyikas, who justify the Vedas by their divine authorship, the Mīm. āmsākas regard them as authorless (apauruṣeya). The elements of the Vedic language are assumed to exist eternally, without the necessity of a speaker. Any particular human utterance of course depends on a phonetic or typographical instantiation of a piece of language, but the types thus instantiated exist ante rem, without depending on the tokens instantiating them. The referents of expressions, which the Mīm. āmsākas take to be eternal and unchanging universals, are related to these expressions via a set of objective and necessary relations.  

While the Mīm. āmsā view of language attracted plenty of criticism from the Buddhist side (centred around Dignāgas apoha theory), there is no good evidence that this is the view Nāgārjuna’s opponent in the VV wants to defend.

There is, however, some interesting evidence that at least some of Nāgārjuna’s Indian commentators saw him as opposed to similar conceptions of language. When commenting on MMK 2:8 in his Prajñāpradīpa, Bhāviveka raises the question why the verbal root gam, “to go,” is used in its atmanepada form “gacchate” rather than being conjugated in the usual parasmaipada manner as a “gacchati.” Bhāviveka lists a variety of quotations from Indian grammarians illustrating the perils of wrong grammar. When the god Tvastr created a serpent to destroy Indra, he exclaimed indraśatru vardhasva, intending to say “May you prosper, destroyer of Indra!” Since he intended the compound to be a tatpurusya, it should have been stressed on the ultimate syllable. Unfortunately Tvastr stressed it on the first syllable, turning it into a bahuvrīhi meaning “having Indra as a destroyer.” The words did what they meant rather than what Tvastr intended them to mean, and Indra destroyed the snake, not the other way round. Bhāviveka then continues to observe that Nāgārjuna’s irregular use of gacchate not only was intentional, but served a philosophical purpose. By demonstrating that no disaster would strike from an irregular use of grammar, Nāgārjuna was aiming to convince his opponents to give up their attachment to mere words, together with the assumption that there was a substantial nature (svarūpa) of words which determined that they could appear only in certain grammatical forms.

Nevertheless, for the purposes of interpreting the VV it makes better systematic sense to ascribe a different (and less extreme) theory than that to Nāgārjuna’s opponent. According to this theory, whether a statement is empty or not does not depend on the mind-independent existence of language in some Platonic heaven but on the semantics we employ when interpreting the statement. Even if we accept that the link between “red” and the property of redness is conventional, this fact does not imply that we also think that the property of redness only has conventional existence as well. It can still be a property that exists in the world independent on human conventions and intentions. Moreover, even if the linkage of particular words to their referents should prove to be conventional, the linkage of entire sentences to the world might not be. For example we might suppose that the statement “The apple is red” is linked to the state of affairs it refers to by a relation of structural similarity, by their sharing of a common logical form, which in turn is not a product of convention. Once we have linked up the simple signs of our language with the simple objects in the world, we then do not need a further set of conventions to link up the complex signs (the sentences) with the complex objects (facts or states of affairs), in the same way as once we have settled by convention how the different chessmen are to move we do not have to bring in further conventions to decide whether a particular distribution of chessmen on the board will allow white to mate in five moves. This can be decided just by reference to the initial conventions, and in the same way the truth-conditions of a sentence such as “The apple is red” can be worked out by considering the simple signs it is made up of and how these are put together in the sentence.

20. That Nāgārjuna’s opponent was a Naiyāyika (as claimed by Bhattacharya [1977: 265] and Bhattacharya et al. [1978: 1]) is supported by the close connection between the VV and the NS (Meuthrath [1999]). See Bhattacharya (1999: 124) for further references.

21. Ames (1995: 309). This form is not found in any version of Candrakirti’s Prasannapadā from which the Sanskrit text of the MMK is usually extracted. Here we just read “gacchati” (PP 97:14, see also de Jong [1978]). Only recently some fragments of older manuscripts of the MMK independent of the Prasannapadā have been discovered (see Ye [2006a: 2006b]). Unfortunately the verse in question is not among them. Nevertheless, recent palaeographical research strongly suggests that “gacchate” is indeed the correct reading MacDonald 2007: 32–33.
In fact both the assumptions behind this picture of the non-emptiness of statements—the assumption that there is a “ready-made world,” to borrow a phrase of Putnam’s, and the assumption that there is a structural link between language and the world—are extremely widespread, so widespread indeed that we might refer to them jointly as the “standard picture.” This standard picture provides us with a good idea of what is meant by the notion of svabhāva in the context of language, as opposed to an ontological understanding of svabhāva in terms of substance, or a cognitive understanding in terms of a superimposition (samāropā) which conceptualizes objects as permanent and observer-independent. The standard picture therefore represents the third, the semantic dimension of svabhāva mentioned in chapter 2.

It is evident that the standard picture does not sit well with the thesis of universal emptiness. Neither the existence of a world sliced up “at the joints” into particulars and properties nor the existence of an objective structural similarity between sentences and the world would be acceptable for the Mādhyamika. A Mādhyamika-compatible semantics would deny the existence of a world differentiated objectively into different logical parts and would try to replace the structure-based picture of the language-world link by a different one, perhaps by a theory built on speaker conventions.

There is good historical evidence that the standard picture is indeed what Nāgārjuna’s opponent presupposes if we take into account how closely many of the arguments in the VV engage with the NS. Garfield points out:

[In the Nyāya-influenced logico-semantic context in which these debates [in the VV] originate the dominant view of meaningful assertion (the one that Nāgārjuna calls into question) is one that from our vantagepoint can best be characterized as a version of Fregian realism: meaningful assertions are meaningful because they denote or express independently existent properties. A proposition is the pervasion of an individual entity or groups or entities by a real universal or sequence of universals.

On this understanding of the emptiness of statements we can read the opponent as claiming in VV 1 that because of Nāgārjuna’s thesis of universal emptiness, the Mādhyamika cannot accept the standard semantic interpretation for his utterances. For Nāgārjuna both questions of ontology (how the world is sliced up) and of semantics (how language and the world are linked)

25. On the relation between the VV and the Nyāya school, see Oberhammer (1963), Bhattacharya (1977) and Meuthrath (1999). For some remarks on the realist background of the Navya-Nyāya see, Ingalls (1951: 1, 33–35). must be settled by appeal to conventions. The opponent, on the other hand, can assume that there is a “ready-made world,” as well as an objective, structural way of linking this to our language. Now the opponent argues that on this picture Nāgārjuna never gets out of his system of conventions to connect his claims with the things—and that is the reason why his claims are unable to refute the opponent’s claims, which manage to connect with the things. Nāgārjuna’s arguments can no more refute the opponent than the rain in a meteorological simulation can moisten real soil. Nāgārjuna’s opponent thus considers the interesting case of a language in which we have two kinds of statements: some are interpreted according to the standard semantics (referring via an objective reference relation to objects that exists independently of us), some are interpreted according to Nāgārjuna’s semantics (which does not make these assumptions). The opponent argues that statements of the second kind could not possibly influence the first kind.

To see this point, consider a similarly structured case. Assume we recognize two kinds of norms, norms that are real, objective, “out there,” and norms that are the product of human convention. (Moral realists take certain ethical norms to be of the first kind, rules for the regulation of traffic are generally considered to be of the second kind). Now it is clear that although the two kinds of norms could be in conflict, a norm of the second kind could never override one of the first kind, since the former are part of the objective normative framework of the world while the latter are only a supplement of human design.

Although he does not explicitly say so, Nāgārjuna’s arguments seem to imply that he agrees this situation would indeed be problematic. If there are two kinds of statements, the latter would be as impotent compared to the former as a film would be to reality: we could not escape the burning cinema by entering the scene projected onto the wall. Nāgārjuna counters the charge of impotence by denying that there are two kinds of statements, which differ like film and reality. All statements are to be interpreted in the same way, so that their interaction is not ontologically any more problematic than the interaction of different characters in a film.

Understanding the emptiness of statements as their interpretation according to a non-standard semantics, we can also give a more interesting rendering

26. Another manifestation of the Naiyāyika opponent’s conception of a harmonious word-world link is the view that the simple terms of our language cannot fail to refer (as is discussed in chapter 3).

27. In VV(S) 43:2–6 the opponent claims, that “A fire that does not exist cannot burn, a weapon that does not exist cannot cut, water that does not exist cannot moisten; similarly a statement that does not exist cannot deny the svabhāva of all things.” na hy asatā śashtraṇa śakyam, daydhum | na hy asatā śakyaṁ, chettum | na hy asatāḥ bhīṣmaḥ| añca bhīṣmaḥ yādhiṣaṁ klesayat | evam asatā vacanena na śakyaṁ. sarvabhāvasvabhāvapraṇāśedah. kartum.

28. See particularly VV 23, 27; MMK 17:31–33.
of the argument in VV 4. Remember that there the opponent claims that Nāgārjuna might want to say:

According to this very method, a negation of negation is also impossible; so your negation of the statement negating the intrinsic nature of all things is impossible.29

The opponent has just claimed that because Nāgārjuna’s theory entailed a nonstandard semantics, his assertions did not manage to connect with the world and were therefore meaningless. But if the opponent then sets out to refute the thesis of universal emptiness, this attempt means either that he takes it to be meaningful after all (and therefore deserving refutation) or that the statement he wants to defend (which is the negation of Nāgārjuna’s claim) is meaningless as well, since plugging in the word “not” will not help to turn nonsense into sense.

The opponent could reply to this charge by pointing out the difference between internal and external negation. While it is plausible to assume that the internal negation of a nonsensical statement is nonsensical too (“the number seven is not yellow [but rather some other color]” is as problematic as “the number seven is yellow”), this is not the case for an external negation (“it is not the case that the number seven is yellow” is not just meaningful but also generally taken to be necessarily true). Nāgārjuna’s opponent could then claim that his negation of the claim of universal emptiness is external only and therefore not affected by the lack of meaning in the claim it negates.30

It is possible that the opponent had argued like this because a distinction between the different scopes of negation, as well as between the accompanying presuppositional and nonpresuppositional readings, was made in the philosophical literature of the time.31 It has to be noted, however, that the passage in question fails to make any direct reference to different kinds of negation being involved.

A more abstract way of employing the distinction between the two kinds of negation in the opponent’s reply consists in rejecting Nāgārjuna’s peculiar semantics. Here the opponent points out that he does not have to accept Nāgārjuna’s semantics, since it is a particular characteristic (laksana) of Nāgārjuna’s

29. pratishedhapratisedho ’py anenaiva kalpenānupapannah. tatra yadbhavān sarvabhāvasvabhāvataptisedhayavacananam. pratishedhayati tad anupapannam iti. VV(S) 45:16–18.

30. Garfield (1996: 12) reads the argument in this way and argues that the opponent just wants to negate Nāgārjuna’s position, without asserting the contrary.

31. For present purposes we can assume a (simplifying) identification of paryudāsa with internal negation and of prasajyapratisedhau with external negation. For further differentiation, see Ruegg (2002: n. 6, 19–24) as well as the discussion in chapter 4, section 4.1.

32. Compare also the discussion in Ruegg (2000: 117).

system but nothing the opponent would be forced to take on board.33 The opponent negates not just Nāgārjuna’s claim of universal emptiness, but the entire non-standard semantics which comes with it. If prasajya-negation is seen as a presupposition-cancelling negation which negates not just a proposition but also that proposition’s presuppositions,34 and if the semantics according to which a speaker wants the set of his utterances interpreted is included among these presuppositions, denying a claim together with the semantics it comes with can be regarded as an example of prasajya-negation.

9.4. The Specific Role of Verse 29

It is interesting to note that verse 29, which is meant to be a reply to the opponent’s argument given in verse 4, does not attempt a comeback in trying to argue that the opponent’s negation of Nāgārjuna’s claim of universal emptiness is somehow impossible after all. Instead Nāgārjuna addresses a difficulty (dosā) arising from the “specific character” of his system which the opponent raises at the end of verse 4.

In mKhas grub rje’s sTong thun chen mo, an influential dGe lugs commentary which deals with the interpretation of this passage,35 this difficulty is taken to be inconsistency. If Nāgārjuna assumed that his thesis of universal emptiness was non-empty itself (rang bzhin gyis yod pa) and, on our interpretation, would therefore have to be supplied with a semantics according to the standard picture, his position would be inconsistent (at least until he proposed a special reason why this statement should be excepted, which Nāgārjuna does not do). But, mKhas grub rje argues, since none of Nāgārjuna’s claims of universal emptiness are taken to be non-empty, the difficulty of inconsistency does not arise.36 The same point is made by Tsong kha pa.37

Therefore, the issue as to having or not having theses is not an argument about whether [Nāgārjuna] has them in general. It is an

33. “The objection applies only to the specific character of your proposition, not to that of mine. It is you who say all things are void, not I. The initial thesis is not mine,” tava hi pratijñālaśyuprāptam. na mama | bhavān bravīti śūnyāh. sarvabhāvā iti nāham | pūrvakah. paks.o na mama. VV(S) 45:19–66:2.

34. As, e.g., in Shaw (1978: 63–64).

35. See Ruegg (2000: 173–187) for a summary and analysis of the relevant part of the commentary.

37. des na dam bca ’yod med ni spyir yod med rtso pa ma yin gyi | dngos po thams cad la rang bzhin med do zhes dam bca pa.i tshig la rang bzhin yod med rtso pa yin pas | de ’dra ba.i dam bca pa.i tshig de la rang bzhin yod par khas blangs na dngos po thams cad rang bzhin med par dam bca pa dang ’gal ba.i skyon nged la yod na’ng | nged de litar mi ’dod pas skyon de nga la med (1985: 687:13–17); (2000–2004: III:241).
argument as to whether the words of the thesis “all things lack intrinsic nature” have intrinsic nature. [Therefore the meaning of the lines from the VV is this:] If I accepted that the words of such a thesis had an intrinsic nature, then I could be faulted for contradicting the thesis that all things lack intrinsic nature, but because I do not accept that, I cannot be faulted.

What is unsatisfactory about this interpretation is that Nāgārjuna has already made the point ascribed to him here in verse 22. There he claims that his claim of universal emptiness is also empty, and he gives reasons why he thinks it can still have argumentative force, thus avoiding the charge of impotence. Unless we assume Nāgārjuna to be unnecessarily repetitive, it is not clear why we should assume that he makes the very same point once again a couple of verses later, and also formulates it in a much more obscure manner than the first time.

It is important to note that verses 21–28, which deal with the objections raised in the first three verses of the VV, are concerned primarily with solving the dilemma of inconsistency and impotence which is faced by Nāgārjuna’s claim of universal emptiness. Verse 29, however (pace mKhas grub and Tsong kha pa), is not again concerned with the thesis of universal emptiness. Nāgārjuna realizes that the twin problem of inconsistency and impotence is a problem not just for his thesis of universal emptiness, but for any other claim he holds as well. Any other claim either will face the problem of being a counterexample to Nāgārjuna’s assertion that all claims should be given a non-standard semantics, or will fail to connect with the world in the way sentences with the standard semantics do, and will therefore be meaningless. I want to argue that this is the difficulty arising from the “specific character” of Nāgārjuna’s system to which the opponent refers in verse 4 and which Nāgārjuna takes up again at the beginning of verse 29. He is not interested in defending the claim (attributed to him by the opponent in verse 4) that his thesis of universal emptiness could not possibly be negated. Instead he takes up the opponent’s more important point that apart from defending his claim of universal emptiness from the twin problems of inconsistency and impotence, he should better say something about the status of his other assertions as well. This is why he says in verse 29 that none of his other assertions should be regarded as propositions with standard semantics (pratijñāṇa) either.38

The plausibility of this interpretation rests on there being two meaning of “thesis” (pratijñāṇa) in play here, one referring to theses with standard semantics (which Nāgārjuna rejects) and one referring to theses with nonstandard semantics (which Nāgārjuna does not reject). In fact there appears to be good textual evidence that the notion of “thesis” is indeed used in two different ways in Madhyamaka literature.

Candrakīrti’s commentary on Nāgārjuna uses one sense of thesis (pratijñāṇa) to refer to statements with clearly unproblematic status; indeed some utterances by Nāgārjuna himself are regarded as theses in this way,39 while theses in another sense are firmly rejected. We might want to refer to the first kind of theses as propositions, and to the second as views. How are we to understand the distinction between them? It has been claimed that views are theses with philosophical or metaphysical commitments and, more specifically, that they postulate an independently existing entity (bhāva).40 Propositions, on the other hand, do not make such commitments and are therefore philosophically unproblematic. It is important to note at this point, however, that what distinguishes a view from a proposition is not just that the former asserts the existence of objects existing by svabhāva while the latter does not. On this understanding the statement “Object x does not depend in any way on any other object” would be a view concerning x, while “Object x stands in a variety of dependence relations with other objects” would not be. Ontological commitment comes into play only at the level of semantics. Whether someone asserting that the average man has 2.4 children is committed to an object that acts as the reference of the expression “the average man” depends on the semantics given. If we interpret the statement in the way statements such as “Paul has two children” are usually interpreted, such commitment to a strange man with partial children ensues; if, on the other hand, we read it (more plausibly) as a statement about ratios between the number of men and children in a certain set, there is no such commitment.

It therefore seems to be plausible to take the distinction between views and propositions and between theses with standard and non-standard semantics as coinciding. The views the Madhyamika rejects are theses that are interpreted by referring to a ready-made world and a structural link between this world and our language. The propositions he takes to be unproblematic, and some of which he holds himself, are theses that are given a semantics that makes neither of these two assumptions.

38. For example, MMK 1:1 in PP 13:3. See Ruegg (1983: 213–214) for further examples. Oetke (2003: 458–459), however, argues that the distinction between two senses of pratijñāṇā arises only in the later Prāsan gīka literature and should not be read back into Nāgārjuna’s works.
Some support for this semantic interpretation of the difference between the two senses of “thesis” can be gained from MMK 13:8:

The Victorious Ones have announced that emptiness is the relinquishing of all views. Those who in turn hold emptiness as a view were said to be incurable.\(^{42}\)

Although Nāgārjuna does not use the word \textit{pratijñā} for “view” but rather talks of \textit{dṛṣṭi}, it seems sensible to treat the two terms as synonymous in this context.\(^{43}\) If the difference between propositions and views just depended on what the statement asserted, statements asserting the emptiness of some phenomenon such as “each spatio-temporal object depends causally on some other object” \textit{ex hypothesi} could not be views, contrary to what Nāgārjuna says in the verse just cited. If, however, we treat “view” as denoting a statement together with the standard semantics, this is indeed possible. For if we read “each spatio-temporal object depends causally on some other object” as asserting the existence of various objectively existing individuals in the world, linked by a relation of causation, about which we speak by exploiting an objectively obtaining structural similarity between language and the world, it would indeed be turned into a view.

That the point at issue here is a specific (and, as Nāgārjuna sees it, inappropriate) conception of semantics is supported by Candrakīrti’s commentary on this verse. Candrakīrti argues that one taking emptiness to be a view is like one who, when being told by a shopkeeper that he has nothing to sell, asks the shopkeeper to sell him that nothing. The customer (like the White King in \textit{Alice Through the Looking-Glass}) treats “nothing” like a proper name and therefore expects it to denote a particular object, as proper names do. But though this view is justified by the surface grammar of the sentence concerned, it does not lead to an understanding of what the merchant wants to say. Similarly, giving a standard semantical interpretation of statements asserting emptiness does not lead to an understanding of what Nāgārjuna wants to say.\(^{44}\)

The semantic interpretation outlined above provides a good way of making sense of verse 29 within the argumentative structure of the VV and also

\(^{42}\) \textit{sānyatā sarvadrṣṭīnām. proktā nih. saraṇam. jinaḥ. / yeṣām. tu śānyatādṛṣṭis tān asādhyaṃ babhāṣire.}

\(^{44}\) This interpretation does not imply, of course, that one could hold “any position at all” as long as one gives it the required nonstandard semantics, as Galloway (1989: n. 5, 27) asserts. A statement such as “Things arise from what is other than themselves” will be regarded as false by Nāgārjuna, independent of whether it is interpreted according to the standard or the non-standard semantics.

CANDRAKĪRTI COMMENTARY

[Chapter XII]

As was shown in the preceding chapter (fn 1 not included in this translation - MMK XII), the arising of things, on being examined, is neither spontaneous nor caused by another, nor both, nor random; nor is there any other way for things to arise. Yet to the unenlightened whose wisdom eye is afflicted with the disease of ignorance they appear to arise. This is why things, though wholly without self-existence, deceive, as an illusory elephant or horse, the unenlightened who do not comprehend them as they are, but do not deceive those of insight. And so the compassionate Buddha, the awakener of all creation, who has the vision to see all things without mediation (aparoksa) as they are in themselves, uprooted totally all the illusions of ignorance and teaches unerringly the absence of being in things to protect helpless beings who, due to the four misbeliefs (see MMK XXIII), conceive things falsely.

The Madhyamika view

KALUPAHANA COMMENTARY

Chapter Thirteen Examination of Action and the Agent (Samskara-pariksa).

GARFIELD COMMENTARY

Chapter XIII Examination of Compounded Phenomena

In this chapter, Nāgārjuna begins to develop the idea of emptiness more explicitly. Up to this point, he has been arguing that phenomena are empty, but has not been characterizing emptiness itself, or its relation to entityhood or to conventional reality, except by example and by implication. At this point, through a general discussion of all compounded phenomena - that is, all phenomena constituted of parts or brought into being dependent upon causes - he argues explicitly both that emptiness is the lack of essence and that emptiness itself is wholly negative in character. It is not an essence that things have instead of whatever essence naive common sense or sophisticated reification might have thought they had - rather, it is the total lack of essence or inherent existence. This is, hence, an anticipation of the explicit discussions of the emptiness of emptiness to follow.
Kārikā XIII.1

INADA (Skt):
Verse 1 - The Blessed One has said that elements with delusive nature are untrue. All mental conformations are delusive in nature. Therefore, they are untrue.

JONES (Skt):
[1] The blessed one, the Buddha, has said “Whatever is characterized by deception is false.” All phenomena that are compounded (i.e., put together) are characterized by deception and thus they all are false.

KALUPAHANA (Skt):
The Blessed One has said that whatever is of deceptive nature, that is delusion. All things that are of deceptive nature involve dispositions. Therefore, they are delusions.

MCCAGNEY (Skt):
The Venerable One said, “whatever event is deceptive, that is false.”
Deceptive events are in all dispositions, so they are false.

NISHIJIMA (Skt?):
1. Reality has become uselessly the robbers’ World,
How many topics of merciful gods have been stopped for long time?
In everything there are many robbers’ Worlds,
Therefore, because of such situations, human daily lives are totally useless.

SPRUNG (Skt):
1 Whatever is not what it pretends to be is unreal,
declared the illustrious one. All compound things are not what they pretend to be and are therefore unreal.

STRENG (Skt):
1 A thing of which the basic elements are deception is vain, as the glorious one said. All conditioned elements (samskara) are things that have basic elements (dharma) which are deception; therefore, they are vain.

ENGLISH TRANSLATIONS

BOCKING (Ch):
13v1 As is taught in the Buddhist sutras,
False deceptions have the mark of misapprehension.
All predispositions and misapprehensions
And therefore they are called deceptions.

BATCHelor (Tb):
The Bhagavan said that whatever dharma is deceptive, that is false. All conditions [are] deceptive dharmas, thus they are false.

DOCTOR (Tb):
The Transcendent Conqueror has taught
That all deceptive phenomena are false.
All conditioned phenomena are deceptive,
And, therefore, they are false. [XIII.1]

GARFIELD (Tb):
1. The Victorious Conqueror has said that whatever is deceptive is false.
Compounded phenomena are all deceptive.
Therefore they are all false.

GARFIELD-SAMTEN (Tb):
1. The Transcendent Lord has said that whatever is deceptive is false.
All compounded phenomena are deceptive.
Therefore they are all false.

HAGEN (paraphrase):
13.1 (axiomatic) The Blessed One has said that whatever is of deceptive nature, that is delusion. All mental conformations are deceptive. Therefore, they are delusion.
PINGALA COMMENTARY

13/1 In the Buddhist sutras it says that false deceptions are characterized by misapprehension, but the supreme reality which is called nirvana is not characterized by misapprehension. Because of what these sutras say, we should know that all predispositions are false deceptions and characterized by misapprehension.

Reply:

CANDRAKĪRTI COMMENTARY

The sutra says, ‘What is not what it pretends to be (mosa-dharma) is unreal (mrsa) and the realm of the compounded is that. The higher truth, o monks, does not pretend to be what it is not: it is nirvāṇa. All compound things pretend to be what they are not and are unreal.’ Further, ‘In this world there is no truth of things nor absence of untruth: these too are not what they pretend to be; they too are empty talk.’ Thinking in this way the illustrious, realized one declared that what pretends to be what it is not is unreal, that all compound things pretend to be what they are not, that, therefore, because of this false pretence, they are unreal. They are like the mechanical puppets made by craftsmen or like the mechanical elephant of great verisimilitude with which Udayana, King of Vatsa, was tricked. In these cases the falseness lies in their ultimate incongruence (visamvadaka); it is like the error of perceiving the circling torch as a circle of fire.

Thus all things pretend to be what they are not because they lack self-existence and because they are unreal. They are like mirages and other illusory appearances of water. The true (satya), however, is what does not pretend to be what it is not; nirvāṇa is the sole instance of this. Both the arguments we have advanced and the authority of the texts establish that all things are devoid of self-existence, and for this reason that there is an absence of being in all elements as such. We can read this in the Ardhasatika prajñaparamita Sutra.

You may object that, if, in this way the illustrious one taught that all things are unreal because they are not what they pretend to be, then, if this is so, all things must be nonexistent (na santi). But the denial (apavada) of the reality of things would be a Buddhist heresy.

We reply. The fact is that the deceptive pretence of things is confusing you even now. For indeed,

KALUPAHANA COMMENTARY

A chapter dealing with dispositions (samskara) immediately following an analysis of suffering (duhkha) need not create any confusion. Nor should the fact that the title of this chapter is presented in the Tibetan translation as tattva, instead of samskra (see Inada,), lead to difficulties in understanding it. There cannot be any doubt that the original chapter was named "Examination of the Dispositions." Even the most cursory glance at the statements of the Buddha in the discourses would reveal the naked fact that he never looked upon all phenomena (sabbe dhamma) as "suffering" or "unsatisfactory" (dukkha). However, the classical Hindu philosophers who misquoted the Buddhist texts, and some of the modern interpreters who were guided by such philosophers, have been responsible for portraying Buddhism as a pessimistic religion by misinterpreting the Buddha-word, especially the doctrine of "suffering" (see Kalupahana, "The notion of suffering in early Buddhism, compared with some reflections of early Wittgenstein," PEW 27 [1977]:423-431.) The three prominent characteristics, impermanence (anicca), suffering (dukkha), and non-substantiality (anatta) have been recklessly lumped together by these interpreters and applied to all phenomena when the Buddha in innumerable instances (M 1.228; S 3.133; 4.401; A 1.286; Dhp 277-279; Tsa 10.7 [Taisho 2.66b- 67a]; Tseng 23.4 [Taisho 2.668c] Ch'ang 1.1 [Taisho 1.9b]) and in every statement he made in regard to these three characteristics, always distinguished between sankhara and dhamma.

These three characteristics are always mentioned as follows:

i. "All dispositions are impermanent" (sabbe sankhara anicca).

ii. "All dispositions are suffering" (sabbe sankhara dukkha).

iii. "All phenomena are non-substantial" (sabbe dhamma anatta).

In the first place, the clear distinction made by the Buddha between "dispositions" (samskara) and "phenomena" (dharma) and, secondly, the fact that he specifically referred to the former being subject to
suffering, could not have escaped the penetrating and careful eye of Nagarjuna, a philosopher whose writings have influenced some of the best brains in the East throughout the centuries. If all dispositions were considered by the Buddha to be subject to suffering, then there is no reason to doubt as to why Nagarjuna should not concentrate his attention on these "dispositions" after his examination of the problem of suffering. Hence the reason for the present chapter.

Why the Tibetan translators should consider this to be an examination of truth (tattva) is also not a mystery. They were simply looking at the conclusion of the chapter. Is there any connection between "dispositions" and "truth"?

As pointed out earlier (V.8), the "appeasement of dispositions" (samskaropasama) is the ultimate goal of Buddhism. Excessive lust (raga) is supposed to lead to the strengthening or solidification of one's dispositions, which in turn contributes to grasping, not only for the objects of sense pleasure, but also for ideas. The result would be the dogmatic grasping on to absolute truth or truths. The elimination of lust would then mean the elimination of the dispositions too (samskara-ksaya) which would imply virtual death and no motivation for any action or even to continue with one's present life. Thus, the Buddha himself was willing to characterize the death of a "freed one" (tathagata) as the "cessation of dispositions" (sankharakkaya) (Dhp 383) leading to the cessation of the stream of becoming (bhava-sota).

However, while recognizing the waning of lust (ragakkhaya) as the way to freedom, the Buddha did not encourage the complete elimination of dispositions which would mean suicide. It seems that the Buddha did not recognize a one-to-one relationship between the waning of lust and the cessation of dispositions. Hence his emphasis on the appeasement of dispositions while living and the cessation of dispositions at the time of death. The strengthening of dispositions, as mentioned earlier, leads to dogmatic beliefs. These would pertain to personal immortality, conceived in the form of a belief in an eternal soul or self (atman) or of a universal reality (loka, brahman). Any form of eternalism (sasvata) is supposed to lead to the strengthening or solidification of one's dispositions, which in turn contributes to grasping, not only for the objects of sense pleasure, but also for ideas. The result would be the dogmatic grasping on to absolute truth or truths. The elimination of lust would then mean the elimination of the dispositions too (samskara-ksaya) which would imply virtual death and no motivation for any action or even to continue with one's present life. Thus, the Buddha himself was willing to characterize the death of a "freed one" (tathagata) as the "cessation of dispositions" (sankharakkaya) (Dhp 383) leading to the cessation of the stream of becoming (bhava-sota).

Yet, for the living human being the Buddha was not prescribing the elimination of dispositions. Rather he advocated their appeasement. This view has significant epistemological implications. A living human being needs to act. Action involves understanding. Conduct (carana) is preceded by knowledge (vidya). One needs knowledge of oneself as well as of the external world. "Omniscience" or knowledge of everything was not available to the Buddha. Hence, neither the absolute origin of things nor the absolute end of things were discussed in Buddhism (see Chapter XI). Any theory that attempts to explain such origins and ends, whether it pertains to an eternal self or soul (atman) or a substance (svabhava), was unacceptable to the Buddha. Dispositions are invariably associated with the knowledge derived from the senses. The innumerable data provided by the senses cannot easily be handled by the human being. As William James characterized sense experience, it is a "big, blooming, buzzing confusion" (Some Problems of Philosophy). Being unable to deal with such confusion, human beings are compelled to be selective. They pick out the things that interest them, leaving out others. In that process, they develop dispositions and these dispositions in turn contribute their share in gaining knowledge of the world. As such, the world of ordered experience is one that is constructed, made, put together (sam + , "to do, to make"), by the human being. This is the pragmatic conception of truth (tattva) that is prominent in the Buddha's teaching. The appeasement of dispositions thus contributes to the elimination of dogmatism, of grasping after absolute truth or truths, when all the time human beings are creating truths. If a person is not aware of the process by which he constructs the truths about the world, he will not only be confused but also disappointed. Dispositions can thus turn out to be a great source of confounding and delusion (mrsa), unless one understands their function in the formulation of truths (tattva). The translators of Nagarjuna's text into Tibetan probably perceived the direction of the argument in this chapter and named it accordingly.

Note that the delusion (mrsa) is produced, not by all the phenomena (sarva-dharma) but only by the way in which these phenomena are put together (samskaroti) for purposes of understanding (see Websters' Seventh Collegiate Dictionary, 1965, where delusion is defined as "self-deception concerning facts or situations"). That putting together is the function of dispositions (samskarah). Hence, for Nagarjuna, as it was for the Buddha, if anything is to contribute toward delusion that would not be all phenomena (sarve dhammah), rather it would be all dispositions (sarve samskarah).
1. (“Compounded phenomena” fn 69. Kalupahana (1986) translates this term (Skt: *samskāra*, Tib: ‘*du byed*) as “dispositions.” That is often correct. But it can also refer to compounded phenomena in general. Given the structure of the argument in this chapter, I (as do Tsong Khapa and his followers) prefer this reading. Kalupahana (p. 48) argues that it makes sense to follow ‘a chapter on suffering with one on dispositions, inasmuch as the latter plausibly give rise to the former. He is right. But it also makes sense to follow a chapter on suffering with one on compounded phenomena since positing them as self-existent is what gives rise to suffering. Dispositions and compounded phenomena are - as the homonymy in question demonstrates - closely linked in Buddhist metaphysics. Dispositions are themselves compounded phenomena; but more importantly, they are what lead us to the conceptual compounding that gives -phenomena their status as conventional entities.)

This is an important verse for any understanding of the relation of the two truths - the conventional and the ultimate - to one another. That relation is vexed because the conventional truth is sometimes referred to as a truth and sometimes as wholly false. Conventional phenomena are sometimes referred to as empirically real and not imaginary and sometimes as wholly imaginary. (fn 70. This, of course, is partially responsible for the kind of nihilistic misreading of the text one sees, e.g., in Wood (1994).) So it is important to see that the sense of “falsehood” in play when the conventional is characterized as false is “deceptive.” That is, insofar as conventional phenomena present themselves as more than conventional as inherently existent - they deceive us. We take them to be what they are not - to be intrinsically identified, inherently existent entities. In that sense, they are false. But to the extent that we understand them as dependently arisen, empty, interdependent phenomena, they constitute a conventional truth. Yet one must bear in mind that, according to Nāgārjuna, perception untutored by Madhyamika philosophy and rigorous practice delivers objects to consciousness as inherently existent. In this sense, the things that we see are wholly false. For most of us, the best that we can do is reason our way into knowing, but not seeing, their true nature. The goal of meditation on emptiness is to bring this knowledge into perceptual experience and, hence, to see things as they are.

ENGLISH TRANSLATIONS

INADA (Skt): Verse 2 - If the elements with delusive nature are untrue, what is there which deludes? On account of this the Blessed One merely expounded the significance of sunyata.

JONES (Skt): [2] If what is characterized by deception is false, what is deceived? This was said by the blessed one in explaining emptiness.

KALUPAHANA (Skt): If, whatever that is of deceptive nature is delusion, what is it about which there is delusion? That too, namely, that which illuminates emptiness, has been spoken of by the Blessed One.

MCCAGNEY (Skt): If whatever deceptive event is false, then it is deceived by what? This was said by the Venerable One to illuminate openness.

NISHIJIMA (Skt?): 2. Reality has become uselessly the robbers' World, By whom and when, what kind of things there have been robbed? Such kinds of area are ironically called very happy places, But the state of perfectly balanced autonomic nervous system is never brilliant.

SPRUNG (Skt): 2 If whatever is not what it pretends to be is unreal, what is it in that case that pretends? The illustrious one said this in elucidating sunyata, the absence of being in things.

STRENG (Skt): 2. "If that which has deceptive basic elements is vain, what is there which deceives?" This was spoken by the glorious one to illuminate "emptiness."

BOCKING (Ch): 13v2 False deception and misapprehension; What is apprehended in these? The Buddha has spoken thus In order to point to the meaning of emptiness.

BATCHELOR (Tb): If whatever is a deceptive phenomenon is false, what is deceptive about it [in what way is it deceptive]? That statement by the Bhagavan is a complete presentation of emptiness.

DOCTOR (Tb): If a phenomenon that is deceptive is also false, Then what is it that deceives? With this, the Transcendent Conqueror Has fully revealed emptiness. [XIII.2]

GARFIELD (Tb): 2. If whatever is deceptive is false, What deceives? The Victorious Conqueror has said about this That emptiness is completely true.

GARFIELD-SAMTEN (Tb): 2. If whatever is a deceptive phenomenon Is false, then what deceives? Saying that, the Transcendent Lord Perfectly presents emptiness.

HAGEN (paraphrase): 13.2 [Opponent begins]: If whatever is of a deceptive nature is delusion, what deceives? [Nagarjuna]: The Blessed One has said of this that Emptiness is completely True.
13/2 If dharmas characterized by misapprehension are false deceptions, what is considered to be apprehended in the predispositions? When the Buddha speaks thus we should know that he is explaining the meaning of emptiness.

(17b6) Question. How do you know that the predispositions are empty?

Reply. Because all predispositions have the characteristic of falsity. The predispositions arise and cease without abiding; they have no self-nature and are therefore empty. ‘Predispositions’ means the five skandhas. Since they arise from predispositions, the five skandhas are called predispositions. These five skandhas are all false and unreal and have no fixed nature, and why? For example; the form one has when an infant is not the form one has when crawling. The form one has when crawling is not the form one has when a toddler. One's form as a toddler is not the form one has as a boy. The form one has as a boy is not the form one has in manhood, and the form one has in manhood is not the form one has in old age. Thus form does not abide even momentarily, so that to distinguish any fixed nature in it is impossible. Either the infant's form is the same as the crawler's form and so on up to the form in old age, or they are different, but both (these ideas) are wrong, and why? Suppose that the infant's form were the same as the crawler's form, and so on up to the form in old age. If this were so, there would be only one form, that of the infant, and there would be no crawler and so on up to old age. Or again, it is like a lump of clay which is always a lump of clay and never becomes a pot. Why is this? Because a form is always fixed. If the form of an infant differs from that of a crawler, then an infant will not become a crawler, and a crawler will not become an infant, and why? Because the two forms are different. If things were thus, the forms of boyhood, youth, manhood and old age would not succeed each other, and there would be loss of any family structure, with no fathers and no sons. If things were thus, there would only be an infant, who would have to become a father – the other stages from crawling to old age would play no part. Therefore, both are erroneous.

(17b23) Question. Even though form is not fixed, when the infant's form has ceased, it arises in a succession (of forms) up to the form of old age. This does not involve the kind of errors discussed above.

(17b25) Reply. If the infant's form is successively reproduced, then either it is successively reproduced after having ceased (at each juncture) or it is successively reproduced without having ceased. If the infant's form has ceased, how can there be any successive reproduction, since there would be no cause? Even though, for example, there is firewood which could burn, there is no successive production (of fire) after the fire has gone out. If we suppose that there is successive reproduction of the childhood form without it having ceased, then the childhood form, since it never ceases, will surely continue with its original characteristics and there will be no successive reproduction here either.

(17c1) Question. We are not saying that there is successive reproduction because (the form) has ceased or not ceased. We are merely saying that because non-abiding characteristics seem to arise, we can speak of successive reproduction.

Reply. If this were so, it would be a fixed form arising again, and in that case there ought to be a thousand myriad kinds of form, but this is not so. In that case too, there should be no succession. Thus, though we may search everywhere for form, it has no fixed characteristics. It exists only through conventional expressions. It is like the banana tree – you can search for its core but you will not be able to find it, for it is merely bark and leaves. In such a way does the man of insight seek the characteristics of form. Ceasing moment by moment and utterly without reality, form is unattainable. The shape and characteristics of non-abiding form, seeming to arise consecutively are hard to distinguish, just as it is impossible to distinguish fixed forms in the flames of a lamp. It is impossible for there to be forms arising from such fixed forms (as you describe), therefore form has no nature and is empty, existing only through conventional expressions.

(17c11) Receiving is also like this. The wise man investigates it in various ways but since (receptions) are sequential and similar, it is difficult to distinguish their arising and ceasing; they are like the succession of flowing water.

It is only because we have r it that we say there are three receivings within the body. Therefore, you should know that receiving may be explained in the same way as form.

(17c13) (The skandha of) conception arises on account of names and marks, and without such names and marks it would not arise. Therefore the Buddha says that discriminative knowledge of names and terms is called conception. It is not fixed and pre-existent, but arises from conditions and has no fixed nature. Having no fixed nature, it resembles 'the shadow following the substance' The shadow is there because of the substance. Without the...
substance there is no shadow, and the shadow has no fixed nature. If it did have a fixed existence, then the shadow would exist without the substance, but in reality this does not happen. Therefore it arises from conditions, has no own-nature and is unattainable. Conception too, is like this. It only exists because of external designations and through conventional worldly expressions.

(17c20) (The skandha, of) consciousness arises because of form, sound, smell, taste, touch, etc., and eyes, ears, nose, mouth and body etc. Because the functions of eye, etc., are differentiated, consciousness is differentiated. This consciousness must be either in the form, or in the eye, or between them. It has no fixed nature, and only after it has arisen is there consciousness of the material world, consciousness of this person and consciousness of that person. The consciousness which cognizes a particular person is either the same as the consciousness which cognizes another person, or it is different. These two may be hard to distinguish, just as eye-consciousness may be difficult to distinguish from ear consciousness. Since they are hard to distinguish, we can either say that they are one, or that they are different. They are not fixed and differentiated, because they merely arise from conditions. Such distinctions as eye (consciousness), etc., are therefore empty and have no own-nature.

(17c27) It is like an entertainer who puts a pearl in his mouth, then having taken it out, shows it to the people who begin to doubt whether it is the original pearl, or some other different one. Consciousness is also like this, for having arisen, it arises again. Is it the original consciousness, or is it a different consciousness? Therefore you should know that consciousness, being non-abiding, has no own-nature and is false and deceptive, like an illusion.

(18a2) Predispositions are also like this. Predispositions are those of body, speech and mind, and are of two kinds, pure and impure. Which are impure? The grasping attachment which afflicts beings is called impure. True speech, non-attachment etc. which do not afflict beings are called pure. These (two) either increase, or diminish.

(18a5) Those with pure predispositions, since they have already received their rewards either as humans, or in the heavens of desire, or in the heavens of form or the formless heaven, are ‘diminishing’, but now in resuming their activities they are called ‘increasing’. Those with impure predispositions are also like this. Having already received their deserts in the hells, in animal births, and amongst the hungry ghosts and asuras they are ‘diminishing’, but in resuming their activities they are called ‘increasing’. Therefore, since all predispositions are increasing and decreasing they never abide. It is like a man who is ill. If he is given suitable treatment his illness will subside, but if it is unsuitable his illness will get worse. Predispositions are like this. Because they increase and diminish they are not fixed, but exist only through conventional worldly expressions. It is by means of the worldly truth that we manage to perceive the supreme truth.

(18a12) It is said that ignorance causes predispositions, because of predispositions there is consciousness and attachment, because of consciousness and attachment, there is name and form, from name and form derive the six avenues, from the six avenues there is contact, from contact there is reception, from reception there is desire, from desire there is grasping, from grasping there is existence, from existence there is birth and from birth there is old age and death, sorrow, grief, suffering affliction, the pain of separation from those you love, and the pain of association with those you hate, and so on. In this way all sufferings have their origin in predispositions. The Buddha’s teachings rely on conventional worldly truth, (but) if you attain to the truth of the supreme meaning and develop true insight (prajña) then ignorance will cease. When ignorance ceases the predispositions do not accumulate, and because the predispositions do not originate, that which the perception of truth cuts off, the view of the body (as the self) and doubts, rituals and attachments and so on are all cut off.

(18a19) In addition, that which meditation cuts off, namely attachment and craving, anger, contamination by forms, contamination by non-form, lust and ignorance are also cut off. Because these are cut off, each link (of causation) ceases, which is to say that ignorance, predispositions, consciousness, name and form, the six avenues, contact, reception, desire, grasping, existence, birth, old age, death, sorrow, grief, suffering, affliction, the pain of separation from those you love, and pain of associating with those you hate, and so forth, all cease. Because of this cessation the five skandhas completely cease, with nothing at all remaining, only emptiness.

(18a24) This is why the Buddha, wishing to point to the meaning of emptiness, taught that all predispositions are false deceptions. Furthermore, all dharmas, since they are without (own) nature, are false deceptions. Being false and deceptive, they are empty. As the verse says.
CANDRAKĪRTI COMMENTARY

2ab If whatever is not what it pretends to be is unreal, what is it in that case that pretends?

When we say, ‘What pretends is unreal’, and ‘What in that case pretends?’ we mean, How, then, can the non-existent (abhava) exist (bhavati)? If any object whatsoever existed then the denial of it and the theory of non-existence would constitute a Buddhist heresy. So long, however, as we discern no actual object whatsoever, then what can do the pretending? No non-existent object can exist. So your accusation is not appropriate. You may ask, if the theory of non-existence is not taught by this text, what, then is?

We reply:

2cd The illustrious one said this in elucidating sunyata, the absence of being in things.

What the illustrious one uttered was not the elucidation of the non-existence of things, but rather the absence of being in things: that self-existent things do not arise. This is the meaning of the Sutra. The Anavataptahradapasamkramana Sutra says, ‘What is born of conditions is not truly born; and it does not arise as self-existent; what depends on conditions is said to lack being. Whoever comprehends the absence of being in things is free of delusion.

Absence of being as changeableness

You may object that this text (kārikā 1) does not state that self-existent things do not arise, but rather that things are without self-existence in the sense that their essential nature is inconstant and perishable (fn 1 This view predominates in the early sutras; the radically new depth given the notion of sunyata by Nagarjuna can mark the philosophical maturation of Buddhism.) If you ask how this is meant:

KALUPAHANA COMMENTARY

If dispositions cause delusions, what is it about which there are delusions? The answer would be: “The world of experience.” The Buddha has spoken of that world too. It is the world that is non-substantial, is empty of any permanent and eternal entity. All delusions arise regarding that world which is dependently arisen and nonsubstantial, but which is being understood as being either eternal or absolutely unreal.

GARFIELD COMMENTARY

2. (“The Victorious Conqueror” fn 71. An epithet of the Buddha. (The translation reflects the sense of the Tibetan. The Sanskrit would read “Blessed One.”))

The opponent then asks what we are deceived about. Here is what motivates the question: If there are no real tables, for instance, then when I believe that there is a table in front of me and am therefore deceived, what is deceiving me? We don’t want to say that a nonexistent phenomenon is pretending to be existent since it would have to exist in order to pretend. Nāgārjuna replies that what actually exists is an empty table. (That is not to say, however, that that empty table is inherently existent - only that the correct way to characterize the entity that exists conventionally is as an “empty table.”) That empty table is misperceived by an ordinary mind as a truly existent table. To the extent that it appears as empty, it appears as it truly is. In the first two lines of the next verse, Nāgārjuna notes that it is the absence of essence that permits change:
Kārikā XIII.3

bhāvānāṃ niḥsvabhāvatvatvam anyathābhāvadarśanāt |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 3 - (The opponent contends) From the perception of varying natures all entities are without self-natures. An entity without self-nature does not exist because all entities have the nature of sunyata.

JONES (Skt):
[3] Since we see change, all entities lack self-existence. Without self-existence, an entity does not exist - thus the emptiness of all entities.

KALUPAHANA (Skt):
Because of the perception of change, the absence of self-nature of existents is [recognized]. Because of the emptiness of existents, there is no existent without self-nature.

MCCAGNEY (Skt):
Since beings are viewed as having no self-nature in a changing nature
and a being lacking self-nature does not exist, then openness [is the self-nature] of beings.

NISHIJIMA (Skt?):
3. In many existences, poverties are clear,
But in another case the attitudes of looking at, has been omitted.
The unnatural birth does not exist really,
And in the miscellaneous existences, the balanced state of the autonomic nervous system is going on.

SPRUNG (Skt):
3 Things are without an essential nature because they are seen to alter. No thing is without an essential nature as all things are without being.

STRENG (Skt):
3. An opponent says: There is non-self-existence of things since a thing, by observation, becomes something else. (i.e. impermanence) A thing without self-existence does not exist—due to the emptiness of existing things.

ROBINSON (Skt):
That existsents are without own-being is because their alter-being is seen; an existent without own-being does not exist; hence the emptiness of existents.

BOCKING (Ch),
13v3 Since all dharmas vary
We know that they have no nature.
Dharmas without a nature do not exist
Because all dharmas are empty.

BATCHELOR (Tb):
Things have no essential nature because they are seen to change into something else. Things do not lack an essential nature because things are emptiness.

DOCTOR (Tb):
Things are devoid of essence
Because they are perceived to change.
There are no entities without essence
Because entities possess emptiness. [XIII.3]

GARFIELD (Tb):
3. All things lack entithood,
Since change is perceived.
There is nothing without entity
Because all things have emptiness.

GARFIELD-SAMTEN (Tb):
3. All entities are natureless,
Since transformation into something else is perceived.
All entities lack naturelessness
Because all entities have emptiness.

HAGEN (paraphrase):
13.3 [Nagarjuna]: Because change is perceived, all things are without self-nature. [Opponent]: Because of the emptiness of existents, there is no existent without self-nature.
PINGALA COMMENTARY

13/3 Dharmas have no nature, and why? Though dharmas arise, they do not abide in an own-nature, and hence they have no nature. It is as if an infant had a fixed, abiding own-nature. He could never become a crawler, and so on up to old age. Yet an infant, through consecutive phases, does have different characteristics manifesting as crawling and so on up to old age. This is why we say that, since we see dharmas having varying characteristics we know that they have no nature.

Question. Even if dharmas have varying characteristics and no nature, what is wrong in saying that dharmas with no nature exist?

Reply. If they have no nature, how-can they be dharmas, how can they have characteristics? Why is this? Because they have no basis. It is solely in order to refute their (presumed) nature that we say they have no nature. If dharmas which had no nature existed, we would not describe all dharmas as empty. If all dharmas are empty, how can dharmas with no nature exist? Question.

CANDRAKĪRTI COMMENTARY

3ab Things are without an essential nature because they are seen to alter.

Alteration (anyathatva) in things means that their transformation is directly observed. That is to say, if there were no essential nature in things, that is, if things were not self-existent, their alteration could not be perceived. But transformation is directly observed and so it should be recognized that the sutra is speaking of the changeableness of the essential nature of things.

This is so, because

3cd No thing is without an essential nature as all things are without being.

A thing lacking an essential nature does not exist, as the absence of being is conceived of as an attribute of all things. But it is not logically possible that an attribute could be based in a non-existent subject, as the skin colour of a non-existent son of a barren woman is not logically possible. There is therefore an essential nature in things (fn 2 To hypostatize sunyata is virtually irresistible; within metaphysics it is inescapable.).

Furthermore,

KALUPAHANA COMMENTARY

This is a clear statement that truth or reality (tattva) (there being no provisional truth and ultimate reality) is neither substantial existence nor nihilistic nonexistence. The perception of change or variation (anyathabhava) confirms the non-substantiality of phenomena (nihsvabhava). This is another way of expressing the idea embodied in the discourse to Kaccayana that “to him who perceives through right wisdom the cessation of the world as it has come to be, the notion of existence (atthita) in the world does not occur,” (S 2.17). Cessation (nirvihara) or change (anyathabhava) does not imply complete annihilation. Hence Nagarjuna's view that there is no existent that is without substance (a-svabhava), that is, something that goes into complete oblivion after existing for a while (bhutva pratityasamutpada) leaving no trace at all. The discourse to Kaccayana says that he who perceives arising (samudaya) does not hold on to the non-existence of the world. In other words, arising (samudaya or samutpada) contradicts nihilistic non-existence (nastita, a-svabhava). Nagarjuna perceives this to be emptiness (sunyata).

This, then, is the way in which "dependent arising" of phenomena (pratyasamutpada) becomes a synonym for "emptiness" (sunyata) or "non-substantiality" (nairatmya) which will be further elaborated in Chapter XXIV.
3. It is emptiness that makes change possible. If things
had essences, they would be incapable of real change. But
since they are seen to change, Nāgārjuna argues, they must
be empty of essence. The opponent, though, rejoins: Since
according to Nāgārjuna all things are empty and since this is
their ultimate nature, all things in fact do have a kind of
entitithood, namely, existence as empty phenomena.
Nāgārjuna is here anticipating the charge that he has rejected
other essences only to posit emptiness as an essence, subject
to all of the problems he has already adumbrated for
essentialist metaphysics.

The opponent then asks (XIII: 4), “If everything lacks
being, and is therefore empty, what could change?” Change
would seem to have to be change of something, and the
doctrine of emptiness seems to rob us of those somethings.
Nāgārjuna, hence, presents himself, in the voice of the
opponent, with a dilemma: He seems to have propounded,
his protestations to the contrary notwithstanding, a theory of
the essence of all phenomena. That theory, according to this
hypothetical objection, is that emptiness just is the essence
of all phenomena. He could deny having propounded such a
theory, of course. But the consequence of such a denial, the
opponent charges, would be no better. For then, the very
basis of the argument here offered for emptiness - the reality
of change would have to be rejected. This is because without
real entities there would no longer be a possible subject of
change. Nāgārjuna replies in the third and fourth lines of
XIII: 4 that the opponent has things backward: If there was
entitithood - if things were nonempty change would be
impossible. It is emptiness itself that makes change
comprehensible:
**Kārikā XIII.4 (Ch)**

[Robinson states that this verse in the Chinese has no correlate in the Sanskrit]

zhū fǎ ruò wú xìng yún hé shuǐ yīng ér; er nǎi shì yǔ; yǔ wū lǎo nián ér yǒu zhōng zhōng yì

**ENGLISH TRANSLATIONS**

**BOCKING (Ch), 13v4**

If dharmas have no nature
How can you say that from infancy
To old age and so on
Various differences–exist?

**PINGALA COMMENTARY**

13/4 If dharmas had no nature, then they would not have varying characteristics, yet you say that they do have varying characteristics. Therefore dharmas do have a nature. If there were no dharma–natures, how could there be varying characteristics?

Reply:
Kārikā XIII.4

若諸法有性 云何而得異
若諸法無性 云何而有異

INADA (Skt):
Verse 4 - (Nagarjuna asserts) If self-nature does not exist, what is it that has this varying nature? (On the other hand), if self-nature does exist, again, what is it that has this varying nature?

JONES (Skt):
[4] If there is no self-existence, what thing would change? If there is self-existence, what thing would change?

KALUPAHANA (Skt):
Whose change would there be, if self-nature were not evident? Again, whose change would there be, if self-nature were evident.? 

MCCAGNEY (Skt):
Whose would be the changing nature if self-nature does not occur?
Whose would be the changing nature if self-nature does occur?

NISHIJIMA (Skt?):
4. Where is the existence of another world other than this exists? The real existence of myself itself is not recognized at all. Where is the existence of another world other than this exists? Then the real existence of myself itself is recognized at that time.

SPRUNG (Skt):
4 If there were no essential nature, what would this becoming other be of? If there is an essential nature what would this becoming other be of?

STRENG (Skt):
4. If self-existence does not exist, whose "other-existence" would there be? Nargarjuna answers: If self-existence does exist, whose "other-existence" would there be?

WESTERHOFF (Skt):
XIII.4b If svabhāva was found, what would change?

ROBINSON (Skt):
If own-being does not occur, to whom might alter-being belong? If own-being does occur, to whom might alter-being belong?
PINGALA COMMENTARY

13/5 If dharmas had a fixed and definite nature, how could they possibly vary? 'Nature means a fixed, settled existence which cannot be transformed, just as true gold cannot be transformed, or the nature of darkness cannot be changed into light, and the nature of light cannot be changed into darkness. Moreover.

CANDRAKĪRTI COMMENTARY

4ab If there were no essential nature, what would this becoming other be of?

If there were no essential nature in things what would this becoming other which has the character of transformation be of?

Unintelligibility of change

At this point we reply. Allowing this way of conceiving things to stand, still,

4cd If there is an essential nature what would this becoming other be of?

A characteristic which is invariable in a thing is commonly said to be its essential nature; that is, it is not conjoined with any other thing. For example, heat is said to be the essential nature of fire because in all experience it invariably accompanies fire. Heat is not the essential nature of water because it arises from extraneous conditions and because it is something artificially produced. But if this invariable essential nature is something real, then because of its invariableness it could not become other. After all coldness cannot become a property of fire. Thus, if we accept an essential nature in things, alteration is not possible. But alteration is directly perceived in things so there can be no essential nature.

Further, this becoming other of things, from the observation of which it is thought that there is an essential nature in things, is simply not possible.

KALUPAHANA COMMENTARY

Nagarjuna is here contrasting identity and difference. If things are completely different from one another, then there is no reason to speak of the change of things (anyathabhava). If, on the contrary, there were to be a substance (svabhava) which is assumed to be permanent and eternal, it could not change.

GARFIELD COMMENTARY

4. Now Nāgārjuna begins a brief explanation of how to understand change in the context of emptiness and of why entitithood would preclude change. This discussion is certainly grounded in the analysis in Chapter II, but is more explicitly tied to the doctrine of emptiness at this point in the text:
**Kārikā XIII.5**

**INADA (Skt):**
Verse 5 - It is not possible for this or another entity to have a varying nature. This is from the fact that youth does not age (over again).

**JONES (Skt):**
[5] Change is not admissible for something in itself or for something different - since "youth" does not age, nor does "aging" age.

**KALUPAHANA (Skt):**
Neither change of something in itself nor of something different is proper. The reason being that a youth does not age nor does an aged person age.

**MCCAGNEY (Skt):**
No changing nature, either of itself or of another, occurs. This is because a youth does not age and an aged one does not age.

**NISHIJIMA (Skt?):**
5. Existence in other world does never belong to this world. At the same time what belongs to the different world, is never attached to this world. For the same reason, young men do not become old at the present moment, For the same reason, old men do not become old at the present moment.

**SPRUNG (Skt):**
5 Becoming other is not comprehensible either of the same thing or of another thing. So the young man does not grow old nor does the old man grow old.

**STRENG (Skt):**
5. Just as there is no other-existence of a thing, so also an-other-existence of something else is not possible—Since a youth is not aging (jiryate), and since "who has already aged" is not aging (jiryate).

**WESTERHOFF (Skt):**
XIII.5 Neither the change of a thing itself nor of something different is suitable: as a young man does not become old, so an old man does not become old either.

**ENGLISH TRANSLATIONS**

**BOCKING (Ch):**
13v6 A particular dharma does not vary, A different dharma does not vary. Just as youth does not become old age And old age does not become youth.

**BATCHelor (Tb):**
This itself does not change into something else. The other itself too does not [either]. Because youth does not age. Because age too does not age.

**DOCTOR (Tb):**
Change is not in that itself Nor is it in something else, Because the young do not age, And because the aged do not age. [XIII.5]

**GARFIELD (Tb):**
5. A thing itself does not change. Something different does not change. Because a young man doesn't grow old, And because an old man doesn't grow old either.

**GARFIELD-SAMTEN (Tb):**
5. A thing itself is without transformation. Nor is transformation in something else, Because a young man does not age, And because an aged man does not age either.

**HAGEN (paraphrase):**
13.5  Becoming something else is not comprehensible either of the same thing or of another thing. Thus neither a youth nor an elder grow old.
PINGALA COMMENTARY

13/6 If a dharma did vary it ought to have varying characteristics. Either it is the same dharma which varies, or it is a different dharma which varies, but neither of these is correct. If it was the same dharma which varied, then old age ought to become old age, but in reality old age does not become old age. If it is a different dharma that is the variant, then, old age being different from youth, youth should become old age, but in reality youth does not become old age. Both are wrong.

Question: What is wrong in saying that the same dharma varies? We see with our own eyes that youth, with the passing of the seasons and the years, becomes old age.

Reply:

CANDRAKĪRTI COMMENTARY

The alteration of something which continues to exist just as it did in a previous state is not logically possible. For example a young man cannot alter so long as he exists in his state of youthfulness. You may suppose that the alteration is realized in the immediately succeeding state, but that is not logically possible either. Alteration is just a synonym for old age. And if you try to think that the alteration is not in the young man, but rather in the other - the old man — that too is impossible. A second conjunction of ageing with the old man would be pointless. What would be achieved by attributing old age a second time to an old man? As an old man does not exist before the advent of old age it makes no sense to say ‘an old man becomes old’. On the other hand, it makes no sense to say that the alteration is in the youth because the term youth is used of the stage in which old age has not been attained, and because the two stages — youth and old age — are mutually exclusive.

What is more,

KALUPAHANA COMMENTARY

Nagarjuna continues to emphasize the view that change (anyathabhava) is inexplicable in the context of identity or difference. "Of itself" (tasya eva) means "of something that has substantial existence;" "of another" (anyasya eva) implies "belonging to something completely different." As mentioned previously (VII.24), "decay" (jara) was not rejected by Nagarjuna. In the present context, what he intends to convey is that such decay makes no sense when applied to explain a person who is metaphysically conceived either as possessing an eternal self or as being different from moment to moment.

GARFIELD COMMENTARY

5. When we imagine change, we imagine one thing retaining its identity, but changing its properties. But if identity is understood strictly, it is only possible as an internal relation that a thing bears to itself. To the extent that a thing changes, it becomes, strictly speaking, a different thing. But the relation between two things is not the change of a thing - it is simply the difference between two nonchanging entities. A young man does not grow old. When he is old he is no longer a young man. The relation between the young man and the old man is simply the difference of two things. But an old man doesn’t grow old either. He is already old. So if change and things that change are thought of nonrelationally, we can make no sense of change at all.

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 6 - If an entity does have a varying nature, then it will be possible for milk to become butter. But butter-nature will have to arise in something other than milk.

JONES (Skt):
[6] If a thing itself changed, then milk would itself be curds; otherwise, being curds would be something other than milk.

KALUPAHANA (Skt):
If change were to be of something in itself, then milk itself would be butter. Butter-ness would then be something other than milk.

MCCAGNEY (Skt):
If a changing nature [were] of itself, then milk would be butter. Since milk differs, the nature of butter will be of what?

NISHIJIMA (Skt?):
6. Mind in this world can exist in another world, And so condensed milk can exist similarly as if it were yoghurt. Leaving from condensed milk, something different can exists in a different thing. Therefore the existence of condensed milk might be possible in future.

SPRUNG (Skt):
6 If one and the same thing becomes other, then milk itself would be curd. Curd will arise from anything whatsoever other than milk.

STRENG (Skt):
6. If there would be an other-existence of a thing, milk would exist as curds. But surely "being curds" will be something other than milk.

BOCKING (Ch):
13v7 If a dharma is the same as its variant, Then milk should itself be cream. What dharma is there apart from milk That can produce the cream?

BATCHelor (Tb):
If this itself changes into something else, milk itself would be curds. Something other than milk would be the being of curds.

DOCTOR (Tb):
If that itself changes, Then milk itself is yogurt. What, other than milk, Would turn into yogurt? [XIII.6]

GARFIELD (Tb):
6. If a thing itself changed, Milk itself would be curd. Or curd would have come to be An entity different from milk.

GARFIELD-SAMTEN (Tb):
6. If a thing itself transformed, Milk itself would become yoghurt. But what other than milk Could become the entity that is yoghurt?

HAGEN (paraphrase):
13.6 If a thing could remain itself and yet change, then milk could be butter. But butter is something other than milk.
PINGALA COMMENTARY

13/7 If a dharma were the same as its variant, then milk itself ought to be cream, and would need no causes or conditions at all, but this is not correct, and why? Because milk differs from cream in various ways. Milk itself is not cream, and therefore dharmas are not their own variants. If you say that it is a different dharma which varies, this too is incorrect, for what other thing could be considered as cream? Looked at in this way, a dharma does not vary itself. But it is not a different dharma that varies either. Therefore you should not cling to a one-sided position.

Question: Destroying both 'itself' and 'different' dharmas, you seem to be abiding in emptiness. Emptiness is itself a doctrine.

Reply:

CANDRAKĪRTI COMMENTARY

6ab If one and the same thing becomes other, then milk itself would be curd.

It may be thought that it is only by passing beyond the state ‘milk’ that the state ‘curd’ comes into existence, so that it is not the milk itself which becomes curd.

We reply. If you do not wish to think that milk becomes curd because they are mutually exclusive, then,

6cd Curd will arise from anything whatsoever other than milk.

Is curd to arise from water? Thus it is illogical to say that curd arises from what is other than itself. As, in this way, alteration is impossible, how can it be established that things have an essential nature from the observation of change? That would be absurd.

As is said in the Ratnakaramahayaua Sutra, ‘The truth of things as revealed by the victorious one, the lion among men, is neither born nor does it arise, it does not decay, it does not die. In it are merged all living beings.

‘What is not self-existent in any sense, cannot attain other-existence either from within or from without; the lord is realized everywhere.

‘Buddha has revealed the way of being at peace, though no definable way has been attained; there you will walk what is called the way of liberation. Yourself free, you will free many other beings.

‘Buddha, you declare all elements of existence devoid of self; you liberate men from belief in the individual being. Free from any path you have attained liberation; you have reached the other shore without leaving this one.

‘Having crossed the ocean of existence you have reached the other shore. But there is no individual as such who has gone beyond. There is neither a shore here nor there; it is merely a manner of speaking to say you have crossed over.

‘Neither do the words you utter exist, nor does what you speak about exist, nor does he with whom you speak exist nor he who comprehends.

‘The whole world is deluded because it clings to false obsessions. The self-existent Tathagata has been seen by those who clearly comprehend that all elements of existence are at peace.

‘One who fully knows that the subtlest elements of existence are at peace attains happiness and makes other beings joyful. Overcoming the afflictions of existence, he becomes a conqueror.

‘And he knows the pure mind of the victorious ones and enlightens all creation.’

Absence of being as the exhaustion of all views

You stated earlier that no thing was lacking an essential nature as absence of being is to be attributed to all things. That is, there is an essential nature in things which is the base for the absence of being in them. Nagarjuna says that this does not make sense either.
If change were to be applied to something recognized as existing in itself, i.e., a substance, then the conception of change would be negated. Here we find the example of milk and butter (ksira-dadhi) utilized by the Vatsiputriyas, along with the metaphor of “fire and fuel” (Akṣa p), to illustrate the relationship between the aggregates and the self. If butter is considered to be substantially the same as milk, then butterness will have to belong to something different from milk. Otherwise we will be left with two different substances having the same substantial constitution.

6. If we think of identity persisting through change, there is a single thing that changes as conventionally, milk becomes curd. Since that thing is identical to milk and to curd, by transitivity we would have to say that curd and milk are identical. But no one would want to put curd in his/her tea! The only way to avoid this result while retaining the idea that milk and curd are entities would be to consider them to be wholly different entities. In that case, there is still no change in an entity - only the difference between two unrelated phenomena. (fn 72. My reading of these last two verses appears to conflict with that of Imada (1970), who reads Nāgārjuna as here denying that there is change. Rather, I take it, Nāgārjuna denies that there is any inherently existent change or any substantial entity that could be the subject of change, in virtue of the conventional reality of change and the changed.)
If something devoid of the nature of sunya exists, then there also will be something else which may have the nature of sunya. But as anything devoid of the nature of sunya does not exist, how could there exist the nature of sunya?

If there were anything at all that is not empty, then there would exist something we could call “empty.” However, there exists nothing nonempty - how then can there be the “empty”?

If there were to be something non-empty, there would then be something called empty. However, there is nothing that is non-empty. How could there be something empty?

If something would be nonopen, then nothing would be “open.”
If nothing is nonopen, why will there be open?

If there were a bit of something that is not empty, There could be a bit of something that is empty. As there is not a bit that is not empty, How could there be anything that is empty? [XIII.7]

If there were even a trifle nonempty, Emptiness itself would be but a trifle.
But not even a trifle is nonempty. How could emptiness be an entity?

If there were the slightest thing not empty, There would be that much emptiness existent.
Since, however, there is not the slightest thing nonempty, How could emptiness exist? (7)

If there were a bit of something that is not empty,
There could be a bit of something that is empty.
As there is not a bit that is not empty, How could there be anything that is empty? [XIII.7]

If there were even the slightest bit nonempty, Emptiness itself would be the slightest bit existent.
But when not there is not even the slightest nonempty thing, How could emptiness exist?

If there were the slightest thing not empty, There would be that much emptiness existent.
Since, however, there is not the slightest thing not empty, How could emptiness exist? (7)
PINGALA COMMENTARY

13/8 If non-empty dharmas existed, then empty dharmas should exist interdependently with them. But in what has gone before we have refuted non-empty dharmas with various types of reasonings. Since no dharmas exist which are non-empty, there is no reciprocal dependence, and since there is no reciprocal dependence, how can empty dharmas exist?

(18c11) Question: You say that because no non-empty dharmas exist, empty dharmas do not exist either. If so, this is a doctrine of emptiness. But since there is no reciprocal dependence there should not be any clinging (to a position). If there are opposites, there must be interdependence. If there are no opposites, then there will be no interdependence. If there is no interdependence there will be no characteristics, and if there are no characteristics there will be no clinging (to a position). It is in this way that we regard your doctrine of emptiness.

Reply:

CANDRAKĪRTI COMMENTARY

(fn 3 This implies that meaningful statements derive from pairs of opposite concepts. And ‘absence of being’ cannot be asserted of things: one of the variants of the Madhyamika paradox.)

If there were something called devoidness of being (fn 4 i.e. if devoidness were ontic) there would be an essential nature in each thing as its basis (asraya). But it is not so. The reasoning here is that, if we suppose devoidness of being to be the universal characteristic of all elements of existence there can be no non-devoidness (asunyata) because there is no element which is not devoid. If there are no non-devoid entities, that is if there is no non-devoidness, then because it will not be related to its antithesis (pratipaksa), there will certainly not be any devoidness either, as there is no garland of flowers in the sky. If there is no devoidness of being no entities will exist as basis for it. This is dead certain.

You may object that the illustrious one, for the purpose of liberating those who follow him, taught three ways to liberation, namely, devoidness, causelessness and desirelessness. These are not learned in the systems of non-Buddhists but only in the teaching of Buddha. The illustrious Buddhas, the sole light of all creation, are born solely for the purpose of these three truths. They are born into this world which is given over to the dark confusion of false teachings and are the unquenchable flame of the truth of the absence of being in things. But you (fn 5 Candrakīrti; opponent still speaks), sir, by a deceitful interpretation of the teaching of the realized one, are about to destroy this very absence of being.

Good gracious! Like one whose head is held high in pride, you have overlooked, through a total misconception, the superior, blissful, direct path to the city of nirvāṇa. You thirst for liberation and depend on a path which, though it seems to lead to the city of liberation, winds through the forests of the cycle of death and re-birth. You are confused by a stubborn predilection for reality and roam about in the forests of the cycle of death and re-birth. The wise should reproach you, but you, subject to the obstinacy of pride, reproach them. Indeed, according to the great monarchs of medicine who completely cure the disease of the afflictions:

KALUPAHANA COMMENTARY

The conception of "emptiness" or "non-substantiality" is intended to eliminate the belief in substance and attribute conceived in a metaphysical sense. However, if "emptiness" itself were to be used in an attributive sense, that is as a characteristic of something substantial, then "emptiness" itself becomes "something" (kimcana). A substantial thing is a "non-empty-something" (asunyam kimcita). Such a thing does not exist. If so, there cannot be something called "empty" (sunyam iti kimcana). This is the clearest warning from Nagarjuna against moving towards the metaphysics of "emptiness" (sunyata drsti, see below).
GARFIELD COMMENTARY

7. Verses 7 and 8 are critical for any understanding of the subtle doctrine Nāgārjuna is developing of the emptiness of emptiness. In XIII: 7, Nāgārjuna is emphasizing that emptiness is not one of the many properties that a thing might or might not have. It is not that some things are empty and some are nonempty, or that all things happen to be empty although they might have been otherwise. Emptiness is important because it is the only way that things can exist. Moreover, emptiness is not an entity. It is not a distinct phenomenon to which other phenomena are related. It is exactly the emptiness of all phenomena. (fn 73. So here I agree with Wood (1994, p. 174) when he concludes that the purport of this verse is that emptiness is not an entity. But unlike Wood, I do not think that entails a nihilism with respect to emptiness. It remains a characteristic of all phenomena (including itself) and, hence, like them, is conventionally real. See also Siderits (1989).) The conventional character of conventional entities and their emptiness are one and the same.
Kārikā XIII.8

śūnyatā sarvadṛṣṭīnāṃ proktā niḥsaraṇaṃ jinaiḥ |
yeśāṃ tu śūnyatādṛṣṭis tān asādhyān babhāṣire ||8||

INADA (Skt):
Verse 8 - The wise men (i.e., enlightened ones) have said that sunyata or the nature of thusness is the relinquishing of all false views. Yet it is said that those who adhere to the idea or concept of sunyata are incorrigible.

JONES (Skt):
[8.] The victorious ones have proclaimed emptiness to be the forsaking of all views. Those for whom emptiness is a view are said to be incurable.

KALUPAHANA (Skt):
The Victorious Ones have announced that emptiness is the relinquishing of all views. Those who are possessed of the view of emptiness are said to be incorrigible.

MCCAGNEY (Skt):
The conquerer taught openness as the refutation of all views. But those who hold openness as a view are called irremediable.

NISHIJIMA (Skt?):
8. The perfectly balanced autonomic nervous system, is all the origin of intuitive Truth,
Therefore the contents of those Buddhist Masters’ teachings are all unchangeable True Pursuit.
Those are just the doctrine, which is based on the perfectly balanced autonomic nervous system,
And they are all never defeated Proclamation.

SPRUNG (Skt):
8 The spiritual conquerors have proclaimed the absence of being in things to be the exhaustion of all theories and views; those for whom the absence of being is itself a theory they declared to be incurable.

STRENG (Skt):
8. Emptiness is proclaimed by the victorious one as the refutation of all viewpoints; But those who hold "emptiness" as a viewpoint—the true perceivers have called those "incurable" (asadhya).

ROBINSON (Skt):
The Victors have declared emptiness as the expeller of all views; but those who hold emptiness as a view they have pronounced incurable.

BOCKING (Ch):
13v9 The Great Sage speaks of the emptiness of dharmas In order to wean us from all views.
If you then reinstate a view of 'emptiness',
You cannot be taught by all the Buddhas.

BATCHelor (Tb):
The Conquerors taught emptiness as the forsaking of all views. Those who view emptiness are taught to be without realisation [incurable/incorrigible].

DOCTOR (Tb):
The Victorious Ones have taught emptiness As a deliverance from all views.
For those whose view is emptiness, they teach,
Nothing can be accomplished. [XIII.8]

GARFIELD (Tb):
8. The victorious ones have said That emptiness is the relinquishing of all views.
For whomever emptiness is a view,
That one will accomplish nothing.

GARFIELD-SAMTEN (Tb):
8. The victorious ones have said That emptiness is the elimination of all views.
Anyone for whom emptiness is a view Is incorrigible.

HAGEN (paraphrase):
13.8 (axiomatic) The Victorious Ones have said that emptiness is the relinquishing of all views. Those possessing a view of emptiness are incorrigible.
PINGALA COMMENTARY

13/9 It was in order to destroy the sixty-two views, as well as ignorance, craving etc., and all the afflictions, that the Buddha spoke of emptiness. If a person produces further views about emptiness, such a person is incorrigible. As an example, a sick man has to take medicine to be healed. If the medicine makes him ill again he cannot get better. Or it is like a flame coming out of firewood which can be extinguished by water. If it had been produced by water, what could one use to extinguish it? In the same way emptiness is the water which can extinguish the fires of affliction. There are some people who, because they carry a heavy load of karma, have a mind steeped in craving and attachment and are dull in insight, produce views of emptiness. They either say that there is emptiness, or that there is not emptiness, and through (these ideas) they again generate afflictions. If one (tries to) instruct this kind of person in emptiness, he will say 'I have known this emptiness for a long time'. But without this emptiness there is no way to nirvana, for as the sutra says, 'Unless you pass through the gate of emptiness, marklessness and non-doing, your liberation will be nothing but words'.

CANDRAKĪRTI COMMENTARY

The exhaustion (nihsaranam), the ceasing to function of all ways of holding to fixed concepts stemming from theories or views (drsti) of any kind whatsoever, is the absence of being in things. But the mere ceasing to function of what stems from holding views is not itself a real thing. With those who obstinately hold to the reality of things, even in the case of the absence of being, we can have no dialogue. How could we, who teach that liberation ensues on desisting from all conceptual thinking whatsoever? It is as if one man said to another, 'I have no wares at all to sell you.' If this other man were then to say, 'Give me what you call those “no wares at all”', how would he be able to take hold of any real wares? Similarly, how can there be an end to the pertinaceous holding to reality (bhavabhinivesa) on the part of those who pertinaciously hold to reality even in the case of the absence of being? That is why the great healers, the realized ones, greatly wise, having diagnosed this disease in the light of the great art of healing, do not attend to them.

As the illustrious one said in the Ratnakuta Sutra, 'It is not devoidness of being which renders the elements of existence devoid of being; rather the elements are devoid by nature. It is not causelessness which renders the elements of existence causeless; rather the elements are by nature without cause. It is not purposelessness which renders the elements of existence purposeless; rather the elements are purposeless by nature. Just this way of regarding things. Kasyapa, I call the middle way; it is the true way of regarding the elements of existence. But those, Kasyapa, who seize on the absence of being as an object they assail the absence of being and such, I say, are hopelessly lost. Indeed, Kasyapa, it were better if one resorted to a belief in the reality of the individual as unshakable as Mount Sumeru, than to hold to a theory of the absence of being through the stubborn belief in the unreality of things. Why is that? Because Kasyapa, the absence of being is the exhaustion of all theories and views.

‘One for whom, in turn, the absence of being itself becomes a dogmatic view I call incurable. It is, Kasyapa, as if a sick man were given a medicine by a doctor, but that medicine, having removed his ills, was not itself expelled but remained in the stomach. What do you think, Kasyapa, will this man be freed of his sickness? No indeed, illustrious one, the sickness of this man in whose stomach the medicine, having removed all his ills remains and is not expelled, would be more violent.

The illustrious one said: In this sense, Kasyapa, the absence of being is the exhaustion of all dogmatic views. But the one for whom the absence of being itself becomes a fixed belief, I call incurable.’

KALUPAHANA COMMENTARY

The inevitable conclusion to be derived from XIII. 7 is that the conception of "emptiness" (sunyata) or "nonsubstantiality" (nairatmya), utilized by the Buddha in order to free oneself from all metaphysical views (drsti), can turn out to be an equally unsatisfactory view, if its application is to be carried beyond its proper limits. Indeed, Nagarjuna perceives such activity as leading to worse forms of dogmatism.
8. The sense of “view” (Tib: Ita-ba, Skt: dwī) at work in verse 8 is crucial. By a view, Nāgārjuna here means a theory on the same level of discourse at which reification-nihilist debates proceed. A view in this sense is a view about what does or does not exist when existence is taken to mean inherent existence, or about the nature of phenomena, presupposing that the idea of a nature is coherent. So both the theory that compounded phenomena exist in virtue of having natures and identities and the theory that since they don’t have such natures and identities they don’t exist at all are views in this sense. Both presuppose that things exist at all if and only if they do so inherently. But the analysis in terms of emptiness is not a view at all in this sense. For the claim is not that things exist in virtue of having the property of emptiness as an essence. Rather it is the claim that they are empty because they have no essence.

It is also very important to see that this understanding of what a view is is closely bound up with Nāgārjuna’s account of assertion and of the role of language in Madhyamika dialectic. For Nāgārjuna, assertion in the literal sense is always the ascription of a property to an entity. As long as we are talking from the conventional standpoint, there is no problem here. There are plenty of conventional entities and conventional properties to go around and, so, lots of available conventionally true assertions. That is the basis of conventional truth. It is also important to note here that corresponding to these conventional assertions are real propositions that make them true or false - entities with or without the ascribed properties. Again, as long as we remain and are aware that we remain within the framework of conventional designation and conventional assertion, this poses no problems. But, when we start to do metaphysics, it is easy to slip into nonsense: For now, when we want to characterize the essence of a thing, we take ourselves to be positing a non-conventional thing and ascribing to it an essential property. And there not only are no such things, but there are not even possibly such things. There is no ultimate way the world is that we are characterizing, truly or falsely.

The danger to which Nāgārjuna is here adverting with respect to Madhyamika philosophy (of treating Madhyamika as a view) is then connected to assertion in the following way: If one were to think that in asserting that things are empty that one is positing entities and ascribing to those independent entities the property of I emptiness, one would be treating the language of Madhyamika as making literal assertions. But from the standpoint from which these would be true, there are no entities and no characteristics, and a fortiori, there are no entities having the characteristic of being empty. The language must hence be understood, from the ultimate perspective, not as making assertions, but rather as ostending - indicating that which cannot be literally asserted without falling into nonsense - as Wittgenstein puts it in the Tractatus, showing that which cannot be said.

Nāgārjuna makes this much more explicit in his discussion of positionlessness in Vīgrahavyātivartanī XXI-XXVIII, where he explicitly denies that the Madhyamika assert any propositions, in virtue of there being no entities or properties presupposed by their use of language existing independently and corresponding to the words used. Aryadeva makes the same point at Catusātaka XVI:

“21. Candrakīrti in his comments on these verses compares one who treats emptiness as an essential property - as opposed to the lack of any essential property, thus treating Madhyamika language as assertoric in the sense of asserting the view that all things have the essential nature of emptiness - to one who, upon entering a shop and learning that there are no wares for sale, asks the shopkeeper to sell him the ‘no wares.’”

(fn 74. Murti (1985) puts this point nicely: “Criticism of theories is no theory. Criticism is but the awareness of what a theory is, how it is made up, it is not the proposing of a new theory. Negation of positions is not one more position” (p. xxiii). See also Siderits (1989) for an interesting discussion of the connection between Nāgārjuna’s claim to positionlessness and contemporary antirealism. Siderits puts the point this way: - (Nāgārjuna) neither asserts nor intimates any claims about the ultimate nature of reality, for he takes the very notion of a way that the world is independently of our cognitive activity to be devoid of meaning... The slogan ‘The ultimate truth is that there is no ultimate truth’ is merely a striking way of putting the point that an acceptable canon of rationality will have to reflect human needs, interest, and institutions. (p. 6) I am neither completely comfortable with Siderits’s construction of the contemporary realism-antirealism debate nor with his location of Nāgārjuna on the antirealist side. (I rather think that Nāgārjuna would reject the presupposition of that debate - that the relevant sense of “real” is coherent in the first place.) But the connection he establishes between positionlessness and the rejection of a realist ontology is instructive. All of this will become much more explicit (if not much clearer) in the discussions in XXII, XXIV, XXV, and XXVII below. I discuss this at greater length in Garfield (unpublished).)

(fn 75. Ng (1993), however, argues that this verse should be read “all false views.” So he claims that, according to Nāgārjuna, to understand emptiness is to relinquish all false views and that anyone who holds false views about emptiness is incurable. But Nāgārjuna doesn’t say this, and the interpretation seems unfounded. See pp. 18-25.)

To hold a view of emptiness - to reify it and then attribute it to phenomena - would then involve simultaneously reifying those phenomena as having a fixed nature and denying their existence at all, in virtue of disparaging their conventional reality as unreality by contrast with the reality of emptiness. It is this incoherence, so characteristic of essentialist philosophies, that leads Nāgārjuna to assert that one holding such a view is completely hopeless - incapable of accomplishing anything, philosophically or soteriologically. (fn 76. The Tibetan “bsgrub-tu-med-pa” (will accomplish nothing) translates the Sanskrit term “āsādhyām,” which car
also be translated “incurable.”) (fn 77. This does not entail, however, pace Sprung (1979, p. 9,15-16), that nothing is intelligible. Nāgārjuna spends a good deal of time developing quite lucid analyses of conventional phenomena and their relation to emptiness. What fails to be intelligible is, rather, the idea of inherent existence. But since no phenomena exist that way, and since emptiness is intelligible, the actual nature of phenomena is intelligible.)

This argument against the coherence of any understanding of emptiness as itself an essence is tied very tightly to the analysis in Chapter XXIV: 18-40 of the emptiness of emptiness and of the connection between emptiness, dependent arising, and convention and tied most directly to the concluding verse of the text, XXVII: 30. (The commentaries on XXIV: 36 and XXVII: 30 below may be useful in elucidating this verse as well.) It is clearly an early anticipation of the powerful and climactic conclusions drawn in those two discussions.
Chapter XIV

संसर्गपरीक्षा चतुर्दशमं प्रकरणम्।

中論觀合品第十四(八偈)

saṃsargaparīkṣā nāma caturdaśamaṃ prakaraṇaṃ ||

Chapter XIV: Examination of Connection
We are still in the second part of the second major section of the text—that on the two selflessnesses—the demonstration that mere phenomena are essentially empty. We have completed the first part of that section: the refutation of the essential existence of things. [262:7] We now begin the second of those two parts: the refutation of the argument for the essential existence of things. This part has three sections: the refutation of the essential existence of contact, the refutation of the essential existence of appropriation of causes and conditions, and the refutation of the essential existence of bondage and liberation. This chapter is the first of those three parts.

Here someone might argue as follows: Things exist essentially because their contact is presented, because it says frequently in sutra that, depending on eye and material form, visual consciousness arises. And depending on the assembly of these three, there is contact. That which arises along with contact is feeling. 1 In the same way these two phenomena called “feeling” and “discrimination” are in contact and are not out of contact. Attachment, anger, and ignorance—the three overpowering passions—overpower one. Thus, all compound phenomena involve contact.

Refuting this thesis has two parts: the refutation of the essential existence of contact and the demonstration that this refutes things being in the process of contact.
SUMMARY:
While if the contact, possession, coalescing, and collection of phenomena existed through their own power they could not be posited, one should be firm in one’s ascertainment, through the framework of the two truths, of the tenability of all of these things when they are posited as essenceless.

INADA (Chapter Introductions)

CHAPTER XIV - Examination of Combination or Union
This chapter discusses the concept of combination or union (samsara) and once again Nagarjuna resorts to the three temporal moments in discussing any concept or entity. Verse I has direct relationship to Chapter III which examines the six ayatanas (seats of sense perception) and Verse 2 to Chapter VI which examines the passion and the impassioned self. But quite explicit in the whole discussion is the fact that Nagarjuna has in mind two ideas of the Madhyamika Credo, i.e., with respect to non-identity and non-difference. His argument is to show the absurdity of these ideas combining and evolving one from the other or from their identical or different natures. Thus, finally, he arrives at the conclusion that the presently combining, an already combined, and the agent which combines are untenable.

KALUPAHANA (CHAPTER OVERVIEWS)

14. Association (samsarga). The dispositions are instrumental in our forming of views on the basis of experience. It was also pointed out that if we were not to formulate such views we would be no different from the sessile sea-anemone. Dependent arising (pratityasamutpada), impermanence (anityata), nonsubstantiality (anatmata), emptiness (sunyata), etc. are all concepts which would be rendered meaningless unless they were to be identified with the “dependently arisen,” “the impermanent,” “the non-substantial,” and “the empty” given to us in experience. They are views or theories formulated by stretching out our experiences into the dim past as well as the future.

However, some of the Buddhist metaphysicians, as explained earlier, had complicated the situation for Nagarjuna by their analysis of experience into discrete momentary events. Such as analysis, which led to the formulation of the metaphysical notion of self-nature (svabhava), also created other problems that these metaphysicians were never able to solve satisfactorily. One of them is the distinction they made between mind (citta) and matter (rupa). In their ultimate constitution, these were explained as having completely distinct natures (svabhava). Mind was considered to be im-material (a-rupa) and matter was looked upon as being non-mental (a-citta).

Avoiding such a reductive analysis, early Buddhism was able to maintain that depending upon the eye, the visible form, and consciousness perception (samjna) arises. However, following that reductive analysis, the Buddhist metaphysicians experienced difficulty in explaining not only perceptual experience, but also conceptual formulation of such perceptual experience.

This accounts for the need to have a chapter on “association” (samsarga) following the chapter on the “dispositions” (samskara). How is it possible to bring together into association (samsarga) the object (drastavya) and the subject (drastr) in order to have a visual perception (darsana)? Nagarjuna begins this chapter with a denial of such a possibility. In doing so he is specifically denying the possibility of an association of events that are considered to be ultimately distinct, and this idea is being emphasized in Kumarajiva’s translation of XIV.1. The problems of identity and difference that arise as a result of such a reductive analysis are once again clearly brought out in this chapter.
Connection

I the beholder,
The one I behold,
The beholding itself
Do not connect with one another-

Just as I who desire,
The one I desire,
The desiring itself
Do not connect.

We do not connect
Because we are not
Apart from one another;
We would not be together

If we were apart.

I am other than you
In relation to you;
I could not be your other without you.

Were I other than you,
Then even without you
I would be someone else;
I cannot be your other without you.

There is no otherness
In either you or me;
Without otherness,
There is no me or you.

I do not connect with me
Nor do I connect with you –
No connecting, no
Connections, no connectors.

JONES (COMMENTARY)

14. Connections

This topic naturally follows the topic of compoundedness. For Nagarjuna, a self-existing reality is either identical to something else or absolutely different - no other connection is possible for self-existent realities. Here, the question is how the connection of an object that is seen, the act of seeing itself, and one who sees can be connected if they are three real entities.

“Otherness” does not exist in one entity alone but is an inherently relational property: one thing cannot be an “other” without another thing (v. 5). (The same is applied in Chapter 19 to the segments of time.) So, one thing’s property of

“otherness” is dependent on another thing. Hence, “another thing” does not exist without the other thing (v. 6).

With self-existent entities, no connections of independent entities or of identical entities or of an entity and its properties are possible. Nor can any connections themselves be real (self-existent) since they depend on the realities being related. And without self-existence, there are no real entities to connect. So if everything is empty, there are no “real” entities to connect. Thus, no connections are really possible whether we accept either a self-existence metaphysics or an emptiness metaphysics. Connections can be accepted on the conventional level, but ultimately there no realities to connect.

GYAMTSE (COMMENTARY)

14

An Examination of Contact

In the Sutra Requested by the Bodhisattva “Shining Intelligence,” the Buddha taught:

Forms neither meet nor part.

THIS TEACHING IS EASY to understand if we think of appearances in dreams. Since the things that appear in dreams never truly meet, they never truly part either. Even so, meeting and parting still appear to happen and we conceive of them as being real, and therefore we must train in understanding their true nature. To put this into verse for you:

In this great expanse of space, without center or end,
On this planet, where there is neither top nor bottom,
Friends and enemies, it seems,
Are forever meeting and parting,
But please know that it is all just like a dream!

Please do not take meeting and parting to be real.

Nagarjuna composed this chapter in answer to those who asserted that things do essentially exist because meeting and parting exist. Meeting and parting occur all the time, they claimed, and therefore there must be something to meet and part! However, the mere appearance of meeting and parting and the corresponding thought that they are real are not enough to establish their true existence, because these appearances and thoughts also occur in dreams. Therefore, in
order to help these people understand that things do not truly exist, Nagarjuna had to demonstrate logically that meeting and parting are not real.

Nagarjuna analyzes meeting, or contact, with regard to sense perception. If sense perception truly occurred, there would have to be some contact between the perceived object, the sense faculty, and the perceiving sense consciousness. Thus the question is, is there any contact between these three or not? Nagarjuna gives the answer in the first verse of the chapter:

*The object seen, the eye that sees, and the seer—*
*These three do not meet each other,*
*Either in pairs or all together.*

Three things must come together in order for there to be a moment of eye sense perception: the object that is seen, the eye sense faculty that sees, and the seer—the eye sense consciousness. “These three do not meet each other in pairs” means that the eye does not come into contact with the object that it sees; the eye sense consciousness does not come into contact with the object; and the eye sense consciousness does not come into contact with the eye. Therefore, they do not meet in pairs, nor do they all three meet together at the same time.

The reason the eye sense consciousness and the form that it perceives cannot meet each other is that the form is one of the causes of the eye sense consciousness—it is called the eye consciousness’ focal condition. Therefore, the form that is the cause and the consciousness perceiving the form that is the result cannot exist at the same time, because if they did, one could not be the cause of the other. If the object perceived and the consciousness perceiving it come into existence simultaneously, then the former could not cause the latter to arise, because it would have no opportunity to do so. Logically, then, the form would have to occur before the eye sense consciousness if it were going to be its cause. It would have to cease before the eye sense consciousness arose, and that is why the two cannot meet.

Of course, this second possibility—that the perceived form precedes the sense consciousness that perceives it—is also impossible. If that were the case, the perceived object and the perceiving subject would be unable to make any connection with each other. If the perceived object ceased before the consciousness that perceived it arose, what precisely would that consciousness perceive? Its object would no longer exist! It would have nothing to perceive at all.

Since the perceived object and perceiving subject do not occur simultaneously or sequentially, sense perception is a mere appearance that does not truly exist.

The “self-liberation of contact through recollection” is an important Mahamudra practice in which one recalls again and again that the apparent meeting of consciousness and object is not a real occurrence; it is a mere appearance, the union of appearance and emptiness. The five sense consciousnesses are nonconceptual—they are free from any thoughts that things truly exist. The conceptual aspect of the mental consciousness, however, follows this direct valid cognition of the sense consciousnesses and conceives of the sense consciousnesses’ experiences as being real. By following this thought of sense perception as being real with the recollection that the sense perception is appearance-emptiness, one practices self-liberation of contact through recollection, the remedy for that mistaken belief in the sense perceptions’ true existence. Milarepa sang of this practice in several of his songs. It is an important practice because we have to realize the transcendence of the meeting of object, faculty, and consciousness if we are to realize the genuine nature of reality. If we still believe that the meeting of object, faculty, and consciousness is real, it is a sign that our certainty in emptiness is not stable yet.

Nagarjuna applies his analysis of meeting to the mental afflictions and the remaining sources of consciousness in the second verse:

*Desire, the desirous one, and the object of desire do not meet either,*
*Nor do any of the remaining afflictions,*
*Nor any of the remaining sources of consciousness:*
*In these sets of three there is neither meeting in pairs nor all together.*

The contact between desire, the individual who experiences the desire, and the desired object, just like the meeting of object, faculty, and consciousness, is a mere appearance that occurs due to the coming together of causes and conditions—it is not the slightest bit real. The same can be said for anger, the angry individual, and the object of the anger, as well as for the other mental afflictions (pride, desire, and stupidity), those who experience them, and their objects. You should also apply this analysis to the remaining sources of consciousness: sound, the ear, and the ear sense consciousness, and the remaining four (nose, tongue, body, and mind) sets of three (object, sense faculty, and consciousness).

Concerning this, Mipham Rinpoche explains in his commentary, “Sense objects, faculties, and consciousnesses meet neither in pairs nor all together, just like the son and daughter of a childless woman.” This is a good example! It is an example coming from the perspective of object, faculty, and consciousness having no existent essence, an example from the perspective of their emptiness. From the perspective of their appearance, their meeting is an incidence of dependent arising, a mere coming together of causes and conditions, like in a dream. It is the union of appearance and emptiness. So there is no need to be afraid of emptiness meaning “nothing-ness,” because it does not.
When we think that the meeting of object, faculty, and consciousness is real, suffering increases. In fact, you could say that most of the suffering in the world is the result of believing sense contact or the absence of sense contact to be truly existent. However, when we gain certainty that sense contact is a dependently arisen mere appearance, like in a dream, the quality of our meditation increases. Therefore, do not be attached to the meeting of object, faculty, and consciousness as being real. Know that the appearance of their meeting is illusory and dreamlike.

For all ignorant beings without exception,
Clinging to contact as being real increases their suffering,
So they are in need of instruction in the practice
Of self-liberation through recollection.

Our suffering increases in direct proportion to the extent that we cling to the meeting of object, faculty, and consciousness as being real. That is why the practice of self-liberation through recollection is so important.

In his song The Eight Wonderful Forms of Happiness, Milarepa sang of how he used this practice to cut the rope that binds perceived object and perceiving subject:

The meeting of appearances and the six kinds of consciousness—
This is the guide that turns adverse conditions into a path.
Is there anyone here who is able to keep to this path and follow it through?

The one for whom desire and craving self-liberate is happy.
The rope that ties perceiver and perceived when cut is emaho!

(In Emaho is a Tibetan word that expresses surprise or amazement.)

The connection between perceiver and perceived is not truly existent; it is a dependently arisen mere appearance. Therefore, we have to cut the rope of clinging to duality as being real. The way to do that is to reflect on the emptiness of the meeting of perceiver and perceived with our precise knowledge of the genuine nature of reality.

When we remember that the true nature of sense perceptions is appearance-emptiness, our experience of them will be open, spacious, and relaxed. This is the method that turns experiences we would otherwise consider to be adverse conditions into the path of Dharma. We can begin to experience what we would otherwise consider to be painful and difficult as open, spacious, and relaxed, just as we would experience the appearance of difficulty when we were dreaming and we recognized that it was a dream. You need to train in this again and again, first with minor experiences of suffering, and then gradually you will be able to apply it even to experiences of great suffering. Recognizing that both happiness and suffering are mere conceptual imputations, and that therefore genuine reality transcends them both, you will experience the inconceivable and inexpressible equality of happiness and suffering, an experience that is, as Milarepa sang, a most wonderful form of happiness.

PINGALA COMMENTARY

14/0 The proponent says: In the earlier chapter (Ch 3) refuting the sense-functions, we explained that seeing, what is seen, and the seer cannot be established. Since these three things are not different dharmas, they do not combine, and the meaning of no-combining will now be explained.

Question: Why is there no combination of the three elements of eye etc?

GARFIELD COMMENTARY

Chapter XIV Examination of Connection

The word here translated as “connection” (phrad-pa) is the term denoting the relation between the components that are compounded in any compounded phenomenon. It can also describe the relation between two things coming together in space and time or colliding, or two things fitting together, and while this can be taken fairly literally in the context of physical objects when they are understood as compounded of their parts, the relation is actually much more general than that. In fact, the example that Nāgārjuna takes as central, and one that is used by some earlier Buddhist theorists as an example of a case of connection in this sense, is visual perception. In such a case, according to the proponent of the reality of meeting, or compounding, the subject, the sensory organs, the sensory faculty, and the object join together, or “connect,” not in a literal physical sense of spatiotemporal coincidence, but rather in the sense of forming an ensemble. Sense perception is, on this view, the entire compound ensemble.

So, dialectically, this chapter follows quite naturally on the heels of the examination of compounded entities. For we can imagine an opponent might reason as follows: Nāgārjuna may be right in denying the inherent existence of compounded entities in virtue of their dependence upon their parts and upon their parts being compounded, but surely since these phenomena depend upon being compounded that relation - the connection - exists. This chapter is aimed at replying to this position.

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 1 - The three phases of the object perceived, the perceiving function, and the perceiver cannot mutually combine in twofold senses or all together. - Note: The two-fold senses refer to: (1) The object and the perceiving function, (2) The perceiving function and perceiver, and (3) The perceiver and the object.

JONES (Skt):
[1] The object seen, the seeing itself, and the seer - these three do not connect to each other in pairs or collectively.

KALUPAHANA (Skt):
The object of seeing, the seeing and the seer - these three do not function in mutual association either in pairs or all together.

MCCAGNEY (Skt):
These three, seeing, the seen, and the seer, in pairs or collectively, also do not become mutually combined.

NISHIJIMA (Skt?):
1. To be seen, an action to see, and a man, who sees, Those three kinds of miscellaneous colorful mixture are produced by combination between the two and the two. Never being totally fused together, But mutually combined one by one actually.

STRENG (Skt):
1. That which is seen, sight, and the "seer": these three do not combine together either in pairs or altogether.

BOCKING (Ch):
14v1 Seeing, what is seen and the seer; Each of these three has a different realm, The three dharmas being thus different They will never for a moment combine.

BATCHelor (Tb):
The seen, the seeing and the seer: these three do not mutually connect [as] pairs or all [together].

DOCTOR (Tb):
The seen, sight, and the seer- Do not, either in pairs Or as a group, Ever come into contact. [XIV.1]

GARFIELD (Tb):
1. The seen, seeing, and the seer: These three-pairwise or All together - Do not connect to one another.

GARFIELD-SAMTEN (Tb):
1. The seen, seeing, and the seer; These three—neither pairwise nor All together—do not Exist in contact with each other.

GOLDFIELD (Tb):
The object seen, the eye that sees, and the seer— These three do not meet each other, Either in pairs or all together. (1)

HAGEN (paraphrase):
14.1 The seen, seeing, and the seer do not combine in any way, either all together or in pairs.
PINGALA COMMENTARY

14/1 'Seeing' is the function of the eye, 'what is seen' is the material form, and 'the seer' is the self. Each of these three things occupies a different place and there will never be a time when they combine. 'Different place' means that the eye is inside the body, and forms are outside the body, while the self may be said to be either inside the body or to be everywhere and in all places. This is why there is no combination.

(19a8) Furthermore, if you say that a dharma of seeing exists, it must be either seeing involving combination, or seeing not involving combination, but both of these are wrong, and why? If it is seeing with combination, then according to where the object is, the sense-function and self should be there as well, but this is not the case, and consequently there is no combination. If it is seeing with no combination, then there would have to be seeing with sense-function, the self and the object each occupying different places, but then there would be no seeing, and why? Because if, for example, the eye-function is here, it cannot see a jug in a distant place. Consequently in neither case is there seeing.

(19a13) Question: Through the combination of four things; self, mind, sense-function and object, knowing is produced. We do have the ability to know the myriad objects such as pots, clothes etc., and therefore there must be seeing, what is seen and the seer.

(19a15) Reply. These matters have already been refuted in the chapter on the sense-functions, but we will now explain them once again. You say that four things combine to produce knowing. This knowing is either produced after seeing objects such as pots, clothes, etc., or it arises before seeing them. If it arises after having seen them, such knowing is useless. If it arises before seeing them, it would be before any combination, so how would knowing have been produced? If you say that the four things combine simultaneously to produce knowing this also is incorrect. If they arose simultaneously there would be no interdependence and why? First the pot exists, then you see it, and then afterwards knowledge arises. In simultaneity there is no before or after.

Since knowing does not exist, seeing, what is seen and the seer likewise do not exist. In the same way all dharmas are like an illusion, like a dream, without fixed characteristics. How could they combine? And since they do not combine, they are empty.

Further.

GARFIELD COMMENTARY

1. First, he claims, these things simply don’t occur in the same place at the same time. There is no literal sense in which they connect.
Kārikā XIV.2

Verses XIV.2

evam rāgaś ca raktaś ca rañjanīyaṃ ca dṛṣyatām |
traiḍhena śeṣāḥ kleśāś ca śeṣāṇy āyatanāni ca ||2||

rān yū yū;yū;wū kē rān rān zhē yī fū rān |
yū rū yū fān nāo jiē yī fū rú shì

| de bźin ’dod chags chags pa (8b1)daṅ | | chags par bya ba ŋon moṅs pa |
| lhag ma rnams daṅ skye mched kyi | | lhag ma’ān nram pa gsum ŋid kyis |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 2 - The passion, impassioned self, and the impassionable can be seen in the same manner. The rest of the klesas (i.e., mental defilements) and ayatanas (i.e., seats of sense perception) depends on these three phases (for exposition).

JONES (Skt):
[2] So too with passion, the impassioned person, and the object of passion. And so too with the remaining afflictions and the fields of the senses.

KALUPAHANA (Skt):
Lust, the lustful as well as the object of lust should be seen in the same way. The remaining defilements as well as the remaining spheres of sense should be seen in the triadic mode.

MCCAGNEY (Skt):
Thus passion, the impassioned, and object of passion would be seen by means of these three, as well as the remaining defilements and the remaining spheres of sensation.

NISHIJIMA (Skt?):
2. Similarly to the cases of action to dye and what is dyed, Being dyed and Action to dye are similar to each other.
And being maintained as three, that is, what has been left, pain, And altars, which have been left also.

STRENG (Skt):
2. Desire, the one who desires, and the object of desire have to be regarded in the same way, As also the impurities which remain and the three kinds of "base of sense" (ayatana) which remain.

BOCKING (Ch):
14v2 Passion, and the object of passion And the impassioned one are also thus. The other avenues, the other afflictions Are also all like this.

BATCHelor (Tb):
Likewise desire, desiring and the desired, the remaining afflictions and also the remaining sense-fields do [not connect] by three aspects.

DOCTOR (Tb):
The same goes for desire, the desirous one, And the object of desire, the other afflictions, The remaining sense sources, And for all such triads. [XIV.2]

GARFIELD (Tb):
2. Similarly desire, the desirous one, the object of desire, And the remaining afflictions And the remaining sources of perception Are understood in this threefold way.

GARFIELD-SAMTEN (Tb):
2. Similarly, desire, the desirous, and the desired And the remaining afflictions, And the remaining faculties, Should be regarded in this threefold way.

GOLDFIELD (Tb):
Desire, the desirous one, and the object of desire do not meet either, Nor do any of the remaining afflictions, Nor any of the remaining sources of consciousness: In these sets of three there is neither meeting in pairs nor all together. (2)

HAGEN (paraphrase):
14.2 Like so is desire, the object of desire and the desirous one, and the remaining afflictions as well as the remaining fields of sense.
PINGALA COMMENTARY

14/2 In the same way that seeing, what is seen and the seer are not combined, so passion, the object of passion and the impassioned one also should not combine. And what is said of the three dharmas of seeing, what is seen, and the seer, may also be said of hearing, what is heard and the hearer, and the remaining avenues. What is said of passion, the object of passion and the impassioned one, may also be said of hate, the object of hate, and the hater, and the remaining afflictions, etc.

Further.

KALUPAHANA COMMENTARY

The pragmatic theory of truth, that is, truth as something put together according to human dispositions (samskara) depending upon something experienced (dharma), is not a very palatable one, especially for some analytical philosopher who wants to carry his analysis to the very extreme. In the present treatment of Nagarjuna's philosophy, it has been repeatedly pointed out that an extremist analysis left the Buddhist metaphysician with absolutely distinct entities. For him (and this was the position accepted even by a philosopher like Hume), "What is distinguishable is also separable." Of course, these metaphysicians would then proceed to explain events in terms of "composition," of putting different entities together (samskarana) according to one's dispositions (samskara) or, as Hume insisted, in terms of one's imagination. However, they will have to carry the burden of explaining how only certain things can be so put together and not anything and everything. For example, one can insist that it is possible to bring together events such as the eye, color, and visual consciousness together to produce the impression called "perception of color." Yet, one cannot, either in terms of dispositions or according to any imagination, put together the eye, sound, and gustatory consciousness and produce either a visual impression or an auditory impression.

The only way in which such metaphysicians can explain any possible association is by assuming a substantial relation, an inherent nature among those events that are so associated. This is how the analysis of events into absolutely different entities contributed to the recognition of mysterious substances. The Sarvastivada notion of substance or self-nature (svabhava) was, therefore, an inevitable answer to such extremist analysis, in the same way as Bertrand Russell's theory of relations, defined as neither mental or physical, was the answer to the Humean analysis.

For such philosophers, a pragmatic theory of truth, where truth is defined as something "made" (samskrta), becomes a problem because their analysis has deprived them of any empirical relations in terms of which things can be associated. It is, therefore, not surprising to see Nagarjuna taking up the question of association (samsarga), in order to show that it does not work in the background of the metaphysical assumptions of certain analysts.

Thus it becomes necessary to keep in mind that Nagarjuna's criticism of association is specifically related to the association of events that were so distinguished that each was assumed to have its own nature (svabhava). He begins this chapter with a reference to the various categories he has already examined at the very outset in this section of the book, namely, seeing (darsana), the object of seeing (drastavya) and the seer (drastr) (Chapter III). XIV.2 refers to another set of categories examined in Chapter VI. This application is then extended to all occurrences such as the defilements and faculties.

GARFIELD COMMENTARY

2. In the various chapters on the relation between characteristic and characterized, Nāgārjuna has argued that it makes no sense to think of the relation between individuals and their properties or between entities as any kind of relation between independent entities at all, and that these phenomena cannot be understood as the same, as different, or as neither.
Kārikā XIV.3

anyenaṁyasya saṁsargas tac cānyatvam na vidyate |
draṣṭavyaprabhṛtinām yan na saṁsargaṁ vrajanty atah ||3||

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 3 - There is combination of something with something different. But there are (essentially) no different natures in the object perceived, etc. and these, therefore, cannot coalesce.

JONES (Skt):
[3] There are connections of distinct things only by means of another thing, but the distinction of the object seen, the seeing itself, and the seer is not found. Therefore, they cannot connect.

KALUPAHANA (Skt):
Association is of the mutually different [events]. Such difference is not evident in the objects of seeing, etc. Therefore, they do not function in mutual association.

MCCAGNEY (Skt):
That combined difference of some event with some other does not occur. Hence, beginning with seeing, which of these do not become combined?

NISHIJIMA (Skt?):
3. Fusion relies upon different things, and at the same time it belongs to different things.
Fusion is never recognized as different characteristics. It might be offerings for it to be seen, And since then Fusion does not go on further.

STRENG (Skt):
3. Some hold: There is unification (samsarga) of one different thing with another different thing; but since the different-ness Of what is seen, etc. does not exist, those factors do not enter into unification.

BOCKING (Ch):
14v3 Different dharmas should combine
But seeing, etc., are not different
Since their characteristics have not been established as different.
How can seeing, (and seer) etc., combine?

BATCHelor (Tb):
If the other connects to the other, because the seen and so forth do not exist [as] other, therefore there is no connection.

DOCTOR (Tb):
Contact occurs between different things, So because the seen and so forth Do not exist as different things, They do not come into contact. [XIV.3]

GARFIELD (Tb):
3. Since different things connect to one another, But in seeing, etc., There is no difference, They cannot connect.

GARFIELD-SAMTEN (Tb):
3. Since different things contact one another, But in such things as seeing There is no difference, They cannot make contact.

HAGEN (paraphrase):
14.3 Combination occurs only where there is difference. Since difference is not evident in seeing, etc., combination is also not evident.

740
PINGALA COMMENTARY

14/3 Ordinary things combine by virtue of being different, but no difference in characteristics can be found in seeing, (seer) etc., and consequently there is no combination. Further.

KALUPAHANA COMMENTARY

Association, as mentioned above, becomes a philosophical problem only when distinctions or differences are rendered absolute. Nagarjuna, basing himself on the principle of "dependent arising," insists that such distinctions are not available among objects of seeing, etc. If these are distinguished or differentiated in the way metaphysicians do, then they cannot enjoy mutual harmony or association.

GARFIELD COMMENTARY

3. In order to have things that connect in the relevant sense, they must be different from one another, but as we saw in the chapters on characteristics, on desire, on seeing, on action, on motion, and on the self, the differences of the relevant kind are not found on analysis.
**Kārikā XIV.4**

na ca kevalaṃ anyataṃ draṣṭavyāder na vidyate |
kasyacit kenacit sārdham nānyatvam upapadyate ||4||

fēi dàn jiàn déng fā yì xiāng;xiāng bù kě dé;de;de;
suǒ yǒu yì qiè fā jiē yì wú yì xiāng;xiāng

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 4 - Not only do different natures in the object perceived, etc., not exist, but it is also not possible for an entity to have a different nature jointly with another.

JONES (Skt):
[4] Not only are there no distinctions between the object seen, the seeing itself, and the seer, distinctions do not occur between anything existing with anything else.

KALUPAHANA (Skt):
It is not only that the difference with regard to objects of seeing, etc. is not evident; the possibility of something possessing difference jointly with another is also not appropriate.

MCCAGNEY (Skt):
Not only does difference [in reference to] seeing, etc., not occur, even the difference of one event joined in another does not take place.

NISHIJIMA (Skt?):
4. Something excluding others is different from characters of another.

Characters to be seen, and so forth, are not recognized. Something belonging to it, and something relying upon to it, are over all. And so, different character does not appear at all.

STRENG (Skt):
4. Not only does the different-ness of that which is seen, etc. not exist, Also the different-ness of something coming from another does not obtain.

BOCKING (Ch):
14v4 Not only in the dharmas of seeing, etc. Can no difference in characteristics be found But all dharmas which exist Are also without different- characteristics.

BATCHelor (Tb):
Not only are the seen and so forth alone not existing as other, it is invalid for anything simultaneous with something to be other [than it].

DOCTOR (Tb):
It is not only the seen and the rest That do not differ from each other; Wherever there is coexistence There cannot reasonably be difference. [XIV.4]

GARFIELD (Tb):
4. Not only in seeing, etc., Is there no such difference: When one thing and another are simultaneous, It is also not tenable that there is difference.

GARFIELD-SAMTEN (Tb):
4. Not only with respect to such things as the seen Is there no such difference: When one thing and another are simultaneous, It is also not tenable that there is difference.

HAGEN (paraphrase):
14.4 (axiomatic) Not only is difference not evident in seeing, etc., it is not possible that there can be difference between objects jointly conceived.
PINGALA COMMENTARY

14/4 Not only can we find no difference in characteristics among the three elements of seeing, what is seen, and the seer, but all dharmas are without such different characteristics.

Question: Why do they not have different characteristics?

Reply:

KALUPAHANA COMMENTARY

This is an interesting analysis of identity and difference. The dilemma of substance is brought out clearly in this analysis. In order to relate things, differences need to be recognized. Once the differences are recognized as being absolute, each thing is assumed to have its own nature. It becomes a substance different from any other substance. If each substance is different, it cannot have a substance that is shared by another. If it does, the difference breaks down. Either there is difference or there is identity.

GARFIELD COMMENTARY

4. This problem emerges not only in the analysis of intuitively unitary phenomena like vision, but is perfectly general. Things that are separate from one another cannot be coherently thought of as inherently different entities either. For without any inherent identity, there is no basis for inherent difference. This recalls the argument of Chapter I.
**Kārikā XIV.5**

anyad anyat praśītyānyan nānyad anyad rte 'nyataḥ |
yat praśītya ca yat tasmāt tad anyan nopapadyate ||5||

yī yīn yī yōu yī yī lí yī wǔ yī 
ruò fā cóng yīn chū shì fā bū yī yīn

| gźan ni gźan la brten te gźan | | gźan med par gźan gźan mi 'gyur |
| gaṅ la brten te gaṅ yin pa | | de ni de las gźan mi 'thad |

**ENGLISH TRANSLATIONS**

INADA (Skt):
Verse 5 - Differentiation comes about by the relational conditions of different (entities) and it does not exist removed from them. And yet by virtue of the relational factor, there cannot be a differentiation between the entities involved.

JONES (Skt):
[5] To be “another thing,” one thing depends upon another thing - an “other” is not other without another thing. But it is not admissible that what is dependent upon something occurs without it.

KALUPAHANA (Skt):
Different things are dependent upon different things. Different things are not without different things. Because something depends upon something, a different thing is not appropriate.

MCCAGNEY (Skt):
Differences of one event from another depend on [the fact that] one event is not different from another without that other. Which which depends on which so that from which it differs does not take place?

NISHIJIMA (Skt?):
5. Different, different, clearly different, What is not different, and what is different, both move as something different. But something very clear is just that, And so the different from it does never appear.

STRENG (Skt):
5. A thing is different insofar as it presupposes a second different thing. One thing is not different from another thing without the other thing.

BOCKING (Ch):
14v5 Difference is difference because of difference Difference without difference is not difference. If a dharma issues from a cause That dharma does not differ from its cause.

BATCHelor (Tb):
The other is other in dependence upon the other. Without the other, the other would not be other. It is invalid for whatever is dependent on something to be other than that.

DOCTOR (Tb):
That which is different differs in dependence on something else. It does not differ without that different thing from which it differs.

Where something depends on something else, The two cannot reasonably be different. [XIV.5]

GARFIELD (Tb):
5. A different thing depends on a different thing for its difference. Without a different thing, a different thing wouldn't be different. It is not tenable for that which depends on something else To be different from it.

GARFIELD-SAMTEN (Tb):
5. One different thing depends on another for its difference. Without a different thing, another would not be different. It is not tenable for that which depends on something else To be different from it.

HAGEN (paraphrase):
14.5 (axiomatic) Things depend on different things for their difference - they cannot appear without this. But a thing dependent on another is not different from it.
PINGALA COMMENTARY

14/5 The difference of which you speak is a difference which is called difference on account of it being a different dharma. Unless there are different dharmas we cannot regard things as different, and why? If a-dharma is produced from conditions, that dharma is not different from its cause. When the cause is destroyed, the effect is also destroyed. For example, a house exists because of its beams and rafters. The house is not different from the beams and rafters, so that for the beams and rafters to decay is for the house, too to decay.

Question. What is wrong in saying that there are fixed, different dharmas?

Reply:

GARFIELD COMMENTARY

5. For there to be substantial difference, it must be possible to independently establish the identity and natures of the relata. But this, Nāgārjuna has argued repeatedly, is impossible.
Kārikā XIV.6

yady anyad anyasyaṁśad anyasyaṁśad āpy rēte bhavet |
| tad anyad anyasyaṁśad rēta nāstī ca nāasty atah ||6||

ruò lī cōng yī yī yīng yú yì yòu yì
li cōng yī wù yī shì gū wū wò yòu yì
| (3)gal te gźan ni gźan las gźan || de tshe gźan med par gźan ’gyur |
| gźan med par ni gźan ’gyur pa || yod min de yi phyir na med |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 6 - If a different (entity) is different because it arises from another different (entity), then it will also exist removed from the latter. But such a situation of a different (entity) cannot possibly exist.

JONES (Skt):
[6] If one thing is other than another thing, it would also exist without that other thing. But without the other thing, a thing is not “an other thing” - thus, it does not exist.

KALUPAHANA (Skt):
If a thing is different from another because it arises from a different thing, then it would exist even without that other thing. However, that other thing does not exist without the other, and therefore, it does not exist.

MCCAGNEY (Skt):
If one event is different than another from which it differs, it would be without that from which it differs.
But that difference does not exist without the one from which it differs and so it does not exist.

NISHIJIMA (Skt?):
6. In that case, difference, difference, and because of the differences, And just because of those differences, motion can exist.
But the Real Facts are difference, difference, and because of the differences, So any motion does not exists really, and since then anything does not exist.

STRENG (Skt):
6. If one different thing is different from a second different thing, it exists without a second different thing; But without a second different thing, one different thing does not exist as a different thing.

BOCKING (Ch):
14v6 If a ‘difference’ means a separate thing arising from something different.
Then it should be different from that other different thing. There are no ‘different’ things which arise separated from different things.
Therefore there is no ‘difference’.

BATCHelor (Tb):
If the other was other than the other, then, without the other, it would be other. Without the other it would not be other. Therefore, it does not exist.

DOCTOR (Tb):
If the different differed from something different, It would be different even without anything different. But nothing differs without something different, And, hence, this is not the case. [XIV.6]

GARFIELD (Tb):
6. If a different thing were different from a different thing, Without a different thing, a different thing could exist. But without that different thing, that different thing does not exist.
It follows that it doesn't exist.

GARFIELD-SAMTEN (Tb):
6. If one different thing were different from another, Without another, a thing could be different. But without that other, that different thing does not exist. Therefore this is not the case.

HAGEN (paraphrase):
14.6 (axiomatic) If a different thing arises from a different thing, it could exist without the different thing. Since it doesn’t, no such things exist.
PINGALA COMMENTARY

14/16 If there were (genuinely) different dharmas, separate and arising from other different (dharmas), then these different dharmas would be separate from those other different (dharmas). But in reality there are no (genuinely) different dharmas, separate and arising from different dharmas, consequently those other different dharmas do not exist. It is as if the fist were different and separate from a different (entity of) five fingers. If the fist were different, it should be (equally) different to different things such as pots, etc. Now, one cannot find a different fist, quite separate from a different (entity of) five fingers. Therefore there is no different dharma of a fist which is different to pots, etc.

(19b22) Question. Our sutras say that different characteristics do not arise from conditions. Different characteristics result from our making distinctions within the universal characteristic, a-ad it is because of these different characteristics that there are different dharmas.

Reply.

GARFIELD COMMENTARY

6. That is, the only way that difference or the identity of a different thing as different could be shown to exist inherently would be for that difference to be present independently of the existence of another different thing. But that is not so. The only alternative would be to argue that difference is present independently in single things. But this ignores the relational character of difference.
**INADA (Skt):**
Verse 7 - It is not possible for a differentiation to exist in a different or a non-different (entity). When a differentiation does not exist, difference and identity also do not exist.

**JONES (Skt):**
[7] Otherness is not found in the other thing, nor in what is not another thing. And when otherness is not found, there is neither an "other thing" nor a "not other thing."

**KALUPAHANA (Skt):**
A difference is not evident in relation to a different thing. Nor is it not evident in a different thing. When difference is not evident, there is neither difference nor identity.

**MCCAGNEY (Skt):**
Where no difference occurs, the difference in the different does not occur.
And where difference is not present, neither identity nor difference exist.

**NISHIJIMA (Skt?):**
7. Because of not relying upon anything, The different situations are not recognized, Never being upon non-consciousness, or another consciousness, Never something, which does not really exist in another world, or in the real world.

**STRENG (Skt):**
7. Difference-ness does not exist in a different thing, nor in what is not different. When different-ness does not exist, then there is neither what is different nor "this" from which something can be different.

**ROBINSON (Skt):**
Otherness does not occur in an other and does not occur in a non-other; and when otherness does not occur, there is neither an other nor an identity.

**ENGLISH TRANSLATIONS**

**BOCKING (Ch):**
14v7 Within difference there are no different characteristics.
Nor are there any within non-difference. Since there are no different characteristics There is no difference between this and that.

**BATCHelor (Tb):**
Otherness does not exist in the other. Nor does it exist in what is not other. If otherness does not exist, neither the other nor that itself exists.

**DOCTOR (Tb):**
Difference does not exist in the different, Nor does it exist in what is not different. As difference as such does not exist, Nothing is different and nothing is the same. [XIV.7]

**GARFIELD (Tb):**
7. Difference is not in a different thing. Nor is it in a nondifferent thing. If difference does not exist, Neither different nor identical things exist.

**GARFIELD-SAMTEN (Tb):**
7. Difference is not in a different thing. Nor is it in a nondifferent thing. If difference does not exist, Neither difference nor identity exists.

**HAGEN (paraphrase):**
14.7 (axiomatic) Difference is not evident in a different thing, nor in a non-different thing. If difference is not evident, there is neither difference nor identity.
PINGALA COMMENTARY

14/7 You say that different characteristics are a result of making distinctions within a universal characteristic, and that because of these different characteristics there are different dharmas. If this were so, these different characteristics would arise from conditions, and this being the case they would be described as (causally) conditioned dharmas. Since these different characteristics cannot be found apart from different dharmas, the different characteristics merely exist because of different dharmas, for they cannot be established in isolation. But, there are no different characteristics within different dharmas, and why? If the different dharmas are already in existence, what use have they for different characteristics? Neither are these different characteristics in dharmas which are non-different, and why? Because if the different characteristics were in dharmas which were not different, they would not be called non-different dharmas. Since they do not exist in either situation, there are no different characteristics, and since there are no different characteristics there is no 'this dharma' and 'that dharma'.

Moreover, since there are no different dharmas, there is also no combination.

KALUPAHANA COMMENTARY

These verses seem to highlight the fact that one cannot speak of dependence so long as one recognizes absolute difference among events. They are a reminder of the detailed treatment of the relation of contingency (apekṣa) undertaken previously in relation to the metaphor of "fire and fuel" (Chapter X).

GARFIELD COMMENTARY

7. So difference cannot be located either as a relation between things or as a unary property of individual things. So there is no inherently existent difference. But it is the existence of inherent difference that grounds the problem of connection. So there is no such relation, and no problem to be solved.

INADA (Skt):
Verse 8 - The combination of identical entities or of different entities is not justifiable. For, there cannot exist a presently combining, an already combined, and the agent which combines.

JONES (Skt):
[8] A connection of one thing with itself or of another thing with itself is not admissible. A current connection, a thing connected, and the thing connecting are not found.

KALUPAHANA (Skt):
The association of identical things or of different things is not proper. Neither the associating nor the associated nor even the agent of association is evident.

MCCAGNEY (Skt):
The combination of identical events [of one to another] or different events [of one differing from another] is not found.
The connecting, the connector, and the connected is not reasonable.

NISHIJIMA (Skt?):
8. Fusion does not belong to Reality, or does not rely upon Reality. Fusion does not belong to another world, or in the real world.
Fusion is just perfectly mixed situations, and perfectly combined situations.
Fusion is never recognized as any kind of mixture at all.

STRENG (Skt):
8. Unification is not possible by uniting one thing with that one thing, nor by uniting one thing with a different thing; Thus, the becoming unified, the state of being united, and the one who unites are not possible.

BOCKING (Ch):
14v8 A dharma does not combine with itself.
Different dharmas do not combine either.
Combiner, moment of combining
And dharma of combining; none of these exists.

BATCHELOR (Tb):
That does not connect with that. The other too does not connect with the other. The connecting, the connection and the connector too do not exist.

DOCTOR (Tb):
Nothing comes into contact with itself,
Nor do different things come into contact.
Contacting, contacted, and contactor
Do not exist either. [XIV.8]

GARFIELD (Tb):
8. That does not connect to itself.
Nor do different things connect to one another.
Neither connection nor Connected nor connector exist.

GARFIELD-SAMTEN (Tb):
8. Nothing contacts itself.
Nor does one different thing contact another.
Neither that which is being contacted, Nor the contact, nor the contactor exists.

HAGEN (paraphrase):
14.8 The unity of identical things or of different things is not proper. Neither connection, the connected, nor a connector are evident.
PINGALA COMMENTARY

14/8 A dharma does not combine with its own substance, because it is one, just as one finger does not combine with itself. Different dharmas also do not combine because they are different, and different things already established do not need to combine. Contemplated thus, a dharma of combination is untenable, and this is why we say that a combiner, a moment of combining and a dharma of combining are all untenable.

KALUPAHANA COMMENTARY

Identity and difference assumed by the Buddhist metaphysicians cannot solve the problem of truth, especially its pragmatic version. The only solution available to them is a recognition of the Buddha's "omniscience" (sarvajnatva), which they unhesitatingly attributed to him, even without attempting to define what "omnis" (sarvam) stood for in the Buddhist context (see commentary on IX.3).

GARFIELD COMMENTARY

8. The conclusion is a powerful one and, especially when conjoined with the conclusion of the previous chapter, goes to the heart of any Buddhist (or non-Buddhist, for that matter) ontology that seeks to reify the entities that appear at any stage of ontological analysis. It is quite tempting when examining dependent, compound phenomena to think that while they themselves might not be inherently existent, and might not be the ultimate entities of the empirical world, it must at least be a fundamental fact that their being constituted of parts, or dependent upon their location in a causal and mereological nexus, exists as a fact. That would seem, in fact, to be the natural way to interpret the doctrine of dependent origination and the emptiness of macroscopic entities. But Nāgārjuna here pulls the rug out from any such analysis, pointing again to the emptiness of emptiness: Not only are compounded phenomena empty of inherent existence, but so is the relation among their constituents and determinants in virtue of which they are compounded.

751
Chapter XV

स्वभावपरीक्षा पञ्चदशमं प्रकरणम्।

観有無品第十五(十一偈)

svabhāvaparīkṣā nāma pañcadaśamaṃ prakaraṇaṃ ॥

Chapter XV: Examination of Essence
We are still in the second part of the section on the two selflessnesses, the demonstration that mere phenomena are essentially empty. We are still in the second of its two sections: the refutation of the argument for the essential existence of things. We have completed the first of the three parts of that section: the refutation of contact. This chapter comprises the second part: the refutation of the
appropriation of causes and conditions as essentially existent.

EXPLANATION:

Here one might say that things exist essentially, because there is appropriation of such things as causes, conditions, seeds, and ignorance, which give rise to such things as sprouts and actions, respectively. This is the motivational introduction to the chapter in Prasannapada, [87b] but Buddhapalita motivates it as follows:

You maintain that all phenomena are dependently arisen and at the same time that they are not inherently existent. But how could things arise and not exist inherently? If the nature of things does not arise from causes and conditions, then what else could arise from them? If the nature of the cloth does not come from the warp and weft, do they simply give rise to warp and weft themselves? If nothing arises from them, why do we say "it arises"?

We respond: Are you not the man riding the horse who does not see that horse? While you say that things are dependently arisen, you do not see that they are not inherently existent? [224a]

Thus, this provides a motivational introduction to this chapter, which explains that it is not contradictory to say that it is inconsistent for things to have even the slightest nature of inherent existence and to be arisen from causes and conditions. The most important point of this argument is to distinguish rather than to confuse these two.

The refutation of essence has two parts: the refutation of the essential existence of things and the demonstration that maintaining that things exist essentially cannot avoid the extremes.

SUMMARY:

One should ascertain the explicit meaning of this presentation—that nature and naturelessness in general, one's own nature and the nature of being other in particular—and the essence of phenomena as they really exist cannot be posited in the framework of inherent existence. One should thereby ascertain the implicit meaning—dependent origination—with the understanding that they are all only tenable when they are merely posited conventionally.

INADA (Chapter Introductions)

Chapter XV - Examination of Self-nature

Nagarjuna here discusses the idea of self-nature or self-existence (svabhava) and the possible ways of conceiving it. He introduces the interesting concept of extended or other nature (parabhava) to show that it too cannot help in the understanding of the character of self-nature. It is interesting to note that Stcherbatsky translates parabhava as relational existence with an eye, it seems, to capture the sense of relativity of objects.

KALUPAHANA (CHAPTER OVERVIEWS)

15. Self-nature (svabhava). The problem of association (samsarga), discussed above in the specific context of seer, object of seeing, and seeing, arose as a result of admitting a self-nature (svabhava) in each one of these phenomena. This provided Nagarjuna with an opportunity to come into grips with the most difficult issue he had to deal with, self-nature or substance. In our earlier discussions we have shown how the Sarvastivadin utilized this conception to explain the relationship between a cause and an effect, Nagarjuna's basic argument against this notion of self-nature is that it contradicts the conception of the occurrence (sambhava) of an event depending upon causes and conditions (hetu, pratyaya). Nagarjuna's understanding of self-nature is that it is not made (akrtaka) by anything else. It is not dependent upon causes and conditions for its existence; hence independent. A "caused substance," according to him, is a contradiction in terms. This analysis should, therefore, be supplemented by his analysis in Chapter I. As we have pointed out there, Nagarjuna was not denying either dependently arisen phenomena or dependent arising. He was merely showing the inconsistency in explaining causally conditioned phenomena in terms of self-nature. It is in the present chapter that he is giving a definition of self-nature that contradicts the notion of dependent arising or causation. He says: "Indeed, an unmade self-nature is also non-contingent upon another," (aktrtimeh svabhavo hi nirapeekah paratra ca) (XV.2). The argument in Chapter I is then repeated to show that in the absence of self-nature, there cannot be other-nature (parabhava). Buddha's famous discourse to Katyayana, discussed at length at the beginning of this Introduction, is then quoted in order to reject the "existent" (bhava) or "self-nature" (svabhava) and the "non-existent" (abhava) or "other-nature" (parabhava). These then are aligned with views regarding existence (astitva) and non-existence (nastitva).
Existence (aṣṭītvā) is further defined as the original or primordial existence (prakṛti), a conception developed in the Sankhya school of Indian philosophy which had close affinity, if not identity, with the Sarvastivāda conception of existence. The empirical and logical difficulties involved in this conception are then laid bare. Reiteration of the fact that the beliefs in self-nature and other-nature, in the existent and the non-existent, in existence and non-existence, lead to beliefs in permanence and annihilation respectively provides a conclusion to this rather significant chapter.

The topics taken up for discussion in this section (Chapters III-XV), as pointed out above, deal with elements of experience (dharma) which were originally explained in terms of dependence, but which were complicated by the introduction of the notions of self-nature (svabhava) and other-nature (parabhava), of metaphysical identity and absolute difference, by some of the later Buddhists. Nagarjuna’s attempt in this section was mainly directed at getting rid of the conception of self-nature or identity (the notions of other-nature or difference falling apart as a result). This is the way in which he attempted to establish the non-substantiality of elements (dharma-nairatmya). The non-substantiality of the human personality (pudgala-nairatmya) turns out to be his next concern.

**BATCHelor (Poetic “TRANSLATION”)**

**Essence**

If my essence came
From causes and conditions,
It would have been constructed-
Essences are neither contingent nor contrived.

If I have no essence, how can you?
What is other for me is for you your own –
How can you not be
Yourself or someone else?

Without something,
There could be no nothing –
Do not people say:
A thing becomes nothing
When it changes into something else?

You who behold
Somethings and nothings,

Yourselves and others,
Are blind to what the Buddha taught.

Through understanding
Somethings and nothings,
Gautama told Katyayana
To relinquish being and nothingness.

If I had an essence,
I would never cease to be me –
My nature could never be anything else.
If I had no essence,
Whose nature would it be to be anything else?

"I am me, I will never not be" –
The longing for eternity.
"I used to be, I am not any more" –
The cut of annihilation.

The sage avoids being and nothingness.

**JONES (COMMENTARY)**

15. **Self-Existence**

This chapter presents the independence and permanence of anything self-existent. This is applied to entities (bhavas) that exist through self-existence and the absence of such entities (abhavas). A non-entity is a change in a self-existent entity, and so if no self-existent entity can be established (since all entities are dependently arisen), the absence of an entity cannot be established either (v. 5). That is, if there are no truly real entities, then their absence or destruction is not possible either. But this does not deny that there are entities in the conventional sense - they are simply not self-existent. If is-ness existed by self-existence, then there can be no is-not-ness since the latter would be a change in the former and the nature of what exists by self-existence cannot change (v. 8).

Emptiness becomes the position between the views of “It is” (i.e., permanent, eternal, and changeless) and “It is not” (i.e., the destruction of what “was”) (vv. 10-11).

“Other-existence (para-bhava)” is the self-existence (svabhava) of something else. Thus, in the absence of self-existence, other-existence is not possible (v. 3).

Verse 7 has the only reference to a specific Buddhist text in the Karikas or any of the other texts in this book - the Discourse to Katyayana (Samyutta Nikaya 11.17). In this discourse, the Buddha rejects the views of “All exists (sarvam asti)” and “All does not exist (sarvam na-asti)” and charts a middle way between them through dependent-arising (and
refers to “right views”). This is interpreted in verses 10-11 to mean the rejection of the views that everything is eternal (eternalism, svabhava-vada) and that everything is annihilated (annihilationism, uchcheda-vada). The Discourse with Katyayana is not a Mahayana text, but part of the earlier Pali canon. The lack of any citations to Mahayana texts may be become they were too contentious at the time. (See Walser 2005.) Or it may be that the author of the Karikas did not think of himself as a Mahayanist at all. (See Warder 1973.) But other texts attributed to Nagarjuna do quote Mahayana texts.

GYAMTSO (COMMENTARY)

In reality, however, “something” and “nothing” must depend upon each other for their existence. You can only have a thought of something being there if you have a notion of what it means for nothing to be there, and vice versa. You can only have a thought of space, the absence of things, if you have some idea of what is missing, the thing that is absent. Therefore, whatever it maybe, it cannot be said to be inherently existent or nonexistent existence and nonexistence are just dependently existent concepts that our thoughts superimpose onto genuine reality, whose nature transcends all such fabrications.

In the seventh verse of this chapter, Nagarjuna states:

In his Pith Instructions to Katyayana,
The one who knows all things and all absences of things,
The Transcendent Conqueror,
Refuted both existence and nonexistence.

The commentary quotes from this sutra called The Pith Instructions to Katyayana as follows:

Katyayana, most people in the world fixate intensely on things as being existent, and others on the thought that things are nonexistent. As a result of their clinging, they are not free from birth, aging, sickness, or death; from agony, crying, suffering, mental anguish, or agitation. Especially, they are not free in any way from the torments of death.

Teaching in this way, the Buddha refuted both extremes of existence and nonexistence.

The reason it is important for us to understand that the true nature of reality transcends both existence and nonexistence is that all of the suffering in the world comes from either the thought that there is something or the thought that there is nothing. For example, people who are wealthy have the suffering that goes along with having a lot of things, the suffering related to existence, while people who are poor have the suffering that comes from not having enough, the suffering related to nonexistence. That rich and poor both suffer, however, shows that neither type of suffering truly exists. If suffering truly came from having material things, then the rich would suffer but the poor would not; and if suffering truly came from not having material things, then the poor would suffer but the rich would not. Since both rich and poor suffer, however, this shows that their suffering has no real cause or inherent existence, that it is just the confused projection of conceptual mind.
In this way, we have to examine with our intelligence all the limitless kinds of suffering that can come from existence and nonexistence. We have to examine the actual reasons they occur and what their true nature really is.

This particular quote from The Pith Instructions to Katyayana is also important because it comes from the Vinaya teachings of the Shravakayana, and therefore all Buddhist schools must accept its validity (The Vinaya is the set of teachings the Buddha gave on the subject of prescribed and proscribed conduct for those who hold vows of the various yanās (vehicles) of Buddhism.). No one can claim that it is not the authentic words of the Buddha. These days, the followers of the Shravakayana assert that the Mahayana sutras are not really the words of the Buddha, but rather that they are Nagarjuna’s extensive commentaries on this passage that the Buddha spoke to Katyayana. They do not believe that the Prajñāpāramitā Sutras are the teachings of the Buddha himself. They say that those teachings are in fact Nagarjuna’s extensive explanations of what the Buddha actually said in this teaching to Katyayana.

In verse ten, Nagarjuna instructs us how to train our minds in the Middle Way that is free from all extremes. This means that we have to realize with precise knowledge what Middle Way actually means. One can follow the Middle Way path by refuting all extremes, but one needs to be free from the concept of abiding in the middle in between the extremes as well. The verse reads:

"Existence" is the view of permanence,
"Nonexistence" is the view of extinction,
Therefore, the wise do not abide
Either in existence or in nonexistence.

The views of permanence and extinction have both coarse and subtle levels. The coarse view of extinction is to deny the existence of past and future lives and of karmic cause and result. The coarse view of permanence is to believe that this life is truly existent. The subtle view of extinction is to have any concept at all of nonexistence, while the subtle view of permanence is to have any notion at all of existence.

There are those who, when they think that things exist, do not know how to understand existence in terms of dependently arisen mere appearances. They think that existence means that there is something truly there. That is the extreme of permanence. Then there are others who believe that emptiness means total nonexistence, complete nothingness. That is the view of extinction, the other extreme. Understanding, however, that appearances are appearance-emptiness eliminates the extremes of both existence and nonexistence, in the following way: That appearances lack inherent nature eliminates the extreme of existence. With a water-moon, for example, not a single particle of the moon exists there in the water, so it cannot be called existent. At the same time, that appearances do appear due to the coming together of causes and conditions is undeniable, and this eliminates the extreme of nonexistence. For example, no one could deny the vivid appearance of the moon there in the water. Therefore, in order to follow the Middle Way that falls into neither the extreme of existence nor that of nonexistence, we must understand that all phenomena are the union of appearance and emptiness, like dreams, illusions, and water-moons. Along these lines, Karmapa Rangjung Dorje taught:

The way that the wise ones assert things to be
Is that all phenomena are neither true nor false,
They are like water-moons.

PINGALA COMMENTARY

15/0 Question: Every dharma has a nature, because it has a function. For example, a pot has the nature of a pot, and cloth has the nature of cloth. This nature emerges when there is a combination of conditions.

CANDRAKīRTI COMMENTARY

[Chapter XIII]
Refutation of the realist thesis

Some argue that things in fact have essential natures which exist as such (bhavanam svabhava) and take such essential natures to be produced, as effects, from certain causes and conditions (hetupratyaya) (fn 1 Or ‘causal conditions’, i.e. conditions of the nature of material cause.). They do not take things which have no ontic existence (nasti), like the sky-flower, to be the effects of causes and conditions. But they take a seed, for example, to be the cause which has the sprout as effect, or primal ignorance (avidya) to be the cause which has personal dispositions (samskara) as its effect. Thus, things do have essential, self-existent natures, they say.

In reply we say that if things like personal dispositions and sprouts have self-existent natures what would be the purpose of their being caused, as they exist already? As personal dispositions truly exist one does not have to posit primal ignorance as their cause for the sake of producing them a second time, nor for sprouts must one posit seeds. Thus nothing other than itself is required for the genesis of anything, because its essential nature is in existence. Nagarjuna puts it this way:

KALUPAHANA COMMENTARY

Chapter Fifteen Examination of Self-nature (Svabhava-parikṣa)

GARFIELD COMMENTARY

Chapter XV Examination of Essence

This chapter continues the discussion begun in Chapter XIII and carried on in Chapter XIV of the fundamental nature of things and the relation between emptiness and existence. Here Nāgārjuna rejects the coherence of the concept of essence and explores its ramifications for the concept of inherent existence, the concept of an entity, and the concept of a nonentity. This chapter is also aimed at dispelling any nihilistic interpretation of the Madhyamika philosophical orientation and in explaining the deep connection between the analysis of phenomena as empty of essence and the demonstration of the possibility of empirical reality.
Kārikā XV.1

na saṁbhavaḥ svabhāvasya yuktaḥ pratyayahetubhiḥ |
hetupratyayasaṁbhūtaḥ svabhāvaḥ kṛtako bhavet ||1||

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 1 - The rise of self-nature by relational and causal conditions is not justifiable. For, such a self-nature will have a character of being made or manipulated.

JONES (Skt):
[1] That self-existence arises from causes and conditions is not admissible - if self-existence arose from causes and conditions, it would be something produced.

KALUPAHANA (Skt):
The occurrence of self-nature through causes and conditions is not proper. Self-nature that has occurred as a result of causes and conditions would be something that is made.

MCCAGNEY (Skt):
There is no arising of self-nature connected with causes and conditions. Self-nature from causes and conditions would be artificial.

NISHIJIMA (Skt?):
1. Total existence does not belong to the subjective existence, And what is spoken is the Truth, which is supported by Reason. The Reason and the Truth exists being compound, And the subjective existence exists what has been produced artificially.

SPRUNG (Skt):
1 The genesis of a self-existent nature from causes and conditions is not intelligible. A self-existent nature which arises from causes and conditions would be something created.

STRENG (Skt):
1. The production of a self-existent thing by a conditioning cause is not possible. For, being produced through dependence on a cause, a self-existent thing would be "something which is produced" (kṛtaka).

WESTERHOFF (Skt):
XV.1 Svabhāva cannot result from causes and conditions, because if it was produced from conditions and causes it would be something artificially created.

ROBINSON (Skt):
Emergence of own-being through cause-and-conditions is not valid; an own-being that had emerged through cause-and-conditions would be a made thing.

BOCKING (Ch):
15v1 That a nature exists within conditions Is not correct. And a nature issuing from conditions Would be termed a 'created dharma'.

BATCHelor (Tb):
It is unreasonable for an essence to arise from causes and conditions. Whatever essence arose from causes and conditions would be something that has been made.

DOCTOR (Tb):
Nature cannot reasonably occur Due to causes and conditions. A nature that arises due to causes and conditions Would be a nature that is produced. [XV.1]

GARFIELD (Tb):
1. Essence arising from Causes and conditions makes no sense. If essence came from causes and conditions, Then it would be fabricated.

GARFIELD-SAMTEN (Tb):
1. Essence arising from Causes and conditions makes no sense. Essence arisen from causes and conditions Would be created.

HAGEN (paraphrase):
[axiomatic] Self-nature arising from causes and conditions makes no sense, for such a self-nature would be something that has been made.
PINGALA COMMENTARY

15/1 If dharmas have natures, they should not issue from conditions, and why? Because if they issue from conditions they are 'created' dharmas and have no fixed nature.

Question: What is wrong in saying that a dharma's nature is created from conditions?

Reply:

CANDRAKÎRTI COMMENTARY

1ab The genesis of a self-existent nature from causes and conditions is not intelligible.

You may agree that before its genesis there can be no self-existent nature (svabhava) of anything, as, being in existence, its genesis would be pointless. But, you may say, what if a self-existent nature which does not exist before its genesis arises subsequently from causes and conditions? If one so thinks, Nagarjuna continues:

1cd A self-existent nature which arises from causes and conditions would be something created.

You may say: But that self-existent natures are created (krtaka) because they issue from causes and conditions, is just what we mean, and, as we presuppose that self-existent natures are created, the logical objection of their being created does us no harm. Nagarjuna says that this too is not intelligible:

KALUPAHANA COMMENTARY

Chapter XV is the conclusion to Part II of Nagarjuna's text. The main thrust of Part II, as explained in the Introduction, is in the direction of clarifying the conception of dharmas (in the plural), whether they represented ideas, things, events, or phenomena. As was evident from an examination of the preceding twelve chapters, Nagarjuna's analysis of dharmas was intended to eliminate the metaphysical ideas relating to identity and difference (ekartha-nantartha). In that process, he refuted the metaphysical notions of arising and ceasing (utpada-nirodha), of eternalism and annihilationism (sasvata-uccheda) and of appearance and disappearance (agama-nirgama). These metaphysical notions were the result of assuming a substance or self-nature (svabhava) in phenomena, an assumption that is mutually related by a conception of absolute "otherness" (parabhava).

Self-nature or substance (svabhava) thus being the major issue, it is natural for Nagarjuna to conclude this section with an examination of this particular conception. In refuting the conception of substance, Nagarjuna relies heavily upon the Buddha's own conception of a "middle position," namely, "dependent arising." Because he was here concerned mainly with refuting the metaphysical extremes, Nagarjuna refers only to that section of his locus classicus (i.e., the discourse to Katyayana) that deals with the two extremes of existence (astitva) and non-existence (nastitva). In the very fast verse, Nagarjuna states his own pragmatic view of truth as something made (krtaka) depending upon causes and conditions (hetu-pratyayasambhutah). Substance or self-nature, if it were to exist, could not escape the principle of dependent arising (pratityasamutpada).

GARFIELD COMMENTARY

1. Essence by definition is eternal and independent. So it can’t arise dependently. Chapter XV: 1, 2 develop this point directly. But since all entities arise dependently, it follows that none of them have essence. (fn 78. But see Bhattacharya (1979), pp. 341-42, for a contrary view. Bhattacharya argues that we can make sense of dependent, changeable essences. Perhaps. But these are not the essences Nâgârjuna has in mind and are not those that lie behind the kind of pernicious reification or its counterpart, nihilism. that he is out to extirpate.)
Kārikā XV.2

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 2 - How is it possible for the self-nature to take on the character of being made? For, indeed, the self-nature refers to something which cannot be made and has no mutual correspondence with something else.

JONES (Skt):
[2] But how could there be “produced self-existence”? Self-existence is non-produced and not dependent upon anything else.

KALUPAHANA (Skt):
Again, how could there be a self-nature that is made? Indeed, an unmade self-nature is also non-contingent upon another.

MCCAGNEY (Skt):
Again, how will what is called self-nature be artificial? Self-nature is not made artificially and, indeed, it is independent of others.

NISHIJIMA (Skt?):
2. The subjective existence is what has been produced artificially as only a common name, And how is it possible for it to continue existence longer? Because what are not artificial products are the subjective existence, And so it might be not so interesting, and it might belong to future.

SPRUNG (Skt):
2 How can a self-existent nature be something created. Self-existent nature is not created nor is it dependent on anything other than itself.

STRENG (Skt):
2. How, indeed, will a self-existent thing become "something which is produced"? Certainly, a self-existent thing by definition is "not-produced" and is independent of anything else.

WESTERHOFF (Skt):
XV.2 But how could svabhāva be artificially created, as it is not artificially created and not dependent on anything else?

ROBINSON (Skt):
How can own-being be a made thing, since own-being is unmade and not dependent on anything else?

BOCKING (Ch):
15v2 Suppose its nature were created; But what would be the meaning of this? 'Nature' means something uncreated Established without reliance on other dharmas,

BATCHelor (Tb):
How is it possible for there to be “an essence which has been made?” Essences are not contrived and not dependent on anything else. [XV.2]

DOCTOR (Tb):
“A nature that is produced,” How could that be right? The natural is not fabricated, And does not depend on anything else. [XV.2]

GARFIELD (Tb):
2. How could it be appropriate For fabricated essence to come to be? Essence itself is not artificial And does not depend on another.

GARFIELD-SAMTEN (Tb):
2. How could it be appropriate To call that which is created “essence”? Essence itself is not constructed And does not depend on another.

HAGEN (paraphrase):
[axiomatic] How could there be a self-nature that is made? Unmade self-nature is not dependent upon another.
PINGALA COMMENTARY

15/2 Just as gold mixed with copper is not true gold, so if a nature exists then it has no need of conditions. If it issues from conditions we will know that it is not a true nature. Also, if a nature is fixed, then it should not emerge in reliance upon anything else. It is not like length and shortness, or this and that, which, having no fixed natures, rely upon other things for their existence.

Question: If dharmas have no self-nature, they must have other-nature.

Reply:

CANDRAKĪRTI COMMENTARY

2ab How can a self-existent nature be something created.

As the terms ‘created’ and ‘self-existent nature’ are contradictory (parasparawiruddhatva) there is no intelligible meaning in such a statement. Self-existent nature means, etymologically, what is itself through itself. A created thing, for example, the heat of water, which is produced by fuel or the activity of spirits, or such things as quartz appearing to be a ruby is not commonly spoken of by anyone as self-existent. On the other hand, what is not created, for example, the heat of fire or the genuine rubineness of rubies, is a self-existent nature, it is commonly said. Whatever it is in such things that is not born from conjunction with something else, is said to be a self-existent nature.

Although it is the convention in everyday transactions (lokavyavahara) to say that the self-existent is uncreated, we claim further that even the very heat of fire must be understood as not being self-existent because it is created. In this case the dependence of fire on causes and conditions is directly perceived when lens, kindling and sun conjoin or when sticks are rubbed together. But heat does not occur in the absence of fire; and so heat itself is born of causes and is therefore created. It is clear and certain that, being created, it, like the heat of water, is not self-existent.

You may say: It is evident even to the womenfolk of the cowherds that heat is the self-existent nature of fire. But did we say that it was not evident? What we claim is that it is not capable of being a self-existent nature because it lacks the characteristics of a self-existent nature. The unenlightened person, however, victim of misbelief due to primal ignorance, treats all things as if they had self-existent natures, though they have not.

As those of defective eyesight, because of their defect, persist in treating non-existing hairs and such things as if they were self-existent, so unenlightened people, their spiritual vision being afflicted with the defect of primal ignorance, persist in treating things which have no essential, self-existing nature as if they did. They frame their definition according to this fixed prejudice. Heat is the unique, inherent characteristic (svalaksana) of fire; because it is not perceived anywhere else, because of its uniqueness, it is the characteristic of itself only, they explain. The illustrious one, having regard for the unenlightened, in the Abhidharma pronounced upon the essential nature (svanipa) of such things only in the everyday, veiled sense (samskṛta). And such general characteristics as impermanence (fn 2 There are three universal characteristics of things: impermanence (anitya), imperfection (dukkha) and insubstantiality (anatman).) were defined as universal.

When, however, the teaching was for the understanding of those with the clear eye of wisdom who are rid of the defect of primal ignorance, then, as explained long ago by the great ones, benevolent to others, there is no self-existent nature as imagined by the unenlightened, even as one cured of defective vision no longer sees hairs and such things which he perceived when diseased. For such there is no self-existent nature of things in this sense (fn 3 I.e., the particularity of identical things is not self-existent.).

As is said in the Lankavatara Sutra, ‘As those of diseased vision deludedly grasp after false hairs, so the unenlightened deludedly imagine the notion of reality in things. There is no self-existence, no knowledge, no reality and no ground of consciousness: these are the imaginings of unenlightened, effete sophists.’ And again, ‘Knowing that self-existence does not arise in time, I have declared, o Mahamati, that all the elements of existence do not arise in time.’

The Madhyamika position

You may ask: If you say that the heat of fire and such things are without a self-existent nature because they issue from causes and are created, what then is the definition of a self-existent nature and what is such a nature? You should make this clear.

The reply is,
Self-existent nature is not created nor is it dependent on anything other than itself.

Here the intended meaning is that a self-existent nature is one which exists of and for itself (svabhava); it is the unique, ownmost nature (atmiya rupa) of anything. What is unique and ownmost in anything? Whatever is not created in that thing; whereas what is created in something, like heat in water, is not unique and ownmost in that thing. Again, what is completely at the disposal of one, that too is ownmost, as one’s servants or one’s wealth. But what is available through someone else is not ownmost; something borrowed for limited time is not unconditionally one’s own. Thus self-existence is not considered to be in what is created nor in what depends on something else. For this reason it makes sense to say that the heat of fire is not self-existent because it is dependent on causes and because it is created, being non-existent at one time and subsequently coming into existence. And this being the case it follows that the innate nature (nija rupa) of fire, which is unvarying throughout all time, must be uncreated, i.e. it cannot come into existence if at one time it did not exist (fn 4 A Parmenidian formulation). What is relative to certain conditions does not truly exist, like the heat of water, like ‘this side’ and ‘other side’ or like the long and the short. That is what is meant by self-existence. Is there, in this sense, an inherent nature in things like fire? The heat of fire neither exists nor does not exist as an inherent nature (fn 5 The initial Madhyamika formulation; the remainder of the chapter is a development of this puzzling statement.). Although this is so, nevertheless, in order to dispel the fears of people, we say ‘Things do truly exist’ by employing ordinary language and so constituting the everyday world (samvrtiya samaropya) (fn 6 A view familiar to Westerners in the twentieth century!).

As the illustrious one said, ‘How can the unutterable truth be taught or learned? The unutterable is taught and learned only by a special use of ordinary language (samaropa).’

Nagarjuna says elsewhere in this treatise (MMK XXII) ‘The terms “devoid of being”, “not-devoid of being”, “both-devoid-and- not-devoid of being”, “neither-devoid-nor-not-devoid of being” should not be asserted as predicates (na vaktavya); they are however employed for the purposes of practical teaching (prajnaptyarthartha).’

You may ask: Well, if one afraid says, ‘Things do truly exist’ only after projecting (adhyaropa) the notion of self-existence, what does self-existence itself mean? (fn 7 The following three paragraphs constitute the strongest statement of Madhyamika up to this point.)

Whatever is the quintessential nature (dharmata) of the elements of existence, that and only that has a self nature (svarupa). And what is quintessential nature of the elements? Their self-existent nature (svabhava). And what is self-existent nature? Original, invariable nature (prakrti). What is original, invariable nature? Devoidness of being (sumyata). And what is devoidness of being? Not being of the nature of substantial thing (na svabhava). What is not being of the nature of substantial thing? The way things really are (tathata). What is the way things really are? Being as they are (tathabhava): invariableness, steadfastness throughout all time.

Whatever it is in fire and other things that does not come into existence at any point in time because it is not dependent on anything other than itself and because it is not created, that is said to be its self-existent nature.

In short: what, arising from the optical defect of primal ignorance is, in whatever way, taken to be the everyday world of things (bhavajata), becomes, in virtue of going beyond ways of taking things, the world of the wise (aryanam visayatvam) who are free of the optical defect of primal ignorance; that and nothing else has a nature of its own; the wise name it ‘self-existence’. Remember that Nagarjuna defined it: ‘What is self-existent is uncreated and is not dependent on anything other than itself.’ Self-existence in this sense - by nature not arising in time - is non-self-existence in the ordinary sense because it is simply non-existent ontically through not having a specific nature. This being so, it should be clear that there is no self-existence of particular things (fn 8 I.e. only enlightenment (nirvāṇa) is self-existent.).

As the illustrious one said, ‘The one who wisely understands that things are non-things is never obsessed with things. The one who is never obsessed with things attains peace of mind beyond all definition.’

Existence of otherness

You may interject that, although there is no self-existence in things, still there is at least the relative existence of otherness (parabhava) as this has not been refuted. And if there is existence of otherness there will be self-existence also, because existence of otherness cannot be established apart from self-existence.

Nagarjuna replies:
An artificial substance (krtakah svabhavah) is not possible, for by definition a substance is eternal and therefore not subject to arising and ceasing. Anything that is subject to arising and ceasing cannot be a substance and, hence, contrary to dependent arising. It is simply non-contingent (nirapeksah).

2. In these first two verses, Nāgārjuna indicates the three cardinal characteristics of an essence: An essence (or an entity that exists in virtue of possessing an essence) is uncaused, independent of other phenomena, and not fabricated from other things. It is important to bear this in mind in any Madhyamika analysis of emptiness. For when Nāgārjuna argues that phenomena are all empty, it is of essence in this sense that they are empty. Hence, when Nāgārjuna argues that all phenomena originate in dependence upon conditions, that all phenomena are interdependent, and that all phenomena are, fabricated (both in virtue of being compounded from parts and in virtue of acquiring their identity as particulars through conceptual imputation), he is thereby arguing quite directly for their emptiness.
Kārikā XV.3

Verse 3 - Where self-nature is non-existent, how could there be an extended nature? For, indeed, a self-nature which has the nature of being extended will be called an extended nature.

- Note: Parabhava, in the sense of extended nature, means that an entity has the existential character of extending or reaching over into the nature of other entities. It also means other-nature in contrast to self-nature. However, the argument obtains regardless of the translation.

BOCKING (Ch):
15v3 If a dharma has no self-nature How can it have other-nature? Self-nature, in relation to other-nature Is also called other-nature.

DOCTOR (Tb):
If nature does not exist, How could there be other-nature? It is the nature of other-nature That is identified as “other-nature.” [XV.3]

GARFIELD (Tb):
3. If there is no essence, How can there be difference in entities? The essence of difference in entities Is what is called the entity of difference.

GARFIELD-SAMTEN (Tb):
3. Since there is no essence9 How can there be the nature of being other? The essence of the nature of being other Is what is called the nature of being other.

HAGEN (paraphrase):
Without self-nature [identity], how can there be other-nature [difference]? The self-nature of other-nature is called other-nature.

INADA (Skt):
Verse 3 - Where self-nature is non-existent, how could there be an extended nature? For, indeed, a self-nature which has the nature of being extended will be called an extended nature.

- Note: Parabhava, in the sense of extended nature, means that an entity has the existential character of extending or reaching over into the nature of other entities. It also means other-nature in contrast to self-nature. However, the argument obtains regardless of the translation.

JONES (Skt):
[3] In the absence of self-existence, how can there be "other-existence"? For the self-existence of another entity is called "other-existence."

KALUPAHANA (Skt):
In the absence of self-nature, whence can there be other-nature? For, self-nature of other-nature is called other-nature.

MCCAGNEY (Skt):
In a being having self-nature, where will other-nature be? The self-nature of other-nature is called other-nature.

NISHIJIMA (Skt?):
3. Why in the subjective existence anything does not exist? And the objective existence will exist in future. The subjective idea is included in the objective existence. Because the objective existence transmits the informations.

SPRUNG (Skt):
3 If there is no self-existence, how can there be existence of otherness? For it is the self-existence of the existence of otherness which is called ‘existence of otherness’.

STRENG (Skt):
3. If there is an absence of a self-existent thing, how will an other-existent thing (parabhava) come into being? Certainly the self-existence of an other-existent thing is called "other-existence."

ROBINSON (Skt):
When there is no own-being, whence might other-being be? For the own-being of other-being is called other-being.
Since a dharma’s nature is created by conditions and established by causal dependence, it is not self-nature. This being the case, other-nature, since it is self-nature in relation to an other-nature and is also produced interdependently from conditions, does not exist either. Since it does not exist, how can you say that dharmas are produced from an other-nature, since that other-nature is also a self-nature?

Question: What is wrong in saying that dharmas exist without either a self-nature or an other-nature?

Reply:

In this way of thinking any self-existent whatsoever, in so far as it is related to another self-existent, is designated ‘other’ (para). If heat is the self-existent nature of fire, it is designated, with reference to fluidity, the self-existent nature of water, as ‘other’. As nothing whatsoever is self-existent when examined by those on the way to liberation, how can there be otherness? As there is no existence of otherness, it is evident that there is no self-existence either.

You may argue that, even though there is neither self-existence nor other-existence, none the less there are existing things because this has not been ruled out. And such things will be either self-existent or will exist in otherness. It follows that there is both self-existence and existence in otherness.

Nagarjuna replies:

This represents a repetition of the argument used by Nagarjuna at I. 3 and XIV.4 to indicate the relativity of self-nature and other-nature. If one is not acceptable, the other too is not admissible.

3. This is an echo of the argument about difference presented in Chapter I. Essential difference presupposes essences of individuals. So any argument against individual essence will count as an argument against essential difference.
Kārikā XV.4

svabhāvaparabhāvābhīyāṁ ṛte bhāvaḥ kutaḥ punaḥ |
svabhāve parabhāve ca sati bhāvo hi sidhyati ||4||

li zì xìng tā xìng hé dé; déi; de gēng; gēng yǒu fà |
ruò yǒu zì tā xìng zhú fà zé dé; déi; de chéng |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 4 - Again, separated from self-nature and extended nature, how could existence be? For, indeed, existence establishes itself in virtue of either self-nature or extended nature.

JONES (Skt):
[4] Without self-existence and other-existence, how can there be an entity? When there is self-existence or other-existence, then an entity is established.

KALUPAHANA (Skt):
Without self-nature and other-nature, whence can there be an existent? For, the existent is established only when there is self-nature or other-nature.

MCCAGNEY (Skt):
Again, where is the being without self-nature or other-natures?
Indeed, it demonstrates that a being exists in self-nature or’ in othernature.

NISHIJIMA (Skt?):
4. Relying upon both the subjective existence and the objective existence,
To what direction the existence moves again?
Both in the subjective existence and in the objective existence,
Because both the subjective existence and the objective existence are really accomplished ‘auspicious’ facts.

SPRUNG (Skt):
4 How can there be an entity apart from self-existence and other-existence? If there is either self-existence or other-existence entities are already established.

STRENG (Skt):
4. Further, how can a thing exist without either self-existence or other-existence? If either self-existence or other existence exist, then an existing thing, indeed, would be proved.
PINGALA COMMENTARY

15/4 'Lou speak of dharmas existing without either self-nature or other-nature, but this is not correct. Without self-nature and other-nature there will be no dharmas, and why? It is through the existence of self-nature and other-nature that dharmas are established. For instance, where the substance of a pot is a self-nature, cloth is an other-nature.

Question: If you refute existence in terms of self-nature and other-nature, then there must be nonexistence.

Reply:

CANDRAKĪRTI COMMENTARY

If one thinks of an existent thing it must be either self-existent or existent-as-other. But, as explained previously, there is neither and because there is neither of these two it must be accepted that there can be no existent thing either.

Non-existence

KALUPAHANA COMMENTARY

This probably could serve as evidence against the belief that Nagarjuna recognized an ultimate reality beyond both self-nature and other-nature. In the case of the Vatsiputriyas, the "ultimately real" emerges on the basis of an assertion of both identity and difference, (see commentary on X. 1, "Fire cannot be designated as something different from the fuel, nor as something identical." ) The Japanese Buddhist scholar Y. Ueda perceives a unique logical principle adopted in Madhyamika logic derived from the metaphor of "fire and fuel." According to him, "There are inherent conditions in each such that their ultimate relationship into a whole or unity entails a mutual denial of each other," (see Inada, , emphasis added). However, Nagarjuna is here raising the question: "Distinct from self-nature and other-nature, whence can there be an existent?" Thus, the eight negations are not intended to prove or establish the nature of reality, as it is often and loudly asserted. They are primarily and solely intended to eliminate metaphysical notions, not to characterize either an ultimate reality or dependent arising. Dependent arising is a totally different way of expressing the truth or reality.

In the second statement above, Nagarjuna maintains that svabhava and parabhava are both dependent upon bhava. They represent a further bifurcation of bhava.

GARFIELD COMMENTARY

4. The concept of an inherently existent entity is the concept of an entity with an essence. So without essence, there are no inherently existing entities.
Kārikā XV.5

bhāvasya ced aprasiddhir abhāvo naiva sidhyati |

| dṅos po gźan du gyur pa ni | | dṅos med yin par skye bo smra |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 5 - If existence does not come to be (i.e., does not establish itself), then certainly non-existence does not also. For, indeed, people speak of existence in its varying nature as non-existence.

JONES (Skt):
[5] If an entity is not established, the absence of an entity (i.e., a “non-entity”) is certainly not established, since it is an entity that has changed (i.e., “becoming otherwise”) that people call a “non-entity.”

KALUPAHANA (Skt):
When the existent is not established, the non-existent is also not established. It is, indeed, the change of the existent that people generally call the non-existent.

MCCAGNEY (Skt):
The lack of explanation of being does not establish nonbeing. The changing nature of being is indeed called nonbeing by people.

NISHIJIMA (Skt?):
5. Being included in existence suggests that it hasn’t been accomplished. Being out of existence does never suggest accomplishment. Because belonging to existence produces living in another world, and so the many numbers of births suggest many numbers of strange contrivances.

SPRUNG (Skt):
5 If existence is not accepted, non-existence cannot be established. Because people say that non-existence is being other than existence.

STRENG (Skt):
5. If there is no proof of an existent thing, then a non-existent thing cannot be proved. Since people call the other-existence of an existent thing a “non-existent thing.”

ROBINSON (Skt):
If the existent is not established, then the inexistent is not established, either, since by the inexistent people mean the alter-existent of an existent.

BOCKING (Ch):
15v5 If existence is not established, how can nonexistence be established? It is because there are existent dharmas. That when existents are destroyed, they are called “nonexistent”.

BATCHelor (Tb):
If things were not established, non-things would not be established. [When] a thing becomes something else, people say that it is a non-thing.

DOCTOR (Tb):
If entity is not established, then neither is nonentity. It is the transformation of entity that people call nonentity. [XV.5]

GARFIELD (Tb):
5. If the entity is not established, a nonentity is not established. An entity that has become different is a nonentity, people say.

GARFIELD-SAMTEN (Tb):
5. Since entity does not exist, nonentity does not exist. People say that an entity that transforms into another is a nonentity.

HAGEN (paraphrase):
Where existence is not established, non-existence is also not established. To become other than what exists is what people think of as non-existence.
PINGALA COMMENTARY

15/5 If you have already accepted that existence is not established, then you should accept that nonexistence does not exist either, and why? When existent dharmas are destroyed they are called nonexistent. This nonexistence exists because of the destruction of existence.

Further.

CANDRAKĪRTI COMMENTARY

According to this reasoning, if there were anything existent there would be non-existence as its otherness (anyatha). Pots and such things are commonly said to be non-existent if they cease from their present state and enter another. But if pots and such things have not been established as existing, how can non-existing entities be other than them? It follows that there is no non-existence either. So, self-existence, other-existence and non-existence are all unintelligible, total misapprehensions of those whose spiritual vision is crippled by the defect of primal ignorance.

Evidence from the Buddhist tradition

KALUPAHANA COMMENTARY

While svabhava and parabhava represent a bifurcation of bhava, the latter is itself dependent upon abhava. Ordinarily people speak of abhava as change in bhava. The bhava -abhava, though more comprehensive than the svabhava-parabhava dichotomy, carries the same implications as the latter. Both involve the metaphysical notions of identity and difference.

Neither the Buddha's conceptions of "dependent arising" (paticcasamup-pada) and "non-substantiality" (anatta) nor Nagarjuna's views on dependence and emptiness (sunyata) should be understood as involving or creating the metaphysical notions of identity and difference. In fact, the interpretation of sunyata by some scholars as an "ultimate reality" has brought about an immediate response from others who characterize it as "nothingness." The dichotomy that ordinary people assume is immediately brought into play here. It was this incorrigibility (asadhya) that Nagarjuna was referring to at XIII.8. Hence, Nagarjuna's declaration that follows.

GARFIELD COMMENTARY

5. By a nonentity, Nāgārjuna means something inherently different from some existing entity. A nontable in this sense would be inherently different from a table. But a nonexistent in general would be a Meinongian subsistent which is available as a basis of predication but is intrinsically different from what it is to be an existent - a real thing possessed of the property of being nonexistent. Just as a table must be established as a determinate entity in order to establish the nature of nontables, existence must be established as an inherently existent property in order to establish the parallel status of nonexistence. But neither tables nor existence can be so established. By the same token, then, there are no inherently established nontables, nor any inherently established nonexistents in their stead. So even though it might appear that an analysis through emptiness would leave us only with nontables and nonexistent phenomena, it doesn’t even leave us with that (inherently), though it leaves us with plenty of tables, nontables, existents, and nonexistents (conventionally).
Kārikā XV.6

若人見有無 見自性他性
如是則不見 佛法真實義

svabhāvaṃ parabhāvaṃ ca bhāvaṃ cābhāvam eva ca |
ye paśyanti na paśyanti te tattvam buddhaśāsane ||6||

BOCKING (Ch):
15v6 If a person sees existence and nonexistence, And sees self-nature and other-nature, (seeing) thus he does not see The true meaning of the Buddha-dharma.

PINGALA COMMENTARY

15/6 If a person is deeply attached to dharmas, then he will inevitably pursue a view of existence. If you refute self-nature then he will see other-nature. If you refute other-nature he will see existence. If you refute existence, he will see nonexistence. If you refute nonexistence, he will become confused. But if he is clear-witted and his mental attachments are slight, and he knows the calm serenity of the cessation of all views, he will nevermore generate these four kinds of sophistries. Such a person sees the Buddha-dharma, and this is why the above verse says so. Further:
CANDRAKĪRTI COMMENTARY

Such are those who delude themselves that they are faithfully expounding the teaching of the perfectly realized one when they explain the self-existent and essential nature of things, saying that solidity is the self-existent and essential nature of earth, that experience of the object is the self-existent and essential nature of feeling and that being reflected as an object is the self-existent and essential nature of consciousness. And they explain existence-as-otherness (parabhava) saying that consciousness is other than object and that feeling is other than both. They explain that consciousness and the other factors of personal existence, when in the present, exist, and when they are in the past do not exist. They do not explain the supremely profound truth of dependent origination. So self-existence and existence-as-other are, as we have shown, contrary to reason (upapattiviruddha). The self-existence of things as expounded by the perfectly realized ones, however, is not contrary to reason because of their autonomous, incorrigible, perfect enlightenment about the true nature of all things. Therefore the teaching of the revered Buddhas is valid knowledge (pramana), the wise say, because it is in accord with reason (sopapattika) and free from contradictions. And also because it derives from realized ones who are completely free of any faults. It has authority because it yields the authentic truth of all things; and because it is an authentic guide for those on the way; and because the ordinary man attains nirvāṇa if he bases himself on it. Authority (agamatva) is defined as being the teachings only of the perfectly enlightened one. Doctrines differing from this, because they are not in accord with reason (upapattiviyukta), are declared not to be valid knowledge but spurious doctrine. Therefore these theories of self-existence, other-existence, existence and non-existence are destitute of intelligibility and are not the true ways of things.

So, for the guidance of those desiring liberation:

KALUPAHANA COMMENTARY

It is not merely self-nature and other-nature that are rejected, but also existence and non-existence. The former pair covers a limited range of explanation, compared to the more comprehensive notions of existence and nonexistence.

An empirical definition of existence, as presented by the Buddha, would mean some thing, some event, some phenomenon available to the six senses (see S 4.15, Sabba-satta). Such a phenomenon is assumed to have come to be on the basis of conditions (patīcasamuppanna), to remain for a while showing signs, at the same time, of decay (thitassa aṇñathatta), and then cease to exist (nīrodha, vyaya), once again depending upon conditions. So that even ordinary unenlightened people would say: “Change of what is existent is nonexistence” (bhavasya hy anvabhavān abhavān bruvate janah, XV. 5).

However, the metaphysicians can take over from this ordinary man’s language, especially with its use of the genitive or possessive case (bhavasya). He will assume that change is something possessed by the existent (bhava) which is always the same. Yet he cannot say the same about non-existence (abhava). The metaphysicians part company here, one dogmatically holding on to a theory of eternal existence (sasvata), the other advocating absolute nonexistence, which is annihilationism (uccheda). Another metaphysician who is interested in explaining the empirically felt “selfhood” and “others” will attempt to bifurcate existence (bhava) as self-nature (svabhava) and other-nature (parabhava). When applying this latter dichotomy to the explanation of causality, the metaphysician once again brings the duality of existence and non-existence into play.

Such metaphysics has no place whatsoever in the Buddha’s explanation of existence and non-existence. Hence Nagarjuna’s statement that those who adhere to these notions do not understand the truth or reality expressed in the Buddha’s message.

GARFIELD COMMENTARY

6. If the only way that one can think about phenomena is to think of them as things with inherent natures and to think of things without such natures as thereby nonexistent, none of the Buddhist doctrines of impermanence, emptiness, or liberation will make any sense.
Kārikā XV.7

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 7 - According to the Instructions to Katyayana, the two views of the world in terms of being and non-being were criticized by the Buddha for similarly admitting the bifurcation of entities into existence and non-existence. - Note: The Sanskrit, Katyayanavavada, either refers to the sutra or to the instruction given to Katyayama by the Buddha.

JONES (Skt):
[7] In his Discourse to Katyayana, both “is” and “is not” are denied by the blessed one who has made known both “being” and “non-being.”

KALUPAHANA (Skt):
In the admonition to Katyāyāna, the two theories [implying ‘exists’ and ‘does not exist’ have been refuted by the Blessed One who is adept in existence as well as in non-existence.

MCCAGNEY (Skt):
In the instructions to Katyayana, both “it is” and “it is not” were demonstrated by the Buddha as causing the appearance of being and nonbeing.

NISHIJIMA (Skt?):
7. Katyayana was not so affirmative,
To the two kinds of discussions whether something exists, or not. The Saint Katyayana was not so affirmative, Therefore the problem whether it is existent, or not, is not so clear.

SPRUNG (Skt):
7 In the Katyayanavavada Sutra, the illustrious one, who comprehends existence and non-existence, repudiated both thoughts: that something is and that something is not.

STRENG (Skt):
7. In "The Instruction of Katyayana" both "it is" and "it is not" are opposed By the Glorious One, who has ascertained the meaning of "existent" and non-existent."
PINGALA COMMENTARY

15/7 In the Samda-Katyayana sutra, the Buddha expounds the meaning of 'right view' as 'separate from existence and separate from nonexistence'. If there were the least fixed 'existence' in dharmas, the Buddha would not have refuted both existence and nonexistence. When existence is refuted, people - say that this constitutes nonexistence, but because the Buddha is thoroughly versed in the characteristics of dharmas, he explains that neither is the case. You should therefore relinquish views of existence and of nonexistence.

Further.

CANDRAKĪRTI COMMENTARY

The illustrious one says in the Katyayanavavada Sutra, ‘So much the more, Katyayana, the unenlightened man, clinging tenaciously to the belief that things are either in being (asti) or not in being (nasti), is not liberated in that way. He is not liberated from the distress of birth, old age, disease, death, grief, lamentation and sorrow. He is not liberated from the prison of unregenerate existence with its basis in personal existence. He is not liberated from the painful sorrow of a mother’s death or of a father’s death.’ (In El Kindred Sayings, vol. 2, p. 12, Pali Text Society, Translation Series, Luzac, London, 1952.) And so on. This sutra is taught in all the Buddhist schools. So on this authority and from the arguments given, an intelligent man should not, in reason, be capable of holding to the theories of self-existence, other existence, existence and non-existence, which are completely opposed to the words of the perfectly realized one and which he rejected.

Of what nature is the illustrious one exactly? He comprehends existence and non-existence. One whose nature it is to comprehend existence and non-existence is a comprehender of existence and non-existence. From his ultimate grasp of self-existence in the true sense as related to existence and nonexistence, as we have explained it, only the illustrious one is said to be a comprehender of existence and non-existence. Therefore he rejects both views: that things are in being or that things are not in being. It follows that it does not make sense to insist that the true way of things can be seen in terms of existence or non-existence.

To quote: ‘To say, Kasyapa, “Something is”, is one extreme; to say “Something is not” is one extreme. What avoids these two extremes is said to be without a specific nature, beyond proof, not related, invisible, without an abode, not to be known conceptually. It is, Kasyapa, the middle way (madhyama pratipad); it is the right way of regarding the true nature of things.’ (In 10 From the Ratnakuta Sutra, one of the earliest Mahayana sutras.)

To quote: ‘ “It is”, “It is not” are two dogmas; “purity”, “impurity” are two dogmas; and so the wise man abandons both dogmas without taking up a position in the middle. “It is”, “It is not” is mere disputation; “purity”, “impurity” is mere disputation; afflicted existence is not terminated by engaging in disputation; afflicted existence is brought to an end by not engaging in disputation.’ (Samadhiraja Sutra.)

The unintelligibility of change

You may interject: But if there is self-existence of fire and such things what objection would there be?

There would be the objection already given: ‘A self-existent nature which arises from causes and conditions would be something created’, and so on. Moreover, if there were this kind of self-existent nature in fire and such things, it, existing already in fact, could never change. Nagarjuna expounds:

KALUPAHANA COMMENTARY

This, as mentioned in the Introduction, is the single most important piece of evidence available in the work of Nagarjuna, which can relate him to the Buddha as presented in the Pali Nikayas and the Chinese Agamas. Inada’s note on this verse is too brief and vague: “The Sanskrit Katyayanavavada, either refers to the sutra or the instructions given to Katyayana [sic.] by the Buddha,” (.). This statement of Nagarjuna deserves much more attention than has ever been accorded to it.

The main theme of the discourse is to expose the untenability of the two metaphysical views of existence (asti) and non-existence (nasti). This is done by appealing to the empirical notions of arising (utpada) and ceasing (nirodha). With the fifteen chapters (including the present), Nagarjuna has presented an outstanding explanation of how the empirical conceptions of arising and ceasing, of impermanence and change, can profitably be used to expose the futility of metaphysics. Hence, he is
satisfied with merely referring to that portion of the "Discourse to Katyayana" which deals with the rejection of the two metaphysical extremes. A discussion of the remaining ideas expressed by the Buddha in this discourse, especially the positive description of the human personality as well as its experiences, is reserved for a later occasion.

**GARFIELD COMMENTARY**

7. In the *Discourse to Katyayana*, the Buddha argues that to assert that things exist inherently is to fall into the extreme of reification, to argue that things do not exist at all is to fall into the extreme of nihilism, and to follow the middle way is neither to assert in an unqualified way that things exist nor in an unqualified way that things do not exist. It represents one of the fundamental *suttas* of the Pali canon for Mahayana philosophy. In the *sutta*, the Buddha claims that reification derives from the failure to note impermanence and leads to grasping, craving, and the attendant suffering. Nihilism, he claims, is motivated by the failure to note the empirical reality of arising phenomena. It leads to suffering from failure to take life, others, and morality seriously enough. The middle path of conventional existence leads to engagement in the world without attachment. (fn 79. Kalupahana (1986) relies on this verse to argue that the entire Mula-madhyamaka-kārikā is a “grand commentary on the Discourse to Katyayana” (pp. 81, 232). While this *sutta* is clearly important for Nāgārjuna, nothing in the text justifies this global interpretation. The range of topics Nāgārjuna considers far exceeds the scope of that *sutta*, and no other passage from that *sutta* is mentioned in the Mula-madhyamaka-kārikā.)
Kārikā XV.8

yady astitvam prakṛtyā syān na bhaved asya nāstitā |

| raṅ bźin gźan du (2)’gyur ba ni | | nam yaṅ ’thad par mi ’gyur ro |

**ENGLISH TRANSLATIONS**

INADA (Skt):
Verse 8 - If existence is in virtue of a primal nature, then its non-existence does not follow. For, indeed, a varying character of a primal nature is not possible at all.

JONES (Skt):
[8] If existence (i.e., “is-ness”) existed by its own nature, there could be no nonexistence (i.e., “is-not-ness”) of it, for the change in the nature of something self-existent never occurs.

KALUPAHANA (Skt):
If existence were to be in terms of primal nature, then there would not be its non-existence. A change of primal nature is certainly not appropriate.

MCCAGNEY (Skt):
If existence would be unalterable, there would not be its nonexistence. Indeed a changing nature of primordial substance never happens.

NISHIJIMA (Skt?):
8. If Reality is the original substance, There might not be anything, which does not belong to this world, nor to be Reality.
And something original might be perfectly impossible to be a different existence,
Because what has been separated from the original Reality, might manifest itself at all.

SPRUNG (Skt):
8 If it is the nature of something to exist, it cannot cease to exist. Real change of the nature of something is not logically possible.

STRENG (Skt):
8. If there would be an existent thing by its own nature, there could not be "non-existence" of that thing. Certainly an existent thing different from its own nature would never obtain.

ROBINSON (Skt):
If existence [derives] from nature [prakṛti], its non-existence will not occur; for the otherwise-being of a nature [prakṛti] is never true to fact.
PINGALA COMMENTARY

15/8 If dharmas have a fixed existent nature this should under no circumstances change, and why? If it is a fixed, existent self-nature, then it should not have varying characteristics, just as in the 'true gold' example above (15/2). Now, since dharmas are manifestly seen to have varying characteristics, we must know that they do not have fixed characteristics.

Further:

CANDRAKĪRTI COMMENTARY

8ab If it is the nature of something to exist, it cannot cease to exist.

If it is the nature of fire and such things to be self-existent, then such a self-existent, whose nature it is to exist, could not change.

8cd Real change of the nature of something is not logically possible.

If the nature of fire and such things were as one supposes, it would be self-existent; and then, because of the unchangeableness of a true nature (prakṛti), change (anyathābhava) would never be logically possible. For example, the infinity of space could never possibly change; similarly there could be no change in such things as fire because it is their nature to exist as such. But one perceives the disappearance of things, either in so far as they change or as there is a disruption of continuity. So, because their nature is to change, this cannot be the inherent self-existent nature of things; it is like the heat of water. This should be clear.

You may object: If change is impossible in something which exists by its very nature and yet one perceives change you say there can be no true nature of such things. But then, indeed:

KALUPAHANA COMMENTARY

This and the next three verses seem to constitute a digest of the detailed and meticulous analysis of the two extreme views presented by Nagarjuna so far. If existence is understood in the sense of primal nature (prakṛti), in the way the Sankhya school did, for, in fact, the Sankhya used the term svabhava to refer to the primal nature, then there cannot be its non-existence. The reason is that change and primal nature or substance are incompatible.

GARFIELD COMMENTARY

8. If for a thing to exist were for it to be a determinate entity with an essence, then no thing would ever cease to exist or change in any way. For an essential property is a necessary property, and it is incoherent to say that a thing loses a necessary property.
Kārikā XV.9

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 9 - If primal nature does not exist, what will possess the varying character? If, on the other hand, primal nature does exist, what then will possess the varying character? - Note: The opponent raises the first question and Nagarjuna counters with the second. He follows up with an answer in the next two verses.

JONES (Skt):
[9] Since such a self-existent nature does not exist, of what can there be a change in natures (i.e., "becoming-otherwise-ness")? But if such a nature existed, of what would there be such a change?

KALUPAHANA (Skt):
When primal nature is non-existent, whose change would there be? When primal nature is existent, whose change would there be?

MCCAGNEY (Skt):
Where primordial substance does not exist, what will have changing nature?
Where primordial substance exists, what will have changing nature?

NISHIJIMA (Skt?):
9. In the case of relying upon the imitated substance, How is it possible for the original situations to be manifested really? In the case of relying upon the true substance, How is it possible for the imitated situations to be manifested really?

SPRUNG (Skt):
9 If things have no inherent nature what is it that will change? If things have an inherent nature what is it that will change?

STRENG (Skt):
9. An opponent asks: If there is no basic self-nature (prakti), of what will there be "otherness"? Nargarjuna answers: If there is basic self-nature, of what will there be "otherness"?
PINGALA COMMENTARY

15/9 If dharmas had a fixed nature, how could they change? If they have no nature then they have no self-substance, so how could they change?

Further.

CANDRAKĪRTI COMMENTARY

9ab If things have no inherent nature what is it that will change? (In 11 The opponent's argument.)

That is, how can there be change in something which, like the sky-lotus, does not exist by virtue of its inherent nature (prakrtya svarupena); one does not perceive change in something which by its nature does not exist; because one experiences change there must be inherent self-existent nature.

We reply. If, according to your thought, there is an inherent nature in things because there can be no change in something which has no essential nature and yet there is direct experience of change, even so

9cd If things have an inherent nature what is it that will change?

Taking your case, how will there be change in something which by its inherent nature exists in present fact (vartamana eva)? There can be no change in something which by its very nature exists. Thus change is impossible in every sense. It should be realized therefore that there is no inherent nature (prakrti) in things.

When we said earlier that there could be no inherent nature because we experience change, that was said with reference to the experience of change as understood by others. We have at no time agreed that there is change in anything at all. Rather it is that an inherent nature of things is totally (atyantatah) non-existent, that all the putative elements of existence are non-existent and without an inherent nature and that change in such things is non-existent. One who, however, believes in the existence and non-existence of things, for him, so believing, it follows inevitably.

The twin dogmas of eternalism and naturalism

KALUPAHANA COMMENTARY

Not only the existence of primal nature, but also its non-existence is incompatible with change. Here primal nature is understood as the substance and change as the attribute. If the substance is not available, the attributes cannot be applied to it. If the substance is present, the attributes become superficial. In brief, the substantialist enterprise consists of reconciling substance and attribute after creating a sharp and irreconciliable distinction between them (see Chapter V).

The above explanation would eliminate the need for assuming that the first line of the verse represents a question raised by an opponent to which Nagarjuna gives his own reply in the second (see Inada, who follows Candrakīrti's interpretation of this verse.)

GARFIELD COMMENTARY

9. In the first half of this verse, the opponent replies that since the argument in the previous verse presumes the reality of change, it must presuppose the reality of the changer. If it presupposes the reality of change, it presupposes the reality of things that change and, hence, that persist through time. In order to remain the same, there must be some essence that accounts for this identity. Nāgārjuna replies, however, that if this persistence through time were determined by essence, the change it putatively explains would be impossible. Only conventional existence over time can explain change. Nāgārjuna summarizes, paraphrasing the Discourse to Katyayana:
Kārikā XV.10

astīti śāśvatagrāho nāstīty ucchedadarśanam |
tasmād astitvanāśītive nāśrīyeta vicāsaḥ ||10||

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 10 - Existence is the grasping of permanency (i.e., permanent characteristics) and non-existence the perception of disruption. (As these functions are not strictly possible), the wise should not rely upon (the concepts of) existence and non-existence.

JONES (Skt):
[10] To say “It is” is to grasp for eternal permanence. To say “It is not” is to grasp for complete annihilation. Therefore, the clear-sighted should not adhere to either “It is” or “It is not.”

KALUPAHANA (Skt):
“Exists” implies grasping after eternalism. “Does not exist” implies the philosophy of annihilation. Therefore, a discerning person should not rely upon either existence or non-existence.

MCCAGNEY (Skt):
“It is” is grasping for eternity. “It is not” is the view of nihilism. Therefore, existence and nonexistence would not be resorted to by the wise.

NISHIJIMA (Skt?):
10. It is said that the Eternal Manifestation really exists, and it is completely wrong that the continuous observation has been cut actually. Therefore in the middle way between existence and nonexistence, It might be just the passing through all situations of having sharp corners.

SPRUNG (Skt):
10 To say ‘Things are in being’ is the eternalist view; to say ‘Things are not in being’ is the naturalist view. Therefore a thinking man should not resort to the twin beliefs in existence and non-existence.

GOLDFIELD (Tb):
“Existence” is the view of permanence, “Nonexistence” a view of extinction. Therefore, the wise do not abide in existence or nonexistence.

DOCTOR (Tb):
“Existence” is apprehension of permanence, “Nonexistence” a view of annihilation. The wise, therefore, ought not to adhere to either existence or nonexistence. [XV.10]

GARFIELD (Tb):
10. To say ”it is” is to grasp for permanence. To say ”it is not” is to adopt the view of nihilism. Therefore a wise person Does not say ”exists” or ”does not exist.”

GARFIELD-SAMTEN (Tb):
10. To say “it exists” is to reify. To say “it does not exist” is to adopt the view of nihilism. Therefore a wise person Does not subscribe to “it exists” or “it does not exist.”

HAGEN (paraphrase): [axiomatic] “It is” implies grasping at eternalism. “It is not” implies holding to nihilism. Therefore, the wise do not rely on notions of existence or nonexistence.

BOCKING (Ch),
15v10 Fixed existence is attachment to permanence. Fixed nonexistence is attachment to severance. Therefore the wise man Should not be attached to either existence or nonexistence.

BATCHelor (Tb):
“Existence” is the grasping at permanence; “nonexistence” is the view of annihilation. Therefore, the wise do not dwell, in existence or nonexistence.

STRENG (Skt):
10. "It is" is a notion of eternity. "It is not" is a nihilistic view. Therefore, one who is wise does not have recourse to "being" or "non-being."
PINGALA COMMENTARY

15/10 If dharmas were fixed and existent, having the mark of existence, then they would never become nonexistent, with the mark of nonexistence, and this would be permanence. Why is this? It is like saying, of the three periods of time, that the characteristics of a dharma exist in the future period, and that this dharma comes into present existence, and then in turn passes into the past, without abandoning its original characteristics. This would constitute permanence. It is also saying that an effect exists beforehand in the cause, which is also permanence.

(20b22) If you say that a fixed (entity) is nonexistent, then this nonexistent thing must have existed previously but does not exist now, and this constitutes severance. Severance means no continuity of characteristics. Through these two views, one strays very far from the Buddha's Dharma.

Question: Why does (a view of) existence produce the view that things are permanent, and a (view of) nonexistence produce the view that things are cut off?

Reply:

CANDRAKĪRTI COMMENTARY

10ab To say ‘Things are in being’ is the eternalist view; to say ‘Things are not in being’ is the naturalist view.

It is implied here that these theories of eternalism (sasvata) and naturalism (uccheda) (fn 12 Usually translated ‘nihilism’. In the discussion which follows ‘naturalism’ seems more appropriate.) are obstacles on the way to the final beatitude of heaven, and that they cause great ill.

10cd Therefore a thinking man should not resort to the twin beliefs in existence and non-existence.

Why, given the theories of real existence and real nonexistence do the dogmas of eternalism and naturalism follow? Because:
Kārikā XV.11

astī yad dhi svabhāvena na tan nāstīti śāśvatam |
naśīdānīm abhūt pūrvam ity uchedaḥ prasājyate  ||11||

ruò fà yòu dìng xìng fēi wú zé shì cháng |
xiān yòu ér jīn wú shì wéi duàn miè |
| gaṅ žig raṅ bźin gyis pa | | de ni med pa min pas rtag | |
| sṅon byuṅ da ltar med ces pa | | des na chad par thal bar 'gyur | |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 11 - It follows that permanency means that existence based on self-nature does not become a non-entity and disruption means that what formerly was existent is now non-existent.

JONES (Skt):
[i] For the claim “Whatever exists through self-existence does not not exist” entails the view of eternal permanence. The claim “It does not now exist, but did exist before” entails the view of complete annihilation.

KALUPAHANA (Skt):
“Whatever that exists in terms of self-nature, that is not non-existent” implies eternalism. “It does not exist now, but existed before” implies annihilation.

MCCAGNEY (Skt):
“Whatever exists by self-nature, that does not not exist” and so is permanent.
Annihilation follows from “it does not exist now but existed before.”

NISHIJIMA (Skt?):
11. Relying upon thinking subjective existences, even though there is the concrete Universe,
The concrete Universe is not something, which really does not exist, or is not eternal.
In the time before this world hasn't existed,
What is called extinction does not appear yet.

SPRUNG (Skt):
11 What exists by its inherent nature can never not exist: this implies eternalism. What does now not exist but once did: this implies naturalism.

STRENG (Skt):
11. That which exists by its own nature is eternal since "it does not not-exist." If it is maintained: "That which existed before does not exist now," there annihilation would logically follow.

BOCKING (Ch):
15v11 If dharmas had fixed natures They would not be nonexistent, and this would be permanence.
If they previously existed and now do not, This would constitute severance.

BATCHelor (Tb):
"Since that which exists by its essence is not non-existent," is [the view of] permanence. "That which arose before is now non-existent," leads to [the view of] annihilation.

DOCTOR (Tb):
That which exists by nature Is not nonexistent—this is permanence. "It existed before, but now it does not"— That implies annihilation. [XV.11]

GARFIELD (Tb):
11. "Whatever exists through its essence Cannot be nonexistent" is eternalism. "It existed before but doesn't now" Entails the error of nihilism.

GARFIELD-SAMTEN (Tb):
11. "Whatever exists essentially Cannot be nonexistent" is reification. "It existed before, but does not now" Entails the error of nihilism.

HAGEN (paraphrase):
The notion, “whatever exists in terms of self-nature is not non-existent,” implies eternalism. The notion, “it existed in the past but it no longer exists,” implies nihilism.
PINGALA COMMENTARY

15/11 If dharmas' nature were fixed and existent, they would have the characteristic of existence and not the characteristic of nonexistence, so they would in no way be nonexistent. If they were nonexistent, they would not exist, and consequently they would not be dharmas. Because of the errors previously discussed, one thus falls into a view of permanence.

(20c1) If a dharma which formerly existed is destroyed and becomes nonexistent, then this constitutes severance, and why? Because existence cannot be nonexistence, and because, as you say, existence and nonexistence each have fixed characteristics. If you have views of severance or permanence, sin and merit, etc. will not exist and you will negate all worldly processes. For this reason, you should relinquish them.

CANDRAKĪRTI COMMENTARY

What is said to exist by its inherent nature (svabhāvena) can at no time not exist because inherent nature is indefeasible (anapayitva). If, thus, one agrees that things are in being one espouses the eternalist view. Again, if one agrees that in a previous time something really existed of which, later, because it has been destroyed, one says ‘it does not exist’, one is caught up in the naturalist view. One for whom a self-existent nature of things is not intelligible, because a self-existent nature of things is never directly experienced (anupalambha), is not involved in the eternalist and naturalist views.

You may object that one who supposes there is no inherent nature in things, though he does not hold the eternalist view as he rejects the reality of things, is inevitably caught up in the naturalist view. We reply that the naturalist view does not arise in this way. One who supposes that at one time there is a self-existent nature of something and who perceives this at a later time to have disappeared, holds that things are not in being because he repudiates what he previously perceived to be self-existent. However, when one is rid of optical defect, not perceiving things as the one with an optical defect sees hairs, says, ‘Things do not really exist’ he is not saying ‘Everything is illusory’ because in that case there would be nothing to be negated. For the purpose of removing the persistent illusion of the deluded, we declare, like one freed from an optical defect, ‘Things as such do not really exist’. In saying this we are not caught up in the naturalist theory: we are concerned to be of help to others.

As the sutra says, ‘One who supposes the real existence of desire, aversion and illusion and later says they have ceased to exist, he indeed is the naturalist’, and so on.

But, you may say, one who supposes that mind and its objects are real (vastumatra) only in reciprocal dependence (paratrantra) avoids the theory of eternalism because there is no inherent self-existence in dependence as he conceives it; and he avoids the theory of naturalism because dependent mental states, which are the cause of the removal of afflictions, really exist (fn 13 The position of the Vijnanavada school of Buddhism.).

How can such a one avoid the twin dogmas? What is projected by the mind is non-existent; what is dependent on mind is existent; so both the eternalist and the naturalist dogmas are operative. Further, his exposition does not make sense because it has been shown that the self-existence of what is dependent does not make sense. Thus the Madhyamika view alone is free of the twin dogmas of eternalism and naturalism, but not the views of the Vijnanavadin and others.

So it is said in the Ratnavali: ‘Ask the Sarhkhyas, the Vaisesikas, the Jains, the personalists, and the naturalists if their doctrine teaches the transcendence of existence and nonexistence.’ ‘You should know the hidden depths of the immortal teaching uttered by the Buddhas, for its very essence is the transcending of existence and non-existence.’

Out of concern for the enlightenment of such people who need guidance, as a useful means to comprehending the ultimate truth, the illustrious one, in his limitless compassion, taught the doctrines of the Vijnanavadins and of the Sammitiyas, who believe in the person. But only for the sake of the uninitiated (neyartha), not for the initiated (nitartha).

As is said in the Samadhiraja Sutra: ‘The one who can distinguish the higher truth in the sutras knows that the Buddha held to the absence of being in things. All mention of persons, beings, and souls, he knows, are only for the sake of the uninitiated.’
This point is found repeatedly in the teachings of the Aksamati and other texts. The cycle of death and rebirth endures as long as the entanglement in the twin dogmas that things are in being or that they are not endures. When those genuinely striving for liberation have realized this, being freed from the twin dogmas, they rightly embrace the middle way.

As the illustrious one said in the Samadhiraja Sutra: ‘Let there be an end to the knowledge of existence and nonexistence; all is inaccessible to thought and all is unreal. Those who follow their inclination to intellection will suffer in countless rebirths. The one who wisely understands that things are non-things is never obsessed with things. The one who is never obsessed with things attains peace of mind beyond all definition.’ ‘When Buddha, the sage, the king of truth, the revealer of all truths appears, the refrain is sounded from grass and bush and tree and plants, from the rocks and the mountains: all elements of existence are without being.’

‘Howsoever far mere words reach in the world realm, all are without being, none is real; and so far resounds the call of the realized one, the guide and teacher of all men.’

To say ‘something is’ is to say that it is in being. But eternal being as the self-existent nature of particular things is never a fact. All putative elements of existence are not real and devoid of being because as particulars they do not have self-existent natures. This is found in the prajnaparamita texts. The self-existence of particular things is contrary to thought. ‘The refrain is sounded that all elements of existence are without being.’

The meaning of similar sutras is to be understood in this sense.

‘Howsoever far mere words reach in the world realm, all are without being, none is real.’

In sum, the intention is to repudiate the reality of things (fn 14 Reading bhava; the text has abhava but this must be a mistake. It is true that Madhyamika repudiates both bhava and abhava, but the tactical thrust of this chapter, as of most others, is against uncritical realism (bhava); to say things are not real is precisely the same as to say they have no self-existence.

KALUPAHANA COMMENTARY

These theories of existence and non-existence are not simple and harmless ones. They contribute to unfortunate consequences. The theory of existence leads to the dogmatic grasping on to the belief in eternalism. The conception of nonexistence leads to an equally dangerous view of annihilation, both of which, as will be pointed out later, are damaging to the moral life. Hence, a wise man would not associate himself with such extreme views.

GARFIELD COMMENTARY

11. (“Entails the error of nihilism” fn 80. The verse ends ......thal-bar ‘gyur.” This form indicates that the nihilism is taken as the unacceptable consequence that would provide a reductio on the claim “it existed before but doesn’t now.”)

To say that if something exists, it does so in virtue of having an essence and hence cannot change or pass out of existence would entail the absurd position that everything is eternal. To say of something that it existed in this strong sense - with an essence - in the past, but does not do so now, is absurd. For if for something to exist is for it to do so inherently, and if it is not now existent, it could never have been. So since everything we observe is impermanent, if the only existence that there could be were inherent existence, nothing could exist at all. That would be nihilism. The upshot of this chapter is that the very concept of an essence, and hence the very concept of an inherently existent entity at all, is incoherent. No coherent conception of the phenomenal world can be one in which things are posited other than conventionally. (fn 81. See Ng (1993), pp. 25-27, 34-36, for a nice discussion of the connection between this rejection of extremes and the emptiness of emptiness.)
Chapter XVI

bandhanamokṣaparīkṣā nāma ṣoḍaśamāṃ prakaraṇam ||

Chapter XVI: Examination of Bondage
We are still in the second part of the section on the two selflessnesses, the demonstration that mere phenomena are essentially empty. We are still in the second of its two sections: the refutation of the argument for the essential existence of things. We have completed the first two parts of the three parts of that section: the refutation of contact and the refutation of the essential existence of appropriation of causes and conditions. [284:12] The third part of this section, the refutation of the essential existence of bondage,
This craving for becoming, while leading to suffering in the general trend of the treatment is hinted at. All living beings are bound by defilements, i.e., by being caught up in the basic life-death process of samsara. Is there a way out of all this bondage? To think in terms of a release or deliverance (moksa) means to make effort to achieve liberation. Nagarjuna again brings in his logic of reductio ad absurdum to demonstrate that what is already bound cannot be unbound, that what is unbound need not be bound, and that there cannot be any movement from one thing to another in what we understand as samsara. As a consequence, there is nothing to be released or freed from a bound entity. Even conceptual knowledge works in a similar fashion for he says that those who believe in manipulating the concept of nirvana have the gravest of all attachments (Verse 9) and that nirvana and samsara are beyond thought (Verse 10).

The Buddha's denial of such a metaphysical entity gave rise to enormous philosophical problems. The question was often raised: "Which self will be touched (or affected) by actions performed by a non-self." So long as the doctrine of dependent arising was understood properly, the Buddhists could consistently describe the manner in which a person may be said to perform an action and reap its consequences. However, as emphasized earlier, the Buddhist metaphysicians created more problems with their interpretations of dependence than they solved. These metaphysical views were foremost in Nagarjuna's mind when, after examining the problems renting to suffering, etc., he proceeded to analyse the problems of bondage and release (bandhana-moksa), action and consequence (karma-phala), and so on.

Bondage (bandhana) can be of several sorts. Human beings are lettered by the pleasant objects they perceive, the ideas they form, and finally the process of becoming (bhava) itself. Craving for becoming (bhava-trsna) is looked upon in Buddhism as one of the most troublesome bonds. This craving for becoming, while leading to suffering in the present life, keeps the individual wandering in samsaric existence, subjecting him to repeated births and deaths. Death, personified as Mara, carries with it a snare (pasa) which very few humans can escape. The present chapter, therefore, focusses its attention on this bondage to the life-process. While the discussion of the Sarvastivada conception of self-nature (svabhava) lingers along in the next few chapters, the Saungrantika theory of a transmigrating personality (pudgala) emerges into prominence in the present section. When it is said that "dispositions transmigrate" (samskarah samsaranti), what is assumed is that there is a subtle essence in the dispositions that enable them to be perpetuated. Nagarjuna's argument here is more dialectical. If dispositions are permanent, then there is no point in speaking of their transmigration. For, transmigration implies moving from one position to another, disappearing in one place and appearing in another. If something is permanent, it is always present and there is no question of its ceasing and arising. On the contrary, if things are impermanent, in the sense of being completely destroyed (uccheda), they will never transmigrate. Nagarjuna, therefore, maintains that if a human being is looked upon in the above manner, it is not possible to speak of his transmigration (XVI. 1).

The impression one gets from the available translations of XVI.2 is that Nagarjuna rejects the theories of
aggregates (skandha), faculties (ayatana), and elements (dhatu). Yet, what is clearly stated here is the early Buddhist position: “It may be assumed that a person transmigrates. Yet such a person, sought for in the fivefold way, in the aggregates, spheres and elements, does not exist. Who then will transmigrate?” Thus, the transmigration that is denied is that of a subtle personality. However, if transmigration is understood as the continuation of the factors of the human personality on the basis of causal dependence, Nagarjuna may not have any objection against it.

The notion of bondage that is criticized turns out to be the bondage of a substantial entity to such things as dispositions. It is similar to the notion one finds in the Indian tradition where the permanent “self” (atman) is said to be in bondage to the psychophysical personality which is impermanent. Hence Nagarjuna’s argument that anything that is of the nature of arising and passing away (utpada-vyaya-dharmin) is neither bound nor released. What is being criticized here is not the simple notions of bondage and release but those that take into consideration a substantial subject and its attributes.

The concluding verse could easily lead to much misunderstanding if the significance of the relative terms “where/there” (yatra/tatra) are ignored. The context specified here with these relative terms is what came to be discussed before, namely, the assumption of a substantial subject and the attribution of various attributes to it. Thus, in a context where some substantial subject is attributed with something called freedom (nirvana samaropa) or is stripped of the life-process (samsarapakarsana), therein there is no sense in making a discrimination (vikalpa) between freedom and bondage, for what is real, namely, the substantial subject, will remain the same. Or else, where nirvana is “reified” (samaropa) and the life-process is eliminated (apakarsana), therein too there is no sense in making such discriminations. These being totally different from one another, the knowledge of one would have no relevance to the understanding of the other.

**BATCHelor (Poetic “Translation”)**

If clinging binds,
I who cling would be unbound
Like those who do not cling.
How is it I am trapped?

Neither bound nor unbound are free –
Were the bound to be freed,
Freedom and bondage
Would be simultaneous.

“I am free! I cling no more!
Liberation is mine!” –
The greatest clinging
Is to cling like this.

What do you think
Of a freedom that never happens?
What do you make
Of a life that won’t go away?

16. Bondage and Liberation

Is there a reality that “transmigrates”? The argument here is that compounded entities cannot be reborn. Something compounded is not one, integrated entity but an assemblage of parts, and thus there is no unified entity to transmigrate or be liberated. So too, if what is compounded were one real entity it would be permanent and thus could not be reborn (since this involves a change). The same analysis applies to exiting the cycle of rebirths by becoming enlightened: no real entities can change their state, and so if liberation is possible, any sentient being cannot be a real entity that is either “bound” or “liberated” (vv. 4-5). Nor are nirvana or the cycle of rebirths real entities (v. 10): one could not exit the cycle of rebirths and attain nirvana if they were permanent and unchanging entities. All must be empty of self-existence for anything to work.

The problem of the “mover moving” is applied in verses 6-9.

GYAMTSO (COMMENTARY)

16

An Examination of Bondage and Liberation

In the sutras, the Buddha taught:

Forms do not arise, and therefore they are neither bound nor liberated.

THE BUDDHA MADE SIMILAR STATEMENTS about sounds, smells, taste, bodily sensations, and so forth; and thus connecting this teaching with many other phenomena, he taught of the transcendence of bondage and liberation in a vast way.

That bondage and liberation appear to be real, that we think they are real, and that we seem to have further experiences that confirm our belief that they are real is still not enough to prove they are real, because all of this also happens in dreams. You may dream of being bound in iron chains and then being let out of them, or of being thrown into prison and then being set free. Your dream body was never born in the first place, however, and therefore there is nothing really there to be bound or liberated. Thus, dream bondage and liberation are mere appearances, not real in the slightest. The bondage and liberation that appear during the day are the same.

In Tibet, some Dharma practitioners were imprisoned for twenty years, but they say that it was a very good experience—that it helped their practice a lot. They were probably meditating on the transcendence of bondage and liberation!

In this chapter, Nagarjuna will prove the validity of this teaching with logical reasoning. The reason he composed this chapter was that there were people who thought, “Things do in fact have an inherent nature because we can perceive them to be bound in samsara or liberated in nirvana.” They used the existence of bondage and liberation as their proof of the existence of things. Thus, in order to help them give up their mistaken belief in true existence, Nagarjuna had to demonstrate to them why bondage and liberation do not exist in the genuine nature of reality.

Mipham Rinpoche’s commentary identifies two main sections in this chapter: first, a refutation of samsara and nirvana, and second, a refutation of bondage and liberation themselves. From the first section, the first verse of the entire chapter reads:

If one asks, “Do the aggregates wander?”  
No, they do not, because permanent aggregates could not wander,  
And impermanent aggregates could not wander either.  
The same holds true for sentient beings.

This verse takes up the analysis in the following way: If samsara truly exists, there must be someone or something wandering around in it. If there is no one wandering in samsara, samsara cannot be real.

We can identify two possibilities for what the wanderer is: Either it is the set of five aggregates that constitutes the sentient being, or it is the sentient being who possesses these aggregates. Whichever of these two is wandering in samsara, it must be either permanent or impermanent if it truly exists. There is no other possibility.

First, let us examine the aggregates. It cannot be that permanent aggregates wander in samsara, because permanent aggregates would never change states or phases. They could not go from one life to another, even from one place to another, because they would be unchanging. Impermanent aggregates cannot wander in samsara either, because something that is impermanent ceases as soon as it arises—that is the definition of impermanence. If it remained the same for any period of time, it would be permanent, not impermanent. Something that is impermanent, therefore, has no time to go anywhere, because as soon as it arises, it disappears. Therefore, impermanent aggregates would have no time to wander around in samsara, because they would cease immediately after arising. Thus, neither permanent nor impermanent aggregates can wander in samsara, and since there is no other alternative for how the aggregates could be, it is logically impossible that the aggregates wander in samsara.
The same is true for sentient beings. There could not be permanent sentient beings that wander in samsara because such beings would never change in any way; impermanent sentient beings could not wander in samsara either, because the first instant they would exist and the second instant they would be gone. They could not go from one place to another, let alone one life to another, because they would not have time to do so. Thus, sentient beings cannot logically be the wanderers in samsara either.

Since it is logically impossible for either permanent or impermanent aggregates or sentient beings to wander in samsara, and since there is no other possibility for how they could be, the only conclusion to draw is that no wanderer in samsara actually exists. Since no wanderer in samsara actually exists, samsara does not truly exist either. Samsara is not real; it is just a dependently arisen mere appearance.

The third verse presents another line of reasoning. It reads:

If the individual really wandered from one existence to the next,  
Then in between existences, there would be no existence!  
With no existence and no appropriated aggregates,  
What individual could possibly be wandering?

If this life, the next life, and the transition in between the two truly existed, then there would be an individual sentient being who would appropriate one set of aggregates in this life, then leave them behind, then appropriate another set of aggregates at the start of the next life. In between the two, however, there would just be the individual, the appropriator, without any appropriated aggregates. The sentient being would not have any aggregates at all at that point. That would be illogical, however, because there would be nothing to call a sentient being if there were no aggregates to compose that sentient being—there would be no body and no mind. The sentient being is defined as the one who appropriates the aggregates, so how could that appropriator exist without any aggregates to appropriate?

Take, for example, the situation of being a human in this life and a god in the next life. In between dying as a human being and giving up that set of aggregates and then being born as a god with a new set, there would be an empty gap. Then the question is, during that empty gap, what is it that is going around in samsara? It would be illogical to posit anything, because there would be nothing there. The whole notion of samsara as an uninterrupted continuum of lifetimes would be inapplicable if things actually transpired in that way.

Someone might say, “In between the two existences there is the sentient being in the bardo, the intermediate state.” It is fine to posit that, but the question would then be, what is there in between the time when one abandons the human aggregates and one appropriates the bardo aggregates?

Sentient beings in the bardo still have aggregates, just of a more subtle variety than our own. So positing the existence of the bardo changes the form of the question but does not make it go away.

Let us look at the example of being a pig in the past life and a human being in this one. First you are a pig and then you are a person. So if you go from being a pig to being a human being, the question is, are the human being’s aggregates the same as the pig’s aggregates, or not? If they are the same, then that pig would be a permanent pig. If the aggregates were different, however, then you would first have the pig’s aggregates, then you would have nothing at all, and then you would have the human being’s aggregates. The human being’s aggregates would have no cause, because they would have just emerged from that nothingness of the gap in between the two lives. Therefore, neither the possibility of permanence nor that of impermanence is feasible, and therefore samsara’s existence is not feasible either. This becomes clear once we analyze with logical reasoning in this way.

Samsara is the beginningless cycle of existence in which sentient beings wander in the six realms from one lifetime to the next. We can see from this analysis, however, that samsara is just a dependently arisen mere appearance, like a dream. There is nothing real to it or in it. Since samsara is just a dependently arisen appearance, it is naturally open, spacious, and relaxed. Therefore, we do not have to cleanse ourselves of samsara, only of our thoughts that samsara truly exists.

In his Authentic Portrait of the Middle Way, Jetsun Milarepa sang, “So even the name ‘samsara’ does not exist.” Not only the basis to which the name samsara is given does not exist, but even the name itself does not exist. After all, the name samsara is comprised of three syllables. When you say the first syllable, sam, then sara does not exist. When you say sa, however, sam and ra do not exist, and when you say ra, samsa does not exist. If the name really existed, all its parts would have to exist at the same time!

In fact, both the basis to which the name samsara is imputed as well as the name itself are appearance and emptiness undifferentiable. Milarepa described this when he sang in The Eight Kinds of Mastery:

Not separating appearance and emptiness  
This is mastery of the view.

Thus, we can see that Milarepa’s intention and Nagarjuna’s intention are the same.

When someone argued, “Samsara truly exists because there is nirvana, the transcendence of samsara’s suffering,” Nagarjuna responded by analyzing nirvana in the fourth verse:

No matter how they might be,
It would be untenable for the aggregates to attain nirvana.

No matter how they might be,
It would be untenable for sentient beings to attain nirvana.

Nirvana does not truly exist because when we analyze, we cannot find anything or anyone that can actually attain it. For example, the aggregates cannot attain nirvana, because permanent aggregates could not change states—they could not go from the state of samsara to that of nirvana—and impermanent aggregates would arise and then immediately cease, so they would not have time to attain nirvana. Similarly, permanent sentient beings could not logically attain nirvana because they would be unchanging, and imperfect sentient beings could not attain nirvana because they would not have time to do so.

Another reason nirvana is not truly existent is that samsara and nirvana are dependently existent. There can only be samsara in dependence upon there being nirvana, and there can only be nirvana in dependence upon there being samsara. Since these two things exist only in mutual dependence, they do not inherently exist.

It is for these reasons that in An Authentic Portrait of the Middle Way, the Jetsun sang:

No meditator and no meditated,
No paths and levels traveled and no signs,
And no fruition bodies and no wisdoms,
And therefore there is no nirvana there,
Just designations using names and statements.

This whole passage is a logical reasoning that progresses in stages. First, Milarepa sang that there is no meditator. There is no meditator because there is no self. If there is no meditator, there cannot be any object of meditation, and if there is no object of meditation, there cannot be any path or any signs of progress on the path. If there is no path, there cannot be any fruition at the end of the path in the form of the fruition bodies and wisdoms (fn “Bodies” is a translation of the Sanskrit kaya; see footnotes below for a description of the three kayas.). If there are no fruition bodies or wisdoms, there is no such thing as nirvana. All of these terms then are just designations, mere names and imputations.

The Heart of Wisdom Sutra teaches that there is “no path, no wisdom, no attainment, and no nonattainment either.” The teaching that is neither attainment nor any absence of attainment is a perspective that we have to apply to the other subjects mentioned as well. For example, there is neither a path nor any absence of a path, there is no wisdom nor any absence of wisdom, and so forth. The ultimate nature of reality transcends all concepts of what it might be.

The people who believed in the true existence of things next asserted that samsara and nirvana exist because bondage and liberation exist, so Nagarjuna responded by analyzing bondage and liberation themselves in the fifth verse:

The aggregates, characterized by birth and decay,
Are not bound and do not become free.
Similarly, sentient beings
Are not bound and do not become free.

It is very easy to see that permanent aggregates or sentient beings could not be bound and later liberated, so it was not necessary for Nagarjuna to explicitly mention that in this verse. What he does examine is the belief that imperfect aggregates could first be bound and then liberated. That is a mistaken notion, because imperfect aggregates would have the qualities of arising and ceasing moment by moment, and therefore they would not have time to be bound and then liberated. They would not have time to have these two different states because as soon as they arose they would immediately cease. Similarly, permanent sentient beings could not be bound or liberated, and imperfect sentient beings could not be bound and liberated either.

Sometimes it seems that we are terribly bound by the mental afflictions of desire, anger, jealousy, and so forth. However, Nagarjuna analyzes this in the sixth verse and demonstrates that the mental afflictions do not bind anyone at all:

Do the mental afflictions bind?
They do not bind one already afflicted,
And they do not bind one who is not afflicted,
So when do they have the opportunity to bind anyone?

If we think that the mental afflictions truly bind us, then the question is, in whom does their activity of binding begin? It cannot begin in those who are already afflicted—sentient beings—because once they are bound by the afflictions, it makes no sense that this bondage would have to begin anew. Furthermore, it cannot begin in those who are not bound by afflictions, like the buddhas, because the afflictions have no power to bind such realized beings. Thus, the afflictions cannot begin to bind anyone in the first place, so how could anyone actually be bound by them? In genuine reality, therefore, the mental afflictions do not bind anyone. The trouble they seem to cause is a mere appearance without the slightest reality to it, and since the afflictions do not bind anyone in the first place, there is actually no liberation from them either. Thus, genuine reality transcends the notions of bondage and liberation. Within it, nothing is ever bound and nothing ever set free.

Since it is the case that bondage and liberation are not real, then it is also the case that samsara and nirvana do not truly exist either. This is what Nagarjuna teaches in the tenth and final verse:

There is no nirvana to be produced
And no samsara to be cleared away.
In essential reality, what samsara is there?
What is there that can be called nirvana?

Since samsara and nirvana do not truly exist, there is no nirvana to be produced or attained and no samsara to be eliminated.

That there is no samsara to clear away and no nirvana to be produced is the result of phenomena lacking inherent existence. If things truly existed, there would in fact be a samsara to get rid of and a nirvana to attain. If things truly existed, it would be like that, but since they are in fact empty of their own essence, there is no samsara that we need to get rid of and no nirvana that we need to attain.

In a dream there can be appearances that we like, which we call “good,” and other appearances that we do not like, which we call “bad.” If things in a dream actually existed, the good appearances that we like and the bad appearances that we do not like would also truly exist. Since nothing in a dream has any true nature, however, then actually there is no good or bad. For this reason, bondage and liberation, samsara and nirvana, are taught to be equality.

Since the true nature of reality is the equality of being bound and being set free, it is called “originally free” or “primordially free,” and the great siddhas have sung many songs of what the experience of realizing this original, primordial freedom is like. In fact, if you think, “Well, all of this intellectual analysis is just philosophy, just some type of intellectual exercise,” that is incorrect, because the lord of yogis Milarepa sang about the exact same thing in An Authentic Portrait of the Middle Way, a song he sang out of the wisdom arising from his meditation.

Furthermore, when in the teachings of Mahamudra and Dzogchen it is said that neither samsara nor nirvana actually exists, those explanations rely on precisely these reasonings to establish their validity. Without these reasonings, we could never prove those teachings to be correct.

PINGALA COMMENTARY

16/0 Birth and death (samsara) is not entirely without foundation. Within it there are surely living beings transmigrating (Lat. going and coming), or predispositions transmigrating. What are your reasons for saying that living being and predispositions are absolutely empty, and that there is no transmigration?

GARFIELD COMMENTARY

Chapter XVI Examination of Bondage

So there are no entities. But still, from a Buddhist perspective, we are bound: bound to our conceptions of entities and essence, bound to our selves, bound to objects, and principally, bound to cyclic existence itself. Surely, the opponent might ask, mustn’t the bondage that accounts for the illusions so ruthlessly analyzed in the previous chapter be intrinsically real? If not, what is the causal basis for all of these illusions and all of this suffering? In a Buddhist framework, this bondage to cyclic existence is instantiated in endless transmigration in samsāra, and freedom from bondage would be liberation from cyclic existence into nirvāṇa. We will postpone a discussion of the precise nature of that liberation and of nirvāṇa until we reach the chapters where that topic is discussed, namely, XXII and XXV. Nāgārjuna begins with an examination of transmigration and the entity that transmigrates:
Kārikā XVI.1

INADA (Skt):
Verse 1 - If mental conformations are transmigratory (i.e., as cyclic nature), they, as permanent entities, do not transmigrate. In fact, as impermanent entities, they also do not transmigrate. The same (relationship) also holds true for a sentient being.

JONES (Skt):
[1] If compounded things transmigrate, they are not permanent: phenomena that are permanent entities do not transmigrate. Nor do impermanent entities transmigrate. The same analysis applies to sentient beings.

KALUPAHANA (Skt):
If it is assumed that dispositions transmigrate, they would not transmigrate as permanent entities. Neither do they transmigrate as imminent entities. This method (of analysis) is applicable even in the case of a sentient being.

MCCAGNEY (Skt):
If dispositions transmigrate, they transmigrate as not permanent and they transmigrate as not impermanent. It is the same process in a sentient being.

NISHIJIMA (Skt?):
1. What have been accomplished, are wandering through in regulated situations,
And the regular situations, which do not wander, are this world. Slow walking and not being eternal are the Real situations, And actually this world is going on totally.

STRENG (Skt):
1. When conditioned elements (dispositions, conditioning?) continue to change (through rebirths?), they do not continue to change as eternal things (the same before and after). Likewise they do not continue to change as non-eternal things (different before and after). The arguments here is the same as for a living being.

BOCKING (Ch):
16v1 As for the predispositions transmigrating,
If they are permanent they should not transmigrate.
Nor should they if impermanent.
It is the same too, with living beings.

BATCHelor (Tb):
If it is said that impulses are “samsara”, if they were permanent, they would not move around. Even if impermanent, they would not move around. Sentient beings too are similar in this respect.

DOCTOR (Tb):
If it is claimed that formations cycle,
They cannot do so if permanent,
Nor can they if impermanent.
In the case of sentient beings, the steps are the same.
[XVI.1]

GARFIELD (Tb):
1. If compounded phenomena transmigrate,
They do not transmigrate as permanent.
If they are impermanent they do not transmigrate.
The same approach applies to sentient beings.

GARFIELD-SAMTEN (Tb):
1. Suppose compounded phenomena cycle:
If they are permanent, they do not cycle.
Even if they are impermanent, they do not cycle.
The same approach applies to sentient beings.

GOLDFIELD (Tb):
If one asks, “Do the aggregates wander?”
No, they do not, because permanent aggregates could not wander,
And impermanent aggregates could not wander either.
The same holds true for sentient beings. (1)

HAGEN (paraphrase):
16.1 If mental conformations transmigrate, they cannot do so as permanent entities. Likewise, if they are not permanent, they also cannot transmigrate. This same analysis applies to sentient beings.
16/1 If predispositions transmigrate within the six paths of samsara, do they transmigrate with permanent characteristics, or do they transmigrate with impermanent characteristics? Both are wrong. If they transmigrate with permanent characteristics, then there will be no continuity of characteristics through births and deaths, because they will be fixed, and because their self-nature will persist. If they transmigrate with impermanent characteristics, then, too, there will be no continuity of characteristics through transmigration and birth and death, since they will not be fixed, and will have no self-nature. In the case of living beings transmigrating, the same errors will apply. Further...

**PINGALA COMMENTARY**

Part Three, according to our analysis, consists of Chapter XVI-XXVI, and is different from Part Two in its treatment of the subject matter, even though the subject matter itself appears to be similar in them. While Part Two was concerned with the analysis of the elements of existence (dharma) showing how they are lacking in any substance (dharma-nairatmya) and how they are dependent upon arising (parti tyasamutpanna), Part Three is concerned more with the explanation of the human personality (pudgala) without falling into metaphysical traps. The human personality, both in bondage and in freedom, is analyzed here. The problems of “self” (atman), questions regarding moral responsibility and its associated concepts of time and fruitioning, are discussed first. Moving therefrom, Nagarjuna takes up the problem of the person who has attained freedom, the question of truths, of freedom itself, trying to deal once again with the metaphysical interpretations, until he reaches Chapter XXVI when he presents the most positive explanation of that human personality. The present chapter begins with one of the most popularly held misconceptions about the Buddha’s teachings pertaining to rebirth (punabhava). Even during the Buddha's day, when he spoke about rebirth being causally conditioned or “dependently arisen” (paticcasamuppanna), and enumerated several conditions that would contribute to it (M 1.265), one of his disciples picked out one among these conditions, namely, consciousness (vinnana), maintaining that it is “This very same consciousness that transmigrates, not another” (idam eva vinnanam sandhavati samsarati anannam, M 1.256; Chung 54.2 [Taisho 1.766c]). There certainly were many others, including some of his disciples, who continued to uphold such views throughout the centuries. The widespread prevalence of this view seems to indicate the adamant way in which people believed that for survival to take place there must be a permanent and eternal substance.

The Buddha’s answer to these believers in a permanent and eternal self or entity is that any factor that contributes to human survival, whether it is consciousness (vinnana) or disposition (sankhara), or action (kamma) or even grasping (upadana), all these are dependently arisen. For the Buddha, continuity can be explained in a more empirical way by following the principle of dependence of impermanent factors of existence, where on leaves an impression on another, thus eliminating the need for assuming a permanent entity.

Nagarjuna is here referring to two extremes, i.e., permanence (nitya) and impermanence (anitya), this latter being the momentary destruction (ksana-bhanga) advocated by the Buddhist metaphysicians. The former represents the Sarvastivada point of view; the latter, the Sautrantika.

If the dispositions (samskara) are presented as being either permanent or impermanent when they transmigrate, and if there is no mention of causal conditioning of these dispositions as well as the other factors, then the theories of eternalism and annihilationism are inevitable. Furthermore, such extreme conclusions are especially unavoidable when one factor or entity is singled out and shown to be the factor involved in transmigration.

**GARFIELD COMMENTARY**

1. (If compounded phenomena transmigrate)” fn 82. The Tibetan term translated as “transmigrate” (khar, Skt: sarvcsar) is a cognate of the term “samsrā,” or cyclic existence. It literally means go around and could also be translated with justice as “flow.” But the root idea here is that of cycling or circulating or participating in a phenomenal reality conceived as multicyclic. In this chapter, as in Chapter XIII, I opt to translate “du byed” as “compounded phenomena,” rather than, as Kalupahan.(1986) does. “Dispositions.” This follows the Tibetan commentarial tradition and makes better sense of the argument.)

Nāgārjuna sets up a by now familiar destructive dilemma: Either compounded phenomena - of which sentient beings, the beings who are bound are instances - are permanent or impermanent. Let us just consider the compounded phenomena who are sentient and hence who transmigrate: If they are thought of as permanent, they cannot transmigrate because transmigration involves, by definition, change. And what is permanent, as we have seen, cannot change. But if they are impermanent, then they do not endure through time and, hence, cannot transmigrate. So no sentient being considered as an inherent entity can be conceived of as a transmigrator in cyclic existence.
Kārikā XVI.2

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 2 - If man's individuality is transmigratory with respect to the five-fold realms of skandhas, ayatanas and dhatus, then it is non-existent. What then does transmigrate? - Note: Reference is made to the five-fold function in man's action involving all the 5 skandhas, 12 ayatanas, and 18 dhatus. These activities are samsaric or migratory in nature.

JONES (Skt):
[2] If we search for a person who transmigrates in the fivefold way (i.e., the analysis of Chapter 22, verses 1-7) in the aggregates, the fields of the senses, and the elements, no one is there - what then transmigrates?

KALUPAHANA (Skt):
It may be assumed that a person transmigrates. Yet, such a person, sought for in the fivefold way in the aggregates, spheres (of sense) and elements, does not exist. Who then will transmigrate?

MCCAGNEY (Skt):
If a person transmigrates fivefold in the elements, sense spheres and personality skeins pursuing what does not exist, who will transmigrate?

NISHIJIMA (Skt?):
2. When a personal substance is wandering,
The five kinds of aggregates, that is, matter, perception, recognition, action, and consideration, are relying upon material element as the place of taking a rest.
Those five kinds of necessary material elements can never become the cause of wandering through.
How shall we stop such kind of wandering through at all?

STRENG (Skt):
2. If the personality would change when it is sought five ways in the "groups" (skandha), "bases of sense perception" (ayatana), and the "irreducible elements" (dhatu), Then it does not exist. Who is it who will change (i.e. transmigrate)?
PINGALA COMMENTARY

16/2 Birth and death, the skandhas, realms and entrances all mean the same thing. If it is living beings who transmigrate within these skandhas, realms and avenues, we have searched in the chapter on fire and fuel 213 for such living beings in five ways and they are unattainable. Who is it that transmigrates in the skandhas, the realms and the avenues?

Further:

KALUPAHANA COMMENTARY

It is interesting to note that in the previous statement Nagarjuna rejects only the view that dispositions transmigrate. He did not deny the dispositions themselves. However, in the present verse Nagarjuna maintains that if a transmigrating "person" (pudgala) is sought for (mrgyamano) in the aggregates, faculties, and elements (as Nagarjuna did in the last fifteen chapters) one does not discover him. The "person" referred to here is no ordinary person. This person should possess the same characteristic which, according to the previous verse, made it impossible for the "dispositions" to transmigrate, namely, permanence. Inada seems to miss the meaning of the term mrgyamana in his translation of this verse.

GARFIELD COMMENTARY

2. Given that no inherently existent person can be found upon analysis as the bearer of the aggregates, as identical to the aggregates, as different from the aggregates, as the collection of the aggregates, or as the arrangement of the aggregates, and mutatis mutandis for other possible modes of analysis in terms of domains of knowledge or experience and in terms of basic elements, it follows that there is no inherently existent subject of transmigration. If the transmigrator cannot be identified on analysis, though, neither can the transmigration itself. It will follow that there is no inherently existent transmigration and, hence, no inherently existent bondage to cyclic existence.

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 3 - Anything moving from one (sensual) grasping to another will be without a body or form. How does a bodiless or non-grasping thing ever transmigrate?

JONES (Skt):
[3] Transmigrating from acquiring one rebirth to acquiring another leads only to destruction. Who could transmigrate with destruction or acquisition?

KALUPAHANA (Skt):
Moving from one form of grasping to another, there would be other-becoming. Who is this person who has ceased to be and is [therefore] non-grasping? Wherein does he transmigrate?

MCCAGNEY (Skt):
Migrating from grasping to grasping would be annihilation. Who is destroyed and [thus] not grasping? Who is he who will transmigrate?

NISHIJIMA (Skt?):
3. Avoiding action, which we want to do, but at the same time we would do what we want to do. There might be favorite job, which can exist everywhere. At the same time there are many jobs, which we do not like to do. What is just the job, which we like to do?

STRENG (Skt):
3. Moving from "acquisition" (upadana) to "acquisition" would be "that which is without existence" (vibhava). Who is he who is without existence and without acquisition? To what will he change (i.e. transmigrate)?

BOCKING (Ch):
16v3 If something transmigrates from a body to a body, It will be bodiless. If it has no body. Then there will be no transmigration.

BATCHelor (Tb):
If one moves around in having clung [to something] and then clinging [to something else], there would be no becoming. If there were no clinging and no becoming, who would move around?

DOCTOR (Tb):
If there is cycling from appropriation to appropriation, Then there cannot be any becoming. Without becoming there can be no appropriation, So what kind of cycling is this? [XVI.3]

GARFIELD (Tb):
3. If one transmigrates from grasping to grasping, then One would be nonexistent. Neither existent nor grasping, Who could this transmigrator be?

GARFIELD-SAMTEN (Tb):
3. If one transmigrated from Appropriation to appropriation, there would be no life. If there were neither life nor appropriator, What would transmigrate?

GOLDFIELD (Tb):
If the individual really wandered from one existence to the next, Then in between existences, there would be no existence! With no existence and no appropriated aggregates, What individual could possibly be wandering? (3)

HAGEN (paraphrase):
16.3 To move from grasping to grasping, is to become other. But who, in ceasing to be and without grasping, transmigrates?
16/3 If living beings transmigrate, do they transmigrate with a body, or do they transmigrate without a body? Neither is correct, and why? If there is transmigration with a body, then (the living being) will go from one body to another body, and if so, the transmigrator will not have a body. Moreover, if the body already existed, (the living being) would not have any further need to pass from body to body, but if no body existed beforehand, he would not exist, and being non-existent, how could he transmigrate, be born, or die?

Question. The sutras say that there is nirvana, and the extinction of all suffering. Surely this extinction must be the extinction of the predispositions, or the extinction of living beings?

Reply. Both are incorrect, and why?

Understanding the causal process in a linear way one runs into difficulties in explaining "grasping" (upadana) as a reason, not only for transmigration but also for conceptualizing a person. While grasping was considered an important cause for the unhappiness and suffering (dukkha), as also the rebirth of a human being, "nongrasping" (anupadana) was a condition for happiness (sukha) in this life and for not being reborn in a future life. In addition, even the very notion of a substantial "self" (atta) is supposed to be the result of grasping on to the five aggregates (upadanakkhanaha).

However, if grasping is singled out and explained in a linear way, then moving from one moment of grasping to another, one will be faced with other-becoming (vibhava). To explain this broken or interrupted series of grasplings, one needs to assume that there is something to be grasped so that grasping can continue. The aggregates do not continuously provide a foundation for grasping. They arise and cease. With such arising and ceasing, grasping itself would be interrupted. This means that grasping that has come to be non-existent (vibhava) would also be non-grasping (anupadana). If so, where is this so-called permanent entity and where does he transmigrate?

3. ("grasping" fn 83. This term (nye-bar-len-pa) is used in a quite general sense: To grasp could be to cling to a possession, to regard attributes or experiences as part of oneself, or to grasp an object in consciousness.)

"Grasping" here refers primarily to grasping the aggregates as one’s self. Transmigration - or for that matter continuation within one life, which from the Madhyamika perspective is exactly the same kind of process - involves moving from grasping one set of phenomena as one’s self to grasping another in the same way. That is one of the most fundamental delusions from a Buddhist standpoint. But grasping can also be the grasping of an object as an object, or the clinging to possessions. Life in saṃsāra, Nāgārjuna would insist, can equally well be characterized in any of these ways. But if in order to exist as an individual one would have to retain one’s identity over time since on this view it is of the very nature of cyclic existence that one constantly changes from one moment to another, then it would follow that no subject exists. But if there is no subject of grasping, there can be no grasping. So, on the supposition that to exist and to transmigrate is to exist as a continuing entity, there is no way to make sense of the phenomenal world. So an inherently existent grasper, posited in order to guarantee the reality of cyclic existence, in fact makes the reality of cyclic existence incoherent.
INADA (Skt):
Verse 4 - Why is it that nirvana (or quiescence) is not possible with mental conformations? Also, why is it that even a sentient being is not possible of nirvana?

JONES (Skt):
[4] Nirvana does not occur in any way for the compounded, nor does nirvana occur in any way for a sentient being.

KALUPAHANA (Skt):
The cessation of dispositions is somehow not appropriate. The cessation even of a sentient being is also not appropriate in any way.

MCCAGNEY (Skt):
How does the liberation from dispositions even happen? How does the liberation of a sentient being also happen?

NISHIJIMA (Skt?):
4. The balanced state of the autonomic nervous system does not belong perfection.
How is it possible for such a situation to occur actually? The balanced state of the autonomic nervous system does never belong to Reality itself.
How is it possible for Reality to manifest itself newly?

STRENG (Skt):
4. The final cessation (nirvana) of the conditioned elements certainly is not possible at all. Nor is the final cessation of even a living being possible at all.

ROBINSON (Skt):
In no way is nirvana of the samskaras a fact; in no way is nirvana of a living being a fact.

INADA (Skt):
Verse 4 - Why is it that nirvana (or quiescence) is not possible with mental conformatons? Also, why is it that even a sentient being is not possible of nirvana?

BOCKING (Ch):
16v4 The predispositions becoming extinct?
Such would never be the case.
Living beings becoming extinct?
This too could not be right.

BATCHelor (Tb):
It is in no way feasible that impulses go beyond misery. And it is in no way feasible that living beings go beyond misery.

DOCTOR (Tb):
Formations that transcend suffering Do not make sense in any way.
Sentient beings that transcend suffering Do not make sense in any way either. [XVI.4]

GARFIELD (Tb):
4. How could compounded phenomena pass into nirvana? That would not be tenable.
How could a sentient being pass into nirvana? That would not be tenable.

GARFIELD-SAMTEN (Tb):
4. It is not tenable in any way For compounded phenomena to pass into nirvana. It is not tenable in any way For a sentient being to pass into nirvana.

GOLDFIELD (Tb):
No matter how they might be. It would be untenable for the aggregates to attain nirvana. No matter how they might be, It would be untenable for sentient beings to attain nirvana. (4)

HAGEN (paraphrase):
16.4 The cessation (release) of dispositions is not intelligible. The cessation of a sentient being is also not intelligible.
PINGALA COMMENTARY

16/4 You say that either the predispositions cease or the living being ceases, but we have already answered these assertions. Predispositions have no nature. Living beings too, you can search for in various ways in samsara and transmigration but you will not be able to find them. Therefore, predispositions do not cease, nor do living beings cease.

Question: If this is true, then there is no bondage, and no liberation, since no foundation can be found for them.

Reply:

KALUPAHANA COMMENTARY

The Buddha left unanswered the question regarding the nature of a "freed person" (tathagata) after death (parammarana). Nagarjuna will return to this question in his final chapter, "The Examination of Views" (Drsti-pariksa). In the present context, Nagarjuna is concerned mostly with the living person. The previous verses referred to the metaphysical views regarding a living person in bondage. The present verse is, therefore, devoted to an examination of the metaphysical view pertaining to a living person who has attained freedom. Speaking of that freedom, Nagarjuna does not want to assume that it is the cessation of dispositions, or of a "person." He was probably aware that the Buddha spoke of the pacification of dispositions (sankharaupasama) in relation to a living person who has attained freedom. He was also aware that the Buddha did not advocate the annihilation of a sentient being (sattva, see commentary of XIII. 1). Hence his present statement.

GARFIELD COMMENTARY

4. If compounded phenomena are permanent, grasping is permanent. And if grasping is permanent, saṃsāra is permanent. And if saṃsāra is permanent, then nirvāṇa is impossible. But the philosopher who is positing inherently existent bondage is doing so in order to defend a Buddhist perspective on cyclic existence and nirvāṇa. This is precisely the motivation for the reification - the worry that saṃsāra and nirvāṇa are, if not inherently existent, nonexistent. So this conclusion is inadmissible for such an opponent.
Kārikā XVI.5

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 5 - The mental conformations are endowed with the characteristics of production and extinction, and thus cannot be bound or attain release. Similarly, a sentient being cannot be bound or attain release.

JONES (Skt):
[5] What is compounded is subject to arising and passing away and thus neither becomes bound nor released. So too, a sentient being is subject to arising and passing away and thus neither becomes bound nor released.

KALUPAHANA (Skt):
Dispositions that are of the nature of uprising and ceasing are neither bound nor released. A sentient being, like the foregoing, is neither bound nor released.

MCCAGNEY (Skt):
Rising and ceasing events are neither bound nor free. Dispositions are neither bound by nor released by the previously mentioned sentient being.

NISHIJIMA (Skt?):
5. Not destroying life, but not to be free, Appearance, passing through, and Universal morals. The accomplishment as before is Reality. Not to destroy, but not to make free.

STRENG (Skt):
5. The conditioned elements, whose nature (dharma) is arising and destruction, neither are bound nor released. Likewise a living being neither is bound nor released.

BOCKING (Ch):
16v5 Predispositions have the characteristics of arising and ceasing.
Not bound, and not liberated.
Living beings too, as formerly explained.
Are not bound and not liberated.

BATCHelor (Tb):
Impulses that have the properties of being born and dying are not bound and will not be freed. In the same way as above living beings too are not bound and will not be freed.

DOCTOR (Tb):
Formations that are subject to arising and ceasing are not bound and will not be freed.
As before, sentient beings as well are not bound and will not be freed. [XVI.5]

GARFIELD (Tb):
5. All compounded phenomena, as arising and ceasing things, are not bound and not released.
For this reason a sentient being is not bound, not released.

GARFIELD-SAMTEN (Tb):
5. Compounded phenomena that arise and cease are neither bound nor liberated.
And in the same way, sentient beings are neither bound nor liberated.

GOLDFIELD (Tb):
The aggregates, characterized by birth and decay, are not bound and do not become free. Similarly, sentient beings are not bound and do not become free. (5)

HAGEN (paraphrase):
16.5 Dispositions, having the nature of coming and going, are neither bound nor released. Like so, a sentient being is neither bound nor released.
PINGALA COMMENTARY

16/5 You say that predispositions and living beings have bondage and liberation, but this is not the case. Since predispositions arise and cease instant by instant, they cannot be bound or liberated. It has already been explained that you can search for living beings in five ways but you will not find them. How can they have bondage or liberation?

Further:

KALUPAHANA COMMENTARY

According to the substantialist way of thinking, an eternal self or soul (atman) is in bondage because it is bound to various ephemeral factors such as the psychophysical personality (see. Bhagavadgita, Chapter XIII). Such a self has to break away from its bondage in order to be free. Having rejected a permanent entity like the self, if the Buddhists were to consider the dispositions as the condition for bondage, such dispositions, being of the nature of arising and ceasing, could neither be bound nor freed. In other words, one cannot look at the dispositions through the eyes of the substantialist. The same can be said of a sentient being (sattva).

GARFIELD COMMENTARY

5. Neither bondage nor release can be seen as inherently existent, nor as inherent properties of sentient beings. This is the conclusion of the argument that follows. Nāgārjuna first considers bondage as an inherent property, and then liberation.
INADA (Skt):
Verse 6 - If (sensual) grasping per se is bound or restricted, then the grasping entity will be free from bonds. A non-grasping entity will also be free from bonds. Then, in what abiding condition is (one) bound?

JONES (Skt):
[6] If the acquisition of a new rebirth is the bondage of the cycling of rebirths, then what possesses the acquisition does not become bound and what is without the acquisition does not become bound - in what state then is one bound?

KALUPAHANA (Skt):
If grasping were to be considered a bondage, one who is with grasping is not being bound. Neither is one without grasping being bound. A person in which state is then bound?

MCCAGNEY (Skt):
If grasping is bondage, he [who is grasping] is not bound by grasping nor is he bound by not grasping. But who remains bound by grasping?

NISHIJIMA (Skt?):
6. Restrictions seem to be just our perceptions. But the Real perceptions can never be Restriction. Just never other than perception does restrict, And what kind of constancy would be destroyed at that time?

STRENG (Skt):
6. If the acquisition (upadana) were the "binding," that one having the acquisition is not bound; Nor is that one not having the acquisition bound. Then in what condition is he bound?

ROBINSON (Skt):
If appropriation is bondage, then one who has appropriation is not bound; one without appropriation is not bound; then how is any state bound?

BOCKING (Ch):
16v6 If bondage means the body, Then having a body is not bondage. Not having a body also is not bondage. How then can there be bondage?

BATCHELOR (Tb):
If clinging binds, the one who has clinging would not be bound. And there would be no bondage without clinging. In what state is then bound?

DOCTOR (Tb):
If bondage is due to appropriation, Since nothing is bound in the presence of appropriation, And there is no bondage in the absence of appropriation, When, then, is it that bondage occurs? [XVI.6]

GARFIELD (Tb):
6. If grasping were bondage, Then the one who is grasping would not be bound. But one who is not grasping is not bound. In what circumstances will one be bound?

GARFIELD-SAMTEN (Tb):
6. If appropriation were bondage, Then the appropriator would not be bound. But without appropriation, there is no bondage. So, in what circumstances would one be bound?

GOLDFIELD (Tb):
Do the mental afflictions bind? They do not bind one already afflicted, And they do not bind one who is not afflicted. So when do they have the opportunity to bind anyone? (6)

HAGEN (paraphrase):
16.6 If grasping were bondage, then the one who is grasping is not bound. Neither is the one who is not grasping bound. In which state, then, is a person bound?
PINGALA COMMENTARY

16/6 If you say that bondage means (to have) the body of the five skandhas, then if a living being already has the five skandhas, he cannot be bound, and why? Because this would be one person having two bodies. Having no body he cannot be bound either, and why? If he has no body, then he has no five skandhas, and having no five skandhas is emptiness, so how could there be bondage? There is no further third (entity) which could be bound.

Further.

KALUPAHANA COMMENTARY

The substance/attribute distinction that emerges from the statement such as "one who is with grasping" (saupadano) militates against saying that he is being bound (badhyate). In this sense, the attribute is already implicit in the substance and there is no point in piling up another identical attribute on it. If the substance is without attribute (as in the case of an-upadana), then there seems to be no way in which one can attribute an attribute to it. They could always remain independent. These difficulties relating to identity and difference give rise to the question regarding the status of the person who is being bound.

GARFIELD COMMENTARY

6. If grasping is identified with the property of bondage, then the continuity of bondage across transmigration is inexplicable: The problem is that grasping is not only the cause, but is also the effect of bondage. Delusion by which we are bound, from a Buddhist perspective, leads us to grasp at things; that grasping perpetuates delusion and bondage. To the extent that we grasp onto external phenomena or onto the self as inherently existent, we are bound to the delusions that constitute’ and ground saṃsāra. To the extent that we are bound in delusion, we continue to grasp. The bondage is hence not only conditioned by, but overarches, particular instances of grasping. But we don’t want to infer from the fact that grasping and bondage are not identical that the relinquishing of all grasping would not free one. The task is then to figure out the nature of bondage, which must be conceived as relational.
Kārikā XVI.7

badhniyād bandhanaṃ kāmaṃ bandhyāt pūrvaṃ bhaved yadi |  
na cāsti tac cheṣam uktaṃ gamyamānagatāgataiḥ ||7||
ruò ké fù xiān fù zé yīng fù ké fù

| (7)gal te bciṅ bya’i sṅa rol na |  | ’chiṅ ba yod na ’chiṅ la rag |  
| de yaṅ med de lhag ma ni |  | soṅ daṅ ma soṅ bgom pas bstan |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 7 - If bonds exist prior to the bondage, they could bind freely or at will. But this is not so. The other matters have already been discussed with respect to gamyamana, gata and agata. - Note: The last remark refers to Chapter II where the problems on the three aspects are minutely discussed.

JONES (Skt):
[7] If we assume that bondage binds, then bondage does not exist before the binding of what is to be bound. The rest has been explained in the analysis of motion, the unmoved, and the mover in Chapter 2.

KALUPAHANA (Skt):
If it is assumed that bondage exists prior to the binding of that which is to be bound, that does not exist. The rest has been explained by [the analysis of] present moving, the moved and the not moved.

MCCAGNEY (Skt):
If bondage would be prior to what is bound, freely it would bind what does not exist. The rest is discussed by going, gone, and not gone.

NISHIJIMA (Skt?):
7. When slaughter has been done as far as being desired, Then just before, an arrest would be done at that time. And such kind of verbal talks does never exist, As if the same talk as “going,” “have gone,” and “will go,” in the Chapter 2.

STRENG (Skt):
7. Certainly if the "binding" would exist before "that which is bound," then it must bind; But that does not exist. The remaining analysis is stated in the analysis of "the present going to," "that which has already gone to" and "that which has not yet gone to."

ROBINSON (Skt):
If bondage existed before the bound, then it might bind; but that is not so. The rest is stated according to the case of the being-gone, the gone, and the ungone.
16/7 If, as you assert, bondage exists prior to the one who is bound, then it ought to bind the one who is bound, but in reality no prior bondage exists, separate from the one who is bound. Therefore, you cannot say that the living being is in bondage, nor can you say that the living being is the one who is bound and that the five skandhas are the bondage. Nor can you say that, within the five skandhas, the afflictions are the bondage and the remainder, the five skandhas, are what is bound. None of these is correct, and why? If the living being existed separately, prior to the five skandhas, then the living being would be bound by the five skandhas, but in reality there is no separate being apart from the five skandhas. If the afflictions existed separately, apart from the five skandhas, then the five skandhas would be bound by the afflictions, but in reality there are no separate afflictions apart from the five skandhas.

(21b2) Moreover, as is explained in the chapter on going and coming, a past going does not go, a future going does not go, and a moment of going does not go. In the same way a future bondage does not bind, a past bondage does not bind, and a moment of bondage does not bind. There is, moreover, no liberation either, and why?

---

If, in answer to the question raised in the previous verse, it is said that bondage exists prior to someone being bound, such bondage, according to Nagarjuna, does not exist. The analysis in Chapter II as well as in Chapter X can be utilized here to refute the implications of a substantialist view of bondage.

7. The only way that bondage itself could be an inherently existent phenomenon would be if it could exist prior to and independently of a bound sentient being. But then the case would be strictly analogous to motion (as well as to several other analysands we have considered so far). That is, just as there is no motion apart from the mover, there is no bondage apart from the bound. The argument can be applied in a strictly parallel way.
Kārikā XVI.8

Inada (Skt):
Verse 8 - In truth, then, a bound entity cannot be released and it is so also with an unbound entity. If by chance a bound entity is in the process of being released, then bondage and release will be simultaneous phenomena.

Jones (Skt):
[8] The bound does not become released from the cycling of rebirths and likewise the unbound does not become released. If the bound were being released, bondage to the cycling of rebirth and the liberation from it would occur simultaneously.

Kalupahan (Skt):
One who is bound is not released, nor is one who is not bound freed. When there is releasing of one who is bound, then there would be simultaneous occurrence of bondage and release.

Mccagney (Skt):
Therefore, the bound is not freed by the unbound, nor is the unbound freed by the bound. In presently freeing the bound, bondage and freedom would be simultaneous.

Nishijima (Skt?):
8. As far as Gautama Buddha does not permitted, The states without arrest have never been permitted. Aha! So, in the case of Gautama Buddha, the abbreviation might be permitted. And so the bondage might be in liberation.

Streng (Skt):
8. Therefore, "that which is bound" is not released and "that which is not bound" is likewise not released. If "that which is bound" were released, "being bound" and "release" would exist simultaneously.

Robinson (Skt):
The bound one is not released and the unbound one is not released, either; if the bound one were being released, bondage and release would be simultaneous.
PINGALA COMMENTARY

16/8 One who is bound does not have liberation, and why? Because he is already bound. One who is not bound does not have liberation either, and why? Because he is not bound. And if you say that there is liberation in the moment of bondage, then bondage and liberation would be simultaneous, and this is not right, since bondage and liberation are mutually opposed.

Question: There are people who, cultivating the Way, manifestly enter nirvana and achieve liberation. How can you say that they do not exist?

Reply:

KALUPAHANA COMMENTARY

One who is substantially bound (baddha), i.e., one who has the self-nature (svabhava) of bondage, cannot be freed. Similarly, it is meaningless to speak of someone who is absolutely free (a-baddha), i.e., whose self-nature is freedom, as one being freed. If one were to speak of someone who is already bound and is being freed, then bondage and freedom would be simultaneous.

GARFIELD COMMENTARY

8. Nāgārjuna then recalls another argument from Chapter II, the argument against the possibility of the beginning of motion. There, Nāgārjuna argued that motion could not begin in a stationary object since it is not moving, nor in a moving object since it is already in motion. And there can be no moment when a thing is both moving and stationary, nor any moment when an entity is neither. Similarly, nirvāṇa cannot arise in one in saṃsāra, nor in one already in nirvāṇa. One cannot be simultaneously in saṃsāra and nirvāṇa. Nor is there any third option.

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 9 - Those who delight in maintaining, "Without the grasping, I will realize nirvana; Nirvana is in me;" are the very ones with the greatest grasping.

JONES (Skt):
[9] "Free of acquiring a new rebirth, I shall attain nirvana - nirvana will become mine!" - for those who cling like this, there is a great clinging and acquisition.

KALUPAHANA (Skt):
"Non-grasping, I shall be free. Freedom will then be mine." For whomsoever there is grasping in this manner, that will be a gigantic grasping.

MCCAGNEY (Skt):
[For] those who say, "Nirvāṇa will be mine," their grasping of the nongrasping of freedom is a gigantic grasping.

NISHIJIMA (Skt?):
9. In the case that I will not live in this World, Suggests that the balance of the autonomic nervous system might be possible to exist in me in future. From such situations the present maintenance like that might be Real, And the appearance of the real facts are the very Great Facts.

STRENG (Skt):
9. "I will be released without any acquisition." "Nirvana will be mine." Those who understand thus hold too much to "a holding on" i.e., both to the acquisition of karma, and to a viewpoint.

ROBINSON (Skt):
Those who grasp the notion, "I will enter nirvana when free from appropriation, nirvana will be mine," have a great grasp on appropriation.

BOCKING (Ch):
16v9 "If we do not receive dharmas We will attain nirvana". Such persons as these Are themselves the ones in bondage to receiving.

BATCHelor (Tb):
"I, without clinging, am beyond misery. Nirvana is mine." Those who grasp in that way have great grasping and clinging.

DOCTOR (Tb):
"Without appropriation, I shall transcend suffering; The transcendence of suffering, that shall be mine!" Those who grasp in this way Are engaged in severe appropriation. [XVI.9]

GARFIELD (Tb):
9. "I, without grasping, will pass beyond sorrow, And I will attain nirvana," one says. Whoever grasps like this Has a great grasping.

GARFIELD-SAMTEN (Tb):
9. "I, without appropriation, will attain nirvana, And nirvana will be mine," one says. Whoever grasps like this Grasps mightily to appropriation.

HAGEN (paraphrase):
16.9  "When I gain enlightenment, I'll be free of sorrow, I'll attain Nirvana." Those who think in this way, grasp with the greatest grasping,
PINGALA COMMENTARY

16/9 If a person produces this thought - "I shall free myself from receiving and attain nirvana", this person is the very one who is in bondage to receiving.

Further.

KALUPAHANA COMMENTARY

Nagarjuna is here presenting a fundamental idea expressed in the early discourses (see M 1.145-151, Rathavinita-sutta) as well as in the Prajnaparamita literature, especially the Vajracchedika. It is the idea that one cannot be freed and still cling to freedom, let alone bragging about it. However, one need not construe the Buddha’s statement at M 1.171 (Ariyapariyesana-sutta) as an instance of such bragging. That statement was made by the Buddha in response to a question raised by Upaka at a time when the only freed one in the world was the Buddha himself. He was simply describing to Upaka the absence of any one who had attained freedom, in the sense in which the Buddha understood the conception of freedom. Whether the Buddha would make such a statement subsequent to the preaching of the first sermon and the attainment of enlightenment and freedom by his first five disciples is extremely doubtful.

GARFIELD COMMENTARY

9. There is a stylistic feature in this verse that deserves note: The pronoun “I” (bdag) is uncharacteristically fronted in the sentence and is emphasized with the focus particle (mi). Nāgārjuna is hence drawing attention to the fact that the individual in whose mouth this verse is put is grasping to his own identity as an agent and as a continuing subject both through samsāra and into nirvāṇa. This grasping onto self, he suggests, precludes the nirvāṇa the speaker craves. But Nāgārjuna presents another argument as well: It is also possible to grasp after nirvāṇa - to reify it as a state and to crave it as a phenomenon inherently different from samsāra and as highly desirable since it is indeed characterized as liberation from suffering. But this grasping onto the end of grasping is itself a grasping and so precludes the attainment of nirvāṇa. Nirvāṇa requires, according to Nāgārjuna, a complete cessation of grasping, including that onto nirvāṇa itself. While that might seem paradoxical, it is not: To grasp onto something in this sense requires, inter alia, that one reify it. By refusing to reify liberation, in virtue of seeing it as the corelative of bondage, which itself is not inherently existent, it is possible to pursue the path to liberation without creating at the same time a huge obstacle on that path - the root delusion with regard to nirvāṇa itself. Possible, that is, but perhaps not that easy. (fn 84. In Yuktisastikā 11, Nāgārjuna asserts “This is nirvāṇa in this very life!” He emphatically rejects the positing of nirvāṇa as a distinct entity divorced from samsāra. This will emerge much more explicitly in the discussion of nirvāṇa in XXV below.)

(fn 85. It is also important to note that this indicates a difference in kind between grasping for nirvāṇa and an aspiration to attain buddhahood. For it is central to Mahayana Buddhist practice to develop the altruistic aspiration to attain buddhahood for the sake of all sentient beings - to enhance one’s knowledge, skill, and compassion so as to maximally benefit others. But this aspiration can be cultivated without reification of self, of the goal, or of the objects of compassion or action and, hence, without grasping of the kind at issue.)

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 10 - Where nirvana is not (subject to) establishment and samsara not (subject to) disengagement, how will there be any conception of nirvana and samsara.

JONES (Skt):
[10] Where there is neither the transfer to “nirvana” nor the elimination of “transmigration,” what entity “nirvana” and what entity transmigration is there being fabricated?

KALUPAHANA (Skt):
Wherein there is neither the attribution of freedom nor the elimination of the life-process, what is it that is being discriminated as life-process or as freedom?

MCCAGNEY (Skt):
Neither is nirvāṇa only sāṃsāra nor is sāṃsāra removed away.

Where there is nirvāṇa, there is sāṃsāra. Which is falsely discriminated from which?

NISHIJIMA (Skt?):
10. The balanced state of the autonomic nervous system, is not the place, where we should enter,

But the place for wandering is not the place, where we should get out from it.

There something, which is not clear, and here the wandering without any stability.

And in the balanced autonomic nervous system, there is something, which is not decisive.

STRENG (Skt):
10. Where there is a super-imposing of nirvana on something else, nor a removal of existence-in-flux, What is the existence-in-flux there? What nirvana is imagined?

ROBINSON (Skt):
Where there is no Impostion of nirvana and no repudiation of samsara, what samsara and what nirvana are conceived?

BOCKING (Ch):
16v10 Nirvana is not something special, Separate from birth and death. The meaning of thusness being thus, How can there be any distinctions?

BATCHelor (Tb):
When nirvana is not born and samsara not eliminated, then what is samsara? And what is considered as nirvana?

DOCTOR (Tb):
Where the transcendence of suffering is not produced And cyclic existence is not dispelled, How to conceive of cyclic existence, And how of the transcendence of suffering? [XVI.10]

GARFIELD (Tb):
10. When you can't bring about nirvana, Nor the purification of cyclic existence, What is cyclic existence, And what is the nirvana you examine?

GARFIELD-SAMTEN (Tb):
10. When one can bring about neither nirvana, Nor the elimination of cyclic existence, What are the cyclic existence And the nirvana one imagines?

GOLDFIELD (Tb):
There is no nirvana to be produced And no samsara to be cleared away. In essential reality, what samsara is there? What is there that can be called nirvana? (10)

HAGEN (paraphrase):
16.10 When Nirvana cannot be established and samsara cannot be eliminated, what is referred to as Nirvana and samsara?
PINGALA COMMENTARY

16/10 In the highest sense of the real character of all dharmas, we do not speak of a special nirvana which exists apart from birth and death. As the sutras say; "nirvana is samsara, samsara is nirvana". Within this true character of all dharmas how can you say 'This is samsara, this is nirvana'?

KALUPAHANA COMMENTARY

This concluding verse provides a beautiful summary of the metaphysical views relating to a life of bondage (samsara) and freedom (nirvana) and can serve as a key to unlocking the mysteries surrounding the chapters to come. The constant debates among modern scholars as to the implications of Nagarjuna's famous chapter on Nirvana (XXV) can easily be eliminated if we are to keep in mind the nature of the theories pertaining to bondage and freedom that Nagarjuna had to deal with.

Presented in the substantialist mould, freedom becomes an attribution (samaropa), while the life-process with its suffering requires elimination (apakarsana). No such freedom or life process is accepted by Nagarjuna. Such a description was too metaphysical for him.

Attribution and elimination imply the existence of a neutral substance to which freedom can be attributed or strung on to, while bondage in the form of life-process can be wrestled away from. If no neutral substance is recognized, there could be two other ways of explaining freedom and bondage. First, it is possible to say that the substance is inherently free and that it is held in bondage by adventitious elements. Thus, the Upanisadic or the Brahmanical notion of "self" which is pure and luminous is understood as something kept in bondage to the psychophysical personality, like a sword kept in its sheath. The originally pure mind (prakrti-prabhasvaracitta) of the Buddhist metaphysician (see Lankavatara, ed. Nanjio, 1956,) resembles the Upanisadic and Brahmanical views of the "self." Secondly, if such an originally pure entity is not acceptable, then it is possible to argue that what is called the life-process (samsara) is completely annihilated and a completely new process of freedom is initiated. The former has nothing to do with the latter. Indeed, one cannot ignore the solutions offered by the Buddhist metaphysicians when they came to analyse the personal stream of becoming (bhava-sota) into discrete entities. The concepts of "attainment" (prapti) and "non-attainment" (a-prapti) provided a solution that is almost identical with those mentioned above. Nirvana thus becomes a prapti that fall into the stream (sva-samtana-patita) and at that point samsara becomes an a-prpti.

As pointed out in the Introduction, the Buddha's conceptions of bondage and freedom (and this would also apply to Nagarjuna's views) have nothing to do with any one of the alternative explanations mentioned above.

GARFIELD COMMENTARY

10. Anyone who is subject to either of these pathologies - grasping to one’s self or grasping for nirvāṇa - is incapable of attaining that peace. So, Nāgārjuna urges, in order to make such progress possible, one should reexamine one’s conception of the nature of phenomena in cyclic existence (both oneself and external phenomena) and nirvāṇa itself. By coming to see their ultimate emptiness, he suggests, one can relinquish that grasping and attain that liberation. Neither nirvāṇa nor samsāra are inherently existent. Ultimately both are nonexistent. So, what, Nāgārjuna asks rhetorically, are they? The answer is that they are conventionally real, dependently arisen phenomena that are empty of inherent existence. In virtue of that fact, it is possible to escape the former and to attain the latter. But that escape would be impossible were they inherently existent and is impossible for anyone who takes them to be so,

Chapter XVII: Examination of Actions and Their Fruits
TSONG-KHA-PÁ (Outline, Explanation, Summary)

OUTLINE:

We are still in the second part of the section on the two selflessnesses, the demonstration that mere phenomena are essentially empty. We are still in the second of its two sections: the refutation of the argument for the essential existence of things. We have completed the first two parts of the three parts of that section: the refutation of contact and the refutation of the appropriation of causes and conditions as essentially existent. We are still in the third part of this section, the refutation of the essential existence of bondage. We have completed the first of its two sections: the main point. [297:14] This chapter comprises the second part: the refutation of the argument for the essential existence of liberation and bondage.
EXPLANATION:

This section has two parts: the argument and the reply.

SUMMARY:

These arguments refute the essential existence of agent, action, afflictions, their effects, and the experiencing of those effects, etc. They should be understood as showing that it is not at all tenable to posit them in the context of inherent existence. So such things as agents are tenable only in the following sense: Although they are empty of existence through their own characteristics, they appear to exist in this way: just like dreams, illusions, emanations, and cities of gandharvas.

INADA (Chapter Introductions)

CHAPTER XVII - Examination of Action and Its Effect

The Tibetan version agrees with the Sanskrit in its title but in the Chinese version the title is simply the Examination of karma or Action, This is one of the more interesting chapters since it deals with the popular Buddhist concept of man's action. Man is always interested in the question of what past, present and future deeds or actions are and to what extent they are significant to present lives or to what extent they are controllable.

In this chapter Nagarjuna first explains the types of karma in order to introduce and clarify the Buddha's teachings. He says that the Buddha spoke of two types of karma, i.e., one which is in the realm of thought (cetana) and the other concerning thought in action (cetayitva). The following diagram will illustrate the point:

cetana-manasa-karma (thought) cetayitva-kayika-karma (bodily) vacika-karma (verbal)

He then brings in the ideas of permanency or constancy and interruption or disruption relating these with the concept of karma and its effect. Employing the same type of logic (prasanga) as seen in previous chapters, he destroys any notion the opponent may have that a movement of anything from one place of action (e.g., karma) to another (e.g., phala or effect) is possible. With equal force he condemns any idea of an indestructible continuing action (avipranasa) which gives the sense of continuity or transition in man's everyday life deeds. In Verse 20 he finally enunciates the true position of the Buddha who said that Sunyata is not disruption (uccheda) and that samsara is not permanency (sasvata). Nothing is interrupted, fixed, gained, lost, or passed over to another. As a consequence, it is of no use speaking of karma and its effect, of klesas, of bodily entities, etc., for they are all false peregrinations of the mind. Incidentally, verses 1-19 contain the popular views on karma.

KALUPAHANA (CHAPTER OVERVIEWS)

17. Action and consequence (karma-phala). Buddhism, in contrast to the theistic religions of India, advocated human responsibility in the case of bondage as well as release. Chapter XVII that follows therefore deals with the notions of human action (karma) and its consequences or fruits (phala).

Inada’s analysis of this very lengthy chapter is very confusing. He assumes that verses 1-19 contain the popular views on karma, while in verse 20 Nagarjuna finally explains the true position of the Buddha who spoke of “emptiness” (sunyata). Yet, verses 2 and 13 unequivocally attribute certain views to the Buddha, as well as the Pratyekabuddhas and the Sravakas. The contents of this chapter therefore deserve careful scrutiny. The doctrine of karma is clearly stated in XVII. 1: “Self-restraint as well as benefitting others this is the friendly way and it constitutes the seed that bears fruit, here as well as in the next life.”

If Nagarjuna was a Mahayanist, as many have portrayed him to be, then he certainly could not deny this “friendly way” (maitram dharam), for otherwise he could not qualify as a bodhisattva. Restraining oneself and benefitting others are actions that need to be recognized by a bodhisattva. These are here described as bearing fruit (phala) in this world as well as in the next. Nagarjuna was not unaware of the fact that according to the Buddha, actions are to be defined in terms of volition (cetana). While volition itself could be considered an action, anything that is volitional also falls under the category of action. This is the implication oft he Buddha's statement in Anguttara-nikaya 96 and Nagarjuna is seen to elaborate on this statement at XVII.2. Nagarjuna asserts that according to the Buddha there are two main types of karma: volition and volitional. These are further analysed into a variety of karmas that were also recognized in the early Buddhist tradition. He gives no indication that all these karmas are not real in the sense that they do not produce fruits or consequences. However, in XVII.6 he raises a question which clearly embodies the particular form of inquiry carried out by the Buddhist metaphysicians with which he disagrees. The inquiry is as follows: “Does karma remain even at the time it has not attained maturity? (Tisthata apakakalat?)

There can be little doubt as to who would raise such a question. While a pragmatic Buddhist may say that karma
is what it is because it produces consequences or fruits (phala), a substantialist could not resist asking the question: “Yet, does not the effect (phala) pre-exist, before karma reaches its maturity?”

Such metaphysical inquiries, as pointed out earlier, led to the belief in an underlying substance (svabhava), which was criticized and rejected by Nagarjuna in Chapter I. And here Nagarjuna is once again asserting the view that such inquiries lead to the belief in permanence (nityata). If one were to reject such a notion of permanence, then karma and effect are separated in such a way that once the karma ceases, it will not produce any consequences (niruddham sat kim phalam janayisyati). Thus we are back again in the permanenceannihilation (sasvata-uccheda) syndrome.

Verse 7 introduces the notion of a series (samtana) upheld by the atomistic Sautrantikas, and the difficulties this generates are then examined in the few verses that follow.

It is rather unfortunate that this new situation arising from the metaphysically oriented question raised in verse 6 came to be ignored by those who dealt with verse 12. The term esa (this, such) in XVII.12 refers specifically to the sort of thinking (kalpana) involved in XVII.6 and Nagarjuna maintains that such thoughts engender a multitude of insuperable difficulties (bahavas ca mahatas ca dosah). It is this particular way of thinking that is considered to be inappropriate (nopapadyate).

Indeed, at XVII.13, Nagarjuna suggests another way of thinking (kalpana) which is more objective and which was extolled by the Buddhhas, the Pratyeka-buddhas and the Sravakas: Like an imperishable promissory note, so is debt as well as action. It is fourfold in terms of realms and indeterminate in terms of primal nature. According to this, karma is imperishable like a promissory note. One’s debt (rma) remains effective at least as long as the promissory note lasts. Even though there is no continuity of karma (and, it in this case, borrowing), that is, it does not continue in any subtle or substantial way, the responsibility for that karma cannot be denied once that karma is performed. The Buddha, the early Buddhists, and Nagarjuna were not prepared to say that the promissory note one signs is unreal and therefore to be ignored. The responsibility and commitment remains long after the document is signed (maybe even if the document were to be lost or destroyed).

The idea that one is responsible for one’s own actions has been emphasized by the Buddha. A statement in the Dhammapada reads: “Neither in the sky nor in the middle of the ocean nor having entered into a cleft of the mountains is there a place on earth seen remaining where a person would be released from his evil actions.”

The existence and the popularity of a similar statement among the Buddhists who preserved their literature in Sanskrit has already been referred to. There is little doubt that Nagarjuna was aware of this statement. This conception of the imperishable nature of karma thus turns out to be an important conception in Nagarjuna, primarily because he was not prepared to accept the notion of substance (svabhava) or self (atman) to explain this process nor was he willing to deny the effectiveness of karma with the denial of substance or self. As such Inada’s statement that Nagarjuna “with equal force condemns any idea of an indestructible continuing action (avipranasa)” is surprising.8 Neither the Buddha nor Nagarjuna nor even Vasubandu (who compiled the Karmasiddhipakrana) were saying that karma itself remains indestructible. Aviprana-s-karma or the imperishable action refers to the responsibility a person has for any karma that he performs and how that karma will, depending upon circumstances, bear fruit (phala). The simple notion of human responsibility is what is upheld here, not the metaphysical notion of the fruit or result that lies hidden and gradually attains maturity, as was implied in the question raised by the Buddhist metaphysician.

Therefore, without any hesitation Nagarjuna attributes the conception of the imperishable (avipranasa) karma to the Buddha himself: “Emptiness, however, is not annihilation; lier-process is also not permanence; imperishability is of actionsuch is the doctrine taught by the Buddha.” (XVII.34) The most significant assertion here is that the rejection of permanence and annihilation and the acceptance of emptiness and samsara (or the life-process) do not imply the rejection of the relationship between action (karma) and consequence (phala). The imperishable nature (avipranasa-dharma) of action merely implies the possibility of action giving rise to consequences, and this need not involve the notion of an underlying permanent substance in action.

The three verses that follow are critical of the conception of karma that is based on the recognition of self-nature. Such a conception, as explained at XVII.24, conflicts with all the accepted conventions (vyavahara) and would imply the denial of merit and demerit (punya-papa) and such other distinctions (pravibhaga). Action (karma), looked upon as something substantial (svabhavika), not only implies the production of a result (vipaka), which is already existing in mature form (vipakvva) (XVII.25), but also goes against the admitted purity or impurity of action. If action has its own nature, then defilement (klesa) also will have its own nature and how these two natures could come together will never be satisfactorily explained (XVII.26-27). Moving on to XVII.29 without keeping the above definition
of action (karma) in mind, it is easy to assume that Nagarjuna rejects action as something dependently arisen and, therefore, there is neither action nor agent. On the contrary, verse 29 simply rejects the possibility of an action being dependently arisen, if that action were to be substantial (svabhavika).

Thus the denial of action (karma), agent (kartr), and consequence (phala), as well as of one who experiences the consequences (bhoktr), comparing them to created forms (nivmiakakara) or to mirages and imaginary entities, needs to be understood only as referring to the substantial conceptions of these phenomena and does not represent an unqualified denial of such phenomena (dharma).

**BATCHelor (POETIC “TRANSLATION”)**

Acts

1. Buddha taught that acts
   Are motives of the mind
   And words and gestures
   You are moved to express.

   Restraining yourself
   And loving others
   Are seeds that bear fruit
   In this life and beyond.

2. If they lasted ’til they ripened,
   Acts would be static.
   If acts stopped,
   How would they bear fruit?

   Seeds turn into plants that bear fruit.
   Motives turn into minds that bear fruit.
   Seeds are neither severed from
   Nor forever fused with fruits of plants,
   Motives neither severed from
   Nor forever fused with fruits of minds.

   No killing and no stealing,
   No abusing and no lying,
   No slandering, swearing, gossiping,
   No coveting, resenting or fixating:

   These pristine acts
   Are ways to practice
   That ripen as beauty and pleasure
   Here and elsewhere.

3. Acts, like contracts,
   Are as irrevocable as debts –
   Their irrevocability
   Ensures fruition.

   Only patient cultivation
   Frees you from their grip –
   Insight by itself is insufficient.
   Were acts transcended
   By understanding –
   Insight would destroy them.

   Irrevocability alone survives
   The vexed transition
   From one life to the next –
   Emptiness does not negate it;
   Life does not set it in stone.

4. My acts are irrevocable
   Because they have no essence.
   If they had an essence,
   They would be permanent.
   No one could have performed them.
   I would fear the consequence
   Of things I did not do.
   I would not lead a noble life.

   Descriptions would conflict
   With one another.
   I would be incapable
   Of telling good and bad apart.
   Having already ripened,
   Acts would ripen again.

   If acts are compulsive
   And compulsions unreal,
   How can acts be real?
   Acts and compulsions form me.
   What could empty acts
   And compulsions form?

   Blocked by confusion
   Consumers consume the fruits of acts,
   Which neither they
   Nor anyone else committed.

   Where are the doers of deeds
Absent among their conditions?
Where are the fruits of doers and deeds
That cannot be found?
Where are the consumers
Of fruits that are not there?

Imagine a magician
Who creates a creature

Who creates other creatures.
Acts I perform are creatures
Who create others.

Deeds, compulsions, bodies,
Doers, fruits are like
Invisible cities, mirages, dreams.

JONES (COMMENTARY)

17. Action and its Fruit

The chapter begins with a straight exposition of Buddhism on action. (This leads some scholars to doubt that this part of the chapter was part of the text written by Nagarjuna.) A key to Buddhist ethics is that karmic action is equated with intention and not merely the act itself - thus, the same act would have different karmic repercussions depending on the actor's intent. This is so in the Pali canon (Anguttara Nikaya 11.207, IVA15) and here (v. 2). (See Jones 2004: 152-53.)

In verse 6, the objector raises a persistent problem for Buddhism: how can an act done today have karmic consequences that occur only years from now, or indeed in another life if everything is momentary? How is it possible that the effects may occur much later (and thus the causes seem dormant) when even the dharmas last only momentarily? Mustn't there be some persisting reality to connect the two events? This problem was discussed by Abhidharmists and Mahayanist theorists. Nagarjuna replies (v. 7) with the idea of a series of connected but impermanent events - here, a seed becoming a plant producing fruit. There are no boundaries in reality corresponding to our conceptual boundaries between seed, sprout, and full sized plant. It is a continuum of conditioned realities, not a collection of discrete, self-existent entities. With regard to karmic actions: somehow the "seeds" of the future fruit are passed on a connected series of impermanent events. A seed is neither terminated nor eternal because of the continuing series of effects.

The ten pure paths of verse 11 are from the Buddhist codes of conduct - i.e., abstaining from directly or indirectly taking the life of any sentient being, and so forth.

Verse 21 repeats part of the Dedication: what is without self-existence is unarisen and unperishing. If actions were self-existent entities, then they would be permanent and eternal (v. 22) - they would never end and so their "fruit" would never arise. Verses 23-24 connects the point to the Buddhist religious program.

In verse 30, the objector again brings up the idea that there must be a real actor, real action, and real fruit. Nagarjuna responds that one illusion can produce another illusion (vv. 31-32) - the phenomena are causally real but not real in terms of substances.

GYAMTSO (COMMENTARY)

17

An Examination of Karmic Actions and Results

In the sutras, the Buddha taught:

For those belonging to the family of the noble ones, karmic actions do not exist and results of karmic actions do not exist, either.

THE NOBLE BUDDHAS AND BODHISATTVAS realize the emptiness of all phenomena, and therefore they realize that karmic actions and their results do not truly exist. As a result of their realization, they pass beyond the karmic actions and results that cause ordinary sentient beings to wander in samsara. In this chapter, Nagarjuna will use logical reasoning to prove the validity of the teaching that karmic actions and their results are not truly existent.

Nagarjuna composed this chapter in order to counter the argument that samsara exists because the karmic actions and their results that compose samsara exist. For if people believe this, then until one proves to them that there really are no such things as karmic actions and results, they will not be able to gain certainty in the fact that samsara itself has no inherent reality. It is true that if karmic actions and their results really did exist, then samsara would as well, but if karmic actions and their results do not genuinely exist, then samsara must necessarily not truly exist either.

We can formulate the following logical reasoning:
Karmic actions and results are mere appearances devoid of true existence, because no self, no actor, exists to perform them. This is a valid way to put things because if the self of the individual does not exist, there cannot be any action, and therefore there cannot be any result of any action either.

We can also examine the relationship between the actors and the actions themselves by asking, "Which one comes first?" It could not be that the actor exists first, because then there would be an actor who was not performing any action.
It also would be impossible for there to be any action before the actor who performed it, because if there were, there would be an action that existed even though no one was performing it. Neither could actor and action exist simultaneously, because if they did, each with its own inherent nature, then each would be independent of the other and thus they would have no connection between them. If that were the case here, there would be two separate entities, actor and action, existing simultaneously with no connection between them, which would be illogical. So actor and action cannot exist sequentially and they cannot exist simultaneously, and therefore they cannot genuinely exist.

If karmic actions and actors did truly exist, what would be the quality of that existence? If the actor really existed, he would have to have his own independent nature, which would mean that the actor would always exist, whether there was an action or not. Similarly, if the action really existed, it would have to have its own independent nature, meaning that it would not exist in dependence upon the actor at all—it would exist by itself. Obviously, though, that is not the case, because we can say that there is an actor only if there is an action, and we can say that there is an action only if there is an actor. Since these two exist only in mutual dependence, they therefore have no independent nature; they are not real.

Someone might ask, “Isn’t it nihilistic to think that karmic actions and their results do not exist?” In fact, this is not a nihilistic view because there exists no self to have any nihilistic view. There can be a nihilistic view only if there is someone to hold it, but since there is no one to have any view, then there can be no nihilism. Furthermore, since the thought of nihilism neither arises nor abides nor ceases, there can be no nihilism in genuine reality. Genuine reality transcends the conceptual fabrications of realism and nihilism. It transcends karmic actions and results, and the absence of karmic actions and results as well.

If karmic actions and their results do not exist in the abiding nature of reality, then what is the quality of their appearance? Nagarjuna describes this in the chapter’s thirty-third verse:

\[
\text{Mental afflictions, actions, and bodies,} \\
\text{As well as actors and results,} \\
\text{Are like cities of gandharvas,} \\
\text{Like mirages, and like dreams.}
\]

This verse teaches us that karmic actions and their results do not genuinely exist; they are mere conventions, mere superficial appearances, like cities of gandharvas, mirages, and dreams. Thus, even though actors and actions do not genuinely exist, in apparent reality they do exist as dependently arisen mere appearances. So you do not need to worry or be afraid of reality being nothingness. Reality is appearance and emptiness undifferentiable, and this appearance-emptiness is open, spacious, and relaxed.

The Heart of Wisdom Sutra teaches:

\[
\text{There is no ignorance nor any ending of ignorance, no aging and death nor any ending of aging and death.}
\]

The sutra here explicitly mentions the first and the last of the twelve links of dependent arising; we must ourselves apply this to the ten middle links as well (fn For a brief description of the twelve links of dependent arising, see chapter 26, “An Examination of the Twelve Links of Existence.”).

If ignorance inherently existed, its ending would also inherently exist. Since ignorance does not inherently exist, however, there is no ending of it either. If aging and death inherently existed, there would be some end to them as well, but since they have no nature of their own, there can be no true cessation of them either. So what are they? They are like dreams, illusions, and water-moons. Confusion, liberation, stains, and the freedom from stains are all dependently arisen mere appearances whose true nature is equality.

When we dream of first being filthy and then getting clean, when we do not know we are dreaming, both the filth and the cleanliness seem to truly exist. When we know we are dreaming, the filth is mere appearance and the cleanliness is mere appearance. In the true nature of the dream, there is neither filth nor cleanliness. That is easy to understand—please do not forget it.

In his Authentic Portrait of the Middle Way, Milarepa sang:

\[
\text{All animate, inanimate—the three realms} \\
\text{Unborn and nonexistent from the outset,} \\
\text{No base to rest on, do not coemerge,} \\
\text{There is no karmic act, no maturation,} \\
\text{So even the name “samsara” does not exist.}
\]

We need to remember this again and again. If in our studies we connect the teachings of the great scholar Nagarjuna with those of the great yogi Milarepa, then our understanding will become very profound.

PINGALA COMMENTARY

17/0 Question. Although you refute dharmas in various ways, karma does have a fixed existence, since it is able to cause living beings to receive the fruits and rewards (of their actions. As the sutra says, 'all living beings take birth according to their karma'. An evil person goes into the hells, one who cultivates merit is reborn in heaven, and one who traverses the path attains nirvana. Therefore, these dharmas are not empty. It is said of karma that.

GARFIELD COMMENTARY

Chapter XVII Examination of Actions and Their Fruits

Arguing for the emptiness of bondage and liberation, however, raises a further question that demands an answer: If there is no real bondage and no real release, what are the effects of our actions? For it would appear, at least given standard Buddhist moral theory and the doctrine of karma on which it is grounded, (fn 86. That is, broadly speaking, that our actions, words, and intentions have consequences that determine the future course of our lives. Karma from the Buddhist standpoint is a straightforwardly deterministic process and not a matter of accounts being kept by a cosmic accountant. The doctrine can be applied both within a single life or across rebirths and with respect both to individuals and to groups of individuals.) that meritorious actions conduce to liberation and that morally wrong actions increase bondage. Given the emptiness of these latter, an analysis of the consequences of action is in order. Nāgārjuna begins with Buddhist moral truisms, accepted by the Madhyamika as well as by members of other Buddhist schools. It is important to note that the first nineteen verses of this chapter represent the views of four distinct opponents in order of increasing similitude to the Madhyamika understanding. Despite the fact that Nāgārjuna sets these views up as targets, however, some of the views the opponents put on the table are, suitably interpreted, shared by Nāgārjuna. Each can be seen as, despite being inadmissible as a characterization of a nonconventional basis for the relation between action and its effects, a reasonable empirical assessment of at least part of the conventional reality in this domain.
INADA (Skt):  
Verse 1 - Self-restraint, kindness towards others, and benevolence are the ways of the dharma (i.e., the truth of the nature of things). They are the seeds which bear fruit in this as well as the next realm of life.

JONES (Skt):  
[1] The thought that controls oneself and benefits others - this friendly manner is the doctrine. It is the seed for fruit after death as well as in this life.

KALUPAHANA (Skt):  
Self-restraint as well as benefiting others—this is the friendly way and it constitutes the seed that bears fruit here as well as in the next life.

MCCAGNEY (Skt):  
Thinking [i.e., willing] self-restraint, kindness toward others, and friendliness is the teaching. It is that seed of the fruit now and after death.

NISHIJIMA (Skt?):  
1. The negative attitudes to the existence of Soul is an excellent decision,  
The attitude to keep a distance from the Soul is that.  
The friendship to others is just the real fact, and the Rule of the Universe is just the fact.  
And the seeds as results are just the next world of this world.

STRENG (Skt):  
1. The state of mind, which is self-disciplined, being favorably disposed toward others, And friendship: that is the dharma; that is the seed for the fruit now and after death.

BOCKING (Ch):  
17v1 A person can subdue his mind  
And benefit living beings.  
This is called compassion  
The seed and the fruit of the two worlds.

BATCHelor (Tb):  
Restraining oneself well and loving thoughts that benefit others are the Dharma which is the seed of fruits here and elsewhere.

DOCTOR (Tb):  
Restraining oneself properly,  
Helping others, and a loving mind— 
These are Dharma, seeds that bear fruit  
Both here and hereafter. [XVII.1]

GARFIELD (Tb):  
1. Self-restraint and benefiting others  
With a compassionate mind is the Dharma.  
This is the seed for  
Fruits in this and future lives.

GARFIELD-SAMTEN (Tb):  
1. Self-restraint and benefiting others  
With lovingkindness is the Dharma.  
This is the seed for  
Fruits in this and future lives.

HAGEN (paraphrase):  
[opponent #1 begins:] Self-restraint and benefiting others with a compassionate heart, this is the seed that bears fruit both in this and future lives.
PINGALA COMMENTARY

17/1 The three poisons in a person cause distress to others and give rise to actions, so the good person first of all destroys his own evil. This is why it is said that subduing his own mind benefits others. 'Benefiting others' means almsgiving, holding to the precepts, humility, etc. and not harming others. This is what is meant by 'benefiting others'. It is also known as 'compassionate goodness and blessed virtue' and as 'the seeds and joyful fruit of this world and the next'.

Further.

KALUPAHANA COMMENTARY

The present chapter, unlike Chapter VIII, deals with the problem of moral responsibility. It is an attempt to explain the "fruits" (phala) reaped as a result of one's actions (karma). The doctrine of the fruits of action or moral responsibility is pivotal to any explanation of human life, whether it is in bondage or in freedom. However, in the present chapter, the idea of the accumulation of merit and demerit (punya-papa) (for future benefit) is examined at length, primarily because this particular idea is mostly associated with the life-process (samsara) in bondage. The Buddha insisted that such accumulation of merit and demerit is abandoned (prahina) by a person who is enjoying freedom (nirvana), even though he does not transcend morals or is not unconcerned with questions relating to moral responsibility.

Inada assumes that verses 1-19 represent the popular explanation of karma. This is questionable. In fact, the popular, and therefore, a mistaken view of karma is presented only in verses 6-12. Verse 13, as will be pointed out, refers to a more sophisticated theory of moral responsibility held by the Buddha and his disciples. The present verse deals with two important virtues—serf-restraint and benevolence—and these constitute the friendly way (maitram dharmah) which serves as the seed that fruitions here as well as in the future. Inada reads three virtues—serf-restraint, kindness towards others and benevolence. On the contrary, maitram seems to qualify dharma, and Kumarajiva understood it in this latter sense.
Kārikā XVII.2

cetanā cetayitvā ca karmoktaṃ paramarṣiṇā
tasyānekavidho bhedaḥ karmaṇaḥ parikīrtitah ||2||

INADA (Skt):
Verse 2 - The Great Sage has said that karma is (in the nature of) thought as well as thought in action, and that there are many distinct varieties of karma.

JONES (Skt):
[2] Intention and what is intended were called “action” by the great seer, the Buddha. Multiple varieties of that action have been shown.

KALUPAHANA (Skt):
The Supreme Ascetic has said that action is volition as well as volitional. Many distinct varieties of that action have also been expounded.

MCCAGNEY (Skt):
The Great Sage said karman is volition and will in action. Actions of many distinct kinds have been expounded.

NISHIJIMA (Skt?):
2. They are both perception and the contents, which have been perceived,
And they are talked on Action, and they are very necessary to endure them.
In them there are so many articles, and they are divided into so many divisions,
And they are belonging to matter, which are so related with the states of Actions, and some official proclamations.

STRENG (Skt):
2. The most perceptive seer Buddha has said that there is action (karma) as volition and as a result of having willed. The variety of acts of that action has been explained in many ways.

BOCKING (Ch):
17v2 The great sage expounds two kinds of karma;
The thought, and that which thought produces.
Within these different characteristics of karma Various distinctions are explained.

BATCHelor (Tb):
The great sage has taught all actions to be intention and what is intended. The specifics of those actions are well known to be of many kinds.

DOCTOR (Tb):
The Supreme Sage has taught
That action is volition and the willed.
The subdivisions of these actions Are set forth in great detail. [XVII.2]

GARFIELD (Tb):
2. The Unsurpassed Sage has said
That actions are either intention or intentional.
The varieties of these actions Have been announced in many ways.

GARFIELD-SAMTEN (Tb):
2. The Unsurpassed Sage has said
That actions are either intention or intentional.
The varieties of these actions Have been delineated in many ways.

HAGEN (paraphrase):
The Great Sage has said that karma is intent as well as intentional action, and that there are many distinct forms of karma.
PINGALA COMMENTARY

17/2 The great sage teaches that karmas are of two kinds. One is thought, the other is that which thought produces. These two kinds of karma are explained in detail in the Abhidharma.

KALUPAHANA COMMENTARY

At A 3.415 (Chung 27.5 [Taisho 1.600a]), the Buddha identified karma with "volition" and maintained that karma, whether it be bodily, verbal, or mental, is to be recognized as karma if it is volitional (Cetana 'ham bhikkhave kammam vadami Cetayitvakammam karoti kayena vacaya manasaca). The emphasis on volition was intended to eliminate the wrong belief that a person is responsible for any and every action he performs, a view that was advocated by the Jaina thinkers of pre-Buddhist India (see Kalupahana, Causality, p). The distinct varieties of karma referred to here are the one's presented in the canonical Adhidharma, and these are based upon the discussions available in the early discourses.

GARFIELD COMMENTARY

2. The classification to which Nāgārjuna refers is a partition of actions into mental and physical. Mental actions are mere intentions on this view; physical actions and speech (generally distinguished in Buddhist psychology and action theory) are properly intentional. That is, the latter two involve a mental and a nonmental component; the mental actions only involve a mental component. Verse 3 clarifies this:
Kārikā XVII.3

तत्र यच्चे�তनेत्युक्तं कर्म तन्मानसस्मृतम्।
चेतनेत्वा च यत्तूक्तं तत्तु कायिकवाचिकम्॥३॥

佛所說思者 所謂意業是
所從思生者 即是身口業

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 3 - The karma which has been described as thought (cetana) indicates the mental and volitional aspects and that which has been described as thought in action (cetayitva) refers to the bodily and verbal aspects.

JONES (Skt):
[3] In this regard, the action that is said to be mental is called "intention," and the verbal and bodily actions are called "what follows intention."

KALUPAHANA (Skt):
Herein, what is called volition is reminisced as mental action. Whatever is called volitional consists of the bodily and verbal.

MCCAGNEY (Skt):
Karman, which is here called "volition," is mindfulness of what is present in the mind. Further, that called will in action, that is bodily and verbal.

NISHIJIMA (Skt?):
3. In such situations, that kind of visibility is talked, And a concrete fact, Action, is the mental teachings. The individual soul is just what has been spoken there, And concrete facts there, which are included by physical Action and verbal expressions.

STRENG (Skt):
3. Thus, that action which is called "volition": that is considered by tradition as mental; But that action which is a result of having willed: that is considered by tradition as physical or verbal.

BOCKING (Ch):
17v3 The thought of which the Buddha speaks May be termed 'mental karma'. That which arises from the thought Is speech and body karma.

BATCHelor (Tb):
In this respect action spoken of as "intention" is regarded as being that of mind. That spoken of as "what is intended" is regarded as being that of body and speech.

DOCTOR (Tb):
That which is taught as "actions of volition" Is asserted to be mental, While the so-called "intended actions" Are physical and verbal. [XVII.3]

GARFIELD (Tb):
3. Of these, what is called "intention" Is mental desire. What is called "intentional" Comprises the physical and verbal.

GARFIELD-SAMTEN (Tb):
3. Of these, what is called "intention" Is maintained to be mental. What is called "intentional" Comprises the physical and the verbal.

HAGEN (paraphrase):
Thus, what is called "intention" refers to what is purely mental. What is called "intentional" refers to what is physical or verbal.
PINGALA COMMENTARY

17/3 Conception is one of the dharmas of mental configurations. Amongst the mental configurations, it has the capacity to initiate that which is done, and this is why it is called karma. External actions of body and speech arise on account of conception. Although there are things which are done through the other configurations of the mind, it is conception which is the basis of action, and this is why conception is said to be karma. The characteristics of karma will now be explained.

KALUPAHANA COMMENTARY

A difference is noticeable between the Buddha's own explanation of karma in the statement from Anguttara quoted at XVII.2 and the present description of Nagarjuna. While cetana or volition is definitely mental, the Buddha seems to assume that not all mental actions are volitional. Hence his statement that all three forms of karma, bodily, verbal and mental, can be determined by volition.

However, in the present statement, volition seems to have been identified with mental action, the volitional being confined strictly to bodily and verbal. This latter view may be a reflexion of the Buddha's own statement at M 2.25 (Chung 47.2 [Taisho 1.720]), wherein both bodily and verbal actions are considered to have mind as a basis.

GARFIELD COMMENTARY

3. In the next verse, an opponent uses these truisms as a platform for the defense of the view that actions themselves must remain in existence until their consequences are observed. Actions that derive from renouncing the world are different from those that derive from worldly concerns. This difference in nature... he argues, must explain the difference in their consequences:
Kārikā XVII.4

vāgviṣpando "viratayo yāś cāvijñaptisamjñitūḥ |
avijñaptaya evānyāḥ smṛtā viratayasya tathā ||4||

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 4 - Words, actions, the indescribable non-abandonment as well as what is asserted to be another form of the indescribable abandonment, (This verse continues on to the next.)

JONES (Skt):
[4-5] Speech, gesture, persisting states designated "unreported," ceased unreported states, the merit produced by enjoyment, the demerit produced by enjoyment, and intention - these seven phenomena are said to manifest action.

KALUPAHANA (Skt):
Whatever words and deeds that are associated with delight and designated as non-intimation, and also those others reminisced as non-intimation, but are associated with non-delight; similarly, merit as well as demerit consequent upon enjoyment, and finally, volition—these are reminisced as the seven things that are productive of action.

MCCAGNEY (Skt):
Uninterrupted words and deeds, which are false ideas that do not inform, are called opposite to cessations by means of mindfulness.

NISHIJIMA (Skt?):
4. Endless talks like dram without stop are the situations, And those situations are just reporting the news without any information. Those situations of lacking information might be very irregular states, And memories might be stopped Actually.

STRENG (Skt):
4. Sound (1), gesture (2) and that which does not rest which is considered as unknown (3), Also the other unknown which is considered to be at rest (4);

BOCKING (Ch):
17v4 The karma of body and the karma of speech. Performed and non-performed karma. Within these four things Is both goodness and non-goodness.

BATCHelor (Tb):
Whatever (1) speech and (2) movements and (3) “unconscious not-letting-go,” (4) other kinds of unconscious letting-go are also regarded like that.

DOCTOR (Tb):
Speech and movement; Imperceptible nonabstinence And imperceptible abstinence— These are similarly asserted. [XVII.4]

GARFIELD (Tb):
4. Speech and action and all Kinds of unabandoned and abandoned actions, And resolve As well as...

GARFIELD-SAMTEN (Tb):
4. Speech and physical action: Unobservable unrejected actions, and Unobservable rejected actions; As well as . . .

HAGEN (paraphrase):
Words and deeds—whether committed with full awareness or not, whether enjoyable or not, and whether meritorious or not (depending upon enjoyment)—and volition, these are the seven elements that give rise to karma

GARFIELD COMMENTARY

4. (“And resolve” fn 87. rnam rig byed min pa (Skt: avijnapta). A technical term that can refer to such things as a monk’s vows or a resolution to perform some action.)
Inada (Skt):
Verse 5 - ....virtuous and non-virtuous elements associated with enjoyment of being, and thought itself, these are the seven dharmas which give rise to karma.

Jones (Skt):
[5] [see above]

Kalupahana (Skt):
(included above)

Mccagney (Skt):
Enjoyment and energy, merit and demerit, thought and memories, and volition, according to the precepts, are the seven events that give rise to karman.

Nishijima (Skt?):
5. Continuity of pursuing pleasures might be comfortable,
But unfortunately something impure usually exists only in such a kind of materialistic place. What are clearly seen in such situations are the universal rules of the seven factors of wisdom, that is, consciousness, investigation of the law, exertion, rapture, repose, the balanced states, and serenity. And so all things and phenomena are proclaiming that they are not ideas of existence.

Streng (Skt):
5. That which is pure as a result of enjoyment (5), that which is impure as a result of enjoyment (6), and volition (7): these seven basic elements (dharma) are considered by the tradition as the modes of action.
17/5 Speech karma. There are four kinds of speech karma. Bodily karma: There are three kinds of bodily karma. These seven kinds of karma are subdivided into two types, 'active' and 'non-active'. When you act, this is called 'active' karma, but once you have acted the successive subsequent products are termed 'non-active' karmas. Both 'good' and 'not good'. These two types of karma may be 'Not good' means that they do not stop evil. Good means that they stop evil.

(21c20) Furthermore, blessed virtue arises from their enjoyment, as when a benefactor gives something to a recipient. If the recipient receives and enjoys it, the benefactor acquires two kinds of merit, one arising from the giving and the other arising from the enjoyment.

(21c22) It is like a man shooting at another man with an arrow. If the arrow kills the man, there are two kinds of sin involved. One is the sin of shooting at him, the other is the sin arising from the murder. If the shot had not killed him, the one who shot would only have the sin of shooting, and there would be no sin of murder. This is why it says in the verse that sin and merit are produced from the effect.

(22a2) These are what is meant by the six kinds of karma, and the seventh is called conception. These seven kinds of karma are subdivisions of the characteristics of karma, and karma has effects and rewards in this world and subsequent worlds. Therefore there are fixed, real (karmic) actions and their results. Hence, dharmas cannot be empty.

Reply:

KALUPAHANA COMMENTARY

Some of the terms used here to define the various forms of karma appear for the first time in the Abhidharma (see Akb iv.l-2; Akb p; Adv p). They are absent in the early discourses. However, taken in themselves, they do not seem to create any philopsophical problems. The philosophical problems arose because of the manner in which these actions were interpreted. These interpretations are then taken up for examination by Nagarjuna in the following verses.

GARFIELD COMMENTARY

5. (“These seven” fn 88. The arithmetic here is none too clear. Tsong Khapa has it like this: (1) good and bad speech; (2) good and bad physical action; (3) abandoned and unabandoned actions; (4) meritorious actions; (5) nonmeritorious actions; (6) the intention to do good actions; (7) the intention to do bad actions. Just what the principle of partition is here is not obvious. Clearly the categories overlap (pp. 300-301).)

The kinds of actions to which Nāgārjuna's imaginary opponent refers are simply the various kinds of virtuous and nonvirtuous actions. In general, morally good actions are done for the sake of pleasure for others; morally bad actions sacrifice others' good for one's own pleasure. The opponent, however, goes further, pointing out that these actions have diverse long-term consequences that must be explained:
Kārikā XVII.6

If karma endures at any time in the maturing process, then it will be of the nature of permanent endurance. But if it ceases to be, how could anything ceased (or spent) give rise to an effect?

INADA (Skt):
Verse 6 - If karma endures at any time in the maturing process, then it will be of the nature of permanent endurance. But if it ceases to be, how could anything ceased (or spent) give rise to an effect?

JONES (Skt):

[Objection: 6] If an action endures until the ripening of the fruit of action, then it will go on permanently. But if the action has ceased before the ripening, how, having ceased, will it produce any fruit?

KALUPAHANA (Skt):
If it is assumed that action remains during the time it is maturing, then it will approach permanence. If it is assumed to have ceased, then having ceased, how can it produce a fruit?

MCCAGNEY (Skt):
Since from thinking there is continuity and from continuity, the origin of the thought, thought is prior to thinking. Therefore, there is neither disruption nor ponnenance.

NISHIJIMA (Skt?):
6. Aha, my childhood, when I have established myself at that time, My Action itself has become as big as my age, And the self-regulations are sufficient as my self-regulations. And so something real will be born as results in future.

STRENG (Skt):
6. If an action exists by enduring to the time of its fulfillment, that action would be eternal. If an action were stopped—being stopped, what will it produce?

BOCKING (Ch):
17v6 If the action continues up to its reception of reward, then such an action is permanent. If it ceases, how can a nonexistent action give rise to a reward?

BATCHELOR (Tb):
If the action remained until the time of ripening, it would become permanent. If it stopped, by having stopped, how could a fruit be born?

DOCTOR (Tb):
If an action would remain until ripening, then it would be permanent. If it ceases, then having ceased, how could it produce an effect? [XVII.6]

GARFIELD (Tb):
6. If until the time of ripening Action had to remain in place, it would have to be permanent. If it has ceased, then having ceased, How will a fruit arise?

GARFIELD-SAMTEN (Tb):
6. If until the time of ripening Action had to endure, it would be permanent. If it has ceased, then having ceased, How will a fruit arise?

HAGEN (paraphrase):
[opponent #2 chimes in:] If actions endure until they mature, they are of a permanent nature. If they do not endure, then having ceased, how can they give rise to an effect?
PINGALA COMMENTARY

17/6 If an action continued right up to the reception of its reward, then it would be permanent, but this is not correct, and why? Actions have the characteristics of arising and ceasing. They do not abide even for an instant, so how much less can they persist right up to their reward? But if you say that an action ceases, then, being ceased, it does not exist, so how can it produce its reward? Question.

KALUPAHANA COMMENTARY

This is actually the point at which Nagarjuna begins his analysis of the metaphysical assumptions. Here he immediately turns on to the theories of identity and difference. The assumption taken up for criticism in the first line needs to be examined carefully. Undoubtedly, it is the problem of potential existence. Such existence may be understood in various ways. Potentiality may be taken as the existence of conditions that would eventually give rise to some particular event. Nagarjuna, as may be seen in a moment, does not seem to object to such an explanation. On the contrary, if potentiality is understood in the sense of substantial existence of the particular event (in this case, karma), even when it has not matured or come to fruition, then that assumption leads to eternalism. This latter view is certainly not acceptable to Nagarjuna. It also leads to the contrary view, that is, if the event is completely absent (and this absence pertains to the very conditions that will eventually give rise to the event), then there will be doubts about the occurrence of the event at all. This is annihilationism. Thus, Nagarjuna is not denying the fruit of action but only the manner in which it is explained.

GARFIELD COMMENTARY

6. The problem is this: Given that the consequence of an action may be far in the future, something must persist to connect the action to the result. This is a kind of karmic analog of doubts about action at a distance. It is the same kind of move that lies behind trace theories of memory in recent philosophy of mind. So this first position is that there must be some permanent entity that remains in existence until the consequences of an action occur. A second possibility is that some third thing mediates the relation between action and consequence - a kind of karmic link that is generated by the action and remains in the psychophysical continuum until the consequence is produced. The interlocutor then offers an analogy popular in Buddhist philosophy:
Kārikā XVII.7

yo ’ṅkuraprabhṛtir bijāt saṃtāno ’bhipravartate

tataḥ phalam ṛte bijāt sa ca nābhipravartate ||7||

rū yā dēng;xìāng xù jiē cónɡ zhōng zì shēng

de las ’bras bu sa bon ni | | (6)med na de yaṅ ’byuṅ mi ’gyur |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 7 - A continuity which begins in a sprout, etc., comes forth from a seed and thereby takes on the nature of an effect, but separated from the seed the continuity could never arise.

JONES (Skt):
[Reply:7] The series that has a sprout as its beginning develops from a seed and then produces the fruit. Without the seed, however, the series does not develop.

KALUPAHANA (Skt):
Whatever series that begins with a sprout proceeds from a seed, and then produces a fruit. However, without a seed, such [a series] would not proceed.

MCCAGNEY (Skt):
If karman endures throughout the time of maturation, it would go on in perpetuity.
If it has ceased, then having ceased, what existing fruit will arise?

NISHIJIMA (Skt?):
7. And those young buds have separated from seeds, And because of continuity in succession, the streams follow behind them.
Then as such continuity, fruits have begun to move separating from seeds.
Such a kind of work can never be expansion of any kind of work.

STRENG (Skt):
7. There is fruit (phala) when a process, a sprout, etc., starts from a seed; But without a seed that process does not proceed.

BOCKING (Ch):
17v7 It is like the sprout, etc., where a succession of characteristics Arises from the seed.
And from that is produced the fruit. Without the seed, there would be no succession.

BATCHELOR (Tb):
The continuum of sprouts and so on clearly emerges from seeds, and from that fruits. If there were no seeds, they too would not emerge.

DOCTOR (Tb):
The continuum of the sprout and so forth Manifests from the seed, Due to which the fruit comes about; Without the seed, it would not arise. [XVII.7]

GARFIELD (Tb):
7. As for a continuum, such as the sprout, It comes from a seed.
From that arises the fruit. Without a seed, It would not come into being.

GARFIELD-SAMTEN (Tb):
7. Any continuum, such as that of a sprout, Comes from a seed.
From that arises the fruit. Without a seed, It would not come into being either.

HAGEN (paraphrase):
Any process, such as a sprout, begins as a seed and continues until it bears fruit. Without a seed such a process would not proceed.
The metaphysical assumptions of the Sautrantika doctrine of karma are under review here. The atomistic view of the life-process accepted by the Sautrantikas compelled them to analyse an event into a series (samtana) of moments. Their major difficulty lay in explaining how one series (e.g., a sprout-series) comes to be tied up with another preceding series (e.g., a seed-series), since they are different. If they are radically different, then the sprout-series can occur even in the absence of the seed-series. Nagarjuna maintains that this does not happen. In other words, he is insisting that philosophers like the Sautrantikas will have to accept the view that no event can come into being unless there were conditions that give rise to it; in this case it is the seed-series.

7. That is, just as every actual fruit requires an actual seed as its predecessor and a sprout to mediate between them, the opponent reasons, every consequence of action requires an actual action and an actual karmic link between the action and the consequence. The next three verses extend this analogy:
Kārikā XVII.8

**ENGLISH TRANSLATIONS**

**INADA (Skt):**
Verse 8 - Since continuity comes forth from seed and effect from continuity, there is always a seed prior to the effect. Therefore, there is no interruption and also no constancy.

**JONES (Skt):**
[8] Since the series arises from the seed and the arising of the fruit is because of the series, the fruit is preceded by the seed. Therefore, the seed is neither terminated nor eternal.

**KALUPAHANA (Skt):**
Since a series arises from a seed and a fruit arises from a series, a fruit that is preceded by a seed is, therefore, neither interrupted nor eternal.

**MCCAGNEY (Skt):**
A continuity advances by a sprout which is brought forward from a seed. And therefore, the fruit does not come forward without a seed.

**NISHIJIMA (Skt?):**
8. Just because of leaving seeds, the succession without break can continue. And after breaking from the succession of continuity, then the harvest of fruits follows. Before the seeds, there are fruits before them, And there is no extinction, further more no eternity.

**STRENG (Skt):**
8. Inasmuch as the process is dependent on a seed and the fruit is produced from the process, The fruit, presupposing the seed, neither comes to an end nor is eternal.

**BOCKING (Ch):**
17v8 There is a succession from the seed, And from this succession comes the fruit. The seed comes first, and afterwards the fruit. With no severance, and no permanence.

**BATCHelor (Tb):**
Because continuums are from seeds and fruits emerge from continuums and seeds precede fruits, therefore, there is no annihilation and no permanence.

**DOCTOR (Tb):**
The continuum arises from the seed, And from the continuum comes the fruit. Therefore, the seed precedes the fruit. Hence, there is no annihilation or permanence. [XVII.8]

**GARFIELD (Tb):**
8. Since from the seed comes the continuum, And from the continuum comes the fruit, The seed precedes the fruit. Therefore there is neither nonexistence nor permanence.

**GARFIELD-SAMTEN (Tb):**
8. Since from the seed comes the continuum, And from the continuum comes the fruit, The seed precedes the fruit. Therefore there is neither nonexistence nor permanence.

**HAGEN (paraphrase):**
Since the sprout depends on the seed and the fruit depends on the sprout, the fruit, presupposing the seed, neither perishes nor endures.

**KALUPAHANA COMMENTARY**
In answer to the question raised by Nagarjuna, a Sautrantika can respond thus: Instead of conceiving of these as two different series, let us say that a series is produced from a seed. This series then gives rise to the effect (which is the sprout). In that sense, a fruit is preceded by a seed (bijā-purvam phalam). Understood in this way, one does not fall into either the eternalistic or the annihilationist view.

**GARFIELD COMMENTARY**
8. That is, this interlocutor points out, the position developed in XVII: 5-6 requires that actions either be permanent or nonexistent. His own view, on the other hand, allows actions to exist as impermanent and is, hence, more plausible.
Kārikā XVII.9

yas tasmāc cittasaṃtānaḥ cetaso 'bhipravartate |
tataḥ phalam ṛte cittāt sa ca nābhipravartate ||9||

[9]  So too, what is a “series of thoughts” develops from a thought, and from the series develops the fruit. Therefore, without the seed of that thought, the fruit does not develop.

INADA (Skt):
Verse 9 - Thereupon, thought continuity comes forth from the existence of mind and in consequence the effect. Without the mind, continuity cannot arise.

JONES (Skt):
[9] So too, what is a “series of thoughts” develops from a thought, and from the series develops the fruit. Therefore, without the seed of that thought, the fruit does not develop.

KALUPAHANA (Skt):
Therefore, whatever thought-series there is, that proceeds from a thought and from that fruit. That thought series would not proceed without a thought.

MCCAGNEY (Skt):
Therefore, that continuity of thought advances by thinking. And thus thought [the fruit] does not come forward without thinking.

NISHIJIMA (Skt?):
9. Therefore the task is continuity of consciousness, And the mental power is always going on.
The developing power of result moves leaving mind, And the real situations have arrived at the limitation of the expansion.

STRENG (Skt):
9. There is a product (phala) when a mental process starts from a thoughts; But without a thought that process does not proceed.

BOCKING (Ch):
17v9 And in the same way, from the initial mind The dharmas of mind have arisen in succession. And from this mind there are effects Without that mind, there would be no succession.

BATCHelor (Tb):
The continuum of mind clearly emerges from mind, and from that fruits. If there were no mind, they too would not emerge.

DOCTOR (Tb):
I hat which is the continuum of mind Manifests from the mind, And from that emerges the effect. Without this mind, it would not occur. [XVII.9]

GARFIELD (Tb):
9. So, in a mental continuum, From a preceding intention A consequent mental state arises. Without this, it would not arise.

GARFIELD-SAMTEN (Tb):
9. So a mental continuum arises From a preceding intention. From this a consequent mental state arises. Without that, it would not arise.

HAGEN (paraphrase):
Thus, thought processes proceed from intention and consequently bear fruit. Without intention, such process would not arise.

[No Commentaries on this verse]
Kārikā XVII.10

INADA (Skt):
Verse 10 - Since continuity conies forth from the mind and the effect from continuity, there is karma (of the mind) prior to the effect. Therefore, there is no interruption and also no constancy.

JONES (Skt):
[10] Since the series arises from the thought and the fruit arises from the series, the fruit of action is preceded by action. Therefore, the action is neither terminated nor eternal.

KALUPAHANA (Skt):
Since a continuous series arises from thought and from the continuous series the uprising of a fruit, the fruit that is preceded by action is neither interrupted nor eternal.

MCCAGNEY (Skt):
Since from the seed there is continuity and from continuity, the origin of the fruit, the seed is prior to the fruit. Therefore there is neither disruption nor permanence.

NISHIJIMA (Skt?):
10. Leaving from the mind, then there is the continuous succession, And then leaving from the continuous succession, there is some kind of effects, which has come from the succession. Action is before, and then result. There is never any kind of extinction, and there is never any kind of eternity.

STRENG (Skt):
10. Inasmuch as the process is dependent on a thought and the product (phala) is produced from the process, The product, presupposing the thought, neither comes to an end nor is eternal.

BOCKING (Ch): 17v10 From mind, there is a succession From this succession comes the effect. The act comes first, and afterwards the result. With no severance, and no permanence.

BATCHelor (Tb):
Because continuums are from minds and fruits emerge from continuums and actions precede fruits, therefore, there is no annihilation and no permanence.

DOCTOR (Tb):
The continuum arises from the mind, And from the continuum comes the effect. Therefore, the action precedes the effect And there is no annihilation or permanence. [XVII.10]

GARFIELD (Tb):
10. Since from the intention comes the continuum, And from the continuum the fruit arises, Action precedes the fruit. Therefore there is neither nonexistence nor permanence.

GARFIELD-SAMTEN (Tb):
10. Since from the intention comes the continuum, And from that continuum the fruit arises, Action precedes the fruit. Therefore there is neither termination nor permanence.

HAGEN (paraphrase):
Since thought processes proceed from intention and fruit follow such thought processes, the fruit, presupposing the thought process, neither perishes nor endures.
PINGALA COMMENTARY

17/10 It is like the sprout coming from the corn-seed and from the sprout a succession of stalk, leaf, etc., from which succession the fruit is produced. Without the seed there is no successive arising; therefore succession takes place because of and from the corn-seed. From the succession comes the fruit. Since formerly there was the seed, and subsequently there is the fruit, there is neither severance nor permanence. Just as in the example of the corn seed, so it is with action and its effect. The initial thought which gives rise to sin or merit is like the seed of corn. As a result of this thought, the other dharmas of thoughts and mental configurations are produced in succession, up to the reward. Because the action comes first and the effect afterwards, there is no severance and no permanence involved. If there were rewards separate from actions, this would involve severance or permanence. As for the rewards and causes of good actions, it is said.

KALUPAHANA COMMENTARY

The Sautrantika continues: Similarly, a thought series (citta-samtana) emerges from a thought (cetasah). From that series arises the fruit. Thus, without a thought, the fruit does not come to be. The thought followed by a thought-series thus gives rise to the fruit. The fruit is thus preceded by a thought which is its cause. As such, it is neither permanent nor interrupted. The causal connection envisaged by the Sautrantikas above is simple antecedence.

GARFIELD COMMENTARY

10. In the next verse, another opponent offers an orthodox formulation from a substantialist Buddhist school, arguing that particular kinds of action are described as the methods of attaining realization and that particular rewards for the practitioner are mentioned as consequences of realization. The implication is that, since these are specified in sutras as real, they must be inherently existent:

____
Kārikā XVII.11

dharmasya sādhanopāyāḥ śuklāḥ karmapathā daśa
phalam kāmagunāḥ pañca dharmasya pretya ceha ca ||11||

néng chéng fú dé zhē shì shí bái yè dào
er shì wù yù lè jí shì bái yè bào
| dkar po’i las kyi lam bcu po | | chos sgrub pa yi thabs yin te |
| (10a1)chos kyi ’bras bu ’di gźan du | | ’dod pa’i yon tan rnam lña’o |

INADA (Skt):
Verse 11 - The ten paths of pure action are the means of realizing the dharma. The effects (i.e., fruits) of the dharma of this as well as the next realm of life are the five sensual enjoyments. - Note: The ten pure actions refer to carrying out the following: non-killing, non-stealing, non-adultery, non-lying, non-duplicity, non-evil talk, non-odd talk, non-greed, non-hatred, and non-false view.

JONES (Skt):
[Objection:11] The ten pure paths of action are the means for realizing the Buddha’s teaching. The five pleasures associated with the senses are the fruit of the teaching after death as well as here.

KALUPAHANA (Skt):
The ten pure paths of action are the means of achieving good. The five strands of sense pleasure represent the fruit of good, here as well as in the next life.

MCCAGNEY (Skt):
The ten pure action paths are the means leading straight to the goal of the teaching.
The five objects of the senses [bear] fruit, according to the teaching, both now and after death.

NISHIJIMA (Skt?):
11. The direct and straight approach belongs to the Rules of the Universe,
And they are the Ten Kinds of True Buddhist Precepts.
The fruits are a kind of measure of perfect enjoyment,
And in the Universal Rule it is just as if it were death in this world.

STRENG (Skt):
11. The ten pure "paths of action" are means for realizing the dharma. And the five qualities of desired objects i.e., desire to know the form, sound, odor, taste, and touch of existence are fruits (phala) of the dharma both now and after death.

BOCKING (Ch):
17v11 Able to establish blessed virtue,
Are the ten Paths of 'white' actions.
The five desires and pleasures of the two worlds
Are the reward of these 'white' actions.

BATCHelor (Tb):
The ten paths of white action are the means of practising Dharma. Here and elsewhere, the fruits of Dharma are the five kinds of sensual qualities.

DOCTOR (Tb):
Me ten avenues of wholesome action
Are the means for performing Dharma.
Here and hereafter, the fruits of Dharma
Are the five sense pleasures. [XVII.11]

GARFIELD (Tb):
11. The ten pure paths of action
Are the method of realizing the Dharma.
These fruits of the Dharma in this and other lives
Are the five pleasures.

GARFIELD-SAMTEN (Tb):
11. The ten pure paths of action
Are the method for practicing the Dharma.
The fruits of this Dharma in this and other lives
Are the five sensual pleasures.

HAGEN (paraphrase):
The ten pure paths of action are the means of realizing the Dharma. The five pleasures are the fruits of Dharma both in this and future lives.
PINGALA COMMENTARY

17/11 'White' means good and pure. As for establishing the causes of blessed virtue; following the ten paths of pure actions results in no-killing, no-stealing, no-lewdness, no lying, no deception, no evil speech, no useless gossip, no jealousy, no anger and no perverted views. These are termed good. One who produces such results in body, speech and mind attains name and wealth in this world, and in the next world is born into a place of honor amongst gods and men. Although there are other various types of blessed virtues such as almsgiving and reverence, we are summarizing, and these are therefore to be included within the ten good paths.

Reply:

KALUPAHANA COMMENTARY

Following the causal pattern laid down above, namely, antecedence, the Sautrantika would explain the tenfold path of action (karma-patha) as being initiated by volition (cetana) which puts it together (tathabhisamskaranat, Akb). Volition thin becomes the karma, and the series of actions, bodily and verbal (kaya-vak), determined by that volition, becomes the vehicle of action" (karmanas ca panthanah ibid.). The pure bodily and verbal actions would then be the means by which good is achieved (dharmaṣya sadhanopayah). The five strands of picture to be enjoyed in a "heavenly" life (svarga), either here or in the next world, would the fruit fruit of the good volition. This is the manner in which the Sautrantikas explained the Buddha's notion of karma and its effect.

GARFIELD COMMENTARY

11. “The ten paths” simply denotes the totality of virtuous actions as characterized by one of the Buddhist botanies of morally worthy action. (fn 89. Refraining from killing, stealing, adultery, lying, deception, slander, avarice, hatred, and philosophical error.) The five pleasures are the pleasures appropriate to the various sense faculties. According to the opponent, all we need to do in order to reach enlightenment and to lead good lives is to act virtuously. The principal consequence of this is that we will enjoy temporal happiness.

Yet another interlocutor replies that this wholly misunderstands the Buddha’s explanation of the relation between action and its consequences. While it is the case that acting well is an important ingredient in Buddhist practice and in any account of what it is to lead a good life, and while it is true that when one lives well, one in general is rewarded with material happiness, this hardly indicates that action, the agent, or the consequences of action are inherently existent .. Rather, this more sophisticated opponent suggests, the nature of the link is completely abstract, like a legal obligation: (fn 90. Kalupahana (1986) misreads XVII: 12-19 as Nāgārjuna’s own view. This is understandable, as Nāgārjuna is providing four rival accounts of the relation between action and its karmic consequences. Each on his view contains a kernel of truth; each is indeed accurate in a sense, though misleading in the sense in which it is intended. This final position is closest to Nāgārjuna’s position and can easily be confused with it, but to read it this way misses the significance of the transition at XVII: 20.)
Kārikā XVII.12

INADA (Skt):
Verse 12 - If conceptualizations are permitted there will arise many as well as great errors. Therefore, they are not permissible (or possible) here.

JONES (Skt):
[Reply:12] If such a thought were true, there would be many great errors. Therefore, this thought does not occur here.

KALUPAHANA (Skt):
If there were to be such a thought, there would be many a great error. Therefore, such a thought is not appropriate here.

MCCAGNEY (Skt):
Many and great errors would be assumed to be true if by means of imagining, these [actions] take place here and not those [results].

NISHIJIMA (Skt?):
12. By increasing favor and greatness, When vices have made fabrications,
Those kinds of desirable Acts might be carried out perfectly by acting the behavior concretely,
And relying upon such behaviors the desirable facts can be realized in front of us.

STRENG (Skt):
12. There would be many great mistakes if that explanation were accepted. Therefore, that explanation is not possible.

BOCKING (Ch):
17v12 If one made such distinctions as yours, The errors would be extremely numerous. Therefore, what you have said, Is not correct in its meaning.

BATCHELOR (Tb):
If it were as that investigation, many great mistakes would occur. Therefore, that investigation is not valid here.

DOCTOR (Tb):
When it comes to this account, There are numerous and significant flaws. Hence, this account Is untenable here. [XVII.12]

GARFIELD (Tb):
12. If such an analysis were advanced, There would be many great errors. Therefore, this analysis Is not tenable here.

GARFIELD-SAMTEN (Tb):
12. If it were conceived in this way Many serious errors would follow. Therefore, such a conception Is not tenable here.

HAGEN (paraphrase): [a third opponent weights in:] If such explanation were advanced, there would be many great errors. Therefore, such an analysis is not tenable here.
PINGALA COMMENTARY

17/12 If, in connection with the succession from action to reward, you take as an example the corn-seed, the errors will be extremely numerous, but we shall not discuss them at length here. As for your example of corn-seed, this example will not do, and why? Corn seed is tangible, it has form, can be seen, and has a succession of characteristics, but even so we may contemplate this matter and still not accept your words. How much less with thoughts and actions, which are intangible, formless and invisible? Though they arise and cease without abiding, you desire (to establish) some continuity of characteristics. This is not correct.

(22b13) Further, as for the succession from seed to sprout, etc., is this succession after (the seed) has ceased (at each juncture), or is it a succession in which the seed has not ceased? If it is a succession with the seed having ceased, then this would be causelessness, but if it is succession without the seed having ceased, then corn would be constantly arising from this seed, and if this were so, then one seed of corn would produce all the corn in the world. But this is not the case, and therefore the succession from action to reward is not like this. Question.

KALUPAHANA COMMENTARY

Nagarjuna is not impressed by such an explanation. He perceives many and substantial errors in such conceptualizations. Hence he considers them to be inappropriate. Inada's translation, once again, skips an extremely important qualification made by Nagarjuna. "If conceptualizations are permitted, there will arise many as well as great errors," (). The implication would be that Nagarjuna rejects all conceptualizations. However, this is not the case. Nagarjuna is very specific in his reference when he says: esa kalpana, "these conceptualizations," where "these" refers to the preceding conceptualizations or explanations. Indeed, it is for this reason that Nagarjuna can turn around and speak of a more appropriate thought or conceptualization in the next verse.
Kārikā XVII.13

imāṃ punaḥ pravakṣyāmi kalpanāṃ yātra yojyate |
buddhaiḥ pratyekebuddhaiḥ ca śrāvakaiḥ cânuvartitām ||13||

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 13 - I will here relate about certain appropriate conceptualizations which have been praised (i.e., sanctioned) by the Buddhas, Pratyekabuddhas and Sravakas.

JONES (Skt):
[Objection:13] I shall expound this thought that does apply and that was propounded by the buddhas, the solitary buddhas, and the disciples.

KALUPAHANA (Skt):
Moreover, I shall expound the following thought which is appropriate and which has been extolled by the Buddhas, the self-enlightened ones and the disciples.

MCCAGNEY (Skt):
Again, I will explain where this assumption is employed by awakened ones, by self-awarened ones, and by disciples who praised it.

NISHIJIMA (Skt?):
13. Now I would like to proclaim again that, There have been said some kinds of fabrication set up as oath, By many Buddhas, Pratyeka-Buddhas, And by also Sravakas for explanations in detail.

STRENG (Skt):
13. In rebuttal I will explain the interpretation which can be made to fit the facts, That which is followed by the Buddha, the self-sufficient enlightened ones (Pratyekabuddha) and the disciples of Buddha.

BOCKING (Ch):
17v13 We will now further expound, In relation to actions and their rewards, (Truths) which all Buddhas, Pratyekabuddhas And sages admire and praise.

BATCHelor (Tb):
I will fully declare the investigation which is taught by the Buddhhas, Pratyekabuddhas and Sravakas, which is valid here.

DOCTOR (Tb):
The account given by the Buddhas, The self-realized buddhas, and the listeners Is the one that is tenable here. That, then, shall be set forth. [XVII.13]

GARFIELD (Tb):
13. I will then explain what is tenable here: The analysis propounded by all Buddhas, self-conquerors And disciples according to which...

GARFIELD-SAMTEN (Tb):
13. I will now explain The analysis advocated by all Buddhas, pratyekabuddhas, and śrāvakas Which is apposite here.

HAGEN (paraphrase):
I shall relate what is tenable and has been taught by buddhas, pratyeka-buddhas, and sravakas.

PINGALA COMMENTARY

17/13 Namely,

KALUPAHANA COMMENTARY

The present statement by Nagarjuna should serve as an antidote to most of the misunderstandings that have prevailed so far regarding his views about thought and language. Nagarjuna is about to explain in no unclear terms a more appropriate thought or conceptualization (kalpana), a right thought (samyaksamkalpa), a right view or perception (samyag-drsti) relating to karma and its fruit (phala). It is one that is extolled not only by the Buddha, but also by his disciples (sravaka) and the self-enlightened ones (pratyeka-buddha). If Nagarjuna had recognized a linguistically transcendent truth or reality, he could not have made the above statement.
Kārikā XVII.14

patrāṃ yathā ’vipraṇāśas tathārṇam iva karma ca |
caturvidho dhātutaḥ sa prakṛtyāvyākṛtaḥ ca saḥ ||14||

bù shí fā rú quān yè rú fú cài wù
cí xíng zé wú jí fēn bié yǒu sī zhōng

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 14 - An imperishable continuing action is like a document (i.e., in constant force) and a karma is like an obligation (i.e., a discharge of duty). The imperishable continuing action is four-fold from the standpoint of the realms of action (dhatu) and is indeterminate from the standpoint of primal substance (prakrti). - Note: Reference is made to the four-fold realms of desire (kama), materiality (rupa), immateriality (arupa), and transcendent of sense attachment (anasrava).

JONES (Skt):
[14] As the unperishing is like a promissory note, so is action like a debt. In terms of realms, it is fourfold (the realm of desire, the formed and formless realms resulting from meditation, and the realm of nirvana), and by nature it is undefined.

KALUPAHANA (Skt):
Like an imperishable promissory note, so is debt as well as action. It is fourfold in terms of realms and indeterminate in terms of primal nature.

MCCAGNEY (Skt):
What is imperishable is like a promisory note and an action like a debt. It has four kinds of elements and it is indeterminable in primordial substance.

NISHIJIMA (Sk?):
14. Following the endless motion of the wings, the efforts have been continued until the expected effects. Relying upon such a process, the flying is just Action itself. The four kinds of fundamental Matter, that is, the ground, water, fire, and air, are Real, But the explanations of fundamental Matter are not sufficient yet in their explanations.

STRENG (Skt):
14. As "that which is imperishable" is like a credit on an account statement, so an action (karma) is like a debt. The imperishable is of four kinds in its elements (dhatu) i.e., desire, form, non-form, and pure; in its essential nature it cannot be analyzed.
Moreover, a debt and karma are compared to an imperishable promissory note. The metaphor is significant and needs to be carefully examined. It is used by Nagarjuna to illustrate the doctrine of karma as described in one of the most popular and authoritative statements in the Indian Buddhist tradition. Two centuries later, Vasubandhu wrote a whole treatise (Karmasiddhiprakaraṇa) attempting to explain this statement. Candrakīrti quotes it twice in his commentary (p, 390). The fact that he does not quote it at this point, where it seems to be most relevant, indicates that he was using it to illustrate a completely different point (see below XVII.21). The statement runs thus: "Karmas do not perish even after hundreds of millions of aeons. Reaching the harmony of conditions and the appropriate time, they produce consequences for human beings."

The first statement, taken in isolation, will convey the impression that the Buddhist theory of karma is deterministic in an extreme sense. However, the second statement provides sufficient qualifications to take the determinist sting away. What seems to have compelled Inada to assume that here, "With equal force he condemns any idea of an indestructible continuing action (aviprasakarma) which gives the sense of continuity or transition in man's everyday life and deeds" (Nagarjuna), is his failure to evaluate the first statement in the light of the qualifications provided in the second statement. In the present chapter Nagarjuna is simply explaining the first statement, i.e., "karmas do not perish" (na pranasyanti karmani). His analysis, at this point, is confined to it. He leaves the second statement to be examined in two other chapters that follow. After examining what an imperishable karma is, Nagarjuna wants to keep any soul-theory out of the way, and this he does with Chapter XVIII. And from there, he immediately gets down to analyse the contents of the second statement by compiling two chapters: (i) Chapter XIX on the "Examination of Time" (Kala-parikṣa) and (ii) Chapter XX on the "Examination of Harmony" (Samagri-parikṣa). As such, it would be inappropriate to come to any definite conclusions regarding the contents of this chapter until the three following chapters are carefully examined. However, Nagarjuna's statement at XVIII. 13 that he "will state this more appropriate view" (imam kalpanam pravakṣyati yatā yojayate), which he then attributes to the Buddhas, his disciples, and the Pratyeka-buddhas would certainly seem to indicate that he is presenting an acceptable view, rather than one that should be rejected.

Furthermore, having made such a strong statement indicating that he is presenting "this" (imam) appropriate view, if Nagarjuna were to follow it up with a theory that he is condemning, one will need to think twice before considering Nagarjuna to be a second Buddha.

To return to the metaphor of the promissory note (patra) that one signs when borrowing money, this metaphor being Nagarjuna's own, he is not speaking of a permanent and eternal promissory note, but something that will remain so long as it is not redeemed. As long as a promissory note is preserved, and unless one were to honor one's obligations, one will eventually, depending upon time and conditions, have to face the consequences. The imperishability of the promissory note may also mean that even if the promissory note is destroyed there is an obligation on one's part to honor such an agreement. If, in order to account for such an obligation, one were to assume a substantial nature (prakṛti = svabhava) in that act, Nagarjuna's response is that such a nature is "not determinate" or is "inexplicable" (avyakta), an answer that the Buddha himself gave when questioned about metaphysical issues (see Chapter XXVII). Finally, in terms of the realms in which the consequences may be reaped, such actions can be fourfold. Candrakīrti refers to the fourfold realms as (i) the sphere of sensuality (kamavacara), (ii) the sphere of materiality (rupavacara), (iii) the sphere of the formless (arupavacara), and (iv) the state of freedom or absence of influxes (anavravana).

**GARFIELD COMMENTARY**

14. Using the metaphor of a promissory note, the defender of this view compares action and its consequences to a document attesting to a particular debt or other legal action: Though the ‘act to which the document attests was in one sense momentary, its consequences, and the evidence of its reality, are unlimited in duration. So the consequences of any action - however local that action might appear to be - reverberate through all realms of existence. (fn 91. The four realms reflect traditional Buddhist cosmology: the desire realm, the form realm, the formless realm, the realm of freedom.) Moreover, the fundamental nature of action and its consequences is neutral. That is, simply considered as such, on this view, neither action nor its consequent trace is either positive or negative. Any particular action or trace may of course be so - but action itself is equally capable of being positive or negative in character. We now turn to specific advice to enable one to realize the nature of reality and to abandon the mundane concerns and attachments that lead to binding actions (advice with which Nāgārjuna would not take issue):.
Kārikā XVII.15

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 15 - It (i.e., the imperishable continuing action) is not abandoned by simple abandonment but by the virtuous practical actions. Therefore, the fruits of karma come forth from the imperishable continuing action.

JONES (Skt):
[15] It is not gotten rid of by renunciation, but it is gotten rid of by development through meditation. Therefore, the fruit of action arises through the unperishing actions.

KALUPAHANA (Skt):
That [i.e. the imperishable karma] would not be relinquished by simple relinquishing. It is to be relinquished only through cultivation. Thus, through the imperishable arises the fruit of action.

MCCAGNEY (Skt):
[The imperishable is] not abandoned by the act of abandonment or by unabandoned meditation. Therefore, by means of the imperishable, the fruit is born out of the action.

NISHIJIMA (Skt?):
15. An absolutely stopping job is perfectly different from being sent only as a messenger, for example. The cause of existence is never only denial of estrangement. Therefore during as far as possible for seeds to be maintained, The births are continued relying upon Action.

STRENG (Skt):
15. An imperishable force is not destroyed qua destruction; rather it is destroyed according to spiritual discipline. Therefore, the fruit of actions originates by the imperishable force.

BOCKING (Ch): 17v15 It is not severed by perception of truths. It is only severed by meditation. By virtue of this non-disappearing dharma All actions have their rewards.

BATCHELOR (Tb): It is not let go of by letting go, but only let go of by cultivation. Therefore through irrevocability are the fruits of acts produced.

DOCTOR (Tb): It is not eliminated by elimination, Yet it is eliminated through cultivation. Therefore, it is due to nondissipation That the effects of action are produced. [XVII.15]

GARFIELD (Tb): 15. By abandoning, that is not abandoned. Abandonment occurs through meditation. Therefore, through the nonexpired, The fruit of action arises.

GARFIELD-SAMTEN (Tb): 15. Abandonment does not occur through abandoning. Abandonment occurs instead through meditation. Therefore, in virtue of indestructibility The effect of action arises.

HAGEN (paraphrase): Imperishable action is not abandoned by abandoning, but only through cultivation. Thus the fruit of action arises through the imperishable.
15. Simply by resolving to abandon attachment one cannot thereby succeed in shedding it. It is difficult to accomplish this. Attachment arises as a consequence of the persistent, pervasive psychological, verbal, and physical habits that together constitute what Buddhist philosophers call the “root delusion,” the ignorance of the true nature of things. That delusion consists in confusing existence with inherent existence and issues inevitably in one of the two extreme views - reification or nihilism. Only through extensive meditation on the nature of phenomena and on the nature of emptiness can these habits be abandoned, and only through an understanding of the ultimate nature of things can the fruit of actions done through abandonment - that is, liberation from the suffering of cyclic existence - be attained. The promissory note metaphor is at work here as well. The idea is that one cannot simply cancel a promissory note on one’s own without paying the debt. One must do something more substantial to discharge one’s obligation to one’s creditor.
Kārikā XVII.16

यदिदोषा प्रसाजीयर्षंति कर्मवधायः ||१६||

prahāṇataḥ prahēyāḥ syāt karmānḥ sankrāmena vā
yadi doṣāḥ prasajyeraṃs tatra karmavadhādayaḥ ||16||

INADA (Skt):
Verse 16 - If it is abandoned by simple abandonment or by the transformation of the karma, then there necessarily follows such errors as the denial of karma, etc.

JONES (Skt):
[16] If the unperishing action were to be gotten rid of by the renunciation of action or by transmigration, then errors would follow - the destruction of actions, and so forth.

KALUPAHANA (Skt):
If it to be relinquished through simple relinquishing or through the transformation of action, then there would follow a variety of errors such as the destruction of actions.

MCCAGNEY (Skt):
If abandoned by the act of abandonment or by means of the transformation of what would be karmān then errors follow, such as the denial of karmān, etc.

NISHIJIMA (Skt?):
16. The Action to stop might be occurred by being sent to a far distant place,
And so miscellaneous Actions are relying upon just to act itself.
Therefore miscellaneous vices are always relying upon whether we commit them actually, or not.
Therefore in such situations the Action itself is just the destroyer of heartlessness.

STRENG (Skt):
16. If the imperishable force were that which is destroyed by usual destruction or by transference of action, Fallacies like the destruction of action would logically result.

BOCKING (Ch):
17v16 If it were severed by perception of truths,
Yet actions still reached similar (rewards)
This would mean a denial of karma
And errors such as this.

BATCHelor (Tb):
If it perished through being let go of by letting go and the transcendence of the action, then faults would follow such as the perishing of actions.

DOCTOR (Tb):
If it were eliminated by elimination
Or destroyed by a transference of action,
Various flaws would ensue,
Such as the destruction of action. [XVII.16]

GARFIELD (Tb):
16. If abandonment occurred through abandoning, and
If action were destroyed through transformation,
The destruction of action, etc.,
And other errors would arise.

GARFIELD-SAMTEN (Tb):
16. If abandonment occurred through abandoning, or
If action were destroyed in virtue of transformation,
Absurd consequences such as
The annihilation of karma would follow.

HAGEN (paraphrase):
If it’s abandoned through abandonment or through the transformation of action, there would follow a variety of errors, including the destruction of action.

851
When speaking of imperishable karma, naturally the question can be raised as to how it can be gottern rid of. Is it possible to nullify the effect, say, of a bad karma by simply not doing it again (prahanato praheyo)? The theory of prapti ("attainment") and aprapti ("non-attainment") may imply such a situation. Preventing the momentary stream of life from appropriating a bad karma would mean the nullification of the effects of all previous karmas.

Nagarjuna perceives this to be a negation of the doctrine of karma (karmavatda). He therefore insists that the abandoning of the fruits of karma can be achieved, not through simple abandonment, but through constant practice (bhavana), i.e. constant performance or promotion of good actions and the constant avoidance of evil actions (cp. sabbapapassa akaranam kusalassa upasampada D 2.49; Dhp 183).

16. If one thought that one could just resolve to abandon attachment and delusion and succeed, that would be to treat attachment and attached action as trivial entities - even as illusory in the full sense. Just as when one sees a mirage, one can, knowing that it is a mirage, stop seeing it as water. That is possible for illusory things, but not so for empirically real ones. It takes effort to see an actual puddle as empty - not of conventional water, but of nonconventional inherent existence - and it takes effort to stop reifying habits. Again, though this is articulated in defense of the opponent’s view, this is a sophisticated opponent, and Nāgārjuna in fact agrees with much of this.
Kārikā XVII.17

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 17 - When all the similar and dissimilar karmas come together in a realm, there will arise only one imperishable continuing action.

JONES (Skt):
[17] When there is a new rebirth from all similar and dissimilar actions in the realms, the effects of unperishing actions arise as one.

KALUPAHANA (Skt):
Of all these actions, whether dissimilar or similar, belonging to certain realms, only one would arise at the moment of birth [of a being].

MCCAGNEY (Skt):
When all similar and dissimilar karmans have been put together again with the elements, only one arises.

NISHIJIMA (Skt?):
17. All researches are related with lotus, And are related with the whole Universe and Actions. They are related upon similarities, which belong to Real Matter. Something Only One manifests itself, which is totally Reality.

STRENG (Skt):
17. At the moment of transition that imperishable force Of all identical and different actions belonging to the same element (dhatu) originates.
KALUPAHANA COMMENTARY

Even though this statement of Nagarjuna is in perfect conformity with the Buddha's own explanation of the doctrine of karma, it may come as a surprise to most Nagarjunian scholars, especially because it conflicts with most opinions expressed about Nagarjuna's philosophy. Here is an explanation of rebirth (punar-bhava) examined in relation to past karma. In the eyes of most scholars, Nagarjuna could never make a statement like this. Here, karma is presented as the connecting link between two lives. It is one of a myriad of karmas an individual may have performed, whether they be similar or dissimilar. The fact that only one (eka) among such actions of a life-time may appear at the time of the conception of a being (pratisamdhi) and which can influence the new life-process is acknowledged by Nagarjuna. He could not have been unaware of the statement of the Buddha that consciousness (vinnana which is inextricably bound up with volitional karma) was a possible connecting link between two lives (D 3.105; Chang 12.2 [Taisho 1.77b]) and also of the emphasis placed by his fellow Buddhists on the last thought of the dying person (cuti-citta) as having influence over a new life-process (pratisandhi-citta, see detailed discussion at VbhA 155-160). Without falling back upon a metaphysical theory of moments, as some of the Abhidharma interpreters did, Nagarjuna is here recognizing the dependence of rebirth (pratisamdh) on at least one previous karma. It is a similar recognition that made the Buddha declare: "Beings have karma as their own, karma as inheritance, karma as the source, karma as kin. It is karma that distinguishes human beings, for example, as inferior and superior," (kammassaka ... satta kammadayada kammayoni kammabandhu, kammam satte vabhajati yadidam hinappanitataya M 3.203; Chung 44.1 [Taisho 1.704c]). Unfortunately, Buddhaghosa's explanation, though retaining the ideas expressed by the Buddha as well as Nagarjuna, is marred by a theory of moments (see VbhA 156). Just as much as memory is being described by most psychologists as being "owned" without having to assume its permanence, here we find a person's karma being perceived as something "owned" by him.

GARFIELD COMMENTARY

17. One performs countless various actions in one’s life. And the confluence of the karmic consequences of all of them, on this view, are realized in the beginning of a single individual at the moment of rebirth (the one who arises). This comment is, of course, most directly about rebirth and the mechanism of karma in transmigration. Here is a way to understand that explicit point: The mechanism by which karma operates in rebirth is not that each individual action in a continuum designated as an individual remains permanently in place or leaves a substantial trace that lies dormant until it produces its consequence. This is indeed how karma is often conceived by substantialist Buddhist schools. Rather, each moment of such a continuum, including the moment of rebirth, is a consequence, through the mechanism of dependent arising, of all of the previous moments of that continuum (and, of course, of much else besides). Those karmic consequences are, as it were, “summed up” in the total state of the individual at birth. But of course the implications of this are more general and concern every moment of any life. They can hence be made independently of any discussion of transmigration, though of course they help to demystify that Buddhist doctrine, at least as it is conceived in Mahayana philosophy. The point is this: Every moment of our lives represents the causal consequences of, inter alia, all of our prior actions. No action “lies dormant” waiting for its consequences to emerge. Nor does any action somehow become “canceled” when some salient consequence is noticed. There is no accounting kept, and no debit and credit system, either from the causal or the moral point of view in the continuum of human action and experience. Rather, at each moment we are the total consequence of what we have done and of what we have experienced. And the only sense in which some past action may determine some future reward is one in which that past action, as well as other conditions, have determined a state now that, together with other future conditions, will determine that reward. Mutatis mutandis, of course, for negative consequences. This sober empiricist account of these matters forms the basis for Mahayana moral theory and its account of the nature of soteriological practice.
Kārikā XVII.18

कर्मम: कर्मनो दृष्टे धर्मम उत्पद्यते तु सः।

dviprakārasya sarvasya vipakve 'pi ca tiṣṭhati ||18||

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 18 - The imperishable continuing action will arise in the present, correspondingly with respect to all the two-fold nature (i.e., similar and dissimilar) of the karmas. It will also endure in its maturing state.

JONES (Skt):
[18] In the present life, the unperished effects arise from each individual good or bad action, and they stay even when ripening.

KALUPAHANA (Skt):
That [imperishable] arises in the present life, corresponding to all the actions having dual natures [similar and dissimilar, good and bad, etc.] and stays so even when matured.

MCCAGNEY (Skt):
The view’s teaching is it [the imperishable] arises from the action of the two karmans [similar and dissimilar]. And it endures in the maturation of everything from the two scattered heaps.

NISHIJIMA (Skt?):
18. Actions and Actions can be seen. The Universe manifests itself totally as Reality. In the form of belonging to the two Fundamental Substances, that is, the Universe or Something Real itself. Something has been established as the Universe just perfectly matured in Real Stability.

STRENG (Skt):
18. That imperishable force is the dharma, having arisen by one action after another in visible existence; And it remains constant even in the development of all bifurcating action.
KALUPAHANA COMMENTARY

A further exploration of the Buddha's doctrine of karma is continued here. The phrase drste dharme is a sanskritization of Pali dittha dhamma, which itself can be traced back to drsta-janman, meaning "the present life." The fruitioning of karma into good and bad consequences is admitted here.

GARFIELD COMMENTARY

18. But here the opponent slides over into the substantialism that Nāgārjuna will criticize. For although he has characterized actions as impermanent, he has retained the seed-and-sprout metaphor that has the actions identifiable over time and, hence, as having an independent existence and identity. Moreover, he suggests, their consequences are determinate in time, delimited by death or nirvāṇa:
Kārika XVII.19

**ENGLISH TRANSLATIONS**

**INADA (Skt):**
Verse 19 - The imperishable continuing action ceases to be when it has gone beyond (i.e., exhausted) the effects or met with death. Here a distinction must be made between worldly attachments (sasrava) and supra-worldly non-attachments (anasrava),

**JONES (Skt):**
[19] The fruit ceases through interruption of the fruit or death. In this, a division should be distinguished between actions with outflows of effects and ones without outflows of effects.

**KALUPAHANA (Skt):**
That [imperishable] ceases as result of the interruption of the fruit or as a result of death. Herein, a distinction between one with influxes and the one without influxes is to be signified.

**MCCAGNEY (Skt):**
It [the imperishable] ceases either from escaping the effect or from death. A distinction between passion and purity [outflows and the drying up of outflows] would be drawn.

**NISHIJIMA (Skt?):**
19. Results have also habits of passing through, and it is also Reality. And the refusal from death is also stopped perfectly. Our efforts of neglecting pains are also very severe pain, And it is desirable for us to recognize the real allotments of shares actually.

**STRENG (Skt):**
19. That imperishable force is destroyed by death and by avoiding the product (phala). There the difference is characterized as impure and pure.
PINGALA COMMENTARY

17/19 The non-disappearing dharma, we should understand to be like a bond, and 'actions' to be like the goods received. This nondisappearing dharma may be bound to the realm of desire, bound to the realm of form, bound to the formless realm, and also unbound. As far as distinctions of good, bad and neutral are concerned, it is merely neutral, and the meaning of its being neutral is fully explained in the Abhidharma. It is not cut off by perceiving truths, but is cut off by meditation in the midst of its passing from one effect to another effect. In this way, by virtue of the non-disappearing dharma (karmic) actions produce effects.

(22c10) If it were cut off by perceiving truths, and yet actions still reached similar (rewards) this would mean the error of denying karma, a topic which is fully explained in the Abhidharma. Further, with regard to the never-disappearing dharma; at the time when actions, similar or dissimilar are first receiving a body in a particular realm, only one reward arises.

(22c12) Further actions arise from actions of the body in the present world, and these actions are of two kinds, receiving reward according to their weight. Some say that these actions still remain in existence after having received their rewards, since they do not cease moment by moment.

(22c15) 'Either they cease when at fruition, or they cease at death.' means that for the srotapannas etc. (read: Arhats?) they cease at fruition, but for ordinary people and arhats they cease at death. 'Herein is a distinction between those with outflows and those without outflows' means that all the stages of sainthood should be distinguished from the srotapanna (read: Arhat?) in respect of having outflows and not having outflows.

Reply: These ideas are not at all free of the errors of severance and permanence, and for this reason we cannot accept them either.

Question. If that is the case, there will be no karma and retribution.

Reply:

KALUPAHANA COMMENTARY

The so-called imperishable action (avipranasa-karma) can terminate as a result of two events: (i) the interruption of the fruit (phala-vyatikrama), or (ii) death of the individual. In the case of the latter, it is necessary to remember what was said at XVII.17, i.e., that all actions performed during a lifetime are not continued. Only one of the myriads of actions performed can dominate the last thought moment of a person. This would mean that many other karmas, even though all of them have not matured, may become nullified at the time of death.

GARFIELD COMMENTARY

19. Nāgārjuna now mounts a reply against all of these positions collectively:
Kārikā XVII.20
śūnyatā ca na cocchedaḥ saṃsāraś ca na śāśvatam
karmaṇo ’vipraṇāśaś ca dharma buddhena deśitaḥ |20|
suí kōng yì bù duàn suī yòu yì bù cháng
yè guō bāo bù shì shì míng fú;fó suò shuí
| stōn pa ñid daṅ tshad med daṅ || ’khor ba daṅ ni rtag pa min |
| las rnams chud mi za ba’i chos | | saṁs (6)rgyas kyis ni bstan pa yin |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 20 - (Nagarjuna asserts) The imperishable continuing action spoken of by the Buddha is sunyata and not uccheda (interruption), samsara and sasvata (constancy).

JONES (Skt):
[Reply:20] Emptiness and not annihilation; the cycling of rebirths and not eternalism; and the unperishing of action - this is the teaching of the buddhas.

KALUPAHANA (Skt):
Emptiness, however, is not annihilation; life-process is also not eternal; the imperishability is of action—such is the doctrine taught by the Buddha.

MCCAGNEY (Skt):
Openness is not disruption, and saTf1.siira is not permanence. The imperishability [i.e., continuing through their fruits] of the two actions is the teaching elucidated by the Buddha.

NISHIJIMA (Skt?):
20. The balance of the autonomic nervous system is never the cutting of the two. And the wandering of up and down in our daily life does never continue forever. Both being connected with Action and continuity of successful conditions, Are the Rules of the Universe, which were taught to us by Gautama Buddha.

STRENG (Skt):
20. "Emptiness," "no annihilation," existence-in-flux, "non-eternity," And the imperishable reality of action: such was the teaching taught by the Buddha.
17/20 The ideas which the author of this treatise sets forth are separate from severance and permanence. Why is this? Because karma is utterly empty and has the characteristic of nirvana. Its self-nature being separate from existence, what dharma is there to be cut off, and what dharma is there to disappear? Perverted views are the cause of our transmigrating in samsara, and these too are impermanent, and why? Because dharmas arising from perverted views are empty, deceptive and unreal, and being unreal they are impermanent. Moreover, it is because of your attachments to perverted views and ignorance of the true character that you say that karma does not disappear, and that this is the teaching of the Buddha.

Further.

If what is said before is an appropriate explanation of karma, then Nagarjuna can maintain that "emptiness" (sunyata) does not mean "annihilation" (uc-cheda). At the same time he can maintain that the life-process (samsara) is not a permanent and eternal (sasvata) process. In such a context, an imperishable action (avipranasa-karma) simply means the continuity of that life-process conditioned by karma until some of these karmas bear fruit or are lost on the way, while others like the threads of a web can continue to influence the future life-process. In any case, the entire process is one of dependencedependence upon a whole composite of factors.

Nagarjuna has no hesitation in attributing such a doctrine of karma and personal identity to the Buddha himself and praising it as the Buddha-word, even though the attribution of such a doctrine to Nagarjuna would be unacceptable to some of the classical and modern followers of Nagarjuna himself.

20. All phenomena, including action, its result, and the connection between them, will come out to be empty of inherent existence, yet conventionally real; they will be part of cyclic existence, but will be impermanent. This is not surprising. But Nāgārjuna also says that no action expires (retaining the promissory note metaphor). Obviously, he cannot mean that actions are permanent. Rather, we should understand this to assert two related theses: First, it indicates that the consequences of actions do not cease at some point. All actions have ramifications into the indefinite future, due to dependent arising. Second, actions themselves, being empty of inherent existence are not entities capable of passing out of existence, when passing out of existence is interpreted to mean the cessation entirely of something that - once existed inherently. Since actions are not inherently existent, they are not suitable bases for inherent cessation. And this resolves the final apparent paradox: The tension between the assertion that nothing is permanent and that all action is nonexpiring. All phenomena are indeed impermanent, but that entails both that they do not inherently cease and that their effects are indefinite in scope.
Kārikā XVII.21

कर्म नोतपद्यते कस्मात् निःस्वभावं यत्सत्ततः।
यस्माच्च तदनुतप्पनं न तस्मादविप्रवणश्यति॥२१॥

诸業本不生 以無定性故
諸業亦不滅 以其不生故

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 21 - The reason why karma does not arise is that it is without a self-nature (nihsvabhava). As it does not arise there is no perishing.

JONES (Skt):
[21] Why does not action not arise? Because it is without self-existence. And since it does not arise, it does not perish.

KALUPAHANA (Skt):
Why does action not arise? Because it is without self-nature. Since it is non-arisen, it does not perish.

MCCAGNEY (Skt):
Why does karmam not arise? Because it is without self-nature. Since it does not arise, therefore it does not perish.

NISHIJIMA (Skt?):
21. Action does never appear from anywhere at all. The scarcity of wealth exists everywhere, Therefore the wealth is not easy to be accomplished, At the same time it is rather rare for wealth to be exhausted actually.

STRENG (Skt):
Nargajuna refutes the above arguments: 21. Why does the action not originate? Because it is without self-existence. Since it does not originate, it does not perish.

BOCKING (Ch):
17v21 All dharmas are fundamentally non-arising. Since they have no fixed nature. All dharmas are also non-ceasing. Because they do not arise.

BATECHELOR (Tb):
Because actions are not born, in this way they have no nature. Therefore, because they are not born, therefore they are irrevocable.

DOCTOR (Tb):
Why does action not arise? Because it has no nature. Because it does not arise, Action does not dissipate. [XVII.21]

GARFIELD (Tb):
21. Because action does not arise, It is seen to be without essence. Because it is not arisen, It follows that it is nonexpiring.

GARFIELD-SAMTEN (Tb):
21. Why is karma without arising? Because it is without essence. Because it is not arisen, It follows that it is indestructible.

HAGEN (paraphrase):
Action does not arise because it is without self-nature. And because it does not arise it does not perish.
Having concluded the explanation of the more appropriate view of karma as advocated by the Buddha, Nagarjuna does not leave the discussion without taking a look at the possible metaphysical interpretations or any misunderstanding of this doctrine. He has already spoken of the arising (utpada) of karma at the moment of rebirth (pratisamdhi). That arising is understood in relation to the principle of dependent arising (pratityasamutpada). The imperishability (avipranasa) is introduced in order to explain the continuity in the fruitioning of action. It is not intended as a justification for the belief in a permanent and eternal substance (svabhava). However, some of the Buddhists did utilize a notion of substance to account for the functioning of karma. It is this particular notion of substance that is taken up for analysis.

If karma is "non-substantial" (nihsvabhava) in the way the Sautrantikas understood it, i.e., without any perceivable continuity, but only as something that is continually interrupted, then the arising of such karma cannot be explained. If arising cannot be accounted for in such a metaphysical way, neither can cessation be admitted. Imperishability (avipranasa), as explained by Nagarjuna, becomes the only other alternative. Unfortunately, Candrakīrti, who favored a rather absolutistic interpretation of Nagarjuna (see comments on the Dedicatory Verses), utilizes the conception of imperishability in order to deny any form of arising. It is because he had such an interpretation in mind that he quotes the famous verse elucidating karma at this point rather than utilizing it when the imperishability was first mentioned by Nagarjuna at XVII.14. As has been shown already, Nagarjuna was not critical of any and every form of arising or ceasing. He was only rejecting the metaphysical ideas.

21. This verse emphasizes the second reading of the thesis of the nonexpiration of action and echoes the arguments from Chapter VII.
Kārikā XVII.22

कार्म स्वभावतेष्वत्स्याच्छावशतां स्यादसंस्कृतम्।
अकृतं च भवत्कार्म क्रियते न हि शाश्वतम्।२२॥

若業有性者 是則名為常
不作亦名業 常則不可作

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 22 - If karma has self-nature then undoubtedly it will have the nature of constancy and will also be uncreated. However, anything characterized by constancy does not create.

JONES (Skt):
22] If an action existed because of its self-existence, it would undoubtably be eternal. And the action would be uncreated, since what is eternal is not created.

KALUPAHANA (Skt):
If it is assumed that action comes to be from self-nature, it certainly will be eternal, and action would also be uncaused, for that which is eternal is, indeed, not caused.

MCCAGNEY (Skt):
If karman had self-nature, it would certainly be permanent. Karmar that would be uncaused is indeed not caused by permanence.

NISHIJIMA (Skt?):
22. If Action is the fact of subjective existence, It might be perhaps what is eternal without fail. But at the same time it might be difficult for everyone even only to take a rest. Because it might be perfectly impossible for eternity to be created at all.

STRENG (Skt):
22. If an action did exist as a self-existent thing, without a doubt, it would be eternal. An action would be an un-produced thing; certainly, there is no eternal thing which is produced.

BOCKING (Ch):
17v22 If actions had a nature
They would be called permanent
Inactivity would be called action
For what is permanent cannot act.

BATCHELOR (Tb):
If actions existed [by] nature, without doubt they would be permanent. Actions would not be done [by an agent] because what is permanent cannot be done.

DOCTOR (Tb):
If action had a nature, It would, undoubtedly, be permanent. Action would not be created Because the permanent cannot be active. [XVII.22]

GARFIELD (Tb):
22. If action had an essence, It would, without doubt, be eternal. Action would be uncreated. Because there can be no creation of what is eternal.

GARFIELD-SAMTEN (Tb):
22. If action had an essence. It would, without doubt, be eternal. Action would be unproduced, because There can be no production of what is eternal.

HAGEN (paraphrase):
If action had self-nature it would be eternal. Being eternal it would be uncaused.
KALUPAHANA COMMENTARY

If the arising of karma cannot be accounted for by following the Sautrantika method, can it be explained in terms of the Sarvastivada conception? Nagarjuna's answer is negative. He seems to know with great certainty (asamsayam) that the Sarvastivada solution does not work. It implies permanence and as a result karma would appear to be "un-done" or "uncreated" (akṛta).

GARFIELD COMMENTARY

22. Moreover, Nāgārjuna reminds us, again drawing heavily on the arguments reviewed and redeployed in Chapter VII, things with essences don’t arise and cease, and can’t be related causally to other things. If action existed inherently, it couldn’t be initiated. So, if one were trying to preserve the reality of action and karma against the analysis in terms of emptiness (because one viewed that analysis as undermining their genuine existence), it would be pointless to defend the existence of action and karma as inherent existence.
Kārikā XVII.23

ENGLISH TRANSLATIONS

INADA (Skt): Verse 23 - If an uncreated karma exists then there will be apprehensive (acts) without any creation. And a fallacy would result in which there will be no dwelling upon (i.e., carrying on) the ways of the Brahman.

JONES (Skt): [23] If an action were not completed, there would be the fear of encountering some other unfinished action. The error of a life in conflict with one’s religious vows would follow from this.

KALUPAHANA (Skt): If an action were not performed [by the individual], then there would be fear of being confronted by something not performed [by him]. An ignoble life as well as error would follow from this.

MCCAGNEY (Skt): If karman would be uncaused, there is fear of encountering what one did not cause.

In that case, an unsaintly life and error would follow.

NISHIJIMA (Skt?): 23. Because the Action hasn’t been done, there is sometimes possibility of warning not to be done.

In that situation it might be possible for the Action not to be done. There might be some possibility of not to maintain the vow actually, and there the vices might be attached without fail.

STRENG (Skt): 23. If the action were not produced, then there could be the fear attaining something from “something not produced”; Then the opposite to a saintly discipline would follow as a fallacy.

WESTERHOFF (Skt): XVII.23a If an action were uncreated fear would arise of encountering something not done. . . .
KALUPAHANA COMMENTARY

If actions were to be something not performed, then a person would be haunted by the fear (bhaya) or anxiety that he has no hand in the organization of his own life-process. Fears and anxieties, according to Nagarjuna's view, are one's own creations. Deny one's own responsibility, one does not have to justify a life of moral purity (brahmacarya-vasa). This is a clear and unequivocal assertion of personal responsibility for one's own purity and defilement.

GARFIELD COMMENTARY

23. Nāgārjuna here and in XVII: 24 draws some of the moral consequences of the nihilistic view of action that seems to follow from the conditions set on its existence by the reificationist: Actions would not come into being through agency and so would have no regular relation to any agents. And so one might find oneself experiencing the consequences of some action one had not performed, or find that it was, in some sense, one's own action. One would not take action seriously as one's own responsibility and would not worry about moral infractions. Monks and nuns would break their vows. Since morality depends on a distinction between morally positive and morally negative acts, if there were no actions, or if actions could not be thought of as initiated by their agents, there would be no morality. From another perspective, the preservation of vows would be an impossibility anyway since preserving the vows requires taking action, which would be impossible if action were uncreated.
Kārikā XVII.24

vyavahāra virudhyante sarva eva na saṃśayaḥ |
punyapāpakṛtor naiva pravibhāgaś ca yujyate ||24||

是則破一切 世間語言法 |
作罪及作福 亦無有差別 ॥२४॥

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 24 - All common practices would, no doubt, be destroyed for it follows that no distinction between the virtuous and evil doers could be made.

JONES (Skt):
[24] So too, all conventions would undoubtedly be contradicted, and no distinction between meritorious and evil acts would be admissible.

KALUPAHANA (Skt):
Undoubtedly, all conventions would then be contradicted. The distinction between the performance of merit and evil will also not be proper.

MCCAGNEY (Skt):
Undoubtedly all practices would be hindered. The difference between causing merit or evil does not occur.

NISHIJIMA (Skt?):
24. To do some kinds of job are to receive an enveloping attack, Therefore all situations of businesses similarly lose the time even to take a rest.
And so both people, neither who produce rightness, nor who produce wrongness, do not exist, Therefore only dismemberment has been attached solely.

STRENG (Skt):
24. Then, undoubtedly, all daily affairs would be precluded. And even the distinction between saints and sinners is not possible.

WESTERHOFF (Skt):
XVII.24b It would be impossible to draw a distinction between merit and demerit.

BOCKING (Ch):
17v24 This would negate all Dharmas of worldly expression Doing evil and doing good Would not be distinguished.

BATCHelor (Tb):
All conventions also without doubt would be contradictory. Also the distinction between doing good and evil would not be valid.

DOCTOR (Tb):
Undoubtedly, this would Contradict all conventions. The distinction between virtuous persons and sinners Would no longer make sense. [XVII.24]

GARFIELD (Tb):
24. All conventions would then Be contradicted, without doubt. It would be impossible to draw a distinction Between virtue and evil.

GARFIELD-SAMTEN (Tb):
24. All conventions would also Be contradicted, without doubt. It would be impossible to draw a distinction Between virtue and evil.

HAGEN (paraphrase):
All conventions would, no doubt, be contradicted since any distinction between wholesome and unwholesome actions could not be made.
With the rejection of a life of moral purity resulting from the denial of human responsibility for actions, all moral conventions like merit and demerit (punya-papa) would be rendered meaningless. It is interesting to note that Nagarjuna is not referring to the good-bad (dhamma-adharma or kusala-akusala) distinction, for this latter distinction is different from the former in regard to its value as a convention (vyavahara). This is compatible with the Buddha’s own explanation of karma. On pragmatic grounds, the Buddha recognized the merit/demerit distinction. It was helpful in leading the ordinary people toward accepting a moral life. However, the notions of merit and demerit could be harmful in the long run, especially because it involves the idea of accumulation of merit for the sake of future enjoyment and pleasure.

Furthermore, it is easily associated with the notions of reward and punishment, a notion that the Buddha was not willing to relate to the doctrine of karma (see M 1.373; Chung 32.1 [Taisho 1.628b]). As such, the Buddha insisted that a morally perfected person would eliminate the desire to accumulate merit or demerit (punna-papa-pahina Dhp 39; samitavi pahaya punnapapam Sn 520). Yet, it does not mean that such a person also abandons the good/bad (kusala-akusala) distinction which is the very basis of merit and demerit. Indeed, a morally perfect person is expected to promote good, while eliminating evil or unmeritorious actions (see above XVII.1, 17). It may be for this reason that even a later Mahayana philosopher like Dogen deemed it appropriate to compile a whole treatise on this subject.

24. Moreover, Nāgārjuna argues in the next verse, if actions had essences, they could not cease, and if their karmic consequences had essences since they would need no conditions to arise, they would just keep arising:

---
**Kārikā XVII.25**

**ENGLISH TRANSLATIONS**

**INADA (Skt):**
Verse 25 - If karma is a fixed thing (i.e., enduring) because of its self-nature, then a maturity that is already matured will again seek maturity.

**JONES (Skt):**
[25] If an action is fixed and thus has self-existence, the ripening of fruit already ripened would ripen again.

**KALUPAHANA (Skt):**
If action were to be determined, because it possesses self-nature, then a maturity that has matured will again mature.

**MCCAGNEY (Skt):**
If karman is unchanging because it arises from its own nature, then maturity that has matured will therefore mature again.

**NISHIJIMA (Skt?):**
25. And even though a cook has been well cooked, and furthermore it has been well cooked, it might be cooked further just better again. It is possible for Action to be placed into the systematic Order actually, Therefore it might be possible for the situations to be identified with their own original states actually.

**STRENG (Skt):**
25. Then an act whose development had taken place would develop again, If an act, because it persists, exists through its own nature.

**BOCKING (Ch):**
17v25 If, as you say, actions are fixed With self-existent natures, Then, already having received rewards, One would again receive them.

**BATCHelor (Tb):**
[When] the ripening of that [action] has ripened it would ripen again and again, because if it existed [by] nature, it would [always] remain.

**DOCTOR (Tb):**
The ripening that has already ripened Would go on ripening again and again. For if it possessed a nature, Action would remain present. [XVII.25]

**GARFIELD (Tb):**
25. Whatever is mature would mature Time and time again. If there were essence, this would follow, Because action would remain in place.

**GARFIELD-SAMTEN (Tb):**
25. Any ripened result would ripen Time and time again. If there were essence this would follow, Because karma would endure.

**HAGEN (paraphrase):**
If action had self-nature, it would, even after having matured, ceaselessly mature again and again.

**KALUPAHANA COMMENTARY**

If an action were to take place without being performed by someone (akrtakam), then it will occur on its own. It will possess its own nature (svabhava). Such a substantial action will have its own consequences (vipaka) inherent in it. In that case, what is being described as the fruitioning of karma, namely, a manifestation of its consequences, would merely be a re-fruitioning. This is the same sort of criticism that Nagrjuna made of self-causation (svatautpatti) in Chapter I.
Kārikā XVII.26

कार्म क्लेषात्मकं चेदं ते च कलेशा न तत्त्वं।
न चेदं तत्त्वं कलेशा: कार्म स्वयात्मत्त्वं कथम्॥२६॥

If all actions within the world
Arise from the afflictions,
And these afflictions are not real,
How can (actions) then be real?

INADA (Skt): Verse 26 - This karma will have the nature of defilements (kleśas) and these, in turn, will not be in the nature of truth (tattva). But if the defilements are not in the nature of truth, how could karma be in the nature of truth?

JONES (Skt): [26] If action by its nature has afflictions, these afflictions are not real; and if the afflictions are not real, how could the action be real?

KALUPAHANA (Skt): If this action is associated with defilements, these defilements, in turn, are not found in themselves. If defilements are not in themselves, how could there be an action in itself?

MCCAGNEY (Skt): If karman has defilements as self, the defilements are not real. If they are not real defilements, how would karman be real?

NISHIJIMA (Skt?): 26. The place, where Action has naturally included severe pain, is just this world. However the severe pain is not only the real situation of facts there. In the actual situations there, the severe pain is not all at that place. Action might produce something, which is Real Fact itself,

STRENG (Skt): 26. An action is that whose "self" (atman) is desire, and the desires do not really exist. If these desires do not really exist, how would the action really exist?
17/26 In the highest sense actions do not arise, and why? Because they have no nature. It is on account of their non-arising that they do not cease, it is not because they are permanent that they do not cease. If this were not so, the nature of actions would be fixed and existent, and if actions had a fixed, existent nature, this would constitute permanence. If they were permanent, they would be non-acting actions, and why? Because permanent dharmas cannot do anything.

(23a16) Moreover, if there were non-acting actions, then that man could commit a sin and this man would receive the retribution, or that man could lapse from his pure conduct, yet this man would have the sin, and this would negate conventional worldly dharma.

(23a18) If things were pre-existent, then in winter there would be no need to think about the affairs of spring, and in spring no need to think about the affairs of summer, and there would be errors such as this.

(23a19) Moreover, there would be no differentiation between doing good and doing evil. To perform deeds such as almsgiving and holding to the precepts, etc. is meant by 'doing good', and to perform actions of murdering, stealing, etc. is termed 'doing evil'. If there were actions, yet no doing, there would be no (such) distinction.

(23a22) Again, if actions had a fixed, existent nature, then, having already on one occasion received their rewards, one would have to receive them again. Thus, your doctrine that action and reward exist because of a 'non-disappearing dharma' has these kinds of errors.

(23a24) Moreover, if you say that actions arise from the afflictions, these afflictions do not have any fixed (nature) but merely exist by virtue of conceptualized distinctions. Since the afflictions have no reality, how can karma have any reality? Why is this? Because they (the afflictions) have no nature, actions have no nature either.

Question: Even if both afflictions and karma have no nature and are unreal, the resultant body manifestly exists; surely it is real?

Reply.

KALUPAHANA COMMENTARY

The substantialist explanation of karma presented at XVII. 25 would lead to the distinction between karma and its quality or attribute. Qualifies referred to as defilements (klesa), etc., would be merely incidental. A karma can then make defilement "its own" (klesatmaka) or it can be freed from defilements (nih-klesika). Such a substantialist perspective, as mentioned so often by Nagarjuna, would render the defilements unreal (na tattvatah), especially because they come and go, arise and pass away, and hence without self-nature. Karma, in such a case would be substantial, and the attributes non-substantial. Nagarjuna, the empiricist, sees no way in which such a substantial karma, divorced from the attributes, can be identified.

GARFIELD COMMENTARY

26. Moreover, Nāgārjuna continues, afflicted action is, for the opponent, done essentially in affliction. But given that affliction has already been shown to be empty in the chapter on suffering (XII), how could it serve as an essence for action?
INADA (Skt): 
Verse 27 - It is said that karma and defilements are a co-operating conditionality of differing bodies. But if karma and defilements are of the nature of sunya (i.e., thusness or "void"), what could be said of these bodies?

JONES (Skt): 
[Object: 27] Action and afflictions are declared to be conditions of bodies – if action and afflictions are empty, what talk is this about bodies?

KALUPAHANA (Skt): 
Action and defilements are specified as the conditions of the [different] bodies. However, if these actions and defilements are empty, what could be said about the bodies?

MCCAGNEY (Skt): 
Actions and defilements are mentioned as conditioning causes of the body. How are actions and defilements open if they are that [open] in bodies?

NISHIJIMA (Skt?):
27. Action and the severe pain are just belonging to physical bodies. And many Truths are the contents, which are spoken with words. When both Action and the severe pain are existing in the balanced autonomic nervous system, What kind and from what place those kinds of many bodies come from?

STRENG (Skt): 
27. Action and desire are declared to be the conditioning cause of the body. If action and desire are empty, what need one say about "body"?

BOCKING (Ch): 
17v27 The afflictions and karma are said to be the causes of bodies.
Afflictions and actions being empty. How much more so the bodies?

BATCHelor (Tb):
Actions and afflictions are taught to be the conditions for bodies. If actions and afflictions are empty, how can one speak of bodies?

DOCTOR (Tb): 
Action and affliction are taught to be conditions for the body. If action and affliction are empty, then what can be said of the body? [XVII.27]

GARFIELD (Tb): 
27. Action and affliction are taught to be the conditions that produce bodies. If action and affliction are empty, what would one say about bodies?

GARFIELD-SAMTEN (Tb): 
27. Karma and affliction are shown to be the conditions that produce bodies. If karma and affliction are empty, what should one say about bodies?

HAGEN (paraphrase): 
Action and defilements are said to be the conditioning causes of bodies. But if action and defilements are empty, what could be said about the bodies?
17/27 All the saints and sages tell us that the afflictions and karma are the causes and conditions of bodies. Within these conditions desire has the power to fertilize birth, and karma produces the (appropriate) reward of a high, middle, low, attractive, ugly, noble or base, etc., birth. Though you investigate the afflictions and karma in various ways, they have no fixed (nature). How much less do bodies have a fixed (nature), since they are effects of causes and conditions?

(23b5) Question: Although you have refuted karma and retribution on various grounds, nevertheless the sutras say that there is an originator of karma, and since the one who originates karma exists, actions exist, and their rewards exist. As it is said,

Here Nagarjuna moves on to a higher generality. Both karma and defilements are generally considered to be the conditions that determine the individual. As such, karma and defilements become attributes of the personality (deha).

In the previous verse, Nagarjuna questioned the substantial reality of both karma and defilements. If they are empty of such reality, what could be said about the personality itself?

27. The opponent replies, however, that action and affliction are referred to in sutras as the causes of different kinds of rebirth and of different characteristics in rebirths. And since beings are indeed reborn and do indeed have characteristics, how, from the standpoint of a Buddhist view of rebirth, could empty actions and empty karmic consequences explain this?
Kārikā XVII.28

avidyānivṛto jantus tṛṣṇāsamyojanaś ca saḥ
sā bhoktā sa ca na kartur anya na ca sa eva saḥ ||28||

wú míng zhī suō bì ài jié jiē zhī suó fǔ
er yú;yú;wù bēn zuó zhē bū jī yī yī

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 28 - (The opponent contends) The sentient being beclouded by ignorance is a bundle of cravings. He is the percipient (i.e., experiencer of karmic effects). He is neither identical to nor different from the doer.

JONES (Skt):
[Reply:28] The sentient being, who is shrouded in ignorance and bound by craving, is the enjoyer of the fruit and is neither different from, nor identical to, the one committing the act.

KALUPAHANA (Skt):
A sentient being, beclouded by ignorance, is also fettered by craving. As an experiencer, he is neither identical with nor different from the agent.

MCCAGNEY (Skt):
A sentient being unturned from ignorance is bound by craving.
He is the experiencer and he is not the same and he is not different from the agent.

NISHIJIMA (Skt?):
28. If it is true for human beings are ignorant and do not have ability to regulate themselves, The facts that desire should be regulated, are just Reality. Real people, who are only enjoying their pleasure, are absolutely different from people, who are actually working. Another factors are not different from Reality, which is the just the same as Reality.

STRENG (Skt):
28. An opponent tries to establish an identifiable entity by saying: The man shrouded in ignorance, and chained by craving (trsna) Is one who seeks enjoyment. He is not different from the one who acts, nor identical to it.
PINGALA COMMENTARY

17/28 In the Sutra on Beginninglessness it says that all living beings, obscured in ignorance and bound by bonds-of-desire, transmigrate in beginningless samsara experiencing various sufferings and pleasures. The one who is now experiencing is neither the same as, nor different from, the one who previously acted. If he were the same, then when a man who did evil received the form of an ox, the man would not become an ox, and nor would the ox become a man. If they are different, then all action and reward is lost and we fall into causelessness, and causelessness is annihilation.

(23b14) Therefore, the present recipient is neither the same as, nor different from, the former-doer.

Reply:

KALUPAHANA COMMENTARY

The Buddha's discourse to Acela-Kassapa, the discourse which served as the foundation for Nagarjuna's treatment of "suffering" (Chapter XII. Duhkha-pariksā), rejected the theories of self-causation and external causation of suffering. Rejecting self-causation, the Buddha maintained: "Kassapa, to say that 'a person acts and he himself experiences the consequences,' where self-caused suffering belongs to one who has existed from the beginning, implies eternalism" (so karoti so patisamvediyati ti kho Kassapa adito sato sayamkatam dukkhanti iti vadam sassatam etam pareti, S 2.20; Tsa 12.20 [Taisho 2.86a]). On the contrary, "To say that 'one acts and another experiences the consequences,' where the suffering caused by another belongs to one who has been afflicted with pain, implies annihilationism" (anno karoti anno patsamvediyati ti ... vedanabhitunnassa sato paramkatam dukkhanti iti vadam ucchedam etam pareti, ibid.). It is interesting to note that in the former case, the Buddha refers to the belief in a being who existed from the beginning (adito sato), an idea that is generally considered both by the Buddha and by Nagarjuna as contributing to a belief in a permanent entity (see Chapter IX on Purva-pariksā).

In the present verse, Nagarjuna is faithfully following the Buddha's own argument to reject the identity as well as difference between a doer and an experiencer. A person who believes either in identity or in difference is looked upon a someone who is beclouded by ignorance (avidya) and craving (trsna).

GARFIELD COMMENTARY

28. Nāgārjuna focuses in his reply on the nature of the individual who is the putative agent of these actions and experiencer of their consequences. The present objection rests on the presupposition that they exist inherently. That is why the problem arises about how empty actions and empty karmic links could be sufficient to link their properties. So Nāgārjuna emphasizes that neither an analysis in terms of inherent identity nor one in terms of inherent difference between agent and action will suffice. Both presupposes, incoherently, the inherent existence and hence the possession of an essence, of each term in the putative relation. But this of course recalls the problem posed near the end of Chapter I: How can actual effects arise from empty conditions? And Nāgārjuna’s reply echoes the reply developed there:
Kārikā XVII.29

na pratyayasamutpannam na-pratyayasamutthitam |
asti yasmād karma tasmāt kartāpi nāsty atah ||29||

yè bù cóng yuán shēng bù cóng fēi yuán shēng |

gan gi phir na las ˙di ni || rkyen byuṅ ba ma yin ziṅ |
| rkyen min las byuṅ yod min pa | | de phir byed pa po yaṅ med |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 29 - (Nagarjuna asserts) Since karma does not arise by means of relational or non-relational conditionality, there is also no doer.

JONES (Skt):
[29] Since this action neither arises from the conditions nor without the conditions, there thus also is no actor.

KALUPAHANA (Skt):
Since this action does not exist as arisen from a condition nor as issuing forth from a non-condition, even an agent does not exist.

MCCAGNEY (Skt):
Because this action does not exist arisen from conditions or not exist arisen from conditions, therefore the agent does not even exist.

NISHIJIMA (Skt?):
29. The Truth has never been produced. At the same time what is not the Truth has never appeared at once. Therefore this world really exists as Action. Because of that, just the distinction does never exist since that time.

STRENG (Skt):
29. Nargajuna answers: Since action is not "originated presupposing the conditions" nor fails to arise from presupposing the conditions, There is no one acting.

BOCKING (Ch):
17v29 Karma does not arise from conditions, Nor does it arise from non-conditions. For this reason, there is no Originator of karma.

BATCHelor (Tb):
Because the action does not emerge from conditions and does not emerge from non-conditions, therefore, the agent too does not exist.

DOCTOR (Tb):
Because action does not arise
Based on conditions
Or based on non-conditions,
There is no agent either. [XVII.29]

GARFIELD (Tb):
29. Since this action Is not arisen from a condition,
Nor arisen causelessly,
It follows that there is no agent.

GARFIELD-SAMTEN (Tb):
29. Since this action Is not arisen from a condition,
Nor arisen from that which is not a condition,
It follows that there is no agent.

HAGEN (paraphrase):
[Nagarjuna responds:] Since this action is neither arisen from a condition nor from a non-condition, there is also no one acting.
The causal explanations of karma offered by the metaphysicians, namely, self-causation, external causation, etc., or the non-causal explanations are not acceptable. If karma itself cannot be explained in this way, it would be futile to attempt any such explanations of an agent of karma. Note the use of the term idam (this) to refer to karma, similar to the use of the term esa at XVII.6, thus specifying the type of explanation that is rejected by him. For this reason, we prefer to confine his criticism only to the metaphysical views mentioned in the verses immediately preceding (XVII.21-28), leaving the more appropriate view he mentioned untouched. This seems to be the only way in which one can recognize consistency in Nagarjuna's statements throughout this chapter.

29. Since the action does not arise inherently, it lacks inherent existence. Since, as per the discussion of agent and action in Chapter VIII, empty actions entail empty agents, there is no inherently existing agent of the kind presupposed by the objector. But the objector continues:
**Kārikā XVII.30**

INADA (Skt):
Verse 30 - If there is neither karma nor doer, where could the effect arising from the karma be? Where there is no effect, how could there be any percipient (i.e., experiencer)?

JONES (Skt):
[Objection:30] If there is no action or actor, how could there be any fruit arising from the action? And, the fruit not existing, how could there be an enjoyer of the fruit?

KALUPAHANA (Skt):
If both action and agent are non-existent, where could there be the fruit born of action? When there is no fruit, where can there be an experiencer?

MCCAGNEY (Skt):
If action and agent do not exist, where would there be fruit born of action?
Where there is no fruit, where will the experiencer be?

NISHIJIMA (Skt?):
30. And if Action does not have any distinction actually, Where it might be always possible for what has been born is result. Then does it possible for a person, who is living for only such kind of enjoyment, to arrive at the situation?
Where will it be possible for such a situation to be experienced even in future at all?

STRENG (Skt):
30. If there is no action, how could there be one who acts and the product of action? And if there is no product, how can there be an enjoyer of the product?

---

**ENGLISH TRANSLATIONS**

BOCKING (Ch):
17v30 No karma, and no doer.
How can there be action producing a reward?
And if there is no reward
How can there be a recipient of that reward?

BATCHelor (Tb):
If neither the action nor the agent exists, where can there be a fruit of the action? If the fruit does not exist, where can the consumer exist?

DOCTOR (Tb):
If there is no action and no agent,
How could there be a result produced by action
If there is no result,
How could there be a consumer? [XVII.30]

GARFIELD (Tb):
30. If there is no action and agent,
Where could the fruit of action be?
Without a fruit,
Where is there an experiencer?

GARFIELD-SAMTEN (Tb):
30. If there is no action and agent,
Where could the effect arisen from action be?
If there is no effect,
Where could the experiencer be?

HAGEN (paraphrase):
If there is neither action nor agent, where is the fruit of action? Without a fruit, where is there an experiencer?
PINGALA COMMENTARY

17/30 If there is no action and no-one who performs the action, how can there be a reward arising from that action? And if there is no reward, how can there be a recipient of the reward? Karma has three aspects; within the five skandhas what we conventionally designate as a person is the 'doer', and the good or evil situation produced by his actions is called the 'reward'. If an originator of karma does not even exist, how much less can there be actions, their rewards, or a recipient of these rewards?

(23b24) Question: Although you have refuted karma and its reward and any originator of karma in various ways, nevertheless we can see that all living beings manifestly perform actions and receive their rewards. What about this?

Reply:

KALUPAHANA COMMENTARY

In the absence of either an action or an agent metaphysically conceived, there could be no fruit or consequence born of such action (karmajam phalam). Here again, it is not a denial of fruit or consequence born of action, but only of those that are born of such action as explained previously. If the fruit or consequence is not obtained, its experiencer (bhokta) would also not be appropriate.

GARFIELD COMMENTARY

30. That is, if we deny the reality of the action and the agent, we seem to deny the reality of the consequences of the action and, hence, the experiencer, whether “without understanding and consumed by passion” or not. But Nāgārjuna’s view is not that these things are non-existent, as he emphasized in XVII: 20 - only that they are empty. So it follows that the consequences are empty - but that does not entail in any way that they are nonexistent. And it follows that the consequence and the karmic link are empty. From this it follows that the reborn individual whose existence and characteristics are determined by this causal sequence is also empty of inherent existence. And if so, there is no problem about how his/her genesis is dependent upon an empty sequence. Nāgārjuna introduces an analogy to explain this situation:
Kārikā XVII.31

Verse 31 - It is as if a master, by his supernormal powers, were to form a figure and this figure, in turn, were to form another figure....(continues on to the next verse).

VERSUS 31-32

JONES (Skt):
[Reply:31-32] As a teacher creates an illusory phantasm through magical powers, and that apparition in turn creates another apparition, so too is an actor like the apparition and his action like the apparition created by the apparition.

KALUPAHANA (Skt):
Just as a teacher, through psycho-kinetic power, were to create a figure, and this created figure were to create another, that in turn would be a created.

MCCAGNEY (Skt):
As a teacher has within him the power to magically create a magical illusion and that magical illusion magically creates another magical illusion,

NISHIJIMA (Skt?):
31. In such situations, what has been established, has got the position of a Ruler already.
And the facts, that the urgent ruler has been established already, are grasping the power to hold the urgent political situations confirmly.
In such a situation, the fact that the building has been established already, is completely different from the situation, that the measurement has been finished already.
And so actually speaking the facts that the construction has been accomplished already,
Might have the absolute meaning that the building has been accomplished already..

STRENG (Skt):
31. Just as a teacher, by his magical power, formed a magical form, And this magical form formed again another magical form—

[No Commentary on this verse]

**ENGLISH TRANSLATIONS**

INADA (Skt):
Verse 32 - In exactly the same way, the doer is like the formed figure and his action (karma) is like the other figure formed by the first.

JONES (Skt):
[32] [see above]

KALUPAHANA (Skt):
In the same way, an agent is like a created form and his action is like his creation. It is like the created form created by another who is created.

MCCAGNEY (Skt):
in the same way, an agent is a magical creator and his action a magical illusion.
It is as a magical illusion magically created by a magical illusion.

NISHIJIMA (Skt?):
32. In such situations what has been established is just a figure, which can be seen from outside, And the establisher is that person, and this is just what has been created. The concrete thing, which exists there, is different from what has been constructed, And what has been established and what has been measured, are existing there.

STRENG (Skt):
32. Just so the "one who forms" is himself being formed magically; and the act performed by him is like a magical form being magically formed by another magical form.

BOCKING (Ch):
17v32 Just as the first illusionary man May be called a 'doer', What the illusionary man performs May be called an action.

BATCHelor (Tb):
Like this, whatever action too done by that agent [is ]also like the aspect of a creation. It is just like, for example, a creation creating another creation.

DOCTOR (Tb):
Likewise, the act performed by the agent Resembles an emanation, Just as when one emanation Gives rise to another. [XVII.32]

GARFIELD (Tb):
32. In that way are an agent and his action: The agent is like the illusion. The action Is like the illusion's illusion.

GARFIELD-SAMTEN (Tb):
32. So is the agent's performance of the action Just like the process of emanation. It is just like one emanation Emanating another.

HAGEN (paraphrase):
(included above)
One metaphysical view leads to another, that to a further metaphysical view. Such is the unending circle. A metaphysical view is, indeed fabricated by someone. Yet the fact that such a metaphysical view turns out to be empty does not mean that the experience depending upon which the metaphysical view was formulated or the process of conception are themselves non-existent. Experience as well as concept are available. Only that the conception is carried beyond its limits to assume the existence of independent entities, whether they be atman or svabhava. To understand the significance of Nagarjuna's statement here it would be necessary to take a look at one of the rare statements of the Buddha recorded in the Samannaphalasuttanta (D 1.76-77). In this passage, which explains the fruit of recluseship, the Buddha refers to two forms of knowledge a contemplative could develop before he directs his attention to the so-called higher forms of knowledge (abhinna). The first is described as follows:

With his mind thus serene, made pure, translucent, cultured, devoid of evil, supple, ready to act, firm and imperturbable, he applies and bends down his mind to that knowledge and insight whereby he grasps the fact: “This body of mine has form, it is built up of the four elements, it springs from mother and father, is continually renewed by so much boiled rice and juicy foods, its very nature is impermanence, it is subject to erosion, abrasion, dissolution, and disintegration; and therein lies this consciousness of mine, too, bound up, on that it does depend.

This represents the Buddha's experience and conception of his own personality. Having stated this, he immediately proceeds to examine whether there is anything beyond this experience and conception. What he describes is no more than the function of manas, the faculty which is responsible for the formulation of the metaphysical ideas of self (atman) and substance (svabhava). The statement reads:

With his mind thus serene, . . . firm and imperturbable, he applies and bends down his mind to the calling up of a mental image. He calls up from this body another body, having form, made of mind (mano-maya), having all (his own body's) limbs and parts, not deprived of any organ.

This is how manas becomes a sensus communis surveying the sensory fields of other faculties (M 1.295) and maintaining a feeling of identity, which then gets converted to a permanent and eternal atman. Could it not be possible that Nagarjuna was aware of the above statement of the Buddha? What could be the difference between the creation of a non-existent form through the power of psychokinesis and the generation of a belief in a permanent and eternal self through the activities of manas? It seems that human beings, with faculties through which they are able to perceive and conceive, are not the objects of Nagarjuna's criticism. It is only the manner in which perceptions and conceptions are formulated that is under criticism.

GARFIELD COMMENTARY

32. That is, we can understand the entire sequence of agent, action, consequences of action, and arising of new agent, whether within a single lifetime or - in the context of Buddhist ontology and doctrine - across lifetimes, as an entirely empty sequence with entirely empty stages. But that does not prevent its being perceived, or its reality for those who participate therein.
Kārikā XVII.33

INADA (Skt):
Verse 33 - Defilements, karmas, bodily entities, doers and effects are all similar to the nature of an imaginary city in the sky, a mirage, and a dream.

JONES (Skt):
[33] Afflictions, actions, bodies, actors, and fruit are like the castle in the sky of the Gandharvas, a mirage, and a dream.

KALUPAHANA (Skt):
Defilements, actions, and bodies, agents as well as fruits, all these are similar to the cities of gandharvas, are comparable to mirages and dreams.

MCCAGNEY (Skt):
Defilements, actions, bodies, doers, and effects are like dreams and mirages, made up imaginary cities in the sky.

NISHIJIMA (Skt?):
33. Miscellaneous kinds of Pain, miscellaneous kinds of Action, miscellaneous kinds of bodies and, Miscellaneous kinds of workers and, miscellaneous results and, Gandharva City without prison, The Sun Beam, sleep, and so on.

STRENG (Skt):
33. Desires, actions, bodies, producers, and products Are like a fairy castle, resembling a mirage, a dream.

ENGLISH TRANSLATIONS

BOCKING (Ch):
17v33 All afflictions and actions Doers and rewards, Are like illusions or dreams, Like flames or like an echo.

BATCHELOR (Tb):
Afflictions, actions and bodies and agents and fruits are like a city of scent-eaters, Like an illusion, and like a dream. [XVII.33]

DOCTOR (Tb):
Affliction, action, the body, The agent, and the result Are all like a city of scent-eaters, Like an illusion, and like a dream. [XVII.33]

GARFIELD (Tb):
33. Afflictions, actions, bodies, Agents and fruits are Like a city of Gandharvas and Like a mirage or a dream.

GARFIELD-SAMTEN (Tb):
33. Afflictions, actions, bodies, Agents and effects are Like a city of gandharvas and Like a mirage or a dream.

HAGEN (paraphrase):
Defilements, actions, bodies, agents, and fruits are all similar to a city of gandharvas, and comparable to mirages and dreams.

GOLDFIELD (Tb):
Mental afflictions, actions, and bodies, As well as actors and results, Are like cities of gandharvas, Like mirages, and like dreams. (33)
PINGALA COMMENTARY

17/33 It is like an illusionary man created by the Buddha's spiritual power, who in turn transforms himself into another illusionary man. Such an illusionary man has no actual existence and is merely a vision, but the illusionary man's actions of speech in preaching the dharma, and actions of the body in giving alms and so forth, though they are unreal, can be seen by the eye.

Likewise, the body of birth and death, the doer and the action, should be understood in the same say.

(23c7) 'All the afflictions' means the three poisons whose subdivisions constitute such unlimited afflictions as the ninety-eight temptations, the nine bonds, the ten ties, the six defilements and so forth. 'Actions' means the actions of body, speech and mind. In respect of the present and future worlds they are divided into good, bad and neutral, rewards of pain, rewards of pleasure, rewards of neither pain nor pleasure, actions with rewards in the present, actions producing rewards, and actions with rewards in the future, and so on ad infinitum. 'Doer' means one who can originate the afflictions and karma and can receive the rewards and retribution. 'Rewards' means the neutral five skandhas produced from good and bad actions. All karmas such as these are empty and without nature, like an illusion, like a dream, like a flame or like an echo.

KALUPAHANA COMMENTARY

The metaphors used at the end of Chapter VII to illustrate the nature of metaphysical theories pertaining to arising, stasis, and ceasing, are employed here to elucidate the character of similarly conceived theories relating to defilements, actions, personalities, agents, and consequences.

GARFIELD COMMENTARY

33. Again, it is important to emphasize that emptiness, rather than being a kind of nonactuality contrasting with empirical reality, is in fact the very condition of empirical reality and hence the only kind of genuine actuality. Mirages and dreams are actual phenomena, which actually appear and which have consequences. But that does not mean that they appear to us in a nondeceptive way. Mirages are not water and do not quench thirst, and dream-elephants carry no loads. By analogy, samsāra, action, karmic link, and consequence, Nāgārjuna argues, are real empirical phenomena, but are empty of anything more than conventional existence. While they may appear to exist inherently, either as persistent phenomena, as processes or elements of processes, or as abstract phenomena - as per the various opposing views considered in this chapter - they do not so exist. For to exist in those ways would in fact be incoherent. This analysis hence does not entail the nonexistence of agent and action, except from the ultimate point of view. Rather it explains how it is possible for them to exist at all.
Chapter XVIII

中論觀法品第十八(十二偈)

ātmaparīkṣā nāmāṣṭadaśamaṃ prakaraṇaṃ ||

Chapter XVIII: Examination of Self and Entities
Chapter XVIII

MAJBA (TOPICAL OUTLINE)

OUTLINE:

We have now completed the second part of the section on the two selflessnesses, the demonstration that mere phenomena are essentially empty. This chapter comprises the third of its five parts: the mode of positing the selflessness of things as they really are.

EXPLANATION:

This section has five parts: the mode of engaging with things as they really are, dispelling the charge that this contradicts sutras, the process leading to the realization of how things really exist, the characteristics of things as they really are, and showing that one must practice this.

SUMMARY:

This chapter presents a prescription for practice that wraps up the profound meaning expounded in the earlier and later chapters. Therefore, having understood that all that has been expounded philosophically comes down to the essenceless of the self and of phenomena, one must practice as has been explained previously.

INADA (Chapter Introductions)

CHAPTER XVIII - Examination of the Bifurcated Self
This chapter discusses the concept of atman which had been hinted at in the previous chapter on karma. It is one of the more important chapters dealing with man's self and, eventually, as one would expect, Nagarjuna argues on the non-existence of atman. In the opening verse he quickly destroys any idea that the atman can be equated with the skandhas and concludes that they are logically untenable. The bifurcated self (atman), self-hood (atmiya), self-identity (mama) and individuality (ahamkara) are all mental constructions and detrimental to the attainment of moksa or release. The Buddha only employs the term, atman, provisionally for he is actually interested in teaching the truth of anatman. Truth is non-relational, non-descriptive, non-differential... It is thatness or thusness. In Verse 8 Nagarjuna introduces the famed Four-cornered logic, i.e., the possible conditions of is, is not, both is and is not, and neither is nor is not, in order to exhibit the fact that final truth transcends all these possibilities; it is sunyata per se.

18. Self (atman). The examination of self nature (svabhava) was undertaken by Nagarjuna after a detailed analysis of all factors of experience (dharma), such as aggregates, spheres, and elements. The subjects coming under the two previous chapters (XVI-XVII) pertained to bondage and freedom, action and consequence. Therefore, a close scrutiny of the notion of a personal self (atman) and all other concepts associated with it, such as selfishness, identity, or pride, was considered to be relevant. Hence the subject-matter of Chapter XVIII.

The conception of a permanent and eternal self (atman) arose in relation to the conception of the psychophysical personality (namarupa). The tenetability of the former has already been alluded to in Chapters VIII-XI. In the present chapter, however, a further question in relation to the notion of self needs to be examined, and that pertains to the manner in which the notion of self (atman) leads to bondage (bandhana).

Nagarjuna begins this chapter with the assertion that if the self (atman) is identical with the aggregates (skandha), then it will be subject to arising and ceasing (utpadavayabhaq). If it is different from the aggregates, then it will have the characteristics of the aggregates. Having raised such questions regarding the existence of the self, Nagarjuna proceeds to show that it is the belief in a permanent and eternal self that gives rise to notions of possession (nirmana) and of pride (nirahamkara) are, therefore, the inevitable consequences of the appeasement (sama) of that belief in an eternal self (XVIII. 2). For similar reasons, the belief that there is a person who is without selfishness and pride is also not appropriate (XVIII.3).

The use of the iti-formula at XVIII.4 as aham-iti and mama-iti is important in that it implies the denial of “theories” pertaining to “oneself” (aham) as well as “self-possession” (mama), rather than the simple reflexive uses of these terms. When such metaphysical views are abandoned, grasping (upadana) and the desire for rebirth (janma) are avoided. The cessation of the defilements of action (karma-klesa) is then declared to be release (moksa). The vikalpa that leads to such defilements of action is, therefore, not any and every form of conceptualization, as some of the translations seem to suggest, but only the discrimination or thought of substantial (svabhavika) entities such as ‘I’ (aham), rejected at the beginning of this chapter, and substantial events like action (karma) and effect (phala), criticized in the previous chapter. The belief in such substantial entities and events gives rise to the feeling of “possession” as “this is mine” (mama), which in turn produces obsessions (prapäfaça). Such obsessions can be prevented by the perception of emptiness (sunyata) relating to the notion of “self” (atman) referred to above. To speak of “emptiness” apart from this context is m make it not only “nihilistic” (uccheda, XVIII.20) but also absolutistic and hence a metaphysical “view” (drsti, XVIII.8).

A superficial glance at XVIII.6 may leave the impression that Nagarjuna viewed truth or reality as being beyond conceptualization. However, a more careful consideration of the contents, especially in the light of the teachings of the Buddha as embodied in the “discourses” would indicate that this is not the case. Nagarjuna seems to have been fully cognisant of the Buddha’s use of the term “self” (Pali, atta; Sk. atman) to explain individuality, and his attempt m reject a metaphysical entity when he spoke of “no-self” (Pail, anatta, Sk. anatman). This does not involve two languages: a provisional or ordinary and philosophical. It is a question of two definitions. If the “self” is defined as a permanent and substantial entity, the Buddha was ready to negate it with his conception of “no-self” (anatman). If it was not defined as such, he had no difficulty in utilizing that conception in his discourses. Nagarjuna’s understanding of the Buddha’s intentions is clearly demonstrated in the first line of XVIII.6, when he said: “The Buddha’s have made known the conception of self and taught the doctrine of no-self.” When, in the second line, Nagarjuna maintained: “They have not spoken of something (kascit) as the self or as the non-serf,” he was certainly denying the conceptions of self-nature (svabhava) and other-nature (parabhava) of...
phenomena admitted by the Sarvastivadins and the Sautrantikas respectively.

With the above statement Nagarjuna could have concluded his chapter on the “self” (atman). However, there was one more significant issue to be resolved. Up to this point he was discussing an embodied serf, a serf associated with a psychophysical personality. The question regarding the self that is freed from the psychophysical personality also had to be examined, for it was the belief of the substantialists that when a person attains freedom his permanent and eternal self, dissociated from the psychophysical personality, continues to exist after death. The two verses that follow (XVIII. 7-8), therefore, are intended to explain the Buddha’s view regarding the nature of a person when he attains parinirvana.

What happens to the freed person at death was clearly expressed by the Buddha. He ceases to exist, is not reborn, his birth has waned (khīna jati), and there is no further existence for him.100 Yet, if someone were to ask him the question as to whether that person exists in some form after death (param marana), the Buddha was not willing to say anything, primarily because there was no epistemological basis on which any predication can be made.101 With verses 7 and 8, Nagarjuna is attempting to state this very same idea. “When the realm of thought has ceased, that which is to be designated also has ceased.”

“The realm of thought” (cittagocara) that has ceased (nivṛūtta) can refer to the person who is freed (Pall parinibbuta, Sk. pari-nirvṛta) without his thought being re-established (appatītthitena cittena).102 The difficulties that would arise if someone were to ask the further question as to what happens to him when his thought process has ceased or is not re-established is then explained. “That which is to be designated has also ceased.” This is identical with the Buddha’s statement: “That by which one should speak of him does not exist for him” (yena nam vajju tam tassa n’ atthi).103 Indeed, the term dhamma is used in the verse to refer to the nature of the freed one who has passed away. It is not possible to assert whether he has arisen (utpanna) after death or whether he has ceased to exist (niruddha) after death.

One of the epithets by which the “enlightened one” (buddha) came to be described is tathagata, meaning “one who has thus gone.” This term gave rise to much controversy probably because of the metaphysical implications of the term “thus” (tatha). And it is interesting to note that in the early discourses whenever the question regarding the nature of the freed one after death is raised the term used to refer to him is tathagata. The term tatha (“thus” or “such”) involves the epistemological problem of “reality,” as opposed to no tatha (“not thus”). Hence the secondary derivative taccha (Sk. tathya) came to be used in the sense of what is true or real.104 It is, therefore, not surprising to see the term tathagata being utilized when ever the question regarding the destiny of the freed one is raised,105 for in the eyes of the ordinary man no other question would be more important than the ultimate destiny of the freed one. As mentioned earlier, for epistemological reasons, the Buddha refused to make any assertions, either positive or negative, regarding this problem. Nagarjuna’s application of the fourfold negation (catuskoti) to the conception of “suchness” (tathya) comes immediately after his discussion of the nature (dhammata) of the freed one who has reached his final destiny. It is the same context in which the Buddha himself applied the fourfold negation. The four-cornered negation is always used by the Buddha to avoid metaphysics, and the destiny of the tathagata was one of those popular metaphysical issues. Nagarjuna could not have been unaware of the metaphysical assertions of the pre-Buddhist thinkers who assumed that a “freed self” (atman) becomes united with the all-pervading universal self, the reality in everything (sarvam). The dangers involved in the Sarvastivada conception of substance (svabhava) in everything (sarvam) and how such an idea could influence the interpretation of a tathagata or tathya was, indeed, evident to Nagarjuna. Thus, we have two metaphysical issues combined hereone of “everything” (sarvam) and the other of tathya and the fourfold negation was the only reasonable solution that Nagarjuna could provide. To explain the conception of “suchness” (tathya) going beyond the context of the problems of “everything” and the “thus gone one” (tathagata) after death would undoubtedly lead to a distortion of the philosophical standpoint of Nagarjuna.

As mentioned before, the Buddha was not willing to speculate on the nature of the freed one after death (param-marana) but that he was willing to speak positively about what happens to him at death. In a passage in the Anguttaranikaya the Buddha’s understanding of this state is succinctly expressed in the following verse: “This is the last body and is the essence of the higher life. In regard to that this perfect knowledge has arisen without depending upon another.” (Asekhananam uppannam antimo yam samussaya, yo saro brahmacariyassa tasmim aparapaccayya.)106 This realization is elsewhere explained in a stock passage: “Birth has been eliminated, the higher life has been lived, done is what needs to be done and there is not another of this [life].”107

This is the highest realization that one can attain and is referred to in the discourses as anna.108 It is the result of the moral perfection one attains by being freed from the
three poisons: greed, hatred, and confusion. It is final nirvana, and may justly be called the ultimate moral truth about the world (see p. 15 above). As such it is to be realized by oneself and is not a state to be known by depending upon another (aparapaccaya). When, therefore, concluding the discussion of the freed one after death, Nagarjuna proceeded to speak of tattva (“reality”), he was not referring to an “ultimate truth” per se but to the realization and attainment of freedom from birth. Hence he asserts that the knowledge of this truth is not dependent on another (aparapratyaya). It is peaceful (santa), unobsessed by obsessions (aprapañcita), and, hence, nondiscriminative (nirvikalpa) and non-contradictory (ananartha). Nirvikalpa does not necessarily mean the absence of the subject-object discrimination. It means the absence of any discrimination based upon one’s likes and dislikes, one’s obsessions. Conceptions of identity and difference, permanence and annihilation are then rejected as being part of the Buddha’s teaching. This is became things are recognized as being dependently areisen (pratitya... bhavati).

The conclusion of the chapter represents Nagarjuna as one who remains aloof from the so-called Hinayana-Mahayana conflict. He asserts that in the non-emergence of the Buddhas and the waning of the Sravakas, the knowledge of the “truth” continues to be perpetuated by the Pratyeka-buddhas, even without association with the Buddhas. The need to depend primarily upon an unbroken tradition or an uninterrupted line of patriarchs for the perpetuation of the “true doctrine” is discounted here.

**BATCHelor (POETIC “TRANSLATION”)**

Self

Were mind and matter me,
I would come and go like them.
If I were something else,
They would say nothing about me.

What is mine
When there is no me?
Were self-centeredness eased,
I would not think of me and mine
There would be no one there
To think them.

What is inside is me,
What is outside is mine –
When these thoughts end,
Compulsion stops,
Repetition ceases,
Freedom dawns.

Fixations spawn thoughts
That provoke compulsive acts –
Emptiness stops fixations.

Buddhas speak of “self”
And also teach “no self”
And also say “there’s nothing
Which is either self or not.”

When things dissolve,
There’s nothing left to say.
The unborn and unceasing
Are already free.

Buddha said: “it is real,”
And “it is unreal,”
And “it is both real and unreal,”
And “it is neither one nor the other.”

It is all at ease,
Unfixatable by fixations,
Incommunicable,
Inconceivable,
Indivisible.

You are not the same as or different from
Conditions on which you depend;
You are neither severed from
Nor forever fused with them –
This is the deathless teaching
Of buddhas who care for the world.

When buddhas don’t appear
And their followers are gone,
The wisdom of awakening
Bursts forth by itself.
18. The Self

Note that emptiness is not the same as selflessness (an-atman). The concept of emptiness in effect expands selflessness to all phenomena. All Buddhists agree that all constructed things are impermanent and subject to suffering, and their components - the dharmas - are all without self (e.g., Majjhima Nikaya 11.228, Anguttara Nikaya 1.286). In the Buddhist ontology, a "person" consists of five aggregates - one physical component (namarupa) and four mental ones (dispositions, sensations, perceptions, and cognitions). One school, however, argued that the person (pudgala) was neither the same nor different than the aggregates and was in some way substantive. Nagarjuna argues that even in the conventional sense a "self" is not identical to the bodily aggregates - if that were so, it would cease when one of the aggregates changes - but there also is no self existing apart from the aggregates. He argues then that both the aggregates and the self are empty.

Here the argument is that there is no self-existent self, but there is a conventional but empty "self." If we think of a self-existent self that has properties, then there is the issue of who or what has the properties - some reality must bear the properties. But if we stop thinking in terms of self-existent entities and properties and instead think only in terms of an impermanent series of properties, this issue goes away (v. 2). One who is free of thinking in terms of "mine" and "I" is not found (and thus does not exist) since there are no real entities called "persons" (v. 3). And anyone who still sees in terms of "mine" or ..," does not perceive reality correctly since he or she is still conceptualizing experience in terms of real entities (v. 3). Verse 4 brings out the religious implications of this.

Verse 5 makes conceptual projection (prapancha) the source of our "mental discriminations of discrete entities (vikalpa)." Thus, vikalpa cannot be merely thoughts or ideas or language, but something more: the discrimination of multiple, real entities.

The plural "buddhas" in verse 6 can be an honorific way of referring to the one known Buddha - Gautama of the Shakya clan - but it can also refer to all buddhas. Most translators treat the word as referring to Gautama. Either way, the teaching of the Buddha or the buddhas is the same.

Verse 6 is sometimes translated to state three of four options: the buddhas have taught 'There is a self," and "There is no self," and "There is neither the self nor what is not the self." (Also see YS 44.) Verse 8 contains all four options, and all options are affirmed: "Everything is real, and everything is not real; everything is both real and not real; everything is neither real nor not real." But the first two options seem to contradict each other, the third option apparently violates the law of non-contraction, and the fourth apparently violates the law of the excluded middle. (This will be discussed in the Essay.) Buddhists explain verse 6 by claiming that the Buddha had a "graduated teaching" - i.e., he taught beginners that there is a self, to more advanced students that there is no self, but to more advanced adepts he taught that there is neither a self nor a non-self. (See R394-96; YS 30.) The prefix for the Sanskrit word translated here as "teaching" (anushasana) does justify the idea of a "fitted" teaching. But the translation of verse given here also is warranted and does not have the buddhas ever teaching that there is a self - their teaching becomes simply that there is neither a real self nor anything real that is not the self (non-self entities) - i.e., no entities whatsoever. In sum, Nagarjuna is saying that the Buddha denied both the doctrine of the self and the doctrine of the non-self - if nothing else, there is no real self to contrast "non-self" with. (See also R103, YS 30.) This goes beyond early Buddhism significantly: in Nagarjuna’s way of thinking, even the concept of "non-self" would lead us to a sense of something existing by self-existence.

Note that in verse 7 Nagarjuna says that "When the domain of thought has ceased, then what can be named has ceased." If nothing is ultimately real, there is nothing to name and names are unreal (VP 73 Comm.). Ultimately, "the character of what is actually real is this: not dependent upon another, peaceful, not conceptually projected by conceptual projections, free of thoughts that make distinctions, and without multiplicity (v. 9)." Thus, there are no separate entities in reality as it really is to refer to.

Also note in verse 7 that Nagarjuna speaks of the "nature of things (dharmata)." Buddhists also use "thusness (tathata)" to how things really are. Some may see this as conventional truths only, but in verses 9-11 he gives the defining characteristics (lakshananas) of what is ultimately real (tattva): not dependent upon another, peaceful, free of being projected upon with conceptual projections, free of the conceptualizations of distinct entities, and without a multiplicity of real entities (v. 9); not one, not diverse, not annihilated, not eternal (v. 11). Verse 10 states the central position: whatever arises dependently upon another thing is not that thing, nor is it completely distinct from that thing; therefore, it is not a thing that is either annihilated or eternal. Thus, it is part of a continuing, substanceless process. Since this is the "immortal teaching of the buddhas," it is describing reality from the highest point of view.
The self cannot be different from the aggregates either, however, because if it were, it would not have any of the aggregates’ characteristics. It would not take birth, live, or die, because all the things that arise, abide, and cease are included in the five aggregates. The self would not be able to perform any function, because everything that performs a function is included in the five aggregates. Rather than being a thing, it would be inert nothingness, like empty space.

Thus, the self is not the same as the aggregates, it is not different from the aggregates, and there is no other possibility for how the self could exist in relation to the aggregates. Therefore, the self does not truly exist. It is as simple as that. The second verse reads:

*If there is no “me” in the first place,
How could there be anything that belongs to me?*

*When “me” and “mine” are found to be peace,
Clinging to “me” and “mine” ceases.*

This verse is fairly easy to understand. Once we determine that there is no self, it necessarily follows that there is nothing belonging to the self. This shows us that all of our possessiveness and attachment to things we consider to be our own is just as confused as the thought that we really exist in the first place.

By listening to and reflecting upon these reasonings, however, we can develop the precise knowledge that “me” and “mine” do not genuinely exist, that their nature is peace, beyond conceptual fabrications. This precise knowledge is enough to put a stop to our confused clinging to them as being real, and in fact, there is no other way to do so. You cannot stop clinging to the belief in “me” and “mine” until you are certain that they do not exist; mere unsubstantiated faith in the Buddha’s teachings on selflessness is not enough.

The stronger your precise knowledge in selflessness becomes, however, the weaker your clinging to the true existence of the self becomes, and the easier it is to use your knowledge of selflessness as a remedy for the mistaken belief in self whenever you notice it arising. When you apply this remedy, clinging to the belief in self dissolves in the open, spacious, and relaxed certainty that the self is a mere appearance, the union of appearance-emptiness. This is something you have to train in again and again.

Some people might argue, “There are yogis and yoginis who realize selflessness, and this proves that the self really does exist after all, or else who would be the ones who possessed this realization?” Nagarjuna answers this claim in the third verse:

*The ones who do not cling to “me” or “mine”
Do not exist either.*

*Those who do not cling to “me” or “mine” see accurately.*

The first four verses and the first line of the fifth are an exceptionally clear explanation of the selflessness of the individual. The first verse reads:

*If the self were the aggregates,
It would be something that arises and ceases.*

*If the self were something other than the aggregates,
It would not have the aggregates’ characteristics.*

In chapter 10, “An Examination of Fire and Firewood,” Nagarjuna analyzed the five possible relationships between the self and the aggregates; here, those five are condensed into the two that form their essence. The question is, if the self exists, is it the same as or different from the five aggregates that compose the individual’s body and mind?

First, the self cannot be the same as the aggregates, because if it were, it would arise and cease just as the aggregates do. For example, just as the parts of the body arise and cease moment by moment, so the self would be born and die moment by moment. Just as feelings change every instant, so the self would only last one instant and then be replaced by another self. Furthermore, if the self were the aggregates, then just as the aggregates are many in number, so there would be that many selves. Each part of the body would be a different self; each thought would be a different self. Finally, if the self were the aggregates, it could no longer be said to possess the aggregates. You could no longer say, “my head,” “my thoughts,” or “my feelings,” because those statements assume that the self and the aggregates are different things.
So they do not see a self.

We can apply the analysis from the first verse to the yogis and yoginis who realize selflessness, and see that since they are neither the same as nor different from the aggregates, they do not truly exist either. Therefore, these realized beings are also dependently arisen mere appearances, conceptual designations that lack inherent nature. They are appearance-emptiness: That they appear does not cause them to be truly existent, and that they do not truly exist does not prevent them from appearing, just as is the case with appearances in dreams.

The last two lines teach how it is that yogis’ and yoginis’ realization of selflessness prevents them from clinging to themselves as being truly existent. Their realization also prevents them from feeling proud as a result of having accomplished it—since they know that there is really no one there who realized anything, what reason would there be to be proud? Conversely, as long as someone is proud of or attached to their accomplishments or meditative experiences, they should know that they have not yet realized selflessness.

The fourth verse and the first line of the fifth verse describe how realization of the selflessness of the individual leads to liberation from samsara:

When one stops thinking of the inner and outer aggregates as being "me" or "mine"
All wrong views disappear.
And once they have disappeared, birth in the cycle of existence stops.

When karmic actions and mental afflictions cease, that is liberation.

The inner aggregates constitute one’s own body and mind, and the outer aggregates are everything on the outside that one does not conceive of as being part of oneself. Our mistaken concepts of these inner and outer aggregates as being “me” and “mine” are the root of samsaric suffering. When we believe in the true existence of “me” and “mine,” that leads to thoughts of “I find this pleasant” and “I find this unpleasant,” which are the roots of the mental afflictions of attachment and aversion, respectively. These mental afflictions motivate us to pursue what we find pleasing and shun what we find displeasing—in short, to perform the defiled karmic actions that result in the uninterrupted suffering of samsara.

When we realize the selflessness of the individual, however, this whole process stops. The wrong views that have their root in the belief in self cease, then the mental afflictions cease, then karmic actions cease, and as a result of that, birth in samsara’s cycle of existence ceases. This cessation of compulsive birth in samsara is the liberation that is described as nirvana in the Shravakayana and

Pratyekabuddhayana. Once practitioners who follow those paths perfectly realize the selflessness of the individual, they attain the level of an arhat in “nirvana with remainder,” because as long as they are still alive, they have the remainder of their defiled aggregates. When they pass from that final life, they attain the state of an arhat in “nirvana without remainder,” leaving all their aggregates behind and entering the expanse of peace.

Bodhisattvas who realize the selflessness of the individual gain the same liberation from samsaric rebirth as the arhats do, but for them the outcome is different: They continue to take rebirth again and again in samsara, out of their love and compassion for sentient beings and their desire to lead them out of samsara as well. They are not satisfied simply to gain liberation for themselves—they want everyone to do so! As the bodhisattva Ngulchu Thogme writes in The Thirty-seven Practices of a Bodhisattva:

From beginningless time, my mothers have cherished me;
What is the point of my happiness if they are suffering?
Therefore, in order to liberate limitless sentient beings,
To give rise to bodhichitta is the practice of a bodhisattva.

Therefore, the bodhisattvas are delighted to take birth again and again in samsara. They do not suffer as a result of doing so, however, because they have realized the selflessness of the individual in the manner described above. How could they suffer when they know that no self exists to suffer? Realizing this, for them samsara is a delightful experience, and their work for the benefit of sentient beings is uninterrupted by thoughts of depression, discouragement, fear, or selfishness. This is why realizing the selflessness of the individual is so important.

To be able to benefit beings to the utmost, however, one must attain the state of omniscience, the state of buddhahood. In order to do that, one must perfect one’s realization of the selflessness of phenomena, which is the next subject of the chapter.

There are several synonyms for that which is to be realized: “emptiness,” “actual reality,” “the expanse of genuine reality” (dharmadhatu), “essential reality” (dharma), and “the precise nature of reality.” Here, the last of these terms is used, and its characteristics are described in verse nine:

Unknowable by analogy; peace;
Not of the fabric of fabrications;
Nonconceptual; free of distinctions—
These are the characteristics of the precise nature.

These are the five parts of the definition of the precise nature of reality. It is called by this name to highlight that it is precisely that and nothing else. It is only genuine reality and nothing else.
First, the precise nature is “unknowable by analogy.” The precise nature of reality transcends all conceptual fabrications, and therefore 110 example, sign, or expression can describe what it is. In fact, the only way to lead disciples to realize it is to describe what it is not. Thus, the Buddha taught that the precise nature neither arises nor ceases, is neither one nor many, does not come or go, and is neither existent nor nonexistent. These explanations cannot describe the precise nature directly, but they can help us to dissolve our conceptual fabrications of what it is, and this will lead to our direct experience of it. Experiencing it directly with the precise knowledge arising from meditation is the only way to realize it—it is impossible for someone else to demonstrate or show it to us.

Therefore, if it is something that concepts, terms, and examples can describe or identify, and we can thereby know it without the precise knowledge arising from meditation, it is not the precise nature of reality.

Second, it is “peace in its true nature.” The precise nature is the peace that is naturally free from the four extremes of existence, nonexistence, both existence and nonexistence, and neither existence nor nonexistence. Therefore, if something can be said to fall into one of these four extremes, it is not the precise nature of reality.

Third, it is “not fabricated by fabrications.” If speech can fabricate an expression of it as being “this” or “that,” then it is not the precise nature. For if within it not even the slightest movement of conceptual mind stirs, what need to mention its transcendence of the contrivances of speech?

Fourth, it is “nonconceptual.” It is not the object of conceptual mind, but rather of nonconceptual primordial wisdom. This is also taught by the bodhisattva Shantideva in his Guide to the Bodhisattva’s Conduct, where he explains:

*Genuine reality cannot be experienced by the intellect.*

This is the case because genuine reality itself cannot be described by any conceptual fabrication, like existent, nonexistent, and so forth. Since no such label can apply to it, and since thoughts can only relate to things in terms of names and labels, then genuine reality cannot be known by the intellect, cannot be fathomed by conceptual mind. Therefore, if the intellect is conceiving of something, then whatever it is, it is not reality’s precise nature.

Fifth and finally, the precise nature is “free of distinctions.” There are not different things within it, because it is the equality of all opposites. Good and bad, enemy and friend, poor and rich, male and female, clean and dirty, suffering and happiness, and so forth—the precise nature is the equality of all these distinctions because it transcends them all. Therefore, if something falls into the category of one of these distinctions, it is not the precise nature of reality.

To summarize the teachings in this chapter, everything in samsara and nirvana is empty of the self of the individual and empty of the self of phenomena. It is all empty of inherent existence, and therefore the nature of genuine reality cannot be described. It is not an object of expression; it is beyond the conceptual fabrications of arising, abiding, and ceasing. This explanation is in harmony with those of the Mahamudra and Dzogchen traditions, in which there are many teachings on how it is that genuine reality is inexpressible and inconceivable. The reasonings that those teachings rely upon to prove their validity are none other than the ones in Nagarjuna’s great text.
The Self

After considering Nāgārjuna’s arguments for the selflessness of external phenomena such as causation and motion, we can now turn toward an assessment of the most important example of a subjective phenomenon, namely the self. Of all the discussions of the emptiness of various entities which Nāgārjuna examines in his works, that of the emptiness of the self occupies a special position. He notes:

1. Where something prior to, simultaneous with, or after seeing and so forth [which could be regarded as a self] is not evident, there conceptions “it exists,” “it does not exist” [with svabhāva] have ceased.

Nāgārjuna claims here that once the emptiness or lack of svabhāva in the self has been realized, it will be comparatively easy to understand the emptiness of other phenomena. This is so because the view of a substantial self is particularly natural and tends to assert itself in an especially convincing manner.\(^2\)

Having seen through this fundamental illusion, Nāgārjuna wants to argue, all other mistaken ascriptions of svabhāva can be unmasked in a relatively straightforward manner. In order for one to appreciate Nāgārjuna’s arguments for the emptiness of the self, it is essential to have a clear idea of what he argues against, that is, what a self with svabhāva would amount to. Such a self can be characterized by four core properties.\(^3\) First, it is an entity distinct from both our body and our psychological states. The self is not the same as the body but is what has the body; similarly the self is what has sensations, thoughts, beliefs, desires, and so forth. Second, it is essentially unchanging. Whether or not we think that our selves survive the death of the bodies we have, we still want to claim that it is the same self that is present in the elderly general now and in the schoolboy he was sixty years ago.

This permanence of the self also serves as the foundation for the ascription of moral responsibility, since we are dealing with a single entity unified over time. Third, the self is a unifier: it integrates diverse sensory information, beliefs, and desires in such a way as to allow us to make decisions and to act on the basis of them. Fourth, the self is an agent. It is the permanent core which makes the decisions that shape our lives. The results of these decisions may then in turn influence the self, but there is little doubt that it is the self, not the decisions, which occupy the driver’s seat. This substantialist conception of the self appears to be a relatively accurate description of our intuitive, everyday belief of what we are.\(^5\)

As is to be expected, the aim of Nāgārjuna’s examination of the self is to show that this intuitively plausible view of the self is fundamentally mistaken. The substantialist view of the self has to be replaced by a different one. We can divide Nāgārjuna’s discussion into two main parts. The first deals with the relation of the self to its synchronic parts at a single time and to its diachronic parts across time. The second investigates the relation between the self and its properties.

7.1. The Self and Its Parts

The Buddhist tradition divides the person into five main constituents (skandha): matter or the physical body (rūpa), sensation (vedanā), perception (sam. jñā), intellect (samskāra), and consciousness (vijñāna).\(^6\) What is important from a philosophical perspective is not so much the precise nature of these constituents against, that is, what a self with svabhāva would amount to. Such a self can be characterized by four core properties. First, it is an entity distinct from both our body and our psychological states. The self is not the same as the body but is what has the body; similarly the self is what has sensations, thoughts, beliefs, desires, and so forth. Second, it is essentially unchanging. Whether or not we think that our selves survive the death of the bodies we have, we still want to claim that it is the same self that is present in the elderly general now and in the schoolboy he was sixty years ago.

This permanence of the self also serves as the foundation for the ascription of moral responsibility, since we are dealing with a single entity unified over time. Third, the self is a unifier: it integrates diverse sensory information, beliefs, and desires in such a way as to allow us to make decisions and to act on the basis of them. Fourth, the self is an agent. It is the permanent core which makes the decisions that shape our lives. The results of these decisions may then in turn influence the self, but there is little doubt that it is the self, not the decisions, which occupy the driver’s seat. This substantialist conception of the self appears to be a relatively accurate description of our intuitive, everyday belief of what we are.\(^5\)

As is to be expected, the aim of Nāgārjuna’s examination of the self is to show that this intuitively plausible view of the self is fundamentally mistaken. The substantialist view of the self has to be replaced by a different one. We can divide Nāgārjuna’s discussion into two main parts. The first deals with the relation of the self to its synchronous parts at a single time and to its diachronic parts across time. The second investigates the relation between the self and its properties.

7.1. The Self and Its Parts

The Buddhist tradition divides the person into five main constituents (skandha): matter or the physical body (rūpa), sensation (vedanā), perception (sam. jñā), intellect (samskāra), and consciousness (vijñāna).\(^6\) What is important from a philosophical perspective is not so much the precise nature of these constituents

1. prāk ca yo darśanādibhyah. sām. pratam. cordhvam eva ca / na vidyate ’sti nāstīti nivṛttās tatra kalpanā. MMK 9:12.
5. The extent to which the notion of a self denied by Nāgārjuna (and the early Buddhists, for that matter) was influenced by the Śaṅkhya and Vaiśeṣika concept of ātman is difficult to determine. See Conze (1967: 38); Bhattacharya (1973); Harvey (1995: 33–34).
6. These can in turn be subdivided further (RĀ 1:81). See Nyanatiloka (1950: s.v. khanda, 73–76) for an overview of the standard Abhidharma analysis. A detailed exposition is in chapter 14 of the Visuddhimagga (Buddhaghosa 1991).
and the merits and demerits of the resulting psychological theory for explanatory purposes, but primarily the fact that the human person or self is conceptualized as composite. In addition it is essential to keep in mind that the analysis of the self into different components is meant to be exhaustive. It is supposed to not just illustrate various aspects or properties of a person, but also list all the aspects it consists of. Bearing this point in mind will keep us from interpreting a denial of any of the five constituents’ being the self as an assertion that something else is.

Once an exhaustive analysis of the self into a fixed number of constituents is in place, the question concerning the relation between these constituents and the self they comprise naturally arises. Nāgārjuna mentions four different ways in which the self and the constituents could be related. The self could be identical with the constituents (either with a subset or with all of them together), it could exist as a separate entity distinct from them, it could contain the constituents as a part, or finally it could itself be part of the constituents. Nāgārjuna observes that identifying the self with a particular constituent, such as the body or consciousness, entails the difficulty that the individual constituents are constantly changing. Neither the body, nor consciousness, nor any of the other constituents remains as it is over time. Such an identification would therefore not do justice to the view of the self as essentially unchanging. This is over time. Such an identification would therefore not do justice to the view of the self as essentially unchanging. This is a familiar argument for the absence of a substantial self.

If we cannot identify the self with a single constituent, we might consider equating it with some or all of the constituents across a stretch of time. We would then, for example, regard as our self not just our body as it is now, but a sequence of bodies which incorporate the past as well as the future stages of our body. This solves the problem of the self disappearing from one moment to the next (because each single constituent is only in existence for a short duration) but entails other problems. First of all, if we have to include constituents at future times (such as our body tomorrow) into the entity we regard as our self in order to explain our concern for our future self, we face the difficulty that these future constituents do not yet exist. We then could not claim that our self as it existed today was in fact the entire self. We (that is, our selves) could never be wholly present at the present time. Second, our candidate for a self is now no unified whole any more, but rather a series of ever-changing parts. In this series there will not be any one thing that remains constant and changes only its accidental properties. Such an account would therefore be hardly satisfactory for an advocate of a substantial self.

Given that the identification of the self with constituents at one time or across a stretch of time does not appear to be satisfactory, the other alternative for the defender of a substantial self is to assume that the self is an entity distinct from the various constituents of a person. The self would then be regarded as the owner of the body, the experient of the sensations, the perceiving subject, and so forth. However, as Nāgārjuna points out, such a self could not bear the marks of the constituents (bhaved askandhalaksanah), that is, it could not be characterized as the owner of the body, the experient of the sensations, the one undergoing change, and so on. This is because such a self would be completely unknown to us. Once we have abstracted from all the constituents of the person, there seems to be nothing left that could qualify as a self. The familiar Humean observation that introspection shows us all sorts of inner psychological events but never acquaints us with any object that has the characteristics of the substantial self means that a self existing apart from the five constituents of a person (or any other set of constituents we might come up with) could not be one with which we are directly acquainted. But it would then be distinctly odd to assume that such a self would be the one we cared about. For all we know, it might be an entity we have never even come across.

Another difficulty with this position is that the assumption of the self as an entity distinct from the constituents also implies that it would be possible for the self to exist without any of them, since it does not existentially depend.

9. MMK 22:1. See also RĀ 1:82. A detailed discussion of these possibilities can also be found in MA 6: 126–165. The Buddhist commentarial literature often illustrates the possible relations between the self and its constituents by a series of similes, like the relation between a flower and its scent, a tree and its shadow, etc. See Conze (1967: 38); Collins (1982), for references.
10. MMK 18:1a, 27:3.
on them. There could be something that we would be justified in regarding as our self even though it was not connected with our body, shared none of our memories, desires, or preferences, and would not even have to stand in any specific temporal or causal relation to these. Even if such a thing could exist, it would be questionable with what motivation we could call it a self, given that it is devoid of all the connections which we usually regard as crucially important for our selves. More worryingly, its independence makes it difficult to conceive of this self as an agent shaping our lives with its decisions. If there is no essential causal connection between the self and our various cognitive faculties, how does it enter into the formation of beliefs, the making of decisions, and the bringing about of actions? Such a self would be devoid of action (akarmakah.) and for this reason could not be regarded as an agent.

The final two possibilities considered by Nāgārjuna, that the self contains the constituents as a part or is itself part of the constituents, can be seen to be equally unsatisfactory in the light of the arguments presented above. The former would lead once again to the problem of the unity of the self, the latter would entail the difficulty of how constantly changing entities such as the five constituents of a person could have any permanent parts at all.

The picture of the self thus emerging might strike us as very close to Hume’s bundle theory. While this parallel is illuminating to some extent, it is important to be aware that for Hume his view of the self is the corollary of an epistemological theory which is not seen as having any practical implications. For Nāgārjuna, however, as for Buddhist thinkers in general, the emptiness of the self constitutes a central philosophical position with major practical and soteriological implications. Its realization, that is not just the intellectual understanding of the absence of svabhāva in the self but the cognitive shift accompanying the ability to stop conceiving of oneself as a substantial self, is taken to be an essential step on the road to liberation.

The inability to come up with a satisfactory account of the relation between the self and its parts might now lead us to think that there is no temporally extended self at all. Thus what we would take to be our self existing now would not be in any way the same as what we regarded as our self yesterday, since there is no continuity between them. There would be just mutually independent entities each of which would be regarded as a self at a time, but there would be nothing that could be interpreted as an overarching, essentially unchanging self.

A minor difficulty with this view is that if the various selves were indeed independent and each existed by svabhāva, the existence of one would not depend on the non-existence of another. But then it would be conceivable that yesterday’s self just continued existing while today’s self came into being, so we would end up with two mutually independent selves at the same time and thereby fail to account for the self’s unity.

The main difficulty with this view of episodic selves is that it transforms most of the relations we regard as intrapersonal into interpersonal ones. An obvious example is memory. Given that the self that had an experience and the one that later remembers it are independently existent objects, the transmission of memory turns out to be on the same level as the transmission of information between two persons, and perhaps even more problematic. Since any causal influence of the former on the later self would imply a dependence relation between the two, it is hard to see how anything could be transmitted between them at all. In any case it would be impossible to distinguish between true and false recollections, since a criterion of the former is exactly the connection between selves which the episodic theory denies. An even greater difficulty is presented by the issue of moral responsibility. For apportioning praise and blame, but also for making sense of the Buddhist concept of karma, we need to be able to postulate some sort of dependence relation between different stages of a self, because only in this way could we explain why today’s self should be responsible for yesterday’s actions, and how a being reborn in the form of a god at the present time could have been a human being in a previous life.

7.2. The Self and Its Properties

Most of these arguments for the emptiness of the self based on an investigation of its relation to its synchronic and diachronic parts are familiar to us from pre-Madhyamaka Buddhist literature. However, the MMK also presents us with

25. This then also entails the problem of how the different stages of the self could arise at all, given that they are not causally produced. See MMK 27:12. 26. MMK 27:11.
a set of arguments against the substantial conception of the self which has a distinctly Nāgārjunian slant.

Nāgārjuna’s opponent wonders, “If there was no self, where would the self’s properties come from?” Similarly we might want to ask, “How can seeing and so forth belong to something that is not found? Therefore there is an independently existing thing (bhāvo vyavasthitā) which is earlier than those [sensory faculties].”

The worry behind these questions is that the undeniable fact that there are properties of the self—since the Mādhyamika does not want to deny that seeing, feeling, tasting, and so forth take place—implies that there must be a bearer of such properties, that is, a self. Since properties depend existentially on something that instantiates them, a self must be postulated as the instantiator of all the mental properties we observe. Vātsyāyana argues:

A sort of robust realism dictates that the substance or the substratum must be distinguished from the features, properties, or qualities it holds. This would require a substratum for the so-called mental episodes and dispositions, awareness, desires, preferences, etc.; and the body, because of its continuously changing nature, cannot be regarded as adequate for such a substratum.

However, if we take into account Nāgārjuna’s distinction between constitutive and instantiating properties described on page 210, it seems possible to dissolve this worry. Nāgārjuna differentiates between the property we see as constituting an individual (such as roundness in the case of a circle, treeness in the case of a tree, etc.) and those properties that the individual is then taken to instantiate (such as redness in the case of the circle, and greenness in the case of the tree). As became evident in the discussion of motion, where Nāgārjuna introduces this distinction, the difference between constitutive and instantiating properties is not regarded as bearing any ontological weight. It is rather a reflection

28. ātm any as ati cātmīyamkata eva bhaviyati. MMK 18:2a.

of our epistemic priorities and practical concerns that we describe an object as a tree that is green, rather than as a green object that has the property of treeness. There is therefore no fundamental ontological difference between a substratum (dravya) and the qualities (guna) which inhere in it, contrary to what is assumed by the Naiyāyika. When we speak of an individual having a property, we nominalize the predicate that expresses the property we take to be constitutive and ascribe the instantiating properties to the individual thus created. There would, however, be no deep ontological reason why we could not change our view of what the constitutive and what the instantiating properties are, and thereby describe the very same situation in terms of different individuals and properties.

But if we accept this picture of ontology, it is evident that we are not obliged to infer the existence of a substratum or underlying individual from the existence of a quality. Of course the Mādhyamika does not deny that there are a variety of sensory and mental events which happen in close temporal and causal connection. But our ascription of these to a single self does not commit us to the existence of such a self at the ontological level, any more than the ascription of redness to a circle commits us to the existence of an individual—the circle—and the redness it instantiates. In the same way in which we select one property, such as circularity, as constitutive and then group all the other properties around this new-found “individual,” we also select certain properties of a causal nexus of sensory and mental events, some “shifting coalition of psychophysical elements,” and group the remainder of the properties around this new-found “self.” To speak of the self and its properties in terms of substratum and quality is perfectly acceptable, as long as we do not assume that such talk is based on a distinction with an ontological grounding.

7.3. Epistemology of the Self

In MMK 9:3 Nāgārjuna raises the question of the origin of our knowledge of the self. He asks:

The independent thing which is earlier than seeing, hearing, and so forth, and [also earlier than] feeling and so forth [i.e., the self], by which means is it known?

34. Dennett (1991: 228). For details of how this construction of a self might be carried out, see the discussion in Siderits (2003: 43–51).
35. darśanaśravan. ādibhyo vedanādhya eva ca / yah. prāg vyavasthito bhāvah. kena prajñāpyate ‘tā sah .
This investigation of the epistemology of the self might strike us as curious. After all, there seem to be few things more epistemically obvious than our own self, which seems to accompany us all the time. While there might be all sorts of problematic issues connected with the parts and properties of the self, surely the way in which we get to know it is unproblematic.

The difficulty arises once we note that in its role as a unifier of our cognitive life, a substantial self is the subject of all experiences, but at the same time given the distinctness of such a self from our body and all parts of our mental life, it must also be distinct from all experiences. So in order to have epistemic access to our self, it must be able to function as a cognitive object. Since we assume, however, that it is not only a cognitive subject but also essentially a cognitive subject, it cannot ever occupy this role—at least if we make the plausible assumption that being an object and being a subject are mutually incompatible properties. Now given that we do not seem to be able to acquire knowledge of the self by directing the self’s attention at it (i.e., by introspection) nor by empirical observation (because of the private nature of mental states), it appears that the only cognitive route left open to us is inference. We have to establish by a (hopefully sound) argument that the self exists. This position is by no means an absurd one to hold (in that it is no fundamental difficulty that the same type of event turns up on the cognizing subject side on one occasion and on the cognized object side on another. Given that there is no unified substratum constituting the self, there is also no necessity for something to be essentially a subject of experience. As different parts can play different roles at different times, our self-knowledge can be explained just by a momentary identification with a mental event which presently functions as a recognizing subject.

7.4. The Madhyamaka View of the Self

Given that Nāgārjuna rejects the picture of a substantial self described above, we have to consider which alternative picture we are presented with instead. The self is obviously seen as depending on the five constituents, a view that rules out the assumption that any independently existent substance could be regarded as a self.

The emerging view of the self is characterized by two main properties. First, it is to be regarded as a sequence of events which stand in close temporal and causal relations. Physical processes cause sensory events, which are then framed by concepts, used as the basis of decisions, which give rise to actions, which in turn set physical processes in motion, which cause new sensory events, and so forth. The self is seen not as a cognitive nucleus that stays constant amid the stream of changing sensory impressions and mental deliberations, but rather as the entire set of such sensory and mental events which are interconnected in complicated ways.

In order to stress this point, Nāgārjuna compares the collection of constituents of the self to a lamp. The light of the lamp is not a persisting thing, but a process, a sequence of events one following the next which arise on the basis of the interaction of a complex set of causes, such as fuel, a wick, the presence of oxygen, and so forth. It is for this reason that Nāgārjuna claims that his analysis of fire and fuel given in chapter 10 of the MMK also explains the relation between the self and its constituents. This example adds the additional

40. MMK 27:22.
41. In the Sam. yutta Nikāya 4.196–198 (Bikkhu Bodhi [2000: II: 1254]) the same point is illustrated by the example of the sound of a lute, which is a process based on the parts of the lute and the skill of the player but no part to be found anywhere among them. See Collins (1982: 101).
42. “With [the investigation] of fire and fuel, the way [ for the solution of the problem of ] the self and of grasping is completely described.” Agnindhanābhyaṃ, vyabhāyātā atimopādānayoh, kramah. / sarvo niravaiśeṣaṃ sārdham. / MMK 10.15. The example of the lamp is well known in the Buddhist philosophical tradition. It can already be found in the earliest Buddhist literature (Trencker [1888: 486–487]); (Bikkhu Nalamol and Bikkhu Bodhi [2001: 593]) and lends itself to a further metaphorical explanation of transmigration (lighting one flame with another).
complexity of the mutual dependence of the self and its constituents. Not only does the self depend for its existence on the constituents, but the constituents acquire their existence as distinct parts of the stream of mental and physical events only by being associated with a single self, which, regarded as a constitutive property, produces the basis for postulating the individual in which the various properties of the self inhere. It is precisely this reason which keeps the Mādhyamika from regarding the constituents as ultimate existents (dravya) and the self as merely imputed (prajñapti). For the Mādhyamika not only is there no substantial self, there is also no substantial basis on which a nonsubstantial self could be built.

Second, the self is characterized by a mistaken self-awareness. This means that the self which is essentially a sequence of events does not regard itself in this way but considers itself to be a substantial self, that is, an essentially unchanging unified agent distinct from its physical and mental properties. To this extent it is deluded about its real nature. Nāgārjuna therefore compares the agent to an illusion (nirmita) created in a magical performance, which in turn brings about another illusion. This construction allows Nāgārjuna to reconcile his rejection of a substantial self as an essentially unchanging unifier of our mental life distinct from both its physical and mental attributes with the acceptance of the self as an agent who will experience the results of his actions, an assumption that could not be relinquished within the Buddhist worldview. This is a very important point, since the identification of the self with a causally interlinked set of events might tempt us to throw out all prudential considerations for our future selves, as well as those for other selves. Since none of these has any ultimate existence, we might think that all actions referring to them in some way (that is, all our conscious actions) are all equally insubstantial too, so that in the ultimate analysis it does not make any difference how we act.

Nāgārjuna counters this view by distinguishing the view from the inside of an illusion from that from the outside. When we are dreaming and are not aware we are doing so, we understandably prefer to leave a building by using the stairs rather than jumping out of the window. For somebody who is not dreaming, however (and also for our later, waking selves), it does not make any difference whether we jump or not, since at the ultimate level (from the point of view of the awakened one) there is no fundamental difference between the two actions. This does not imply that while we are still under the thrall of the illusion we should leave all prudential and moral considerations behind. On the contrary, as long as we are under the influence of the illusion, we have to act in accordance with its laws, even if we might suspect that it is an illusion. Unlike in the case of dreaming, where the mere wondering whether we are dreaming sometimes allows us to see through the nature of the dream, the mere suspicion that there is no substantial self is (unfortunately) not yet a realization of the emptiness of the self.

by another) and the notion of nirvāṇa in terms of its literal meaning as the “blowing out of a flame.” See Collins (1982: 186–187); also compare Siderits (2003: 25–26).

43. [. . .] indhanam apekṣyāṅgar apekṣyāṅgrim. [. . .] indhanam. MMK 10:8a. See also 10:9b.

45. “As a magician creates a magical illusion by the force of magic, and the illusion produces another illusion, in the same way the agent is a magical illusion and the action done is the illusion created by another illusion.” yathā nirmitakam. sāstā nirmitārddhisam. padā / nirmito nirmitātyānmanda ca nirmitakah. punah. // tathā nirmitakākārah. kartā yat karma tat kṛtam. / tadyathā nirmitenānya nirmito nirmitas tathā. MMK 17:31–32. This metaphor is encountered frequently both in Nāgārjuna’s works and in later Madhyamaka literature. See YS. 16–17; ŚŚ 66, VV 23, 27; RĀ 1:52–56; CS 7:24, BCA 9:150.

Epistemology

An account of the theory of knowledge is important for Nagārjuna’s investigation for at least two reasons. First of all, objects of knowledge and means of accessing them form an essential part of our conceptualization of the world and our place in it. The means of knowledge are instruments used by the self in order to apprehend objects of knowledge which connect our inner world with that of a world of outside objects. Given the centrality of these key notions of epistemology, it is obviously important to investigate whether any of these could be regarded as existing with svabhāva. Second, Nagārjuna’s account of epistemology also has to provide the foundations of his own project. Given that the knowledge of the theory of universal emptiness is what Nagārjuna wants to establish, it is important for him to describe the epistemology on the basis of which such knowledge is to be gained.

The Indian philosophical tradition distinguishes a variety of means of knowledge (pramāṇa) by which objects of knowledge (prameya) are epistemically accessed. Which means of knowledge are accepted and how their function is understood differs among different philosophical theories. In his discussion of epistemology Nagārjuna lists four such means of knowledge: perception

Nagārjuna’s primary concern is not a discussion of the nature and interrelation of these different means of knowledge, but the question of how to establish any particular set of means of knowledge, whether it is the one just indicated or a different one. Once we have agreed that the existence of objects of knowledge is established by the means of knowledge (as for example the existence of the desk in front of me is established by my perceptual abilities, in this case primarily non-defective vision), we then have to address the further question of how to establish the means of knowledge. How do we know that these means of knowledge are good guides to the objects out there in the world?

There are three different ways in which we could try to establish the means of knowledge. First of all we could regard them as established by mutual coherence: perception is an adequate means of knowledge of the desk because its accuracy is established by other means of knowledge indicating its presence as well. Having the receipt of the delivery of the desk allows me to infer that there must be a desk in my room (since if I have such a receipt, the item in question must have been delivered), my perceptual recognition of the desk is in important ways like the perception of other medium-sized dry goods, such as tables and chairs, and finally, I can rely on the testimony of other people who also see the desk in my room. In a similar way we could then argue for the establishment of inference by the fact that the conclusions inferred are supported by perception, likeness, and testimony, and so on for all the other means of knowledge.

Second, we could assume that the means of knowledge justify themselves. We do not have to go beyond perception to realize that perception usually delivers an accurate picture of the world, but perception itself presents a faithful representation of the world and of its own validity. A popular example illustrating this point is that of the lamp which illuminates other objects at the same time as illuminating itself. We do not need another lamp in order to illuminate the lamp.

Finally, one could regard the means of knowledge and their objects as mutually establishing each other. The means of knowledge establish an object of knowledge by giving us epistemic access to it. But we could also argue that the object in turn establishes the means of knowledge. Given that we manage to interact with the objects of knowledge more or less successfully (as confirmed

by the evolutionary success of our species), there must be something among our cognitive means that gives us a relatively accurate account of the way things are. In this way epistemic success allows us to establish the means of knowledge via the objects successfully cognized.

Nāgārjuna does not devote a great deal of discussion to the first alternative, the establishment of the means of knowledge by mutual coherence. This seems sensible, for even if the argument succeeds, the kind of establishment of the means of knowledge that can be derived from it is not exactly what Nāgārjuna’s Naiyāyika opponent is looking for. He is trying to argue that the means of knowledge provide us with information about the nature of independently existing reals. But it is clear that the mutual establishment of means of knowledge can do no such thing. All it can do is establish the coherence of statements arrived at by different means of knowledge. But the mere coherence of some set of statements is not sufficient for showing that there is anything with an independent existential status that they describe. There are, after all, coherent fairy-tales.

Let us therefore now consider the remaining two possible ways of establishing the means of knowledge.

8.1. Means of Knowledge as Self-established

Regarding the means of knowledge as self-established has the immediate advantage of avoiding two difficulties. First, we get around the infinite regress of establishing the means of knowledge by other means of knowledge, which then in turn need yet other means of knowledge to establish them, and so forth. Unlike other forms of infinite regress that Nāgārjuna accepts (such as an infinitely extended chain of causes and conditions), this regress is vicious, since the burden of proof is transferred in its entirety to the preceding stage, since preceding means of knowledge would have to establish all the succeeding ones.

Second, the self-establishment of the means of knowledge allows the opponent to hold on to the assumption that everything knowable is established by the means of knowledge. It might be attractive to give up this assumption in order to escape the vicious regress, but doing so then makes it necessary to give a special reason (vīśesahetu) explaining why ordinary objects are established by means of knowledge, but the means of knowledge themselves are not.

8.1.1. Means of Knowledge Compared to Fire

In support of the self-establishment of the means of knowledge, we are presented with the following example:

Fire illuminates itself as well as other objects. In the same way, the means of knowledge establish themselves as well as other objects.

This argument is based on a recognition of likeness (upamāna). Because the means of knowledge are like the fire, to the extent to which fire illuminates objects in the dark and thus brings them to our attention, in the same way the means of knowledge retrieve objects from the darkness of ignorance. Now it would be absurd to suggest that there is a vicious regress involved in the illumination of the fire, with someone arguing as follows: “Because we can see the object, it must be illuminated by something. It is illuminated by the fire. But we can see the fire too. So something must illuminate it. So there must be a second fire, which is either invisible or visible. But how can it be invisible, since it illuminates a visible object (namely the fire)? So it must be visible. But then we need a third fire to illuminate the second fire, and so forth.” It is clear that the error occurs through the assumption that there must be a different fire illuminating the fire: a fire can illuminate both itself and other things. Therefore, given the similarity of fire and means of knowledge, and thereby of arguments presented in NS 2, 1, 8–20, confuses the pragmatic question of how our epistemic enterprise should proceed with the philosophical question of its justification. See also Siderits (1980: 331); Siderits (2003: 141).

11. See NS 2, 1, 18.

12. dyotayati svātmānam. yathā hutāśas tathā parātmānam / svaparātmānāvevam. prasādāhavato pramān. āni. VV(S) 64:18–19. See also VP 6, MMK 7:8–12, NS 2, 1, 19.

14. Some references supporting the close connection between illumination and cognition in Indian thought are given by Burton (1999: 163–164). He also offers a different reading of this argument, claiming that as an illuminated object manifests the existence of light, the existence of a known object manifests the existence of a means of knowledge (161). This, however, appears to conflate this argument with the establishment of means of knowledge by their objects, discussed separately below. This reading is also not very satisfactory from a hermeneutical perspective, given that it lets all of Nāgārjuna’s arguments dealing with self-illumination come out as very problematic (as Burton sets out to argue on pages 165–172).
the relations of illumination and establishment, the means of knowledge can establish both themselves and other things.  

Nāgārjuna tries to counter the use of the example of fire to demonstrate the means of knowledge as self-established by arguing for two claims:

- Fire does not illuminate other objects.
- Fire does not illuminate itself.

Note that the establishment of either of these theses is sufficient for refuting the opponent, because each one would demonstrate that an argument by the recognition of likeness between the means of knowledge and fire cannot be used. Nāgārjuna sets out to establish both claims.

In order to argue for the first claim, he observes that in order to illuminate an object, a fire has to illuminate the darkness concealing that object. In order to do so, fire and darkness must come into causal contact, so that one can remove the other. Such a situation, however, is impossible:

- A lamp cannot illuminate when it is connected with darkness since their connection does not exist. Why are the lamp and darkness not connected? Because they are opposed. Where the lamp is, darkness is not. How can the lamp remove or illuminate darkness?  

The point Nāgārjuna wants to make here is that darkness and light cannot be understood as two independently existent objects one of which acts on the other when they come into contact. The illumination of darkness by light is not analogous to the dissolution of salt by water, because darkness is the mere absence of light; it is wherever light is not. For this reason the two can never come into spatial contact.

Nāgārjuna’s opponent argues in VV 38 that light and darkness might coexist during the process of origination (upadhyamāna) of light. So light and darkness would both be present at the same time for a single moment, and then the light would start to act on the darkness in order to remove it. But this theory leaves us with the problem of explaining what causes light to remove the darkness in its second moment of existence but not in the first. If light does not have the causal power to remove darkness in the moment of its origination, how could it have this power later on?

On the other hand it would be highly unsatisfactory to regard light and darkness as independently existing objects which interact without coming into contact. For if light could act on darkness at a distance without spatial contiguity (as the planets were seen to act on human beings in ancient India, and as we now know such forces as gravity and magnetism to work) without influencing it causally, it is difficult to explain why for example a certain lamp can dispel only a certain darkness (namely the one in this room) but not other ones (such as the darkness in the room next door).

The refutation of the second claim (that fire illuminates itself) proceeds by analysis of the notion of illumination. For something to be illuminated, it must first exist hidden in darkness and subsequently made visible by light shining on it. But it is obvious that this is not true of the fire: it does not first exist hidden away in darkness, like a pot in a dark room, and is then made visible by shining its own light onto itself. If we conceive of illumination as the prevention of darkness (tamasah pratigātah), we would have to assume that darkness is somewhere in the fire or encapsulating it to hide it from view. But this would mean that we are again thinking of darkness as an independently existing substance preventing illumination, something like a thick lampshade which prevents the light from reaching our eyes. But as Nāgārjuna has argued above, this view of darkness as a substance is thoroughly unsatisfactory, since darkness is nothing but the absence of light.

15. We might want to note the similarity of this argument to the “glue” objection to Bradley’s regress. This regress occurs once we think that what unifies two constituents of a state of affairs (such as an individual and a property) is the instantiation relation holding between them, and that this instantiation relation has a distinct ontological status, because then we need a further relation to connect the instantiation relation with the individual and the property and so forth. To see what goes wrong here, we can argue that when glueing two things together we do not require superglue to first glue the glue to the objects and then super-superglue to glue the superglue to the glue and so forth. It is the glue itself that can connect to the objects, as well as connecting the objects themselves.  

17. Another example where Nāgārjuna rejects this assumption (even though we are here dealing with mutually dependent rather than with mutually exclusive entities) is the case of fire and fuel. Nāgārjuna argues that we cannot conceive of these as two distinct entities which produce an effect (heat and illumination) when put together, in the same way in which the union of man and woman produces an effect, i.e., a child (MMK 10: 1, 6). See also Burton (1999: 169–171).

18. ’od med pa ni mun pa’o. VP(S) 25:10. See also Burton (1999: 166).

22. VV(S)65:3–4. See also Burton (1999: 313).

24. VV(S) 66:10.

25. VP 10. See also BCA 9:18.
Nāgārjuna also adds a second argument against the self-illumination of fire. He first claims that since the illumination by fire proceeds by the consumption of fuel, self-illumination would entail self-consumption, that is, fire would burn itself as well as its fuel.²⁶ Of course we cannot argue that if one quality of an object acts on itself, any other of its qualities will do so as well.²⁷ An oven may heat a piece of wax as well as itself, and melt the wax, but not melt itself. Nāgārjuna must therefore regard the fire’s burning of fuel and its illumination of objects as the very same process. But we do not have to say that the fire burns down because there is less fuel (it being gradually consumed by the fire) and less fire (because it gradually consumes itself). Fire is just the burning of the fuel rather than some distinct entity acting both on the fuel and also on itself.²⁸ Therefore, if there is no self-consumption of fire, there should also be no self-illumination.²⁹

Second, if fire illuminated itself, and perception was to be understood as structurally similar to illumination, the different modes of perception should also be able to perceive themselves: seeing should be able to see itself, hearing hear itself, and so on.³⁰ Vision would be possible in the absence of any distinct object, because vision could act as its own object of sight. Visual perception would then be regarded not as an intrinsically relational phenomenon, but as something based solely on some essentially perceptive quality of vision. Since such a non-relational understanding of visual perception (and of any other kind of perception as well) is unsatisfactory, Nāgārjuna argues that if the parallel between perception and illumination is maintained, fire cannot be seen as self-illuminating.

Third, since darkness is the opposite of light, if light illuminates itself, darkness should conceal itself.³¹ But then we should not be able to perceive

²⁶. VV 35.
²⁷. As pointed out by Burton (1999: 167).
²⁸. MMK 10:1.
²⁹. It is interesting to note that the Madhyamaka argument against the Yogācāra view of the mind as selfilluminating (svapradāsa) given by Śāntideva in the BCA is another reason by recognition of likeness (upamāna): that of a sword that cannot cut itself (9:17). The Yogācāra view is also criticized by Śāntideva in the Upadeśasūnasūtra 16:13, in the Brahmāṣṭrābhāṣāya 2:2:28, and in his commentary on the Br. hadāran. yaka Upaniṣad 4:3:7. For further references to this “anti-reflexivity principle,” see Siderits (2003: 32, na). It is important to note, however, that even though the example of the lamp or fire is used in the discussion of both, the question of whether the mind is self-illuminating and the question whether the means of knowledge are self-established are distinct. See Siderits (1980: 334–335, n. 4), Burton (1999: 155–156).
³¹. MMK 7:12, VV 36, VP 11.

Self-illumination and self-consumption are self-established, it should be able to exist independently of the existence of an object of vision.³² But if we then assume that it is an essential property of visual perception to see, visual perception must be able to function as its own object, because otherwise there might be no other object to be seen. This reasoning, Nāgārjuna claims, then leads to the same problem encountered in the analysis of motion.³³ Because the mover and the place being moved over cannot exist simultaneously, since motion takes time, vision cannot see something that exists simultaneously with it (such as itself), since vision takes time too.³⁴

Second, observing again that if the means of knowledge are self-established, then they will be established independently of the objects known,³⁵ Nāgārjuna argues as follows. Assume that we wanted to chose those among all the different means of cognitive access to the world that deliver accurate knowledge of the nature of the objects known, that is, that qualify as means of knowledge. We would select all those that have a specific internal quality (such as the cognitive equivalent to self-illumination). The possession of this quality would then guarantee that its possessor delivered accurate information about the nature of the objects cognized. But how is the connection between the specific internal quality and the correct representation of the object justified? After all there are all sorts of properties our means of cognitive access to the world can have, so how do we know that a specific one is a guide to accurate representation?

Suppose we are presented with a set of fancy mechanical devices and are asked to select the five best can openers from these. No detailed study of the

³². Some more discussion of this argument is in Burton (1999: 167–168).
³³. MMK 3:2.
³⁵. MMK 3:3.
internal properties of each will allow us to accomplish that task. We have to analyze each in relation to a can and try to determine the way in which it might open it. Only then would we be able to conclude which particular properties of the mechanisms are correlated with good can-opening abilities. In the same way, we can regard an internal quality of a way of accessing the world only as a characteristic of a means of knowledge once we have assessed it in relation to the objects cognized. Only then can we conclude that this particular property really leads us to the knowledge of the nature of the object, rather than doing something else. But in this case the establishment of the means of knowledge can no longer be regarded as self-establishment, since it incorporates reference to other objects (namely the objects known) at an essential place.

8.2. Means of Knowledge and Their Objects as Mutually Established

If the argument for the self-establishment of the means of knowledge is not successful, the remaining option is to argue that the means of knowledge and the objects of knowledge mutually establish one another. Assume that I see an apple on the table. The existence of the apple, the object of knowledge, is established by the means of knowledge that is perception. But we could equally argue the other way around: that the object known establishes the means of knowledge. This argument would invite the immediate objection that we then need prior cognitive access to the object known, and if we have this we must already have established the means of knowledge. We are therefore pointlessly establishing it twice. But if we somehow gain this access without relying on the means of knowledge, the whole project of establishing these means seems futile, since it is precisely the justification of our means of gaining knowledge of the world which we have set out to scrutinize.

We will therefore need a different argumentative strategy to argue for the mutual establishment of objects known and means of knowledge, and in particular for the establishment of the latter by the former. One way of going about this (which does not commit us to the viciously circular mutual establishment criticized by Nāgārjuna) is to argue that the object of knowledge is

38. VV 42–51.
40. This is the fallacy of “proving the proven” (siddhāsyā sādhanam). See VV 42.
41. VV 44.
42. VV 46–48.

perceived, there must be something bringing about such a perception, and this is the means of knowledge. In this case the apple establishes the existence of the means of knowledge by which it is known. An essential prerequisite for this latter direction of establishment is of course success. Because we successfully apprehend an apple, our means of apprehension is regarded as a means of knowledge. If we were susceptible to frequent apple-hallucinations which disappeared once we tried to touch them, we would not regard perception as a reliable apple-detector, that is, as a means of knowledge. But since we are generally successful in our cognitive interactions with the world and normally only perceive the existence of apples which are indeed there, the very fact that we successfully apprehend a world of outside objects serves as an argument for regarding the successful means of apprehension as means of knowledge.

An immediate difficulty with this procedure is that we also need a means of knowledge for establishing the success of our cognitive actions, that is, we need to ascertain whether we really are perceiving the apple or just an apple-hallucination. Nothing seems to rule out that there are some means of knowledge that first deceive us about what we see and later deceive us about the outcome of whatever procedure we use to establish whether the first cognition was successful. But this possibility need not rule out any attempts of mutually establishing the means and the objects of knowledge if we do not use epistemically suspect procedures (which we know to have led to unsuccessful cognitions in the past) to establish the success of our cognitive actions.

A more worrying question is whether the mutual establishment of means and objects of knowledge—if successful—actually delivers the account of means of knowledge that Nāgārjuna’s opponent wants to defend. In order to see whether it does, we have to note first that the notion of “successful cognitive apprehension” referred to above cannot just be an act of cognition which leads to a successful action, since many of our cognitions (and many of the beliefs subsequently acquired) are never acted upon. We therefore also have to include coherence with other cognitions or beliefs as a criterion for the success of some means of knowledge as well. Our cognition of the apple on the table might therefore be deemed successful either if it leads to a successful action

43. This way of establishing the means of knowledge is what Nāgārjuna criticizes in VV 51 by saying prasiddhiḥ. [. . .] bhavati na ca prameyaiḥ. [. . .] pramānān. ānām.
means of knowledge and their objects, Nāgārjuna argues, father and son would not be distinguished by any substantial difference.

This is a familiar argumentative move we encounter repeatedly in Nāgārjuna’s works. A different and more unusual response to the proposal of mutual establishment is given in the VP. Nāgārjuna observes:

Potness is perceptible, but the pot is not. That which is the object of the sense-faculty (dbang po la rab tu phyogs pa’i don), that is perceived. If we apply the term (bṛda) “visual sense-faculty” then the object [of that faculty] is perceptible and depends on conditions like light and so forth. Thus pot and so forth are established as perceptible.

The idea behind this argument is to deny the establishment of the means of knowledge by the object known by denying that the object of knowledge (the prameya) is an external, independently existent real. The Naiyāyika opponent wants to argue that since our cognitions are generally successful, and since this success serves as an indication of the existence of an external, mind-independent reality, the means of knowledge are just those things that allow us access to this reality. Nāgārjuna replies that in fact the object perceived by our sense-faculties is not the external object, but a mental representation of the object. Nāgārjuna here embraces a representative theory of perception which does not assert (as a naïve realist would) that we have direct and unmediated cognitive access to the objects of the external world. What is directly perceived is the sense-datum (what Nāgārjuna calls the object of the sense-faculty [dbang po la rab tu phyogs pa’i don]), on the basis of which information about the external object is inferred. If, for example, we look at a white disc under red light at an angle, our sense-datum will be a red ellipse, though, knowing some basic facts about vision and about the peculiar lighting conditions, we perceive a white disc. Nāgārjuna stresses the contribution of inference to knowledge gained by

52. bum pa nyid mngon sum yin gi yun pa ni ma yin te dbang po la rab tu phyogs pa’i don gang yin pa de ni mngon sum yin par byas nas mig gi dbang po la dbang po’i bṛda byas la de la rab tu phyogs pa’i don gang yin pa de ni mngon sum yin zhing de yang snang ba la sogs pa’i rken la ltos pa ste de phyir bum pa la sogs pa nyid mngon sum du yongs su grub pa yin. VP(S) 29–6–13.

53. Burton (1999: 192) “suspects that Nāgārjuna actually means that [. . .] the knowledge-episode itself is constitutive of the object known.” This is indeed the case. Burton is also correct in claiming that there is not much of an argument for this position in Nāgārjuna’s texts. But given the generally elliptical nature of the VP, this philological gap does not necessarily entail the existence of a gap in Nāgārjuna’s philosophical argumentation as well. Tola and Dragonetti (1995b: 12) suggest that the Yogācāra flavor of VP 18 could be interpreted as evidence for locating the composition of the VP after the appearance of the Yogācāra school, about 350 C.E., which would speak against its attribution to Nāgārjuna. Given the somewhat isolated nature of VP 18 in Nāgārjuna’s argument, this suggestion does not seem to me to be able to bear much weight.

49. 1980: 318.

perception.54 He notes that in the same way in which the inferential process is based on some perception in order for us to arrive at some piece of nonperceptual knowledge, such as when we infer fire from smoke,55 there is an inferential process at work in ordinary perception as well, which, on the basis of the object of direct acquaintance (the sense-datum) subsequently produces the object of perception.56 But it is evident that for the proponent of a representative theory of perception, an object of knowledge cannot serve as establishing a means of knowledge in the way the Naiyāyika requires. Since all we are directly acquainted with is the sense-datum, we cannot use this acquaintance to support the view that there are epistemic processes which give us direct access to a world of external, independently existent reals.

8.3. Temporal Relations between Means and Objects of Knowledge

Apart from the question of how the means of knowledge are established, Nāgārjuna also investigates the question of how they are related to the objects of knowledge. The two stand in a causal relation. In the case of perception, for example, the contact between the sensory faculty and the object perceived brings about the object of knowledge which for Nāgārjuna is not an external object but a sense-datum.57 It is therefore hardly surprising that Nāgārjuna sees the relation between means of knowledge and objects of knowledge as facing the same difficulties as those of other causes and effects. He concentrates specifically on the problematic nature of their temporal relation.58

If the means of knowledge exists before its object, there is no justification for calling it a means of knowledge, since Nāgārjuna argued earlier that being such a means cannot be a purely intrinsic feature of some cognitive way of accessing the world.59 A different interpretation of this difficulty is found in

54. See Matilal (1986: chapter 8).
55. “In the same way [in the case of inferential knowledge] based on the connection between fire and smoke there is an inference preceded by a perception.” de lhün du me dang du ba la ’brel pa las mngon sum sngon du ’gro ba can rjes su dpag pa yin no. VP(S) 29:14–16.
56. The role of inference (or, as contemporary cognitive science would prefer to put it: the implicit reliance on biologically hard-wired rules in interpreting perceptual input) in the formation of visual perception in particular is now well supported by empirical research. See Hoffman (1998) for an accessible summary.
57. See VV(S) 70:17–18 where the means of knowledge is described as the cause (kārama) of the object of knowledge.

Vāt.syāyana’s Bhāṣya on the NS 2.1.9.60 Here the means of knowledge is regarded not as the perceptual faculty, but as a specific act of perception, and the object of knowledge as the object in the world which, when in contact with the sense-organ, produces the perception.61 The prior existence of the means of knowledge would then be equivalent to the existence of the effect before the cause.62

If it existed after the knowable object, there is no justification for calling the object of knowledge an object of knowledge, since there is not anything yet by which it is known.63 Nāgārjuna also identifies another difficulty when he argues that an arisen and a non-arisen thing cannot abide together.64 If two things are such that one exists only now and the other only at a later moment, it cannot be the case that the second has any effect on the first, such as making it known.

The final possibility is that the means of knowledge and its object exist simultaneously.65 The difficulty is here that for two simultaneously existing things (such as the two horns of a cow, which Nāgārjuna gives as an example, but also, e.g., the two ends of a see-saw moving in opposite directions), it becomes problematic to establish which is the cause and which is the effect. For Nāgārjuna the means of knowledge brings about the object of knowledge, the sense-datum. Therefore the means of knowledge is a cause, the object of knowledge its effect. But in this case we would better not assume that they exist

61. In accordance with the definition of perception in NS 1, 1, 4.
62. While it is instructive to compare the explanation of the difficulties connected with the temporal relations between means of knowledge and their objects in the commentaries on NS 2, 1, 8–15 and Madhyamaka treatises, it is important to be aware of the significance of their respective background assumptions. The Nyāya theory of means of knowledge, based on Vaiśeṣika metaphysics, regards a particular knowledge-episode, such as an instance of perception, as caused by the combination of an externally existing object of knowledge and the respective sense-faculty. For Nāgārjuna, on the other hand, the object of knowledge (prameya) is not external but an internal object, a sense-datum. If we now regard the means of knowledge (pramāṇa) as bringing about the internal representation which is the prameya, we realize that the causal relation between pramāṇa and prameya is seen in different ways by the Naiyāykīka and by Nāgārjuna. For the former the prameya is causally prior, for the latter the pramāṇa.
63. For the Naiyāyīka this dependence is purely notional (Jha [1984: 609, n. *]), whereas for Nāgārjuna it is both notional and existential, as argued in our discussion of causation on page 98 of this book.
64. ma skyes pa dang skyes pa dag lhan cig mi gnas pa. VP(S) 28:24–25.
65. In his commentary on NS 2, 1, 11 (NS 421–424) Vāt.syāyana argues that the problem is that if means and object of knowledge existed at the same time, there could be no sequence of cognitions. The point seems to be that if, for example, we hold a pot in our hand and thereby have both a visual and a tactile perception of it, the optical and haptic properties of the pot exist at the same time—and so should the corresponding perceptions. In our consciousness, however, they occur as successive, and indeed this non-simultaneity occupies an important place in the Nyāya theory of mind (see NS 1, 1, 16).
simultaneously, since it is the temporal ordering which characterizes one item as a cause, the other as an effect.66

One potential way of dealing with the difficulty of the temporal relation between means and object of knowledge is outlined by Vātsyāyana in his commentary on NS 2, 1, 11.67 He claims that the term pramāṇa is to be applied to something that has been the cause of apprehension of an object in the past, is so at present, or will be in the future. Similarly, the term prameya is to be used for an object that was apprehended in the past, is presently being apprehended, or will be apprehended in the future. Only in this way can we make sense of somebody saying “Bring the cook to do the cooking,” since he has not cooked yet—otherwise the term “cook” would fail to refer. In this case we use “cook” just as a synonym for “whoever will do the cooking.” The problem with this reply is that in this case it is obvious that being a cook is not regarded as an essential property of the person referred to. Since statements about the future are contingent, the expression “whoever will do the cooking” must be able to refer even if it turns out that person designated does not cook in the end. But now it is evident that someone who takes “cause” and “effect” to denote essential properties of things—as Nāgārjuna’s Naiyāyika opponent does—cannot help himself to this reply. Because a statement referring to a cause or a means of knowledge might really be talking about what this thing is likely to do in the future, it must be possible that the thing picked out does not cause anything, or does not give us access to an object of knowledge—otherwise its intelligibility now would depend on what happens in the future. Since this is not the case (we know what “what is going to be a means of knowledge in the future” etc. refers to, and we do not know what is going to happen in the future), being a cause or a means of knowledge cannot be an essential property of the thing, since it could lose this property while remaining that very thing.

8.4. The Aim of Nāgārjuna’s Arguments

Nāgārjuna’s aim in his discussion of epistemology is not to argue that means of knowledge and their objects do not exist at all.68 Such an argument immediately generates a paradox, for the non-existence of the means and objects of knowledge is itself an object of knowledge arrived at by some means. But then there must be at least one means and object of knowledge, something that was previously denied.69

What Nāgārjuna sets out to do is refute the existence of either means or objects of knowledge with substance-svabhāva.70 He thus wants to show that there are no procedures that are intrinsically and essentially means of knowledge, nor are there independently existent reals of which they give us knowledge. Means of knowledge and their objects are notionally interdependent: without its ability to give us epistemic access to some thing, we would not label a cognitive procedure a means of knowledge. Similarly something cannot be called an object of knowledge unless there exist a means which allows us to know it. We can also argue that the two are existentially dependent on one another. The existence of certain objects of knowledge allows us to divide off certain types of our cognitive procedures and label them as means of knowledge; it is not the case that this division proceeds along certain fissures which had been there all along. Since our consciousness is a continuous flow without ready-made fissures, the objects of knowledge can be regarded as bringing the means of knowledge into existence. Similarly if the object of knowledge is to be identified with a mental representation (as Nāgārjuna argued above), it is evident that the means of knowledge brings this object about by unifying information received through the different sensory modalities. Means of knowledge and their objects therefore cannot be regarded as distinct substances.

This point is also stressed by Nāgārjuna’s argument that each can assume another’s role: a means of knowledge can be an object of knowledge and vice versa. There are two different ways to argue for this position.

First of all, building on the familiar Nyāya definition that a means of knowledge is what produces the knowledge of something,72 we can argue that since the object of knowledge is what brings the means of knowledge about it, it is an essential part of what produces the knowledge of something, and therefore is an essential part of a means of knowledge. A similar argument can be applied to means of knowledge.73

Alternatively we could argue that a means of knowledge at one time can be an object of knowledge at another time, and vice versa. For example, when we establish a certain cognition as correct, this means of knowledge is an object of knowledge is itself an object of knowledge arrived at by some means. But then there must be at least one means and object of knowledge, something that was previously denied.69

66. I disagree with Burton’s claim (1999: 193) that Nāgārjuna “provides no justification […] for his unusual and far from self-evident assertion,” since this matter is extensively discussed in those passages where Nāgārjuna deals specifically with causation (rather than with causal issues in epistemology). See chapter 5, section 5.4.3.

knowledge. And what is thus known to be correct and is an object of knowledge can in turn be a means of knowledge for knowing other objects of knowledge later on. Vātsyāyana illustrates this point with the example of a piece of gold which can be both the object tested (if we want to determine how heavy it is) or a testing object itself (if we want to check the accuracy of a pair of scales). In fact, as Nāgārjuna points out, the Naiyāyikas themselves count ideas (buddhi, blo) both as a means of knowledge and as an object of knowledge. Either way it becomes evident that means of knowledge and their objects cannot exist as essentially different entities.

It is important to realize that Nāgārjuna’s rejection of the essentially existing means and objects of knowledge is presented within the discussion of the knowability of emptiness. His opponent argues that if all things are empty, means and objects of knowledge are empty too. But if ultimately there are no objects of knowledge, emptiness cannot be an object of knowledge. And if there are ultimately no means of knowledge, if nothing has the intrinsic nature that is characteristic of a means of knowledge, then emptiness, even if it obtained, could never be known. There appears thus to be a fundamental inconsistency in the Madhyamaka project of establishing the truth of emptiness.

Nāgārjuna’s response to this difficulty is to investigate the realist’s way of accounting for means and objects of knowledge with characteristic natures as means and objects, in order to demonstrate that all possible ways of establishing them fail. This sequence of arguments, which has already been discussed above, is to be seen not so much as a tu quoque move on the side of Nāgārjuna but as an assessment of the realist’s epistemological position which lets emptiness come out as unknowable. For the realist, means and objects of knowledge have intrinsic characteristics, and there are invariant relations of epistemic priority, that is, cognitive procedures which are means of knowledge in all possible contexts. On this account of epistemology it is indeed impossible to establish emptiness. But as we saw earlier in this chapter, Nāgārjuna tries to argue that this is not the right account of epistemology. Even though there are no means of knowledge that are intrinsically such, that deliver knowledge in every context, there are still cognitive procedures which function as means of knowledge in the specific context in which they are employed, regimented by certain background constraints and other pragmatic features. By using these procedures (which, Nāgārjuna argues, are all the means of knowledge there are anyway) we can achieve knowledge of emptiness even though ultimately there are neither means of knowledge nor objects of knowledge. Certain procedures can still count conventionally as means of knowledge within the framework of certain aims and directions of inquiry. Nāgārjuna’s arguments about epistemology have therefore to be seen as fulfilling two purposes. First, they continue his general project of examining different types of objects one by one and arguing that none has substance-svabhāva by considering means of knowledge and their objects. Second, and more specifically, they establish the necessary background epistemology needed for understanding how emptiness could in fact be known. It is this second aim which is particularly interesting, since it provides us with the outlines of a specific Madhyamaka theory of knowledge.

Language

In contrast to such topics as causation, motion, the self, and the theory of knowledge, language is not given much explicit discussion in Nāgārjuna’s works. This does not mean that such matters were not important to Nāgārjuna but merely that his extant writings do not contain an extended connected discussion of the impact of his theory of emptiness on our view of language. Nevertheless it is possible to extract some of Nāgārjuna’s views on this philosophically highly interesting issue from remarks found at different places in his works.

9.1. Nāgārjuna’s View of Language and the “No-Thesis” View

A good starting point for the discussion of Nāgārjuna’s conception of how the theory of emptiness affects our view of language is his so-called no-thesis view. This is without a doubt one of the most immediately puzzling philosophical features of Nāgārjuna’s thought and is also largely responsible for ascribing to him either sceptical or mystical leanings (or indeed both). The locus classicus for this view is found in verse 29 of the VV:

If I had some thesis the defect [just mentioned] would as a consequence attach to me. But I have no thesis, so this defect is not applicable to me.¹

1. yadi kācana pratijñā syān me tata eṣa me bhaved doṣah. / nāsti ca mama pratijñā tasmān naivāsti me doṣah.

That this absence of a thesis is to be regarded as a positive feature is stressed in YS. 50, where Nāgārjuna remarks about the Buddhas:

For these great beings there is no position, no dispute. How could there be another’s [opposing] position for those who have no position?²

Now it is important to observe that when these passages are considered in isolation, it is very hard to make any coherent sense of them, for even if we assume that the Buddhas do not hold any philosophical position anymore (having perhaps passed beyond all conceptual thinking), how are we to make sense of the first quotation which, in the middle of a work full of philosophical theses, claims that there is no such thesis asserted at all?

In fact this first statement is even more difficult to interpret than the famous last sentence of Wittgenstein’s Tractatus, which is preceded by the equally famous ladder-metaphor.³ Although Wittgenstein here denies that his preceding statements are of anything but instrumental value, claims that they turn out to be nonsensical after they have fulfilled their instrumental role, and that there is something outside of the grasp of these statements, at least he does not deny making any statements at all!

9.2. VV 29 in Context

In order to get a clearer understanding of what these passages might mean, it is important to consider them in the argumentative context in which they occur. The VV, which contains the first passage given above, is a work of seventy verses, accompanied by Nāgārjuna’s auto-commentary. As its title—which translates as “The Dispeller of Objections”—suggests, its main aim is to answer objections which had been advanced concerning Nāgārjuna’s theses. Its being of a rather technical and specific nature makes it plausible to assume that the VV was written later than his main work, the MMK, and was meant to deal with particular problems arising from the arguments set out there.⁴ The first twenty verses and their commentaries contain criticisms of Nāgārjuna’s

2. che ba’i bdag nyid can de dag / rnam la phyogs med rtsod pa med / gang rnam la ni phyogs med pa / de la gzhon phyogs ga la yod.

3. 6.54 My propositions serve as elucidations in the following way: anyone who understands me eventually realizes them as nonsensical, when he has used them—as steps—to climb up beyond them. (He must, so to speak, throw away the ladder after he has climbed up it.)[ . . .] 7. Whereof one cannot speak, thereof one must be silent.

position, which are answered in the remaining verses and their commentaries. Verse 29, given above, specifically addresses the problem raised by the opponent in verse 4.

The principal point the opponent makes at the beginning of the VV concerns the status of Nāgārjuna’s claim of universal emptiness. The opponent argues that Nāgārjuna faces a dilemma whose horns are inconsistency and impotence. If he assumes his claim not to be empty, he has contradicted his own thesis of universal emptiness (because there is now at least one thing that is not empty). If, on the other hand, Nāgārjuna takes his own claim to be empty too, the opponent argues, this claim is then unable to deny the existence of independently existing phenomena that the opponent asserts. As becomes clear later in verse 22, Nāgārjuna accepts the second horn of the dilemma: everything is empty, and his claim that everything is empty is empty too. As he stresses in the next verse, this reasoning, however, does not entail that the claim could not carry out its philosophical function. A key can open a door in a film even though it is only a key in the film, not a real key.5 Verse 4 now considers a specific comeback Nāgārjuna could make in reply to the difficulty arising from accepting this second alternative, the charge of the argumentational impotence of his claim of universal emptiness. Nāgārjuna could argue that if universal emptiness renders his own claim impotent, the opponent’s claims, being also subsumed under the universal statement of everything being empty, are similarly impotent and therefore cannot act as a refutation of Nāgārjuna’s claim either. But as the opponent is quick to point out, this thinking involves a blatant petitio principii: only if we already accept that everything is empty will the opponent’s arguments be rendered empty and impotent. But this is exactly the thesis the opponent denies. For him at least, some things are not empty, and in particular his own statements are not subject to Nāgārjuna’s claim of universal emptiness. The difficulty the opponent raised is one that arises because of the specific character (laksana) of Nāgārjuna’s system, namely the claim that everything is empty. It does not apply to someone who does not make that assumption.

Verse 29 then is made in reply to this supposed counterargument and its rejection as a petitio. There Nāgārjuna claims that the particular defect (of his thesis of universal emptiness rendering his own philosophical assertions impotent) would indeed apply if he had any position. But given that he has no position, the difficulty therefore does not apply to him.

Now it will strike the reader that this is a rather curious reply to make. It is evident that the opponent’s criticisms formulated in verse 4 as well as in the preceding verses rest on a misunderstanding of the central term “emptiness.” What exactly this misunderstanding amounts to is less clear. In fact the above set of arguments would make sense if we assumed that the opponent understood “empty” to mean “false,” or “meaningless,” or even “nonexistent.”6 But as a reply to a criticism based on misunderstanding of this kind Nāgārjuna’s reply in verse 29 seems a little extreme, given that it would have been perfectly sufficient and far less controversial for him to point out that emptiness entailed neither falsity nor meaninglessness nor non-existence and that he thereby could assert that his claims both are empty and simultaneously are able to refute the opponent’s objections (in fact he makes exactly these points in verses 21 and 22). Even if we agree with Mabbett that it may be the case that the objection addressed by a given verse has already been essentially refuted, but in turning to each new objection Nāgārjuna seeks to make a fresh rebuttal in order to administer the coup de grâce?

Nāgārjuna here seems to use a sledgehammer to crack a nut. Why deny holding any proposition whatsoever if it would have been perfectly sufficient to point out that since “empty” does not mean “non-existent,” it is completely unproblematic to claim that one’s own position is as empty as everything else?

We can distinguish at least three different ways in which Nāgārjuna’s crucial statement that he has no position can be interpreted. I will refer to these as the semantic, argumentational, and transcendent interpretations. According to the semantic interpretation Nāgārjuna does not claim to hold no thesis whatsoever, but claims only to accept no statements that are taken to have a particular semantics. If we follow the argumentational interpretation, Nāgārjuna makes a claim about how one should proceed in debates, namely by always refuting

6. Indeed we might think that the argumentative context makes it most likely that the opponent misunderstands “empty” as “nonexistent.” In this case the problem that nonexistent statements cannot really refute anything seems to be most pressing. But in the case of the other two alternatives other problems become more serious. If Nāgārjuna meant “meaningless” when he said “empty,” his claim that everything is empty would obviously just be false, given that we perfectly well understand the claim he makes (in the same way as somebody saying “all statements, including this one, are not grammatically well formed” would be uttering a falsehood). If, however, “empty” meant “false,” Nāgārjuna’s thesis of universal emptiness would reduce to the liar paradox and there is no good textual evidence that this is the problem the opponent had in mind. On this last point compare also the discussion in Mabbett (1996) and Sagal (1992).
9.3. The Semantic Interpretation

If we consider the major dGe lugs pa commentaries on verse 29 it becomes evident that these usually regard Nāgārjuna’s statement as elliptical. What Nāgārjuna really means when saying that he has no position, these commentaries claim, is that he has no positions that are non-empty.14

The key to understanding the point made in these commentaries lies of course in a precise understanding of what it means for a position or statement to be empty. An object is empty if it does not exist from its own side and is therefore dependent on other objects, so that its existence is not grounded in its “own-nature” (svabhāva, rang bzhin). The Buddhist commentarial tradition considers a variety of dependence relations in which objects stand and which prevent them from existing in a non-empty way. These dependence relations include causal dependence, dependence of a whole on its parts, as well as dependence on a cognizing subject.15 While in the case of certain objects their independent existence seems at least a prima facie plausibility which the Mādhyamika then attempts to refute by appropriate arguments, the emptiness of statements appears to be entirely uncontroversial. Material objects might be considered to exist in causal and mereological dependence, but independent of a cognizing subject; abstract objects, platonistically conceived, will be assumed to be independent in all three ways. Statements, however, can hardly be taken to “exist from their own side” in any of the three senses.

As even Nāgārjuna’s opponent affirms in VV 1, token16 utterances are events that arise in dependence on causes and conditions like all other events. When we consider utterances as types, it is equally clear that, assuming a compositional semantics, these are mereologically dependent on their parts, since the meaning of the sentence type is a function of the meanings of its constituents or parts. Finally, considering a constituent like the expression “red,” we realize that its referring to the color red is no property the word “red” has independent of everything else: the connection of this particular phonetic or typographic object with the property is a convention that holds for speakers of English; for speakers of French the same property is connected by a different set of conventions) with “rous,” for speakers of Tibetan with “dmar po,” and so forth. That

14. “It is not being said that the Mādhyamika has no theses; he merely has not theses that inherently exist.” Hopkins (1983: 471). The same point is made in mkhas grub rje’s commentary on this passage; see Ruegg (2000: 179).

16. A particular utterance of a sentence is a sentence-token, what is expressed by several such utterances that say the same thing is a sentence-type.
“red” refers to the color red depends on a complex framework of conventions connecting a community of cognizing subjects that share a language. Unless we mistakenly consider “empty” to mean “false” or “meaningless” or “nonexistent,” the claim that utterances conceived of as either tokens or types are not empty seems to be a position it is hard to make sense of.

Despite the prima facie strangeness of their claims, theories of the nonemptiness of language have found their defenders. Perhaps the most extreme example is the view of the divine authorship, their nonemptiness has found its justification of the authoritative status of the Mīm. āmsākas. A primary motivation of the Mīm. āmsā theory of language was to provide a justification of the authoritative status of the Vedas. As opposed to the Naiyāyikas, who justify the Vedas by their divine authorship, the Mīm. āmsākas regard them as authorless (apauruṣeya). The elements of the Vedic language are assumed to exist eternally, without the necessity of a speaker. Any particular human utterance of course depends on a phonetic or typographical instantiation of a piece of language, but the types thus instantiated exist ante rem, without depending on the tokens instantiating them. The referents of expressions, which the Mīm. āmsākas take to be eternal and unchanging universals, are related to these expressions via a set of objective and necessary relations.

While the Mīm. āmsā view of language attracted plenty of criticism from the Buddhist side (centred around Dignāgas apoha theory), there is no good evidence that this is the view Nāgārjuna’s opponent in the VV wants to defend.

There is, however, some interesting evidence that at least some of Nāgārjuna’s Indian commentators saw him as opposed to similar conceptions of language. When commenting on MMK 2:8 in his Prajñāpradīpa, Bhāviveka raises the question why the verbal root gam, “to go,” is used in its atmanepada form “gacchate” rather than being conjugated in the usual parasmaipada manner as a “gacchati.” Bhāviveka lists a variety of quotations from Indian grammarians illustrating the perils of wrong grammar. When the god Tvastr created a serpent to destroy Indra, he exclaimed indraśatru vardhasva, intending to say “May you prosper, destroyer.

21. Ames (1995: 310). This form is not found in any version of Candrakīrti’s Prasannapadā from which the Sanskrit text of the MMK is usually extracted. Here we just read “gacchati” (PP 97:14, see also de Jong [1978]). Only recently some fragments of older manuscripts of the MMK independent of the Prasannapadā have been discovered (see Ye [2006a: 2006b]). Unfortunately the verse in question is not among them. Nevertheless, recent palaeographical research strongly suggests that “gacchate” is indeed the correct reading MacDonald 2007: 32–33.

Nevertheless, for the purposes of interpreting the VV it makes better systematic sense to ascribe a different (and less extreme) theory than that to Nāgārjuna’s opponent. According to this theory, whether a statement is empty or not does not depend on the mind-independent existence of language in some Platonic heaven but on the semantics we employ when interpreting the statement. Even if we accept that the link between “red” and the property of redness is conventional, this fact does not imply that we also think that the property of redness only has conventional existence as well. It can still be a property that exists in the world independent on human conventions and intentions. Moreover, even if the linkage of particular words to their referents should prove to be conventional, the linkage of entire sentences to the world might not be. For example we might suppose that the statement “The apple is red” is linked to the state of affairs it refers to by a relation of structural similarity, by their sharing of a common logical form, which in turn is not a product of convention. Once we have linked up the simple signs of our language with the simple objects in the world, we then do not need a further set of conventions to link up the complex signs (the sentences) with the complex objects (facts or states of affairs), in the same way as once we have settled by convention how the initial conventions, and in the same way the truth-conditions of a sentence such as “The apple is red” can be worked out by considering the simple signs it is made up of and how these are put together in the sentence.

22. Ames (1995: 342, n. 65). Notes 64–70 provide very useful information for identifying some of the authors Bhāviveka quotes.

In fact both the assumptions behind this picture of the non-emptiness of statements—the assumption that there is a “ready-made world,” to borrow a phrase of Putnam’s, and the assumption that there is a structural link between language and the world—are extremely widespread, so widespread indeed that we might refer to them jointly as the “standard picture.” This standard picture provides us with a good idea of what is meant by the notion of svabhāva in the context of language, as opposed to an ontological understanding of svabhāva in terms of substance, or a cognitive understanding in terms of a superimposition (samāropa) which conceptualizes objects as permanent and observerindependent. The standard picture therefore represents the third, the semantic dimension of svabhāva mentioned in chapter 2.

It is evident that the standard picture does not sit well with the thesis of universal emptiness. Neither the existence of a world sliced up “at the joints” into particulars and properties nor the existence of an objective structural similarity between sentences and the world would be acceptable for the Mādhyamika. A Mādhyamika-compatible semantics would deny the existence of a world differentiated objectively into different logical parts and would try to replace the structure-based picture of the language-world link by a different one, perhaps by a theory built on speaker conventions.

There is good historical evidence that the standard picture is indeed what Nāgārjuna’s opponent presupposes if we take into account how closely many of the arguments in the VV engage with the NS. Garfield24 points out:

[I]n the Nyāya-influenced logico-semantic context in which these debates [in the VV] originate the dominant view of meaningful assertion (the one that Nāgārjuna calls into question) is one that from our vantagepoint best be characterized as a version of Fregean realism: meaningful assertions are meaningful because they denote or express independently existent properties. A proposition is the pervasion of an individual entity or groups or entities by a real universal or sequence of universals.25

On this understanding of the emptiness of statements we can read the opponent as claiming in VV 1 that because of Nāgārjuna’s thesis of universal emptiness, the Mādhyamika cannot accept the standard semantic interpretation for his utterances. For Nāgārjuna both questions of ontology (how the world is sliced up) and of semantics (how language and the world are linked)

must be settled by appeal to conventions. The opponent, on the other hand, can assume that there is a “ready-made world,” as well as an objective, structural way of linking this to our language.26 Now the opponent argues that on this picture Nāgārjuna never gets out of his system of conventions to connect his claims with the things—and that is the reason why his claims are unable to refute the opponent’s claims, which manage to connect with the things. Nāgārjuna’s arguments can no more refute the opponent than the rain in a meteorological simulation can moisten real soil.27 Nāgārjuna’s opponent thus considers the interesting case of a language in which we have two kinds of statements: some are interpreted according to the standard semantics (referring via an objective reference relation to objects that exists independently of us), some are interpreted according to Nāgārjuna’s semantics (which does not make these assumptions). The opponent argues that statements of the second kind could not possibly influence the first kind. To see this point, consider a similarly structured case. Assume we recognize two kinds of norms, norms that are real, objective, “out there,” and norms that are the product of human convention. (Moral realists take certain ethical norms to be of the first kind, rules for the regulation of traffic are generally considered to be of the second kind). Now it is clear that although the two kinds of norms could be in conflict, a norm of the second kind could never override one of the first kind, since the former are part of the objective normative framework of the world while the latter are only a supplement of human design.

Although he does not explicitly say so, Nāgārjuna’s arguments seem to imply that he agrees this situation would indeed be problematic. If there are two kinds of statements, the latter would be as impotent compared to the former as a film would be to reality: we could not escape the burning cinema by entering the scene projected onto the wall. Nāgārjuna counters the charge of impotence by denying that there are two kinds of statements, which differ like film and reality. All statements are to be interpreted in the same way, so that their interaction is not ontologically any more problematic than the interaction of different characters in a film.28

Understanding the emptiness of statements as their interpretation according to a non-standard semantics, we can also give a more interesting rendering

26. Another manifestation of the Naiyāyika opponent’s conception of a harmonious word-world link is the view that the simple terms of our language cannot fail to refer (as is discussed in chapter 3).

27. In VV(S) 43:2–6 the opponent claims, that “A fire that does not exist cannot burn, a weapon that does not exist cannot cut, water that does not exist cannot moisten; similarly a statement that does not exist cannot deny the svabhāva of all things.” na hy asatā sastreṇa sākyam, dagdhum | na hy asatā ādhibhiḥ sākyam, dagdhum | na hy asatā adhibhāvavahāvapraṇidhiḥ, kartum.

28. See particularly VV 23, 27; MMK 17:31–33.
of the argument in VV 4. Remember that there the opponent claims that Nāgārjuna might want to say:

According to this very method, a negation of negation is also impossible; so your negation of the statement negating the intrinsic nature of all things is impossible.\(^{29}\)

The opponent has just claimed that because Nāgārjuna’s theory entailed a nonstandard semantics, his assertions did not manage to connect with the world and were therefore meaningless. But if the opponent then sets out to refute the thesis of universal emptiness, this attempt means either that he takes it to be meaningful after all (and therefore deserving refutation) or that the statement he wants to defend (which is the negation of Nāgārjuna’s claim) is meaningless as well, since plugging in the word “not” will not help to turn nonsense into sense.

The opponent could reply to this charge by pointing out the difference between internal and external negation. While it is plausible to assume that the internal negation of a nonsensical statement is nonsensical too (“the number seven is not yellow [but rather some other color]” is as problematic as “the number seven is yellow”), this is not the case for an external negation (“it is not the case that the number seven is yellow” is not just meaningless but also generally taken to be necessarily true). Nāgārjuna’s opponent could then claim that his negation of the claim of universal emptiness is external only and therefore not affected by the lack of meaning in the claim it negates.\(^{30}\)

It is possible that the opponent had argued like this because a distinction between the different scopes of negation, as well as between the accompanying presuppositional and nonpresuppositional readings, was made in the philosophical literature of the time.\(^{31}\) It has to be noted, however, that the passage in question fails to make any direct reference to different kinds of negation being involved.\(^{32}\)

A more abstract way of employing the distinction between the two kinds of negation in the opponent’s reply consists in rejecting Nāgārjuna’s peculiar semantics. Here the opponent points out that he does not have to accept Nāgārjuna’s semantics, since it is a particular characteristic (laksana) of Nāgārjuna’s universe of discourse.\(^{33}\)

9.4. The Specific Role of Verse 29

It is interesting to note that verse 29, which is meant to be a reply to the opponent’s argument given in verse 4, does not attempt a comeback in trying to argue that the opponent’s negation of Nāgārjuna’s claim of universal emptiness is somehow impossible after all. Instead Nāgārjuna addresses a difficulty (doṣa) arising from the “specific character” of his system which the opponent raises at the end of verse 4.

In mKhas grub rje’s stong thun chen mo, an influential dGe legs commentary which deals with the interpretation of this passage,\(^ {35}\) this difficulty is taken to be inconsistency. If Nāgārjuna assumed that his thesis of universal emptiness was non-empty itself (rang bzhin gyis yod pa) and, on our interpretation, would therefore have to be supplied with a semantics according to the standard picture, his position would be inconsistent (at least until he proposed a special reason why this statement should be excepted, which Nāgārjuna does not do). But, mKhas grub rje argues, since none of Nāgārjuna’s claims of universal emptiness are taken to be non-empty, the difficulty of inconsistency does not arise.\(^ {36}\) The same point is made by Tsong kha pa’.\(^ {37}\)

Therefore, the issue as to having or not having theses is not an argument about whether [Nāgārjuna] has them in general. It is an

33. “The objection applies only to the specific character of your proposition, not to that of mine. It is you who say all things are void, not I. The initial thesis is not mine,” tava hi pratiññālaksana-prāptam. na mama | bhāvān bravīti śūnyāh. sarvabhāva iti nāham | pārvakah. paks.o na mama. VV(S) 45:19–66:2.
34. As, e.g., in Shaw (1978: 63–64).
35. See Ruegg (2000: 173–187) for a summary and analysis of the relevant part of the commentary.
37. des na dam bca’ yod med ni spyiṃ yod med rtsod pa ma yan gyi | dngos po thams cad la rang bzhin med do yesh dam bcas pa’i tshig la rang bzhin yod med rtsod pa yin pas | de ‘dra ba’i dam bcas pa’i tshig de la rang bzhin yod par khas bhangs na dngos po thams cad rang bzhin med par dam bcas pa dang ‘gal ba’i skyon nged la yod na’ng | nged de liar mi ’dod pas skyon de nga la med (1985: 687:13–17); (2000–2004: III:241).
argument as to whether the words of the thesis “all things lack intrinsic nature” have intrinsic nature. [Therefore the meaning of the lines from the VV is this:] If I accepted that the words of such a thesis had an intrinsic nature, then I could be faulted for contradicting the thesis that all things lack intrinsic nature, but because I do not accept that, I cannot be faulted.

What is unsatisfactory about this interpretation is that Nāgārjuna has already made the point ascribed to him here in verse 22. There he claims that his claim of universal emptiness is also empty, and he gives reasons why he thinks it can still have argumentative force, thus avoiding the charge of impotence. Unless we assume Nāgārjuna to be unnecessarily repetitive, it is not clear why we should assume that he makes the very same point once again a couple of verses later, and also formulates it in a much more obscure manner than the first time.

It is important to note that verses 21–28, which deal with the objections raised in the first three verses of the VV, are concerned primarily with solving the dilemma of inconsistency and impotence which is faced by Nāgārjuna’s claim of universal emptiness. Verse 29, however (pace mKhas grub and Tsong kha pa), is not again concerned with the thesis of universal emptiness. Nāgārjuna realizes that the twin problem of inconsistency and impotence is a problem not just for his thesis of universal emptiness, but for any other claim he holds as well. Any other claim either will face the problem of being a counterexample to Nāgārjuna’s assertion that all claims should be given a non-standard semantics, or will fail to connect with the world in the way sentences with the standard semantics do, and will therefore be meaningless. I want to argue that this is the difficulty arising from the “specific character” of Nāgārjuna’s system to which the opponent refers in verse 4 and which Nāgārjuna takes up again at the beginning of verse 29. He is not interested in defending the claim (attributed to him by the opponent in verse 4) that his thesis of universal emptiness could not possibly be negated. Instead he takes up the opponent’s more important point that apart from defending his claim of universal emptiness from the twin problems of inconsistency and impotence, he should better say something about the status of his other assertions as well. This is why he says in verse 29 that none of his other assertions should be regarded as propositions with standard semantics (pratijñā) either.38

The plausibility of this interpretation rests on there being two meaning of “thesis” (pratijñā) in play here, one referring to theses with standard semantics (which Nāgārjuna rejects) and one referring to theses with nonstandard semantics (which Nāgārjuna does not reject). In fact there appears to be good textual evidence that the notion of “thesis” is indeed used in two different ways in Madhyamaka literature.

Candrakīrti’s commentary on Nāgārjuna uses one sense of thesis (pratijñā) to refer to statements with clearly unproblematic status; indeed some utterances by Nāgārjuna himself are regarded as theses in this way,39 while theses in another sense are firmly rejected. We might want to refer to the first kind of theses as propositions, and to the second as views. How are we to understand the distinction between them? It has been claimed that views are theses with philosophical or metaphysical commitments40 and, more specifically, that they postulate an independently existing entity (bhāva).41 Propositions, on the other hand, do not make such commitments and are therefore philosophically unproblematic. It is important to note at this point, however, that what distinguishes a view from a proposition is not just that the former asserts the existence of objects existing by svabhāva while the latter does not. On this understanding the statement “Object x does not depend in any way on any other object” would be a view concerning x, while “Object x stands in a variety of dependence relations with other objects” would not be. Ontological commitment comes into play only at the level of semantics. Whether someone asserting that the average man has 2.4 children is committed to an object that acts as the reference of the expression “the average man” depends on the semantics given. If we interpret the statement in the way statements such as “Paul has two children” are usually interpreted, such commitment to a strange man with partial children ensues; if, on the other hand, we read it (more plausibly) as a statement about ratios between the number of men and children in a certain set, there is no such commitment.

It therefore seems to be plausible to take the distinction between views and propositions and between theses with standard and non-standard semantics as coinciding. The views the Mādhyamika rejects are theses that are interpreted by referring to a ready-made world and a structural link between this world and our language. The propositions he takes to be unproblematic, and some of which he holds himself, are theses that are given a semantics that makes neither of these two assumptions.

39. For example, MMK 1:1 in PP 13:3. See Ruegg (1983: 213–214) for further examples. Oetke (2003: 458–459), however, argues that the distinction between two senses of pratijñā arises only in the later Prāsan. gika literature and should not be read back into Nāgārjuna’s works.

Some support for this semantic interpretation of the difference between the two senses of “thesis” can be gained from MMK 13:8:

The Victorious Ones have announced that emptiness is the relinquishing of all views. Those who in turn hold emptiness as a view were said to be incurable.  

Although Nāgārjuna does not use the word pratijñā for “view” but rather talks of dṛṣṭi, it seems sensible to treat the two terms as synonymous in this context. If the difference between propositions and views just depended on what the statement asserted, statements asserting the emptiness of some phenomenon such as “each spatio-temporal object depends causally on some other object” ex hypothesi could not be views, contrary to what Nāgārjuna says in the verse just cited. If, however, we treat “view” as denoting a statement together with the standard semantics, this is indeed possible. For if we read “each spatio-temporal object depends causally on some other object” as asserting the existence of various objectively existing individuals in the world, linked by a relation of causation, about which we speak by exploiting an objectively obtaining structural similarity between language and the world, it would indeed be turned into a view.

That the point at issue here is a specific (and, as Nāgārjuna sees it, inappropriate) conception of semantics is supported by Candrakīrti’s commentary on this verse. Candrakīrti argues that one taking emptiness to be a view is like one who, when being told by a shopkeeper that he has nothing to sell, asks the shopkeeper to sell him that nothing. The customer (like the White King in Alice Through the Looking-Glass) treats “nothing” like a proper name and therefore expects it to denote a particular object, as proper names do. But though this view is justified by the surface grammar of the sentence concerned, it does not lead to an understanding of what the merchant wants to say. Similarly, giving a standard semantical interpretation of statements asserting emptiness does not lead to an understanding of what Nāgārjuna wants to say.

The semantic interpretation outlined above provides a good way of making sense of verse 29 within the argumentative structure of the VV and also

42. śūnyatā sarvadṛṣṭīnām. proktā nih. saraṇām. jinaih. / yesām. tu śūnyatādṛṣṭis tān asādhyān babhāṣire.

44. This interpretation does not imply, of course, that one could hold “any position at all” as long as one gives it the required nonstandard semantics, as Galloway (1989: n. 5, 27) asserts. A statement such as “Things arise from what is other than themselves” will be regarded as false by Nāgārjuna, independent of whether it is interpreted according to the standard or the non-standard semantics.

PINGALA COMMENTARY

18/0 Question. If dharmas are wholly and utterly empty, with no arising and no ceasing, and this is what is meant by 'the true character of dharmas', how can one penetrate it?

Reply. Through the extinction of attachment to 'I' and 'mine', the emptiness of all dharmas is attained. The insight of non-self constitutes penetration.

CANDRAKĪRTI COMMENTARY

[Chapter XIV]

The problem

At this point someone may ask: If the basic afflictions, actions, personal existence, responsible agents and the fruits of action are all not the real way of things (tattvam) but rather, being like a fabled city and such things, precisely what is not real, merely appearing to the unenlightened in the guise of reality, what then for you is the way things are really (tattvam)? And how does one attain (avatara) to the way things are really?

We reply. It is the utter cessation of I-ing (ahamkara) and mine-ing (mamakara) in both personal and non-personal regard through ceasing to take anything whatsoever, whether personal or non-personal, as real in its particularity, that is for us the way things are really. Concerning how one attains to the way things really are the Madhyamakavatara should be consulted for details. To quote: 'The yogi, discerning in his wisdom that all basic afflictions and defects whatsoever arise from holding the view that the person is real (satkayadrsti) and having inseen that the self (atman) is the central concept of this view, does away with the self.'

Discerning that the cycle of birth and death springs from holding the view that the person is real, and discerning that the self is the basis of this view that the person is real, the yogi, through not taking the self as real, abandons the view that the person is real, and having abandoned this view, discerning that all the basic afflictions come to an end, he enquires into the self: what is this so-called self which is the intended object of the notion 'I' (ahamkaravisaya).

The self identical with personal existence

The intended object of the notion 'I' must be thought of either as being of the very nature (svabhava) of the factors of personal existence (skandhas) or as being wholly other (vyatirikta) than them. Because the other theses (see MMK X.14 & XXII.1): that the self is either the base of the factors of personal existence, or is based in them, or possesses them, are implicit in the alternatives that the self is either identical with or different from them, and because he wishes to express himself succinctly, Nagarjuna, with a view to commencing the invalidation of the self, refutes both views: that of identity and that of difference.

KALUPAHANA COMMENTARY

Chapter Eighteen Examination of Self (Atma-pariksa)

GARFIELD COMMENTARY

Chapter XVIII Examination of Self and Entities

A good deal of the confusion Nāgārjuna diagnoses in the previous two chapters concerns the presupposition that the self, as an afflicted being capable of liberation from suffering, must be thought of as an inherently real entity. In this chapter, therefore, Nāgārjuna turns to an examination of the self, per se, apart from its relation to such things as perception, action, suffering, affliction, and so forth, as he has examined it in prior chapters.

_____
Kārikā XVIII.1

INADA (Skt):
Verse 1 - If the bifurcated self (atman) is constitutive of skandhas, it will be endowed with the nature of origination and destruction. If it is other than the skandhas it will not be endowed with the latter's characteristics. - Note: The skandhas refer to the five constituents of being or existence, i.e., rupa (material form), vedana (feeling), samjna (awareness), samskara (mental conformation), and vijnana (conscious play).

JONES (Skt):
[i] If the self were the aggregates making up a person (the material form and the mental components), it would be subject to arising and ceasing. If the self were other than these aggregates, it would not have the characteristics of the aggregates.

KALUPAHANA (Skt):
If the self were to be identical with the aggregates, it will partake of uprising and ceasing. If it were to be different from the aggregates, it would have the characteristics of the non-aggregates.

MCCAGNEY (Skt):
If the self would be the skandhas, it would rise and pass away.
If it would be different from the skandhas, it would not have the characteristics of the skandhas.

NISHIJIMA (Skt?):
1. If the Soul really exists as a part of the five kinds of aggregates, The real facts of appearance, disappearance, and maintenance of the Soul, must exist theoretically.
And if there were any kind of different aggregate, which is different from the five kinds of aggregates,
It might be natural for the characteristic of something, which is different from the five kinds of aggregates, to exist.

SPRUNG (Skt):
1 If the self were identical with the factors of personal existence it would itself arise and perish; if it were other than them, it would not be characterizable in their terms.

ENGLISH TRANSLATIONS

STRENG (Skt):
1. If the individual self (atma) were identical to the "groups" (skandha), then it would partake of origination and destruction. If the individual self were different from the "groups," then it would be without the characteristics of the "groups."

BOCKING (Ch):
18v1 If self is the five skandhas,
That self will arise and cease.
If self is different from the five skandhas,
Then it will not have the characteristics of the five skandhas.

BATCHELOR (Tb):
If the aggregates were self, it would be possessed of arising and decaying. If it were other than the aggregates, it would not have the characteristics of the aggregates.

DOCTOR (Tb):
If the self were the aggregates,
It would arise and cease.
If it were different from the aggregates,
It would have none of their characteristics. [XVIII.1]

GARFIELD (Tb):
1. If the self were the aggregates,
It would have arising and ceasing (as properties).
If it were different from the aggregates,
It would not have the characteristics of the aggregates.

GARFIELD-SAMTEN (Tb):
1. If the aggregates were self,
It would have to arise and cease.
If it were different from the aggregates,
It would not have the characteristics of the aggregates.
HAGEN (paraphrase):
If the self were identical to the aggregates it would arise and cease; if it were not, it would not have such characteristics.

GOLDFIELD (Tb):
If the self were the aggregates, It would be something that arises and ceases. If the self were something other than the aggregates, It would not have the aggregates’ characteristics. (1)

CANDRAKĪRTI COMMENTARY

If you ask: How is it that in the Chapters on the Realized One, and Fire and Fuel five theses are given whereas here only two alternatives are? We reply: just because in those two chapters five views are expounded they are not expounded again here. Only the two views are taken up for the sake of brevity.

In this kārikā, if the self (atman) is conceived of as identical with the factors of personal existence, then, as it participates in arising and perishing, the self becomes something which arises and perishes because of its participation in the arising and perishing of the factors of personal existence. But the self is not so regarded because of the various faults which that would entail.

Nagarjuna will say later, ‘Something which once did not exist cannot come into existence, because of the logical fault involved. The self would be either something created or it would come to be without any cause.’ (MMK XXVII.12) ‘The self is not identical with what it possesses (upadāna The factors of personal existence, the skandhas,) because that both arises and perishes. How then can the self be the possessor of the possessed?’ (MMK XXVII.6) Further: ‘If the self is identical with the factors of personal existence, this would render the self multiple as these are multiple. If the self were of the character of the factors of personal existence, then according to this thesis it could have no connection with the characteristics of arising, existing and perishing. Such a thing is not taken to be the meaning of self, either because it would not actually exist, like the flower in the sky, or would be uncompounded as nirvāṇa is uncompounded. But it does not make sense that it could be the object of the sense of ‘I’. So it does not make sense that the self can be wholly other than the factors of personal existence.

But then another argument is possible. If the self were wholly other than the factors of personal existence it would not be definable in their terms. The five factors of personal existence are (1) bodily form, (2) experiencing, (3) seizing on the specific character of things, (4) shaping one’s dispositions, (5) becoming aware of objects (fn 1 An interesting statement of the five skandhas). The self conceived of as wholly other than the factors of personal existence, as consciousness is other than a physical object, would be of a character peculiar to itself. And this character would be understood as peculiar even as mind is peculiar in relation to body. But the self is not so understood. Therefore it is not wholly other than the factors of personal existence.

You may object that non-Buddhists believe that the self is entirely distinct from the factors of personal existence and propound a special definition so that for them your reasoning is no logical impediment. How the non-Buddhists propound a special definition of the self is dealt with in the Madhyamakavatara (VI, 142).
‘Non-Buddhists think of the self as eternal, as non-agent, as the enjoyer, as beyond all attributes and as inactive (fn 2 This description fits the Samkhya). Depending on the different conceptions of the self, non-Buddhists arrive at differing doctrines.’

We reply. It is true that non-Buddhists claim that the nature of the self is quite distinct from the factors of personal existence. But they do not propound their definition from a grasp of the true nature (svarsipatah) of the self. Rather, because not rightly understanding existential hypostatizations (upadaya-prajnapti), they do not understand, because of fear, that the self is merely a name (namamatram eva). Having gone astray even from everyday common sense, by erroneous reification (mithyakalpana) misled by simply a pseudo-inference, in their delusion they construct a theory of the self and define its nature. By giving the proof of the reciprocal dependence of self and the factors of personal existence in the Chapter ‘The Agent Subject and his Doing’, and elsewhere, the refutation of the non-Buddhists is offered even on the level of common sense. To quote: ‘As the reflection of one’s own face is seen depending upon a mirror, but does not exist in its own right; so the “1” is experienced depending on the factors of personal existence but is not anything existing in its own right, like the image of one’s own face. As, in the absence of a mirror, one’s own face is not seen, so neither is the “1” in the absence of the factors of personal existence. From hearing this kind of statement the noble Ananda attained the eye of truth and spoke continuously of it to the other monks.’ (Ratnavali, I, 31-4.)

We do not therefore undertake the exposition of the same point again. It is nothing but existential hypostatizing which is, in the mature view of those aspiring to freedom, the root of the obsession with self among those who, as a result of primal ignorance are in the grip of false belief. The five factors of personal existence appear to be what the self is founded on. Is it of the same nature as the factors of personal existence or is it not? Having examined this question from every aspect, those aspiring to freedom do not take the self to be a self-existent entity (bhavasvabhavatah).

If no self, no I or mine

For such,

**KALUPAHANA COMMENTARY**

The conception of an individual self (atman) was previously examined in a variety of contexts. The present analysis was occasioned by a need to explain the life-process as conditioned by human actions (karma), the subject matter of the preceding chapter.

The Buddha’s analysis of the human personality into five aggregates (pañcakkhandha) was intended to show that underlying the empirical factors constituting the human personality there is no permanent and eternal self. The Buddha’s view was that these five factors served as the basis for any conceptualization of a self or soul. Hence they are always referred to as aggregates of grasping (upadanakkhandha).

Nagarjuna begins his investigation into the conception of self by raising two questions pertaining to the nature of the self, especially in its relationship to the five aggregates. If the self and the aggregates were identical, then the self would have to partake of the characteristics of the aggregates. These latter being subject to arising and ceasing, the self cannot remain permanent and eternal. On the contrary, if the self and the aggregates were to be different, then the former could not have the same characteristics as the latter. Leaving the argument at that, Nagarjuna is allowing the readers to come to their own conclusions.

So far Nagarjuna has not given any indication that he recognizes a special intuitive faculty through which one can see beyond the world of change and impermanence. Indeed, all that he has admitted points to his recognition of sense experiences as the foundation of human knowledge. The impermanent aggregates constitute not only the human personality, but also its experiences. If the self is considered to be different from the aggregates, Nagarjuna is here implying that it is unknowable, not merely inconceivable, for it will not have any of the characteristics of the aggregates that are all that we know through sense experience.
1. If there is an inherently existent self, it must either be identical to or different from the aggregates. The aggregates are the more basic components into which the individual divides upon analysis. In standard Buddhist analysis, they include the physical body, sensation, perception, dispositions, and consciousness or cognition. It is important to note, though, that this particular analysis has no deep philosophical significance. It reflects an essentially empirical psychological theory about the best explanatory framework to use in comprehending human behavior and the most useful way for a Buddhist practitioner to attend to his/her experience. As we have seen already, the aggregates are themselves empty, and as much Buddhist psychology emphasizes, they, too, are subject to further decomposition. But Nāgārjuna’s argument proceeds independently of any particular decomposition. No matter how one analyzes the human being, if we are to posit over and above the components into which it divides an inherently existent self, that self must be either identical to or different from those components. (This argument, by the way, appears in virtually the same form in On Man by Sextus Empiricus.)

But if the self is identical to the aggregates, it will be constantly changing, constantly arising and ceasing, since the aggregates are constantly arising and ceasing. This is so whether one takes the self to be identical to some one of the aggregates or to the whole collection of the aggregates. If, on the other hand, one takes the self to be distinct from the aggregates, the relation between them becomes completely mysterious: the self becomes unknowable, and the fate of the aggregates becomes irrelevant to the fate of the self. This is because the only objects ever given to us in introspection are the aggregates (a familiar Humean insight), and the self we presumably care about is one we know. And it would be a bit bizarre to suggest that whatever happens to my mind, body, memory, sensory experience, and so forth, is independent of what happens to me.

One must, of course, keep in mind that this destructive dilemma depends upon the attempt to identify a single inherently existent self and does not undermine the possibility of a conventionally identified self posited on the basis of the aggregates. So what Nāgārjuna is emphatically not doing is arguing that there are no aggregates in any sense or that there are no persons, agents, subjects, and so forth. The hypothesis for reductio is that over and above (or below and beneath) any composite of phenomena collectively denoted by “I” or by a proper name, there is a single substantial entity that is the referent of such a term.

But, the proponent of the inherently existent self asks, what is the bearer of the self’s properties and the thing that possesses those aggregates? The first half of XVIII: 2 raises this question. The second half begins Nāgārjuna’s reply, which occupies the remainder of the chapter and constitutes a substantial portion of his positive view on the nature of self from the standpoint of ontology and soteriology:

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 2 - Where the bifurcated self does not exist, how could there be a self-hood (atmiya)? From the fact that the bifurcated self and self-hood are (in their basic nature) quiescence, there is no self-identity (mama) or individuality (ahamkara).

JONES (Skt):
[2] When the self does not exist, how can there be anything belonging to the self? From the stilling of the sense of "self" and "belonging to a self," one is free of the ideas of "mind" and "I”

KALUPAHANA (Skt):
In the absence of a self, how can there be something that belongs to the self? From the appeasement of the modes of self and self-hood, one abstains from creating the notions of “mine” and “I”

MCCAGNEY (Skt):
If the self does not exist, what will be one’s own? There is no “I,” no “mine” from the calming of what pertains to both senses of self.

NISHIJIMA (Skt?):
2. It is said that a person himself or herself exists with their Souls together, But where is it possible to exist such fact even in future? Not being egoistic suggests that they are perfectly free from the state of egoism. Therefore the Soul, or co-existence of Souls, is similar to be as if they were fetters.

SPRUNG (Skt):
2 If the self is non-existent how will anything be one’s own? Free of I-ing and mine-ing because the self and what is of the self have come to an end.

STRENG (Skt):
2. If the individual self does not exist, how then will there be something which is "my own"? There is lack of possessiveness and no ego on account of the cessation of self and that which is "my own."

WESTERHOFF (Skt):
XVIII.2a [Opponent] If there was no self, where would the self’s properties come from?

BOCKING (Ch):
18v2 If no ‘I’ exists, How can there be ‘mine’? It is the extinction of I and mine, That is called ‘attaining the insight of non-self’.

BATCHELOR (Tb):
If the self did not exist, where could what is mine exist? In order to pacify self and what is mine, grasping I and grasping mine can exist no more.

DOCTOR (Tb):
When the self does not exist, How could that which belongs to it? Due to the pacification of self and that which belongs to it, The belief in an “I” and a “mine” will cease. [XVIII.2]

GARFIELD (Tb):
2. If there were no self, Where would the self’s (properties) be? From the pacification of the self and what belongs to it, One abstains from grasping onto "I" and "mine."

GARFIELD-SAMTEN (Tb):
2. If the self does not exist Where would being being mine be? In virtue of the pacification of the self and being mine There will be no grasping onto "I and mine."

HAGEN (paraphrase):
In the absence of a self, where would the self’s properties be? From the pacification of the self and what belongs to it, one abstains from grasping onto "I" and "mine."

GOLDFIELD (Tb):
If there is no “me” in the first place, How could there be anything that belongs to me? When “me” and “mine” are found to be peace, Clinging to “me” and “mine” ceases. (2)
2ab If the self is non-existent how will anything be one's own?

Because they do not directly experience the self, even less do they directly experience the five factors of personal existence, on which the hypostatization of the self is based, as their own (atimya). Just as, when a chariot has been burned, one does not perceive its parts because they have been burned too, so those on the way (yogis), when they have realized that the self is not an entity, necessarily realize that their own factors of personal existence are not entities either.

To quote from the Ratnavali, ‘The factors of personal existence arise from the sense of “I”, but this “I” is, in truth, false. If the seed of something is false how can the resulting thing itself be true? Having seen that the factors of personal existence are unreal the sense of “I” is expelled. When the sense of “I” has been abandoned the factors of personal existence are no longer possible.’

The sun, at the end of a summer's day when it is throwing out fiery rays of light and just as it enters that part of the heavens where there is no cloud, emits slanting rays like elongated sparks from a blazing fire and warms the dry earth beneath. If one is in the vicinity of this dry area a visual illusion gives rise to a mirage which seems to be water. For those at a distance it seems to be clear blue water; but for those close by it does not give rise to a mirage.

Similarly, for those who are far removed from viewing the nature of self and own as they really are, who are caught in the cycle of birth and death, in the grip of the misbelief of primal ignorance, for such, a false thing the self as hypostatized on the basis of the factors of personal existence - manifests itself as real. But for those close by who see the truth of these matters, no such false thing manifests itself.

As Nagarjuna says: ‘An object seen from afar is seen clearly by those close by. If a mirage is water why is it not taken to be so by those close by? The everyday world is not seen in the same way by those close to it as it is taken to be by those remote from it, but is without factual character (animitta), like a mirage. As a mirage, which looks like water, is not water, nor any real thing, so the factors of personal existence which are like a self, are not of the self nor of anything real.’ (Ratnavali, I, 29-30.)

And so, because he in fact has no sense of self and what is of self, the one on the way, having seen the higher truth from close by, naturally becomes

2cd Free of I-ing and mine-ing because the self and what is of the self have come to an end.

‘Of the self means what is in the interest of the self, that is, the fivefold factors of personal existence taken as mine. The yogi — the one on the way — becomes free of the I-ing and mine-ing by the coming to an end of the self — the object of the I-sense — and by the coming to an end of what is of interest to the self, that is the factors of personal existence taken as real — the object of the sense of ‘mine’. These are not allowed to arise because he no longer has any sense of them (anupalamba).

You may object that the one who becomes in this way free of I-ing and mine-ing must by that fact exist, and if his existence is established so too are self and the factors of personal existence. But this is not so. Because

KALUPAHANA COMMENTARY

If a permanent entity does not exist, one cannot assume the existence of anything that belongs to it. The denial of a permanent entity does not mean that Nagarjuna is committed to a rejection of self-awareness or self-consciousness.

The rejection of the latter would undermine the very foundation of his epistemology. As mentioned earlier (see III. 17), Nagarjuna, following the Buddha, recognized consciousness (and this includes self-awareness), not as a pre-existent cogito, but as part of the human personality conditioned by factors such as the sense organs and the objects of perception. Self-awareness or self-instinct can be pursued to its extreme limit. The result is the "construction of a self" (aham + kara), which eventually leads to the belief in permanence. The other extreme is the complete rejection of any form of self-awareness, which is tantamount to annihilation.

Without falling into these two extremes, Nagarjuna is here presenting the Buddha's own "middle way" philosophy when he speaks of the appeasement (sama), not the complete eradication, of the "self" (atman) and "whatever that pertains to a self" (atman). This is perfectly in accord
with the "appeasement of dispositions" (samskaropasama), the "appeasement of the object" (drastavyopasama), and the "appeasement of obsessions" (prapancopasama), discussed earlier (see commentary on V.8).

Through the appeasement of the self-instinct one eliminates the metaphysical notions of a self (atman), and through the appeasement of the object (drastavyopasama) one is able to realize the non-substantiality of phenomena and would not cling to them as "one's own" (atmani). These culminate in the absence of selfishness (nirmama) and the absence of egoism (nirahamkara).

The dual meaning of the term ahamkara is worth noting. Ahamkara (literally, "I-making") means both egocenteredness and pride. While the term ahamkara has come to be so popular in ordinary language, it is interesting to note that no such term is constructed with the plural of aham, namely, mayam, as mayamkara ("we-making") would have expressed an idea which is equally unacceptable to the Buddha and Nagarjuna, for they were not willing to eliminate the notion of oneself (aham) altogether in favor of an equally metaphysical notion of a "social self".

**GARFIELD COMMENTARY**

2. Nāgārjuna replies that once one stops trying to posit an independent self, the problem posed simply vanishes. That is, the worry about the possessor of the aggregates and properties of the self occurs only given that one conceives of them as properties and aggregates that are essentially of something. The insight is a bit abstract, but it is the same one that Hume was after in the Fig argument in the *Treatise*. (in 92. See Hume (1975), pp. 235-39.) Much of the motivation for positing a substantial self is the intuition that since its properties and components exist, they must exist somewhere - that there must be a substratum in which they inhere. But once we give up that conception of what it is for a property or a component to exist (as Nāgārjuna has argued that we must in Chapters V, VI, and IX above), the drive to posit a substratum vanishes. And when the drive to posit the substratum vanishes, we simply, Nāgārjuna urges, think of the aggregates and properties as associated aggregates and properties, not as *my* aggregates and properties.
Kārikā XVIII.3

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 3 - Any entity without individuality and self-identity does not exist. Whosoever sees (it with) non-individuality and non-self-identity cannot see or grasp (the truth).

JONES (Skt):
[3] One who is free of the ideas of “mine” and “I” is not found.
In addition, one who sees someone as “free of mine” or “free of I” still does not see correctly.

KALUPAHANA (Skt):
Whosoever is free from selfishness and egoism, he too is not evident. Whoever perceives someone as free from selfishness and egoism, he too does not perceive.

MCCAGNEY (Skt):
He who has no “I” and no “mine” does not occur. Who sees no “I” and no “mine” does not see.

NISHIJIMA (Skt?):
3. Being not egoistic and being free from egoism, Are both real together, but such kinds of situations are never always recognized well.
Not being egoistic is similar to being free from egoism.
Such situations can be seen sometimes, but can’t be seen sometimes.

SPRUNG (Skt):
3 One who is free of I-ing and mine-ing does not exist factually. Anyone who thinks he sees one free of I-ing and mine-ing does not truly see.

STRENG (Skt):
3. He who is without possessiveness and who has no ego — He, also, does not exist. Whoever sees "he who is without possessiveness" or "he who has no ego" really does not see.

BOCKING (Ch):
18v3 Attaining the insight of non-self
Is termed 'viewing reality'
One who attains the insight of non-self;
Such a person is rarely found.

BATCHelor (Tb):
The one who does not grasp at me and mine likewise does not exist. Whoever sees the one who does not grasp at me and mine does not see.

DOCTOR (Tb):
The one who does not grasp at “I” or “mine”
Does not exist either.
The one who sees what lacks the grasping of “I” and “mine”,
That one does not see. [XVIII.3]

GARFIELD (Tb):
3. One who does not grasp onto “I” and “mine,”
That one does not exist.
One who does not grasp onto “I” and “mine,”
He does not perceive.

GARFIELD-SAMTEN (Tb):
3. He who does not grasp “I” and “mine,”
Also does not exist.
Whoever sees he who does not grasp “I” and “mine,”
In virtue of that does not see.

HAGEN (paraphrase):
An entity without individuality and self-identity is not evident. Whoever sees such a person, does not see
Reality.

GOLDFIELD (Tb):
The ones who do not cling to “me” or “mine”
Do not exist either.
Those who do not cling to “me” or “mine” see accurately,
So they do not see a self. (3)
CANDRAKĪRTI COMMENTARY

If self and the factors of personal existence are not perceived at all as self-existent entities, how will there be a different entity distinct from them this one who is free of I-ing and mine-ing? And anyone who thinks he sees one free of I-ing and mine-ing — who does not exist at all as an entity he does not see things as they really are (tattvam).

As the illustrious one said, ‘Regard everything personal as devoid of being, regard everything external as devoid of being. No one at all factually exists, not even the one regarding things as devoid of being.’ And again, ‘Whoever thinks the elements of existence are merely empty is foolish and walks a dangerous path. Imperishable are the empty elements and yet not imperishable are the imperishable elements said to be.’

‘To think the elements of existence are at peace, utterly at peace, such a thought can never be true. The entire manifest world arises from discriminative thinking; the elements should be realized to be subtle and beyond the reach of thought.’ Again: ‘The factors of personal existence are devoid of self-existence and without being. Enlightenment is devoid of self-existence and without being. The one involved with both is devoid of self-existence. So think the wise but not the foolish.’

And so

KALUPAHANA COMMENTARY

Nagarjuna approvingly spoke of the appeasement of the notion of self and the consequent elimination of selfishness and egoism. However, knowing his contemporaries who were so prone to metaphysical speculations, he was not willing to rest satisfied with such a statement.

As a reminder to those who have not achieved the “appeasement of the notion of self,” Nagarjuna points out that someone who is assumed to have gotten rid of egoism and pride is also not available. The constant attempt by the metaphysicians to reify things, entities, persons, etc. was kept in mind by Nagarjuna whenever he makes any positive assertion.

GARFIELD COMMENTARY

3. These are correlative. When one stops grasping the aggregates and the self as independent entities or as the possessions of independent entities, one recognizes one’s own lack of inherent existence. One also recognizes the lack of inherent existence of the aggregates, as in the case of perception. This is not to say that one ceases conventionally to exist or that one goes blind - rather it is that one comes to understand one’s own existence and that of other entities in the context of emptiness and, hence, to regard that existence as necessarily relational and conventional. The relation between the second and third verses of this chapter is also important from the standpoint of the relation between theory and practice, philosophy and soteriology: Nāgārjuna emphasizes the two-way streets in this neighborhood. Understanding emptiness leads one to grasp less, to become more detached. Relaxing one’s tendency to grasp leads to a realization of emptiness. Philosophy, meditation, and the practice of the moral virtues that issue in the relaxation of grasping are conceived from this vantage point as necessarily mutually supportive.
**Kārikā XVIII.4**

INADA (Skt):
Verse 4 - Grasping ceases to be where, internally and externally, (the ideas of) individuality and self-identity are destroyed. From the cessation of grasping the cessation of birth also follows.

JONES (Skt):
[4] When “mine” and “I” are destroyed with respect to both outer and inner phenomena, the acquisition of a new rebirth is stopped; and from the stopping of such acquisition, future births are destroyed.

KALUPAHANA (Skt):
When views pertaining to “mine” and “I”, whether they are associated with the internal or the external, have waned, then grasping comes to cease. With the waning of that [grasping], there is waning of birth.

MCCAGNEY (Skt):
Where “I” and “mine” are internally and externally destroyed.
grasping has ceased. From that destruction birth is destroyed.

NISHIJIMA (Skt?):
4. A title “my” or a title “I” has become very weak, And avoiding God, the Soul is also in the same situation. The self-regulation is just the action, which is useful for us, Leaving from such area, and making our efforts to realize our whole mental functions, are our task.

SPRUNG (Skt):
4 When I-ing and mine-ing have wasted away both inwardly and outwardly, possessive attachment comes to an end and from its cessation personal rebirth ceases.

STRENG (Skt):
4. When “I” and “mine” have stopped, then also there is not an outside nor an inner self. The “acquiring” of karma (upadana) is stopped; on account of that destruction, there is destruction of verse existence.

**ENGLISH TRANSLATIONS**

BOCKING (Ch):
18v4 When inner and outer, I and mine, Entirely cease, with nothing existing, All receiving is then extinct. Reception ceasing, the body also ceases.

BATCHELOR (Tb):
When one ceases thinking of inner and outer things as self and mine, clinging will come to a stop. Through that ceasing, birth will cease.

DOCTOR (Tb):
When the sense of “I” and “mine” that is based On the inner and outer is exhausted, Appropriation comes to an end. As that is exhausted, so is birth. [XVIII.4]

GARFIELD (Tb):
4. When views of "I" and "mine" are extinguished, Whether with respect to the internal or external, The appropriator ceases. This having ceased, birth ceases.

GARFIELD-SAMTEN (Tb):
4. When the views of the self and being mine are extinguished, With respect to the internal and the external, Appropriation ceases. Through this having been eliminated, birth is eliminated.

HAGEN (paraphrase):
Grasping, whether internally or externally, ceases when views of “I” and “mine” cease. With the cessation of grasping comes the cessation of birth.

GOLDFIELD (Tb):
When one stops thinking of the inner and outer aggregates as being “me” or “mine” All wrong views disappear, And once they have disappeared, birth in the cycle of existence stops. (4)
CANDRAKĪRTI COMMENTARY

As the sutra says, ‘The basic afflictions are rooted in the belief in the permanent self, arise from the belief in the permanent self and are caused by the belief in the permanent self.’ This belief in the permanent self is brought to an end by no longer having a sense of self and of what belongs to self. From that sense coming to an end the fourfold possessive attachment — to sense pleasure, to dogmas, to moral pride and vows, and to belief in the permanent self — ceases. From the cessation of possessive attachment (upadana) personal existence understood as re-birth is ended. The sequence of stages in the cessation of personal existence is definitively given in this way:

KALUPAHANA COMMENTARY

The use of the iti formula as mama-iti and aham-iti in the present statement makes it significantly different from the former statement at XVIII.2. In the former statement, Nagarjuna spoke of atman (self) and atmiya (that which belongs to the self) and emphasized the need to appease such awareness or feeling. In the present verse, he refers to aham (“I”) and mama (“mine”) using the iti-formula and insists upon their complete elimination (ksaya). Thus, it is not the fact of self-awareness that causes problems for the human beings but the theorizing based upon such self-awareness. The cogito may thus turn out to be harmless, so long as it is considered to be a product of the sensory process (see III.7), but ergo sum is what is dangerous, epistemologically as well as ethically.

When such theorizing has waned (ksine), then there is cessation of grasping (upadana-nirodha), which is freedom while living. The cessation of grasping eventually leads to the waning of rebirth (janmanah ksayah).

GARFIELD COMMENTARY

4. When one completely relinquishes the view of entities and the self as inherently existent and when all habits of reification have been eliminated, Nāgārjuna urges, liberation from cyclic existence and suffering have been achieved. Nāgārjuna defers the precise characterization of nirvāṇa to the chapter devoted to its examination and that devoted to the examination of the status of the Tathāgata (XXV and XXII, respectively).
Kārikā XVIII.5

业煩惱滅故 名之為解脫

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 5 - There is moksa (release or liberation) from the destruction of karmic defilements which are but conceptualization. These arise from mere conceptual play (prapanca) which are in turn banished in sunyata.

JONES (Skt):
[5] From the destruction of the afflictions resulting from karmic actions, there is the liberation from rebirth. The afflictions arise from thoughts that make distinctions between entities. These thoughts come from projecting distinctions onto reality. But such conceptual projections cease through emptiness.

KALUPAHANA (Skt):
On the waning of defilements of action, there is release. Defilements of action belong to one who discriminates, and these in turn result from obsession. Obsession, in its turn, ceases within the context of emptiness.

MCCAGNEY (Skt):
Because of the destruction of action and defilement, there is liberation. There are actions and defilements for one having false notions.
They must be constructed from false imagining and stopped by openness.

NISHIJIMA (Skt?):
5. To live in both Action and Delusion are just emancipations, And it is true for Action and Delusion to manifest them reciprocally. Both Action and Delusion are prone to develop themselves overcoming themselves, And nowadays in the balance of the autonomic nervous system, some kinds of disturbance have begun.

SPRUNG (Skt):
5 From the wasting away of the afflictions and karmic action there is freedom. The afflictions and karmic action arise from hypostatizing thought and this from the manifold of named things. Named things come to an end in the absence of being.

STRENG (Skt):
5. On account of the destruction of the pains (klesa) of action there is release for pains of action exist for him who constructs them. These pains result from phenomenal extension (prapanca); but this phenomenal extension comes to a stop by emptiness.

BOCKING (Ch):
18v5 When karma and afflictions are extinct, We call it liberation. Karma and afflictions are unreal Penetrating emptiness, all sophistries cease.

BATCHelor (Tb):
Through the ceasing of action and affliction, there is freedom. Action and affliction [come] from thoughts and they from fixations. Fixations are stopped by emptiness.

DOCTOR (Tb):
Liberation follows from the exhaustion of action and affliction.
Action and affliction are due to thought, And thoughts proliferate due to mental construction.
They are brought to an end by emptiness. [XVIII.5]

GARFIELD (Tb):
5. Action and misery having ceased, there is nirvana. Action and misery come from conceptual thought. This comes from mental fabrication. Fabrication ceases through emptiness.

GARFIELD-SAMTEN (Tb):
5. Through the elimination of karma and affliction there is nirvana. Karma and affliction come from conceptual thought. These come from mental fabrication. Fabrication ceases through emptiness.

HAGEN (paraphrase):
With the cessation of afflictions there is liberation. Afflictions are mere mental constructions resulting from conceptual play. But all such fabrication ceases in light of Emptiness.
Absence of self leads to freedom

5a From the wasting away of the afflictions and karmic action (fn 3 Action proceeding from a belief in a permanent self; only such action has moral consequences.) action there is freedom.

Possessive attachment having wasted away, birth into personal existence, which depends on it, is no more. When personal existence has come to an end, how can there be the cycle of birth, old age and death? Nagarjuna puts it precisely: ‘From the wasting away of karmic action and the afflictions there is freedom.’ But, you may ask, from the wasting away of what do karmic action and the afflictions cease? The answer is:

5bcd The afflictions and karmic action arise from hypostatizing thought and this from the manifold of named things. Named things come to an end in the absence of being.

The afflictions arise in the unenlightened from groundlessly (ayonisa) hypostatizing (vikalpayata) external objects and the other factors of personal existence. Nagarjuna will say, ‘Desire, aversion and delusion are said to spring from hypostatizing thought. They arise dependent on misbelief and on taking things to be good or bad.’ As is said in the sutra: ‘Oh desire, I know where you spring from: you are born of the mind. I will dwell on you no more and then for me you will be no more.’

Thus karmic action and the afflictions arise from hypostatizing thought. Hypostatizing thought springs from the manifold of named things (prapanca), i.e., from the beginninglessly recurring cycle of birth and death, which consists of knowledge and objects of knowledge, words and their meanings, agents and action, means and act, pot and cloth, diadem and chariots, objects and feelings, female and male, gain and loss, happiness and misery, beauty and ugliness, blame and praise (fn 4 This is the longest list of the fateful dualities Candrakīrti ever gives us.).

This world of named things (laukikah prapana) in its entirety finds its end in the absence of being, when there is immediate realization that all things are devoid of self-existence.

How is that to be understood? Once objects are taken to be real things, you have the entire world of named things as just described. However, if those thirsty with desire do not take the daughter of a sterile woman to be a beautiful young lady, that is to say if they do not take objects to be real, they will not bring the manifold of named things into existence with such things (fn 5 Knowledge and objects of knowledge, and so on.) as its objects. By not calling the manifold of named things into play they do not groundlessly bring hypostatizing thought into play with named things as its object. By not bringing hypostatizing thought into play they do not allow the afflictions to arise which are rooted in the belief in a permanent self, a belief which springs from obsession with the I and the mine. Because the afflictions, which are of the very essence of the belief in the permanent person, have not been allowed to arise they do not perform acts which can be distinguished as either good or bad. Because they do not perform good or bad acts they do not experience the jungle of birth and death which is one great network of being born and ageing and dying, of suffering, lamentation, misery and sadness. The wise, thus steadfastly seeing all things as devoid of a self-existent nature, do not take the personal factors, the sense fields or types of consciousness to have being in their particularity. Because they do not take these supposed elements to have being in their particularity, they do not bring the manifold of named things into play which would have such real particulars as its object. Because they do not bring the manifold of named things, having real particulars as its object, into play, they do not invoke hypostatizing thought, they do not allow the afflictions, which are rooted in the belief in the permanent person, to arise because of obsession with I and mine. Because they do not allow the afflictions which are rooted in the belief in a permanent person to arise, they perform no karmic acts. Because they perform no karmic acts they do not experience the cycle of life and death called birth, ageing and dying. Thus, having attained to the true way of things (sunyata) which is the serenity of the coming to rest of the manifold of all named things (prapancopasamasiva) there is an end to all named things as the base of hypostatizing thought. From named things being no more there is an end to hypostatizing thought, because hypostatizing is at an end all karmic action and afflictions are ended. Because karmic action and the
afflictions are ended there is an end to personal existence.

It follows that it is nothing other than the absence of being in particular things, understood as the repose (nirvṛtti) of the entire manifold of named things which is said to be nirvāṇa.

To quote from the Catuḥsataka: ‘The perfectly realized ones hold, in brief, that the Buddhist truth is harmless and that the absence of being in things is itself nirvāṇa. These are the only two truths for us.’

Bhavaviveka, however, not understanding the attainment of the absence of being in things by the disciples and the fully realized sages, as just explained, gives this account: The disciple, regarding the entire mass of experiences which perish momentarily and which are generated externally, as not self nor what belongs to self, and regarding the self and what belongs to it as not being real entities, develops the view that there are pure elements of existence (dharma-matra) which are born and perish.

As against that we say that the self is the object of the I and as this does not exist neither does the self; because the self does not exist there is no reality which could be internal or external to self. And if the sense of mine is not functioning, one is free of I and mine and the I does not arise as a definitive entity, but is rather a conventional term for everyday purposes (in 6 Candrakīrti gives, we might say, a phenomenological description of the way the self appears in experience. Bhavaviveka, according to Candrakīrti, gives a metaphysics of the self.). How much more this is true for the great Bodhisattvas who course in transcendent awareness without hypostatizing thought, and who regard all things as unborn. That is why Nagarjuna says, ‘One free of I-ing and mine-ing does not exist in fact.’

Therefore, Bhavaviveka does not follow Nagarjuna in this matter, as I have shown in the Madhyamakavatara. ‘In the seventh stage of the Bodhisattva’s career transcendent awareness governs.’ So I do not again make the effort to show the fault in Bhavaviveka’s account.

The illustrious one says in the Eight Thousand Sutra: ‘One who is hungry to learn, o Subhuti, the enlightenment of the disciple can learn from this sutra of transcendent awareness. One who is hungry to learn, o Subhuti, the unsurpassable perfect enlightenment of the great beings, he may learn from this sutra of transcendent awareness.’

And it is said further: ‘Whoever desires to become a follower of the realized one or a realized one himself, or a monarch of the truth, without attaining this imperturbableness, will achieve nothing: a man who does not discern the banks of a river will not arrive either at this bank or the other.’

The Buddha’s teaching concerning self

Someone may object: If, as you argue, the way things are really is the non-arising of the hypostatizations I and mine in either personal or non-personal regard by not taking anything, personal or non-personal to be real in its particularity, then what about the following sayings of the illustrious one?

‘The self is master of the self. What other master could there be? The wise attain heaven by restraining the self. The self is master of the self. What other master could there be? The self is the witness of the self in both good and ill.’ And so on. Surely this contradicts you.

We reply: Did the illustrious one not also say: ‘In this world neither person nor self exists, because they are causally dependent things.’ And again: ‘The body is not the self, nor does the self possess the body, nor is the self in the body nor the body in the self. In the same vein consciousness is not the self, nor does the self possess consciousness nor is the self in consciousness nor consciousness in the self.’ And again: ‘All elements of existence are without self.’

How is it that these scriptures do not contradict the ones quoted earlier? Because the purpose of the illustrious one’s teaching in the former scriptures has to be understood. It is the universal rule that a distinction between truth for the initiated (nitartha) and what is merely truth for beginners (neyartha) exists in the teaching of the illustrious Buddhas who are devoted to the awakening of the lotus-like mind of the entire creation which is to be guided, who are like a sun that never sets and who are great in the power of their insight, of their ducational wisdom and of their universal compassion’. 

932
The fact that this statement of Nagarjuna immediately follows his criticism of theorizing relating to "mine" and "I," that is, speculation relating to subject and object, becomes very valuable in determining the meaning of the term vikalpa, a term that has caused much confusion and misunderstanding.

Vikalpa can mean two different types of discrimination. One is the type of discrimination made at the phenomenal level. It is the discrimination referred to at XVIII.2, a discrimination that is empirically grounded, but which should be kept under control (sama). The second is the type of discrimination made at a metaphysical level. It is the discrimination referred to at XVIII.4, which has gone far beyond the empirical level and thus become theoretical or speculative.

For Nagarjuna, the defilements of action follow from the latter, not from the former. It seems that this is the primary reason for his reference to and criticism of vikalpa at XVIII.5 rather than at XVIII.3. Wrong actions (mithya-karmanta), i.e., actions that are defiled, emanate from wrong beliefs (mithya-drsti), which are the results of wrong thoughts or discriminations (mithya-samkalpa, mithya vikalpa). Obsessions are the inevitable results of such wrong discriminations. When such obsessions are appeased, then a person does not get involved either in a notion of a permanent self or in a theory of complete annihilation. The realization that self-awareness is dependently arisen (III.7) is a realization that it is empty of a permanent substance (svabhava-sunya). This latter is the middle path that avoids eternalism and annihilationism.

GARFIELD COMMENTARY

5. The diagnosis, though, of the predicament of saṃsāra and the corresponding prescription are clear: Grasping, contaminated action, and suffering are rooted in delusion, and this delusion comes from cognitive error. The root delusion - the fundamental cognitive error - is the confusion of merely conventional existence with inherent existence. The realization of emptiness eliminates that fabrication of essence; which eliminates grasping, contaminated action, and its pernicious consequences.

ENGLISH TRANSLATIONS

INADA (Skt): 
Verse 6 - The Buddhas have provisionally employed the term atman and instructed on the true idea of anatman. They have also taught that any (abstract) entity as atman or anatman does not exist,

JONES (Skt): 
[6] The idea “There is a self” has been disclosed. That “There is no self” has been taught. But by the Buddha it has been taught “There is neither the self nor indeed what is not the self whatsoever.”

KALUPAHANA (Skt): 
The Buddhas have made known the conception of self and taught the doctrine of no-self. At the same time, they have not spoken of something as the self or as the non-self.

MCCAGNEY (Skt): 
The term “atman” pointed out causes it to be distinct from the term “anatman.” Neither a self nor a nonself are pointed out by the buddhas.

NISHIJIMA (Skt?): 
6. The problem, which is related with the Soul, is just a kind of disclosing secrets, And the teaching that the Soul does not exist is just the true teachings. Relying upon many Buddhas' opinions, the Soul does not exists, but spirit is not deniable. The insistence that "move it ahead!" might be just their teachings.

SPRUNG (Skt): 
6 Both ‘The self exists’ has been expounded and ‘The self does not exist’ has been taught too. And ‘Neither self nor non-self exist’ has been taught as well by the Buddhas.

STRENG (Skt): 
[6] (missing?)

BOCKING (Ch): 
18v6 The Buddhas may teach that there is a self, Or teach that there is no self. Within the true character of dharmas. There is neither self, nor non-self.

BATCHelor (Tb): 
It is said that “there is a self,” but “non-self” too is taught. The buddhas also teach there is nothing which is “neither self nor non-self.”

DOCTOR (Tb): 
“Self” is stated And also “no self” is taught. The Buddhas even teach that there is neither Self nor absence of self. [XVIII.6]

GARFIELD (Tb): 
6. That there is a self has been taught, And the doctrine of no-self, By the buddhas, as well as the Doctrine of neither self nor nonself.

GARFIELD-SAMTEN (Tb): 
6. The Buddhas have designated a self; And have taught that there is no self; And also have taught that There is neither self nor selflessness.

HAGEN (paraphrase): 
There is teaching of self and teaching of no-self, but the Buddhas have never used such terms as though they actually applied to anything in particular.
The meaning is this. There are some who, even though rooted in the world of everyday practice, do not correctly see everyday things though these are nothing but the objects which the person of normal vision sees; this is because the eye of their mind is completely covered as by a cataract simply by the erroneous view, arising from false belief, that the self does not exist. They are determined to accept as reality only the elements called earth, water, fire and air. They claim that mind arises solely from the gestation of the four elements, like a foetus; even as the gestation of various substances like roots, boiled rice and water results in intoxicating drink, anal wind and so on. So, actively denying a beginning and an end to life, they deny the self and future existence. This life (loka) is not real; the next life is not real; the matured fruits of good and ill deeds are not real; no individual creature is born, and so on. Because of denying all this, they turn their backs on the various endeavours like the rare and desirable goals of heaven and ultimate beatitude; they incessantly and forever perform ill deeds because of their innate disposition, and are headed for a mighty plunging into the hells.

In order to put an end to the belief of such people that the self does not exist, the illustrious Buddhas sometimes have maintained, for teaching purposes, that the self exists. They, adjusting to the realm of living beings in which there are 8,400 categories of creature, devoted to fulfilling their vow to rescue the entire realm of living beings and flowing with a great store of universal compassion, practical wisdom and ultimate insight, who are peerless, bonded to this one creation, physicians to the great malaise of the afflictions, masters of the art of healing, willed to show kindness to those needing guidance whether of the lowest, middle or highest level, they, in order to put an end to the ill acts of those of the lowest level, formulate their teaching in everyday terms.

The refutation of the theory that things can be without cause is given in the Chapter ‘The Agent Subject and his Doing’ of this treatise and in the verse ‘or without cause’ (in 7 Materialists or naturalists.) and details may be found in the Madhyamakavatara. It is not necessary to refute that view again here.

However, there are some who, like birds, are tied by long and strong bonds of attachment to the I and the mine, bonds which arise from holding to the reality of the self. Such, though they have progressed far and commit no ill acts, are unable to go beyond being born into the three planes of existence and cannot reach the blissful city of nirvana where there is neither old age nor death. Such are of the middle group of those who need guidance, and to them the illustrious Buddhas, in their desire to show favour to those who need guidance, have also taught the non-existence of self in order to weaken the attachment to the false view of the self and to awaken the longing for nirvana.

And there are those who, thanks to their earlier discipline, have perfected their potential by adhering to the profound truth. To such superior followers, for whom nirvana is near, who are free of attachment to a self, who are capable of penetrating to the hidden truth in the words of the foremost sage, the Buddhas, having seen the worthiness of these, have taught: ‘No self whatsoever either exists or does not exist.’ Even as the theory of self is not the truth of things, no more is the theory of non-self. That is why it is taught: ‘There is no self whatsoever, nor is there any non-self whatsoever.’

As is said in the Arvaratnakuta: ‘There is a self, Kasyapa, is one dogma. ‘There is no self’ is the opposing dogma. What avoids these two dogmas is said to be without a specific nature, beyond proof, not related, invisible, without an abode, not to be known conceptually. It is, Kasyapa, the middle way; it is the right way of regarding the true way of things.’

As is said in the Aryaratnavali: ‘And so neither a self nor a non-self is perceived in the way things truly are. The great sage has eradicated false views stemming from self and non-self. What is seen and heard and otherwise perceived is not said by the sage to be either real or false. From one view would arise its opposite and neither would be true.’

As, in this way, the actual teaching of the truth by the illustrious Buddhas in repudiating self, not-self and both together, takes account of the various dispositions of those who are to be guided whether they are of the lesser, middle or superior category, therefore the Madhyamikas are not at variance with the authoritative texts.

This is why the master Aryadeva said, ‘The one who knows how, in the beginning, to ward off ill deed and, later, how to ward off the self and, after that, how to keep all things under control, he has achieved wisdom.’ And Nagarjuna said, ‘Even as the grammarian would teach language, even so Buddha
taught the Truth according to the capacity of those who were to be guided. To some he taught the Truth in order to lead them from ill deeds; to some for the sake of good deeds; to some for the sake of both. And, beyond both, he taught the hidden Truth, terrifying to the timid, concealed in the absence of being and universal compassion; and to yet others he taught the realization of enlightenment.’ (Ratnavali IV, 94-6)

There is another interpretation of the kārikā, The Sarhkhya school and others, after accepting the lack of a necessary connection between an act and its consequences in compound elements which are in constant flux, still talk about a self. And the naturalists (lokayatikas), not seeing, in rigorous perception, a transmigrating self, talk about a non-self. They say, ‘A person is absolutely nothing more than what is within the sense fields. O blessed one, what the learned talk about is but a faulty inference.’

Even as those not suffering from eye disease do not see the hairs and mosquitoes and such things which are perceived by those with eye disease, so the Buddhas in no way whatsoever see self and non-self as self-existing realities in the way ordinary people imagine them. ‘Neither self nor non-self exist’ has been taught as well by the Buddhas.’

**The limitation of language**

Someone may object: If the illustrious Buddhas taught neither that the self exists nor that the self does not exist, what then did they teach? The reply is:

**KALUPAHANA COMMENTARY**

If the distinctions made in XVIII.2 and 4 are not recognized, it is natural for the interpreters of Nagarjuna to run into difficulties in explaining the contents of this verse. Here again we have the use of the iti-formula, this time used with the terms atman and anatman, as atma-iti and anatma-iti. However, the difference between the Buddha’s speculations and those of the metaphysicians in this regard is that the Buddha does not speculate on any entity (kascid) as atman or as anatman. In other words, he does not reify either atman or anatman. Reifying atman one ends up in eternalism, reifying anatman one is led to annihilationism. Without resorting to such reification, the Buddha has indicated the meaning of atman (atmeti prajnapitam) and has spoken of the implications of anatman (anatmeti desitam). Both atman and anatman are explained by the Buddha in terms of dependent arising (pratityasamutpada).

This doctrine of dependent arising eliminates the need for postulating either permanence or annihilation. As such, the distinction that Inada attempts to make between prajnapitam as "provisionally employed" and desitam as "instructed" becomes untenable. If "provisional explanation" is to be achieved by the use of words, it could not be different from "instruction." Both need the use of language. Just as much as the Buddha could instruct on the "true idea of anatman," he could have instructed on the true idea of atman, without falling into metaphysics in either case. If the use of the empirical terms can be utilized in one case, there is no reason to assume any difficulty in using them in the other. The problem then is not with regard to language as such, but only in regard to the way in which it is used.

**GARFIELD COMMENTARY**

6. There are many discussions of the way to think about the self in the Buddhist canon. For those who are nihilistic about the self (such as contemporary eliminative materialists or classical Indian Carvakas), it is important to explain the conventional reality of the self. For those who tend to reify the self, the doctrine of no-self is taught, that is, the doctrine of the emptiness of the self. But, Nāgārjuna claims, as a preamble to the next verse, there is a deeper view of the matter - a doctrine of neither self nor nonself. That doctrine is closely tied to that of the emptiness of emptiness. Both the terms “self” and “no-self” together with any conceptions that can be associated with them, Nāgārjuna claims, are conventional designations. They may each be soteriologically and analytically useful antidotes to extreme metaphysical views and to the disturbances those views occasion. But to neither corresponds an entity - neither a thing that we could ever find on analysis and identify with the self, nor a thing or state that we could identify with nonself. The terms and the properties they designate are themselves empty, despite the fact that they are used to designate emptiness. To say neither self nor nonself is, from this perspective, not to shrug one’s shoulders in indecision but to recognize that while each of these is a useful characterization of the situation for some purposes, neither can be understood as correctly ascribing a property to an independently existent entity. And if they cannot be understood in this way, what are we really saying?
Verse 7 - Where mind's functional realm ceases, the realm of words also ceases. For, indeed, the essence of existence (dharmata) is like nirvana, without origination and destruction.

JONES (Skt):  
[7] When the domain of thought has ceased, then what can be named has ceased. The nature of all things is, like nirvana, unarisen and unceased.

KALUPAHANA (Skt):  
When the sphere of thought has ceased, that which is to be designated also has ceased. Like freedom, the nature of things is non-arisen and non-ceased.

MCCAGNEY (Skt):  
Where the range of thought is renounced, that which can be stated has ceased to be valid. Indeed, the nature of events is like liberation, nonarising and nonceasing.

NISHIJIMA (Skt?):  
7. The abstract world is the world, which has been described with words. Therefore the abstract world is very similar to a pasture, where thoughts can be wandering like cows at random. Because what hasn't been produced can never be governed by any thing, The balanced autonomic nervous system is just the substance of the Universe.

SPRUNG (Skt):  
7 When the object of thought is no more there is nothing for language to refer to. The true nature of things neither arises nor perishes, as nirvana does not.

STRENG (Skt):  
7. When the domain of thought has been dissipated, "that which can be stated" is dissipated. Those things which are un-originated and not terminated, like nirvana, constitute the Truth (dharmata).
This means that if there were something real (vastu) for language to refer to there could be didactic argument (desyeta). When, however, what language refers to is no more, when there is no object (visaya) for utterances to refer to, then there is no didactic argument by the Buddhas whatever. Why does Nagarjuna say there is nothing for language to refer to? Because ‘the object of thought is no more.’ Object of thought means what thought (citta) has as its object (gocana). Object means the object grasped in thought. If there were such an object of thought, then, by imputing a specific character (nimitta) to it, speech would be able to function. When, however, no object of thought exists, how can specific character be imputed by which speech would function? How is it that there is no object of thought Nagarjuna explains when he says: ‘The true nature of things (dharmata) neither arises nor perishes, as nirvāṇa does not.’

As the true nature of things, understood as their inherent, self-existent nature, their ur-nature, does not arise nor perish, like nirvāṇa, so discursive thought cannot function with respect to it. And if thought does not function “how can specific character be imputed to things? And if this is wanting how can speech function? That the illustrious Buddhas have didactically argued nothing whatever is therefore established beyond question (fn 8 An incisive, if brief, essay on the natural limits of metaphysics.). That is why Nagarjuna will say later, ‘Beatitude is the coming to an end of taking things in their particularity, the coming to an end of the manifold of named things. No doctrine about anything at all has been taught by Buddha at any time.’ (MMK XXV.24)

Let it be so, you may say, but what of the earlier statement ‘the manifold of named things comes to an end in the absence of being.’ How can there be an end to named things in the absence of being (sunyata)? The reply is, ‘because what language refers to has come to an end’; this should be understood here as it was earlier.

Well but what about the earlier statement ‘It is the utter cessation of I-ing and mine-ing in both personal and non-personal regard through ceasing to take anything whatsoever, whether personal or non-personal, as real in its particularity that is for us the way things are really’? Is it possible to say more precisely what the way things are really (tattvam) is? To the line ‘When the object of thought is no more there is nothing for language to refer to’ should be added ‘and that is the way things are really’ (tatvatah).

And if, further, you ask: What is the reason why, in that real way of things, what language refers to is no more when the object of thought is no more? Nagarjuna says ‘because the true nature of things neither arises nor perishes, as nirvāṇa does not’. The exposition given earlier fits here precisely.

As is said in the Tathagataguhva Sutra: ‘O Santamati, in the night when the Tathagata [Buddha] became perfectly enlightened with the unsurpassable perfection of illumination, during the night when he attained perfect freedom, during this time the Tathagata neither uttered nor enunciated even one syllable. The illustrious one taught the message in different ways to all beings who are to be guided, to gods, demons, men, Kinnaras, the saints, Vidhvadharas and serpents. By the utterance of one momentary cry he banishes the darkness from men’s minds, he awakens the lotus of enlightenment in its many forms, he dries up the ocean of old age and death and he confounds the multitudinous rays of the seven suns which shine at the end of a cosmic age.’ And from the Samadhirajasutra: ‘When Buddha, the sage, the king of truth, the revealer of all truths appears, the refrain is sounded from grass and bush and tree and plants, from the rocks and the mountains: all elements of existence are without being.’

‘Howsoever far mere words reach in the world realm, all are without being, none is real; and so far resounds the call of the realized one, the guide and teacher of all men.’

Madhyamika is not nihilism

At this point some will insist that the Madhyamikas are indistinguishable from nihilists (nastika) because they hold that good and ill acts, responsible agents, the fruits of action and the entire world of personal existence are without self-existence. And the nihilists as well hold that ‘Things have no permanent existence.’ Therefore Madhyamikas are indistinguishable from nihilists.

It is not so. Why? Because Madhyamikas are exponents of the view that all things arise in dependence. Having grasped the significance of causal conditions they argue that everything in this life and in the next is lacking self-existent nature because it arises...
in dependence. The nihilists are naive realists and do not understand the non-existence of the next life and the other things as due to lack of self-existent nature in things because they arise in dependence. Rather, even though they take the things of this world to have self-existent natures, as they do not admit that one is born into this life from another or into another life from this, they deny that things such as are experienced in this life exist elsewhere.

You may say: But, as they hold that nothing exists as real in itself there is, in this respect, an identity of view. It is not so. Why? As Madhyamikas accept things as real for purposes of the everyday world, the two views are not comparable. But are they not comparable in essentials? Even though comparable in the essential point of the unrealness of things they are not comparable because those putting the views into practice differ.

Suppose a man has committed a crime. Someone, who did not recognize the criminal beyond a doubt, urged by an enemy of the criminal, falsely gives witness that the crime was committed by a certain man. Someone else, an eye-witness of the crime, accuses the same man. Now, even though there is no difference in objective content, none the less, because of the difference between the two witnesses, the one is said to speak falsely and the other to speak the truth. When the facts come to light the first one is worthy of disgrace and demerit, but not the other one.

So it is in this case. There is no identity of insight or of explanation between the Madhyamikas who have fully realized the real nature of things as it is (vastusvarupa) and who expound that, and the nihilists who have not fully realized the real nature of things as it is, even though there is no difference in their theory of the nature of things.

Just as, though a certain imperturbability is common to the ordinary man who has not achieved a tranquil mind and to the saint who has, there is a great difference; and just as, though there is something in common between a man blind from birth and one who can see, if both are lost in a difficult and precipitous region, there is a great difference; so there will be a great difference between the nihilists and the Madhyamikas. Thus the teachers of earlier times. But enough of these arguments. We will continue our exposition.

The nature of the teaching of the Buddhas

You may object that, even though ‘The true nature of things neither arises nor perishes, as nirvāna does not’, and that there can be no assertive use of speech (vac) nor any discursive thought (citta) with respect to it, none the less this truth can certainly not be known if it is not didactically argued. In bringing this truth to those who need guidance there must necessarily be recourse at times to a graduated (anupurvi) teaching given in terms of everyday, unenlightened experience and so the truth will be expounded.

We reply. It should be realized that this graduated teaching of the illustrious Buddhas which penetrates to the way things are eternally is simply:

KALUPAHANA COMMENTARY

"Whereof thought has ceased, thereof speech also has come to cease." Abhidhatavya means "that which is to be designated." It refers to the world of objects. It is the same as abhidheya which, if we follow Nagarjuna's method of exposition, is mutually related to abhidhana, "designation." Both abhidheya and abhidhana would thus cease to be along with the cessation of the sphere of thought (cittagocara). "Whereof one cannot speak, thereof one must be silent."

It is possible for the interpreters of Nagarjuna to assume that here is the identification of the "unspeakable" with "emptiness" (sunyata), generally referred to in negative terms as "non-arisen, non-ceased" (anutpannaruddha), which is then identified with both "true nature" (dharmata) and freedom (nirvana). This is the easy route to the belief in the so-called "non-conceptual" (nir-vikalpa) ultimate reality (paramartha, tattva).

However, the first line of Nagarjuna's statement should prevent anyone from reaching such a conclusion. Nowhere has Nagarjuna asserted any form of knowledge that transcends the six senses. For him, what is perceivable is also conceivable. He may, reflecting upon the conceptualization of the metaphysicians, admit that what is not perceivable is also conceivable. Yet, it would be improper to assume that he will recognize the non-conceptual (nir-vikalpa) as being perceivable. Conceptualizing and conceiving are not two different activities. Hence his statement: "When the realm of thought has ceased, that which is to be designated also has ceased."
As pointed out in the introduction, a similar statement was made by the Buddha in relation to a tathagata who has passed away, and the present context, in which the metaphysical notion of serf (atman) is discussed, is no more different from that in which the Buddha made that statement.

So far as Nagarjuna's analysis is concerned, it has become clear that his negations pertained primarily to metaphysics, whether it be the notion of a permanent and eternal serf (atman) or a substance (svabhava). Along with the negation of a permanent and eternal self, Nagarjuna also rejected absolute "otherness" (parabhava). Existence and non-existence, in this metaphysical sense, were rejected by him. As pointed out in the analysis of the Dedicatory Verses, the "non-arising" (anutpada) and "non-ceasing" (anirodha) were intended as criticisms of such metaphysics. If one recognizes a substance, Nagarjuna would say it is non-ceasing; if one recognizes annihilation, Nagarjuna would characterize it as non-arising. In other words, if absolute arising and absolute ceasing were to be accepted, these would negate empirical arising and ceasing which is the basis of "dependent arising" (pratityasamutpada). When both "the way of phenomena" (dharmata) and freedom (nirvana), which are explained in terms of "dependent arising" (pratityasamutpada), are referred to as "nonarisen and non-ceasing", it is more appropriate to assume that here they are to be distinguished from absolute arising and absolute ceasing. Arising and ceasing in an absolute sense represent inappropriate conceptualizations. Neither the nature of phenomena nor freedom should be the subject of such inappropriate conceptualizations.

GARFIELD COMMENTARY

7. This insight is developed further in this verse. Here Nāgārjuna begins to move towards his famous and surprising identification of nirvāṇa with saṁsāra, and of emptiness with conventional reality. This identification of what in earlier Buddhism were regarded as wholly different from one another and this characterization of the mundane in terms heretofore reserved for the putatively transcendent are among Nāgārjuna’s most radical and original moves and are central to the development of a distinctively Mahayana outlook. In the first two lines, he reiterates that there are no actual convention independent entities that correspond to the ostensible referring terms or predicates in our language. But, he argues, from the emptiness of things, it follows that they never either arise or cease. This does not mean that they are permanent, of course. Rather it means that while arising and ceasing and consequent impermanence are features of all conventional phenomena and are among the features that make them empty, from the ultimate point of view, as was argued in Chapter VII, there is no ultimate basis for arising and ceasing. But if nirvāṇa is liberation from cyclic existence and hence from arising and ceasing, it follows that, from the ultimate standpoint, all things in saṁsāra are actually just as they are in nirvāṇa.

ENGLISH TRANSLATIONS

INADA (Skt): Verse 8 - Everything is suchness (tathyaṃ), not suchness, both suchness and not suchness, and neither suchness nor not suchness. This is the Buddha's teaching.

JONES (Skt): [8] The buddhas' teaching is this: everything is real, and everything is not real; everything is both real and not real; everything is neither real nor not real.

KALUPAHANA (Skt): Everything is such, not such, both such and not such, and neither such and not such: this is the Buddha’s admonition.

MCCAGNEY (Skt): Everything is factual, nonfactual, both factual and nonfactual, neither factual nor nonfactual. This is the instruction of the Buddha.

NISHIJIMA (Skt?): 8. All kinds of Real Entity can be thought as if it were not Real Entity too. Real Entity and non-Real Entity can be thought as if they were the same. They were never non-Reality, but they were never Reality. This World is just Gautama Buddha's teachings themselves.

SPRUNG (Skt): 8 Everything in this world can be taken as real or not real; or both real and not real; or neither real nor not real. This is the Buddha’s teaching.

STRENG (Skt): 8. Everything is "actual" (tathyaṃ) or "not-actual," or both "acts actual-and-not-actual," Or "neither-actual-nor-not-actual": This is the teaching of the Buddha.

WESTERHOFF (Skt): XVIII.8 All is so, or all is not so, both so and not so, neither so nor not so. This is the Buddha’s teaching.

ROBINSON (Skt): Everything is either true, or not true, or both true and not true, or neither true nor not true; this is the adapted instruction of the Buddhas.

BOCKING (Ch). 18v8 All (things) are real, unreal. Both real and unreal, and Neither unreal nor not unreal. This is called the Buddha's Dharma.

BATCHelor (Tb): Everything is real, not real; both real and not real; neither not real nor real: this is the teaching of the Buddha.

DOCTOR (Tb): Everything is real and unreal, Real and indeed not real, Not unreal and not real— That is the thorough teaching of the Buddha. [XVIII.8]

GARFIELD (Tb): 8. Everything is real and is not real, Both real and not real, Neither real nor not real. This is Lord Buddha's teaching.

GARFIELD-SAMTEN (Tb): 8. Everything is real; and is not real; Both real and unreal; Neither unreal nor real. This is the Lord Buddha’s teaching.

HAGEN (paraphrase): Everything is such, not such, both such and not such, neither such nor not such. This is the Buddha’s teaching.
To quote: ‘Whatever is most familiar to one is most effective for him naturally. If one is bewildered how can one receive the truth? As it is not possible to make a foreigner understand by a language not his own, so the unenlightened person (loka) cannot be made to comprehend except by means of the everyday.’ (In 9 Or, the World cannot be made to comprehend except in its own way.)

As the illustrious one said: ‘The unenlightened person is at variance with me; I am not at variance with the unenlightened person. What is accepted by the unenlightened is accepted by me; what is not accepted by the unenlightened is not accepted by me.’ Thus the scripture. The illustrious one always treated the elements of personal existence, the senses and their objects, and the types of consciousness as ‘real’ (tathyam). These are thought to be real when perceived by those who are to be guided - those suffering from the optical defect of primal ignorance — in whom has been aroused the desire to learn about the various natures of the things generally accepted as real. And this with an eye on the higher truth and with a view to arousing the faith of the ordinary man in himself.

‘This holy man is aware of every last happening in the world, he is omniscient and all-seeing; he possesses the knowledge of the inanimate world from the infinity of space to the coursing of the winds and he knows the uttermost limits of the world of beings; he knows incontrovertibly the many kinds of origin, existence and end, what is cause, what is effect, what is pleasurable, what is painful.’

So, after those who are to be guided have realized the omniscience of the illustrious one, at a later time it is explained that everything is not real (na tathyam) as naively taken. At this point what is real is what does not change. But all compounded things change in fact because they perish by the moment. Therefore, because of this fact of change, they are not real either. The word ‘or’ means ‘and’; it is to be taken as joining the two views. That is: ‘Everything in this world can be taken as real and as not real.’

For some it is explained that everything in the world is both real and not real at the same time. For the unenlightened everything in the world is real; for those who have started on the way everything is false because not perceived in its naïve reality (evam anupalambha).

There are those however who, from long practice, see things the way they really are, who have eradicated the obstructions (avarana) virtually completely like the roots of a tree; for them it is explained that everything in the world is neither real nor not real. In order to remove what remains of the obstructions, both alternatives are rejected even as one rejects predicates like black and white for the son of a barren woman.

This is the teaching of the illustrious Buddhas. It leads men from byways and establishes them on the right way. In the interests of gradual instruction and of adapting to those who are to be led, the teaching is flexible.

All the teachings of the illustrious Buddhas, who are possessed of universal compassion, ultimate insight and practical wisdom, are intended to be a means of penetrating (avatara) to the eternal way of things (tattvamrta). The perfectly realized ones have not uttered one word which was not in fact a means of penetrating to the eternal way of things. They administer medicine suited to the illness. They have the urge to succour those who need guidance and they teach the truth accordingly. To quote from the Four Hundred Verses: ‘Things are real, things are not real, things are both real and not real: all this is said variously. Indeed all cures as such are cures for a specific desire.’

The true way of things

But, you ask, what is the nature of ‘the way things really are’ which the teachings of the revered ones are intended to penetrate to? This is explained in the verse ‘When the object of thought is no more, there is nothing for language to refer to.’ When this obtains what further questions can there be? Though this is so, none the less the way things are really must be spoken of. This is done by speaking in a second sense (samaropatah). One accepts the everyday (laukika) terms ‘real’, ‘not real’ and so on which are drawn from the world of transactional discourse (vyavaharasatyata).

Nagarjuna expresses it this way.
On the basis of this statement, Inada, following his predecessors in the interpretation of Nagarjuna, reached the conclusion that "truth is non-relational, non-descriptive, non-differential. . . it is thatness or thusness," (p. 113). Referring specifically to XVIII.8, he says that here "Nagarjuna" introduces the famed Four-cornered Logic, . . . i.e., the possible conditions of is, is not, both is and is not, and neither is nor is not, in order to exhibit the fact that final truth transcends all these possibilities; it is sunyata per se" (ibid.) So far, our analysis of Nagarjuna's statements has failed to reveal any form of four-cornered logic that he used to establish an ultimate truth. Whenever he utilized it, he did so in order to reject metaphysical assumptions, rather than to establish something or some theory.

After stating the fact that metaphysical views, especially those relating to a tathagata after death, take us beyond the sphere of thought (citta-gocara)(XVIII.7), Nagarjuna is here expanding the discussion to include one of the most persistent problems of metaphysics, namely, "everything" (sarvam). It is the problem that led the Sarvastivadins to uphold the view that "everything exists" (sarvam asti) in the form of substance (svabhava). Nagarjuna is simply allowing that metaphysical question to be settled by the use of the fourfold propositions that negate each other.

Indeed, this is not presented as the "teaching" or "message" (sasana) of the Buddha, as Inada seems to understand. Quite on the contrary, it is an "admonition" or "advice" (anusana) in regard to the manner in which speculation about "everything" can be resolved, namely, by demonstrating the inevitable self-contradictions. In other words, he is stating that the question regarding "everything" cannot be settled by any form of discussion, a view clearly expressed by the Buddha in his famous "Discourse on Everything" (Sabba-sutta, see commentary on IX.3), which Nagarjuna was probably conversant with.

8. This is the positive tetralemma regarding existence. Everything is conventionally real. Everything is ultimately unreal (that is, not unreal in just any sense, but unreal when seen from the ultimate standpoint). Everything has both characteristics - that is, everything is both conventionally real and ultimately unreal. Nothing is ultimately real or completely nonexistent. That is, everything is neither real in one sense nor not-real in another sense. (fn 93. My reading contrasts with that of Inada (1970, p. 113), who argues that here Nāgārjuna intends to deny these four possibilities. See also Sprung (1979) and Wood (1994) for interpretations that fail to appreciate completely the positive tetralemma and its role in Nāgārjuna’s enterprise (though to be sure Wood takes note of the positive mood of this instance). Ruegg (1977) interprets this verse as suggesting gradations of progressively more sophisticated teachings progressing from a mundane analysis of existence to a teaching of emptiness, to a teaching of their compatibility, to an indication of the inability of predication. Ng (1993), pp. 93-97, agrees. While such a purport would be something with which Nāgārjuna would agree, it seems out of place in this discussion. Wood, on the other hand, takes this verse to indicate that straightforward contradictions (existence and nonexistence) follow from the supposition that anything exists at all, in any way, and, hence, to form part of a nihilistic analysis. While such a reading would make sense if one only attended to this chapter, taken in the context of the work as a whole, and especially Chapter XXIV, that nihilistic reading is very hard to sustain.) (fn 94. That is, of course, everything that is conventionally real in the first place. Santa Claus is not among the objects of analysis here.)

Interestingly, the tetralemma can also be asserted in a negative form with some of the same force: Nothing is real (ultimately). Nothing is not-real (everything has a kind of reality). Nothing is both real and not-real (in the same sense - that would be contradictory). Nothing is neither real nor not-real (the law of the excluded middle). Both forms of the tetralemma are found in this text. See XXII: 11. (fn 95. It is interesting to note - and we will return to this point in XXII below that Nāgārjuna typically resorts to positive forms of the tetralemma when emphasizing claims about conventional phenomena and to negative forms when emphasizing the impossibility of the literal assertion of ultimate truths. Ng (1993), pp. 99-105, notices this point as well.)

(fn 96. Here I take issue with philosophers such as Sprung (1979), who argue that the tetralemma is insignificant for Madhyamika thought. Indeed, as I indicate in several places in this commentary, it is, both in its positive and negative moods, often an indispensable analytic tool. It is indeed "used as a means of investigation" (p. 7) here and elsewhere in the text. And as I argue here and below it is often quite useful. Sprung may be led to this conclusion by the fact that he overlooks the contrast between positive and negative tetralemmas, focusing exclusively on the latter. Moreover, he confuses its logical structure. See Ruegg (1977) and Matilal (1977) for divergent but each interesting and helpful investigations into the structure of the tetralemma, as well as Wood (1994) for what I regard as a serious misunderstanding of the tetralemma and of its deployment in Madhyamika philosophy (see esp. pp. 64-77.)

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 9 - Non-conditionally related to any entity, quiescent, non-conceptualized by conceptual play, non-discriminative, and non-differentiated. These are the characteristics of reality (i.e., descriptive of one who has gained the Buddhist truth)

JONES (Skt):
[9] The characteristic of what is actually real is this: not dependent upon another, peaceful, free of being projected upon by conceptual projections, free of thoughts that make distinctions, and without multiplicity.

KALUPAHANA (Skt):
Independently realized, peaceful, unobsessed by obsessions, without discriminations and a variety of meanings: such is the characteristic of truth.

MCCAGNEY (Skt):
Unconditioned by another, peaceful, not constructed by means of false imaginings, free from false discriminations and without purpose, this is the mark of reality.

NISHIJIMA (Skt?):
9. Nothing can overcome, and nothing can follow up. The Truth is just the balanced state of the autonomic nervous system. Relying upon miscellaneous kinds of expansion, there is some possibility for any expansion not to exist. The state without any doubt is different from having another aim, and this World is just characteristics, which belongs to the concrete fact.

SPRUNG (Skt):
9 Not dependent on anything other than itself, at peace, not manifested as named things, beyond thought construction, not of varying form thus the way things are really is spoken of.

STRENG (Skt):
9. "Not caused by something else," "peaceful," "not elaborated by discursive thought," "Indeterminate," "undifferentiated": such are the characteristics of true reality (tattva).
‘Not dependent on anything other than itself’ (aparapratyaya) means that in the way things really are one is not dependent on anything; it is to be attained without mediation and not by the instruction of another. Those with an optical defect see hairs, gnats, bees and so on which do not exist. Even though instructed by those of sound vision they are incapable of realizing the true nature of the illusory hair as it is, that is, they are not capable of not seeing it even as those of sound vision do not see it. Rather they understand theoretically, from the instruction of those with sound vision, merely that such things are optical illusions. When, however, those suffering from the defect become people with the eye of wisdom, cured by the balm of unmediated seeing that such things are irrefragably without substance, then they realize directly and for themselves that it is the true nature of such things not to be seen at all. So much for the phrase ‘Not dependent on anything other than itself.’ The true nature of things (svārūpa) is the way things are truly (tattvam).

The true nature of ‘at peace’ (santa) is to be entirely without self-existence like the illusory hairs not seen by those of sound vision.

And then the expression ‘not manifested as named thing’ (in 10 prapancaird aprapancita. ‘Inexpressible in verbal language’ would be an alternate translation.). ‘Named thing’ means that language gives rise to things with meanings. ‘Not manifested as named thing’ means inexpressible by verbal utterance.

‘Beyond thought construction’ (nīrvakālpa). Thought construction is the innate activity of mind. To be free of that is the way things are beyond thought construction. As the sutra says: ‘What is the higher truth? Where nothing is happening, not even knowledge, how could there be any utterance of words?’ This is what ‘beyond thought construction’ means.

Something which is said to be ‘of varying form’ has different forms. This means that what is not of varying form (ananarthā) is invariable, does not have multiple, differing forms.

As is said in the Satyadvayavatara Sutra: ‘Manjusri explained to Devaputra: In higher truth, all the putative elements of existence are of the same nature because in not being produced, in not being born in any sense at all, they are the same nature. Why is that? Because, in higher truth, all the elements of existence become undifferentiated in nirvāṇa from not really arising in any sense at all. Even as, Devaputra, the space in a clay jar is the same as the space in a bejewelled jar, both being of the nature of space, in higher truth undifferentiated; similarly, Devaputra. Afflicted existence, in higher truth, does not arise in any sense; nor does purification arise in any sense. The birth-death cycle itself is, in higher truth, one with non-arising. Even nirvāṇa is in higher truth absolutely the same as non-arising; in it in higher truth, there is no differentiable factor. Why is that? Because, in higher truth, all elements of existence are absolutely undifferentiable.’

In this sense is invariableness to be understood as a characterization of the way things really are. It is because the absence of a self-existent nature is essentially one in all things. Further such exposition can be had from the same source. So much for the way those wise ones, who have vanquished the cycle of birth, old age and death, speak of the way things really are.

The truth in the world of cause and effect

Concerning the characterization of the way things are in the world of everyday Nagarjuna says:

This is one of the most important statements of Nagarjuna, quoted often by his classical as well as modern interpreters. The most recent translation and interpretation comes from Inada and, as such, it could be considered a digest of the existing views. Hence, it is appropriate to quote Inada’s rendering of this verse in full. It reads as follows: Non-conditionally related to any entity, quiescent, non-conceptualized by conceptual play, nondiscriminative and non-differentiated. These are the characteristics of reality (i.e., descriptive of one who has gained the Buddhist truth). The term aparaprtyaya is here taken to mean a special kind of relation that transcends any form of empirical conditionality. Santa signifies “quiescence,” a quiescence resulting from the avoidance of any conceptuality, probably the sort of peace and quiet experienced by one who has
temporarily stopped the functioning of the six sense faculties by reaching the state of cessation (niruddha- samapatti, or sanna-vedayita-niruddha). It is where the dichotomy of subject and object is completely dissolved (nir-vikalpa) and where the variegated experiences of the world, the variety of meanings or fruits (nanartha), is eliminated. Truth, in such a context, cannot be very different from that of either the Upanisads or the Vedanta. It is the flushing out of all conceptual thinking (citta-vrtti-nirodha), thereby transforming the empirical experience into one of absolute, ultimate truth or reality.

However, a glance at the "Discourse to Katyayana," the primary source for Nagarjuna’s formulation of the “middle way,” will reveal the untenability of such an explanation.

Even though the verse seems to describe the characteristics of truth or reality (tattvasya laksanam), every preceding statement points to the means by which a conception of truth is arrived at. Hence, it is one of the most important statements on epistemology. The most salient features of this epistemology are already clearly embodied in the Buddha’s discourse to Katyayana, presented in the form of an answer to the question as to what “right view” (sammi-ditthi) is. The contents of the verse can be analysed in the light of this discourse in the following manner.

The term apara-pratyaya does not refer to a truth that is non-conditionally related to any entity. Rather, it explains the manner in which knowledge (nana) is attained by one who has “right view” (sammi-ditthi). After rejecting the metaphysical views pertaining to permanent existence (atthita) as well as the belief in a permanent and substantial personal entity (atta . . . me), a belief that will require the testimony of some other person who claims to know the absolute beginning of things, the empiricist Buddha claimed that knowledge of (one who has fight view) occurs without having to depend upon another person (aparapaccaya nanam evassa ettha hoti, S 2.17). It is knowledge for which one does not have to depend upon another, primarily because it pertains to arising and ceasing of empirical phenomena. It involves personal verification, a verification that can be accomplished by someone before one begins to formulate any right view.

Man’s search for a permanent entity, while he is equipped with limited epistemological resources, leaves him with unresolved questions. He continues to doubt. He is constantly perplexed and troubled. Looking for permanence, he misses the empirically given. The search for the unseen “beauty queen” (janapada-kalyani, D 1.193; M 2.40) makes him forget the immediately relevant questions (M 2.40). As such, he has no peace of mind.

However, if he were to direct his attention to what is immediately given, and understand the human predicament in its context without being inquisitive about metaphysical entities (dukkham eva uppajamanam uppajjati dukkham nirujjhanam nirujjhati na kankhati na vicikicchati, ibid.), his mind would be peaceful (santam). The Buddha, in one of his very famous statements, insisted that when a reflecting person understands the arising and ceasing of phenomena, all his doubts disappear (Ud 1). Such peace of mind is achieved, not by ignoring what is relevant in the human context, but by ignoring the irrelevant and irresolvable metaphysical issues.

Such a state of peace (santi) cannot be achieved so long as one is bound by one’s prejudices (upayupadanabhinivesa-vinibandho, ibid.,) This is the “obsession” (prapañca) that Nagarjuna is referring to in the present context. The discourse to Katyayana has no reference to any conceptual proliferation. How such obsessions have further strengthened and encouraged the search for ultimate truths, contributing to indiscriminate discriminations, such as those of existence and non-existence (bhava-abhava) or self-nature and other-nature (svabhava-parabhava), has already been explained by Nagarjuna. These are the discriminations that are to be avoided in the search for truth. Nir-vikalpa refers to the absence of such discriminations.

A pluralistic view of the world is not incompatible with dependent arising (pratityasamutpada). Pluralism in the context of dependent arising does not imply the existence of self-contradictory truths. It need not necessarily lead to a notion of an Absolute that transcends such self-contradictory truths. The criterion for deciding what is true in the context of dependent arising is consequence or fruit (artha). When the Buddha maintained that “truth is one; there is no second” (ekam hi saccam na dutiyam atthi, Sn 88a), he was certainly referring to this pragmatic criterion of truth based upon the notion of dependent arising, not an absolute truth that transcends all forms of duality and plurality. Nagarjuna’s characterization of truth as “not having a variety of meanings” (ananartham) reflects more the Buddha’s own conception of truth. To summarize, the conception of truth and the epistemological means on the basis of which it is formulated all point to the fact that the truth under con- sideration is the “dependently arisen” (pratityasamutpanna). The principle of dependent arising (pratityasamutpada) is merely the expression of the manner in which “dependently arisen” phenomena are explained. They are two sides of the same coin.

Yet, as reitered before, the greatest misunderstandings created by the metaphysicians were in regard to “dependently arisen phenomena"
Therefore, after examining the epistemological means by which the conception of truth "as dependently arisen" is arrived at, Nagarjuna, in the verse that follows immediately, takes up the metaphysical interpretations of the concept of dependence.

GARFIELD COMMENTARY

9. That is, independent of conceptual imputation there are no objects, no identities, and so, no distinctions. But of course, as Kant would agree, there is no way that we can think such a reality. Nonetheless, Nāgārjuna argues (and Kant still agrees), we must see that that is the ultimate truth about things, though it might in its nature be inexpressible and inconceivable.

(fn 97. His Holiness the Dalai Lama, in oral remarks (Columbia University, 1994), notes that “whenever we examine physical, mental, or abstract entities, we find as a result of a reductive analysis nothing but their unfindability. So you can’t really speak coherently of identity or of entities. This is the fundamental teaching of Madhyamika.” See also Nagao (1989), pp. 67-68, for useful remarks on XVIII: 79. But this interpretation can be carried too far, with the consequence that Nāgārjuna is seen as a thoroughgoing Kantian absolutist, regarding the ultimate truth. Murti (1985) endorses just such a view:

Origination, decay, etc ... are imagined by the uninformed; they are speculations indulged in by the ignorant. The real is utterly devoid (tanya) of these and other conceptual constructions; it is transcendent to thought and can be realised only in nondual knowledge - prajna or Intuition, which is the Absolute itself The distinction between two truths, Paramartha and Samvrtti, is emphasised.

... It is generally accepted [by Nāgārjuna and his followers] that the real is Absolute, at once Transcendent of Empirical Determinations and Immanent [in] Phenomena as the innermost essence. (p. xi [capitalization in original])

Kalupahana (1986) adopts another extreme reading, arguing that this verse in fact says nothing about the character of reality, but rather “the means by which a conception of truth is arrived at.” He argues that it merely admonishes one to be independent in one’s thinking, unbiased and calm in one’s philosophical inquiry. It is hard to see how this reading could be justified apart from a strong antecedent commitment to seeing Nāgārjuna as a pragmatist.)
Kārikā XVIII.10

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 10 - Any existence which is relational is indeed neither identical to nor different from the related object. Therefore, it is neither interruption nor constancy.

JONES (Skt):
[10] Whatever arises dependently upon another thing is not that thing, nor is it different from that thing. Therefore, it is neither annihilated nor eternal.

KALUPAHANA (Skt):
Whatever that arises depending on whatever, that is not identical nor different from it. Therefore, it is neither annihilated nor external.

MCCAGNEY (Skt):
First off, what arises depending on that is neither identical to nor different from that. Therefore that is neither disrupted nor permanent [neither annihilated nor eternal].

NISHIJIMA (Skt?):
10. Each thing clearly exists one by one, Because similarity between one thing and another is not so similar to each other, The gap between one thing and another, is never so wide. It is not cut with each other, but it is never eternal.

SPRUNG (Skt):
10 What comes into existence dependent on something else cannot be that very thing; nor can it be wholly other either; therefore things neither perish completely nor are they everlasting.

STRENG (Skt):
10. Whatever exists, being dependent on something else, is certainly not identical to that other thing. Nor is a thing different from that; therefore, it is neither destroyed nor eternal.

ROBINSON (Skt):
An “A” that comes into being dependent on “B” Is not identical with “B” and not other than “B”; thus it is non-annulled and non-eternal.

BOCKING (Ch):
18v10 If dhammas arise from conditions, They neither are, nor differ from, their conditions. This is why we call the real character Not cut–off and not permanent.

BATCHelor (Tb):
Whatever arises dependent on something else is at that time neither that very thing nor other than it. Hence it is neither severed nor permanent.

DOCTOR (Tb):
That which arises in dependence on something else Is not identical with it, Nor is it something other. Hence, it is neither annihilated nor permanent. [XVIII.10]

GARFIELD (Tb):
10. Whatever comes into being dependent on another Is not identical to that thing. Nor is it different from it. Therefore it is neither nonexistent in time nor permanent.

GARFIELD-SAMTEN (Tb):
10. Whatever comes into being dependent on another Is neither identical to that thing Nor different from it. Therefore it is neither annihilated nor permanent.

HAGEN (paraphrase):
Whatever arises dependent on another is neither identical nor different from the other. Therefore it is neither perishable nor permanent.
CANDRAKĪRTI COMMENTARY

Anything dependent on a cause comes to be as an effect. A rice sprout, for example, comes into existence in dependence on a rice seed and a complex of conditions like the soil, etc. But it cannot be said that the sprout is precisely the same thing as the seed, nor that the seed is precisely the same thing as the sprout because of the absurd consequence that what is born and what gives birth would be one and the same: that father and son would be identical. If there is no difference one would take the seed to exist in the sprout phase, i.e. as sprout, and one would take the sprout as the seed. The seed would thus be eternal because imperishable. Because this entails the doctrine of eternalism it would result in a mass of grievous faults; it would follow that action and its consequences were not real. Therefore, it does not make sense to say that the seed is identical with the sprout. Nor is the one entirely other than the other; the sprout cannot be entirely other than the seed or it would follow that the sprout could sprout even apart from the seed. As Nagarjuna says: ‘If what is “other” is entirely other than “the other” it would be other without anything other.’ It would follow if the seed persists in the sprout that the seed would be imperishable. This would entail the logical fault of holding that the effect pre-exists in the cause. And so, to say ‘Anything dependent on a cause comes to be as an effect’ does not mean ‘the cause becomes the effect’. Nor again is the effect wholly other than the cause. Therefore, it is possible to conclude ‘the cause is neither perishable nor eternal’.

As Aryadeva says (Catuhsataka, X, 25.): ‘From the fact that things function they are not nothing; from the fact that things cease functioning they are not eternal.’ It is said in the Lalitavistara: ‘If there is a seed there is a sprout, though the seed is not the sprout, nor is it wholly other. This is why the nature of things is neither perishable nor eternal.’

Immortality of the Buddhist teaching So, in accordance with the account given:

KALUPAHANA COMMENTARY

Whatever is arisen dependent upon (pratitya) another, that is, the dependently arisen (pratityatamutpanna), is not appropriately explained in terms of identity or difference. As emphasized so often by Nagarjuna, absolute identity involves permanence and absolute difference implies annihilation. Dependent arising is the middle way adopted by the Buddha in elucidating change and causation.

GARFIELD COMMENTARY

10. Here Nāgārjuna recapitulates a brief analysis of what it is for a phenomenon to be dependently arisen. But in the context of the deeper understanding of emptiness and of the relation between the ultimate and the conventional developed in this chapter, a deeper reading of this verse is in order: Our attention is called to the fact that the analysis of dependency developed here - and consequently of the conventional reality and ultimate nonexistence of the dependent - is at the same time a correct conventional characterization of the nature of phenomena and an ostention of the fact that it is only a conventional designation of a nature that must remain uncharacterizable. (fn 98. Kalupahana (1986) reads these final verses very differently, as having nothing to do with the ultimate truth, but rather as suggesting that freedom from suffering “does not necessarily mean the absence of a subject-object discrimination. It means the absence of any discrimination based upon one’s likes and dislikes, one’s obsessions” (p. 59). It is, however, very hard to square this reading of XVIII: 10, 11 with any defensible reading of XVIII: 8, 9.)

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 11 - "Non-identity, non-differentiation, non-interruption and non-continuity." These are the immortal teachings of the world's patron Buddhās.

JONES (Skt):
[11] Not one, not diverse, not annihilated, not eternal - this is the immortal teaching of the Buddhās, the guides of the world.

KALUPAHANA (Skt):
That is without a variety of meanings or one single meaning, it is not annihilation nor is it eternal. Such, it is reminisced, is the immortal message of the Buddhās, the patrons of the world.

KALUPAHANA (Skt):
That is without a variety of meanings or one single meaning, it is not annihilation nor is it eternal. Such, it is reminisced, is the immortal message of the Buddhās, the patrons of the world.

MCCAGNEY (Skt):
Nondifferentiated, nonidentical, nonmomentary, nonpermanent, this is the immortal teaching of the buddhās, lords of all the worlds.

NISHIJIMA (Skt?):
11. Not only for one aim, but neither having any aim, Not being instantaneous, but neither being eternal, The spot here is just the name of Gautama Buddha. Belonging to many Buddhās, it is just the Universal Law, or Truth itself.

SPRUNG (Skt):
11 Not of one form nor of various forms, not perishable nor eternal: such is the immortal teaching of the Buddhās, the lords of the world.

STRENG (Skt):
11. The immortal essence of the teaching of the Buddhās, the lords of the world, is Without singleness or multiplicity; it is not destroyed nor is it eternal.
CANDRAKĪRTI COMMENTARY

As the Catuhsataka says, ‘Even if one who has comprehended the real nature of things does not attain nirvana in this life, he will achieve it necessarily, without further effort, in a future life as the just fruit of his acts.’ (VIII, 22)

More precisely:

KALUPAHANA COMMENTARY

The metaphysics of identity or of difference, of one or of many, of permanence or of annihilation, may be proved or not proved. So far the evidence has not been found that would provide justification for any such notions. The only known evidence points to the fact that things are changing and are dependently arisen. Such change and dependent arising do not fall within the duality of one or many, of annihilation or permanence. Dependent arising is what has been known so far. Unless a radical change occurs in the constitution of things, this dependent arising will continue to be. Such is the immortal teaching of the Buddha. This, again, is Nagarjuna’s reflection on the epistemology of dependent arising.

GARFIELD COMMENTARY

11. That is, this doctrine itself is also empty. It is conventionally real, ultimately nonexistent, dependent, impermanent, and has a nature in itself that can never be characterized. The final verse is an admonishment to meditate seriously on this argument. For by understanding clearly the nature of the self and of the entities to which it is related, Nāgārjuna believes that one can attain buddhahood. That is why he emphasizes that with a correct view, even without a teacher or a buddha to instruct one, a patient meditator can attain his/her own awakening.
INADA (Skt): Verses 12 - Where the accomplished Buddhas do not appear and the Sravakas cease to be, the enlightened mind of the Pratyeka-buddhas conies forth from independent disengagement (of the bifurcated self). - Note: This verse subtly shows that human beings are all potential Pratyekabuddhas who independently could attain a higher form of knowledge or realize the truth of things (tattva).

JONES (Skt): [12] When the fully-enlightened buddhas no longer appear, and when the disciples have disappeared, the knowledge of the solitary buddhas will come forth without a teacher.

KALUPAHANA (Skt): When the fully enlightened ones do not appear; on the waning of disciples; the wisdom of the self-enlightened ones proceeds without association.

MCCAGNEY (Skt): When accomplished buddhas do not arise and Sravakas cease to be pratyekabuddhas with independent knowledge come forth.

NISHIJIMA (Skt?): 12. Even though ideas of the Soul do not have any influence to people called Buddhists, People called Sravakas, who are diligent to study Buddhism theoretically, are not so positive to the ideas of the Soul. Among people called Pratyeka-buddhas, who revere natural circumstances, the knowledge of the Soul might be increasing their learning. But people, who do not enter to the organization, only begin the practice.

SPRUNG (Skt): 12 If the fully enlightened are no longer born, and the disciples have vanished; Insight of those who attain nirvāṇa for themselves is realized without help from others.
18/12 Some people teach that there is a soul, in which case it must be of two kinds. Either the five skandhas are themselves the soul, or the soul exists apart from the five skandhas.

If the five skandhas are the soul, then the soul will have the characteristics of arising and ceasing. Thus it says in the verse 'if the soul is the five skandhas it will have the characteristics of arising and ceasing', and why? Because once arisen, it will perish. Because they have the characteristics of arising and ceasing, the five skandhas have no permanence, and just as the five skandhas have no permanence, the two dharmas of arising and ceasing likewise have no permanence. Why is this? Because arising and ceasing also perish after they have arisen and hence are impermanent. If the soul were the five skandhas, then, since the five skandhas are impermanent, the soul would also be impermanent and would have the characteristics of arising and ceasing, but this is not correct.

(24a21) If the soul existed apart from the five skandhas, the soul would not have the characteristics of the five skandhas. As it says in the verse 'if the soul is different from the five skandhas, then it will not have the characteristics of the five skandhas'. Yet no other dharma exists apart from the five skandhas. If there were any such dharma apart from the five skandhas, by virtue of what characteristics, or what dharmas, would it exist?

(24a25) If you say that the soul is like empty space, separate from the five skandhas yet existent, this is also wrong, and why? We have already refuted empty space in the chapter on refuting the six elements. No dharma called 'empty space' exists.

(24a27) If you assert that a soul exists because belief in it exists, this is not correct, and why? Belief is of four kinds; the first is belief in a manifest thing, the second is belief in something known through this (manifest thing) (= inferential belief) as when seeing smoke, we know that there is a fire. The third is belief by analogy as when, in a country with no copper, one uses the example of it being like gold. The fourth is belief in what is taught by saints and sages, as when they say that there are hells, heavens and (the continent of) uttara-kuru. Without seeing anything, we believe the words of the holy men and thus know about them.

(24b3) Such a 'soul' cannot be found amongst these beliefs. It is not found in belief in manifest things, nor in inferential belief, and why? Inferential knowledge means that having previously seen something, you thenceforth know (about) this kind of thing, as for example a man who has previously seen that where there is fire there is smoke, subsequently, seeing

(24b7) (24b15) only smoke, knows that there is fire. The concept of 'soul' is not like this, for who could first have seen the soul in the combination of the five skandhas, such that afterwards, seeing the five skandhas, he knows that there is a soul? Suppose you say that there are three kinds of inferential knowledge, the first being 'like the original', the second being 'like the remainder', the third 'seeing together'. 'Like the original' means previously having seen that fire has smoke, seeing smoke now, you know that it is like the original which had fire. 'Like the remainder' means, for example, that when one grain of rice is cooked, you know that the remaining ones are all cooked. 'Seeing together' means, for example, that when you see with your eyes a person going from here to another place, you also see his going. The sun is like this. It emerges from the east and goes to the west. Although you do not see it going, because a man has the characteristic of going, you know that the sun also has going. In the same way suffering, pleasure, hate, desire, perception and insight, etc. must also have whatever goes with them. For example, seeing subjects you know that they must rely on some king, why? But these are all incorrect, and in belief through the characteristic of together-ness, having first seen a person combined with a dharma of 'going' who reaches some other place, when you subsequently see the sun reach another place you know that there is the dharma of 'going'. But there is no prior seeing of the five skandhas combined with a soul, such that subsequently seeing the five skandhas you know that there is a soul. Therefore, no existence of a soul can be established by inferential knowledge of 'together-ness'.

(24b18) There is no soul to be found within the teachings of the saints either, and why? In the teaching of the saints, what they first see with their eyes, they subsequently expound. And since the saints teach other things which can be believed, we should know that when they speak of the hells, etc., these can be believed in, but it is not so with the soul, for there is no-one who, having previously seen a soul, subsequently speaks of it.

(24b22) Therefore, you may seek for a soul within all beliefs such as these four types of belief, but you will not be able to find it. Since you cannot find a soul even though you seek for it, no distinct soul exists separate from the five skandhas.

(24b24) Further, because of the refutation of seeing, seer and seen in the chapter refuting the (six sense-) faculties, the soul is to be refuted in the same way. For if even an eye
seeing coarse dharmas cannot be found, how much less can we find a soul by empty delusions, imagination and so forth? For these reasons, we know that there is no self.

(24b26) 'Mine' exists because 'I' exists. If there is no I, then there is no mine. Through putting into practice the holy eight-fold path265 and extinguishing the causes of I and mine, one attains the firm insight266 of no I and no mine.

(24b29) In the ultimate sense no I and no mine are also untenable. With no I and no mine, one can truly see all dharmas. Since the eye of insight in an unenlightened person is veiled by I and mine, he cannot see reality. Now, since the saints have no I or mine, their afflictions are also extinguished. Because their afflictions are extinct, they are able to see the true character of all dharmas. When both inner and outer, I and mine cease, all reception ceases too, and when all reception ceases, the innumerable future bodies also cease, and this is termed 'nirvana without residue'.

(24c5) Question: What of nirvana with residue?

Reply: When all the afflictions and karma have ceased, this is called 'the mind attaining liberation'. All these afflictions and actions arise wholly from conceptualized discriminations and have no reality. Such conceptual discriminations arise wholly from vain thoughts. If one attains to utter emptiness, the true character of all dharmas, then vain thoughts cease, and this is termed 'nirvana with residue'.

(24c10) The true character of dharmas is like this. Because the Buddhas view all living things with omniscience they teach them in various ways, teaching both that there is a self, and that there is no self. If there is a person whose mind is as yet unprepared, who has no inkling of nirvana and knows no fear of punishment, to such a one they teach that there is a self. Also, if someone has attained the Way, perceived the emptiness of all dharmas, and merely uses 'self' as a conventional 'designation, there is nothing wrong in speaking of a self to such a one as this.

(24c14) There are those who practice the blessed virtues of almsgiving, holding to the precepts, etc., detest and distance themselves from samsara and suffering but fear nirvana as lasting extinction. For the sake of these, the Buddhas teach that there is no self. All dharmas are merely the combination of causes and conditions; when they arise, they arise empty, when they cease, they cease empty. Therefore they teach that there is no self, 'and that self is said to exist only as a conventional designation. Again, someone who has attained the Way knows that there is no self, and will not fall into the nihilism, so there is no error in his teaching that there is no self. This is why it says in the verse (18v6) 'The Buddhas teach that there is a self, and they teach that there is no self, but in reality they do not teach either self or non-self'. (24c20) Question. Even though non-self is the truth, what is wrong with teaching, merely as a convention, that there is a self?

Reply: Non-self exists by virtue of the negation of the dharma of self. No fixed self can be found, so how could there be non-self? If there were a fixed non-self, then annihilation of if would give rise to attachment and craving. As it says in the Prajnaparamita, if a bodhisattva has a self, he cannot act, and if he has no self, he cannot act.

(24c25) Question. If it teaches neither self nor non-self, neither emptiness nor non-emptiness, what does the Buddha-dharma teach?

Reply: The Buddha teaches the true character of all dharmas, and within that true character there is no path for verbal expressions, for it extinguishes all mental activity. Mind arises because of the characteristic of grasping, exists because of the rewards and retribution of karma in a previous world, and cannot therefore see the reality of dharmas. teaches the cessation of mental activities. This is why he

(24c28) Question. Even though an unenlightened person's mind cannot see the reality, surely a saint's mind can see the reality? Why does he teach the cessation of all mental activities?

Reply: The true character of dharmas is nirvana, and cessation means nirvana. It is in order to point towards nirvana, that cessation is also termed cessation. If one's mind were real, what use would be such ways to liberation as emptiness, etc? Why, amongst all the samadhis would the samadhi of cessation (nirodha–samapatti) be regarded as the highest, and why ultimately reach nirvana without residue? Therefore we should know that all mental activities are empty deceptions, and as empty deceptions, should cease. The true character of all dharmas surpasses all dharmas of mental phenomena, has no arising and no ceasing, and has the characteristic of calm extinction, like nirvana.

(25a7) Question. In the sutras it says that all dharmas, having from the beginning the characteristic of calm extinction are themselves nirvana. Why do you say that they are like nirvana?

(25a8) Reply. Those who are attached to dharmas classify dharmas into two kinds, some being worldly, some being of nirvana. They say that the nirvana (dharmas) are calm and extinct, but do not say that the worldly dharmas
are calm and extinct. In this treatise it is taught that all dharmas are empty in nature and have the characteristic of calm extinction. Since those who are attached to dharmas do not understand this, nirvana is used as an example. Just as with your assertion that the characteristic of nirvana is emptiness, with no characteristics, calm extinction, and no vain thoughts, so it is with all worldly dharmas.

(25a14) Question. If the Buddhas do not teach self, nonself, and the cessation of all mental activities and the cutting-off of ways of verbal expression, how do they make people understand the real character of dharmas?

(25a15) Reply. All the Buddhas have unlimited powers of skillful means, and dharmas have no fixed characteristics. In order to save all living beings, they may teach that everything is real, or they may teach that everything is unreal, or that everything is both real and unreal, or that everything is neither unreal nor not unreal.

(25a18) 'Everything is real'. If you search for a real nature of dharmas, you will find that they all enter into the ultimate meaning and become equal, with identical characteristics, which is to say no characteristics, just like streams of different color and different taste entering into a great ocean of one color and one taste.

(25a21) 'Everything is unreal'. At the time when one has not yet penetrated into the true character of dharmas, each one can be contemplated separately. They are all unreal, existing merely by the combination of conditions.

(25a22) 'Everything is both real and unreal'. There are three levels of living beings; superior, average and inferior. The superior person sees that the characteristic of dharmas is that they are neither real nor unreal. The average person sees the characteristics of dharmas as either real, or all unreal. The inferior man, since his powers of perception are limited, sees the characteristics of dharmas as a little real, and a little unreal, regarding nirvana, because it is an inactive dharma and does not perish as real, and regarding samsara, because it is an active dharma, empty and false, as unreal.

(25a27) 'Neither real nor unreal'. Neither unreal nor not unreal is taught in order to negate 'both real and unreal'.

(25a28) Question. The Buddha in other places says 'separate from neither existence nor nonexistence'. In view of this, how can you say that 'neither existence nor nonexistence' is what the Buddha teaches?

(25a29) Reply. In those other contexts he is discoursing in order to refute the four kinds of craving attachment, but if there is no useless arguing about these four theses, and if you listen to what the Buddha teaches you, you will attain the Way. This is why we say 'neither real nor unreal'.

(25b2) Question. We know that the Buddha is discoursing on account of these four theses, but as for attaining the true character of dharmas, by what characteristic can it be known? And, what is the true character?

Reply. If you are able not to follow others' One who does not follow others, means one who, when non-Buddhists, even though they display supernatural powers and teach that this is the way and this is not the way, has faith in himself and in his own mind and does not follow them. Even if they transform the bodies so that he does not know that they are not the Buddha, his mind cannot be diverted because he well understands the true character. Since there is within this (true character) no dharma to be grasped or relinquished, it is called the characteristic of calm extinction. Since it is the characteristic of calm extinction it cannot be vainly argued with sophistries. Sophistries are of two kinds; one is argument from desire, the other is argument from opinion. Within (calm extinction), these two types of sophistries do not exist, and since these two kinds of sophistry do not exist, there is no conceptual discriminating. Lack of any characteristics of distinction and difference is termed the true character.

(25b11) Question. If all dharmas are utterly empty, does this not fall into the error of annihilation? And does no-arising and no-ceasing not fall into the error of permanence?

(25b13) Reply. Not so. Earlier we stated that the true character has no sophistries, that the characteristic of mind is calm extinction and that it cuts off any ways of verbal expression. You in your attachment are now grasping this characteristic, and seeing errors of severance and permanence in the doctrine (dharma) of the true character.

Those who attain the true character teach that all dharmas arise from conditions. They are neither the same as their causes, nor different from their causes, and consequently there is neither severance nor permanence. When the effect is different from its cause, this is severance. If it is not different from its cause, this is permanence.

(25b17) (25b23) Question: What advantage is there in explaining things in this way?

Reply. If one who is travelling on the path is able to penetrate the meaning of this way, then (for him) all dharmas will be neither identical nor different, neither cut off nor permanent. If he is able to do this, he will achieve the cessation of all afflictions and sophistries, and attain lasting bliss and nirvana. This is why it is said that the
Buddha's teaching has the flavor of sweet nectar, just as in worldly terms we say that one who obtains the divine elixir will not grow old, fall ill or die, or experience any degeneracy or distress. This dharma of the true character is the true taste of sweet nectar. The true character taught by the Buddha is threefold. To attain the true character of all dharmas and end all the afflictions is termed the sravaka-dharma. To produce great compassion and arouse the unexcelled mind is called the great vehicle Mahayana. If a Buddha does not enter the world and there is a time when there is no Buddha-dharm, pratyekabuddhas because of their isolation develop insight independently, for even if a Buddha after, saving living beings enters nirvana without residue, and the dharma he completely dies out, if there are any who from a previous world are supposed to attain the Way, then if they meditate a little on the causes for despising and leaving samsara and go alone into the mountains and forests remote from any bustle and confusion, they will attain the way. These are called pratyekabuddhas.

CANDRAKĪRTI COMMENTARY

12ab If the fully enlightened are no longer born, and the disciples have vanished;

there would be no realization of the eternal way of the Buddhist truth because of the lack of a beneficent friend to demonstrate the true and exalted path. None the less, from the force of hearing the truth of things in a previous life, in this world and without ordinary instruction, depending solely on recourse to complete solitude, the self-validating

12cd Insight of those who attain nirvāṇa for themselves is realized without help from others.

‘Without help from others’ means solitude in body and mind or not seeking out a beneficent friend. So it is that because ultimate insight is solitary, those seeking enlightenment for themselves even in an unenlightened age, can attain to the way of the Buddhist truth. This proves the effectiveness of the cure the eternal way of the truth of truths (saddharmatvamrta) — as administered by the great masters of healing, the fully enlightened ones.

This being so it is possible for the man of wisdom to turn his back on the everyday world and to go in search of the way of the truth of truths.

KALUPAHANA COMMENTARY

The Buddha's teachings were perpetuated by a long line of disciples (sravaka). If that lineage were to be interrupted, still it is possible for his teachings to reappear. Nagarjuna was probably aware of the metaphor of the "ancient city" (nagara) whose discovery is compared to the discovery of "dependent arising" by the historical Buddha himself (S 2.104-107; Tsa 12.5 [Taisho 2.8ob]). Therefore, contradicting many a tradition that depended heavily on an unbroken continuity as the primary source of the knowledge of the Buddha's teaching, Nagarjuna is here maintaining that such wisdom (jnana) can occur even without any contact or association (asamsargat) through the self-enlightened ones (pratyeka-buddha).
Chapter XIX

 kali parīkṣā nāma ikonaviṃśatitamaṃ prakaraṇam

 kālaparīkṣā nāma ikonaviṃśatitamaṃ prakaraṇam

Chapter XIX: Examination of Time
OUTLINE:

We have now completed the third part of the section on the two selflessnesses, the mode of positing selflessness of things as they really are. We are about to begin the fourth section—the presentation of the essential emptiness of time. It has two parts: the refutation of the inherent existence of time and the refutation of the argument for the inherent existence of time. This chapter constitutes the first of those two parts.

EXPLANATION:

Here someone might say, “Things inherently have essence because things are the causes of imputation in the three temporal periods.” In this context, the three temporal periods are presented in sutras, and they are based on things because it is said that the nature of things that have already arisen and ceased is to be in the past; and that of things that have arisen and not ceased is to be in the present; and of that which has not yet come to be is to be in the future. The refutation of this has three parts: the general refutation of the essential existence of the three temporal periods, the individual refutations of the views of the Buddhist and non-Buddhist schools, and the way to set out the three temporal periods conventionally.

SUMMARY:

It is not at all possible for the three temporal periods to exist through their own characteristics: neither that which has arisen earlier and ceased, nor that which has not yet arisen; nor that which has arisen, earlier and not yet ceased. Nonetheless, one should confirm one’s ascertainment of the two truths through thinking that it is absolutely tenable that they are essenceless—that is, empty of their own characteristics.

INADA (Chapter Introductions)

CHAPTER XIX - Examination of Time

This relatively short chapter strikes at the core of the matter of temporal moments in existence. Since the analysis made in Chapter II on the Examination of gala, agata, and gamyamana is presupposed, the discussion here is necessarily simplified and brief. Nagarjuna omits the fine analysis of the three temporal moments and almost immediately argues for the non-existence of the time-concept from the temporal as well as existential standpoints.
19. **Time (kala).** In the discussion of the notion of imperishable action (avi-pranasa-karma) discussed above, two more conditions relevant to the fruitioning of karma were mentioned, namely, time (kala) and harmony (samagri).

These two topics constitute the subject matter of the next two chapters.

Time was conceived in a more empirical way in the early discourses. Impermanence (aniccata) was explained there in terms of the temporality of events. As mentioned in the analysis of the conditioned (VII), such temporality was understood as arising (uppada), ceasing (vyaya), and change of what endures (thitassa aññathatta). However, the problems created by the Sarvastivadins and the Sautrantikas by their analysis of time and temporality have already been alluded to (see the discussion of the “Conditioned” above). There, the focus was more on the substantiality of events (conceived as bhava) and the difficulties that arise as a result of attempting to place such “existents” (bhava) in the context of temporality. The present chapter is devoted to the conception of time itself, especially time as analysed by the metaphysicians into discrete moments (ksana). Nagarjuna’s analysis brings out the disastrous implications of such a notion of time and could appropriately be compared with an analysis provided by E. R. Clay and enthusiastically adopted by William James in Western philosophy. Examining the ordinary notion of time, Clay says:

The relation of experience to time has not been profoundly studied. Its objects are given as being of the present, but the part of time referred to by the datum is a very different thing from the conterminous of the past and future which philosophy denotes by the name Present. The present to which the datum refers is really a part of the pasta recent pastdelusively given as being a time that intervenes between the past and the future. Let it be named the specious present, and let the past, that is given as being the past, be known as the obvious past. All the notes of a bar of a song seem to the listener to be contained in the present. All the changes of place of meteor seem to the beholder to be contained in the present. At the instance of the termination of such a series, no part of the time measured by them seems to be past. Time, then, considered relative to human apprehension, consists of four parts, viz., the obvious past, the specious present, the real present and the future. Omitting the specious present, it consists of three... nonentitiesthe past, which does not exist, the future which does not exist, and their conterminous, the present; the faculty from which it proceeds lies to us in the fiction of the specious present.109

Nagarjuna’s analysis indicates, in a similar way, how a metaphysical notion of time would lead to the abolition of the very notion of time as “specious.” Furthermore, the metaphysical notion of time, as propounded by the Sarvastivadins and the Sautrantikas, also involved the conception of substantial existence (bhava), the denial of which would result in the denial of that particular conception of time.

---

**BATCHelor (Poetic “Translation”)**

Time

If I had a past,
What is now and yet to come
Would have already happened.
Were there no now and future then,
How could now and future
Ever have a past?

Without a past
There is no now and future;
What is now and still to come
Would never happen.

Past, present, future
Are like bottom, middle, top
And one, two, three.

You can’t grasp time
And times you can
Are never time itself.
Why configure time you cannot grasp?

If time depends on things,
How could I ever have
Time apart from things?
Without things how can time persist?
19. Time

Nagarjuna’s argument in verse 1 is about the impossibility of the dependence of the present and future on the past if they do not all exist at the same time. In the metaphysics Nagarjuna ascribes to his opponent, all three divisions of time are distinct entities that must all be present at the same time if dependency is to be involved. (Verse 2 does not actually claim that the present and future do not exist in the past, but that is necessary for the argument to proceed.) That is, if the present and future are dependent upon the past, they must have already been in the past - and if they were present in the past, why didn’t they arise back then?

From verse 5: a time that is constantly changing cannot be grasped (only what is fixed can be grasped), and so there is nothing to grasp; and even if time could in principle be grasped, we cannot find a time that is unchanging; time is constantly flowing and never static, and so we still cannot grasp it. Thus, there is no real entity “time” that we can grasp. And, in verse 6 Nagarjuna applies his standard analysis: if time is dependent upon entities that truly exist (i.e., have self-existence), it could not exist without such entities; and since no such entities in fact exist, time cannot exist. Time is measured by the changes entities undergo; and so to Nagarjuna, if there are no real entities, there is no real change and hence no time. In Nagarjuna’s emptiness metaphysics, the past, present, and future are not self-existent and thus not real because they exist only in relation to each other (SS 29). This is not a relativity of frameworks as in physics but is only an everyday observation about the interconnection of concepts. Thus, to translate any of the Buddhist terms as “relativity” in order to make Buddhism sound scientific is in error.

GYAMTSO (COMMENTARY)

An Examination of Time

In the Sutras of the Mother, the Buddha taught:

The past is imperceptible, the future is imperceptible, and the present is imperceptible. . . . The three times are equality.

THE PAST AND THE FUTURE are not perceived by the eye of wisdom. We conceive of them, but they are nowhere to be found. Similarly, the present does not abide for even an instant, so it is not perceptible either.

Nagarjuna composed this chapter as a response to people who claimed that things exist because the three times exist. The designations of past, present, and future, they argued, are possible only because of the existence of composite things: In dependence upon there being things that have ceased, we designate the past; in dependence upon there being things that exist now, we designate the present; and in dependence upon there being things that have yet to arise, we designate the future. Since these three times exist, and they definitely do because the Buddha spoke of them, then the things that are their causes must also exist. This was their argument.

In fact, the three times have no perceptible existence; they are just conceptual imputations. This is something that one can understand quite easily by looking at the first verse of the chapter:

If the present and the future depended on the past,
The present and the future would exist in the past.

We can also change this verse to cover the other possible permutations:

If the past and the future depended on the present,

The past and the future would exist in the present.

If the past and the present depended on the future,
The past and the present would exist in the future.

If the three times exist, they must either exist in dependence upon each other or independent of each other. If the first were the case, then, for example, if the present and the future existed in dependence upon the past, then the absurd consequence would be that the present and the future would have to exist in the past. This is the case because in order for one thing to depend upon another, the two have to meet. If only one exists at a time, it has nothing to depend upon, and there would be nothing there to depend upon it.

If they existed independent of each other, the absurd consequence of that would be that the present would exist independent of any notion of the past or the future, and the past and the future would exist independent of any notion of the present. If that were the case, then we would have to conclude that the present is not really the present after all, because it is something that does not depend upon the past and the future. The fact is that if we have a notion of the present, the only way we can do so is if we have some idea of past and future. Even if something is called the present, if it does not depend on past and future, it cannot actually be the present.

If the present exists in dependence upon the past and the future, however, then the present would exist both in the past and in the future, because it would have to coexist with the thing that it depends upon for its existence. So the present would have to exist in the past in order to depend on the past—it would have to exist in the future in order to depend on the future.

Analyzing in this way makes it clear that the three times do not truly exist, that time is just a creation of our thoughts.
When we are enjoying ourselves, for example, time seems to pass very quickly. When we are suffering, it seems to pass excruciatingly slowly. Finally, when we are in deep sleep, we have no concept of time at all—time simply does not exist for us in that state. So how does time really pass after all? Does it pass quickly, slowly, or not at all? There is no way to answer that question objectively.

These days, it is also easy to gain direct experience of the unreality of time—just call a friend of yours in another country and ask what time it is! Your friend might say, “It is twelve noon,” and you might say, “No, it is ten o’clock at night.” Who would win that debate? That people in different places in the world can have different ideas of what time it is shows that time is just a mere appearance arisen due to the coming together of causes and conditions. It is merely an imputation of thoughts.

If time really existed, we would be able to perceive it independent of forms, sounds, smells, tastes, and tactile sensations. It would exist on its own, and we would be able to perceive it. The fact is, however, that time can exist only in dependence upon there being something to which we can relate the notion of time. For example, if nothing had ceased, we could have no notion of the past; if there were nothing here, we could have no notion of the present; and if we did not anticipate anything happening, we could have no notion of the future. Since time can exist only in dependence upon these things, it cannot truly exist.

In Chandrakirti’s text Entering the Middle Way, he explains, “The present does not abide; the past and the future do not exist.” Out of the sixteen emptinesses, the emptiness of time is “the emptiness of the imperceptible.” When we look for time directly, this is what we find—time is imperceptible. Try it now—look at your watch. When you look at your watch to see what time it is, do you see time? No, you just see some small sticks moving around! When you look for it, you can never see time, because time is imperceptible. Time is emptiness.

Realizing the emptiness of time is important to our practice for several reasons. First of all, in the Mahamudra tradition, attachment to the three times as being real is called a wrong view. If we do not reverse our thought that time is real, we will not be able to realize equality.

Furthermore, realizing the true nature of time prevents us from getting attached to the length of time that we practice as being real. Some people think that they need to meditate for long periods of time or else it is not really Dharma practice. Others feel proud because they think they have been practicing Dharma for a certain number of years and are advanced practitioners as a result. Others get disappointed because they think they have been practicing for a long time and do not see any improvement in their situation—they might get so disappointed that they abandon Dharma practice altogether. Still others are in a big hurry and think that they have to achieve enlightenment as soon as possible. Realizing that time is not truly existent and that long and short periods of time are equality frees us from all of these types of attachment and the mental agitation that they cause. This freedom from attachment is open, spacious, and relaxed.

Realizing the true nature of time is particularly important for bodhisattvas, who vow to liberate every single one of the infinite number of sentient beings from samsara, no matter how many aeons that might take. Since they are free from attachment to long or short periods of time as being real, however, they can make that commitment quite eagerly and happily. As the Buddha taught, “an aeon and an instant are equality,” and knowing this, bodhisattvas are able to remain in samsara and continuously perform deeds that benefit sentient beings without ever getting tired or discouraged.

All these reasons show why it is so important to realize that time is of the nature of appearance-emptiness, and the way we can do so is to use the logical reasonings presented in this chapter. Once we gain certainty in the emptiness of time, remembering it again and again will cause our certainty to become more and more stable, and then eventually we will realize the true nature of time directly. That is how the process works.

PINGALA COMMENTARY

19/0 Question. Surely time exists, established through causal dependence? Because past time exists, future and present time exist. Because of present time, past and future time exist. Because of future time, past and present time exist. The dharmas of above, middle and below, same and different, and so forth also exist through reciprocal causal dependence.

Reply:

CANDRAKĪRTI COMMENTARY

[Chapter XV]

Some hold that the self-existence of things is a fact because it is the basis for our conceiving of time as three-phased (kalatraya). In this way of thinking the three time phases, as explained by the illustrious one, are (a) what is past (atita); (b) what is not yet realized (anagata) [the future]; (c) what is arising here and now (pratyutpanna) [the present]; and these have their basis in things. That is, a self-existent thing which has arisen and perished is said to be past; what has arisen but has not perished is existent; something which has not yet attained self-existence is said to be not yet realized, i.e. future. The three phases of time are explained in this way as dependent on the self-existence of things and are held to be real. It follows that what they are dependent on - the self-existence of things - is also real.

Past, present and future interdependent and so unreal

We reply that there would be self-existence of things, by reason of which we can conceive of the three phases of time, if these as conceived by you were themselves real. But they are not. How they are not real Nagarjuna expounds in this way:

KALUPAHANA COMMENTARY

Chapter Nineteen Examination of Time (Kala-pariksa)

GARFIELD COMMENTARY

Chapter XIX Examination of Time

Another response to the attack on the reality of action and its consequences might to be argue that, nonetheless, the time in which action and its consequences are realized must be real. Nāgārjuna in this chapter argues that time cannot be conceived of as an entity existing independently of temporal phenomena, but must itself be regarded as a set of relations among them. His arguments are closely akin to those of Zeno, Sextus, and McTaggart.

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 1 - If, indeed, the present and future are contingently related to the past, they should exist in the past moment.

JONES (Skt):
[1] If the present and the future are dependent upon the past, then the present and the future would have existed in the past.

KALUPAHANA (Skt):
If the present and the future exist contingent upon the past, then the present and the future would be in the past time.

MCCAGNEY (Skt):
If the present and the future are to be dependent on the past, the present and future will be in past time.

NISHIJIMA (Skt?):
1. The existence just at the present moment is the state that everything has never arrived at yet. And at that time past is just the object of consideration mentally, The existence just at the present moment is the state that everything has never arrived at. Therefore the past in time will exist in future actually.

SPRUNG (Skt):
1 If what is arising here and now and what is not yet realized are dependent on what is past, what is arising here and now and what is not yet realized will be in past time.3

STRENG (Skt):
1. If "the present" and "future" exist presupposing "the past," "The present" and "future" will exist in "the past."

ROBINSON (Skt):
If present and future exist in relation to the past, then present and future should exist in past time.;
PINGALA COMMENTARY

19/1 If future and present time exist on account of past time, then future and present time should exist within past time, and why? If dharmas are established according to their place of origin, this place should be the dharma. It is like light which is established on account of the lamp, the light existing according to where the lamp is. The same goes for past time. If it establishes future and present time, then future and present time must exist within past time, and if future and present time do exist within past time, then the three periods should all be called 'past time'. Why is this? Because future and present time would be in the past.

     (25c15) If all times were entirely in the past, then there would be no future and present times, because it would be entirely the past. But if there were no future and present times, then there would be no past time either, and why? Because past time is only called past time because of future and present time. Just as future and present time are established on account of past time, so also is past time established on account of future and present time. Now without future and present time, there could be no past time. This is why your earlier statement (v1) that future and present time are established on account of past time is not correct.

     (25c21) If you say that future and present time do not exist within past time, but that future and present time are nevertheless established on account of past time, this is incorrect, and why?

CANDRAKĪRTI COMMENTARY

(fn 1 Paraphrase: If present and future are dependent on the past, present and future will be in the past.)

The thinking here is that if there were the existent (vartamaṇa) and the not yet realized they would be either dependent (apeksya) on past time or they would not be (anapeksya). In the first case, if their dependence on the past is established, they will necessarily be in past time. However, there can be no dependence of something on that which is non-existent. This would be like progeny issuing from a barren woman, or a flower from a garland in the sky, or sesame oil from a grain of sand. It will not do to argue that the dependence is reciprocal even as light depends on darkness — which is non-existent - and darkness depends on light, because this is a vitiated circle (sadhyasamatva). In this case if the existent and the not yet realized are considered to be in past time for the purpose of establishing their dependence in this way, these two would be past as well because they exist in a real past time and are of the essence of the past. It follows that there would be no past either. Hence, as the past is what has passed beyond the existing state, the not yet realized cannot be realized. So long, however, as both the existent and the not yet realized are entirely impossible how could there be a past of anything whatsoever? It follows that there is no past either.

Now, wishing to avoid this faulty consequence:

GARFIELD COMMENTARY

1. Nāgārjuna’s method is to divide time into the past, the present, and the future and then to argue that none of these can be said to inherently exist. In these first two verses, he considers one horn of an implicit dilemma: The present and the future either depend upon the past or they do not. In these two verses he considers the possibility that they do depend upon the past. But if they depend upon it in any sense that could plausibly guarantee their inherent existence, they must somehow emerge from it as a basis. If so, he argues, they must have existed in the past. For if they did not, then we would have the situation where when the time on which they ostensibly depend exists they do not exist, or a situation where at the time they exist that on which they ostensibly depend does not exist. We would then either have the situation in which the ostensibly dependent exists, but in the absence of that on which it depends, or in which the necessary condition exists, but without that of which it is the condition.

This raises two difficulties, one general and one specific to the case at hand: First, by the arguments developed concerning the temporal relations between causes and their effects in Chapters I and VII, we have two incoherent situations from the standpoint of anyone who considers the causal relation or its relata to be inherently existent. There must be a real relation between the cause and the effect in which the effect is contained potentially in the cause, and this would unfortunately entail the past existence of the present and the future. But second, there is a little regress to be developed. For if the present and the future depend upon the past, they must succeed or be simultaneous with it. But they must succeed or be simultaneous with it in time. That requires a super-time in which the parts of time are related, and so on, ad infinitum.

**Kārikā XIX.2**

INADA (Skt):
Verse 2 - If, again, the present and future do not exist there (i.e., in the past), how could they be contingently related?

JONES (Skt):
[2] If the present and the future did not exist in the past, how could they be dependent upon the past?

KALUPAHANA (Skt):
Again, if the present and the future were not to exist therein [i.e., in the past], how could the present and the future be contingent upon that?

MCCAGNEY (Skt):
Again, if the present and the future do not exist there, how would the present and the future depend on it?

NISHIJIMA (Skt?):
2. The existence just at the present moment is the state that everything has never arrived at yet,
The situations there might never exist once more again at all.
The existence just at the present moment is the state that everything has never arrived at yet,
Perhaps, aha, what kind of consideration, does it belong?

SPRUNG (Skt):
2 If, on the other hand, arising here and now and being not yet realized are not based in the past how could arising here and now and being not yet realized be related to the past?

STRENG (Skt):
2. If "the present" and "future" did not exist there in "the past", How could "the present" and "future" exist presupposing that "past?"

ROBINSON (Skt):
if present and future do not exist in it, how can present and future exist in relation to it?

**ENGLISH TRANSLATIONS**

BOCKING (Ch):
19v2 If, within past time
Future and present do not exist,
How can future and present time
Depend on the past?

BATCHELOR (Tb):
If the present and future did not exist there, then how could the present and the future be contingent on it?

DOCTOR (Tb):
If the present and the future
Do not exist in the past,
How can the present and future
Be dependent on it? [XIX.2]

GARFIELD (Tb):
2. If the present and the future
Did not exist there,
How could the present and the future
Be dependent upon it?

GARFIELD-SAMTEN (Tb):
2. If the present and future
Did not exist there,
How could the present and the
Future be dependent on it?

HAGEN (paraphrase):
19.2  If the present and the future were not in the past how could they depend on it?
PINGALA COMMENTARY

19/2 If future and present time are not within past time, how can future and present time be established on account of past time? Why is this? If each of the three times had different characteristics, then they could not be established by mutual interdependence. They would be like objects such as pots and cloth etc., each of which is separately established in itself, not depending upon each other. But in fact future and present time are not established independently of past time, past and future time are not established independently of present time, and past and present time are not established independently of future time.

(26a2) Earlier you said that although future and present time do not exist within past time, nevertheless future and present time are established on account of past time. This is not correct.

Question. What is wrong (in saying that) even though future and present time are not established on account of past time, they nevertheless exist?

Reply.

CANDRAKĪRTI COMMENTARY

If it is imagined that the time phases of the existing and the not yet realized are not based in past time, then in this case as well, they cannot be related to the past because like the lotus blossom in the sky they do not exist in the past.

KALUPAHANA COMMENTARY

As mentioned at XVII.14, the conception of time was an important factor in the explanation of the fruits of action (karma-phala). All actions do not bear fruit immediately. Indeed, the problems were magnified by the Buddha's recognition of the possibility of the survival of the human personality through countless lives. The Abhidharma lists four categories of karma in terms of their fruitioning, all of which can be traced back to the discourses themselves. The four categories are as follows: (i) karma that fruitions immediately or in the present life (dittha-dhamma-vedaniya); (ii) karma that fruitions in the next life (upapajja-vedaniya); (iii) karma that fruitions in some after life (aparapariya-vedaniya); and (iv) karma that produces no fruitioning (ahosikamma)( Vism). The use of the metaphor of “the imperishable promissory note” by Nagarjuna was necessitated by the fact that some karmas produce consequences on a subsequent occasion. Thus, the conception of time becomes invariably bound up with the notion of karma. As such, whatever metaphysical speculations that emerged with the doctrine of karma, such as those mentioned at XVII.7-10, also came to be associated with the conception of time. Analysing time as a separate entity, the metaphysicians assumed that if there were to be any mutual relationship between the present and the future on the one hand and the past on the other, then, since they are distinct entities, the present and the future will have to be inherent in the past. In other words, the past produces the present and future from within itself. This is the identity version of causation (svatotpatti). A further implication of this is that if one knows the past, one also knows with absolute certainty what the present and the future would be. These, indeed, represent some of the basic speculations of the Sarvastivadins.

GARFIELD COMMENTARY

2. That is, if we deny that the present and the future existed potentially in the past and were somehow coexistent with it, there is no way to understand the mechanics of the dependency relation. By the time the present comes around, the past isn’t around to give rise to it. And when the past was around, the present didn’t occur.
Kārikā XIX.3

Verse 3 - Again, it is not possible for both (present and future) to establish themselves without being contingent on a past. Therefore, there is no justification for the existence of a present and a future time.

JONES (Skt):
[3] Without being dependent upon the past, neither the present nor the future can be established. Therefore, the present and the future do not exist.

KALUPAHANA (Skt):
Moreover, non-contingent upon the past, their [i.e. of the present and future] establishment is not evident. Therefore, neither a present nor a future time is evident.

MCCAGNEY (Skt):
Again, no demonstrated past occurs independent of both. Therefore, present and future time do not occur.

NISHIJIMA (Skt?):
3. An accomplishment is not so esteemed. Past is not so recognized also. Existing at the present moment hasn’t arrived at yet actually. Therefore Time is not recognized yet.

SPRUNG (Skt):
3 The reality of these two cannot be established independently of the past; the time phases arising here and now and being not yet realized are, therefore, not real.

STRENG (Skt):
3. Without presupposing "the past" the two things "the present" and "future" cannot be proved to exist. Therefore neither present nor future time exist.

WESTERHOFF (Skt):
XIX.3a In turn the past is not found established independent of the two [present and future].

ROBINSON (Skt):
The establishment of the two does not occur without relation to the past; therefore present and future time do not exist.
PINGALA COMMENTARY

19/3 Future and present time are not established independently of past time, and why? If present time did exist independently of past time, in what place would present time exist? It is the same with future time; in what place would future time exist? Therefore, there is no future or present time independent of past time. Because of such mutually dependent existence, in reality there is no time.

CANDRAKĪRTI COMMENTARY

Because they are unrelated to the past, what is arising here and now and the not yet realized, like the horns of a donkey, are without reality (asattva). This is the way it is with what is arising here and now and the not yet realized. It should be understood that it follows that time is not real (na vidyate).

In so far as, in the way shown, what is arising here and now and the not yet realized cannot be proved either in relation to the past or without relation to it, in the same way the dependence or non-dependence of what is past and what is not yet realized on what is arising here and now and what is past on what is not yet realized cannot be shown. In precisely this sense, by the same proof used in the case of the dependence or non-dependence of what is arising here and now and what is not yet realized on what is past, Nagarjuna points out exactly the same vitiating fault:

KALUPAHANA COMMENTARY

The present verse embodies Nagarjuna’s criticism of the notion of time referred to in XIX.1-2. Taken away from that context, this will appear to be a complete rejection of the very notion of time. However, Nagarjuna’s criticism pertains only to the contingency (apeksa) understood in the light of a theory of inherence. On a previous occasion (X.8-12), Nagarjuna has convincingly demonstrated the difficulties involved in explaining contingency or relativity in the context of theories of identity (which is also implied in inherence) and difference.

Nagarjuna’s argument seems to read as follows:
- 1. Major premiss:
The present and the future are not seen to be established non-contingent upon the past.
- 2. Middle term:
Contingence of the present and the future on the past implies the substantial existence of the present and the future in the past, which is not evident.
- 3. Conclusion:
Therefore, the present and the future, as substantial entities, do not exist.

Ignoring the middle term, so dearly defined at XIX.1-2, Nagarjuna’s conclusion will appear to be an absolute rejection of time. It would then read as follows:
- 1. First premiss:
The present and the future are not contingent upon the past.
- 2. Second premiss:
The present and the future are not non-contingent upon the past.
- 3. Minor premiss:
The present and the future cannot be both contingent and non-contingent upon the past.
- 4. Conclusion:
The present and the future do not exist.

GARFIELD COMMENTARY

3. If, on the other hand, one argued that the parts of time are independent, there would be no sense in which they would be determinately ordered and in which they would be part of the same time. Time is by definition an ordering of events in which moments stand in determinate relations to one another, in virtue of which the location of any moment depends on the location of all of the others. The present is the present only because it is poised within the past and the future. If it were not, it would not be the present. So either the present is in the past, in which case it is nonexistent, or it is independent of the past and the future, in which case it is nonexistent.
**ENGLISH TRANSLATIONS**

INADA (Skt): Verse 4 - It follows from the above analysis that the remainder of the two periods likewise can be taken up and that concepts such as above, below, middle, etc. or identity, etc. can be similarly described or treated. - Note: This means that the analysis can be made similarly by using the present and the future in turn as a base and relating each to the other two temporal periods. Similar analysis holds true for the other concepts mentioned.

JONES (Skt): [4] This analysis characterizes the other two relationships (i.e., the past and future are not dependent upon the present, and the past and present are not dependent upon the future). In addition, this analysis applies to “higher, lower, and middle” and “unity and multiplicity,” and so forth.

KALUPAHANA (Skt): Following the same method, the remaining two periods of [time] as well as related concepts such as the highest, the lowest and the middle, and also identity, etc. should be characterized.

MCCAGNEY (Skt): By this method, neither of the two remainders are concluded [to exist]: and [the same conclusion concerning] above, below, middle, etc., identity, etc., would be drawn.

NISHIJIMA (Skt?): 4. Utilizing just this place what have been left are two, The one is relying upon going on ahead, and the other one is relying upon accomplishment. Among the highest, the lowest, and the middle, Selecting only one might be desirable actually.

SPRUNG (Skt): 4. Precisely the same procedure applies to the remaining two divisions of time. It could be applied to such distinctions as high, low and middle as well as to unity, duality, and so on.

**STRENG (Skt):**

4. In this way the remaining two times can be inverted. Thus one would regard "highest," "lowest" and "middle," etc., as oneness and difference. (or "after," "before" and "middle," or "right," "left" and "middle" ...)

**ROBINSON (Skt):** By this method the remaining two [times] are to be treated mutatis mutandis. One should examine the top, bottom, and middle, etc., and the unity, etc.

**BOCKING (Ch):** 19v4 Through this interpretation We know that the other two times, Above, middle, below, same and different And other such dharmas, are all nonexistent.

**BATCHelor (Tb):** These very stages can be applied to the other two. Superior, inferior, middling etc., singularity and so on can also be understood [thus].

**DOCTOR (Tb):** By these very same steps, the other two, The supreme, the middling, and the inferior, and so forth; As well as singularity and so on Can also be understood. [XIX.4]

**GARFIELD (Tb):** 4. By the same method, The other two divisions - past and future, Upper, lower, middle, etc., Unity, etc., should be understood.

**GARFIELD-SAMTEN (Tb):** 4. By this very method, with substitution, The remaining two; as well as. . . Superior, inferior, average, etc.; and Unity, etc., should be understood.

**HAGEN** (paraphrase): 19.4 By the same method, past and future, as well as above, below, middle, etc., and identity, etc. should be understood.
PINGALA COMMENTARY

19/4 Through this interpretation we should know that the other future and past times are also non-existent, and all dharmas such as above, middle and below, same and different etc., are all nonexistent. Since middle and below exist on account of above, if there is no above there will be no middle and below. If there were middle and below apart from above then they would not be interdependent. Difference depends on sameness, and sameness depends on difference. If sameness existed as a reality it would exist independently of difference, and if difference existed as a reality it would exist independently of sameness. All such dharmas as these may be negated in the same way.

(26a20) Question. Since there are such varied divisions as year, month, day, minute etc., we know that time exists. Reply,

CANDRAKĪRTI COMMENTARY

It could be done this way: If what is past and what is not yet realized are dependent on what is arising here and now, the times of past and the future will be based in what is arising here and now. If, on the other hand, past and future time are not based in what is arising here and now, how would past and future times be dependent on it? Again, these two cannot be established (siddhi) independently of what is arising here and now, hence what is called past and future time are not real. This much for the one division of time.

And for the second division of time: If what is past and what exists are dependent on what has not yet arisen, what is past and what exists will be based in the time of what has not yet arisen. If on the other hand what is past and what exists are not based in what has not yet arisen how could what is past and what exists be dependent on it? Again if these two are not dependent on what has not yet arisen they cannot be established. It follows that past time and present time are not real.

These were supplementary verses. The two divisions of time are to be understood in this way.

It follows, after this kind of investigation, that the three phases of time do not exist (nasti). Time therefore, is not real (na vidyate); and because time is non-existent there is no true existence of things either. This is now established. And as the three phases of time have been investigated, in the same way ‘It could be applied to high, low, middle and such distinctions, as well as to unity and so on.’

To be understood by the expression ‘and such distinctions’ in the line beginning ‘high, low, middle’ are all such triadic conceptualizations as good, not good, indefinable; arisal, existence, decay; beginning, end, middle; the realms of desire, of form, of the formless; correct, incorrect, neither correct nor incorrect. By the expression ‘unity, duality and so on’ should be understood unity, duality and plurality. It should be realized that by the exposition of the three phases of time, high, low and so on, as well as unity, plurality and so on have been expressly dealt with.

Time incomprehensible either as lived or as unchanging

One may object that time is real because it is measurable (parimanavattva). The thought here is that what is not, cannot in fact be measurable as the horns of a donkey cannot be, whereas time is measurable: in virtue of the distinctions of moment, minute, hour, night, day and night, fortnight, month, year and so on. It follows that because it is measurable time is real.

We reply that if there were something called time it would be measurable. But there is not.

KALUPAHANA COMMENTARY

Nagarjuna is insisting that the same argument be applied to the concept of the present in relation to the past and future, and to the future in relation to the past and present. In addition, he maintains that this analysis can be extended to similar concepts like the highest, the lowest, the middle, etc. In all these cases, the metaphysical issues emerge as a result of the absolute distinctions that are being made. Such absolute distinctions are being often made in logical analyses, and are not supported by empirical evidence. Time, as experienced, cannot be analysed into three water-tight compartments as past, present, and future. (See Introduction, for an explanation of the experienced time by a modern psychologist.)

GARFIELD COMMENTARY

4. That is, we can generalize this argument about the dependency of the future and present, whose narrow purpose is to demonstrate the nonexistence of the present, to demonstrate the nonexistence of the past and future as inherently existent entities. Moreover, Nāgārjuna notes, this argument applies, mutatis mutandis, to spatial relations.
Kārikā XIX.5

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 5 - A non-enduring time cannot be manipulated. But an enduring time, although manipulatable, does not exist. How could a non-manipulatable time be grasped (i.e., conceptualized)?

JONES (Skt):
[5] A time that is not static cannot be grasped. A time that is static is not seen. And how could an ungrasped time be made known?

KALUPAHANA (Skt):
A non-static time is not observed. A static time is not evident. Even if the unobserved time were to be observed, how can it be made known?

MCCAGNEY (Skt):
What does not endure is not grasped by time and enduring time does not occur. And how is time caused to be known by what is not grasped by grasping?

NISHIJIMA (Skt?):
5. Time can be grasped relying upon the fact that it does never stop. Time, which has stopped, can never be found anywhere at all. If Time is something, which has been caught, but at the same time hasn’t been caught, How is it possible for Time to be recognized at all?

SPRUNG (Skt):
5 Time cannot be comprehended as variable; there is no unchanging time which can be comprehended; how speak sensibly about a time which is incomprehensible?

STRENG (Skt):
5. A non-stationary "time" cannot be "grasped"; and a stationary "time" which can be grasped does not exist. How, then, can one perceive time if it is not "grasped"?

BOCKING (Ch):
19v5 Time standing still cannot be found Moving time cannot be found. If time cannot be found. How can one speak of characteristics of time?

BATECHELOR (Tb):
Non-dwelling time cannot be apprehended. Since time which can be apprehended, does not exist as something which dwells, how can one talk of unapprehendable time?

DOCTOR (Tb):
A time that does not endure is not apprehended. Since a time apprehended as enduring does not exist, How can one speak Of a time that is not apprehended? [XIX.5]

GARFIELD (Tb):
5. A nonstatic time is not grasped. Nothing one could grasp as Stationary time exists. If time is not grasped, how is it known?

GARFIELD-SAMTEN (Tb):
5. A nonenduring time is not grasped. Nothing one could grasp as Time Could exist as enduring. If time is not grasped, how it is known?

HAGEN (paraphrase):
19.5 A non-static time cannot be grasped. A grasparable static time is not evident. How, then, can ungraspable time be comprehended?
The reasoning here is that if what we call time were invariable (avasthita), quite different from periods of time such as moments, minutes and so on, it could be understood as being measurable into such periods. But there is no such thing as invariable, unchanging time which could be understood in terms of periods such as moments and minutes. Hence variable (asthita) time cannot be understood; that is to say, it cannot be understood in its variableness.

It might be urged that what is called time is in its invariable essence imperishable but manifests (abhivyajyate) itself in time periods such as moments. It is said: ‘Time transmutes the elements; time sustains being; time cares for the sleeping; time is insurmountable.’ So in this sense the distinguishing characteristic of time is the essence of invariableness itself.

We reply that in this sense as well there is no invariable time which could be conceived of as manifesting itself in time periods such as moments and minutes. If you ask again why this means that time cannot be invariable, it is because time cannot be conceived of as something distinct from periods of time such as moments and minutes.

Furthermore, time will exist as either compounded or un-compounded by nature. Both alternatives are repudiated in the Chapter ‘The Compounded’ in the kārikā if origination, existence and perishing are not established there can be no compounded. If the compounded is not established how will the uncompounded be grounded? So, in this way, there is no invariable time which could be comprehended.

Now to consider the time which cannot be comprehended because it is its essential nature to be spoken of in terms of variableness; it is inconceivable how it can be spoken of sensibly in terms of time periods such as moments. As Nagarjuna puts it, ‘How speak sensibly about a time which is incomprehensible?’ It follows that time simply is not.

Time is not merely an aspect of things

One might counter, saying that it is true that there is nothing called time which is imperishable, which is unrelated to objects and the other factors of personal existence and which has an essence of its own. None the less there is a time which in a practical way is conceived of (prajnapta) as resting on (upadaya) the factors of personal existence and on compound things and is spoken of in terms of time periods such as moments. So there is no fault in this.

We reply: Again,

A non-static time is a temporal flux. It is what the interpreters of the Abhidharma referred to as the “flowing present” (santati paccuppanna, DhsA 421), where the future continues to flow into the past through the present. Any attempt to grasp it would be futile, for by the time the attempt is made the present has disappeared into the past. In order to grasp it one has to stop the flow. Hence the metaphysicians recognized a static moment (sthitiksana). Nagarjuna has already analysed the implications of such theories in Chapter VII. Thus, time understood in terms of distinct momentary entities could not account for experience. This metaphysical theory viewed the present as the momentary present (khana-paccuppanna, loc.cit.). Even if the non-graspable time were to be grasped, Nagarjuna’s question is: “How can it be made known?” The empiricist is, therefore, left with a specious time (probably an addha-paccuppanna). It is specious because, when any attempt is made to grasp it independent of temporal events, it vanishes like a mirage. It cannot be made known by any means. Absolute time makes no sense for Nagarjuna.

5. This is a second destructive dilemma: Time, if it exists as an entity, is either stationary or changing. To say that it is changing is incoherent; we would need to posit a super-time in which that change occurs. But to say that it is static is incoherent as well. That suggests that past, present, and future coexist. So there is no coherent conception of time as an entity.

ENGLISH TRANSLATIONS

INADA (Skt): Verse 6 - If time exists in virtue of the relational existential structure, where can it be without the structure? As any existential structure does not exist, where can time be?

JONES (Skt): [6] If time is dependent upon entities, how could time exist without such entities? And no such entities in fact exist at all - so where will there be time?

KALUPAHANA (Skt): If it is assumed that time exists depending upon an existent, how can there be time without an existent? No existent whatsoever is found to exist. Where can time be?

MCCAGNEY (Skt): If time depends on a being, where is there time without a being? Not any being exists, so where will time exist?

NISHUIMA (Skt?): 6. Even though it is clear for Time to exist really, in the case that Time really exists, where does it move actually? If there were no existence of Time at all, Where is it possible for time to exist really even in future at all?

SPRUNG (Skt): 6 If time is dependent on things how can time be separate from things? But no thing whatsoever is real. How can there be time?

STRENG (Skt): 6. Since time is dependent on a thing (bhava), how can time exist without a thing? There is not anything which exists; how, then, will time become something?

WESTERHOFF (Skt): XIX.6 If time existed dependent on an object, from where should it come without this object? Since there is not any object, from where does time come?

ROBINSON (Skt): If time depends on an entity, then where is there time without the entity? Since there is no entity, where would time exist?
19/6 If time does not stay still then it cannot be found, yet if it were still, it would be non-existent. If time cannot be found, how can one expound the characteristics of time? And if there are no characteristics of time, then there is no time. It is because of the arising of objects that we refer to time, and apart from objects there is no time. In what has gone before we have refuted all objects on various grounds. Since objects do not exist, how can time exist?

CANDRAKĪRTI COMMENTARY

6ab If time is dependent on things how can time be separate from things?

If, that is, one defines time as ‘dependent on things’ then in so far as things are not real, time, being based on them, is necessarily not real either. Nagarjuna explains:

6c But no thing whatsoever is real.

This follows both from the arguments given earlier and from the refutations yet to be given. So long as, thus, it is the case that no thing whatsoever is real, then

6d How can there be time?

And because there is no time, there are no divisions of time such as moments, seconds and hours which are measurements of it. How therefore can time be grounded in its being measurable? From this it follows that things are definitely not self-existent.

KALUPAHANA COMMENTARY

An existent (bhava), since it represents a metaphysical entity having its own nature (svabhava), has already been rejected by Nagarjuna. Time (kala) denied by him is an absolute time. It is time that is real as momentary entities (ksana) or something that is fleeting (santart) on its own. In the present verse, Nagarjuna is maintaining that two independent entities an existent (bhava) and time (kala) cannot be dependent upon one another. If they are dependent upon one another (bhavam pratitya kalas cet), then there cannot be time independent of an existent. An existent as such is non-existent. Whence can there be time? This is a rejection not of temporal phenomena, but only of time and phenomena as well as their mutual dependence so long as they are perceived as independent entities.

GARFIELD COMMENTARY

6. Finally, Nāgārjuna argues, we cannot suppose that time exists as, one entity dependent on some other as its ground if we want time to exist inherently. This is because, in the previous arguments in the text, we have already argued that none of the entities that exist in time are inherently existent. So none would form a suitable ontological basis for an inherently existent time.

But this final verse is double-edged, and its positive reading contains Nāgārjuna’s positive account of the nature of time. Nāgārjuna points out that with no entities to be temporally related, there is no time. That is, the only mode of existence that time has is as a set of relations among empirical phenomena. Apart from those phenomena and those relations, there is no time. (fn 99 This insight is foundational for Dogen’s later analysis of Uji, or being-time.) But that means that, given the lack of inherent existence of phenomena, there can be no inherent existence of time. Time is thus merely a dependent set of relations, not an entity in its own right, and certainly not the inherently existent vessel of existence it might appear to be.

Chapter XX: Examination of Combination
Chapter XX
MAJBA (TOPICAL OUTLINE)

1. The chapter's context
   1. Refutation of the notion that production occurs due to an assembly of causes and conditions
   2. Refutation of arising effects by considering the effect
      1. Effects that arise based on assemblies that precede their effects
      2. Effects that arise based on assemblies that are simultaneous with them
      3. Effects that arise based on assemblies that are subsequent to them
   2. Refutation of arising effects by considering the cause
2. The content of the chapter
   1. Refutation of the belief that production occurs due to a cause
   2. Refuting the notion that effects are produced by causes that are not different from them
   3. Causes can produce neither effects that have arisen, nor those that have not
   4. Causes cannot produce effects that are seen or unseen
   5. Regardless of whether or not the two come into contact, causes cannot produce effects
   6. Causes cannot produce anything, whether they are empty or not empty of their effects
   7. Whether or not they themselves are empty, effects cannot arise
   8. Effects are produced neither by causes that are identical to them, nor by those that are different
   9. Neither existent nor nonexistent results are produced
10. Conclusion regarding causality's proven lack of nature
3. Summary
   1. Whether or not it is supplied to the effect, a cause cannot produce anything
   2. Refuting the notion that effects are produced by causes that are not different from them
   3. Causes can produce neither effects that have arisen, nor those that have not
   4. Causes cannot produce effects that are seen or unseen
   5. Regardless of whether or not the two come into contact, causes cannot produce effects
   6. Causes cannot produce anything, whether they are empty or not empty of their effects
   7. Whether or not they themselves are empty, effects cannot arise
   8. Effects are produced neither by causes that are identical to them, nor by those that are different
   9. Neither existent nor nonexistent results are produced
10. Conclusion regarding causality's proven lack of nature
OUTLINE:

We are still in the fourth section of the extensive explanation of selflessness—the presentation of the essential emptiness of time. We have completed the first of its two parts: the refutation of the inherent existence of time. [345:11] We now begin the second part: the refutation of the argument for the inherent existence of time. This section has two parts: the refutation of time as the supporting condition of the arising of the effect and the refutation of time as the cause of the arising and cessation of the effect. This chapter constitutes the first of those two parts.

EXPLANATION:

Here someone might say, “Time exists essentially because it is the supporting condition of the arising of effects. Although conditions such as the seed, the soil, and the water are assembled, until the right moment occurs, the effect does not arise; when the right moment occurs, it does arise; just as it is in the case of external phenomena, so it is for internal phenomena as the Buddha says: When the assemblage is complete, and the time is right The fruit will ripen. [Vinaya, ksudra-varga, Phran tshegs ta 153a, 156a, 157a, and Vinaya Vibhanga, 'Dul ba cha 177a]

SUMMARY:

In the Buddhapolita it says, “If neither time nor cause and effect nor their assemblage exist, what else could exist?” is an assertion of nihilism. But we respond: This is not the case, because the way you have conceptually constructed such things as time as inherently existent is simply not tenable; instead they exist as dependent designations. [255b]

One should thus understand that while the inherent existence of cause and effect and the assemblage of causes and conditions maintained by the reificationists is refuted, the existence of dependently originated phenomena, originated in dependence on causes and conditions, is not refuted.

INADA (Chapter Introductions)

CHAPTER XX - Examination of Assemblage

The Tibetan and Chinese versions both have their titles as the Examination of Cause and Effect. The content of the chapter certainly reveals the relationship between these two concepts but it also treats the concept of assemblage. It would seem, however, that Nagarjuna’s treatment places greater emphasis on the idea of assemblage where various relational conditions (pratyaya), cause, and effect come together or exist in concomitance. He naturally utilizes the other concepts in order to show the impossibility of attaching any subsisting nature to any one of them, i.e., hinting at all times that existence or being per se is beyond descriptive manipulation. Therefore, he goes through all the possible combinations of cause and effect (Verses 12, 13, 14) in their temporal moments in order to demonstrate the inconceivability of both being together within an assemblage. The question of void (sunya) is then introduced but again he shows that any conceptualization of it falls into error. Consequently, nothing can be asserted of either cause or effect in assemblage or of assemblage without cause and effect. The ideas expressed here are closely related to those found in Chapters I & XIV

KALUPAHANA (CHAPTER OVERVIEWS)

20. Harmony (samagri). The analysis of the causal process in terms of discrete momentary events eliminated the possibility of explaining harmony as part and parcel of the events that combine to produce the effect. With such discrete events harmony becomes an attribute. Such a problem was not faced by the Buddha when he explained dependence of events because such events were recognized as related events rather than discrete ones. Thus, the Buddhist metaphysicians were compelled either to accept an immediately contiguous cause (samanantarapratyaya) where each event is caused by an immediately preceding event, or make harmony an attribute of such discrete events so that their assemblage could provide a rationale for the production of the effect. The problem of causation received the foremost attention of Nagarjuna, as is evident from Chapter I. The difficulties involved in explaining the arising of the fruit or effect (phala) on the basis of a metaphysical notion of harmony are further elaborated here. Once again, what is denied is not the arising of the fruit or effect, for that was the central philosophy of Buddhism, but only the manner in which such arising is described by the metaphysicists. Hence Nagarjuna’s conclusion: The effect is not made by the harmony, nor is it made by a non-harmony. “Where can there be harmony without an effect?” (XX.24).
Combination

If fruits are in the seed,
Why would they have to grow
From a combination
Of seed and earth,
Water, heat and air?
Were they not in their causes,
How could they originate
From a duster of causes?

If fruits are in the seed,
You should be able to find them there.
If they are not there,
How does mango seed
Differ from plantain seed?

If seed stopped the moment it bore fruit,
It would be schizoid seed:
Halting and starting.
If it stopped before fruition,
Its mangos would be unoriginated.

If mangos appear
When causes combine,
Creator and created would be one.
If mangos precede the combining,
They would need no cause.

If, when causes stop,
They are transferred to their fruits,
Seeds created before
Would be created again.

How can mangos appear
From the vanishing of their seed?
How can they appear
While their seed is present?

How can they appear
Unconnected to seed?

Seeds neither witness nor do not witness
Mangos they create:
Without connecting with mangos,
How can seed create them?
Through connecting with mangos,
How can it create them?

How can seed, empty of mangos,
Create mangos?
How can seed, not empty of mangos,
Create mangos?

How can seed create empty mangos?
How would they stop?
Empty and unempty mangos
Are uncreatable and unstoppable.

If mangos were real,
What could their seed create?
If mangos were unreal,
What could their seed create?

An uncreating cause
Is not a cause.
With no cause,
Whose fruit would mangos be?

If a cluster of causes
Cannot create itself,
How can it create mangos?
Mangos are not created
By their combination
Or their uncombination.
What combination of conditions?
There are no mangos.

20. The Combination of Causes and Conditions

Here, unlike in Chapter 1, Nagarjuna specifically addresses “causes (hetus).” But he does not discuss the Western problems with causation (e.g., what is responsible for the regularity of a cause and its effect) that gave rise to David Hume’s questioning of causation. Rather, the background for his argument is the Indic scheme of causation involving the issue of origins whether an effect is in the cause or is independent of it. It is not a matter of one billiard ball causing another to move, but of how butter arises from milk. Those who assert that the effect is in the cause (sat-karya-vadins) argue that the effect is either a transformation of the cause (Samkhyins) or only an appearance (the Advaita Vedantins who came after Nagarjuna); Buddhists are among those who argue that the effect exists ontologically independent of the cause (a-sat-karya-vadins). But Buddhists also argued among themselves about whether the various conditions must be independent of what is conditioned or of a different nature. Both theories give Nagarjuna an opening: if the effect is in the
causes and conditions, why do we not see it there? If butter is in milk, why do we not see it there? But if the effect is distinct from the causes and conditions, the discontinuity presents an issue: are they really the causes and conditions at all? Nagarjuna is not denying causation but denying that it would work if things existed by self-existence. According to him, the world works only if we reject both that the effect is different from the cause and that it is the same as the cause.

The chapter starts with an application of his general argument: if an effect is in the combination of causes and conditions, we should be able to grasp it there, but we do not; but if it is not there, it exists independently of them and so the alleged causes and conditions would not really be its causes and conditions at all (w. 1-4).

Verse 5 involves the status of an entity after it has acted as a cause: if we still think of it as a cause after the effect has arisen, then there are two things the entity acting as a cause and the entity not acting as a cause. Thus, if – we think in terms of self-existence, there are two distinct entities, which obviously is not the case. But if the cause is self-existent and it expires before the effect occurs, then the effect would be without a cause (v. 6).

Nagarjuna then proceeds to show that, because self-existent entities can only be either identical or absolutely different, a self-existent cause cannot produce an effect either in conjunction with the conditions or without them – thus, there cannot be a real cause, a real act of causation, or a real effect. Therefore, nothing actually real arises or ceases: neither a non-empty effect can arise or cease (since it is self-existent and hence changeless), nor can an empty effect (since it is not "real" in the sense of being self-existent); thus, nothing real arises or ceases (w. 17-18). In sum, if the effect is real, it cannot be produced; and if is not real, then there is nothing to be produced and no real production. (Note that the opponent speaks here only of being “empty of effects,” not of self-existence, but Nagarjuna replies in terms of being “empty of self-existence.”) Thus, whether there is svabhava or only shunyata, there is no real arising or ceasing. In fact, the world of svabhava and the world of shunyata end up being described the same way - unarisen, unchanging, unceasing (e.g., 24.37 versus 25.3) - even though the metaphysics and the reasons why the world is so described are very different.

Verse 20.16 has been rendered here with the opponents raising an objection in the first two lines and Nagarjuna responding in the last two lines. But it can also be read as Nagarjuna speaking all four lines.

With the metaphysics Nagarjuna ascribes to the Abhidharmists, a cause and effect must be either identical or different, and if they are different then the cause cannot bring about a real effect (vv. 19-21): if the cause and effect are identical, then no real causation is involved; and if the effect is different from the cause, it cannot be dependent on it in any way if it is real; a cause cannot cause a real effect (if the effect is real, it is not dependent on a cause) or unreal effect (it cannot produce what is not real). Note that to Nagarjuna, something not actively producing an effect at the moment is not causally effective at all (v. 22). (This will be discussed in the Essay.)

Verse 23 means that the combination of causes and conditions is not itself a self-existent reality that could produce an effect (since it is compounded per Chapter 13).
An Examination of Collections

In the sutras, the Buddha taught:

*All the many things in the universe are appearances of collections. Therefore, things themselves do not exist and collections of things do not exist either.*

A forest, a head of hair, a woven tent, a garland—these are all examples of collections. Collections are not real, because although the parts that compose the collection are there, the entity of the collection itself does not exist. When we look at a forest, for example, there really is no “forest”; there are just the trees. Whatever thing it might be in samsara or nirvana, it is also just a collection of smaller things that are its parts, and the thing itself that is said to possess the collection of parts, like the forest, does not exist.

It is good to apply this analysis to the body. The body is a collection of parts and is called the possessor of its parts. When we look, however, we see only the parts; no entity of the “body,” the possessor of the parts, can be found. For this reason, the body does not truly exist. We should examine the parts too—let us take the hand, for example. The hand is a collection of joints. Since, however, no possessor of the collection of joints exists, the hand does not have any inherent nature. The finger can be analyzed in the same way, as can its components, down to the most subtle particles of matter. They are all merely collections, and therefore they all lack inherent existence.

People also come together in groups all the time, but these groups are constantly prone to change and decay. This is because whatever group it is, the entity of the group itself has no inherent existence.

Nagarjuna composed this chapter in answer to those people who said to him, “Your refutations aside, time does in fact exist because it is one part of the collection of conditions that cause the arising of a result. For example, when a seed, the five elements, and time all come together, a sprout can arise. As the Buddha taught, ‘When the collection of causes gathers and the time is right, the precise result will occur.’ Therefore, since collections of causes exist, and this collection includes time, then time must also exist.”

Thus, it was necessary for Nagarjuna to demonstrate with logical reasoning why collections do not truly exist. He could have just asked these people nicely, “Please do not believe in the true existence of collections,” but that would not have been enough. On the other hand, it is the case in general that if one can logically prove something to someone else, if they are intelligent and open-minded, they will accept it.

Taking a look at the above argument, it is certainly the case that in order for a flower to arise, all of the causes and conditions of that flower have to come together in a collection. There have to be the seed, soil, fertilizer, water, heat, oxygen, and space—all of these have to come together for the flower to arise. However, apart from these individual elements, nothing we could call “the collection” exists. This is because, apart from the individual elements, nothing else is visible. No entity of the collection can be seen. Therefore, the flower that appears to be the result of this collection of causes and conditions does not truly exist either, because the collection itself does not truly exist in the first place.

The nineteenth verse in the chapter examines causes and results from a different perspective, showing that causes and results cannot be the same thing nor can they be different things, and therefore they cannot genuinely exist:

*If cause and result were one, then producer and produced would be the same thing. If cause and result were different, then causes and noncauses would be equivalent.*

Here we have to consider causes and results in a way that we are not used to doing. We will not consider the continuum of the cause to be just one thing and the continuum of the result to be one thing, because that would be mere conceptual imputation. For example, it is just a concept that takes the whole continuum of individual moments of a seed and turns it into one undifferentiated seed, or the whole continuum of distinct moments of a sprout and turns it into just one sprout. Here we will analyze in a more subtle way than our thoughts ordinarily do, by looking at the very last instant of the seed and the very first instant of the sprout that arises from it.

If the last moment of the seed and the first moment of the sprout were the same thing, then cause and result would be one thing. The cause would be the result; the result would be the cause. “Producer and produced would be the same thing,” as Nagarjuna describes.

That would not make sense, however, because from our own direct experience we know that cause and result are not the same thing. When the sprout exists, for example, the seed is nowhere to be found. If cause and result were the same thing, the seed should be visible at the time of the sprout, and, for that matter, the sprout should be visible at the time of the seed. Since it is not like that, we can conclude that seed and sprout, cause and result, are not one undifferentiated entity.

On the other hand, even though the last moment of the seed and the first moment of the sprout appear to be different things, if they were truly different from each other, they would be two independent entities that would have no connection between them. The result of that would be that
since everything that was not a cause of the sprout would have no connection with the sprout, and since the seed that is the cause of the sprout would have no connection with the sprout either, then causes and noncauses would be equivalent in their lack of connection to the result, and therefore both should be equally able to produce the sprout. If a cause that is completely different from and has no connection to its result can nevertheless produce that result, what should stop a noncause that is completely different from and has no connection to the result from producing it as well?

The point is that when causes are posited as being different from their results, the distinction between what is a cause and what is not a cause of any specific result disappears. Generally in the world, we think that causes and their results have some connection or relation between them, and that is why one thing can produce a certain result but another thing cannot. Take that connection away, however, and the reason one thing can produce a certain result and others cannot disappears. Thus, when causes and results are different from each other, all things become equally able to give rise to everything else. Since this is not the case, as we can see in our own experience, for cause and result to be different from each other would also be impossible.

Related to the view that cause and result are the same is the idea that even though the cause itself does not exist at the time of the result, the cause somehow transfers its essence to the result, and therefore there is a continuity of this essential nature from the cause to the result that it produces. This would be like an actor in a play who just changes clothes from act to act, while remaining the same person throughout the whole performance—some essence, whatever that might be, would manifest at one stage as a seed and another stage as a sprout, while it itself would remain the same thing all the while, transferring itself from one stage to the next. This, however, is the view of permanence, and it is completely untenable, because if there were some permanent essence that continued to exist from one stage to the next, it would not arise from or be affected by causes and conditions. Whatever arises from causes and conditions is necessarily impermanent, ceasing immediately after it arises, as it is replaced by the result of a new set of causes and conditions. If that unchanging essence did not arise from causes and conditions, it could not perform the function of producing the result, for no causes and conditions would have given it the ability to do so. If it did not have the ability to produce the result, it would not have any relation with the cause, because its characteristics would be precisely the opposite of those of the cause, which is defined by its ability to produce a result.

On the other hand, and related to the view that cause and result are different things, is the idea that the cause ceases and then the result arises. This view, however, connotes the extreme of extinction—it posits that the cause vanishes and becomes nonexistent. If the seed first ceased and then the sprout arose, the sprout would not really have a cause, because first the seed would exist, then it would cease, then there would be nothing, and then the sprout would arise—but where would the sprout come from? It would come from out of nothingness, after its cause had ceased. So this view is not tenable either.

Finally, there is the view that the cause neither exists at the time of the result nor ceases before the result arises, but rather that the cessation of the cause and the arising of the result occur simultaneously. This is actually how it seems to happen in apparent reality: It seems that the seed ceases and the sprout arises precisely at the same moment. From the perspective of genuine reality, however, this view is also untenable, because arising and ceasing themselves are just conceptual imputations that do not accurately describe genuine reality. Positing simultaneous arising and ceasing does not help to get around the fundamental problem that cause and result cannot exist at the same time, nor can they exist sequentially, and therefore they cannot truly exist. For in the situation in which the cause’s ceasing is simultaneous with the result’s arising, when the cause is “ceasing” it still exists; but what about the result that is in the process of “arising”? Does the result exist when it is arising, or not?

If the result does exist when it is arising, and the arising of the result and the cessation of the cause occur simultaneously, then both cause and result would exist at the same time. This, however, is logically impossible, because then cause and result would be separate and independently existent entities that would have no connection with each other. Furthermore, if the result existed at the same time as its cause, the cause would have no opportunity to produce the result because the cause and result would come into existence simultaneously. If the result does not exist when it is arising, however, then what in fact would be arising? Arising without something there to arise makes no sense. Therefore, this view that posits the simultaneous cessation of the cause and arising of the result also falls apart under analysis.

Thus, it is not possible that the cause exists at the time of the result, nor that it does not exist at the time of the result. The Middle Way, therefore, does not assert either of these two views, and in this way it is free from the extremes of permanence and extinction, existence and nonexistence.

Then what of the appearance of the sprout arising from the seed, of results arising from the collections of causes and conditions?

These appearances are not real—they are mere instances of dependent arising. They are the same as what occurs when the night sky is free of clouds, a lake is clear and still, and, as a result, a water-moon vividly shines. As the siddha Gyalwa Gotsangpa sang in his vajra song of realization The Eight Flashing Lances:
The murkiness of clinging clarified,
Causes and conditions like reflections,
Knowing what to do and not, that subtle art—
These three make dependent arising fully free,
Like a lance that flashes free in the open sky.

When one is free of the murkiness of clinging to things as being real, causes and conditions shine like reflections in clear pools of water, as vivid manifestations of appearance-emptiness. Knowing them to be this way, one gains precise knowledge of what to do and what not to do. Thus, understanding the true nature of appearances does not impede good conduct; rather, it informs good conduct. Such knowledge makes conduct more subtle and beneficial. It is just like when you stand in front of a mirror and the reflection of your face appears within it. Knowing all the while that the reflection is not real, you can still use that reflection to remove stains from your face and make yourself look beautiful.

Chapter Twenty - Examination of Cause and Effect

**PINGALA COMMENTARY**

20/0 Question. Since effects produced by a combination of causes and conditions manifestly exist, we must know that these effects exist through the combination of conditions.

Reply:

**CANDRAKĪRTI COMMENTARY**

[Chapter omitted by Sprung]

**KALUPAHANA COMMENTARY**

Chapter Twenty Examination of Harmony (Samagri-pariksa)

**GARFIELD COMMENTARY**

Thus, while every phenomenon would, as Nāgārjuna has been arguing, be completely dependent on all others, this dependence itself would be inherently existential. Much of the argument is a reprise of arguments that we have seen already, particularly in Chapters I and VII. But the temporal analysis of Chapter XIX is also in evidence.

**ENGLISH TRANSLATIONS**

**INADA (Skt):**
Verse 1 - If the effect (i.e., arisen entity or fruit) comes about from the assemblage of cause and relational conditions and exists within such an assemblage, in what manner does it come about in the assemblage?

**JONES (Skt):**
[i] If an effect arises from the combination of causes and conditions and is in the combination, then how can it arise from the combination?

**KALUPAHANA (Skt):**
If the effect were to arise from a harmony of cause and conditions, and if it were to exist in the harmony, how can it arise from the harmony?

**MCCAGNEY (Skt):**
If an effect is produced by the whole of cause and conditions and exists in the whole, how is it produced by the whole?

**NISHIJIMA (Skt?):**
1. Belonging to Reason or belonging to many Real Truths, The Inclusive Grasp is born at that time. Result exists also relying upon the Inclusive Grasp, Therefore how is it possible for the Inclusive Grasp to be born newly?

**STRENG (Skt):**
1. If a product (phala) is produced through the aggregate of causes and conditions, And exists in an aggregate, how will it be produced in the aggregate?

**ROBINSON (Skt):**
If an effect is born from the conjunction of cause and conditions, and if it exists in the conjunction, how can it be born from the conjunction?

**BOCKING (Ch):**
20v1 If causes and conditions combine And an existent effect is produced, It already existed within the combination. What need-has it to be produced by combination?

**BATCHelor (Tb):**
If a fruit is born from the combination of cause and conditions and exists in the combination, how can it be born from the combination itself?

**DOCTOR (Tb):**
If effects are produced by an assembly Of causes and conditions And are present in those assemblages, How could they be produced by those assemblages? [XX.1]

**GARFIELD (Tb):**
1. If, arising from the combination of causes and conditions, The effect is in the combination, How could it arise from the combination?

**GARFIELD-SAMTEN (Tb):**
1. If, arising from the assemblage of Causes and conditions, The effect is in the assemblage, How could it arise from the assemblage?

**HAGEN (paraphrase):**
20.1 If, arising from a combination of causes and conditions, the effect were in the combination, how could it arise from the combination?

**PINGALA COMMENTARY**

20/1 If you say that an effect is produced by a combination of causes and conditions, then this effect already existed within the combination, and yet is something which arises from the combination. This is not correct, and why? If the effect had a pre-existing fixed substance, then it would not have to be produced by combination.

Question. What is wrong with saying that, though no effect exists within the combination of conditions, an effect arises out of the conditions? Reply.

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 2 - If the effect comes about from the assemblage of cause and relational conditions, and it does not exist within such an assemblage, in what manner does it come about in the assemblage?

JONES (Skt):
[2] If the effect arises from the combination of causes and conditions and is not in the combination, then how can it arise from the combination?

KALUPAHANA (Skt):
If the effect were to arise from a harmony of cause and conditions and it were not to exist in the harmony, how can it arise from the harmony?

MCCAGNEY (Skt):
If an effect is produced by the whole of cause and conditions and does not exist in the whole, how is it produced by the whole?

NISHIJIMA (Skt?):
2. Belonging to Reason or belonging to many RealTruths, The Inclusive Grasp is born at that time. What is called result does never exist really receiving the influence of the Inclusive Grasp, And so how is it possible for the Inclusive Grasp to be born newly?

STRENG (Skt):
2. If a product is produced in the aggregate of causes and conditions, And does not exist in the aggregate, how will it be produced in the aggregate?

ROBINSON (Skt):
If an effect is born from the conjunction of cause and conditions, and if it does not exist in the conjunction, how can it be born from the conjunction?

BOCKING (Ch):
20v2 If within the combination of conditions There is no effect. How can an effect arise From combination of conditions?

BATCHelor (Tb):
If a fruit is born from the combination of cause and conditions and does not exist in the combination, how can it be born from the combination itself?

DOCTOR (Tb):
If effects are produced by the very assembly Of causes and conditions, And are not present in those assemblies, How could they be produced by those assemblies? [XX.2]

GARFIELD (Tb):
2. If, arising from the combination of Causes and conditions, The effect is not in the combination, How could it arise from the combination?

GARFIELD-SAMTEN (Tb):
2. If, arising from the assemblage of Causes and conditions, The effect is not in the assemblage, How could it arise from the assemblage?

HAGEN (paraphrase):
20.2 If, arising from a combination of causes and conditions, the effect were not in the combination, how could it arise from the combination?
20/2 'If an effect arises out of a combination of conditions, then the effect does not exist within this combination, but is produced from the combination.' This is not correct, and why? If an object has no self-nature, then it can never be produced.

Further.

The term used in the early discourses for "assemblage" is sangati (M 1.111-112). For example, the eye, the visible form, and visual consciousness are said to come together (sangati) in contact (phassa). Here, the eye, visible form, and visual consciousness are compatible factors, and not incompatible. However, as events came to be distinguished in the Abhidharma, the interpreters of the Abhidharma had to be concerned more with "harmony" (samagri) than with simple "assemblage" (sangati). The conception of "harmony" thus came to attract Nagarjuna's attention, even though he will return to the notion of "assemblage" later on in this chapter. Nagarjuna's attempt at the beginning of this chapter is to examine the conception of harmony and to prevent any metaphysical interpretation of it. Metaphysical speculations were further advanced by the Sarvastivada distinction between cause (hetu) and condition (pratyaya). This latter distinction, supported by the Sarvastivada conception of self-nature (svabhava), culminated in the idea of self-causation (svata utpatti). For this reason, in the very fast verse, Nagarjuna takes up three ideas: (i) harmony, (ii) distinction between cause and conditions, and (iii) the arising of an effect from a harmony of cause and conditions. (Note Nagarjuna's use of hetu in the singular and pratyaya in the plural.)

Nagarjuna's criticism is mainly directed at the idea of serf-causation. If the fruit arises from the harmony (samagrya, ablative case) of a cause and a set of conditions (hetoh pratyayanan ca), then it is already existent in the harmony (samagryam, locative case). How then can it arise from the harmony (samagrya)? The causal process presented in this manner implies the identity between "harmony of cause and conditions" and the fruit or effect that arises from it. The identity theory of causation was already criticized in Chapter I. Similarly, as stated at XX.2, if the fruit or effect arising from such a harmony were not to be in the harmony, that is, if the effect is different from the harmony, it can never arise from that harmony. This is a criticism of the non-identity theory of causation discussed in Chapter I. These two verses, therefore, state the difficulties involved in accepting theories of identity and difference.

2. In the opening verses, Nāgārjuna sets up the destructive dilemma that frames the first part of this chapter: Either the effect is already present in the combination on which it is supposed by the reificationist to inherently depend or it is not. If it is, he will argue, there is no sense in which it really arises from them at all. If not, on the other hand, he will argue that there is no sense in which whatever dependence there is could be inherent dependence. Nāgārjuna alternates in the subsequent verses between these alternatives, developing a number of difficulties for each.
Kārikā XX.3

INADA (Skt):
Verse 3 - If the effect is in the assemblage of cause and relational conditions, it should be conceivable within the assemblage. However, (the fact is) it is inconceivable within an assemblage.

JONES (Skt):
[3] If the effect is in the combination of causes and conditions, it should certainly be grasped in that combination, but it is not grasped there.

KALUPAHANA (Skt):
If it is assumed that the effect exists in the harmony of cause and conditions, should it not be observed in the harmony? However, it is not observed in the harmony.

MCCAGNEY (Skt):
If an effect exists in the whole of cause and conditions, all of the whole would never be included in it and all of the whole is not included by it.

NISHIJIMA (Skt?):
3. Belonging to Reason or belonging to many Real Truths, There might be possibility for the Inclusive Grasp to be born in such a situation. The Result exists really relying upon the Inclusive Grasp, But how is it possible for the Inclusive Grasp to be born newly?

STRENG (Skt):
3. If the product is in the aggregate of causes and conditions, Would it not be "grasped" i.e., located in the aggregate? But it is not "grasped" in the aggregate.

BOCKING (Ch):
20v3 If within the combination of conditions The effect does exist It should exist within the combination But in reality it cannot be found.

BATCHelor (Tb):
If the product is in the combination of causes and conditions, it should be perceptible in that combination but it is not perceptible in the combination.

DOCTOR (Tb):
If effects are present in the assemblies Of their causes and conditions, They should be perceptible in those assemblies, And yet they are not perceptible in those assemblies. [XX.3]

GARFIELD (Tb):
3. If the effect is in the combination Of causes and conditions, Then it should be grasped in the combination. But it is not grasped in the combination.

GARFIELD-SAMTEN (Tb):
3. If the effect were in the assemblage Of causes and conditions, Then it should be found in the assemblage. But it is not found in the assemblage.

HAGEN (paraphrase):
20.3 If the effect is in the combination of causes and conditions, it should be found in the combination. But it is not.

PINGALA COMMENTARY

20/3 If there is an effect which comes from within a combination of conditions, then if it has form, it should be visible, and if it is formless it should be conceivable. But in reality no effect can be found within the combination. Therefore it is not correct (to say) that the effect inheres in the combination.

GARFIELD COMMENTARY

3. First, suppose that the effect already exists somehow in the combination of phenomena on which it depends. Then in grasping that is, in conceiving or perceiving - that collection, we should, ipso facto, grasp the effect. But we do not. Consider the set of conditions of a match lighting. There is the presence of sulphur, friction, oxygen, and so forth. But neither in virtue of conceiving of these things nor in virtue of seeing them do we see fire.
Kārikā XX.4

ENGLISH TRANSLATIONS

INADA (Skt):  
Verse 4 - If the effect is not in the assemblage of cause and relational conditions, then the causes and relational conditions would be similar to non-causal and non-relational conditions.

JONES (Skt):  
[4] If the effect is not in the combination of causes and conditions, then the causes and conditions would be the same as no cause and no conditions.

KALUPAHANA (Skt):  
If the effect were not to exist in the harmony of cause and conditions, then the cause and conditions would be comparable to non-cause and non-conditions.

MCCAGNEY (Skt):  
If the effect does not exist in the whole of cause and conditions, causes and conditions would be the same as uncaused by means of conditions.

NISHIJIMA (Skt?):  
4. Belonging to Reason or belonging to many Real Truths, Being helped by the Inclusive Grasp, there might be possibility for result not to exist at all.

Many Reasons and many Truths are actually thrown away, And what are not reasonable and what are not true might be full there.

STRENG (Skt):  
4. If the product is not in the aggregate of causes and conditions, Then the causes and conditions would be the same as non-causes and non-conditions.
PINGALA COMMENTARY

20/4 If there is no effect within the combination of causes, then the causes and conditions will be the same as non-causes and conditions. If is like milk being the cause and condition of cream. If there is no cream within the milk, then, since there is no cream within water either, if the milk contains no cream it is the same as water, and we should not say that cream comes only from milk. Therefore (to say) that there is no effect within the combination of causes is not correct.

Question. A cause, having operated as a cause to bring about an effect, ceases, and thus there is cause and effect without such errors (as those above).

Reply:

KALUPAHANA COMMENTARY

If the identity theory is valid, then the fruit could be observed (grhyeta) in the harmony itself even before it is produced through such harmony. However, Nagarjuna assumes that it is not observed or grasped in this manner. Once again this confirms our view that Nagarjuna is not a mere dialectician, but an empiricist who appeals to experience, as he did at 1.5. If, on the contrary, the fruit is not found in the harmony, then the cause and the conditions would be rendered in-effective.

GARFIELD COMMENTARY

4. On the other hand, Nāgārjuna argues, if the proponent of inherently existent dependence argues that the effect is not present in the combination, he would have to say that there is no difference between actual conditions of an effect and an arbitrary collection of phenomena with no relation at all to it. Because the very point of this analysis is to explain how a particular set of conditions determines an effect. For Nāgārjuna, as we should be able to see by recalling his treatment of dependent origination and the relation between conditions and their effects in Chapter I, this is no problem: There is simply no general metaphysical answer to such a question for a Madhyamika philosopher. A collection of conditions determines its effect simply because when those conditions are present, that effect arises. That fact may in turn be empirically explicable by other regularities. But there is no independent foundation for the network of regularities itself. However, for the substantialist there must be some analysis of the collection of conditions itself that answers the question regarding how that collection has the power to produce that effect. And the answer the opponent proposes is that it does so because the effect is inherently present in some sense in that collection.

| gaṅ byin pa daṅ gaṅ 'gags pa'i || rgyu yi bdag ŋid gnis su 'gyur |

**ENGLISH TRANSLATIONS**

INADA (Skt): Verse 5 - If the cause gives to the effect a causal nature before extinguishing itself, then there will be a dual causal form of the given and the extinguished.

JONES (Skt): [5] If its status as “the cause” ceases after its causal power is passed on to the effect, there would be a dual nature to the cause: what was given to the effect and what was stopped.

KALUPAHANA (Skt): If the cause were to cease having passed on the causal status to the effect, then there would be two forms of the cause: the given and the ceased.

MCCAGNEY (Skt): If the cause is stopped by the causality having been given to the effect, that given and that stopped would be two forms of cause.

NISHIJIMA (Skt?): 5. Reason is usually given as result, And so Reason is usually suppressed actually. What is presented, can be what is neglected, Because, relying upon Reason, the two kinds of factors of spirits might manifest them.

STRENG (Skt): 5. If a cause, having given the cause for a product, is stopped, Then that which is "given" and that which is stopped would be two identities of the cause.

WESTERHOFF (Skt): XX.5 If the cause ceased to exist after having passed on the causal power of [bringing about] the fruit, the cause would have a double nature: the given [causal power] and the ceased [nature after having passed on the causal power].

ROBINSON (Skt): If, having provided the cause for the effect, a cause is extinguished, then what is provided and what is extinguished would be two selves of the cause.

BOCKING (Ch): 20v5 If a cause gives cause to an effect
And having caused, then ceases,
This cause has a dual substance
One giving, and one ceasing.

BATCHelor (Tb): If the cause stops once it has given the cause to the fruit, there would be a double nature of the cause: one that gives and one that stops.

DOCTOR (Tb): If the cause ceases to be,
Having been supplied to its effect,
It follows that the cause has two identities,
One supplied and another that ceases. [XX.5]

GARFIELD (Tb): 5. If the cause, in having its effect,
Ceased to have its causal status,
There would be two kinds of cause:
With and without causal status.

GARFIELD-SAMTEN (Tb): 5. If the cause ceases,
Having provided causation to the effect,
There would be two kinds of cause:
The causation that has been provided and the cause that has ceased.

HAGEN (paraphrase): 20.5 If the cause were to cease after passing its causal status to the effect, then there would be two kinds of cause: one with and one without causal status.
20/5 If a cause, having operated as the cause for an effect then ceases, such a cause will have a dual substance, one called 'giving cause', the other called 'ceasing cause'. This is not correct, because it would be one dharma having two substances. Therefore it is not the case that a cause, having operated as the cause for an effect, then ceases.

Question: If one says that a cause, without giving rise to an effect, operates as a cause and then ceases and an effect arises, what is wrong in this?

Reply:

5. At this point, Nāgārjuna turns to the temporal relation between the effect, the cause, and the combination of conditions that together with the primary cause of the effect bring about the effect. The position that he is worrying about is this: Effects depend upon particular causes, but those causes need the cooperation of supporting conditions in order to be efficacious. The familiar example in this context is that of the seed and the sprout. The seed, according to the proponent of such a position, causes the sprout, but only if there is soil, water, air, and so forth, to support it. Nāgārjuna then complains that on this view the word “cause” is being used equivocally: In one sense it is used to refer to things - the primary causes - that really don’t cause anything. In the other sense, it is used to refer to those that really have causal status - namely, the entire assemblage of conditions that are necessary and sufficient for the arising of the effect.
Kārikā XX.6

hetum phalasyādattvā ca yadi hetur nirudhyate |
hetau niruddhe jātam tat phalam āhetukaṃ bhavet ||6||

| rgyu 'gags nas ni skyes pa yi | | 'bras bu de dag rgyu med 'gyur |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 6 - If, however, the cause does not give the effect a causal nature before extinguishing itself, then the effect, arising after the cause extinguishes itself, will have no cause.

JONES (Skt):
[6] If the cause ceases to exist before it produces the effect, the effect would be a product without a cause.

KALUPAHANA (Skt):
If the cause were to cease without passing on the causal status to the effect, then the effect that is born when the cause has ceased would be without a cause.

MCCAGNEY (Skt):
If the cause is stopped by the causality not having been given to the effect, that effect produced where the cause stopped would be without cause.

NISHIJIMA (Skt?):
6. When any result hasn’t been given as the reason actually, Then the reason should be erased at that time.
Relying upon the Reason, a birth is actually suppressed sometimes.
Then a result can be maintained without any kind of reason.

STRENG (Skt):
6. If a cause without having given the cause for a product is stopped Then, the cause being stopped, the product would be produced as something derived from a non-cause (ahetuka).

WESTERHOFF (Skt):
XX.6 If the cause ceased without having passed on its causal power to the effect, that effect which is born when the cause has ceased would be without cause.

ROBINSON (Skt):
If, without having provided the cause of the effect, a cause is extinguished, then, the cause having been extinguished, that effect would be born without cause.

BOCKING (Ch):
20v6 If a cause, without giving rise to an effect, Having operated as a cause then ceases.
The cause having ceased when the effect arises, Such an effect will be uncaused.

BATCHelor (Tb):
If the cause stops without having given the cause to the fruit, those fruits which are born after the cause has stopped would be uncaused.

DOCTOR (Tb):
If a cause ceases to be, Without having been supplied to its effect.
The effects that arise when it has ceased Do not have any cause. [XX.6]

GARFIELD (Tb):
6. If the cause, not yet having Produced its effect, ceased, Then having arisen from a ceased cause, The effect would be without a cause.

GARFIELD-SAMTEN (Tb):
6. If the cause, not yet having Provided causation to its effect, ceased, Then, having arisen from a ceased cause, The effect would causeless.

HAGEN (paraphrase):
20.6 if the cause were to cease before passing its causal status to the effect, then the effect, having arisen from a ceased cause, would be without a cause.
20/6 If a certain cause, without giving rise to an effect, operates as a cause and then ceases, then, the cause having already ceased when the effect arises, the effect will be uncaused. But this is not correct, and why? We can manifestly observe that there is no effect which is produced without a cause. Therefore, your statement that a cause, without giving rise to an effect, may operate as a cause and then cease, and then an effect arises, is not correct.

Question: What is wrong in saying that the effect is produced in the moment of combination of conditions?

Reply:

The metaphysicians recognized two types of causes—the concomitant (sahabhu) and the associated (samprayuktaka) as being presently existing and producing the effect (sahabhu-samprayuktaka-hetu vartamanau phalam prayacchati, Akv). They are supposed to give rise to the effect at the same time (samana-kalam ... phaladana, ibid.) However, with the dominance of the linear view of causation as well as the theory of momentary destruction (ksana-bhanga) of phenomena, the question was raised as to how the cause in the present moment could give rise to the effect in the succeeding moment. The answer was that the effect comes to be without a pause or gap (samanantara nirvarttanat). The effect is both given (datta), in the sense of being put forward (prayacchati) by the cause, and at the same time not given (na punah dattam, because it is not identical (tad eva) with the cause (ibid.).

These are some of the speculations referred to by Nagarjuna. He insists that if a cause were to perform the dual task of providing causal efficacy and ceasing at the same time, then it should possess dual natures (atma-dvayam). If, on the contrary, it were to cease, without passing over the causal efficacy, then the effect would be without a cause. These indeed are the implications of the conclusions reached by the metaphysician that the effect is both given (datta) and not given (na datta), referred to in the Abhidharmakosabhasya.

6. But, he urges, if we want to assert that the cause, instead of changing from a cause to a noncause, simply ceases at the moment when it produces its effect, we still have a problem. Because by the time the effect emerges, the cause” will have vanished, and the effect will then have emerged without a cause and so will be a causeless effect.
Kārikā XX.7

If, again, the effect and the assemblage appear together, then it would follow that the producer and the produced are contemporaneous (i.e., exist in the same moment).

BOCKING (Ch):
20v7 If in the moment of combining of conditions an effect is produced, then producer and product would occur simultaneously.

GARFIELD-SAMTEN (Tb):
7. If the product would become visible concomitantly with the aggregate of causes and conditions, then it would logically follow that the producer and that which is produced exist in the same moment.

HAGEN (paraphrase):
20.7 If the effect were to arise simultaneously with its combination, it would logically follow that the producer and the produced would be contemporaneous.

PINGALA COMMENTARY

20/7 If an effect is produced in the moment of combination of conditions, then producer and product would occur simultaneously, but this is not the case, and why? It is like a father and son, who cannot be born at the same time. Therefore your assertion that an effect arises in the moment of combination of conditions is not correct.

Question. What error is there in (saying that) the arising of the effect comes first, and subsequently conditions combine? Reply:

GARFIELD COMMENTARY

7. Turning now to the entire collection as determinative of the effect, Nāgārjuna points out that the effect cannot be simultaneous with the occurrence of a collection of its conditions for all of the reasons that he has advanced previously against the simultaneity of causes and their effects.
Kārikā XX.8

pūrvam eva ca sāmagryāḥ phalaṃ prādurbhaved yadi |
hetupratyayānimuktaṃ phalam āhetukaṃ bhavet ||8||

ruò xiān yǒu guǒ shēng ér hòu zhòng yuán hé;gé |

| rgyu daṅ rkyen rnams med pa yi | | ’bras bu rgyu med ’byuṅ bar ’gyur |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 8 - Moreover, if the effect appears prior to the assemblage, then it, without cause and relational condition, will have a non-causal nature.

JONES (Skt):
[8] If the effect were to arise before the combination of causes and conditions, the effect would be free of causes and conditions and thus causeless.

KALUPAHANA (Skt):
If the effect were to appear even prior to the harmony, the effect, distinct from causes and conditions, would be without a cause.

MCCAGNEY (Skt):
If the effect would arise prior to the whole, the effect, separated from cause and conditions, would be without cause.

NISHIJIMA (Skt?):
8. Just before relying upon the Inclusive Grasp, Result has possibility to manifest itself at that time. When Reason and the Truth have been emancipated themselves, There might be possible for result to be identified with something unreasonable.

STRENG (Skt):
8. If the product would become visible before the aggregate, Then the product, without being related to causes and conditions, would be something derived from a non-cause.
PINGALA COMMENTARY

20/8 If, as you say, there is production of the effect before conditions have as yet combined, this is not correct, because the effect would be separate from its causes and conditions, and hence would be termed a causeless effect. Therefore to say as you do that an effect arises before conditions have combined, is not correct.

Question: What is wrong in saying that the cause ceases and transforms into the effect?

Reply:

KALUPAHANA COMMENTARY

Moving from the individual came to the harmony of conditions (pradurbhavet) Nagarjuna raises similar questions. If the effect were to appear (pradurbhavet) along with the harmony of conditions, then the distinction between the producer and the produced would collapse. Similarly, if the effect were to precede the harmony, then causation would be rendered meaningless.

GARFIELD COMMENTARY

8. But neither, of course, can the effect arise before the conditions are met since the effect would then “arise spontaneously, and this possibility has been refuted earlier.
Kārikā XX.9

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 9 - If the effect is taken to be the transition of a cause which had extinguished itself, then it follows that the cause would be a re-origination of an already originated cause.

JONES (Skt):
[9] If the cause were stopped, the effect would be a transformation of the cause, and there would be a rebirth of the previously-born cause.

KALUPAHANA (Skt):
If it is assumed that when the muse has ceased to exist, the effect would become the transformation of the cause, then it follows that there is a rebirth of a cause that was already born.

MCCAGNEY (Skt):
If, where the cause has ceased, the cause would transmigrate to the effect, a rebirth of an already-born cause follows.

NISHIJIMA (Skt?):
9. When Result has been vanished, The combination between relying upon Reason and following upon Reason, has existed, Before being birth, actually from Reason, The next birth must be cling to hesitation..

STRENG (Skt):
9. If, when the cause of the product is stopped, there would be a continuation of the cause, It would logically follow that there would be another production of the previous producing cause.

BOCKING (Ch):
20v9 If the cause transforms into the effect The cause will reach the effect Thus a preceding producing cause Having produced, will produce again.

BATCHELOR (Tb):
If [when] a cause stops, it is forever transferred to the fruit, then it would follow that the cause which was born before would be born again.

DOCTOR (Tb):
If a cause ceases,
Yet is transferred to its effect,
It follows that a cause already arisen Would arise once more. [XX.9]

GARFIELD (Tb):
9. If, the cause having ceased, the effect Were a complete transformation of the cause, Then a previously arisen cause Would arise again.

GARFIELD-SAMTEN (Tb):
9. If, the cause, having ceased, Passed completely into the effect, Then a previously arisen cause Would, absurdly, arise again.

HAGEN (paraphrase):
20.9 If, the cause having ceased, the effect were now the transformation of the spent cause, there would be the rebirth of a cause that was already born.
PINGALA COMMENTARY

20/9 Causes are of two kinds. One is the preceding producing (cause), the other is the co-operative producing (cause). If a ceased cause changes into an effect, then the preceding producing cause would decay and again arise, but this is not correct, and why? A thing which has already ceased should not arise again.

(27a2) If you say that a particular cause changes into an effect, this is also incorrect, and why? If it is that particular (cause) then it cannot be regarded as changed. If it is changed, then, it cannot be regarded as that particular (cause).

Question: The cause does not completely cease, only its designation (as a cause) ceases; the substance of the cause changes into the effect, just as a lump of clay turns into a jug. The designation of 'lump of clay' is lost, and the designation of 'jug' is produced.

Reply:

(27a6) If the lump of clay ceases before the jug is produced, this does not constitute transformation. Also, the substance of the lump of clay does not produce only jugs. Urns and so forth all come out of clay. If a lump of clay were merely a designation it could not change into a jug. 'Change' means as milk changes into cream. Therefore, to say as you do that although the designation of the cause ceases it changes into the effect is not correct.

Question: Even though the cause has ceased and disappeared, it can still produce an effect. Therefore, there are effects, and no such errors.

Reply:

KALUPAHANA COMMENTARY

Among the variety of causes that were formulated to account for a continuous effect (nisyanda-phala) are complementary (sabhaga) and universal (sarvatraga) causes (Akb). Explained in the light of the theory of moments, a universal cause would mean the continuous arising of the same cause in order to account for the continuous effect. The continuous effect (nisyanda-phala) thus turns out to be a transformation (samkramana) of the cause (hetu). Nagarjuna refuses to recognize the rebirth of the same cause that has ceased.

GARFIELD COMMENTARY

9. Nāgārjuna now responds to the following possible reply: The effect in question is not an entity distinct from the cause or the collection of conditions that serve as its ground. Therefore these questions about the temporal relations between events involving distinct entities do not arise. The sprout is not distinct from the seed, but is merely a complete transformation of it. But, Nāgārjuna argues, it is also not possible to characterize the effect as a simple change of nature of a single entity that was the cause before the transformation. For then we would have to say that the cause remains in existence after the effect arises and so would have to keep producing the same effect over and over again.

This argument might seem not to have much bite. After all, one might think, the alternative being proposed seems quite like Nāgārjuna’s own view that we should not think of causes and their effects as distinct entities. But this would be wrong. This argument succeeds because the opponent denies the distinctness in entity between cause and effect by positing an identity in essence and by appealing to that essence to explain the causal potential of the cause. If the essence of the entity is what determines its causal potential, then if that essence remains, the potential should remain as well. If the essence does not remain, then the language of transformation must be abandoned: If the essence remains, and the language of transformation is retained at an accidental level, the claim that there is an essential causal principle must be rejected.

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 10 - How could an already extinguished cause give rise to an already arisen effect? Again, how could a cause which is concomitant with an effect give rise to the latter?

JONES (Skt):
[10] But how could a cause that has ceased and vanished give rise to an effect that has already arisen? In addition, how could an enduring cause produce an effect if it is joined to the effect?

KALUPAHANA (Skt):
How can a cause that has ceased, has reached its end, give rise to an effect that is already arisen? How can a cause, even though enduring, produce an effect, when it is separated from the latter?

MCCAGNEY (Skt):
How would what is stopped and ceased give rise to an arisen effect?
And how would an enduring cause be an occasion that gives rise to an effect?

NISHIJIMA (Skt?):
10. There is possibility that Result has been born having become bigger,
But how is it possible for suppressing birth to become weaker actually?
How is it possible for the establishment of Reason to be the cause of reducing the Birth?
Relying upon result, the part, which has been concealed, has been kept by sheet.

STRENG (Skt):
10. How can that which is stopped, i.e., something which has disappeared, produce the arising of a product? How could a cause which is enclosed by its product, even though it persists, originate that product?
PINGALA COMMENTARY

20/10 If a cause has ceased and is gone, how can it possibly produce an effect? And if the cause does not cease but combines with the effect, how can it produce the effect?

Question: Particular causes have effects everywhere, and such effects arise.

Reply:

KALUPAHANA COMMENTARY

Throughout the present analysis we have indicated that the philosophical method adopted in the Abhidharma did not create any metaphysical problems until the interpreters adopted a theory of moments that were followed by theories of identity and difference. The variety of causes (hetu) and conditions (pratyaya), even though not presented in such detail and in identical terminology in the discourses, is not incompatible with the teachings embodied therein. However, even a cursory glance at the manner in which the interpreters of the Abhidharma struggled with these different causes and conditions (see AK Chapter ii; Akb pp. 38-110) is sufficient to indicate the magnitude of the problems they were faced with.

Nagarjuna continues his analysis showing how a cause that has ceased (niruddha) or one that remains (tisthan), yet is distinct from the effect (phalena vrtah), could never give rise to an effect.

GARFIELD COMMENTARY

10. Nāgārjuna now returns to the temporal trilemma. As he has argued before, just as a cause cannot follow or be simultaneous with its effect, the precedence of cause over effect is problematic as well. For when there is a cause, there is no effect. When there is an effect, there is no cause. And if we appeal to temporal overlap, we inherit all of the problems with precedence, simultaneity, and collections. In introducing the idea of a cause being “joined” with its effect Chrel-bal, Nāgārjuna is introducing a putative causal link into the discussion. One who proposes simultaneity or temporal overlap of cause with effect might be doing so in order to make possible such a link. But Nāgārjuna here claims that positing that link does not overcome the temporal difficulties he has presented. In XX: 11-15, Nāgārjuna summarizes the results of these arguments. Causes, whether single or composite, cannot precede, coincide with, or follow their effects; causes cannot produce their effects in isolation, nor can collections of causes inherently produce their effects:

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 11 - On the other hand, what kind of an effect would result from a cause without the nature of concomitance? For, a cause will not give rise to an effect regardless of whether the latter is projected or unprotected. - Note: Projected and unprojected are peculiar translations for drstva and adṛṣṭvā respectively and they refer to the state of ontological relationship or non-relationship from the standpoint of a cause and its effect.

JONES (Skt):
[11] However, if the effect is not joined to the cause, what effect could the cause produce? The cause does not produce either a seen or unseen effect.

KALUPAHANA (Skt):
What cause, even if it were not separated from the effect, will give rise to the effect? A cause does not produce an effect either imperceptibly or perceptibly.

MCCAGNEY (Skt):
Moreover, the occasion which would give rise to the effect is not that effect. Indeed, the effect is not produced by either a seen or an unseen cause.

NISHIJIMA (Skt?):
11. Now, relying upon cause, the situations, which have been concealed, are like that. Who among many people, does bear result? Because it is not always true for a blind person not to look at anything absolutely,. Therefore there is possibility for Reason to produce result.

STRENG (Skt):
11. Or if that cause were not enclosed by the product, which product would it produce? For the cause does not produce the product, having seen or not having seen the product.
PINGALA COMMENTARY

20/11 Suppose that a certain cause does not 'see' its effect. It should not even produce that effect, how much less if it sees it? If the cause does not itself see the effect, then it should not produce the effect. Why is this? If it does not see the effect, the effect will not follow the cause. Moreover: if the effect does not yet exist, how can (the cause) produce the effect? If the cause has previously seen the effect, it does not need to produce it again, since the effect already exists.

Further.

KALUPAHANA COMMENTARY

When the analytical process was carried to its extreme, many events, which under normal contexts would not have been questioned, came to be doubted. For example, instead of a rented event, analysis produced two: a relation and an event. When the normal empiricist criteria were adopted in the latter case, one was compelled to assume that the relation is not perceived in the same way as the event is perceived. The metaphysician was thus compelled to insist upon the substantial existence of the relation. "Birth is the arising of what is to be born and this does not take place without causes and conditions," so says the Abhidharmakosa (janyasya janika jatir na hetu-pratyayair vina, ii.49). The bhasya on this passage continues to argue about the nature of this "birth" (jati), insisting that the genetive case (sasthi) (as in the statement, "arising of what is to be born") makes no sense if birth (jati) is not perceived in the same way as "that which is to be born" (janika) is perceptible. The Sautrantika Vasubandhu argues against this position saying that "numbers, limits, distinction, union, analysis, otherness, sameness" are recognized as reals (sattva) in the speculations of the heretics (tirthakara), and that these are needed only to establish the knowledge (buddhi) of the reality of "the one, the dual, the great, the individuated, the united, the separated, the other, the same, etc." To illustrate his point of view, he refers to the example of "the union of form" (rupasya samyoga) and maintains that the genetive case indicates the ownnature (svabhava) of "form." However, in his own Sautrantika view it is a mere designation (prajnaptimatram, Akb).

It is this controversy regarding the reality or unreality of numbers, conjunctions, disjunctions, etc. (a controversy that has continued to plague philosophers in the modern world) that Nagarjuna is referring to in the present verse when he uses the terms drstva (seen) and adrstva (unseen).

GARFIELD COMMENTARY

11. Here Nāgārjuna returns to his critique of the idea of a causal nexus. He points out that though that idea has been shown to be incoherent, it is the only way that one can make sense of a real causal link or of inherently existent production. So in its absence, we cannot make sense of the production of an effect by its cause. In the last two lines, Nāgārjuna makes use of the strange metaphor of a cause seeing its effect to denote this link (thongs-ba). (fn 100. Inada, with some philosophical justification, translates this as "projected." But I see little lexical merit in that choice.) This is clearly a metaphor for this link, suggesting that whether it is forged by contiguity or by some other means at a distance, it will be explanatorily impotent.

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 12 - Indeed, it is not possible to have a union of a past effect with a past cause nor with a future and present cause.
- Note: This verse as well as the following two refer to the three possible combinations of an effect with respect to its past, present, and future conditions.

JONES (Skt):
[12] There is never seen a combination of a past effect with a past cause, nor with a future cause, nor with a cause that is currently arising.

KALUPAHANA (Skt):
Indeed, the assemblage of a past effect with a past or a future or a present cause is not evident.

MCCAGNEY (Skt):
Indeed, a past cause is not together with a past effect.
What arises does not occur accompanied by what is present nor by what is not present.

NISHIJIMA (Skt?):
12. Because being not included into the past, and because not relying upon the past,
Being included by result suggests to be relying upon cause.
In the case not without birth, or not with birth,
The real contact must be recognized without fail.

STRENG (Skt):
12. There is no concomitance of a past product with a past cause, a future cause or present cause.

BOCKING (Ch):
20v12 If you say that a past cause
Goes with a past effect,
Or future, or present effect;
These never combine.

BATCHelor (Tb):
The simultaneous connection of a past fruit with a past, a future and a present cause never exists.

DOCTOR (Tb):
A past effect is never in contact
With a cause that has passed,
Nor with one that has not arisen,
Or one that has already arisen. [XX.12]

GARFIELD (Tb):
12. There is never a simultaneous connection
Of a past effect
With a past, a non-arisen,
Or an arisen cause.

GARFIELD-SAMTEN (Tb):
12. There is never simultaneous contact
Of a past effect
With a past, non-arisen,
Or arisen cause.

HAGEN (paraphrase):
20.12 The concomitance of a past effect with either a past, present, or future cause is not evident.

INADA (Skt):
Verse 14 - Indeed, it is not possible to have a union of a future effect with a present cause nor with a future and past cause.

JONES (Skt):
[14] Nor is there ever found a combination of a future effect with a currently arising cause, or with a future cause, or with an extinguished cause.

KALUPAHANA (Skt):
Indeed, as assemblage of the future effect with a present or a future or a past cause is not evident.

MCCAGNEY (Skt):
Indeed, a present cause is not together with a nonpresent effect.
What arises does not occur accompanied by what is not present nor by what has perished.

NISHIJIMA (Skt?):
14. Because, not belonging to be born and relying upon to be born, are different,
Being included by result suggests to be relying upon cause.
Not relying upon not being born, and not relying upon disappearance,
The Inclusive Grasp is being recognized at every moment.

STRENG (Skt):
14. Certainly there is no concomitance of a future product with a present cause, future cause or past cause.

BOCKING (Ch): 20v14 If you say that a present cause Goes with a present effect Or with a future or past effect – These never combine.

BATCHelor (Tb):
The simultaneous connection of a future fruit with a present, a future and a past cause never exists.

DOCTOR (Tb):
An effect that has not arisen Is never in contact With a cause that has arisen,
Has not arisen, or that has passed. [XX.14]

GARFIELD (Tb):
14. There is never a simultaneous connection Of a nonarisen effect With a past, a nonarisen,
Or an arisen cause.

GARFIELD-SAMTEN (Tb):
14. There is never simultaneous contact Of a non-arisen effect With an arisen, non-arisen,
Or a past cause.

HAGEN (paraphrase):
20.14 The concomitance of a future effect with either a present, future, or past cause is not evident.
PINGALA COMMENTARY

20/14 A past effect does not combine with a past, future or present cause. A future effect does not combine with a future, present or past cause. A present effect does not combine with a present, future or past cause. These three kinds of effect never combine with past, future or present causes.

Further:

KALUPAHANA COMMENTARY

After analysing the conception of “harmony” (samagri), Nagarjuna now returns to the earlier notion of “assemblage” (samgati) (see comments on XX. 1). The notion of assemblage may not have caused philosophical problems for the early Buddhists who adopted an empiricist theory of change and causation. But, for Nagarjuna, the conception of assemblage, like the notion of harmony, does not work, so long as it is associated with the metaphysical conception of time.

Vasubandhu, as a Sautrantika, himself raises the more radical question as to how the mind (manas) that has already ceased can assemble with future and present concepts (dharma) and mental consciousness (manovijnana) in order to produce contact (Akb , manindriyas punar niruddhasyangatavar-tamanabhyam dharma-manovijnanabhyam katham samnipatah). He then refers to a variety of insights (bhedam gata buddhayah) of different teachers, and the controversy appears to be too complicated. He dismisses them saying: “Enough of this argument” (alam prasangena). Nagarjuna's reluctance to accept any one of these views is, therefore, the result of his realization that they are all metaphysical views not allowing for any definite answers or solutions.
Kārikā XX.15

INADA (Skt):
Verse 15 - Without partaking in a union, how could a cause give rise to an effect? But again, with the partaking in a union, how could a cause give rise to an effect?

JONES (Skt):
[15] Where there is no combination, how can a cause produce an effect? Where there is a combination, how can a cause produce an effect?

KALUPAHANA (Skt):
When an assemblage does not exist, how can a cause produce an effect? When an assemblage exists, how can a cause produce an effect?

MCCAGNEY (Skt):
Where there is no real association, how is the effect born by the cause?
Or where there is a real association, how is the effect produced by the cause?

NISHIJIMA (Skt?):
15. Because of the no-existence of the mutual contact, was the reason, How is it possible for the result to be born?
The fact, or the clear meeting, is the reason, therefore, How is it possible for the result will be born in future?

STRENG (Skt):
15. If there is no concomitance whatever, how would the cause produce the product? Or if a concomitance exists, how would the cause produce the product?

BOCKING (Ch):
20v15 If there is no combining, How can a cause produce an effect?
If there is combination How can a cause produce an effect?

BATCHelor (Tb):
When there is no connection, how can a cause produce fruit? Even when there is connection, how can a cause produce fruit?

DOCTOR (Tb):
If there is no contact, How could a cause produce its effect?
Even if there is contact, How could a cause produce its effect? [XX.15]

GARFIELD (Tb):
15. Without connecting, How can a cause produce an effect?
Where there is connection, How can a cause produce an effect?

GARFIELD-SAMTEN (Tb):
15. Without contact, How can a cause produce an effect?
Even where there is contact, How can a cause produce an effect?

HAGEN (paraphrase):
20.15 Without concomitance, how can a cause produce an effect? With concomitance, how can a cause produce an effect?
PINGALA COMMENTARY

20/15 If cause and effect do not combine then there is no effect. If there is no effect, how can the cause produce an effect? If you say that the cause can produce the effect in the moment when cause and effect combine, this is also incorrect, and why? If the effect is within the cause, then, the effect already being existent within the cause, how can it arise again?

Further:

KALUPAHANA COMMENTARY

Here the cause (hetu) is defined in terms of assemblage (Samgati) which is either existent (sat) or nonexistent (asat). A cause defined in such a way turns out to be substantialist or non-substantialist. The former implies permanence and the latter, annihilation. Nagarjuna rejects both.

GARFIELD COMMENTARY

15. At this point, Nāgārjuna turns directly to the connection between emptiness and the dependence of effects on collections of conditions. The opponent now asks how a cause or collection of causes that does not contain the effect in any way can produce that effect:
Kārikā XX.16

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 16 - If a cause is a void with respect to an effect, how could it give rise to the effect? If, on the other hand, a cause is not a void with respect to an effect, how could it give rise to the effect?

JONES (Skt):
[Objection:16ab] If a cause is empty of its effect, how can it produce the effect? [Reply:16cd]: If a cause is not empty of its effect, how can it produce the effect?

KALUPAHANA (Skt):
If it is assumed that the cause is empty of an effect, how can it produce an effect? If it is assumed that the cause is not empty of an effect, how can it produce an effect?

MCCAGNEY (Skt):
If the cause is open to an effect, how is an effect produced? If the cause is not open to an effect, how is an effect produced?

NISHIJIMA (Skt?):
16. When Reason is in the balanced autonomic nervous system relying upon the result, How is it necessary for us to dig up any kind of cause for such a state intentionally? When even in the case that Reason has lost the balance of the autonomic nervous system, How is it necessary for us to dig up any kind of cause for such a state intentionally?

STRENG (Skt):
16. If the cause is empty of a product, how would it produce the product? If the cause is not empty of a product, how would it produce the product?

ROBINSON (Skt):
If the cause is empty of effect, how can it produce the effect? If the cause is not empty of effect, how can it produce the effect?
PINGALA COMMENTARY

20/16 'If a cause has no effect' means that because it has no effect a cause is empty, so how can the cause produce an effect? It is like someone who is not pregnant; how can they produce a child? If the effect pre-exists in the cause, then, since the effect already exists, it does not have to be produced again. We shall now further discuss the effect.

KALUPAHANA COMMENTARY

Turning around, Nagarjuna now takes up the conception of the effect or fruit (phala). If the cause is empty (sunya) of the effect, it can never produce an effect. Neither is it appropriate to assume that the effect is produced by the cause if it is already in the cause, hence not empty (asunya) of the effect.

GARFIELD COMMENTARY

16. Nāgārjuna, echoing the argument of Chapter I, replies that only if cause and effect are empty can production be understood. The next verse explains this in more detail:
ENGLISH TRANSLATIONS

INADA (Skt):
Verse 17 - An effect which is a non-void (asunya) will not arise nor extinguish itself. For, that which is a non-void will be non-arising and non-extinguishing.

JONES (Skt):
[17] A non-empty effect does not arise, and being non-empty it would not cease - it would be unceasing and unarisen.

KALUPAHANA (Skt):
A non-empty effect will not arise; a non-empty effect will not cease. For, the non-ceased and non-arisen will also be the non-empty.

MCCAGNEY (Skt):
An effect will not arise by being nonopen and will not cease by being nonopen.
What is not open will be nonarising and nonceasing.

NISHIJIMA (Skt?):
17. Result will never manifest itself as the unbalanced autonomic nervous system.
And the unbalanced autonomic nervous system will never be suppressed at all,
The state of no suppression also does not appear,
And the concrete fact of the unbalanced autonomic nervous system will continue existing.

STRENG (Skt):
17. A non-empty product would not be originated, and a non-empty product would not be destroyed. Then that is non-empty which will not originate or not disappear.

ROBINSON (Skt):
A non-empty effect would not arise and would not perish; being non-empty, it would be unextinguished and unarisen.
KALUPAHANA COMMENTARY

This verse should clarify the meaning of the famous terms aniruddham ("non-ceased") and anutpannam ("non-arisen") more than any other statement of Nagarjuna. Whatever phenomenon (dharma) is characterized by Nagarjuna as "empty" (sunya) is without self-nature. If something possesses a self-nature, then it is not empty (asunya). As such, it can neither cease nor arise (anirodham anutpadam). Thus, an effect or fruit that is not empty and therefore is possessed of self-nature will not arise (notpatsyate) nor cease (nairotsyate).

GARFIELD COMMENTARY

17. If the effect were nonempty, as the opponent presupposes in wondering how the effect could be produced from empty causes, then since the inherently existent depends on nothing, the effect would be unproduced and would never cease. But there are no such things. So the putative problem case, the nonempty effect of empty causes, is not even possible.
Kārikā XX.18

Verse 18 - How could an effect which is a void (sunya) either arise or extinguish itself? Again it necessarily follows that that which is a Void will be non-arising and non-extinguishing.

INADA (Skt):
Verse 18 - How could an effect which is a void (sunya) either arise or extinguish itself? Again it necessarily follows that that which is a Void will be non-arising and non-extinguishing.

JONES (Skt):
[18] How will the empty arise? And how will it cease? If something is empty, it will be unceasing and unarisen.

KALUPAHANA (Skt):
How will the empty arise and how will the empty cease? If something is empty, it follows that it is nonceased and non-arisen.

MCCAGNEY (Skt):
How will what is open arise, how will what is open cease? Surely it follows that what is open is nonceasing and nonarising.

NISHIJIMA (Skt?):
18. How is it possible for the balanced autonomic nervous system will appear in future?
And how is it possible that the balanced autonomic nervous system will disappear too?
The balanced state of the autonomic nervous system will never be obstructed.
And what hasn’t been accomplished yet is belonging to the secular society too much.

STRENG (Skt):
18. How would that be produced which is empty? How would that be destroyed which is empty? It logically follows, then, that which is empty is not originated and not destroyed.

BOCKING (Ch):
20v18 Since an effect is empty it is not produced. Since an effect is empty it does not cease. Where an effect is empty It neither arises nor ceases.

BATCHelor (Tb):
How would empty [fruit] be produced? And how would the empty stop? It follows that that empty too is unstoppable and also unproducable.

DOCTOR (Tb):
How can the empty arise?
How can the empty cease?
It follows that the empty Has not ceased and not arisen. [XX.18]

GARFIELD (Tb):
18. How can the empty arise?
How can the empty cease?
The empty will hence also Be the nonceased and nonarisen.

GARFIELD-SAMTEN (Tb):
18. How can the empty arise?
How can the empty cease?
The empty would hence also, absurdly, Be the non-ceased and the non-arisen.

HAGEN (paraphrase):
20.18 How can the empty arise or cease? It follows that what is empty is non-arisen and non-ceased.
PINGALA COMMENTARY

20/18 If an effect is not empty, it should not be produced and should not cease. Why is this? If an effect already has a fixed existence within a cause, it does not need to be produced again, and since there is no production, there is no cessation. Therefore, because effects are not empty, they neither arise nor cease.

(27b 21) If you say that effects are empty, and hence do arise and cease this is also wrong, and why? If an effect is empty, emptiness means that there is nothing which exists, so how can arising and ceasing exist? This is why it is said that where the effect is empty, there is neither arising nor ceasing. Continuing, we shall now refute cause and effect in terms of unity and difference.

KALUPAHANA COMMENTARY

Taken by itself, this verse can be used to justify the view that according to Nagarjuna "emptiness" (sunyata) is the ultimate truth beyond all forms of description. Hence the negative description: "non-ceased" (aniruddham) and "non-arisen" (anutpannam).

However, considered along with XX. 17, which rejects the notion of identity presented by the Sarvastivadins as self-nature (svabhava), which according to Nagarjuna is "non-empty" (asunya), what is referred to as "empty" (sunya) in the present verse is more appropriately understood as a reference to the non-identity theory of the Sautrantikas. It may be remembered that the first Buddhist school to deny the Sarvastivada theory of self-nature was the Sautrantika school. How the Sautrantika theory of "emptiness" or "absence of substance" (nih-svabhava) and their theory of "momentary destruction" (ksana-bhanga) led to a denial of both arising and ceasing has already been pointed out (VII. 17 ff.).

As such, the present statement of Nagarjuna, following upon his refutation of identity, must involve a rejection of difference, the two extremes that he has persistently criticized. In other words, the Sarvastivada and Sautrantika theories both render arising and ceasing meaningless.

GARFIELD COMMENTARY

18. Nāgārjuna emphasizes here the double edge of the ontology of emptiness. Even though it is in virtue of the fact that conventional entities are constantly arising and ceasing that they are empty, their emptiness entails that they do not, from the ultimate standpoint, arise, cease, or abide at all. This is an eloquent statement of the interpenetration of the ultimate and the conventional truths: The very ground on the basis of which emptiness is asserted is denied reality through the understanding of emptiness itself. The emptiness of phenomena is, after all, asserted on the basis of their momentary impermanence. But that impermanence and the very existence of the impermanent objects asserted to be empty is not even present from the ultimate standpoint. Yet that, rather than constituting a self-refutation, constitutes a self-confirmation. For if anything were apparent from the ultimate standpoint, that phenomenon would be nonempty. It is the absence of any such phenomenon - not its presence - that confirms the analysis and that prevents it from lapsing into a view, in the pernicious sense. (fn 101: See the discussion of XXVII: 30 for more on this point.)

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 19 - It is not possible, indeed, for a cause and an effect to be identical. But again, it is not possible indeed for them to be different.

JONES (Skt):
[19] The identity of cause and effect does not occur. The difference of cause and effect does not occur.

KALUPAHANA (Skt):
The identity of cause and effect is indeed not appropriate. The difference between cause and effect is indeed not appropriate.

MCCAGNEY (Skt):
Indeed, an identity of cause and effect does not take place. Indeed, a difference between cause and effect does not happen.

NISHIJIMA (Skt?):
19. Belonging to Reason, and being included by Result, do not belong to the same group, Because they do not appear together at the same time. Belonging to Reason, and being included by Result, do not belong to the same group. Because both Reason and Result have also possibility to be manifesting their images together.

STRENG (Skt):
19. Certainly a oneness of cause and product is not possible at all. Nor is a difference of cause and product possible at all.

ROBINSON (Skt):
For oneness of cause and effect is never a fact, and otherness of cause and effect is never a fact.

BOCKING (Ch):
20v19 That cause and effect are one - This is never the case. That cause and effect are different - This, too, is not correct.

BATCHelor (Tb):
It is never possible that cause and fruit are identical. It is never possible that cause and fruit are other.

DOCTOR (Tb):
Cause and effect being identical Will never make sense. Cause and effect being different Will never make sense. [XX.19]

GARFIELD (Tb):
19. For cause and effect to be identical Is not tenable. For cause and effect to be different Is not tenable.

GARFIELD-SAMTEN (Tb):

GOLDFIELD (Tb):
If cause and result were one, Then producer and produced would be the same thing. If cause and result were different, Then causes and noncauses would be equivalent. (19)

HAGEN (paraphrase):
20.19 The identity of cause and effect is not appropriate. The difference between cause and effect is not appropriate.

GARFIELD COMMENTARY

19. Nāgārjuna here returns to the business of mobilizing destructive dilemmas against the view that any dependence of effects on collocations of conditions could be inherently existent. The argument in XX: 20 is based on the dichotomy of identity or difference of cause and effect and is drawn from Chapter I:
Kārikā XX.20

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 20 - If the cause and effect were identical there would be an identity of the producer and the produced. If they were different, however, then the cause would be the same as a non-causal cause.

JONES (Skt):
[20] If the identity of cause and effect did occur, the producer and product would be one. If the cause and effect were different, a cause would be the same as no cause.

KALUPAHANA (Skt):
If there were to be identity of cause and effect, then there would be oneness of producer and the produce. If there were to be difference between cause and effect, then the cause would be equal to a non-cause.

MCCAGNEY (Skt):
In the identity of cause and effect, the producer would be one with the product.
In the difference of cause and effect, the cause would be equal to no cause.

NISHIJIMA (Skt?):
20. Result and Reason perhaps might have the common characteristics together.
It is just the combination between the power to bear, and the state to be born.
It might be in the oneness between result and reason,
Therefore Reason and without relying upon Reason might be similarly the same.

STRENG (Skt):
20. If there were a oneness of the cause and product, then there would be an identity of the originator and what is originated. If there were a difference of product and cause, then a cause would be the same as that which is not a cause.

GARFIELD COMMENTARY

20. For the relation at issue in this chapter to be inherently existent, the collection of conditions would have either to be identical in nature or different in nature from the effect. If identical, we would have the absurd consequence that the effect was self-caused. But if the effect is totally different in essence, we have no explanation of how that collection of conditions produced that effect.
Kārikā XX.21

若果定有性 因為何所生
若果定無性 因為何所生

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 21 - How could a cause give rise to an effect which in its own nature is a complete being? But again, how could a cause give rise to an effect which in its own nature is an incomplete being?

JONES (Skt):
[21] How could a cause produce an effect that is truly real because of its own self-existence? How could a cause produce an effect that is not truly real because of its own self-existence?

KALUPAHANA (Skt):
How is it that a cause will produce an effect which comes m be on its own nature? How is it that a cause will produce an effect which does not come to be on its own nature?

MCCAGNEY (Skt):
What cause will give rise to an effect that truly exists as self-nature?
What cause will give rise to an effect that does not truly exist as selfnature?

NISHIJIMA (Skt?):
21. If Result is the subjective existence and the Real World. How will it be possible that Reason will bear something in future. If Result is the subjective existence, but not the Real World, How will it be possible that Reason will bear something in future.

STRENG (Skt):
21. Can a cause produce a product which is essentially existing in itself (svabhāva)? Can a cause produce a product which is not essentially existing in itself (svabhāva)?

BOCKING (Ch):
20v21 If the effect has a fixed, existent nature
What does the cause produce, which is produced?
If the effect has a fixed non-existent nature,
What does the cause produce, which is produced?

BATCHelor (Tb):
If fruit existed essentially, what would a cause produce?
If fruit did not exist essentially, what would a cause produce?

DOCTOR (Tb):
If an effect is existent by nature,
Then what could its cause produce?
I fan effect is nonexistent by nature,
Then what could its cause produce? [XX.21]

GARFIELD (Tb):
21. If an effect had entitihood,
What could have caused it to arise?
If an effect had no entitihood,
What could have caused it to arise?

GARFIELD-SAMTEN (Tb):
21. If an effect is inherently existent,
To what could a cause have given rise?
If an effect is inherently nonexistent,
To what could a cause have given rise?

HAGEN (paraphrase):
20.21 How can a cause produce an effect which exists by its own nature? How can a cause produce an effect which does not exist by its own nature?

KALUPAHANA COMMENTARY

The implications of the theories of identity and difference discussed at XX.17-18 are further elaborated in these three verse.

GARFIELD COMMENTARY

21. This attack on the inherent status of the relation between conditions and effects focuses on arising itself. The effect must either have entitihood or not. If it does, its being caused to arise is self-contradictory. If not, though, from the ultimate standpoint it does not arise. It would follow from either that there is no inherently existent arising and, so, no inherent production from a collection of conditions. The next verse makes this same point from the side of the collection.
Kārikā XX.22

na cājanayamānasya hetutvam upapadyate
hetutvānu-papattau ca phalam kasya bhavisyati ||22||

yīn bù shēng guò zhě zé wú yīn xiāng;xiāng
ruò wú yīn xiāng;xiāng shuí néng yǒu shì guǒ

Inada (Skt): 
Verse 22 - Moreover, a cause without a productive nature cannot be a cause. In the absence of such a productive nature, where will the effect be?

Jones (Skt): 
[22] Something that is not producing an effect has no causal effectiveness. Where there is no causal effectiveness, of what will there be an effect?

Kalupahana (Skt): 
Moreover, the causal efficacy of something that is not producing is not appropriate. In the absence of causal efficacy, to what will the effect belong?

McCagney (Skt): 
Causation of what is not arising does not take place. And in failing to prove causation, the effect will be of what?

Nishijima (Skt?): 
22. Never belonging to an agitators’ intention, But the reasonable attitude manifests itself actually. When the reasonability hasn’t manifested itself yet at all, Where will it be possible for some result to exist at any place at all?

Streng (Skt): 
22. If something is not giving rise to an effect, It is not tenable to attribute causality. If it is not tenable to attribute causality, Then of what will the effect be?

Doctor (Tb): 
If it does not produce any effect, The cause does not make sense. If the cause does not make sense, Of what, then, is the effect? [XX.22]

Garfield (Tb): 
22. If something is not producing an effect, It is not tenable to attribute causality. If it is not tenable to attribute causality, Then of what will the effect be?

Garfield-Samtén (Tb): 
22. If something is not giving rise to an effect, It is not tenable to attribute causality. If it is not tenable to attribute causality, Then of what will the effect be an effect?

Hagen (paraphrase): 
20.22 If a cause does not produce an effect, it is not appropriate to call it a cause. If there is nothing the term “cause” refers to, then of what is there an effect?

Kalupahana Commentary

Identity and difference are thus shown to militate against not merely arising, but also causal or dependent arising. Causal efficacy (hetutvam) is rendered meaningless if there were to be no production, that is, if the arising of an effect cannot be accounted for by a cause, which is the result of the Sarvastivada and Sautrantika theories. If causal efficacy cannot be accounted for, how can one speak of an effect or fruit?
Kārikā XX.23

INADA (Skt):
Verse 23 - As the assemblage of causes and relational conditions does not in virtue of itself produce itself, how could it produce an effect?

JONES (Skt):
[23] Moreover, this combination of causes and conditions is not produced by itself or by another. So how can it produce an effect?

KALUPAHANA (Skt):
Whatever harmony of causes and conditions there is, it is not produced by itself or by another. If so, how can it produce an effect?

MCCAGNEY (Skt):
Since that whole of causes and conditions is not produced by itself or by means of a nonself, how would it produce an effect?

NISHIJIMA (Skt?):
23. The Real Truth does never be included into miscellaneous Reasons. This World utilizes the Soul well utilizing the Soul. The Inclusive Grasp really grasps the Reality. And so how is it possible for result to be born actually?

STRENG (Skt):
23. How will that aggregate of causes and conditions produce a product when That which is the aggregate of causes and conditions does not produce itself by itself?

ENGLISH TRANSLATIONS

BOCKING (Ch):
20v23 If, out of causes and conditions, Combination is produced. Combination itself does not produce So how can it produce an effect?

BATCHelor (Tb):
If whatever is a combination of causes and conditions does not produce itself by itself, how could it produce fruit?

DOCTOR (Tb):
If the assembly of causes and conditions Does not itself Produce its own identity, How could it produce an effect? [XX.23]

GARFIELD (Tb):
23. If the combination Of causes and conditions Is not self-produced, How does it produce an effect?

GARFIELD-SAMTEN (Tb):
23. If the assemblage Of causes and conditions Does not give rise to itself, How does it give rise to an effect?

HAGEN (paraphrase):
20.23 If the combination of causes and conditions does not in and of itself produce itself, how can it produce an effect?
After producing an exhaustive analysis of the relationship between a cause (hetu) and fruit or effect (phala), Nagarjuna returns to the question with which he began the chapter, the harmony of causes and conditions. Once again, refuting the identity and non-identity theories, he insists that whatever harmony there is, it is not produced by the causes and conditions either from within themselves (atmana = svabhavata) or from outside (anatmana = paratah). When harmony cannot be explained in any of these two ways, then it is not possible to assume that an effect can arise from a harmony so explained.

23. The ground of an inherently existent relation of production must be inherently existent. But then it could depend on nothing else. It would have to be self-produced. But this is not claimed for the collection of conditions or the relation between them and the effect by the opponent here. It couldn’t be. For the whole point of moving to a collection is to avoid the problems of production from a single cause. But collections depend upon their parts and upon the causes of those parts. So no such collection can be self-produced. So, while Nāgārjuna can certainly grant that effects are dependent upon collections of conditions, it cannot be that those collections or that dependence exist inherently.
Kārikā XX.24

na sāmagrīkṛtaṃ phalaṃ nāsāmagrīkṛtaṃ phalam |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 24 - There is no effect created either by an assemblage or by a non-assemblage of causes and relational conditions. Separated from an effect, where indeed is the assemblage of relational conditions?

JONES (Skt):
[24] Therefore, the effect is not produced by the combination, nor is it not produced by the combination. Indeed, without the effect, how can there a combination of its conditions?

KALUPAHANA (Skt):
The effect is not made by the harmony, nor is it not made by a harmony. Where indeed can there be a harmony of conditions without an effect.

MCCAGNEY (Skt):
The effect is not made by the whole, and the effect is not made by what is not the whole.
Where does the whole of conditions exist without an effect?

NISHIJIMA (Skt?):
24. What has been created by the Inclusive Grasp, is not result? What has not been created by the Inclusive Grasp is not result? The Real Truth, which is just the Inclusive Grasp, exists actually. Where is it possible for result not to exist really at all?

STRENG (Skt):
24. The product is not produced by the aggregate; nor is the product not produced by the aggregate. Without the product, how is there an aggregate of conditions?

BOCKING (Ch):
20v24 Therefore effects are not produced
By the combination, or non-combination of conditions. If there are no effects
Where is the dharma of 'combination'?

BATCHelor (Tb):
Therefore, there is no fruit which has been made by combination [or] made by non-combination. If fruit does not exist, where can a combination of conditions exist?

DOCTOR (Tb):
Therefore, nothing is produced by an assembly, And yet there is no effect made by anything else. When no effect exists, How can there be an assembly of conditions? [XX.24]

GARFIELD (Tb):
24. Therefore, not made by combination,
And not without a combination can the effect arise. If there is no effect, Where can there be a combination of conditions?

GARFIELD-SAMTEN (Tb):
24. Therefore, there is no effect, either Created by an assemblage, Or by something that is not an assemblage. If there is no effect, where can there be an assemblage of conditions?

HAGEN (paraphrase):
20.24 The effect is neither made by a combination of causes and conditions nor is it not so made. Separated from an effect, where is there a combination of causes and conditions?
PINGALA COMMENTARY

20/24 The dharma of 'combination of causal conditions' cannot produce a self-substance. Since there is no self-substance how can it produce any effect? Therefore, effects are not produced by a combination of conditions, nor are they produced by non-combination. If no effects exist, where can there be a dharma of combination?

KALUPAHANA COMMENTARY

The effect is not produced by a harmony of causes and conditions explained in the above manner. Nor is it produced by a non-harmony. Nagarjuna's final question is: Where can there be a harmony without a fruit or effect? This final conclusion need not be understood as a denial of fruit or effect. On the contrary, it can be the assertion of a pragmatist who insists that there cannot be a harmony of causes and conditions without a fruit or effect.

GARFIELD COMMENTARY

24. Combinations of conditions, just like individual conditions and just like their effects, can only be conceived of as empty of inherent existence.

1. The causal substance is annihilated in the context of existence
2. The resultant continuum is annihilated in the context of peace

2. The inescapable flaws of permanence and annihilation since the continuum itself is not established
OUTLINE:

We are still in the fourth section of the extensive presentation of selflessness— the presentation of the essential emptiness of time—and we are still in its second part—the refutation of the argument for the inherent existence of time. We have completed the first of the two sections of that part: the refutation of time as the supporting condition of the arising of the effect. [357:20] This chapter constitutes the second of those two parts: the refutation of time as the cause of the arising and cessation of the effect.

EXPLANATION:

Here someone might say that time does exist essentially because it is the cause of the becoming and cessation of effects. This is because depending on time, such as winter, sprouts disintegrate, and depending on time, such as spring, they arise.

SUMMARY:

Arising and destruction, birth and death, and the continuum of life which uninterruptedly goes from one life to another are regarded as existing through their own characteristic; but rational analysis into whether or not they exist in reality has refuted this. One cannot work without these conventions; therefore, one should be led to ascertain the way in which they are completely tenable in the context of their emptiness of their own characteristics.

INADA (Chapter Introductions)

CHAPTER XXI - Examination of Occurrence and Dissolution of Existence

The title refers to the concepts of occurrence (sambhava) and dissolution (vibhava) of being. In the argument which follows Nagarjuna has in mind the real meaning of human existence. In other words, the two concepts must be understood in the sense of occurring or coming into existence and dissolving or going out of existence in the context of true existence. He goes through the usual process of discussing the two concepts in relationship to each other with reference to the three temporal moments. In each instance there is no justification for asserting any of the concepts; that is to say, any dogmatically contended assertion can always be led to the realm of absurdity.

It might just be a projection but it would seem that Nagarjuna makes an illuminating point when he introduces the subtle difference between the terms, bhava and bhava. Bhava refers to the general state or nature of existence of any entity or organism. In this sense, it connotes something of the nature of an enduring or static quality. This conception is what most of us profess to understand as the basis for the existence of all things. Such an understanding, however, comes from a deluded mind and it is here that Nagarjuna goes on to show that there is another realm or aspect of being which people have always overlooked. This is the realm or aspect of bhava. Bhava refers to the truly dynamic worldly existence, i.e., it refers to the Buddhist fundamental conception of the continuity of becomingness of ordinary life. This becomingness or bhava is a fact which no amount of conceptualization will ever be able to analyze or fathom. It will "cease" only in nirvana.

KALUPAHANA (CHAPTER OVERVIEWS)

21. Occurrence and dissolution (sambhava-vibhava). This chapter concludes Nagarjuna’s examination of the nature of the human personality as it gradually evolves or dissolves depending upon one’s actions (karma). In the “Discourse on the Knowledge of the Beginning” (Agganna-suttanta ), the Buddha speaks of the evolution and dissolution not only of the world, but also of the human personality. This discourse was intended primarily to refute the rather static conception of the world and the social order presented in the Indian philosophical and religious traditions. Without committing himself to any notion of an absolute beginning, the Buddha spoke of a period of dissolution (samvatta ).
followed by a long period of evolution (*vivatta*). In spite of the Buddha’s reluctance to get involved in the discussion of such theories, because of the epistemological difficulties, he was compelled to do so by the unfortunate moral and ethical implications of the Indian castesystem. Even though the discussion of the world-systems is rare in the early discourses, the evolution as well as the dissolution of the human personality through long periods of time constituted a popular subject. The process of the evolution and dissolution of the human personality came to be designated *samsara* (life-process) or *bhava* (becoming) and was contrasted with the Indian notion of life as eternal existence (*atthita*, Sk. *astitva*). While the concepts of *atthita* (existence) and *n’ atthita* (non-existence) were used in the pre-Buddhist literature, the Buddha, realizing the metaphysical implications, avoided them and instead utilized the notion of *bhava* (becoming). No sooner than the Buddha explained the human personality as a process of becoming, the metaphysicians of the traditional schools of Indian philosophy began speaking of *bhava* (instead of *astitva*) and *abhava* (instead of *nastitva*) when speaking about existence and non-existence respectively, two terms which were not popular in the Indian tradition before the Buddha.

The Sarvastivadins and the Sautrantikas, who were lured into this substantialist trap as a result of their analysis of the process of becoming (*bhava*) into discrete moments, formulated the notion of a “series of becoming” (*bhava-samtati*), instead of the “stream of becoming” (*bhava-sota*) referred to in the early discourses. Buddhaghosa, who introduced these different interpretations into the Thervada tradition in the South and South East Asian countries (circa. sixth century AD), distinguished between three different notions of the present:

i the specious present (*addha-paccuppanna*),
ii the momentary present (*khana-paccuppanna*), and
iii the flowing present (*samtati-paccuppanna*).

He proceeded to identify these with the different stages in the development of the Buddhist thought, maintaining that the “discourses” (*sutta*) advocated the first, that some other Buddhists (probably the Sautrantikas) spoke of the second, and that the commentaries accepted the third.

Nagarjuna, compiling his treatise during the second century AD after the Sarvastivada and the Sautrantika theories had come into prominence, could not have been unaware of these differences. In the present chapter he was therefore criticizing the metaphysical notion of a “series of becoming” (*bhava-samtati*), a series of disjointed or disconnected momentary (*ksanika*) existences, rather than the conception of becoming as formulated by the Buddha. Thus, after a criticism of the notion of *bhava-samtati*, in the present chapter, Nagarjuna is able to speak of *bhava* at XXVI.7-8 without rejecting it. He carefully avoids the concepts of *bhava* and *abhava* as well as *svabhava* and *parabhava* throughout the text. Thus, the denial of *bhava-samtati* need not be construed as a denial of *bhava* or *bhava-sota* which occur in the discourses of the Buddha.

The problems discussed so far relate primarily to the nature of the human personality, its survival, and its moral responsibility, and Nagarjuna’s endeavor is to establish its non-substantiality (*pudgala-nairatmya*). The chapters that follow deal with the non-substantiality of the person who has attained freedom.
BATCHELOR (POETIC “TRANSLATION”)

You do not appear or fail to appear.
When you appear,
You neither disappear nor fail to disappear.

How can I disappear
Without appearing?
Can I die and not be born?
What disappears appears.

Can I disappear and appear at once?
Do I die the moment I am born?
Can I appear and disappear at once?
Am I born the moment I die?

When everything changes,
How can I appear and not disappear?
Whether dead or alive,
I am neither here nor gone.

Without things,
There would be no appearance or disappearance;
Without which,
There would be no things.

Whether empty or not,
Things neither appear nor disappear.
Appearance and disappearance
Are not the same or different--

They fool you.

Things are not born
From things or nothing.
Nothing is not born
From nothing or things.

If things are either
Eternal or ephemeral,
To believe in them is either
Eternalism or nihilism.

Isn’t the appearance
And disappearance
Of seeds and fruits
The flow of life itself?

Seeds would be annihilated:
The disappeared cannot appear again.
You would be erased in nirvana
When the flow of life is stilled.

If life stopped,
How would it start again?
If it never stopped,
How would it start again?

How can it flow
Without flowing before,
Flowing now,
Or flowing later?

JONES (COMMENTARY)

21. Becoming and Dissolving

Verse 1 involves the idea of becoming (i.e., “coming-to-be”) and dissolving (i.e., “ceasing-to-be”). The verse would be wrong if “becoming” were a type of change in an existent entity (since the real cannot change); rather, it is about the arising or birth in the sense of coming into existence. This sets up the contrast between arising and ceasing: if they are real, then they are distinct and cannot contain the other. The conclusion is that the self-existent cannot either become or dissolve since what is cannot change; and what is empty cannot either become or dissolve since it is not real (vv. 8-9). Either way, there is no real becoming or dissolution, and so those who see becoming or dissolution do so only because of a delusion (v. 11). We are left with a world of empty entities constantly in change. Only this permits the religious goal of liberation from the cycle of becoming (v. 17) since a change in the state (and hence nature) of a person is needed.

Verses 12-15 involve entities (bhavas) that truly exists (i.e., have self-existence) and hence are incapable of arising or any other change.

Verse 18 reads: “If the last has ceased, the existence of a first one arising is not admissible. If the last has not ceased, the existence of a first one arising is not admissible.” Interpreted in Nagarjuna’s framework, this means that if the last in a series has ceased, then there was never anything real in the series to begin with and so no real first entity to rise to begin the series; if the last has not ceased, then the series could not arise since what is unceasing is eternal and so no permanent first entry arose.
An Examination of Emergence and Decay

In the sutras, the Buddha taught:

O Bodhisattva of Shining Intelligence, forms do not die and they are not born.

JOINING THIS WITH MANY OTHER SUBJECTS, the Buddha taught of the freedom from birth and death in a vast way.

Nagarjuna composed this chapter in answer to the proponents of the true existence of things who argued, “Your refutations of time aside, sprouts wither in the winter and emerge again in the spring, and in this way, time is the cause of emergence and decay. Therefore, if emergence and decay exist, time, which is their cause, must also exist.” Thus, in order to prove to these people that time does not truly exist after all, Nagarjuna had to demonstrate logically that emergence and decay are not real.

One way to analyze emergence and decay is by asking, “If emergence and decay exist, are they the same thing or different things?” Nagarjuna gives the answer in verse ten:

Emergence and decay

Cannot logically be the same thing.

Emergence and decay

Cannot logically be different things.

Emergence and decay are not the same thing because they are opposites, like light and dark, heat and cold, and big and small. To say that something is emerging is the opposite of saying that it is decaying, just like saying that something is getting bigger is the opposite of saying that it is getting smaller. They cannot be different things either, because if they were, they would exist independent of each other. This they cannot do, because emergence can occur only in dependence upon decay, and decay can occur only in dependence upon emergence (in For more on why emergence and decay exist only in dependent upon each other, see

the similar analysis of arising, abiding, and ceasing in chapter 7, An Examination of the Composite.”). Furthermore, when considering the emergence and decay of a single entity, for example, a flower, since they both occur in relation to the same flower, how could they be different? How could they occur independent of each other? If they did, they would have to occur in completely different things.

This logical reasoning as well as the other ones in this chapter were still not enough to satisfy Nagarjuna’s opponents, who argued further, “What is the point of all your subtle analysis? Everyone from uneducated shepherds on up sees emergence and decay happening with their own eyes! This direct experience is enough to prove that emergence and decay are real, no matter what your analysis may find.” Nagarjuna replied to this claim in verse eleven:

When you think you see emergence and decay,

It is only bewilderment that sees emergence and decay.

Just as in a dream, the apparently direct perception of emergence and decay is not enough to establish them as being truly existent. Just as in a dream when we do not know we are dreaming, it is only the veil of our bewilderment that causes us to think that the mere appearances of emergence and decay are real.

So shepherds may know quite a bit about the mode of appearance of their sheep, but that does not mean that they know the sheep’s true nature. It is not really correct to say that shepherds are uneducated, though, because shepherds have to study a lot! They have to know all about their sheep: what the mother ewes are like, what the baby lambs are like, and what to do if some of the flock get sick. They also have to know how to protect their sheep from wolves and other dangers; in Western countries, shepherds have sheepdogs to help them do this job, but in Tibet, they had to do it themselves. So it is not really fair to call shepherds uneducated—good shepherds have to be very skillful! The most skillful shepherds know that their sheep are appearance-emptiness inseparable, and that their birth, aging, sickness, and death are as well. Those kinds of shepherds take the best care of their sheep, and they have a great time doing so!

**GARFIELD COMMENTARY**

Chapter XXI Examination of Becoming and Destruction  

In this chapter, Nāgārjuna examines the phenomenon of momentary impermanence. At this point in the dialectic, one might suggest that since the emptiness of phenomena derives directly from their decomposition into momentary time-slices and from the fact that they are constantly coming into existence and being destroyed, that process of momentary arising and destruction itself ought to be real in the strong sense. Nāgārjuna, by way of completing the discussion of the nature of conventional phenomena, demonstrates the emptiness of even arising and destruction themselves as a prelude to the final section of the text, that discussing the nature of the ultimate and its relation to conventional reality.
Kārikā XXI.1

ło chéng jì gòng chéng shì zhōng wú yǒu huài
li huài jì gòng huài shì zhōng yì wú chéng

INADA (Skt):
Verse 1 - Dissolution does not exist either separated from or concurrent with the occurrence of being. Occurrence, likewise, does not exist either separated from or concurrent with its dissolution.

JONES (Skt):
[1] There is no dissolution (i.e., ceasing-to-be) either with or without becoming (i.e., coming-to-be). There is no becoming either with or without dissolution.

KALUPAHANA (Skt):
Dissolution does not exist either without or with occurrence. Occurrence does not exist either without or with dissolution.

MCCAGNEY (Skt):
Dissolution does not exist either with or without origination. Origination does not exist either with or without dissolution.

NISHIJIMA (Skt?):
1. Without existence and without being together, the both Coexistence and Universal Existence do not really exist. Universal Existence exists always relying upon Coexistence. Either being single or being together, the both do not really exist. Coexistence inevitably relies upon Universal Existence.

STRENG (Skt):
1. There is no disappearance either with origination or without it. There is no origination either with disappearance or without it.

BOCKING (Ch):
21v1 Whether apart from becoming, or together with becoming.
In neither case is there dissolution.
Whether apart from dissolution, or together with dissolution,
In neither case is there becoming, either.

BATCHelor (Tb):
Passing does not exist without or together with rising.
Rising does not exist without or together with passing.

DOCTOR (Tb):
Disintegration occurs neither apart from nor together with arising.
Arising occurs neither apart from nor together with disintegration. [XXI.1]

GARFIELD (Tb):
1. Destruction does not occur without becoming.
It does not occur together with it.
Becoming does not occur without destruction.
It does not occur together with it.

GARFIELD-SAMTEN (Tb):
1. Destruction does not occur without becoming.
It does not occur simultaneously with it.
Becoming does not occur without destruction.
It does not occur simultaneously with it.

HAGEN (paraphrase):
21.1 There is no dissolution either with occurrence or without it. There is no occurrence either with dissolution or without it.

PINGALA COMMENTARY

21/1 Whether there is becoming or there is no becoming, in neither case does dissolution exist. Whether there is dissolution, or there is no dissolution, in neither case does becoming exist. Why is this?

GARFIELD COMMENTARY

1. This first verse announces the final stage in the argument to be developed. Nāgārjuna will show that destruction and becoming are both mutually incompatible and that they are mutually entailing. It will then follow that if they are inherently existent, they have contradictory properties.
Kārikā XXI.2

bhaviṣyati kathāṃ nāma vibhavaḥ saṁbhavaḥ vinā |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 2 - How could there be dissolution separated from the occurrence of being? (As there would be the improbable phenomenon of) death without birth, there is no dissolution without occurrence.

JONES (Skt):
[2] Indeed, how could there be dissolution without becoming? How could there be death without birth? There is no dissolution without an arising.

KALUPAHANA (Skt):
How can there be dissolution without occurrence, death without birth, dissolution without uprising?

MCCAGNEY (Skt):
What will dissolution then be without origination, death without birth, dissolution without generation?

NISHIJIMA (Skt?):
2. How is it possible for a name to exist always in future? Universal Existence can manifest itself even without Coexistence. If there were no existence of both birth and death, Universal Existence does never exist without birth.

STRENG (Skt):
2. How, indeed, will disappearance exist at all without origination? How could there be death without birth? There is no disappearance without prior origination.

BOCKING (Ch):
21v2 If separate from becoming,
How can dissolution exist?
It would be like death without birth.
This is not correct.

BATCHelor (Tb):
How can passing exist without rising? Is there death without birth? There is no passing without rising.

DOCTOR (Tb):
Disintegration without arising,
How could this occur?
There would be dying without birth.
Without arising, there is no disintegration. [XXI.2]

GARFIELD (Tb):
2. How could there be destruction Without becoming?
How could there be death without birth?
There is no destruction without becoming.

GARFIELD-SAMTEN (Tb):
2. How could there be destruction Without becoming?
There would be death without birth.
There is no destruction without becoming.

HAGEN (paraphrase):
21.2 How can there be dissolution without occurrence, death without birth? There is not dissolution without occurrence.
The terms sambhava and vibhava need to be translated keeping in mind the purpose of this section. It is an attempt on the part of Nagarjuna to explain the life-process (samsara) or the human personality without resorting to a theory of self or soul (atman, pudgala) considered to be eternal. As mentioned earlier, this whole section is devoted to the establishing of the idea of non-substantiality of the human person (pudgalanairatmya). This has to be achieved not only by showing the untenability of the theory of permanence or eternalism, but also of a conception of annihilationism.

Thus, in this particular chapter sambhava, in the sense of occurrence, pertains to the "birth" (janma) of a human being conditioned by various factors, without any underlying permanent entity passing from one life to another. Vibhava, in the sense of dissolution, means "death" (marana), and here there is no implication of complete annihilation. In the life-process, birth is thus not the absolute beginning, nor is death the absolute end. The first two verses deny the occurrence of death without (vina) birth or at the same time (saha). Just as much as death does not occur without birth, there is no up-rising (udbhava) without dissolution (vibhava). This is an empirical, rather than a logical, analysis of birth and death. A rationalist can argue that "all human beings are not mortal," for everyone who has been born has not died. Such a rational argument did not prevent the Buddha from accepting mortality as a fact of life. For him, the evidence lies in the fact that so far all human being who have died had been born. However, this does not lead the Buddha to assert the metaphysical view that death is inherent in birth.

GARFIELD COMMENTARY

2. Nāgārjuna argues that, absent something coming into being, there is no sense in which it can be destroyed. So destruction presupposes becoming.
Kārikā XXI.3

INADA (Skt):
Verse 3 - How could there be dissolution concurrent with the occurrence of being? For, indeed, it is not possible for both birth and death to exist simultaneously.

JONES (Skt): [3] But how could death occur with birth? Birth and death are not seen to occur at the same time.

KALUPAHANA (Skt):
How can there be dissolution along with occurrence? Indeed, simultaneous birth and death are similarly not evident.

MCCAGNEY (Skt):
How will there be dissolution together with origination? Indeed, death contemporary with birth does not occur.

NISHIJIMA (Skt?):
3. Even though Universal Existence is just relying upon Coexistence, How is it possible for both Coexistence and Universal Existence to exist together like this even in future? Even though birth and death do not appear like this, Because of that the modern situations of Human Society is recognized like that.

STRENG (Skt):
3. How can disappearance exist concomitantly with origination? Since, surely, death does not exist at the same moment as birth.

BOCKING (Ch):
21v3 If becoming and dissolution exist together, How can there be becoming and dissolution? How could this occur? Death does not exist at the same time as birth.

DOCTOR (Tb):
Disintegration together with arising How could this occur? Death does not take place At the very same time as birth. [XXI.3]

GARFIELD (Tb):
3. How could destruction and becoming Occur simultaneously? Death and birth Do not occur simultaneously.

GARFIELD-SAMTEN (Tb):
3. How could destruction Occur simultaneously with becoming? Death does not occur Simultaneously with birth.

HAGEN (paraphrase):
21.3 How could dissolution and occurrence arise simultaneously? Birth and death are never seen to occur simultaneously.

KALUPAHANA COMMENTARY

This is an explicit rejection of the metaphysical view that death is inherent in birth. If the life-process (samsara) were to be understood as a series of momentary existences (samtana, samtati), as the Sautrantikas believed, then the seeds of death should occur at the very moment of birth. This logical explanation was not acceptable to the empiricist Nagarjuna.

GARFIELD COMMENTARY

3. But they cannot exist simultaneously. For then the same entity would have contradictory properties.
Kārikā XXI.4

भविष्यति कथं नाम संभवी विभवं विना।
अनित्यता हि भावेषु न कदाचिन्न विदयते॥४॥

bhaviṣyati kathāṃ nāma saṃbhavo vibhavaṃ vinā |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 4 - How could there be occurrence separated from the
dissolution of being? For in the various modes of (true)
existence, transient nature is never found not to exist.

JONES (Skt):
[4] But how could there be a becoming without dissolution?
For impermanence is never not seen in entities.

KALUPAHANA (Skt):
How can there be occurrence without dissolution, for the
impermanence in existences is never not evident.

MCCAGNEY (Skt):
What will origination then be without dissolution?
Indeed, never does the impermanence of beings not occur.

NISHIJIMA (Skt?):
4. How is it actually possible for name to exist without fail in future?
When it is belonging to Coexistence, the Universal Existence does
not exist at all.
But if it is only for the name of Coexistence, it might be to exist
even in future.
And so it is very difficult for us to know when they have actually
happened exactly.

STRENG (Skt):
4. How, indeed, will origination exist at all without
disappearance? For, impermanence does not fail to
be found in existent things ever.

ROBINSON (Skt):
For impermanence never does not occur in entities.

BOCKING (Ch):
21v4 Apart from dissolution,
How could there be becoming?
For there is never a time
When impermanence is not found in all dhammas.

BATCHelor (Tb):
How could rising exist without passing? Things are never
not impermanent.

DOCTOR (Tb):
Arising without disintegration,
How could this occur?
It is not that things
Ever lack impermanence. [XXI.4]

GARFIELD (Tb):
4. How could there be becoming
Without destruction?
For impermanence
Is never absent from entities.

GARFIELD-SAMTEN (Tb):
4. How could there be becoming
Without destruction?
For things never
Lack impermanence.

HAGEN (paraphrase):
21.4 How could there be occurrence without
dissolution? Impermanence is never absent from any
existent.
21/4 Dissolution cannot be found apart from becoming, and why? If there were dissolution apart from becoming, then there would be dissolution independent of becoming, and dissolution consequently would be uncaused. Moreover, dharmas which had not become could nevertheless be dissolved. 'Becoming' means the combining of conditions. 'Dissolution' means the dispersion of conditions. If there were dissolution apart from becoming, then with no becoming, what would dissolve? It is just as when there is no jug, we cannot say that the jug has dissolved. Hence, there is no dissolution apart from becoming.

(27c28) If you say that dissolution exists together with becoming, this is also incorrect, and why? A dharma first comes into being – separately, and (only) afterwards is there combination. The combined dharma is not separate from the different (elements). If it dissolved separately from its different (elements), the dissolution would be causeless. Therefore, dissolution does not exist together with becoming.

(28a2) As to no becoming apart from dissolution or together with dissolution; if there were becoming apart from dissolution, then becoming would be permanent. Permanence means not having the characteristic of dissolution, but in reality we do not see any dharma which is permanent and lacks the characteristic of dissolution. Therefore, there is no becoming apart from dissolution.

(28a4) If you say that becoming and dissolution exist together, this is also wrong. Becoming and dissolution are opposites. How can they exist simultaneously? It is like a man having hair and not having any hair – he cannot have both simultaneously. Becoming and dissolution are also like this. Therefore, it is not the case that becoming exists jointly with dissolution, and why?

(28a7) If you say that dharmas are distinct, asserting that there is constant dissolution within becoming, this is not correct, and why? If there were constant dissolution within becoming, then there would be no dharma of abiding, but in reality there is abiding. Therefore, no becoming can exist, either apart from dissolution or together with dissolution.

Further:

Occurrence (sambhava), as an absolutely new beginning, is rejected here, when Nagarjuna affirms that without dissolution occurrence does not take place. Indeed, the discourse to Katyayana utilized the empirical argument that the belief in a permanent entity is abandoned when one perceives the cessation of the world (loka-nirodham ... yathabhisamam sammappannaya passato ya loke atthita sana hoti). Nagarjuna's argument here is not that "there is another realm or aspect of being which people have always overlooked. This is the realm or aspect of bhava, [which] refers to the truly dynamic worldly existence" (as Inada seems to assume, see). Rather, it is a rejection of bhava, primarily because impermanence (anityata) is incompatible with bhava, which implies permanence. In fact, Nagarjuna was probably aware that the Buddha had always employed the term bhava to explain the process of "becoming," instead of the abstract term bhava. Indeed bhava, or its more restricted form svabhava, is equivalent to astitva (atthita) and more often Nagarjuna understood the term in that sense.

4. Since all phenomena are impermanent, as has been forcefully argued in earlier chapters, anything that comes into existence passes out of existence.
Kārikā XXI.5

saṃbhavo vibhavenaiva kathāṃ saha bhaviṣyati |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 5 - How could there be occurrence concurrent with the dissolution of being? For, indeed, it is not possible for both birth and death to exist simultaneously.

JONES (Skt):
[5] But how could there be a becoming with dissolution? Again, birth and death are not seen to occur at the same time.

KALUPAHANA (Skt):
How can occurrence be evident along with dissolution? Indeed, simultaneous birth and death are similarly not evident.

MCCAGNEY (Skt):
How will there be origination without dissolution? Indeed, death contemporary with birth does not occur.

NISHIJIMA (Skt?):
5. Coexistence is just relying upon Universal Existence actually. Therefore how is it possible for Coexistence and Universal Existence to exist at the same time even in future? The birth and the death do never appear at the same time actually. Even though it is possible for birth and death to be recognized as if they were at once.

STRENG (Skt):
5. How can origination exist concomitantly with disappearance? Since, surely, death does not exist at the same moment as birth.
PINGALA COMMENTARY

21/5 As for becoming not being established together with dissolution, and the two not being established separately from each other; if the two are established together, then, the two dharmas being opposites, how can they exist simultaneously? But if they exist separately, then they are uncaused. In neither way can they be established, so how can becoming exist? If it does exist, you should explain how.

Question: Dharmas which have the characteristic of being exhausted and ceased, manifestly exist. Such exhausted and ceased dharmas are said to be both exhausted and not exhausted. Surely becoming and dissolution exist in the same way?

Reply:

KALUPAHANA COMMENTARY

At XXI. 3, Nagarjuna questioned the feasibility of asserting that death occurs together with (saha) birth. In the present verse, he is questioning the validity of asserting the occurrence of birth together with (saha) death. In other words, he is questioning the feasibility of asserting an invariable connection between death and rebirth, an invariable connection that is never asserted by the Buddha. In fact, what the Buddha asserted was that a dying person, depending upon conditions, can be reborn. An invariable relationship between death and rebirth was admitted only by the substantialists.
Kārikā XXI.6

[The Chinese of verse 5 seems to correspond to the Sanskrit of verses 5 & 6.]

INADA (Skt):
Verse 6 - The establishment of mutual concurrence or mutual separation is an impossibility. How then would it ever be possible to assert any completed states of the two?

JONES (Skt):
[6] When two things cannot be established as existing with each other or without each other, how can they be established at all?

KALUPAHANA (Skt):
The occurrence of things, either together or separately, is not evident. If so, how can their establishment be evident?

MCCAGNEY (Skt):
The establishment of them either conjoined by difference or without difference does not occur. How then does the establishment of both occur?

NISHIJIMA (Skt?):
6. Even though they are the same articles or the different articles, both are able to be things accomplished.
And even in the case where there is no different article, the situations are the same as the former case.
But in a case, that one thing and another thing are existing separately, it seems to be only for the two cases as they exist.
How is it possible for them to be recognized as accomplished articles actually?

STRENG (Skt):
6. When two things cannot be proved either separately or together, No proof exists of those two things. How can these two things be proved?

ENGLISH TRANSLATIONS

BOCKING (Ch):
[n/a]

BATCHelor (Tb):
How can those that are not established either mutually together or not mutually together be established?

DOCTOR (Tb):
When two things are neither established as coexistent, Nor as not coexistent, How can they be established? [XXI.6]

GARFIELD (Tb):
6. How, when things cannot Be established as existing, With, or apart from one another, Can they be established at all?

GARFIELD-SAMTEN (Tb):
6. How can those things which cannot Be established as existing Simultaneously or not simultaneously with each other Exist at all?

HAGEN (paraphrase):
21.6 [axiomatic] When it is not evident that things occur either together or separately, what evidence is there that they occur at all?
KALUPAHANA COMMENTARY

This conclusion of Nagarjuna is related to his criticisms in the previous verses. He is simply questioning the metaphysical assertions relating to occurrence and dissolution, birth and death.

GARFIELD COMMENTARY

6. This is the argument to this stage: Becoming and destruction are mutually contradictory. So they cannot be properties of the same thing at the same time. But everything that is coming into existence is at a stage in a process that culminates in its destruction. So everything that is becoming is at the same time being destroyed. Everything that is being destroyed is in a later stage of a process that earlier resulted in its coming into existence and, indeed, is coming to exist in some other form. So everything that is being destroyed is also becoming. So becoming and destruction cannot coexist, but cannot exist apart. Hence they cannot exist independently at all.

7. There is no becoming of that which is exhausted. Nor is there becoming of that which is not exhausted. There is no destruction of that which is exhausted. Nor is there destruction of that which is not exhausted.

HAGEN (paraphrase):
21.7 There is no arising of what is either gone or not gone. There is no cessation of what is either gone or not gone.
PINGALA COMMENTARY

21/6 All dharmas, morning, noon and night, instant by instant, are constantly ceasing, becoming exhausted and passing away, like flowing water which never stands still. This is termed 'exhaustion'. This process cannot be grasped, and cannot be explained. Like a mirage, which has no fixed nature to get hold of, so exhaustion has no conceivable fixed nature. How can one subdivide it and assert that becoming exists? This is why it is said that exhaustion has no becoming either. Since becoming does not exist there can be no dissolution either, and this is why it is said that exhaustion has no dissolution either.

(28a25) Where there is, moment by moment, a constant succession of arisings and ceasings with no severance this is termed 'non exhaustion'. In this case dharmas are fixed, permanent and abiding and are not cut off, so how can one differentiate them and assert that 'this is a moment of becoming'? This is why it is said that there is no becoming in non-exhaustion either. Since there is no becoming, there is no dissolution, and this is why it is said that there is no dissolution in non-exhaustion either. One may investigate in this way, but since no real entity can be found, there is no becoming and no dissolution.

Question: Even if we set aside becoming and dissolution, what is wrong with allowing that there are simply dharmas?

Reply:

KALUPAHANA COMMENTARY

The term ksaya was used in the Buddhist texts in the context where waning or complete extinction is implied. Whereas the term nirodha could mean ceasing that could be followed by arising (upada) and, as such, they could be used as complementaries to explain change and impermanence as well as dependent arising, the term ksaya had no such complementary term except its negation, a-hsaya, which implies permanence. For this reason, Nagarjuna was able to maintain that there is neither absolute cessation (ksaya) nor permanence (aksaya) of both occurrence (sambhava) and dissolution (vibhava).

GARFIELD COMMENTARY

7. This verse offers an epigrammatic summary of the previous argument: All phenomena, when analyzed closely, resolve into ephemeral moments, constantly disappearing to be succeeded by later stages of what are conventionally identified as the same objects. So everything that has ever existed has disappeared. Such a thing cannot be coming into existence. But no nondisappeared thing ever comes into existence. For as soon as it exists, it disappears. Similarly such things cannot be in the process of destruction. But nothing that is not ephemeral is destroyed either. Given this ephemeral nature of phenomena, establishing becoming and destruction as distinct, independent processes is impossible. This claim is made directly in XXI: 8:
**Kārikā XXI.8**

saṃbhavo vibhavaś caiva vinā bhāvaṃ na vidyate

saṃbhavaṃ vibhavaṃ caiva vinā bhāvo na vidyate ||8||

ruò lí yū;yū;wū chéng huài shì yì wú yǒu fā

| | 'byuṅ daṅ 'jig pa med par ni | | dṅos po yod pa ma yin no |

**ENGLISH TRANSLATIONS**

**INADA (Skt):**
Verse 8 - Occurrence and dissolution are not possible apart from (true) existence. On the other hand, (true) existence is not possible apart from occurrence and dissolution.

**JONES (Skt):**
[8] Becoming and dissolution are not found without a self-existent entity. A self-existent entity without becoming or dissolution is not found.

**KALUPAHANA (Skt):**
Without an existent, occurrence as well as dissolution are not evident. Without occurrence as well as dissolution, an existent is not evident.

**MCCAGNEY (Skt):**
Without a being, origination and dissolution do not occur. Without origination and dissolution, a being does not Occur.

**NISHIJIMA (Skt?):**
8. Both Coexistence and Universal Existence are, Without their Existences they are never recognized at all. Both the Coexistence and the Universal Existence are similarly, If they do not have their existences, they are not recognized.

**STRENG (Skt):**
8. Origination and disappearance cannot exist without an existent thing. Without origination and disappearance an existent thing does not exist.

**BOCKING (Ch):**
21v7 Apart from becoming and dissolution, There are no dharmas. If they should be separated from dharmas Becoming and dissolution also would not exist.

**BATCHelor (Tb):**
Rising and passing do not exist without the existence of things. Things do not exist without the existence of rising and passing.

**DOCTOR (Tb):**
Where there is no thing, There is no arising and no disintegration. Without arising and disintegration, There is no thing. [XXI.8]

**GARFIELD (Tb):**
8. When no entities exist, There is no becoming or destruction. Without becoming and destruction, There are no existent entities.

**GARFIELD-SAMTEN (Tb):**
8. Without the existence of things, There is neither becoming nor destruction. Without becoming and destruction, There is no existence of things.

**HAGEN (paraphrase):**
21.8 Without an existent, neither occurrence not dissolution are evident. Without occurrence and dissolution, an existent is not evident.

**PINGALA COMMENTARY**

21/7 There are no dharmas apart from becoming and dissolution. If there were dharmas with no becoming and no dissolution, such dharmas would have to be either nonexistent, or permanent, but no permanent dharmas exist in the world. Your statement that there are dharmas apart from becoming and dissolution is not correct.

(28b6) Question: What is wrong in saying that only becoming and dissolution exist, without dharmas?

Reply: To say that becoming and dissolution exist without dharmas is also wrong, and why? Apart from dharmas, what is there to become, and what is there to dissolve? Therefore it is not the case that becoming and dissolution exist apart from dharmas. Further:

**GARFIELD COMMENTARY**

8. In the next verse, Nāgārjuna connects this point directly to emptiness and to inherent existence, pointing out both that emptiness precludes the inherent establishment of becoming and destruction and that positing inherently existent phenomena would do no better:
Kārikā XXI.9

saṃbhavo vibhavaś caiva na śūnyasyopapadyate |
saṃbhavo vibhavaś caiva nāśūnyasyopapadyate ||9||

ruò fǎ xìng kōng zhé shuí dāng yǒu chéng huài |
ruò xìng bù kōng zhé yì wú yǒu chéng huài |

stöŋ la 'byuṅ daṅ 'jig pa (4)dag | 'thad pa ŋid ni ma yin no |
| mi stöŋ pa la'án 'byuṅ 'jig dag | 'thad pa ŋid ni ma yin no |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 9 - Occurrence and dissolution cannot exist in the nature of void (inya). They cannot exist in the nature of non-void either.

JONES (Skt):
[9] No becoming or dissolution occurs for what is empty. No becoming or dissolution occurs for what is not empty.

KALUPAHANA (Skt):
Either occurrence or dissolution of the empty is not appropriate. Either occurrence or dissolution of the non-empty is also not appropriate.

MCCAGNEY (Skt):
Origination and dissolution of what is open does not take place. Origination and dissolution of what is not open does not happen.

NISHIJIMA (Skt?):
9. Both in the case of Coexistence and Universal Existence similarly, If the balance of the autonomic nervous system does not manifest itself, In the case of both Coexistence and Universal Existence similarly, The unbalanced autonomic nervous system does not manifest itself.

STRENG (Skt):
9. Origination and disappearance does not obtain for that which is empty. Origination and disappearance does not obtain for that which is non-empty.

BOCKING (Ch):
21v8 If dharmas' nature is empty What can become or dissolve? If their nature is not empty There will also be no becoming or dissolution.

BATCHelor (Tb):
Rising and passing are not possible for the empty; rising, passing are not possible for the non-empty also.

DOCTOR (Tb):
With respect to the empty, Arising and disintegration make no sense. With respect to the non-empty, Arising and disintegration make no sense either. [XXI.9]

GARFIELD (Tb):
9. It is not tenable for the empty To become or to be destroyed. It is not tenable for the nonempty To become or to be destroyed.

GARFIELD-SAMTEN (Tb):
9. It is not tenable for the empty To become or to be destroyed. Nor is it tenable for the nonempty To become or to be destroyed.

HAGEN (paraphrase):
21.9 It is not appropriate to ascribe occurrence and dissolution to either the empty or the non-empty.

PINGALA COMMENTARY

21/8 If the nature of dharmas were empty, being empty, how could they become or dissolve? If the nature of dharmas were not empty, then not being empty they would have a fixed existence, and again there could be no becoming or dissolution.

Further.

GARFIELD COMMENTARY

9. The empty cannot come to be or be destroyed simply because there is no basis for the predication. With no entities, there is nothing to be brought into existence or to be destroyed. But if we posit nonempty phenomena, their independence and consequent permanence preclude their coming to be or destruction.
Kārikā XXI.10

成壞若一者 事則不然
成壞若異者 事亦不然

chéng huài ruò yī zhē shì yì bù rán

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 10 - It is not possible that occurrence and dissolution are identical. They cannot be different either.

JONES (Skt):
[10] Becoming and dissolution do not arise as one. Becoming and dissolution do not arise as many.

KALUPAHANA (Skt):
It is not appropriate to assume that occurrence and dissolution are identical. It is not appropriate to assume that occurrence and dissolution are different.

MCCAGNEY (Skt):
“Origination and dissolution are identical” is not said.
“Origination and dissolution are different” is not said.

NISHIJIMA (Skt?):
10. When Coexistence and Universal Existence are perfectly the same,
What is called “not one,” does appear.
And when Coexistence and Universal Existence are perfectly the same,
What is called “can never be different” does not appear.

STRENG (Skt):
10. It does not obtain that origination and disappearance are the same thing. It does not obtain that origination and disappearance are different.

BOCKING (Ch):
21v9 That becoming and dissolution are one – This is not the case.
That becoming and dissolution are different – This also is not the case.

BATCHELOR (Tb):
Rising and passing cannot possibly be one; rising and passing also cannot possibly be other.

DOCTOR (Tb):
Arising and disintegration
Do not make sense if the same.
Arising and disintegration
Do not make sense if different. [XXI.10]

GARFIELD (Tb):
10. It is not tenable
That destruction and becoming are identical.
It is not tenable
That destruction and becoming are different.

GARFIELD-SAMTEN (Tb):
10. It is not tenable
That destruction and becoming are identical. Nor is it tenable
That destruction and becoming are different.

GOLDFIELD (Tb):
Emergence and decay
Cannot logically be the same thing. Emergence and decay
Cannot logically be different things. (10)

HAGEN (paraphrase):
21.10 It is not tenable that occurrence and dissolution are either identical or different.
PINGALA COMMENTARY

21/9 If you thoroughly investigate becoming and dissolution, no unity can be discovered, and why? Because they have different characteristics, and are differentiated in various ways. But also no difference can be found in becoming and dissolution, and why? Because they are not separated, and because they would be uncaused.

Further.

KALUPAHANA COMMENTARY

It is probably the use of the term bhava at XXI. 8 that led Inada to assume that it represents a unique realm of existence recognized by Nagarjuna. However, if we are to keep in mind the two metaphysical schools Sarvastivada and Sautrantika and their metaphysical doctrines of identity and difference, it is possible to interpret the statement in verse 8 as well as the two verses that follow as straightforward criticisms of these two schools.

For example, a Sautrantika who denies a bhava or svabhava can maintain that occurrence and dissolution can take place without a permanent entity (bhava, svabhava). Occurrence and dissolution would then mean the absence of continuity. Nagarjuna denies this.

On the contrary, a Sarvastivadin can maintain that a bhava or svabhava can exist without occurrence and dissolution, and this would account for continuity but negate difference. This too is rejected by Nagarjuna. Similarly, occurrence and dissolution are incompatible with the "empty" (sunya), as understood by a Sautrantika, or the "non-empty" (asunya) as explained by the Satvastivadin (see XX. 16-18). Furthermore, occurrence and dissolution are neither identical (naika) nor different (nana) in a metaphysical sense.

GARFIELD COMMENTARY

10. They cannot be identical because they are contradictory predicates. But every destruction is a coming to be and vice versa. Hence when conceived of inherently, they can be neither identical nor different; when conceived of inherently, they cannot exist:
Kārikā XXI.11

हैँ ११

若謂以眼見
而有生滅者
則為是癡妄
而見有生滅

ruò wèi yì yǎn jiān ér yǒu shēng miè zhě
zé wèi shì chì wàng ér jiàn yǒu shēng miè

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 11 - You may think that both occurrence and dissolution can be perceived but such a perception only comes about from a deluded mind.

JONES (Skt):
[11] If you see becoming and dissolution, they are seen only because of delusion.

KALUPAHANA (Skt):
It may occur to you that both occurrence and dissolution are seen. However, both occurrence and dissolution are seen only through confusion.

MCCAGNEY (Skt):
As origination and disappearance is seen by you, so it could exist. But origination and disappearance is exactly so seen out of delusion.

NISHIJIMA (Skt?):
11. When Coexistence is seen there as it is clearly, Universal Existence might exist clearly there as it is. When Coexistence is also seen there as it is clearly, It is very troublesome for Universal Existence to exist also there.

STRENG (Skt):
11. You argue: Origination, as well as disappearance, is seen. Therefore it would exist for you. But origination and disappearance are seen due to a delusion.
PINGALA COMMENTARY

21/10 If someone says 'arising and ceasing exist since we see them with our eyes; how can they be refuted by words and teachings?' This is not correct, and why? Seeing arising and ceasing with one's-eyes is due to ignorance and delusion. In seeing the nature of dharmas, they are empty and have no fixed (nature); they are like an illusion, like a dream. It is only that the unenlightened man has attained his eyes on account of his delusion in a former world. Because of his false conceptualization and discrimination in the present world, he says that his eyes see arising and ceasing. In the ultimate sense, there is, in reality, no arising or ceasing. This topic has already been discussed at length, in the chapter refuting the (three) marks. (ch 7)

Further:

KALUPAHANA COMMENTARY

It would be a folly to assume that occurrence and dissolution are perceived (drsyate). Neither the Buddha nor Nagarjuna would be willing to assert this. Occurrence and dissolution in themselves are not perceivable. They are seen only in relation to phenomena that occur and dissolve.

GARFIELD COMMENTARY

11. In the next two verses, Nāgārjuna addresses coming to be. He points out that if it is conceived of as truly existent then it must satisfy at least one of the alternatives represented in each of the following two tetralemmas. But it cannot:
Kārikā XXI.12

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 12 - (True) existence does not arise from itself nor does it arise from non-existence. Again, non-existence does not arise from itself nor does it arise from existence.

JONES (Skt):

KALUPAHANA (Skt):
An existent does not arise from an existent; neither does an existent arise from a non-existent. A nonexistent does not arise from a non-existent; neither does a non-existent arise from an existent.

MCCAGNEY (Skt):
A being could not be born by a being, a being is not born by a nonbeing. A non-being could not be born by a nonbeing, a nonbeing is not born by a being.

NISHIJIMA (Skt?):
12. Being left from existence, existence does never be born. Without being from non-existence, existence does never be born at all. Without leaving non-existence, non-existence will be born. Non-existence can not be born, leaving from existence.

STRENG (Skt):
12. An existent thing does not originate from another thing; and an existent thing does not originate from a non-existent thing. Also, a non-existent thing does not originate from another non-existent thing; and a non-existent thing does not originate from an existent thing.

BOCKING (Ch):
21v11 Dharms do not produce dharmas
Nor do they produce non-dharms
Non-dharms do not produce dharmas,
Nor (do they produce) non-dharms.

BATCHELOR (Tb):
Things are not created from things; things are not created from nothing; nothing is not created from nothing; nothing is not created from things.

DOCTOR (Tb):
Things do not arise from things.
Things do not arise from nonthings.
Nonthings do not arise from nonthings.
Nonthings do not arise from things. [XXI.12]

GARFIELD (Tb):
12. An entity does not arise from an entity. An entity does not arise from a nonentity. A nonentity does not arise from a nonentity. A nonentity does not arise from an entity.

GARFIELD-SAMTEN (Tb):

HAGEN (paraphrase):
PINGALA COMMENTARY

21/11 As for 'Dharmas are not produced from dharmas'; whether they disappear or reach (each other) 1 both are incorrect. If dharmas are produced from dharmas, then whether they reach (each other) or whether they disappear, they are independent, and being independent they fall into (the error of) severance or permanence. If a dharma is produced from a dharma after it has been reached, this dharma, although it has already been reached, is called arisen, and this would be permanence. Moreover, having already arisen, it would be arising again, and it would be arising uncaused, which is not correct.

(28c4) If a dharma is produced from another dharma after it has disappeared, this would mean the cause would be missing, and the one which arose would be uncaused. Therefore no dharma is produced from a dharma which disappears.

(28c6) As for 'non-dharmas are not produced from dharmas'; 'non-dharma' means that there is nothing which exists. 'Dharma' means an existent. How can the characteristic of nonexistence be produced from the characteristic of existence? Therefore, non-dharmas do not arise from dharmas.

(28c7) As for 'dharmas do not arise from non-dharmas'; 'non-dharma' means nonexistence. How can nonexistence produce existence? If existence arose from nonexistence this would be causelessness, and causelessness would be a great error. Therefore, dharmas are not produced from non-dharmas.

(28c10) As for 'non-dharmas are not produced from non-dharmas'; 'non-dharma' means that there is nothing which exists. How could nothing which exists be produced by nothing which exists? It is like a rabbit's horns which do not produce a tortoise's hair. Therefore, non-dharmas are not produced from non-dharmas.

Question: Although you have analyzed dharmas and non-dharmas in various ways as being non-produced, nevertheless dharmas surely do produce dharmas?

Reply:

GARFIELD COMMENTARY

12. The first alternative is precluded because inherently existent and distinct phenomena, Nāgārjuna has argued, cannot be related dependently. The second is precluded because that would involve production from nothing. The third would fail to count as inherently existent production, and from the standpoint of one who posits inherent existence as a guarantor of reality, would only amount to the production of the imaginary in any case. The final alternative again would not amount to real production of anything.
Kārikā XXI.13

न स्वतः जायते भाव: परतो नैव जायते।
न स्वतः परतशैव जायते, जायते कुऽ।||13||

| bdag daṅ g̃zan las skye ba ni | | yod min ji ltar skye bar 'gyur | |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 13 - (True) existence arises neither by itself nor by an other. It does not arise by both (forces). How then does it arise?

JONES (Skt):
[13] An entity does not arise from itself, nor does it arise from another. Nor does it arise from both itself and another. How then can a self-existent entity arise?

KALUPAHANA (Skt):
An existent does not arise from itself, or from another or from both itself and another. Whence can it then arise?

MCCAGNEY (Skt):
A being is not born by itself nor born by another, nor by both itself and another. It is born by what?

NISHIJIMA (Skt?):
13. Anything subjective, does never be born as existence, And anything objective, does never be born as existence at all. Neither anything subjective, nor anything objective, similarly, Relying upon what kind of reason, is it possible for anyone to be born again and again?

STRENG (Skt):
13. An existent thing does not originate either by itself or by something different. Or by itself and something different at the same time. How, then, can it be produced?

BOCKING (Ch):
21v12 Dharmas are not produced from themselves, Nor are they produced from another. Nor are they produced from self and other. How can they be produced?

BATCHelor (Tb):
Things are not created from themselves, nor are they created from something else; they are not created from [both] themselves and something else. How are they created?

DOCTOR (Tb):
Things do not arise from themselves Nor from something other than themselves. When nothing arises from either self or other, How can there be arising? [XXI.13]

GARFIELD (Tb):
13. An entity does not arise from itself. It is not arisen from another. It is not arisen from itself and another. How can it be arisen?

GARFIELD-SAMTEN (Tb):
13. Things do not arise from themselves. Nor do they arise from others. Since they arise neither from self nor from another, How can they arise?

HAGEN (paraphrase):
21.13 An existent does not arise from itself, from another, from both itself and another. How then can it arise?
PINGALA COMMENTARY

21/12 Since nothing exists when a dharma has not yet arisen, and it itself has not arisen, dharmas are not self-produced. If a dharma has not yet been produced, there is no 'other', and because there is no other you cannot say that it arises from another. Moreover, when it has not yet arisen, it does not exist itself, and if no self and no other exists then it is not produced from the two together. Since it is not produced in any of these three ways, how can dharmas be produced from dharmas?

Further.

KALUPAHANA COMMENTARY

Bhava and abhava referred to here may be compared with the sat and asat in the pre-Buddhist Indian philosophy. The unresolvable metaphysical questions that plagued Indian philosophy for centuries, questions such as "Did existence (sat) arise from non-existence (asat)" or vice versa, have once again been introduced into Buddhist thought by the Sarvastivadins and the Sautrantikas. The identity and non-identity theories of causation, theories of self-causation and external causation, and many other metaphysical views that emerged in the Buddhist tradition are repeatedly mentioned and rejected by Nagarjuna.

GARFIELD COMMENTARY

13. This verse simply recapitulates the argument of Chapter I in the service of the conclusion that arising cannot be conceived of as an independent phenomenon. Nāgārjuna now draws more general conclusions regarding the implication of the view that existence amounts to inherent existence for the extreme positions. He develops in the next two verses a nice reductio ad absurdum:
Kārikā XXI.14

भावम्बृपपन्नस्य शाश्वतोच्छेददर्शनम्
प्रसज्यते सं भावो हि नित्योऽनित्योऽथ वा भवेत्।।१४।।

若有所受法，即墮於斷常
當知所受法，為常為無常

bhāvam abhyupannasya sāśvatocchedadarśanam |
prasajyate sa bhāvo hi nityo 'nityo 'tha vā bhavet ||14||

ruò yǒu suò shòu fā jì duò yù;yù:wù duān cháng
dāng zhī suò shòu fā wéi cháng wéi wú cháng
| dǐnōs po yǒd par khas blaṅs na | | rtag dān chad par lta bar ni |
| thal bar 'gyur te dǐnos de ni | | rtag dān mi rtag 'gyur phyir ro |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 14 - One who admits existence will necessarily perceive permanence and disruption. For, it necessarily follows that such an existence must either be permanent or impermanent. - Note: This idea was discussed in XV, 10, 11.

JONES (Skt):
[14] for one who accepts the existence of an entity, the view of eternal permanence and complete annihilation follows because that entity is either permanent or impermanent.

KALUPAHANA (Skt):
For him who is engrossed in existence, eternalism or annihilationism will necessarily follow, for he would assume that it is either permanent or impermanent.

MCCAGNEY (Skt):
He who has agreed to the continuity of existence, the view of permanence and annihilation follows, for existence would indeed certainly be either permanent or impermanent.

NISHIJIMA (Skt?):
14. Even though the existences are approaching to get a teacher, Whether it is eternal or extinctive can be seen with eyes. Because the Real Existence can be seen as what has been born, Even what hasn’t been looked at yet, can be seen also existing there as it is.

STRENG (Skt):
14. For someone assuming an existent thing, either an Eternalistic or nihilistic point of view would logically follow, For that existent thing would be either eternal or liable to cessation.

ROBINSON (Skt):
That existent would be either permanent or impermanent.
PINGALA COMMENTARY

21/13 Someone who "accepts dharmas" differentiates between this one as good, this one as not good, as permanent, as impermanent and so on. Such a person inevitably falls into either a view of permanence or a view of severance, and why? Dharmas can be accepted in two ways, as either permanent or impermanent. Both are incorrect, and why? If (taken as) permanent, you straightaway fall into the extreme of permanence. If impermanent, you straightaway fall into the extreme of severance. Question.

KALUPAHANA COMMENTARY

Nagarjuna is here presenting the inevitable conclusions that a person involved in speculations relating to bhava will reach. If the bhava is assumed to be permanent, he will end up with a notion of eternalism. If, on the contrary, the bhava is looked upon as being impermanent, then he will assert annihilation. It may be noted that the Sarvastivadins who were involved in the notion of bhava, came up with the belief in an eternal self-nature (svabhava) or substance (dravya). The same involvement led them to assume the momentary destruction (ksana-bhanga) of impermanent qualities or characteristics of bhava.

GARFIELD COMMENTARY

14. If one thinks that any existent entity must exist inherently, then one is forced simultaneously to embrace the extremes of nihilism and reification. One must reify because any existent must be treated as inherently existent and hence permanent. But upon observing the impermanence of phenomena, one will be driven to nihilism since their impermanence would entail their lack of inherent existence and hence their complete nonexistence. An opponent, however, can be imagined to reply as follows:
Kārikā XXI.15

bhāvam abhyupapannasya naivocchedo na śāśvatam |
udayavyayasamtaṇāḥ phalahaṭvāt bhavaḥ sa hi [[15]]||

suǒ yòu shòu fā zhē bù duò yù;yú;wū duàn cháng
yìn guō xiāng;xiāng xù gū bù duàn yì bù cháng

| dṅos po yod par khas blaṅs kyaṅ | | chad par mi ’gyur rtag mi (7)’gyur |
| 'bras bu rgyu yi ’byuṅ ’jig gi | | rgyun de srid pa yin phyir ro |

ENGLISH TRANSLATIONS

INADA (Skt): Verse 15 - (The opponent contends) On the other hand, as one admits (true) existence there could be no permanence or disruption. For, such an existence expresses the continuity in the rise and fall (i.e., disintegration) of a being in a cause-effect relationship.

JONES (Skt): [Objection:15] For one who accepts the existence of an entity, the view of eternalism and annihilationism does not follow - the cycle of rebirths (i.e., “becoming”) is a series of the arising and passing away of causes and effects.

KALUPAHANA (Skt): [On the contrary,] for him who is engrossed in existence, there would be neither annihilationism nor eternalism, for, indeed, becoming is the series of uprising and ceasing of cause and effect.

MCCAGNEY (Skt): For he who has agreed to the continuity of existence as neither permanent nor annihilated, the continuity of rising and passing away is indeed the continuity of both cause and effect.

NISHIJIMA (Skt?): 15. Even though the existences are approaching to get a teacher, The situations have never been broken, nor been eternal forever. Appearance, disappearance, and continuity, Because relying upon result and relation of cause and effect, the existence is real.

STRENG (Skt): 15. An opponent objects: For someone assuming an existent thing, there is not only Eternalism or nihilism, Since this is existence: namely, the continuity of the originating and stopping of causes and product.

BOCKING (Ch): 21v14 There are those who accept, dharmas And do not fall into severance or permanence. Since the continuity of cause and effect Involves neither severance nor permanence.

BATCHELOR (Tb): If you assert the existence of things, eternalism and annihilationism will not be, because the continuity of the rising and passing of cause-effect is becoming.

DOCTOR (Tb): Although the existence of things is claimed, Permanence and annihilation do not follow Because existence is the continuum of effects and causes That arise and disintegrate. [XXI.15]

GARFIELD (Tb): 15. If one accepts the existence of entities Nonexistence and permanence will not follow. Cyclic existence is the continuous Becoming and destruction of causes and effects.

GARFIELD-SAMTEN (Tb): 15. Even if one accepts the existence of things, Nihilism and reification will not follow. Cyclic existence is the continuous Becoming and destruction of causes and effects.

HAGEN (paraphrase): 21.15 [an opponent objects]: For one who assumes existence, there would be neither permanence nor extinction, for cyclic existence is the continuous rise and fall of cause and effect.
PINGALA COMMENTARY

21/14 There are those who accept and admit distinctions in speaking of dharma, yet do not fall into severance or permanence. For instance, the sutras teach that the five skandhas are impermanent, suffering, empty and without self, but without severance, and they teach that sins and merits are never lost throughout countless kalpas, yet this is not permanence, and why? Because such dharma constantly arise and cease in a succession of causes and effects, coming and going without interruption. Because they arise and cease, there is no permanence. Because they have continuity, there is no severance.

Reply.

GARFIELD COMMENTARY

15. If Nāgārjuna is correct, this objection goes, there is a constant becoming and destruction of causally related phenomena. This, after all, is the heart of the Madhyamika analysis of phenomenal reality. But if that is so, these phenomena that are becoming and being destroyed must exist. Otherwise, what comes into and passes out of existence? It is these entities, this opponent argues, that we must posit. And from positing such entities, neither their complete nonexistence nor their permanence follows. For they are by definition impermanently existent. Nāgārjuna replies in the next verse:
Kārikā XXI.16

INADA (Skt):
Verse 16 - (Nagarjuna asserts) If such an existence expresses the continuity in the rise and fall (i.e., disintegration) of a being in a cause-effect relationship, then, since the fall does not have the nature of arising again, it will necessarily be the disruption of cause.

JONES (Skt):
[Reply:16] If becoming is a series of the arising and passing away of causes and effects, then the annihilation of the cause follows from the repeated non-arising of what has ceased.

KALUPAHANA (Skt):
If it is assumed that becoming is the series of uprising and ceasing of the cause and effect, then with the repeated non-arising of that which ceases, it will follow that there will be annihilation of the cause.

MCCAGNEY (Skt):
If the continuity of rising and passing away is the continuity of cause and effect, it follows that only one [occurrence] of arising and of passing away is the annihilation of causality.

NISHIJIMA (Skt?):
16. Appearance, disappearance, and continuity, Relying upon result and reason, the existence really exists there. By passing through, relying upon the birth, which does never occur once more again, Then the cutting the reason might be done presumably.

STRENG (Skt):
16. Nagarjuna replies: If this is existence: namely, the continuity of originating and stopping of causes and product, It would logically follow that the cause is destroyed because the destroyed thing does not originate again.

ENGLISH TRANSLATIONS

BOCKING (Ch):
21v15 If causes and effects arise and cease In succession, with no cessation Since what has ceased does not arise again, The cause should be considered extinct.

BATCHELOR (Tb):
If the continuity of the rising and passing of cause-effect is becoming, because what has passed will not be created again, it will follow that the cause is annihilated.

DOCTOR (Tb):
If a continuum of arising and ceasing Causes and effects constitutes existence, That which is destroyed does not arise again And so causes are annihilated. [XXI.16]

GARFIELD (Tb):
16. If cyclic existence is the continuous Becoming and destruction of causes and effects, Then from the nonarising of the destroyed Follows the nonexistence of cause.

GARFIELD-SAMTEN (Tb):
16. If cyclic existence were the continuous Becoming and destruction of causes and effects, Since that which is destroyed does not arise again, Causes would, absurdly, be annihilated.

HAGEN (paraphrase):
21.16 [Nagarjuna replies]: If cyclic existence is the continuity of the rise and fall of cause and effect, then, since the fall does not have the nature of arising, it will necessarily be the end of the cause.
PINGALA COMMENTARY

21/15 If you say that by virtue of the continuous succession of causes and effects, dharmas are neither severed nor permanent, then if a ceased dharma has already ceased it will not arise again, and this is severance of the cause. If the cause is cut off, how can there be continuity, since what has ceased does not arise again?

Further.

KALUPAHANA COMMENTARY

The Sautrantika position was no more different. They assumed that bhava is none other than bhava, the process of becoming represented by the series (samtana) of arising and ceasing of effect and cause (phalabetvoh) As such, they believed that their conception of existence does not come under either eternalism or annihilationism.

However, Nagarjuna has a different perception. He assumes that if the process of becoming (bhava) is analysed into a series of arising and ceasing of effect and cause, as the Sautrantikas did, one is compelled to recognize the non-rebirth (a-punar-utpatti) of that which has ceded, and there would be complete annihilation of the cause. This is similar to the argument used at XXI.7.

GARFIELD COMMENTARY

16. Given the pervasiveness of dependent arising, the impermanence of all causes and effects, and the emptiness of the relation of dependence itself, causes and effects themselves must be regarded as noninherently existent. For the person who equates existence with inherent existence, this forces the denial of the very becoming and destruction he has posited as the only inherently existent phenomena. The point against the objection asserted in the previous verse is this: The very fact that constant becoming and destruction characterizes reality entails that at no point can anything be identified as an entity in the robust sense - a thing with a nature that persists over time. The very phenomena the opponent wants to posit as existent in order to make sense of the series of becoming and destruction are, when that series is taken seriously, themselves nonexistent. But the kind of full existence the opponent feels compelled to posit is in any case not only impossible given this situation, but unnecessary as well. Nāgārjuna now turns to the soteriological implications of this view of becoming, destruction, and entitihood:
**Kārikā XXI.17**

INADA (Skt):
Verse 17 - It is not justifiable to assert that an existence in virtue of self-nature becomes a non-existence. For, at the time of nirvana, there is a disruption in virtue of the quiescence of the continuity of being.

JONES (Skt):
[17] The nonexistence of a real entity existing through self-existence is not admissible. At the time of nirvana, there will be cessation because of the stilling of the stream of becoming.

KALUPAHANA (Skt):
The non-existence of that which possesses existence in terms of self-nature is not appropriate. [On the contrary,) at the time of freedom, there will be annihilation as a result of the appeasement of the stream of becoming.

MCCAGNEY (Skt):
By means of the self-nature of a real existent, a nonreal existent does not occur. At the time of nirvāṇa there is annihilation of the uninterrupted series of births and transmigrations on account of calmness.

NISHIJIMA (Skt?):
17. Belonging to the real existence, and relying upon subjective existence,
There is no concrete situation for the non-concrete existence to be bound by abstract conditions at all.
In the time when we are staying in the serene state of the balanced autonomic nervous system.
Relying upon the tranquility, even the existence itself will continue its no stopping state further.

STRENG (Skt):
17. If there is self-existence of something which is intrinsically existing, then non-existence does not obtain. At the time of nirvana there is destruction of the cycle of existence (bhavasamtana) as a result of the cessation.
PINGALA COMMENTARY

21/16 At the time when a dharma is fixed within the characteristic of existence, it is not without characteristics, just as a jug, when it is fixed in the characteristics of a jug, does not have the characteristics of destruction. As long as the jug exists, it does not have the characteristics of destruction, but when the jug does not exist, there are no characteristics of destruction either, and why? Because if there is no jug, there is nothing to be destroyed. Understood in this way, cessation is untenable.

Without cessation there can be no production either, and why? Because arising and ceasing are mutually interdependent, and also because there would be the errors of permanence etc. Therefore, existence and nonexistence may not co-exist in one dharma.

(29a18) Also, your earlier assertion that because there is a succession of arising and ceasing of cause and effect, one can accept dharmas without falling into severance and permanence, is not correct, and why? You say that because there is a continuity of cause and effect, there is continuity of characteristics of the three existences, and that nirvana means continuity of the characteristic of cessation. If this were so, then at the time of nirvana, one ought to fall into severance and cessation, because of the cessation of the continuity of characteristics of the three existences.

Further.

KALUPAHANA COMMENTARY

Nagarjuna's attention is now directed at the Sautrantika view, for it is that which finally contributed to the "personalist theory" (pudgala-vada) of the Vatsiputriyas. The Sautrantika will dismiss the Sarvastivada view, insisting that there is no way in which nirvana can be explained in terms of their notion of self-nature (svabhava), especially because what is really existing (sadbhava) on its own (svabhavena) cannot become a non-existent (asadbhava).

However, the Sautrantika will say that as a result of the appeasement of the series of becoming (bhava-samtati), there is annihilation at the time of nirvana. Having stated this position, Nagarjuna proceeds to analyse its implications.

GARFIELD COMMENTARY

17. If we thought that anything had inherent-existence - whether entities, processes, or arising and its determinants - that could not possibly cease in nirvāṇa. So this view would render Buddhist soteriology incoherent and is therefore, since it purports to be a view of the nature of cyclic existence by contrast with nirvāṇa, untenable.

The next three verses sum up the results of this investigation regarding the possibility of conceiving of empirical reality as consisting of a series of momentary phenomena, each one of which gives rise to the next through an inherently real nexus of destruction and becoming. The structure of the argument is by now familiar:
Kārikā XXI.18

ENGLISH TRANSLATIONS

INADA (Skt): Verse 18 - It is not justifiable to assert that a being arises only at a time when a previous being ceases to be, nor also that a being arises when a previous being does not cease to be.

JONES (Skt): [18] If the last has ceased, the existence of a first one arising is not admissible. If the last has not ceased, the existence of a first one arising is not admissible.

KALUPAHANA (Skt): It is not proper to assume that there is first becoming when the last has ceased. Nor is it proper to assume that there is first becoming when the last has not ceased.

MCCAGNEY (Skt): A being first occurs where the last has not ceased [or] a being first occurs where the last has not ceased.

NISHIJIMA (Skp?): 18. The ultimate ends are not always stopped, And Existences are usually restraint by the most former top. Even at the latest End, there is no situation, where any kind of hindrance does not exist, And Existences are usually restraint by the most former top.

STRENG (Skt): 18. If the last part of existence is destroyed, the first part of existence does not obtain. If the last part of existence is not destroyed, the first part of existence does not obtain.
21/17 'The first existence' means existence in the present time period. 'Subsequent existence' means existence in a future period of time. If the first existence ceases and afterwards there is the subsequent existence, it will be uncaused, and this is not correct. Therefore, we cannot say that the first existence ceases and (then) there is the subsequent existence.

(29a27) If the first existence does not cease, there will not be any subsequent existence either, and why? If the subsequent existence exists when the first existence has not yet ceased, this would be two existences existing at one time, and this is not correct. Therefore, if the first existence does not cease, there will be no subsequent existence.

Question. The subsequent existence does not arise through the cessation of the first existence, nor does it arise through the non-cessation of the first existence. It is simply produced at the moment of cessation.

Reply:

The Sautrantika theory of a series of momentary existences is under investigation here. As mentioned before, the Sautrantikas were often faced with the problem of explaining arising (utpada). Thus, Nagarjuna argues that the first (moment of) becoming (prathamo bharah) cannot occur when the last (carama) has ceased, for there will be nothing to give rise to the former. This is what was referred to as the cessation of the cause (hetuccheda) at XXI. 16. The other alternative is to assume that the entity of the last moment has not ceased (aniruddha), and this, of course, makes it difficult for the first becoming to occur at all.

18. If the momentary phenomenon prior to a present momentary phenomenon has ceased prior to the arising of the present one, there is no basis for that arising. But if it has not ceased, then its destruction cannot be an occasion for the arising of the subsequent event. So the prior momentary phenomenon can neither have ceased nor not ceased.
Kārikā XXI.19

निरुध्यमाने चर्मे प्रथमो यदि जायते
निरुध्यमाने एकः स्वाज्ञायणानोपरो भवेत्।।19।।

若初有滅時 而後有生者
滅時是一有 生時是一有

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 19 - If a being arises in the ceasing process of the previous being, then perhaps the ceasing process refers to one kind of being and the arising process to another.

JONES (Skt):
[19] If the first one is being born as the last one is ceasing, the one ceasing would be one thing and the one being born would be another.

KALUPAHANA (Skt):
If the first were to be born when the last is ceasing, then that which is ceasing would be one and that which is being born would be another.

MCCAGNEY (Skt):
If the first is born where the last is presently ceasing, what is ceasing would be one and what is being born would be another.

NISHIJIMA (Skt?):
19. When everything has been stopped, or at the latest end, Then the earliest one at that time is born.
All kinds of stopping must be supposed to exist only one, And so the simple fact of going on at the present moment can exist.

STRENG (Skt):
19. If the first part of existence were produced while the final part were being destroyed, There would be one thing being destroyed and being produced both at the same time.
PINGALA COMMENTARY

21/18 If the subsequent existence is produced in the moment of cessation of the first existence, this is two existences together in one moment, one existence being the moment of cessation, the other existence being the moment of production.

Question: It is not that the moment of cessation and the moment of production are two existences together, it is merely that we manifestly see that when the first existence ceases, the subsequent existence arises.

Reply:

KALUPAHANA COMMENTARY

Assume that the first becoming occurs at the time when the last is ceasing (nirudhyamana). Nagarjuna insists that, in that case, what is ceasing is one thing and what is arising is something completely different (aparo). Nagarjuna is here referring to the implications of the theory of moments, namely, the recognition of absolute distinctions.

GARFIELD COMMENTARY

19. That is, if we say that the cessation of the previous momentary phenomenon is simultaneous with the arising of its successor, then being simultaneous but distinct, the two phenomena are separable and hence independent. If so, there is no basis for positing any connection between them. This is yet another application of the principle of the independence of separable phenomena.
na cen nirudhyamānaś ca jāyamānaś ca yujyate |
 sārdhamaṃ ca mriyate yeṣu teṣu skandheṣu jāyate ||20||

ruò yán yū;yū;wū shēng miè ér wèi yī shí zhē |
 zē yū;yū;wū cì yīn sì jì yū;yū;wū cì yīn shēng

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 20 - If it is not justifiable to assert that existence can be expressed in the concurrent process of arising and ceasing, then it should arise as well as cease within the same realm of the skandhas (i.e., the five aggregates of being).

JONES (Skt):
[20] But if the one ceasing is the one being born, then one ceases in the aggregates in which one is also being born.

KALUPAHANA (Skt):
If it is asserted that the ceasing is also the being born, this would not be props. For, in that case, whatever that is born in relation to the aggregates, would also be dying at the same time.

MCCAGNEY (Skt):
If not, presently ceasing and presently being born occur where those skandhas being born are the same as these dying.

NISHIJIMA (Skt?):
20. If the situation there, is not stopped actually, The real situation of flying might be stopped. And if the whole situations are stopped then, Relying upon them, or relying upon miscellaneous things and phenomena, Birth will be realized.

STRENG (Skt):
20. If the one "being destroyed" and the one "being produced" cannot exist together, Can someone be produced in those "groups of universal elements" (skandhas) in which he is also "dying"?

BOCKING (Ch):
21v19 If you say that arising and ceasing Take place simultaneously Then when these skandhas die. These same skandhas are born.

BATECHELOR (Tb):
If it is also unreasonable for stopping and creating to be together, aren’t the aggregates that die also those that are created?

DOCTOR (Tb):
Hence, it does not make sense either For ceasing and arising to occur together. Could the aggregates with which one dies Be the ones with which one is born as well? [XXI.20]

GARFIELD (Tb):
20. If, absurdly, the one arising And the one ceasing were the same, Then whoever is dying with the aggregates Is also arising.

GARFIELD-SAMTEN (Tb):
20. It does not even make sense that the one arising And the one ceasing are simultaneous. Whoever is dying with respect to the aggregates Would also be arising with respect to them.

HAGEN (paraphrase):
21.20 It makes no sense that the one arising is the one ending. Were this so, then one being formed of the fluxing aggregates is simultaneously dying with them.
21/19 If the moment of arising and the moment of ceasing are one moment and not two existences, and you say that in the moment when the first existence ceases, the subsequent existence arises, then according to whatever skandhas one dies in, these skandhas should be (re)born, and one should not be reborn in any other skandhas. Why is this? Because the one who dies will be the same as the one who is reborn. But these dharmas of ‘dying’ and ‘being born’ are opposites, and cannot both occupy one moment or one place. Therefore, your earlier statements that the moment of cessation and the moment of arising are one moment and not two existences, and that it is merely a case of manifestly seeing that when the first existence ceases, the subsequent existence is produced, are not correct.

Further.

KALUPAHANA COMMENTARY

Further complications will arise if it is assumed that something that ceases is also arising. Nagarjuna is not prepared to accept such an occurrence because this would mean the simultaneous death and birth of the aggregates.

Therefore, an occurrence is not explained by a strictly momentary theory of existence advocated by the Sautrantikas.

GARFIELD COMMENTARY

20. Finally, we don’t want to identify arising and ceasing, claiming that they are the same phenomenon, since they are by definition contraries. It would be tantamount, Nāgārjuna claims, to saying that a person who is dying is simultaneously being born. From the standpoint of one who wants to posit arising and destruction as the two complementary inherently existent bases of cyclic existence, it would hardly do to say that they are one and the same thing.
**Kārikā XXI.21**

**INADA (Skt):**
Verse 21 - Consequently, the continuity of being is not possible within the three temporal moments. As it does not exist within the three temporal moments, in what manner does it exist? - Note: Reference to past, present, and future.

**JONES (Skt):**
[21] Therefore, the stream of becoming is not connected to the three times (i.e., past, present, and future). How can there be a stream of becoming that is not in the three times?

**KALUPAHANA (Skt):**
Thus, the stream of becoming is not proper in the context of the three periods of time. How can there be a stream of becoming that does not exist during the three periods of time?

**MCCAGNEY (Skt):**
Thus the continuing series of births and transmigrations is not reasonable in the three times. How can that which does not exist in the three times be [regarded] as a “series”?

**NISHIJIMA (Skt?):**
21. Following like this, relying upon the three kinds of time, past, present, and future, or relying upon the time itself, The talks about continuity of being born and the continuity of cause and effect, has ended in talks. Even in the three kinds of times, they do not really exist, And so how is it possible for such a kind of stopping continuity of birth and continuity of cause and effect?

**STRENG (Skt):**
21. Thus, the chain of existences is not possible in any of the three times i.e. past, present, and future; And if it does not exist in the three times, how can the chain of existences exist?

**ROBINSON (Skt):**
Thus succession of becoming is not valid in any of the three times; how can that which does not exist in the three times be a succession of becoming?

**ENGLISH TRANSLATIONS**

**BOCKING (Ch):**
21v20 Seeking a continuity of existence in the three periods of time
It cannot be found. If it is not existent in the three periods of time, What continuity of existence exists?

**BATCHelor (Tb):**
Likewise, if the continuity of becoming is not reasonable at any of the three times, how can there be a continuity of becoming which is non-existent in the three times?

**DOCTOR (Tb):**
Therefore, nowhere in the three times, Could there reasonably be any continuum of existence. How could something outside of the three times Be the continuum of existence? [XXI.21]

**GARFIELD (Tb):**
21. Since the series of cyclic existence is not evident In the three times, If it is not in the three times, How could there be a series of cyclic existence?

**GARFIELD-SAMTEN (Tb):**
21. Since the continuum of life makes no sense In terms of any of the three temporal periods, How could that which does not exist in the three temporal periods Be the continuum of life?

**HAGEN (paraphrase):**
21.21 Thus continuity of being is not found in any of the three times. If it is not found in time, in what manner can it be said to exist at all?
PINGALA COMMENTARY

21/20 'The three existences' means desire-existence, form-existence and no-form existence. It is because one is unable to attain true insight within beginningless samsara and death, the three existences eternally succeed each other. Now, even if we earnestly seek for them in the three periods of time, they cannot be found, and if not within the three periods of time, then where can this continuous succession of existences take place? You should know that the continuity of existence exists only by virtue of delusions and perverted views. In reality, it does not exist.

KALUPAHANA COMMENTARY

The conclusion is inevitable that the series of becoming (bhava-samtati) is not appropriately explained in terms of the three periods of time, a concept which, as shown in the previous chapter, is not empirically grounded.

GARFIELD COMMENTARY

21. And finally, if we cannot conceive of the domain of conventional phenomena as inherently existent in time, there is no sense in suggesting that it has some kind of transtemporal existence. The object of analysis here is the conventional world we inhabit. So, Nāgārjuna concludes, we cannot, upon analysis, resolve the domain of conventional phenomena into a series of constantly arising, constantly ceasing, yet individually inherently existent momentary phenomena, connected to one another and characterized by inherently real arising and ceasing. As this target ontology was among the subtlest of the pre-Madhyamika views of the nature of reality, dependent arising, and impermanence (and is indeed not by any means a relic within Theravada Buddhism) and as it represents a plausible interpretation of fundamental Buddhist tenets, this refutation is an appropriate close to the portion of the text concerned directly with the analysis of the fundamental structure of conventional reality. With this in hand, Nāgārjuna turns in the final six chapters to topics concerned with the nature of ultimate reality: buddhahood, prominent incorrect views about the ultimate, the Four Noble Truths and emptiness, nirvāṇa, and the twelve limbs of dependent origination.
Chapter XXII: Examination of the Tathagata
Chapter XXII

MAJBA (TOPICAL OUTLINE)

1. Refuting the notion that the Thus-Gone is established by nature
   1. Showing that the appropriating person who is the Thus-gone lacks establishment
   2. Refuting the substantial existence of the person by pointing out that the person does not exist in relation to the appropriated in any of the five ways
   3. There is no basis for this designation

2. Establishing that he is, therefore, beyond all beliefs
   1. Showing that the aggregates that are appropriated by him lack establishment
   2. Refuting the nominal existence of the person by pointing out that the person does not exist in relation to the appropriated in any of the five ways
   3. He cannot be established as either a self-entity or as an entity that is of another nature

3. Extending this analysis to other topics
   1. The reality of the Thus-Gone is beyond all mental and verbal constructs
   2. It is a flaw to apprehend it as confined to such constructs

4. Summary
   1. Prior to the appropriated, the appropriator does not exist
   2. There could be no appropriation by an appropriator who has no prior existence
   3. Without an appropriation, there cannot be something appropriated
   4. There is no appropriator without appropriation

1070
OUTLINE:
We now begin the fifth section of the extensive explanation of selflessness: the presentation of the essential emptiness of the continuum of life. This section has two parts: the refutation of the essential existence of the Tathagata; and the refutation of the essential existence of the afflictions. This chapter constitutes the first of those two parts.

EXPLANATION:
Here some say that the continuum of life exists essentially because the Tathagata exists essentially. The Victor, for the benefit of sentient beings, accumulated vast merits for either three or seven countless aeons and attained buddhahood through these long efforts. If the continuum of his life had not existed essentially, the Tathagata could not exist, because the attainment of buddhahood depends on going through many births in cyclic existence.

Efforts have been made through the various lights of reason to dispel the deep darkness of your ignorance. But, because you have been habituated to it for a very long time it has not been dispelled. This shows that because your deep ignorance has not been dispelled, the continuum of cyclic existence has not been terminated and instead has been prolonged. If the Tathagata existed essentially, the continuum of cyclic existence would exist essentially as well, but he does not.

This discussion has four parts: the refutation of the existence of the Tathagata through his own characteristic, showing that there is no room for others’ false views, the presentation of the deficiencies of those false views, and applying arguments to those other views.

SUMMARY:
If phenomena existed through their own characteristics, the ontological status of the Tathagata and his attributes would not make any sense. But their ontological status is completely tenable insofar as they are dependently originated and empty of existence through their own characteristics. Thus it is completely tenable in this system, and only in this system, to posit the Tathagata as a refuge object.

INADA (Chapter Introductions)

CHAPTER XXII - Examination of the Tathagata
This chapter investigates the question of the Tathagata. The term itself is an interesting one in that it refers to one who has attained or arrived at the state of truth (tathata or tattva). It is normally translated as thus-come or thus-gone.

In reality, this chapter is a logical consequence of what has been hinted at in the previous chapter. There we have seen that Nagarjuna advertently or inadvertently stressed the concept of bhava (rather than bhava), the realm of true worldly existence beyond any conceptualization. It is in this realm that the true meaning of a Tathagata will have to be understood. He goes through the usual pattern of thought, as in Chapter XVIII, Verse 8, he introduces the so-called four-cornered logic, i.e., the four and only four possible ways of viewing anything. He applies the elements of this logic to the concepts of sunya (void) and concludes that, after all, sunya is spoken of only as a provisional means of understanding the true realm.

KALUPAHANA (CHAPTER OVERVIEWS)

22. “Thus Gone One” (tathagata). A host of epithets were used to describe the attainments of the person who was able to understand the nature of human existence and overcome the suffering associated with it. Two of them stand prominent. These were buddha or the “enlightened one” and tathagata or the “thus gone one,” and even these two terms were used synonymously. The lust of these describes the ideal achieved by one who was aspiring for knowledge or understanding, an aspiration clearly expressed in the famous Upanisadic statement: “From darkness, lead me to light,” (tamaso mam jyotir gamaya).112 In the Upanisads, this enlightenment was nothing short of “omniscience” (sarvajña),119 even though this term was not used in a technical sense. For the Buddha, enlightenment is attained as a result of the realization of the means and limits of knowledge (see the above analysis of the Kaccanagotta-sutta).
The second epithet, *tathagata*, led to more misunderstanding and misinterpretation in the Buddhist context. As the term implies, it explains the ultimate goal to be achieved by such enlightenment. It represents an attempt to answer the aspirations of the human beings who were looking for immortality avoiding the endless cycle of births and deaths. In the *Upanisads* it is expressed in the statement: “From death, lead me to immortality,” (*mṛtyor mam amrtam gamaya*). According to the *Upanisads*, the “enlightened one” who understands the nature of the real self (*atman*), upon the dissolution of the psychophysical personality, is united with the universal ideal self (*brahman*) and thereby enjoys eternal life. The Buddha, who was not willing to admit the existence of such a state, merely maintained that the “enlightened one” (*buddha*) is also freed from continuous becoming (*bhava*). Hence, the *tathagata* or the “thus gone one” is contrasted with one who is subjected to becoming (*bhava*) or re-becoming (*punabbaṁ*).

With the attainment of enlightenment and freedom from grasping (*upadana*), the freed one leads a happy and contented life, while at the same time not longing for a future existence. Enlightenment (*bodhi*) is synonymous with waning of craving (*tanhhakkhaya*). However, the unenlightened person, bound by craving and grasping, not only looks for eternal life beyond the grave (*param marana*), but also expects to see something more mysterious and awe-inspiring (*acchariya-abbhuta*) in the life of a freed one who is alive. It is for this reason that two major questions were raised in relation to the conception of a *tathagata*. The first is the question as to whether the *tathagata* is identical or different from the psychophysical personality.114 The second is the question as to whether the *tathagata* survives the destruction of the psychophysical personality.115 This may explain why, in the early discourses, whenever such questions were raised they were raised more in relation to a *tathagata* than in connection with a *buddha*. Thus, after a detailed examination of the problems of human existence, problems such as action, moral responsibility, or becoming, it was natural for Nagarjuna to direct his attention to the questions pertaining to the conception of ultimate goal as envisaged in Buddhism. In doing so, he was compelled to deal, fast of all, with the meaning of the concept *tathagata*.

Nagarjuna’s examination of the *tathagata* follows the line of analysis found in the early discourses. While early Buddhism confronted problems relating to the conception of *tathagata* because it was understood in terms of the notion of a permanent and eternal self (*atman*), Nagarjuna is here struggling with the same conception as explained in relation to the notion of a real substance (*svabhava*). Nagarjuna was not willing to consider the *tathagata*, conceived in such a metaphysical way, as identical with the aggregates (*skandha*). This was the Sarvastivada position which Nagarjuna was rejecting (XXII. 2). Nor was he prepared to accept the alternative suggested by the Sautrantikas, who emphasized non-identity or difference. The notion of *anatman* (no-self) referred to at XXII.3 is really the conception of “other-nature” (*parabhava*) that was propounded by the Sautrantikas. Inada’s explanation that “the use of the term *anatman* here is not to be confused with the cardinal Buddhist doctrine by the same term,”116 therefore needs to be qualified as the “cardinal early Buddhist doctrine,” for the Sautrantikas were guilty of propounding a theory of *anatman* which emphasized real difference. Nagarjuna was therefore ready to assert that a *tathagata* conceived in terms of either “self-nature” (*svabhava*) or “other-nature” (*parabhava*) is not evident.

The question whether the *tathagata* is dependent is taken up next. Its dependence or independence is then rejected primarily because once again it is understood in terms of substantial dependence (*svabhava upadana*) or substantial independence (which is the implication of “other-nature” or *parabhava*) (XXII.9). Views of *tathagata* as “empty” (*sunya*) or “not empty” (*asunya*) are considered, and these again are particular views (expressed in the *iti*-formula) and are therefore rejected.

How the notion of a living *tathagata*, conceived of in a rather metaphysical way, leads to the belief in a *tathagata* after death is explicitly stated by Nagarjuna at XXII. 13. Nagarjuna’s argument is that if the *tathagata* were to be considered empty in terms of self-nature (*svabhavataḥ*), any thought of his being existent or non-existent after death (*param-nirodhat*) is not appropriate. This, indeed, is the view expressed by the Buddha in the early discourses.117

The concluding statement of this chapter is rather significant, especially in view of the nature of the “freed one” (*nibbuta*) or “freedom” (*nibbana*) as enunciated in the early discourses. We have already pointed out that freedom (*nibbana*) is a state unconditioned by dispositions (*asankhata*). It is not a state that is uncaused (*appaticca-samuppanna*). The *tathagata* is, therefore, unconditioned by dispositions but not in-dependent. Elsewhere Nagarjuna insists that there is nothing in the world that is independent (XXIV. 19). The *tathagata* is, therefore, like the universe (*jagat*) wherein the principle of dependence (*pratitya-samantpada*) functions. He has no self (*atman*) or substance (*svabhava*), as it is in the case of the universe (*jagat*).
Batchelor (Poetic “Translation”)

Buddhanature

It’s not physical, emotional, Conceptual, impulsive, conscious – Or anything else. It does not dwell in us Nor we in it. It does not own us.

If it depended on us Or on anything else, It would not be in itself. How could it be anything but itself? Could what is not itself Be buddhanature?

What is it apart from itself Or something else? Is it independent of body, feeling, thought, Impulse or consciousness? It depends on them now And is set to continue.

Can you say that Buddhanature is “contingent” When what is depended on

And what depends are empty?

Can you say that Buddhanature is “empty” When “empty” and “not empty” Are mere ciphers?

Fixed ideas of permanence And transience, Finitude and infinity, Have no place when all is well.

Believers believe in buddhas Who vanish in nirvana. Don’t imagine empty buddhas Vanishing or not.

When transfixed On what’s unwavering Beyond fixation’s range, You see no buddhanature.

Buddhanature Is the nature of this world. Buddhanature has no nature, Nor does this world.

Jones (Commentary)

22. The Buddha

The title used here, “Tathagata,” is a compound meaning either “the thus come one” or “the thus gone one,” depending on how we parse the Sanskrit - “tatha-agata” or “tatha-gata.” The Tibetans do it the second way and Chinese the first. Either way, it means one who has successfully traversed the path to enlightenment.

There is no “real” Buddha (vv. 3-4) because there is no self-existence, and so the Buddha does not speak since only something “real” can really speak. So too, there is nothing real to say. And so, the Buddha is “the silent one” - his title “Shakya-muni” means the “silent one of the Shakya clan” even if this is no longer understood literally: he could speak, as his discourses testify, but without projecting the linguistic distinctions onto reality. The traditional fivefold analysis (v. 8) is to examine whether the Buddha is the aggregates, is independent of the aggregates, or is in the aggregates, or the aggregates are in the Buddha, and whether the Buddha possesses the aggregates. (See R 82.) Verses 8-9 are saying that the Buddha is not self-existent and not a real entity since he is dependent upon the bodily aggregates (vv. 1-6).

The rejection of the four options in verse 11 introduces the idea of the “emptiness of emptiness” and the conventionality of all language: “‘Empty,’ ‘not empty,’ ‘both,’ or ‘neither’ - these should not be said, but they are said only as an indicator (prajnaptir).” (See also 24.18.) The word “emptiness” is itself empty (W 59). In short, there is no real, self-existent entity called “emptiness,” but, like all nouns, it can be used conventionally to designate something - it indicates the absence of self-existence. It differs from other nouns in that there is no phenomenon, either real or empty, to be indicated by the word “emptiness” while other nouns have some (empty) phenomena to be indicated in objective reality. But even so, the unenlightened think that if there is an “indicator” then there is something to be in the world “indicated.” Nevertheless, the enlightened have gotten beyond projecting our categories onto reality (v. 15). They see that “shunyata” is only a fabrication employed to inform us of the fabricated nature of our fabrications.
Verse 16 uses “svabhava” in a non-technical sense: whatever is the “nature” or “essence” of the Buddha, that is the “nature” or “essence” of the world. (See 7.16.) This is not claiming that the Buddha or the world has svabhava in the technical sense of self-existence but only that the nature of the Buddha and the world is the same - being empty of self-existence. This comes up again in his claim that there is no difference between nirvana and samsara (25.20).

GYAMTSO (COMMENTARY)

An Examination of the Tathagata

In the sutras, the Buddha taught:

The Tathagata is a phenomenon that never arises, and all other phenomena are similar to the Sugata.

(In Tathagata, meaning “The Thus Gone One,” and Sugata, meaning “The One Gone to Bliss,” are epithets for the Buddha.)

JUST AS THE TATHAGATAS of the three times are ultimately unborn, so all other phenomena are the same.

Nagarjuna composed this chapter in response to those who argued, “Samsara exists because the tathagatas, the buddhas, exist. The tathagatas are the ones who gain liberation from samsara, and since they exist, then the samsara that they transcend by attaining enlightenment must also exist.”

To help these people overcome their mistaken belief in the true existence of samsara, Nagarjuna proves in this chapter that the Buddha does not truly exist, for if the Buddha does not truly exist, then samsara does not truly exist. Similarly, for samsara to be unreal while the Buddha was real would be illogical. To assert that all phenomena do not truly exist except for the Buddha who does truly exist would be illogical. For if sentient beings did not exist and the Buddha did, the Buddha would have no work to do because there would be no sentient beings to benefit!

The eleventh verse of the chapter reads:

The Tathagata cannot be called “empty,” nor “not empty,” nor both, nor neither.

Use these terms as mere conventional designations.

At the stage when there is no analysis of the true nature of reality, the Buddha exists. At the stage of slight analysis, when precise knowledge examines the Buddha, it cannot find anything, and therefore it is explained that from the perspective of the eye of wisdom, the Buddha does not exist. At the stage of thorough analysis, one discovers that the actual nature of reality transcends both the existence and the nonexistence of the Buddha. No conceptual fabrications can apply. This is what the first line of this verse teaches. Nevertheless, as it says in the second line, “Use these terms as mere conventional designations,” which means that even though none of these expressions of “empty,” “not empty,” “both empty and not empty,” and “neither empty nor not empty” can describe genuine reality, still, sometimes it is good to explain that the Buddha exists, sometimes it is good to explain that the Buddha does not exist, and sometimes it is good to explain that the true nature of the Buddha transcends all conceptual fabrications.

To those who do not believe in the Buddha at all, who have no confidence that there is such a thing as enlightenment, it is good to explain that buddhahood exists as the ultimate result of the path of the cultivation of wisdom and compassion. We can explain that there is a path of wisdom and compassion, and when one reaches the culmination of that path, when one actualizes the ultimate perfection of these two qualities, then one is the Buddha. So the Buddha exists as the result of this path of wisdom and compassion, and it is good to explain things in this way to those people. There are many logical proofs of the existence of this path and its result.

To those who believe that the Buddha truly exists, it is good to explain that when one analyzes logically, no Buddha can actually be found. One cannot find any existence of the Buddha, and in fact Buddha Shakyamuni himself said that the Buddha does not truly exist. Explaining things in this way helps people to let go of their clinging to the Buddha as being real. In fact, the only way to stop thinking that things exist is to develop certainty that they do not exist. When meditating on emptiness, therefore, one must first meditate on the nonaffirming negation (fn A nonaffirming negation is a negation of existence that does not affirm the existence of anything in its place. For example, the statement “There is no spoon” merely negates the existence of a spoon without affirming the existence of anything else. This is opposed to an affirming negation, such as the statement “The lion is not dead.” Negating death here implicitly affirms that the lion is alive.) of existence that leaves nothing remaining—emptiness that is like space.

This, however, is still a conceptual fabrication of emptiness, and as such it obscures our vision of the true nature of reality beyond conceptual fabrications. Therefore, to those who cling to the belief that the Buddha is empty or nonexistent, it is good to explain how, in the ultimate sense, reality transcends all conceptual fabrications. It is good to explain how the Buddha neither exists, nor does not exist, nor is some combination of the two, nor is something that is neither of them. This will help them to give up their clinging to the notion of the Buddha’s emptiness and to realize the true nature of the Buddha, beyond all notions of what it might be.

When you dream and you know that you are dreaming, do you think of yourself as existent? As nonexistent? As both? Or as neither? How do you think of yourself at that
time? This type of analysis will help you to understand the meaning of this verse.

Thus, the first step is to see what perspective people are taking in terms of these four conceptual extremes. They might think that the Buddha exists or does not exist, or both exists and does not exist, or neither exists nor does not exist. Then, depending upon their conceptual perspective, the teacher explains to them from one of the three stages of analysis—either that the Buddha exists, or that the Buddha does not exist, or that the Buddha’s nature transcends both existence and nonexistence. We have to see which perspective it is important to explain at that point, or else we will not be able to be of benefit. Therefore, we have to know: What are the reasons one can say that the Buddha exists? What are the reasons one can say that the Buddha does not exist? Finally, what are the reasons one can say that the Buddha transcends existence and nonexistence?

The twelfth verse refutes the extremes of permanence and impermanence and of finity and infinity:

Permanent, impermanent, and so forth, the four—
Where are they in this peace?
Finite, infinite, and so forth, the four—
Where are they in this peace?

Peace here refers to the true nature of enlightenment, the true nature of the Tathagata. In this nature, the ultimate nature of reality, where is there any permanence or impermanence? Where is there some combination of the two or the absence of the two? Similarly, where is there finity or infinity? Where is there something that is both? Where is there something that is neither?

Depending on what is necessary at the time, it is both permissible and important to describe the Buddha as permanent, impermanent, or transcending both permanence and impermanence. These are the three main stages. For example, someone may think, “Well, the Buddha died, so the Buddha is not here now. The Buddha does not exist now because the Buddha is impermanent.” If someone thinks like that, then the explanation to give is that the dharmakaya of natural purity is permanent and unchanging (The dharmakaya is one of the three kayas, or dimensions of enlightenment. The other two are the sambhogakaya and nirmanakaya. The dharmakaya refers to the Buddha’s enlightened mind, and the dharmakaya of natural purity is the true nature of that enlightened mind, as well as the true nature of the mind of every sentient being. In its nature it transcends conceptual fabrication; it is the essence of genuine reality. When one realizes its nature perfectly, one attains the dharmakaya free of fleeting stains, awakening into the complete and perfect enlightenment of buddhahood.). The dharmakaya of natural purity is nothing other than the Buddha, and therefore the Buddha is permanent. The Buddha is precisely the natural purity of reality’s basic essence, which never ceases to exist.

On the other hand, if people cling to the notion that the Buddha is permanent, then they need the explanation from the perspective of the form kayas, which is that even the Buddha passes into nirvana (fn There are two form kayas, the sambhogakaya and the nirmanakaya. The former appears to and teaches exclusively the noble bodhisattvas on the ten bodhisattva grounds; the latter appears to and teaches ordinary sentient beings and noble bodhisattvas alike.). Even the Buddha dies. So that is the way these two explanations are used, depending upon the way a person thinks. In fact, the true nature of reality transcends both the permanence and the impermanence of the Buddha. That is the actual nature of reality. It is the same with thinking about things being either finite or infinite—the same analysis applies.

The sixteenth verse of the chapter reads:

Whatever is the nature of the Tathagata,
That is the nature of wandering beings.
The Tathagata has no inherent nature;
Wandering beings have no inherent nature.

The nature of the tathagatas is beyond any concept of what it might be. It is completely free of any stain. It is originally pure.

That, precisely, is the nature of sentient beings—completely beyond concept, completely free of stains, pure from the very beginning. The true nature of the Tathagata and the true nature of sentient beings are exactly the same.

Samsara and nirvana are equality—in their true nature, they are the same. This is what is taught in Mahamudra and Dzogchen, and just as it is taught that samsara and nirvana are equality, so it is with buddhas and sentient beings—they are equality.

PINGALA COMMENTARY

22/0 Question: Honored in all the worlds, only the Thus-Come has right and perfect knowledge. He is called 'King of the Dharma' and 'omniscient one'. so surely he exists?

Reply: Now examine and consider this. If he exists, then he must be grasping. If he does not exist, what is there which grasps? Why is this? The Thus-Come...

CANDRAKĪRTI COMMENTARY

[Chapter XVI]

Some argue that the individual birth-death cycle (bhavasamta) is fact because the perfectly realized one (tathagata) is incontestable fact.

According to this view the illustrious one, endowed with great compassion and the twin achievements of perfect awareness (prajna) and practical wisdom (upaya), single-mindedly devoted to ending the misery of existence for all creatures in the three worlds, attained the estate of omniscience, capable of discernment in every form. Throughout perhaps three or perhaps countless aeons, progressing uninterruptedly step by step through undertaking various unsurpassable and exceedingly splendid meritorious deeds out of love for the entire creation, a love surpassing even that for an only son, and obedient to his great compassion for the weal of the entire creation, and becoming in ways appropriate to the need of each, a healing tree for all living creatures in
the great universe being like the universal elements earth, air, fire and water, he attained omniscience.

The one who thus attains this omniscience is the illustrious one. He is held to be the truth (tattvam) of all things (dharmanam) precisely because he is perfectly realized, because he is perfectly enlightened: the perfectly realized one. So, if there were no individual birth-death cycle there would be no perfectly realized one either. As it is not possible to attain perfect realization in one life, the individual birth-death cycle must be fact because the perfectly realized one is incontestable fact.

In reply we say that it is great ignorance which leads to this notion of an uninterrupted series of births throughout a great period of time. The darkness of a great mass of ignorance may be dispersed by many flashes of insight, like the autumn moon; however, if it increases in complexity because of dispositions acquired over a very long time, it is not to be dispersed nor rendered null.

If there were any such thing as a self-existent (svabhavatah) perfectly realized one there would be a series of manifestations of such a one in different births throughout a great period of time. But no such thing as a self-existent perfectly realized one is ever directly experienced (upalabhyate). But if one’s vision is afflicted by a great defect, one is in primal ignorance, and, like two moons and optically illusory hair and gnats, direct experience of the perfectly realized one as self-existent is illusory.

Why it is that the perfectly realized one is not self-existent, Nagarjuna explains in this way:

KALUPAHANA COMMENTARY

Chapter Twenty Two Examination of the Tathagata (Tathagata-pariksa)

GARFIELD COMMENTARY

Chapter XXII Examination of the Tathāgata

This is the first of the final set of chapters in the text, all of which deal directly with topics concerning the ultimate truth and its relation to the conventional. The doctrine of the two truths, central to all Mahayana Buddhist philosophy, is most explicitly enunciated in Chapter XXIV. But it is present as a pervasive theme in the text. There is a conventional world of dependently arisen objects with properties, of selves and their properties and relations. And in that world there is conventional truth: Snow is white, Grass is green. Individual humans are distinct from another and from their material possessions. But there is also an ultimate truth about this world: It is empty (of inherent existence). None of these objects or persons exists from its own side (independently of convention). From the ultimate point of view there are no individual objects or relations between them. Just how these two truths are connected, and how we are to understand them simultaneously, is the central problem of Madhyamika epistemology and metaphysics, and from the standpoint of Madhyamika, a satisfactory solution is essential for Buddhist soteriological practice and ethics as well.

But discourse about the ultimate is perilous in a number of ways. First, and most obviously, there is the ever-present danger of talking sheer nonsense. For the ultimate truth is, in some sense, ineffable in that all words and their referents, are by definition conventional. The dualities generated by the use of terms that denote 276 individuals or classes as distinct from others or from their complements are unavoidable in discourse and nonexistent in the ultimate. So one must be very careful to kick away all ladders promptly. At the same time, there are things that one can say without lapsing into nonsense, by way of ostention, even from the bottom rungs.

But the other grave danger is this: By distinguishing the conventional from the ultimate, it is tempting to disparage the former in contrast to the latter, developing a sort of theory of one truth and one falsehood. This is done if one reifies the entities associated with the ultimate, such as emptiness or impermanence, or the Four Noble Truths, or the Buddha. Then one treats these as real, intrinsically existent phenomena. The conventional then becomes the world of illusion. It is to combat this tendency to treat the conventional world as illusory through treating such apparently transcendent entities as inherently existent that Nāgārjuna develops these final chapters. Perhaps the most obvious candidate for reification in a Buddhist context is the Buddha himself, and that is where Nāgārjuna begins:
Kārikā XXII.1

INADA (Skt):
Verse 1 - The Tathagata is not the (aggregation of the) skandhas nor is it different from the skandhas. He is not in the skandhas nor are the skandhas in him. As he cannot possess the skandhas, what actually is he?

JONES (Skt):
[1] The Buddha is neither the aggregates of the body nor other than the aggregates. Nor are the aggregates in him, nor he in them. Nor does he possess the aggregates. So what here is the Buddha?

KALUPAHANA (Skt):
The tathāgata is neither the aggregates nor different from them. The aggregates are not in him; nor is he in the aggregates. He is not possessed of the aggregates. In such a context, who is a tathāgata?

MCCAGNEY (Skt):
Not the skandhas nor different from the skandhas, nor are the skandhas in him nor is he in them.
The Tathāgata is not possessed of skandhas. Who then is the Tathāgata?

NISHIJIMA (Skt?):
1. The five kinds of substances, that is, matter, perception, consideration, action, and consciousness, are not always the same as the five kinds of substances,
Not always relying upon this world, the five kinds of substances do not belong to this world actually.
The real arrival of Reality does not have left the five kinds of substances,
And in that situation, what is just the real arrival of Reality there?

SPRUNG (Skt):
1 The perfectly realized one is not identical with the factors of personal existence, nor other than them; he is not in them, nor they in him; and the perfectly realized one is not the possessor of the factors of personal existence. What then is the perfectly realized one?

STRENG (Skt):

ENGLISH TRANSLATIONS

1. That one who is "fully-completed" is not the "groups of universal elements" (skandha), nor something other than the "groups"; the "groups" are not in him, nor is he in them; The "fully completed" does not possess the "groups." What, then, is the "fully completed"?

ROBINSON (Skt):
He is not identical with the skandhas; he is not other than the skandhas; the skandhas are not in him, and he is not in them; the Tathagata does not have skandhas; in this case, what Tathagata is there?

BOCKING (Ch):
22v1… is neither the skandhas, nor separate from the skandhas.
He and they are not in each other.
The Thus-Come does not have the skandhas In what place does the Thus-Come exist?

BATCHelor (Tb):
Not the aggregates, not other than the aggregates; the aggregates are not in him; he is not in them: the Thus-Gone does not possess the aggregates.
Who, then, is the Thus-Gone? [XXII.1]

GARFIELD (Tb):
1. Neither the aggregates, nor different from the aggregates, The aggregates are not in him, nor is he in the aggregates.
The Tathagata does not possess the aggregates. What is the Tathagata?

DOCTOR (Tb):
He is not the aggregates, nor is he different from them.
He is not in them, nor are they in him.
Neither does the Thus-Gone possess the aggregates.
Who, then, is the Thus-Gone? [XXII.1]

GARFIELD-SAMTEN (Tb):
1. Neither the aggregates, nor different from the aggregates, The aggregates are not in him, nor is he in the aggregates.
The Tathāgata does not possess the aggregates.
What is the Tathāgata?
The Tathagata is neither the aggregates nor different from them. The aggregates are not in him, nor he in them. He does not possess the aggregates. What then, is the Tathagata?

PINGALA COMMENTARY

22/1 If the Thus-Come really exists, (then) either the five skandhas are the Thus-Come, or the Thus-Come exists separately from the five skandhas, or the five skandhas are within the Thus-Come, or the Thus-Come is within the five skandhas, or the Thus-Come has the five skandhas, but none of these is the case.

(29c14) The five skandhas are not the Thus-Come, and why? Because they have the characteristics of arising and ceasing. Since the five skandhas have the characteristics of arising and ceasing, if the Thus-Come were the five skandhas, the Thus-Come would have those same characteristics of arising and ceasing. If he had the characteristics of arising and ceasing this would involve the errors of the Thus-Come being impermanent, annihilated, etc. Also the receiver and the dharma of receiving would be one, the receiver being the Thus-Come and the dharma of receiving being the five skandhas. But this is not correct, and therefore the Thus-Come is not the five skandhas.

(29c19) The Thus-Come does not exist separately from the five skandhas either. If the Thus-Come existed separately from the five skandhas, he would not have the characteristics of arising and ceasing. If this were the case, the Thus-Come would have the error of permanence etc., and in addition all the functions such as the eye, etc., would not be able to see or know, and this would not be correct. Therefore, the Thus-Come does not exist separately from the five skandhas either.

(29c22) The five skandhas are also not found within the Thus-Come and why? If the five skandhas were within the Thus-Come, this would be like fruit in a bowl, or fish in water; they would be different from each other. If they were different, this would involve the error of permanence etc., as above. Therefore, the five skandhas are not situated within the Thus-Come.

(29c25) The Thus-Come, moreover, is not within the five-skandhas, and why? If the Thus-Come were within the five skandhas, this would be like a man being in a bed, or milk being in a bowl. They would thus be distinct entities, and the same errors as discussed above would apply. Therefore, the Thus-Come is not within the five skandhas.

(29c28) The Thus-Come does not have the five skandhas either, and why? If the Thus-Come had the five skandhas, it would be like a man who has a child. They would thus be distinct entities, and this being the case, the same errors as above would apply, so this is not correct. Therefore, the Thus-Come does not have the five skandhas. You may look for him in these five ways but you will not be able to grasp what kind of being this Thus-Come is.

Question. Though one seeks for the Thus-Come in these ways and be unable to find him, nevertheless, by the combination of the five skandhas, the Thus-Come exists.

CANDRAKĪRTI COMMENTARY

If there were an entity called a perfectly realized one, pure and beyond all named things, then either he would be self-existent as the factors of personal existence, i.e., he would be self-existent as the five factors: body, feelings, ideation, dispositions and consciousness; or perhaps as the five states: morality, meditation, wisdom, freedom and the intuition and knowledge of freedom. The other case is that he would be separate (vyatirikta) from them. The five factors of personal existence are adopted in this investigation because they are the reason for assuming individual beings. The five states are not universal and are included in the former.

On the other hand, the perfectly realized one might be entirely separate from the five factors of personal existence. In this case either the perfectly realized one would be based in the factors of personal existence; or the factors of personal existence would be based in the perfectly realized one; or the perfectly realized one would possess the factors of personal existence as Devadatta possesses wealth. On being thought through however, none of these ways is possible.
Why? To begin with, the perfectly realized one is not identical with the factors of personal existence. For what reason?

Because, as was argued: ‘If fire is fuel that would be identity of agent and act.’ (MMK X.1) This verse is also relevant: if Buddha were identical with the factors of personal existence (fn 1 upadana: ‘what is appropriated.’), that would be identity of agent and act.’

Likewise, it is said: if the self were identical with the factors of personal existence, it would itself arise and perish.’ (MMK XVIII.1) And this is relevant here: if Buddha were identical with the factors of personal existence, he would be subject to arising and perishing.’ Thus, in the first place, the perfectly realized one is not the factors of personal existence.

Nor is the perfectly realized one other than the factors of personal existence. Why? Because, as was argued: if fire is wholly other than fuel then it could exist even without fuel.’ (MMK X.1) Again: ‘Because it is unrelated to anything else, it is not caused by bursting into flame; as it burns forever it follows that it is pointless to kindle it again.’ (MMK X.3) The following is relevant here too: if Buddha were other than the factors of personal existence he would exist apart from them.’ Again: ‘Not being dependent on anything else, the Buddha would not be influenced by the factors of personal existence. Moreover every spiritual act being thus futile, the Buddha would be ineffectual.’ Again: if he were other than the factors of personal existence he could not be characterized in their terms.’

Because the perfectly realized one is not other than the factors of personal existence he cannot logically exist in the factors of personal existence nor they in him.

In the Madhyamakavatara these two theses are expounded in this way (VI. 142, 143): ‘The self does not exist in the factors of personal existence nor are these in the self. If these two were other than each other this conception would be plausible; but as they are not other it is an empty hypothesis.’

And how it is that the perfectly realized one cannot possess the factors of personal existence is argued in the same place: ‘The self is not to be thought of as possessing a body because the self does not exist; the idea of possession cannot therefore obtain. In the case of the possessor of cattle there is a difference but in the case of what has a body there can be no distinction between possessor and possessed; the dichotomy of identity and otherness does not obtain in this case as the self has no bodily form.’

It should be understood that all five theses are really included in the thesis concerning identity and otherness. Nagarjuna deals with all five theses because the problem of the perfectly realized one is cognate with that of the permanent personal self. In what other base can the perfectly realized one exist who, on thorough investigation, is not based in the factors of personal existence? A perfectly realized one is logically and factually impossible (fn 2 na sambhavati. Though the words ‘logically’ and ‘factually’ are not separate words in the Sanskrit, the verb sambhavati implies both.) in every respect. Not discovering him as self-existent the venerable teacher, Nagarjuna, said, ‘What then is a perfectly realized one?’ He means that there is nothing ontic (vastu) in all the three worlds which can be truly discerned as self-existent.

Because the perfectly realized one is ontically non-existent, it is established that the birth-death cycle as a round of real entities does not exist.

At this point some will interject: We do not say that the perfectly realized one is identical with the factors of personal existence because of the faulty consequence pointed out; nor that he is entirely separate from them. Nor do we say that the purified factors of personal existence are in the perfectly realized one as a group of trees is on a snowy mountain, nor that he is in the factors of personal existence as a lion is in a clump of trees; nor do we say that he possesses the factors of personal existence as the universal monarch possesses his qualities, because we do not agree that he must be either identical with or different from them. But we definitely affirm that the perfectly realized one is based on (upadaya) purified factors of personal existence and is indefinable in respect to identity and difference (fn 3 This refers to the concept of the dharmakaya: Buddha as the embodiment of truth.). Therefore your logic does not dispose of our point of view. To this it is rejoined:
1. (“What is the Tathāgata?” fn 102. “Tathāgata” is an epithet of the Buddha. It is an ambiguous compound, meaning, depending upon how it is parsed, “thus gone” or “thus come,” hence indicating either the one gone along the path to enlightenment, or the one come to teach the Buddhist doctrine.)

This form of analytic demonstration of the nonexistence of the self through an analysis of its possible relationship to the aggregates, often referred to as the “fivefold analysis,” is developed with great elegance by Candrakīrti in Mādhyamakāvatāra. Nāgārjuna proposes four of five possible relations the self bears to the aggregates in this first verse, and the fifth is considered in the next two verses. Here the self in question is the Buddha’s self, but the analysis is perfectly general as a refutation of any assertion of an inherently existent personal self. That self cannot be the aggregates for two reasons: First, the self posited is meant to be unitary, and the aggregates are plural. Second, the aggregates are constantly undergoing change, while the self that is posited is meant to endure as a single entity.

But the self can’t be different from the aggregates either. For anything that happens to the aggregates happens to the self, and vice versa. If I hurt my body, I hurt myself. If you lose your vision, you become blind. And in the present case, buddhahood is presumably attained by a purification of the aggregates through practice. If the aggregates were entirely different from the self, it is not clear how purifying them would lead the practitioner to buddhahood. The self cannot stand outside the aggregates as a basis for them, for if we strip away all of the aggregates, there is nothing left as an independent support. But nor is the self somehow contained in the aggregates as a hidden core, and for the same reason. When we strip away all of the aggregates in thought, nothing remains of the self.
Kārikā XXII.2

buddhaḥ skandhān upādāya yadi nāsti svabhāvataḥ |
svabhāvataś ca yo nāsti kutah sa parabhāvataḥ ||2||

yīn hé;gé yóu rú lái zé wú yóu zì xìng
ruò wú yóu zì xìng yún hé yín tā yóu

INADA (Skt):
Verse 2 - If a Buddha appropriates the skandhas, it is not so from the standpoint of self-existence. As there can be no self-existence, how can there be (a Buddha from the standpoint of other-existence? - Note: The Buddha and the Tathagata are interchangeable concepts. They refer to the foremost enlightened state. Also, the term, skandha, is left untranslated in the hope of gaining currency.

JONES (Skt):
[2] If the Buddha is dependent upon the aggregates, his does not exist through self-existence. And what does not exist through its own self-existence does not exist through the self-existence of another.

KALUPAHANA (Skt):
If a Buddha were to be dependent upon the aggregates, he does not exist in terms of self-nature. He who does not exist in terms of self-nature, how can he exist in terms of other nature?

MCCAGNEY (Skt):
If the Buddha is clinging to skandhas, he does not exist by self-nature.
He who does not exist by self-nature, how does he exist by other-nature?

NISHIJIMA (Skt?):
2. When a person, who is going to get the Truth, Just at the time, there is no subjective existence of real fact. And when there is no subjective existence really, How is it possible for any kind of objective existence to exist really anywhere at all?

SPRUNG (Skt):
2 If the Buddha is based in the factors of personal existence he is not self-existent; and how can anything exist in dependence on another if it does not exist in itself?

ENGLISH TRANSLATIONS

STRENG (Skt):
2. If the Buddha exists dependent on the "groups," then he is not "that which exists by itself" (svabhava) And how can he exist as something else (parabhava) ("other-existence") if he is not "that which exists by itself" (svabhava)?

BOCKING (Ch):
22v2 If the Thus-Come exists by the combining of the skandhas, Then he has no self-nature. If he has no self-nature How can he exist on account of another?

BATCHelor (Tb):
If the buddha depends on the aggregates, he does not exist from an own-nature. How could that which does not exist from an own-nature exist from an other-nature?

DOCTOR (Tb):
If the Buddha exists dependent on the aggregates, And thus not by his own nature, How could that which does not exist in terms of its own nature Exist through the nature of another? [XXII.2]

GARFIELD (Tb):
2. If the Buddha depended on the aggregates, He would not exist through an essence. Not existing through an essence, How could he exist through otherness-essence?

GARFIELD-SAMTEN (Tb):
2. If the Buddha, depending on the aggregates, Does not exist through an essence, How could something that does not exist through its essence Exist through the nature of another?

HAGEN (paraphrase):
If the Buddha were dependent upon the aggregates, he would not exist in terms of self-nature. How could that which does not exist in terms of self-nature exist in terms of other-nature?
PINGALA COMMENTARY

22/2 If the Thus-Come exists because of the combination of the five skandhas, then he has no self-nature, and why? Because he exists on account of the combination of the five skandhas.

Question: The Thus-Come does not exist by means of a self-nature, but merely on account of other-natures.

Reply: If he has no self-nature, how can he exist by virtue of other-natures? Why is this? Other-natures also have no self-nature, and since there is no reciprocal dependence, no other-natures can be found. Since they cannot be found, they do not constitute 'others'.

Further:

CANDRAKĪRTI COMMENTARY

If the Buddha is understood as based in purified factors of personal existence though it is impossible to say if he is identical with or other than them, then it is obvious that he is not self-existent because he is understood as dependent, like a reflection. How can one who is not self-existent in the sense that he does not have a substance (svarupa) of his own (atmiya) - one who, in fact, is not self-existent — have his existence in dependence on the factors of personal existence? It does not make sense that a factually non-existent son of a barren woman could exist in dependence on the existence of another.

Let it be so, you may interject. In that case he will be like a reflection, which, though it does not exist as a reality in itself, does exist in dependence on other factors such as the face, the mirror and so on. And so the perfectly realized one too, though not in fact self-existent, will have being in dependence on other factors through being based in the five purified factors of personal existence.

However:

KALUPAHANA COMMENTARY

In addition to some of the terms used by the Buddha to refer to his own achievements, his disciples used a vast array of epithets in extolling his virtues. It is significant to note that none of these epithets caused so much misunderstanding as the one under discussion in the present chapter, namely, tathagata. It seems that the very conception of tathagata invited misunderstanding.

The term can be rendered into English as "thus-gone" (tatha-gata). The conception of one who has "thusgone" immediately brings to mind the idea of an "agent" (see Chapter II). It was, therefore, inevitable that when questions relating to the "destiny" of the enlightened one were raised, they were always raised in relation to a tathagata.

Nagarjuna was aware that questions pertaining not only to the final destiny, but also to the nature of the living saint were raised during the Buddha's day. A discussion between Sariputta and a monk named Yamaka, who had entertained the belief that a tathagata is annihilated after death (param marana) is reported in the Samyutta-nikaya (S 3.109-115; Tsa 5.2 [Taisho 2.30c-31c]). Reading the first part of this discussion, one gets the impression that Sariputta was reluctant to identify the tathagata with the five aggregates or to distinguish the tathagata from the aggregates. On the basis of this, it is possible to come to the conclusions, that the tathagata is linguistically transcendent.

However, if the discussion is followed to the very end, one can clearly see that such a conclusion is not warranted. For Sariputta is not willing to admit a tathagata in an absolute sense (saccato thetato), comparable to the metaphysical "self" (atman) that was considered to be permanent and eternal. Indeed, toward the end of the discussion, Sariputta moves from the conception of tathagata to the notion of "self" (atta) and refuses to admit a self that is identical with or different from the aggregates. Nagarjuna, as if he had read this discourse, begins the present chapter in an identical way, first maintaining that the tathagata is neither identical nor different from the aggregates, and then proceeding to question the existence or non-existence of the tathagata after death. As in the Samyutta passage, Nagarjuna immediately qualifies his reference to the living tathagata, insisting that the tathagata or the buddha under investigation is one possessed of self-nature (svabhava) and hence similar to the notion of "self" (atta) rejected by Sariputta. Nagarjuna therefore uses his famous argument that if the tathagata is not found in terms of self-nature, he cannot either be found in terms of other-nature (para-bhava).
2. The fifth possibility is that the self, in this case the Buddha’s self, is distinct from but dependent upon the aggregates. But from the standpoint of positing an inherently existent Buddha this is unsatisfactory. For if the Buddha were dependent, he would lack an essence and would be empty. And the situation can’t be saved by suggesting that he has an essence through a relation to another since that presupposes essential difference, which presupposes that both the Buddha and the aggregates on which he is supposed to depend have individual essences: This is reinforced in the first two lines of the next verse:
Kārikā XXII.3

pratītya parabhāvaṃ yaḥ so ’nātmety upapadyate |
yāṣ cānātmā sa ca kathāṃ bhaviṣyati tathāgataḥ ||3||

fā ruò yīn tā shēng shì jí wéi fēi wǒ

| gaṅ žig gźan gyi dṅos brten nas | | de bdag ŋid du (5)mi ’thad do |
| gaṅ žig bdag ŋid med pa de | | ji ltar de bźin gśegs par ’gyur |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 3 - It would thus follow that relationship by virtue of other-existence will constitute a non-self. But how could that which is a non-self be a Tathagata?

JONES (Skt):
[3ab] Whatever is dependent upon the self-existence of another is without a self. [Objection:3cd] But how can what is without a self be a buddha?

KALUPAHANA (Skt):
He who is dependent upon other nature would appropriately be without self. Yet, how can he who is without self be a tathāgata?

MCCAGNEY (Skt):
He who is dependent upon other nature occurs as “not self.” And how will he who is not self be the tathāgata?

NISHIJIMA (Skt?):
3. And such situations produce objective existence clearly. Then, what is called Spirit or Mind, will appear actually. And what is like that, which does not have Spirit or Vigor, is? Therefore it is possible for something, which is called the Arrival of Reality, will exist in future.

SPRUNG (Skt):
3 One who is dependent on another’s being, is, it follows, without a self; and how can one who is without a self become a perfectly realized one?

STRENG (Skt):
3. That which exists presupposing another existent thing is properly called a "non-individual self" (anatma). How will that which is a non-individual self become the "fully completed"?
PINGALA COMMENTARY

22/3 If a dharma arises by virtue of causes and conditions, then it will have no self. It is like a fist which exists by virtue of the five fingers, but has no own-substance. In the same way we speak of a 'self' on account of the five skandhas, but this 'self' has no own-substance. 'Self' has various names such as living being, man, god, Thus-Come etc. If the Thus-Come exists by virtue of the five skandhas, then he has no own-nature, and since he has no own-nature he has no self. Since he has no self, how can you describe him as The Thus-Come? This is why it says in the verse “if a dharma arises on account of another, then it has no self” and “if a dharma has no self, how can it be the Thus-Come?”

Further.

CANDRAKĪRTI COMMENTARY

If the perfectly realized one is thought of as dependent on other factors, as is a reflection, then in so far as he is like a reflection, it follows that he is without a self; it would not make sense that he would have a being of his own. The term self is a synonym for the term self-existent. How can one who is without self, without a being of his own, exactly as is a reflection, be a self-existing, concrete, perfectly realized one? The thought is that he cannot be one who has followed the veritable way (in 4 ‘avipartamargagata’, a play on the term tathagata).

Furthermore, if there were any self-existence of the perfectly realized one, then, with regard to that self-existence, the self-existence of the factors of personal existence would constitute other being and the perfectly realized one would be dependent on it; as however, there is no self-existence in the perfectly realized one how could there be otherness in the factors of personal existence?

Nagarjuna expounded this when he said

KALUPAHANA COMMENTARY

If serf-nature (svabhava) were to be equivalent to serf (atman) as an entity in itself, then whatever is of "other-nature" (para-bhava) will be "no-self" (anatma). "No-self" in this particular sense, which implies absolute difference, is not acceptable to Nagarjuna, for it is a recognition of a difference between a tathagata and the psychophysical personality.

GARFIELD COMMENTARY

3. The reifier in the last two lines of this verse and in the next asks how it is possible that a real Buddha could lack a self. What then would be the thing that practiced, that became enlightened and that preached the Dharma?
Kārikā XXII.4

yadi nāsti svabhāvaś ca parabhāvaḥ katham bhavet |
svabhāvaparabhāvābhīyāṁ rte kaḥ sa tathāgataḥ ||4||

ruò wú yǒu zì xìng yún hé yǒu tā xìng |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 4 - If self-existence does not exist, how does other-existence exist? Apart from self-existence and other-existence, what could be (the nature of) a Tathagata

JONES (Skt):
[4] If there is no self-existence, how can there be the self-existence of another? And without one's own self-existence or the self-existence of another, who is the Buddha?

KALUPAHANA (Skt):
If there exists no self-nature, how could there be other-nature? Without both self-nature and other-nature, who is this tathāgata?

MCCAGNEY (Skt):
If self-nature does not exist, how would other-nature exist? Without self-nature or other-nature, who is he, the Tathāgata?

NISHIJIMA (Skt?):
4. When the subjective existence does never exist at all, How is it possible for objective existence to exist actually? When something moves relying upon the oneness between the subjective and objective existences, The Something Real is just the Arrival of Reality itself.

SPRUNG (Skt):
4 If there is no self-existence how can there be other-existence? What perfectly realized one can there be apart from self-existence and other-existence?

STRENG (Skt):
4. And if there is no self-existence (svabhava), how would it have an "other-existence" (parabhava)? What would that "fully completed" reality be without either a self-existence or other-existence?

BOCKING (Ch):
22v4 If there is no own-nature
How can there be other-nature?
Apart from own-nature and other-nature
What can constitute a Thus-Come?

BATCHELOR (Tb):
If self-nature does not exist, how can there be the existence of other-nature? What is a Tathagata apart from own-nature and other-nature?

DOCTOR (Tb):
If he does not exist by his own nature,
How could there be the nature of something else?
Apart from what is of the nature of self and other,
What sort of Thus-Gone could there be? [XXII.4]

GARFIELD (Tb):
4. If there is no essence,
How could there be otherness-essence?
Without possessing essence or otherness-essence,
What is the Tathāgata?

GARFIELD-SAMTEN (Tb):
4. If there is no essence
How could there be the nature of being other?
Apart from having essence or the nature of another,
What could the Tathāgata be?

HAGEN (paraphrase):
If there is no self-nature, how can there be other-nature? Without self-nature or other-nature, what is the Tathāgata?
PINGALA COMMENTARY

22/4 If there is no own-nature, then other-nature cannot exist either, because it is only on account of own-nature that we refer to other-nature. If the one does not exist, the other will not exist either, and consequently neither own-nature nor other-nature exists. Apart from an own-nature or other-nature, who is there to be a Thus-Come?

Further:

CANDRAKIRTI COMMENTARY

4ab If there is no self-existence how can there be other-existence?

As thus there is neither self-existence nor other-existence (in 5 i.e. existence as other; or existence-through-another.) so:

4cd What perfectly realized one can there be apart from self-existence and other-existence?

Any existing thing is either self-existent or other-existent. The conclusion is that apart from these two possibilities what other thing could a perfectly realized one be? Therefore the perfectly realized one is not self-existent.

Furthermore:

KALUPAHANA COMMENTARY

The idea that if there were to be no serf-nature other-nature too would not be evident was already emphasized at 1.3. A third metaphysical alternative that transcends both serf-nature and other-nature is here denied.
Kārikā XXII.5

INADA (Skt):
Verse 5 - If a Tathagata exists without appropriating the skandhas, then he should be appropriating the skandhas now. And he should be a Tathagata in virtue of the appropriation.

JONES (Skt):
[Reply:5] A buddha who did not depend upon the aggregates would exist apart from the aggregates, but he now depends upon the aggregates and thus exists dependently.

KALUPAHANA (Skt):
If there were to be a tathāgata because of non-grasping on the aggregates, he should still depend upon them in the present. As such he will be dependent.

MCCAGNEY (Skt):
If any Tathāgata would be not clinging to the skandhas, he would now cling and then would be clinging.

NISHIJIMA (Skt?):
5. When the five kinds of substances are impossible to be accepted, Then some kinds of possibility in the Arrival of Reality might exist. Such a kind of facts at the present moment, can be possible, And so the situation of expansion can be going bigger more and more.

SPRUNG (Skt):
5 If a perfectly realized one existed without being based in the factors of personal existence, at some point he would appropriate them and thus be based in them.

STRENG (Skt):
5. If some kind of "fully completed" thing would exist without dependence on the "groups," It is dependent now; therefore it exists dependent on something.
CANDRAKĪRTI COMMENTARY

If you think a perfectly realized one, because it cannot be said whether he is identical with or other than the factors of personal existence, is to be understood as not based in them, that could hardly make sense. If there were a perfectly realized one who was not based in the factors of personal existence, not having taken possession of them, he would at some point have to make them his own (upadaya). As Devadatta, in a prior state is wholly separate from his wealth, he must at some point take possession of it; so if a perfectly realized one were not based in the factors of personal existence he would at some point have to take possession of them as his own. Therefore he could be said to be based in the factors of personal existence. From this investigation it follows

KALUPAHANA COMMENTARY

In the early discourses, a person in bondage and therefore in a state of suffering (dukkha) is explained in terms of the five aggregates of grasping (upadanak-khandha). A person who is freed is said to be without grasping (anupadana), but not without the aggregates. The gerund upadaya was used in the discourses to express two different meanings, namely, (i) "clinging to" (see an-upadaya, Vin 1.14; A 1.162; 4.290, etc.) and (ii) "depending upon" (D 1.205, kalan ca samayañ ca upadaya). It was only in the former sense that a person was said to be freed from the aggregates, not in the latter sense. Yet, with the development of substantialism, that is, when a freed person came to be looked upon as being totally different from the one in bondage, each having his own nature (svabhava)(see Chapter XXV), the freed one was perceived not only as one not grasping (anupadaya) on to the aggregates, but also as one who is independent of the aggregates. It is this substantialist interpretation that Nagarjuna is criticizing when he points out that if a tathagata were to exist without grasping on to the aggregates (skandban anupadaya), he will still be dependent upon (upadadyad) them at the present time (idanim), that is, as long as he is alive. Nagarjuna was thus going back to the Buddha's own definition of a freed one.

GARFIELD COMMENTARY

5. That is, on the opponent's view, even if the Buddha had no dependence on the aggregates prior to attaining Buddhahood, in order to act as a Buddha, he must depend upon his consciousness, perception, body, and so forth. So if we suppose that the Buddha is now inherently existent and omniscient and compassionate and so forth, we must assume that he exists through dependence on his aggregates in some sense.
Kārikā XXII.6

INADA (Skt):
Verse 6 - Again, no Tathagata could exist without appropriating the skandhas. And how does an entity which cannot exist without appropriation appropriate the skandhas?

JONES (Skt):
[6] Thus, there is no buddha not dependent upon the aggregates. And if he does not exist independently of the aggregates now, how would he become dependent later?

KALUPAHANA (Skt):
There exists no tathāgata independent of the aggregates. How can he who does not exist dependently be grasped?

MCCAGNEY (Skt):
Not any Tathāgata exists not clinging to skandhas. How will he who does not exist by not clinging be grasped?

NISHIJIMA (Skt?):
6. When even the smallest volume of the five kinds of substances do never appear at all, Even the smallest volume of Reality Arrival does never exist at all. And even the slightest Reality Arrival does not exist even as a non-appearance, How is it possible for the Reality Arrival to be realized to occur even in future?

SPRUNG (Skt):
6 There is no perfectly realized one not based in the factors of personal existence; How can one who, not being based in the factors of personal existence, does not exist, take possession of them?

STRENG (Skt):
6. There is no kind of "fully completed" being which is not dependent on the "groups." And whatever is not non-dependent—how will it become dependent?

BOCKING (Ch):
22v6 In reality there is no receiving of the skandhas now, Nor any dharma of a Thus–Come. If, by not receiving, he does not exist How can he receive them now?

BATCHELOR (Tb):
If there does not exist a tathagata [who is] not depending on the aggregates, how does he grasp [depend on them]?

DOCTOR (Tb):
Yet, independent of the aggregates, There is no Thus-Gone at all. When there is no one who exists independently, How could there be any appropriation? [XXII.6]

GARFIELD (Tb):
6. Inasmuch as there is no Tathagata Dependent upon the aggregates, How could something that is not dependent Come to be so?

GARFIELD-SAMTEN (Tb):
6. Inasmuch as there is no Tathāgata Not dependent upon the aggregates, If he does not exist without depending on them, How could he appropriate them?

HAGEN (paraphrase):
There is no Tathagata independent of the aggregates. How can one who is not dependent become dependent?
6ab There is no perfectly realized one not based in the factors of personal existence; because that would mean he was beyond causation.

6cd How can one who, not being based in the factors of personal existence, does not exist, take possession of them?

Because he would be factually non-existent, is meant. Thus, as there is nothing which enters into possession it does not make sense that a perfectly realized one could take possession of, or be based in, the factors of personal existence (fn 7 That is, they cannot be what they are supposed to be. The play on words here defies translation. The word for the factors of personal existence - upadanam - means ‘that which is appropriated’. Hence the inconceivability of the factors of personal existence without one who appropriates them. The argument is more self-evident in Sanskrit than it is in English.).

As, thus, a perfectly realized one prior to the factors of personal existence cannot enter into possession of anything, because he does not factually exist, so it is not possible that there can be possession of factors of personal existence which have not been taken possession of by any one at all.

Nagarjuna explains this:

KALUPAHANA COMMENTARY

Nagarjuna seems to be using the passive very upadasyate in an epistemological sense. In the previous verse, he maintained that a living tathagata should be dependent upon the aggregates, even though he does not grasp on to them. Here Nagarjuna is re-asserting the same position, when he says: "There exists no tathagata who is independent of the aggregates." The reason for this is that such an independent tathagata, being a metaphysical entity like the atman, cannot be grasped or known.

GARFIELD COMMENTARY

6. We already know that the Buddha as a sentient being in saṃsāra, prior to entering nirvāṇa, could not exist dependent on the aggregates. This is a straightforward consequence of the argument for the nonexistence of a self distinct from the aggregates and from the fact that in order to depend upon the aggregates, the self would need to be distinct from them. And so, Nāgārjuna points out, it would be odd to think that an entity not dependent upon the aggregates in saṃsāra would come to be so upon entering nirvāṇa. It would, of course, be particularly odd for someone defending the target of this critique. Anyone holding such a position would hardly be expected to ascribe to the Buddha a more dependent status in nirvāṇa than in saṃsāra.
INADA (Skt):
Verse 7 - There is neither an appropriating process nor an unappropriated entity. How could there ever be a Tathagata which is without the process of appropriation?

JONES (Skt):
[71 There is no nondependent dependency, and no buddha exists in any way without dependency.

KALUPAHANA (Skt):
There is no sphere of non-grasping, nor is there something as grasping. Neither is there someone who is without grasping. How can there be a tathāgata?

MCCAGNEY (Skt):
Nothing is unseized and no one is clinging. Does the Tathāgata somehow not exist without clinging?

NISHIJIMA (Skt?):
7. If there were no behavior not to receive anything, Even a study itself, is also actually something, which is called just a study itself. The situation that, in which everything has been emancipated from desire or attachments, does not exist actually. In such situations what kind of Reality Arrival has not arrived at yet?

SPRUNG (Skt):
7. There can be no factors of personal existence whatever which have not been taken possession of; In no way can there be a perfectly realized one who is without appropriated factors of personal existence.

STRENG (Skt):
7. There is nothing whatever that is dependent on the "groups" and there is no thing whatever on which something does not depend. There would not exist in any way a "fully completed" being without being dependent on the "groups".

BOCKING (Ch):
22v7 When there has not yet been receiving We do not call what is to be received 'received'. Without the dharma of reception There is nothing to be called a Thus-Come.

BATCHelor (Tb):
[Since] there is nothing to be grasped/dependent on, there can be no grasping/depending. There is no tathagata at all who is without grasping/depending.

DOCTOR (Tb):
Without any appropriation, There cannot be something appropriated. Not involved in appropriation—Such a Thus-Gone does not exist at all. [XXII.7]

GARFIELD (Tb):
7. There is no appropriation.
There is no appropriator.
How can there be a Tathagata?

GARFIELD-SAMTEN (Tb):
7. Without the appropriated, There is no appropriation. How can there be a Tathāgata?

HAGEN (paraphrase):
There is neither dependence nor an independent thing. Without dependence, how can there be a Tathagata?

GARFIELD (Tb):
7. There is no appropriation.
There is no appropriator.
Without appropriation How can there be a Tathagata?

HAGEN (paraphrase):
There is neither dependence nor an independent thing. Without dependence, how can there be a Tathagata?
CANDRAKĪRTI COMMENTARY

7ab There can be no factors of personal existence whatever which have not been taken possession of;

as factors of personal existence which have not been appropriated by anyone are not factors of personal existence. So, if nothing is appropriated there is no one who appropriates.

7cd In no way can there be a perfectly realized one who is without appropriated factors of personal existence.

So, according to the logic developed:

KALUPAHANA COMMENTARY

The metaphysical speculations regarding identity and difference (svabhava, parabhava) leave the dependent or the grasped (upadatta), dependence or grasping (upadana) as well as the one who is free or independent (nirupadanah), without any basis. How can there be a tathagata? The fact that it is only an explanation in terms of identity and difference that is rejected here is clearly indicated in the verse that follows.

GARFIELD COMMENTARY

7. The appropriation here is the appropriation of aggregates as one’s own. Without it, there can be no sense of individual identity. Since the opponent is positing the Tathāgata as an inherently existent individual, he must hold him to have his own aggregates.
Kārikā XXII.8

तत्त्वायत्तच यो नासित शूर्यमाणश्च पञ्चाधा।
उपादानन स कथं प्रज्ञप्यत तथागतं॥८॥

若於一異中 如來不可得
五種求亦無 云何受中有

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 8 - How could a Tathagata be known by his appropriating process when he does not exist in terms of the fivefold nature of identity and difference with respect to (the function of) the skandhas?

JONES (Skt):
[8] Having sought the Buddha in this fivefold way and finding that he does not exist by his own reality or by another's reality, how can he be thought to be a buddha through dependency?

KALUPAHANA (Skt):
He who, sought for in the fivefold manner, does not exist in the form of the different identity, how can that tathāgata be made known through grasping?

MCCAGNEY (Skt):
He who does not exist is presently being sought for by means of five real and distinct forms of clinging. By what is the Tathāgata known?

NISHIJIMA (Skt?):
8. The situations, which rely upon Reality and Non-Reality, do not exist relying upon the mutual relations between Reality and Non-Reality,
The thoughts, which have been persuaded, and the five kinds of Matter, the Earth, Water, Fire, Wind, and the Space,
Something, which relies upon Reality,
Can be realized as the Arrival of Reality.

SPRUNG (Skt):
8 How can someone who, after the fivefold enquiry, is neither identical with factors of personal existence nor other than them, be comprehended as a perfectly realized one in terms of the factors of personal existence?

STRENG (Skt):
8. That fully completed being which does not exist by its actual reality (tattva) or by some other reality (anyatva) according to the five-fold examination—How is the "fully completed" being perceived by being dependent?

BOCKING (Ch):
22v8 If the Thus–Come cannot be found
In unity or in difference,
And sought in five ways he cannot be found.
How can he exist in receiving?

BATCHelor (Tb):
If having examined in five ways, how can that tathagata who does not exist as that one or the other be [conventionally] understood by grasping/depending?

DOCTOR (Tb):
When examined in the five ways,
He exists neither as identical nor different.
How, then, could a Thus-Gone who does not exist like that
Be spoken of by virtue of appropriation? [XXII.8]

GARFIELD (Tb):
8. Having been sought in the fivefold way, What, being neither identical nor different,
Can be thought to be the Tathagata Through grasping?

GARFIELD-SAMTEN (Tb):
8. Having been sought in the fivefold way, How can that which is neither identical nor different
Be designated as the Tathāgata In virtue of appropriating?

HAGEN (paraphrase):
How can a Tathagata, found neither in nor apart from the aggregates, be made known through grasping?
CANDRAKĪRTI COMMENTARY

The perfectly realized one, on being critically thought about, exists neither in virtue of identity, that is, oneness with the factors of personal existence, nor in virtue of otherness, that is, separateness from them. How can one who, after the enquiry into the five theories — identity, otherness, nonexistence, base and quality - does not exist, be capable of being taken as a perfectly realized one, one who is completely non-existent in fact? Therefore the perfectly realized one is not self-existent.

It is not only a perfectly realized one who according to this line of thought does not exist.

KALUPAHANA COMMENTARY

The substantialist explanation of a tathagata would imply that he has completely transformed himself into a different entity, that is, a tathagata having his own-nature (svabhava) with no relationship to the person in bondage. However, examining the fivefold aggregates, no such entity can be discovered. Such a tathagata cannot be explained in terms of dependence (upadanena). Thus, the conception of dependence (upadana) is incompatible with both identity and difference. What is denied here is neither dependence nor a tathagata, but merely the metaphysical approaches to both dependence and tathagata. Instead of translating tattva and anyatva and as identity and difference, we have rendered the phrase as "different identity" since it occurs in the singular.

GARFIELD COMMENTARY

8. But, as we have seen in the first two verses of this chapter, there is no way that the Buddha can be thought of as inherently existent in relation to those aggregates. So we can’t divorce the Buddha from the aggregates. Nor can we understand the Buddha as inherently existing given that he must have aggregates.
Kārikā XXII.9

नन ९

又所受五陰 不從自性有
若無自性者 云何有他性

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 9 - Again, the appropriating process cannot function from the standpoint of self-existence. If nothing exists in virtue of self-existence, how could it exist in virtue of other-existence?

JONES (Skt):
[9] In addition, this dependency is not seen to exist through its own self-existence. And how can what does not exist through its own self-existence come to exist through the self-existence of another?

KALUPAHANA (Skt):
This grasping is not found in terms of self-nature. How can that which does not exist in terms of self-nature come to be in terms of other-nature?

MCCAGNEY (Skt):
Because of this clinging, what has self-nature does not occur. What does not exist by self-nature, how does that exist by other-nature?

NISHIJIMA (Skt?):
9. A person, who especially has ability to realize the concrete thing at this place,
Does not like to recognize miscellaneous subjective thoughts at all.
Because the subjective existence does never anywhere really exist actually.
Therefore where will it be possible for the concrete facts to exist only as the physical problems?

SPRUNG (Skt):
9 The factors of personal existence as well are not self-existent. How can something which does not exist in itself, exist in virtue of something else?

STRENG (Skt):
9. So when there is dependence, self-existence does not exist; And if there is no self-existence whatever, how is an other-existence possible?
PINGALA COMMENTARY

22/9 If the Thus-Come already existed before receiving the five skandhas, then this Thus-Come would receive the five skandhas now, having already become a Thus-Come. But in reality a Thus-Come does not exist before the time when the five skandhas are received, so how will he receive them now? Also, if he does not receive the five skandhas, the five skandhas will not be termed 'received', and without receiving them, there is nothing to be called a Thus-Come.

(30b11) You can search for the Thus-Come within unity and difference but you will not be able to find him. You can search for him five ways in the five skandhas but you will not find him there either. This being the case, how can you assert that the Thus-Come exists within the five skandhas? Or, the five skandhas which are received do not exist by virtue of any own-nature. You may say that they exist by virtue of other-nature, but if they do not come from own-nature, how can they exist by virtue of other-nature? Why is this? Because if there is no own-nature, there is no other-nature either.

Further.

CANDRAKĪRTI COMMENTARY

9ab The factors of personal existence (fn 8 i.e. what is appropriated (upadanam).) as well are not self-existent.

What is appropriated — the fivefold factors of personal existence: body, feelings, ideation, disposition and consciousness — does not exist as real in itself, because it arises in dependence and because of the detailed refutation given in the Chapter on the factors of personal existence (MMK IV). Again it might be thought that the factors of personal existence, though not self-existent, exist in dependence on something else, because this is the nature of causal dependence. Nagarjuna explains that that is not logically possible.

9cd How can something which does not exist in itself, exist in virtue of something else?

How can the son of a barren woman, totally non-existent in itself, be made sense out of (prajnapayitum) in virtue of being dependent on something else? Therefore the factors of personal existence do not exist.

Or, as it is put: ‘The factors of personal existence as well are not self-existent.’

As there are no appropriated factors of personal existence unrelated to someone appropriating them because they are inherently dependent on an appropriator, the self-existence of the factors of personal existence has not been established. But, if you say: It is not possible to establish the self-existence of the factors of personal existence unrelated to an appropriator, so let them exist in dependence on him, the reply is, ‘How can something which does not exist in itself, exist in virtue of something else?’ How can appropriated factors of personal existence which are not self-existent, that is, which are not real, exist in dependence on someone who appropriates them? It follows that the factors of personal existence do not exist.

And now, to show what has been demonstrated, Nagarjuna says

KALUPAHANA COMMENTARY

Just as much as a tathagata cannot be explained satisfactorily by relying upon a theory of identity (svabhava) or difference (parabhava), even so grasping itself (upadana) cannot be found in terms of selfnature or other nature. In other words, it would not be appropriate to explain grasping as an inevitable act or tendency in human beings.

GARFIELD COMMENTARY

9. So the Buddha does not exist inherently in virtue of his own essence. Nor does he exist inherently in virtue of some property of his aggregates or, for that matter, in virtue of anything else that is other, such as an inherently existent buddha-nature or state of nirvāṇa.
**Kārikā XXII.10**

Evam śūnyam upādānam upādātā ca sarvaśaḥ |
prajñapyate ca śūnyena kathāṁ śūnyas tathāgataḥ ||10||

Yi ru shi yi gu shou kong shou zhe kong | yun he dang yi kong er shui kong ru lai |
| de ltar ner bla'i ner len po | | rnam pa kun gyi ston pa yin |
| ston pas de bzin gseg ston pa | | ji lta bur na 'dogs par 'gyur |

**ENGLISH TRANSLATIONS**

**INADA (Skt):**
Verse 10 - Consequently, all instances of appropriation and the appropriating entity are in the nature of Sunya. But then, how could a Tathagata in the nature of sunya be known in terms of sunya? - Note: It seems better to leave the technical term sunya untranslated here as well as in the subsequent verses. The same can be said for its opposite, asunya.

**JONES (Skt):**
[10] Therefore, both the dependency and the one dependent upon it are empty in every way. And how could an empty buddha be made known by means of what is empty?

**KALUPAHANA (Skt):**
Thus, grasping and grasper are empty in every way. How can an empty tathāgata be made known by something that is empty?

**MCCAGNEY (Skt):**
And thus the one who clings is clinging to what is everywhere open. How is the open Tathāgata known by means of what is open?

**NISHIJIMA (Skt?):**
10. Relying upon such a method, the balanced states of the autonomic nervous system, can be recognized. What we have actually perceived, are just everything. Just relying upon intuition, or just relying upon the balance of the autonomic nervous system. How is it possible for the balanced autonomic nervous system itself to be the Arrival of Reality itself?

**SPRUNG (Skt):**
Thus, in every respect, both the appropriated factors of personal existence and the one appropriating them are devoid of being. How can a perfectly realized one, himself devoid of being, be comprehended in terms of what is itself devoid?
**PINGALA COMMENTARY**

22/10 Analyzed according to these ideas, receiving and the recipient are entirely empty. If receiving is empty, how can one speak of an empty Thus-come in terms of empty receiving?

**CANDRAKĪRTI COMMENTARY**

10ab Thus, in every respect, both the appropriated factors of personal existence and the one appropriating them are devoid of being.

The factors of personal existence, having been investigated from every angle, are devoid of being. That is, they do not have their being in themselves; and the appropriator is devoid of being, that is, he is without self existence.

10cd How can a perfectly realized one, himself devoid of being, be comprehended in terms of what is itself devoid?

In terms of the factors of personal existence, that is. It is in no way possible that a non-existing perfectly realized one could be made sense of by means of what itself is non-existent. Therefore it is not logically possible to make sense of (prajnapayate) the perfectly realized one as based in the factors of personal existence.

At this point some would object. Our aspirations are destroyed by you. We have had to give up the pleasures we had in refuting the heresies of the Vaisesikas, Aksapada, the Jains, Jaimini, the Naiyayikas and the others, who are as if firmly entangled in the vines of the harmful, vain conjectures of their own imaginations, who are denied walking the veritable path which leads to the city of nirmāna, who have not penetrated the forests and jungles and dangers of this world and who misunderstand the teaching about the veritable path which leads to heaven and final beatitude.

Aspiring to freedom and to supreme and perfect enlightenment for the sake of dispersing the darkness of ignorance, we have taken refuge in the illumination of the perfectly realized one who destroys the darkness spread by the heretical views, who points out the veritable path leading to heaven and final beatitude, who has filled all the worlds with effulgent rays and his teaching of the Truth, who has devoted himself to arousing the petals of the lotus — the spirits of the different peoples to be freed — who is the sole and pure eye for those capable of understanding the truth of the nature of reality, who is the sole refuge of all men, whose halo is formed of the Buddha’s own true properties — the ten powers, the four assurances and so on -- who is the best guide and leader of the Mahayana, who is endowed with swiftness of mind and foot - the seven-membered enlightenment - who dries up for men of all the three worlds the rivers in the forest of the cycle of birth, old age and death, who conquers his foes the four incomparable Maras - with arrows and who confounds the evil demons, Rahu, Vigraha and Udgraha in all the three worlds. You have destroyed our hope for freedom and our aspiration to supreme, perfect enlightenment by declaring, ‘Thus, in every respect, both the appropriated factors of personal existence and the one appropriating them are devoid of being. How can a perfectly realized one, himself devoid of being, be comprehended in terms of what is itself devoid?’

So by your proclaiming that nothing has its being in itself you destroy our hope for freedom and our aspiration for the attainment of the unsurpassable perfect enlightenment. You have succeeded in obscuring the great, luminous orb of the perfectly realized one by improperly generating a succession of clouds not unlike the ignorance of the world.

Our reply is that we have destroyed the hope only of people who, like you, have been unable to bear the supremely profound lion’s roar of the truth that there is no self, a truth absent from all heretical systems. You have, indeed, desiring freedom, abandoned the systems of the heretics and have followed the way of the supreme and incontrovertible Teacher, the perfectly realized one; but, because of the weakness of your aspiration you err about like antelopes on the evil paths of this forest, of this jungle, of this prison — this ineluctable cycle of birth and death — paths full of the pitfalls of faulty views which those astray follow. The perfectly realized ones never teach the reality of the factors of personal existence or of the self.

As it is said in the Bhagavati, ‘Buddha himself, venerable Subhuti, is like may a or a dream; and the
essential qualities of Buddha are like maya and a dream.’ Again, ‘The Truth, properly understood’ is devoid of an existence of its own; enlightenment, properly understood, is devoid of an existence of its own; and one who would enter the way is also devoid of self-existence. So think the wise though not the foolish.’

But we are not urging that the perfectly realized ones who are beyond all named things do not exist in any sense at all; to deny that they do would be an error on our part. A wise and saintly one, explaining that the perfectly realized one is without self-existence, and desiring to speak the unerring truth (javiparTartha), might say

KALUPAHANA COMMENTARY

Thus, grasping as well as the one who grasps are empty in every possible way. They are devoid of any substance. For the substantialist, the tathagata as well as the aggregates have substance or own-nature, even though they are different from one another. The substantialist can explain the tathagata, whose self-nature (svabhava) is freedom, contrasting him with the one who is in bondage as a result of his being a "grasper" (upadatr.) and whose nature is distinct (para) from that of the tathagata. However, with Nagarjuna’s denial of self-nature, that sharp dichotomy also is dissolved. Hence Nagarjuna’s insistence that an empty tathagata cannot be made known in relation to an equally empty "grasper" (upadatr.) or "grasping" (upadana) referred to in the previous verse.

GARFIELD COMMENTARY

10. So we must conceive of the Buddha and of all that pertains to him as empty of inherent existence. But the question then arises: What can we say or know of such an empty Buddha? This is a fundamental question not only with regard to our knowledge of the nature of enlightenment, but also with regard to our ability to say anything coherent about emptiness itself and empty phenomena.

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 11 - Nothing could be asserted to be sunya, asunya, both sunya and asunya, and neither sunya nor asunya. They are asserted only for the purpose of provisional understanding.

JONES (Skt):
[11] “Empty,” “not empty,” “both,” or “neither” these should not be said, but they are said only as indicators.

KALUPAHANA (Skt):
“Empty,” “non-empty,” “both” or “neither”—these should not be declared. It is expressed only for the purpose of communication.

MCCAGNEY (Skt):
I am not saying that “what is open” or “what is not open” could exist
or “both” or “neither.” They are said only for the purpose of teaching.

NISHIJIMA (Skt?):
11. [???]

SPRUNG (Skt):
11 The terms ‘devoid’, ‘non-devoid’, ‘both’ and ‘neither’ should not be asserted as predicates; But such terms are used to teach the truth.

STRENG (Skt):
11. One may not say that there is "emptiness" (sunya) (1) nor that there is non-emptiness. (2)" Nor that both exist simultaneously (3), nor that neither exists (4); the purpose for saying "emptiness" is for the purpose of conveying knowledge.

WESTERHOFF (Skt):
XXII.11 “Empty” should not be asserted, “non-empty” should not be asserted, both or neither should not be asserted, since these are only said for the purpose of designation.

ROBINSON (Skt):
It should not be said that [the Tathagata] is empty, or that he is non-empty, or that he is both empty and non-empty, or that he is neither empty nor nonempty. But it is said for the sake of designation.
PINGALA COMMENTARY

22/11 The emptiness of dharmas cannot be expressed. The non-emptiness of dharmas cannot be expressed either. That dharmas are both empty and not empty and that dharmas are neither empty nor non-empty cannot be expressed either and why? Because they are merely for refuting their opposites and are taught only as conventional names. If you correctly contemplated and reflected in this way, then you would not make difficulties out of difficulties within the true character of dharmas, and why?

CANDRAKĪRTI COMMENTARY

11abc The terms ‘devoid’, ‘non-devoid’, ‘both’ and ‘neither’ should not be asserted as predicates;

we should not assert these terms as predicates in any of the four modes (sarvam etan na vaktavyam).

One cannot, however, enter into a comprehension of the true nature of a perfectly realized one as it really is without using words (anukte). That is why we employ the term ‘devoid of being’ in a special and secondary sense (aropatah). We base ourselves wholly in the transactional reality of the everyday (vyavaharāntya) in an everyday transactional way as it suits those who are to be guided. We employ as well, the terms ‘non-devoid’, ‘both-devoid-and-non-devoid’ and ‘neither-devoid- nor-non-devoid’.

So Nagarjuna says:

11d But such terms are used to teach the truth.

(In 9 Prajñaptiartham, Kārikā 11 and its commentary are seminal for Madhyamiikā thought.)

To quote the words of the illustrious one: ‘All elements of existence are devoid because without self-being, all elements of existence are uncaused being based in causelessness; all elements of existence are unattainable being unthinkable; all elements of existence are translucent by nature because of the utter purity of the surpassing awareness.’

Elsewhere non-devoidness has been taught: ‘If, o monks, a past body does not exist in the future, the noble learned disciple will not acknowledge his past body. But as the past body exists, the noble learned disciple acknowledges his past body. If, o monks, a future body’ and so on, up to, ‘If, o monks, past consciousness is not real in the future’ and so on as before.

In the thought of the Sautrantikas the past and the future are devoid of being but everything else is non-devoid; non-veridical mental acts are devoid. In the Vijnanavada school mental constructs are devoid of self-existence because they do not arise causally; they are like such things as the two moons seen by the ophthalmic.

‘Therefore all things are not to be taken either as devoid of being or as non-devoid; individuals are neither real beings nor unreal beings; this is the middle way.’ One wishing to know for what purpose devoidness and the other concepts are taught may be enlightened by the Enquiry into the Self (MMK XVIII).

To quote the sutra, ‘This world is like magician’s work, you say, illustrious one, like the pretence of an actor or a vision in a dream. There is no self, no real person, no birth. The elements of existence are like a mirage, like a moon reflected; this world is devoid of being, at peace, unborn and without ground.

‘By your compassion you will save by many means, in many ways, and by many teachings. You contemplate this world in perpetual turmoil from countless passions and ills; you move on earth as the incomparable healer. Oh Sugata [Buddha], bring deliverance to the countless creatures. The entire world revolves like the wheel of a chariot; you reveal the supreme way to those fallen among animals, wickedness and hell fires, who are ignorant and without teacher or guide.’

But none of these terms holds good for the perfectly realized one who is not of the nature of a named thing. And it is not only the four assertions concerning devoidness which do not hold good for the perfectly realized one, but:
KALUPAHANA COMMENTARY

Note again the use of the iti-formula. Nagarjuna is rejecting any theorizing regarding either the "empty" or the "non-empty" or both or neither. Neither the empty nor the non-empty should be reified. These terms are used only for the sake of communicating or expressing an experience which, being dependent (pratityasamutpanna), has no static self-nature (svabhava), and as such cannot be demarcated and reified. The subtle difference between vaktavya ("should be declared") and kathyate ("is spoken of, is expressed") should not go unnoticed. For Nagarjuna, declaration and expression are two different activities, the former calling for unquestioned acceptance, a sort of categorical imperative, the latter leaving room for modification depending upon the context.

This statement of Nagarjuna is better understood in the light of the analysis of concepts provided by a modern philosopher like William James who recognizes a pragmatic view of language and truth, in contrast to substantialist philosophers like Plato for whom "concepts" are the incorruptible reals.

GARFIELD COMMENTARY

11. This negative tetralemma is a crucial verse for understanding the relation between discourse on the conventional level and the understanding of emptiness or the ultimate truth. Nāgārjuna has been urging all along that ultimately all things are empty. It would be easy to interpret him to mean that from the ultimate standpoint, we can say of phenomena that they are empty. But here he quite deliberately undermines that interpretation, claiming instead that nothing can be literally said of things from such a standpoint. For ultimately there is no entity of which emptiness or nonemptiness can be predicated. Nor can we say that things are neither empty nor nonempty. For that would contradict the fact that from the standpoint of one using conventional language and cognition, it is correct to characterize phenomena as empty. The central claim in this verse is that all assertion, to the extent that it is true at all, is at best nominally true. Discourse about the ultimate character of things is not exempt from this generalization. Predication always requires an entity of which the predicate can be true; and the emptiness of phenomena guarantees that from the ultimate standpoint, there are no phenomena to be empty. The language is hence at best only ostensive. (fn 103. See Padhye (1988), esp. pp. 79-82, for further useful discussion of the import of this and other negative tetralemmas for Nāgārjuna’s philosophy of language. Padhye correctly emphasizes that Nāgārjuna and his Prasangika-Madhyamika followers reject any kind of Fregean or other realistic semantics that would require the independent existence of properties, including emptiness or nonemptiness, or of individuals, as the semantic values of predicates or subject terms, respectively, arguing for a more pragmatic view of linguistic meaning. Huntington (1989) emphasizes this point as well. I discuss this issue at greater length in connection with the interpretation of Vigrahavyavartani in Garfield (unpublished).) The next verse generalizes this observation:
INADA (Skt):
Verse 12 - How could the fourfold possible natures of permanence, impermanence, etc., manifest in quiescence? Again, how could the fourfold limit, limitless, etc., manifest in quiescence? - Note: Reference is again to the elements of the four-cornered logic.

JONES (Skt):
[12] Here in what is pacified (i.e., free of conceptual projection), how can the fourfold scheme of “eternal,” “not eternal,” and so forth be? So too, in what is pacified, how can the fourfold scheme of “finite,” “infinite,” and so forth be?

KALUPAHANA (Skt):
How can the tetralemma of eternal, non-eternal, etc., be in the peaceful? How can the tetralemma of finite, infinite, etc., be in the peaceful?

MCCAGNEY (Skt):
Where within fourfold permanence, impermanence, etc., is peace? Where within fourfold finitude, infinity, etc., is happiness?

NISHIJIMA (Skt?):
12. What is called Eternity, or what is called Non-eternity, and so forth, exist here in front us. Where are the Four, Reason, the external world, Action at the present moment, and Reality? The End and No-end, and so forth, are just manifesting themselves in front of us. Where exist there the One Group of four, the Reason, the External World, Action at the present moment, and Reality?

SPRUNG (Skt):
12 How could the four assertions concerning the eternal and the non-eternal be made of what is at peace? How could the four assertions concerning the finite and the infinite be made of what is at peace?

STRENG (Skt):
12. How, then, will "eternity," "non-eternity," and the rest of the Tetralemma apply to bliss (santa)? How, then, will "the end," "without end," and the rest of the Tetralemma apply to bliss?

ENGLISH TRANSLATIONS

BOCKING (Ch):
22v12 Within the characteristic of calm quiescence, The four (view4 of permanence, impermanence etc., do not exist. Within the characteristic of calm quiescence, The four (views) of limit, no limit etc., do not exist.

BATCHelor (Tb):
Where can the four such as permanence and impermanence exist in this peaceful one? Where can the four such as end and no-end [of the world] exist in this peaceful one?

DOCTOR (Tb):
Permanence, impermanence, and the other two—How could they pertain to this peace? Limited, limitless, and the other two—How could they pertain to this peace? [XXII.12]

GARFIELD (Tb):
12. How can the tetralemma of permanent and impermanent, etc., be true of the peaceful? How can the tetralemma of finite, infinite, etc., be true of the peaceful?

GARFIELD-SAMTEN (Tb):
12. How can the tetralemma of permanent, impermanent, etc., be true of the pacified? How can the tetralemma of finite, infinite, etc., be true of the pacified?

HAGEN (paraphrase):
[axiomatic] How can the tetralemma of permanent, impermanent, etc., be made of the peaceful? How can the tetralemma of finite, infinite, etc., be made of the peaceful?

GOLDFIELD (Tb):
Permanent, impermanent, and so forth, the four—Where are they in this peace? Finite, infinite, and so forth, the four—Where are they in this peace? (12)
PINGALA COMMENTARY

22/12 The true character of all dharmas is subtle, calm quiescence, but we produce four kinds of erroneous views on account of the past; that the world is permanent, that the world is impermanent, that the world is both permanent and impermanent, and that the world is neither permanent nor impermanent. In calm quiescence none of these exist at all, and why? The true character of all dharmas is utter clarity and purity, and cannot be grasped. If even emptiness is not accepted, how much less these four kinds of views? These four views all arise on account of reception, but within the real character of all dharmas there is nothing which is caused by receiving.

(30c7) Through these four kinds of views we regard ourselves as noble and regard others as base, but in the true character of dharmas there is no ‘you’ or ‘I’, and this is why it is said that in calm quiescence the four views do not exist.

(30c9) Just as with the four views which exist in regard to the past, so it is with the four views which exist in regard to the future; that the world has limits, the world has no limits, that the world both has and does not have limits, and that the world neither has nor does not have limits.

Question. If you refute the Thus-Come in this way, doesn’t this mean that there is no Thus-Come?

Reply.

CANDRAKĪRTI COMMENTARY

(“Peace”: fn 10 Santa, what is not subject to determination in time and space.)

The fourteen questions on which no stand may be taken (avyakrtvastuni) are given by the revered one in the following way. Existence (loka) (fn 11 ‘World’, but understood as personal world, or existence. This is not so much a cosmological problem, as an existential one.) is eternal [without beginning]; existence is non-eternal; existence is both eternal and non-eternal; existence is neither eternal nor non-eternal. Thus the first tetralemma. Existence has an end [in time]; existence is without end; existence both has and has not an end; existence neither has nor has not an end. Thus the second tetralemma. The perfectly realized one exists after his decease; the perfectly realized one does not exist after his decease; the perfectly realized one both exists and does not exist after his decease. Thus the third tetralemma. The living person (jiva) is identical with the body; the living person is one thing and the body another. (fn 12 There is no formal reason why the fourth tetralemma is incomplete, but, traditionally, it is.)

These fourteen topics are called the fourteen unresolved questions because they are by nature unresolvable. According to the argument already given, none of the four assertions concerning devoidness has any relevance (fn 13 na sambhati: logically and really impossible.) for the perfectly realized one who is without ontic existence and who is by nature at peace. Similarly the four assertions concerning the eternal and the non-eternal have no relevance; because they are without relevance, as the predicates ‘light’ and ‘dark’ are without relevance for the son of a barren woman, the illustrious one did not resolve, did not take a stand (na vyakrta) on the four questions concerning existence. In the same way the four assertions are without relevance for the perfectly realized one. Thus the four assertions concerning an end or no end to existence are not relevant to the perfectly realized one, who is at peace (santa).

And now Nagarjuna proclaims the effective irrelevance of the four possibilities ‘the perfectly realized one exists after death’ and so on.

KALUPAHANA COMMENTARY

Santa is an appeased one. It is the tathagata who has appeased the dispositions, obsessions as well as the object (see comments on V.8). For him, the fourfold metaphysical alternatives either regarding the duration of phenomena such as eternity (sasvata) and non-eternity (asasvata) or regarding the extent of phenomena such as the finite (anta) and the infinite (ananta) do not exist. He has stopped brooding over the past and running after the future.
Kārikā XXII.13

Bocking (Ch):
Verse 13 - One whose false views are deeply entrenched
Will say that there is no Thus-Come.
The Thus-Come's characteristic of calm quiescence
He will distinguish as existing, and as not.

Garfield (Tb):
13. One who grasps the view that the Tathagata exists,
Having seized the Buddha,
Constructs conceptual fabrications
About one who has achieved nirvana.

Garfield-Samten (Tb):
13. One who holds firmly
That the Tathāgata exists
Will have to fabricate his nonexistence
After having achieved nirvana.

Hagen (paraphrase):
One who is fixed on asserting the existence or nonexistence of the Tathagata will construct such conceptual fabrications even of one who has ceased.

Bokding (Ch):
22v13 One whose false views are deeply entrenched
Will say that there is no Thus-Come.
The Thus-Come's characteristic of calm quiescence
He will distinguish as existing, and as not.

Jones (Skt):
[13] A person who has conceived the thought “The Buddha exists or does not exist” would also conceive in their thinking the same thought of one who has achieved nirvana.

Kalupahana (Skt):
Discriminating on the basis of grasping or the grasped, and firmly insisting that a tathāgata “exists” or “does not exist,” a person would think similarly even of one who has ceased.

Mccagney (Skt):
You are grasped and destroyed by grasping false imaginings that the Tathāgata “exists” or “does not exist.” He would be imagined to the same as one who is deceased.

Nishijima (Skt?):
13. Now full of Murder, Restraint, and Confinement,
Nowadays, relying upon those facts, it is called the Arrival of Reality.
Actually speaking, it is said that the real situation does never change at all.
And furthermore the situation of stopping might continue for the length of Kalpa.

Sprung (Skt):
13 One who holds the crude notion that the perfectly realized one ‘exists’, must speculate, ‘he does not exist’ after his enlightenment.

Streng (Skt):
13. That image of nirvana in which the Buddha (Tathāgata) either "is" or "is not"— By him who so imagines nirvana the notion is crudely grasped.

INADA (Skt):
Verse 13 - One who is firmly entrenched in asserting (or grasping) the existence and non-existence of the Tathagata will, in turn, even discriminate on the existence and non-existence of the Tathagata in the nirvanic realm.

JONES (Skt):
[13] A person who has conceived the thought “The Buddha exists or does not exist” would also conceive in their thinking the same thought of one who has achieved nirvana.

KALUPAHANA (Skt):
Discriminating on the basis of grasping or the grasped, and firmly insisting that a tathāgata “exists” or “does not exist,” a person would think similarly even of one who has ceased.

MCCAGNEY (Skt):
You are grasped and destroyed by grasping false imaginings that the Tathāgata “exists” or “does not exist.” He would be imagined to the same as one who is deceased.

NISHIJIMA (Skt?):
13. Now full of Murder, Restraint, and Confinement,
Nowadays, relying upon those facts, it is called the Arrival of Reality.
Actually speaking, it is said that the real situation does never change at all.
And furthermore the situation of stopping might continue for the length of Kalpa.

SPRUNG (Skt):
13 One who holds the crude notion that the perfectly realized one ‘exists’, must speculate, ‘he does not exist’ after his enlightenment.

STRENG (Skt):
13. That image of nirvana in which the Buddha (Tathāgata) either "is" or "is not"— By him who so imagines nirvana the notion is crudely grasped.
PINGALA COMMENTARY

22/13 False views are of two kinds; the first denies worldly bliss, the second denies the path to nirvana.

Denying worldly bliss is the false view of the coarse, immature man. He says that there is no sin and no merit, and no saints and sages such as Thus-Comes etc.
Generating such false views, he forsakes good and does evil, and thus denies the bliss of the world. The one who denies the path to nirvana is deeply attached to self, and discriminates between existent and nonexistent, developing good and extinguishing evil. Since he develops goodness, he obtains worldly bliss, but because he discriminates between being and nonbeing he does not attain nirvana. Therefore, if you say that the Thus-Come does not exist, this is a deeply entrenched false view, and you lose even worldly bliss – how much more so nirvana? But if you say that the Thus-Come exists this is also a false view, and why? Because the Thus-Come has the characteristic of calm quiescence yet you are making various distinctions, differentiating within the characteristics of calm quiescence, the Thus-Come as existing or not existing.

CANDRAKĪRTI COMMENTARY

One who holds to the very crude notion — an illusory conjecture — ‘the perfectly realized one exists’ must imagine that the perfectly realized one does not persist in final enlightenment after his death; that is, the perfectly realized one, being destroyed, does not persist in the time following his death, as he has ceased to exist in any sense. One so speculating would be forming a false view.

However, one for whom the perfectly realized one neither exists nor does not exist in any definite state (avastha), because he is devoid of self-existence will think:

KALUPAHANA COMMENTARY

The Buddha’s reasons for the rejection of the notion of tathagata in the Samyutta passage referred to above (see comments on XXII. 1-2) are clearly emphasized by Nagarjuna. The Buddha rejected a tathagata because his existence was asserted in a real and absolute sense (saccato thetato). When Nagarjuna speaks of a dogmatic grasping (graha) on to something as the real or substantial (ghana) existence or non-existence (astiti . . . nastiti) of the tathagata, he was expressing the sentiments similar to those of the Buddha. Furthermore, arguing in a similar way as the Buddha did, Nagarjuna maintains that the same sort of substantialist speculations lead to the views regarding the existence and nonexistence of the tathagata even after his death.

Here there is no denial of a tathagata, but only of a substantial entity. The verse that follows is unequivocal in this regard.

GARFIELD COMMENTARY

13. Here Nāgārjuna returns to the problem of ascribing inherent existence to the Buddha in the context of thinking about phenomena from the ultimate standpoint. The problem is that, as Nāgārjuna has argued above, the only grounds for asserting the inherent existence of the Buddha would be on the grounds of the inherent existence of the aggregates and some view about the relations of the self to the aggregates. And we have seen that to be untenable. Moreover, since upon achieving nirvāṇa one would cease to exist. This is doubly problematic. On the one hand, it forces one to see nirvāṇa as complete annihilation, which doesn’t make it look quite so attractive. On the other hand, it forces the conclusion that the Buddha is either not nirvāṇa (since he exists), which is paradoxical in that buddhahood should guarantee nirvāṇa, or that he both exists (as a genuine buddha) and does not exist (in virtue of being in nirvāṇa), which is contradictory.
Kārikā XXII.14

svabhāvataś ca śūnye 'smiṃś cintā naivopapadyate |
paraṃ nirodhād bhavati buddho na bhavatīti vā ||14||

रु शि झिंग कोंग झिंग सि वेि यि बु के
रु लाई मिड़ दु हौ फें बिए युः;युः;वु यूः यु

INADA (Skt):
Verse 14 - As the Tathagata in its self-existence is in the nature of sunya, it is not possible to reason that the Buddha exists or does not exist after liberation.

JONES (Skt):
[14] Since he is empty by nature, the thought that the Buddha "exists" or "does not exist" after nirvana should not occur.

KALUPAHANA (Skt):
When he is empty in terms of self-nature, the thought that the Buddha exists or does not exist after death is not appropriate.

MCCAGNEY (Skt):
In what is open by nature, this thought: "The Buddha exists or does not exist after death" does not occur.

NISHIJIMA (Skt?):
14. When the state, which is based on subjective existence, is in the balanced state of the autonomic nervous system, Following upon the situations, a worry does never appear at all. When a long distance exists from the self-regulation, It is also said that a Person, who has realized the Truth, does not exist too.

SPRUNG (Skt):
14 As he is by nature devoid it is not intelligible to say, ‘After his death the Buddha exists or does not exist.’

STRENG (Skt):
14. Concerning that which is empty by its own nature (svabhava), the thoughts do not arise that: The Buddha "exists" or "does not exist" after death.

ENGLISH TRANSLATIONS

BOCKING (Ch):
22v14 Within the emptiness of such a nature One may speculate yet not discover Whether, after the passing of the Thus-Come He can be distinguished as existent or non-existent.

BATCHELOR (Tb):
For that one empty of own-nature, it is entirely inappropriate to think that once the buddha has nirvana-ed he either "exists" or "does not exist."

DOCTOR (Tb):
As for a Buddha empty of nature, To declare that, upon transcendence, He exists or does not exist Would not make any sense. [XXII.14]

GARFIELD (Tb):
14. Since he is by nature empty, The thought that the Buddha Exists or does not exist After nirvana is not appropriate.

GARFIELD-SAMTEN (Tb):
14. Since he is essentially empty, Neither the thought that the Buddha exists Nor that he does not exist After having achieved nirvana is tenable.

HAGEN (paraphrase):
As the Tathagata is Empty of self-nature, the thought that the Buddha exists or does not exist after liberation is unintelligible.
22/14 Since the nature of the true character of all dharmas is emptiness we should not speculate as to whether the Thus-Come exists, or does not exist, or both. From the very beginning the Thus-Come was utterly empty; how much more so after his decease?

CANDRAKĪRTI COMMENTARY

Nagarjuna means that this is an illusory attribution (kalpana) like the illusory attribution of colours to the sky. As the perfectly realized one is beyond all named things, is without self-existence and is by nature at peace, it is thinking of but feeble insight which
speculates ‘he is eternal’, ‘he is not eternal’, etc., ‘he is imperishable’, ‘he is perishable’, ‘he exists’, ‘he does not exist’, ‘he is devoid’, ‘he is not devoid’, ‘he is omniscient’, ‘he is not omniscient’, and so on.

KALUPAHANA COMMENTARY

Here the term asmin, in the locative absolute construction (asmin svabhavatas ca sunye), refers to the tathagata. If the tathagata who is alive is empty of self-nature, then it is not appropriate to assume that he exists or
does not exist after death. It is only the substantialist thinking (cinta) that leads to the metaphysical questions which were left undeclared (avyakrta) by the Buddha.

GARFIELD COMMENTARY

14. Nāgārjuna here draws on the results of XXII: 11, 12 to point out that one can evade all of these paradoxes by simply rejecting the language of existence and nonexistence when these are read inherently. Empty things exist conventionally; but about their ultimate status, nothing can be literally said. Of course we can say that the Buddha is empty and, hence, neither really existent nor completely nonexistent. But that, Nāgārjuna is arguing in this chapter, can be only understood in a purely negative sense. The ultimate nature of things is perhaps shown by it, to use a Wittgensteinian metaphor; but cannot be said in this language. (fn 104. Nagao (1991) puts this point nicely: “... [F]or one whose point or departure is sunyata, even the claim that all is sunyata is absurd, for non-assertion or nonmaintenance of a position is the real meaning of sunyata” (p. 42).)
Kārikā XXII.15

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 15 - Those who resort wholly to provisional descriptions in speaking of the Buddha, which is actually beyond description and destruction, are impaired by the descriptions themselves and cannot understand the Tathagata. - Note: This verse clearly indicates the non-identity of thought (discriminative knowledge) and reality.

JONES (Skt):
[15] Those who project concepts onto the enlightened, who is forever beyond such projections, are impaired by these projections and fail to see the Buddha.

KALUPAHANA (Skt):
Those who generate obsessions with great regard to the Buddha who has gone beyond obsessions and is constant, all of them, impaired by obsessions, do not perceive the tathāgata.

MCCAGNEY (Skt):
Those who imagine the Buddha, who is beyond being described by false statements, are all destroyed by idle fancy. They do not see the Tathāgata.

NISHIJIMA (Skt?):
15. The person, who promotes his or her own Personality, has realized the Truth.
The people, who have promoted the Past, are eternal.
They, people, who expand destructions to everything, Do never look at the Arrival of Reality.

SPRUNG (Skt):
15 Those who assert names of the Buddha who is beyond named things and is unchanging — are all victims of their own naming and do not see the perfectly realized one.

STRENG (Skt):
15. Those who describe in detail the Buddha, who is unchanging and beyond all detailed description— Those, completely defeated by description, do not perceive the "fully completed" being.

ROBINSON (Skt):
Those who fantasize about the Buddha, who is beyond fancies and imperishable, are all slain by fancy and do not see the Tathagata.

BOCKING (Ch):
22v15 The Thus-Come transcends sophistries Yet men still produce sophistries.
Sophistries destroy the eye of insight, Such as these do not see the Buddha.

BATCHELOR (Tb):
Those who make fixations about Buddha who is beyond fixations and without deterioration -- all those who are damaged by fixations do not see the tathagata.

DOCTOR (Tb):
Those who create constructs about the Buddha, Who is beyond construction and without exhaustion, Are thereby damaged by their constructs; They fail to see the Thus-Gone. [XXII.15]

GARFIELD (Tb):
15. Those who develop mental fabrications with regard to the Buddha, Who has gone beyond all fabrications, As a consequence of those cognitive fabrications, Fail to see the Tathagata.

GARFIELD-SAMTEN (Tb):
15. Those who develop fabrications with regard to the Buddha— The unextinguished one who has gone beyond all fabrication— And are impaired by those fabrications, Fail to see the Tathāgata.

HAGEN (paraphrase):
[axiomatic] Those who develop mental fabrications with regard to the Buddha who has gone beyond such obsessions and is constant, fail to see the Tathagata due to being impaired by such obsessions.
22/15 ‘Sophistries’ means recollected thoughts, grasping of characteristics, distinguishing this from that, saying that the Buddha is extinct or is not extinct, and so forth. Since man in order to pursue sophistries inverts his eye of insight, he is unable to see the dharma-body of the Thus-Come. In this chapter on the Thus-Come, we have considered, from beginning to end, (the idea of) a fixed nature of the Thus-Come, and we have been unable to discover one. Therefore, the verse says:

CANDRAKĪRTI COMMENTARY

Because names (prapanca) are bound to objects and the perfectly realized one is not an object, how could naming be efficacious? Therefore the perfectly realized one surpasses names. And, as he is by nature not causally produced and does not alter his nature, he is unchanging.

As this is the character of the perfectly realized one, those who discourse speculatively about the illustrious Buddha by means of various fancied non-existent distinctions stemming from the conceit of tainted and impure imagination and from self-induced error, such victims of their own discourse are turned away from and completely lose sight of the true characteristics of the perfectly realized one. So, like dead creatures, those of this school do not see the perfectly realized one as those blind from birth do not see the sun.

Here we radically differ from the prevailing explanations that prapañca means thought distinct from reality (see Inada). Having rejected the more widespread view that Buddhism recognizes an "unspeakable" (avacya) and "indefinable" (anusvacaniya) truth or reality (tattva), which leads to the above interpretation of prapañca, we have rendered the term as "obsession."

The Buddha remains aloof from obsessions (prapancatitam). As such, he is not understood or grasped by those who are obsessed. A person who is obsessed with the idea of identity will understand the Buddha in a way different from one who is obsessed with the idea of difference. One will say that he "exists" (asti) and the other will insist that he "does not exist" (nasti).

The Buddha who has overcome such "obsessions" is "not so variable" (avyaya). His perceptions are not variable in the same way as those of the unenlightened ones who are dominated by obsessions. Nagarjuna could not have been unaware of the definition of the Buddha as "one who has become stable and steady" (thitam anejjappattam, A 3.377; thitam cittam, S 5.74). The term avyaya in the present context expresses the same idea of stability and steadfastness achieved by a Buddha. This is not to assume his permanent existence.

GARFIELD COMMENTARY

15. To see buddhahood for what it is - to see things as a buddha sees them - one must see things independently of the categories that determine an ontology of entities and a dichotomy of existence and nonexistence. That this is inconceivable to us, for Nāgārjuna, only indicates the fact that we are trapped in conventional reality through the force of the delusion of reification. But we can, through using the Madhyamika dialectic, come to see the nature of our predicament, the possibility of transcending it, and even the nature of that transcendence. That, however, requires us to acknowledge the merely nominal character of conceptual imputation.

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 16 - The Tathagata 's nature of self-existence is also the nature of this worldly existence. The Tathagata, (strictly speaking), is without the nature of self-existence and this worldly existence is likewise so.

JONES (Skt):
[16] Whatever is the essence (i.e., self-nature) of the Buddha, that is the essence of this world. But the Buddha is without any essence, and this world is without any essence.

KALUPAHANA (Skt):
Whatever is the self-nature of the tathāgata, that is also the self-nature of the universe. The tathāgata is devoid of self-nature. This universe is also devoid of self-nature.

MCCAGNEY (Skt):
What self-nature is the Tathāgata, that self-nature is the world. The Tathāgata is without self-nature and the world is without that self-nature.

NISHIJIMA (Skt?):
16. The Arrival of Reality is some kind of subjective Existence. And such a kind of subjective Existence is just the motion of this world. The Arrival of Reality is never a lacking of subjective existence, but the negation of subjective existence is just the motion of this world.

SPRUNG (Skt):
16 The self-existence of a perfectly realized one is the self-existence of this very cosmos. The perfectly realized one is without a self-existent nature; the cosmos too is without a self-existent nature.

STRENG (Skt):
16. The self-existence of the "fully completed" being is the self-existence of the world. The "fully completed" being is without self-existence and the world is without self-existence.

ROBINSON (Skt):
The own-being of the Tathagata is the own-being of this world; the Tathagata is without own-being, and this world is without own-being.

BOCKING (Ch):
22v16 The nature of the Thus-Come Is the very nature of the world. The Thus-Come has no nature. The world, also, has no nature.

BATCHelor (Tib):
Whatever is the own-nature of the tathagata, that is the own-nature of the world. The tathagata has no own-nature. This world has no own-nature.

DOCTOR (Tib):
That which is the nature of the Thus-Gone Is also the nature of this world. There is no nature of the Thus-Gone. There is no nature of the world. [XXII.16]

GARFIELD (Tib):
16. Whatever is the essence of the Tathagata, That is the essence of the world. The Tathagata has no essence. The world is without essence.

GARFIELD-SAMTEN (Tib):
16. Whatever is the essence of the Tathāgata, That is the essence of the transmigrator. The Tathāgata has no essence. The transmigrator has no essence.

HAGEN (paraphrase):
[axiomatic] Whatever is the self-nature of the Tathagata is the self-nature of the world. The Tathagata is without self-nature. The world is without self-nature.

GOLDFIELD (Tib):
Whatever is the nature of the Tathagata, That is the nature of wandering beings. The Tathagata has no inherent nature. Wandering beings have no inherent nature. (16)
PINGALA COMMENTARY

22/16 In this chapter we have considered and earnestly investigated the nature of the Thus-Come, which is in fact the nature of all the worlds.

Question. What kind of thing is this nature of the Thus-Come?

Reply. The Thus-Come has no nature. Equally, the world has no nature.

CANDRAKĪRTI COMMENTARY

16ab The self-existence of a perfectly realized one is the self-existence of this very cosmos.

‘Cosmos’ means the universe without living beings. In what sense the perfectly realized one is self-existent Nagarjuna explains:

16cd The perfectly realized one is without a self-existent nature; the cosmos too is without a self-existent nature.

In what way the cosmos is without a nature of its own has been dealt with in the enquiry into causality and other chapters.

This is why it can be said in the sutra: ‘The perfectly realized one is ever independent of the elements of existence; all elements of existence are akin to the perfectly realized one; those of puerile intellect are subject to the notion of cause, and err about in the world among putative elements of existence, which are unreal. The perfectly realized one is of the nature of a reflection; he is of pure elements which cause no harm; here there is no perfection and no perfectly realized one; he is beheld in all the worlds as a reflection.’

To quote the illustrious Prajnaparamita: ‘The sons of the gods said to venerable, revered Subhuti, “O noble Subhuti, are all beings not like magic (mayopama), are they not magic?” On this being said the venerable Subhuti said to the son of the gods, “All beings are like magic, all beings are like a dream (svapnopama); magic and beings are not two things, they are not by nature different; because dreams and beings are not two things; they are not by nature different. All the elements of existence, o sons of the gods, are like magic, like a dream. The one on his way to nirvāṇa is like magic and a dream. The spiritual achievement of one on the way to nirvāṇa is like a magic and a dream. And so too one to be born only once more and his spiritual achievement are like magic and a dream; so too one who is not to be born again and his spiritual achievement; the realized saint as well is like magic and a dream; the spiritual achievement of saithood is like magic and a dream; the perfectly enlightened individual is like magic and a dream; perfect individual enlightenment itself is like magic and a dream. Even the ultimate Buddha is like magic and a dream as is ultimate Buddhahood like magic and a dream. Thus I say.”’

Thereupon the sons of the gods said to venerable Subhuti, ‘You say, o noble Subhuti, that the perfectly enlightened individual is like magic and a dream and that even perfect enlightenment itself is like magic and a dream.’ Subhuti replied, ‘Even nirvāṇa is like magic and a dream; how much more other truths.’

The sons of the gods said, ‘You say, o noble Subhuti, that even nirvāṇa is like magic and a dream.’ Subhuti replied, ‘Whatever other truth there might be even more excellent than nirvāṇa that also I would say was like magic and a dream, because nirvāṇa and magic are not two things, they are not by nature different.’

KALUPAHANA COMMENTARY

The first statement of Nagarjuna may be taken to mean that there is a self-nature of the tathagata which is identical with that of the universe. This would be justification for the belief in a permanent entity which is identical with the reality of the universe, comparable to the atman and brahman of the Hindu tradition. However, Nagarjuna immediately sounds the warning that there is not such self-nature either in the tathagata or in the universe. This would mean that non-substantiality (nairatmya) applies not only to the individual (pudgala = tathagata) but also to all phenomena (dharma = jagat).

GARFIELD COMMENTARY

16. This crucial final verse emphasizes again the lack of any fundamental nature of entities. Emptiness is the final nature of all things, from rocks to dogs to human beings to buddhas. (fn 105. See also Kalupahana (1986), pp. 310-11, and Ng (1993), pp. 26-28, for a similar reading.) This fact entails, for Mahayana philosophers, the possibility of any sentient being to be fundamentally transformed - to attain enlightenment. But this is so, paradoxically, because ultimately there is no fundamental transformation, because there is nothing to transform. In Chapters XXIV and XXV below, we will see the dramatic consequences of this line of reasoning.
Chapter XXIII

विपर्यासपरीक्षा त्रयोविंशतितमं प्रकरणम्‌

中論觀顛倒品第二十三(二十四偈)

viparyāsaparīksā nāma trayoviṃśatitamam prakaraṇam ||

Chapter XXIII: Examination of Errors
We are still in the fifth section of the extensive explanation of selflessness: the presentation of the essential emptiness of the continuum of life. We have completed the first of its two parts: the refutation of the essential existence of the Tathagata. [382:19] This chapter constitutes the second of those two parts: the refutation of the essential existence of afflictions.

Here someone might argue as follows: the cause of cyclic existence exists essentially, because its causes exist essentially. Action arises from the afflictions; the continuous series of birth and death following one another arises as an effect from action and the afflictions, and that is the continuum of cyclic existence. The principal cause is the afflictions, because when they are eliminated, even though there is karma, the continuum of cyclic existence is terminated.
If the afflictions existed essentially, the continuum of cyclic existence would exist essentially. However, this is not the case. The refutation of this assertion has two parts: the refutation of the essential existence of the afflictions and the refutation of the essential existence of the methods of their elimination as arguments for their existence.

SUMMARY:

So, according to those who think that things exist through their own characteristics, it is not possible that afflictions arise from such things as pleasant objects and from conceptualizing them; nor can they distinguish between the erroneous and the nonerroneous in the context of grasping things as permanent, etc.; nor can they abandon the afflictions. One should ascertain, however, that for those according to whom things are empty of inherent existence, all of this is completely tenable.

INADA (Chapter Introductions)

CHAPTER XXIII - Examination of the Perversion of Truth

This chapter discusses the interesting question of perversion or false perception of truth or reality. The term itself is a central concept in Buddhism for in and through it all our false views are said to evolve. And in this sense it belongs to the conceptual or ideational process in man. Nagarjuna attempts to show at the outset that the origin of all false views lies in the adulteration and complication of what is pure and what is impure. All perversions, in this sense, mean confusing the pure with the impure. With purity of experience in the background, he then goes through the usual process of arguing that elements or matters attached or related to the process of perversion do not exist in the real sense. He finally brings out the concept of perversion for direct examination and shows that the concepts of perceiver, the perceived, that which depends on perception, and perception itself are all false constructions. On the other hand, from the basic standpoint of truth or reality, they are all of the nature of quiescence. What is then to be done? He concludes that the perversion itself must cease in order to destroy ignorance and that by the destruction of ignorance all devious functions of the five skandhas, such as, samskara and vijnana, will be extinguished, thus arriving at ultimate quiescence or nirvana.

KALUPAHANA (CHAPTER OVERVIEWS)

23. Confusions (viparyasa). The reasons for the misunderstandings that prevail regarding the nature of the enlightened one (buddha) or the “thus gone one” (tathagata) as well as anything that takes place in the universe (jagat) are then taken up for examination. Once again the nucleus of the chapter can be traced back to the early discourses.

A discussion of the four types of confusions (vipallasa) relating to perceptions (sanna), thought (citta), and views (ditthi) is met with in the Anguttaranikaya.118 The basic confusions relating to these three different functions are given as follows:

1. Perceiving, thinking and viewing what is impermanent as permanent.
2. Perceiving, thinking and viewing what is not suffering as suffering.
3. Perceiving, thinking and viewing what is non-substantial as being substantial.
4. Perceiving, thinking and viewing what is impure as pure.

The first three of these, in that particular order, are generally referred to as the three characteristics (lakkhana) of human existence, that is, impermanence (anicca), suffering (dukkha), and non-substantiality (anatta). Nagarjuna has already dealt with these concepts at length (see Chapters II, XI and XVIII). Hence, he begins his analysis with the last, namely, the pure (subha) and impure (asubha). These indeed are value judgments made by the human beings and serve as the foundation of the religious and spiritual life. However, in the eyes of the substantialist philosophers, these were ultimate qualities, each having its own nature (svabhava). With the first two verses, Nagarjuna sets the tone of his criticism of these qualifies, which allows him to move on to other types of confusions subsequently. While the interplay between the qualities of subha and asubha are mentioned in verse 11, Nagarjuna’s refutation of the ultimate reality of these qualifies is based initially upon his recognition of the dependent arising of both. The notions purity and impurity, like any other entities, have no ultimate substantial standing. They are based upon lust (raga), hatred (dvesa), and confusion (moha), which in turn are the products of thought or conceptualization (samkalpa). The cessation of lust, hatred, and confusion is generally equated with “freedom” (nirvana). Hence, it is generally assumed that nirvana is beyond any conceptualization or thought. This seems to be the manner in which the notion of a “non-conceptual” and ultimate reality (paramartha) came to be attributed to Nagarjuna and, hence, to all Madhyamika philosophy.
Early Buddhism refers to two forms of thought or conceptualization (samkappa), the more comprehensive and, therefore, right thought or conceptualization (samma-samkappa) and the more restricted and, therefore, wrong thought (miccha-samkappa). This is in no way different from what Nagarjuna discussed in Chapter XVII (12-13), where he distinguished thoughts (kalpana) that are proper (yojyate) from those that are inappropriate (nopapadyate).

In many instances, “thoughts” (samkalpa) and “dispositions” (samskara), two terms that are semantically related, function in similar ways. This is attested to by Nagarjuna’s treatment of them. We have already noted how he characterized “dispositions” as “confusions” (mṛsa)(XIII.1 - 2). This definition was, in fact, attributed to the Buddha himself. In the present context, speaking of “confusions” (viparyasa), Nagarjuna introduces the notion of samkalpa and proceeds to define it in terms of its consequences, namely, the generation of lust, etc.

A careful analysis of the notions of samkalpa and samskara in relation to freedom or nirvana may clarify an important epistemological problem, both in early Buddhism and in Nagarjuna. We have already referred to the function of dispositions (sankhara) in the context of early Buddhism. They cannot be eliminated except at death, and are, therefore, to be appeased (samatha, upasama). This process of appeasement is to be achieved by not clinging on to any of the past dispositions when one has to deal with the problem of understanding any situation. Hence, nibbana came to be designated asankhata.

When speaking of the thoughts or concepts (samkalpa), however, we are presented with two types, the right and the wrong. The right ones are to be cultivated and the wrong ones eliminated, a process not recommended in relation to dispositions. This dichotomy between right and wrong thoughts could have unsatisfactory implications. Right thoughts may be taken as pointing to true events or phenomena, while the wrong ones may indicate the absence of such events or phenomena. This, indeed, was the substantialist trap which both the Buddha and Nagarjuna were attempting to avoid. Therefore, without taking right thoughts in the sense of absolutely true ideas corresponding to ultimate facts, that is, as having substance or self-nature (svabhava), Nagarjuna wants them to be treated as empty (sunya), not in the sense of absolute nonexistence (abhava) but in a more pragmatic sense of being able to produce consequences. Thus, while wrong thoughts (mithya samkalpa) are productive of lust (raga), hatred (dvesa), and confusion (moha), right thoughts (samyak samkalpa) give rise to freedom from lust (vairaga), compassion (karuna, advesa), and knowledge (prajña).

The entire chapter on “confusion” (viparyasa), is therefore, devoted, not to an outright rejection of the simple discriminations of purity and impurity, etc., but to a vehement criticism of such discriminations based upon the notions of absolute existence (astitva) and absolute non-existence (nastitva).

---

**BATCHelor (POETIC “TRANSLATION”)**

Confusion

Concepts are at the root of it:
Greed, hatred, bewilderment
Depend on what is conceived
As desirable, despicable or confusing.

How can such things trouble me
If they are not what they seem?
Without anyone to trouble,
Compulsions would be no one’s.

The concept “body”
Is not inside my flesh and bones,
Just as these compulsions
Are not inside my troubled soul.
Nor are my flesh and bones
Inside the concept “body”;

Nob is my troubled soul
Inside its compulsions.

If what is “desirable,”
"Despicable" and “confusing”
Have no nature of their own,
Why do they trouble me?
I may believe that objects of the senses
Are the foundations of desire –
But they are like invisible cities,
Mirages and dreams.

Are they desirable or despicable?
"Desirable" and "despicable"
Depend on each other;
Neither stands alone.
If nothing is desirable,
How can I covet it?
If nothing is despicable,
How can I hate it?

Manners of conception,
Conceptuality itself,
Conceived and conceiver
Arc all at ease.
When there is no confusion
And no unconfusion,
Who is confused and who is not?
Work that out for yourself.

If self, incorruptibility,
Eternity and happiness were real,
They would not confuse me.

Were they unreal,
Nor would selflessness,
Corruption, transience or anguish.
In ending confusion, ignorance stops
And compulsive acts cease.

If there were a problem,
How could I be rid of it?
Who can destroy what is real?
If there were no problem,
How could I be rid of it?
Who can destroy the unreal?

JONES (COMMENTARY)

23. Errors

The three roots of unskillfulness are desiring what is undesirable, hating what is not real and thus not hatable, and errors about what is ultimately real (thinking there is permanence in the impermanent, thinking there is happiness in what can only bring unhappiness, thinking what is unpleasant is pleasant, and thinking there is a self in what is without a self).

Under Nagarjuna’s analysis there are no real afflictions and no real self to afflict. If afflictions existed through their own self existence, they could not be eliminated since we cannot eliminate what is self-existent (v. 24). And if the afflictions do not exist through their own self-existence, they are not real, and so there is nothing that could be eliminated. Either way, there is nothing to eliminate. So too, if there is no real entity who grasps and no real thing to be grasped, then there is no real clinging. Even “impermanence” does not ultimately apply to what is empty (vv. 15-16) since there is nothing permanent to contrast it with. Nor, if an error and a person are real, can an error arise in someone who is not in error (since an error as a self-existent entity cannot enter the self-existent person), nor can it arise in a person who is already in error (vv. 16-20). (The analysis of motion and mover in Chapter 2 applies here.)

When the idea of errors as real entities ceases, the fundamental root-ignorance of the ontological nature of things (avidya) ceases; and when this ignorance ceases, then dispositions cease, and so forth (v. 23).

Verses 23-25 deal with the consequences for the religious way of life, which are also continued in the next chapter. In a standard Nagarjunian analysis, the afflictions are said not to be eliminatable: if they exist through self-existence, then they cannot be changed in any way and so cannot be removed; if they are empty, then there is no reality called “afflictions” to remove.

In verse 5, Nagarjuna uses the word “drishtivat,” but he is not using it here in the technical philosophical sense of a drshti; instead, he means only the everyday sense of “viewing” something.
GYAMTSO (COMMENTARY)

23

An Examination of Mistakes
In the Prajnaparamita Sutras, the Buddha taught:

Desire is perfectly pure, and therefore forms are perfectly pure.

CONNECTING THIS WITH other mental afflictions and confused concepts:

Aversion is perfectly pure, and therefore forms are perfectly pure. Pride is perfectly pure, and therefore forms are perfectly pure. Stupidity is perfectly pure, and therefore forms are perfectly pure. Jealousy is perfectly pure, and therefore forms are perfectly pure. Wrong views are perfectly pure, and therefore forms are perfectly pure. Doubts are perfectly pure, and therefore forms are perfectly pure.

Thus the Buddha taught about perfect purity in a vast way.

The reason Nagarjuna composed this chapter was that there were those who said, “Samsara exists because the mistakes that produce it exist. Mental afflictions cause sentient beings to accumulate karma, and as a result they take birth again and again in samsara.” In order to help these people overcome their confused belief in the reality of samsara, Nagarjuna had to present an analysis of the mistakes that produce samsara: mistaken concepts about reality; the mental afflictions arising from these mistaken concepts; and the karmic actions motivated by these mental afflictions. Nagarjuna had to demonstrate that none of these things truly exist.

In general, people have a tendency to believe that being mistaken and being unmistaken, being right and being wrong, are real. People conceive of right and wrong as being opposites that truly exist. If we are not able to reverse this tendency to think that right and wrong are truly existent, it will be impossible for us to realize emptiness. This is why it is very important for us to analyze mistakes and determine their true nature.

It is also the case that sometimes people think, “I really do not understand this stuff and all my views are wrong. I am constantly thinking about things wrongly, I have all these bad thoughts, and I have so many doubts. I am never going to attain enlightenment.” In this way, they get very discouraged. At other times people think, “Look at that guy. He does everything wrong. His views are completely wrong. His conduct is completely wrong.” This type of thought is wrong in itself, though, for how could anyone know for certain what is inside another person’s mind? Therefore, in order to reverse our tendency to get discouraged ourselves, as well as our tendency to have wrong views concerning others, it is important for us to examine the true nature of mistakes.

To put this into verse:

So that we are no longer discouraged by our own bad thoughts, and / So that we no longer incorrectly judge others to have bad thoughts, / Let us examine mistakes’ true nature.

We can begin by examining the mental afflictions that arise as a result of mistaken thoughts and that cause us to take mistaken actions. The main mental afflictions are desire or attachment, aversion, and stupidity. Desire’s referent object, what it focuses on, is something we consider pleasant. Aversion’s referent object is something we find unpleasant, and stupidity’s referent object is a mistake, a wrong view. Therefore, what we need to examine are these three objects: those we consider pleasant, those we consider unpleasant, and mistakes.

When we examine these objects, however, we cannot find anything really there at all. Whatever object we analyze, we find that it is merely imputed to exist in dependence upon its parts. Analyzing the parts themselves, we find that they too are imputed to exist in dependence upon their own parts. Down to the subtlest particles of matter imaginable, nothing has any type of existence other than as a mere dependent imputation. Therefore, since there really is no object out there, no reference point for any notions of pleasant or unpleasant, pleasant and unpleasant themselves cannot exist. This is what Nagarjuna teaches in the ninth verse:

How could it be possible for
Sentient beings who are like illusions
Or objects that are like reflections
To be either pleasant or unpleasant?

To put this in the form of a logical reasoning: Pleasant and un-pleasant do not truly exist, because the bases for the respective notions of pleasant and unpleasant are individuals and objects that themselves are appearance-emptiness, like illusions and reflections. If there is no support or basis that can have these qualities of pleasant and unpleasant, then how can the qualities themselves really exist? They cannot.

Another way to analyze is to look at the very notions of pleasant and unpleasant themselves. Pleasant and unpleasant could truly exist only if they did so independent of each other. However, pleasant cannot inherently exist before there is any notion of unpleasant, because it would have no reference point. Pleasant has no reference point in the absence of unpleasant. Similarly, unpleasant cannot exist in the absence of pleasant, because it would have no reference point. You cannot have a thought of something being unpleasant without a thought of what pleasant means as well. Therefore, pleasant depends for its existence on unpleasant, but unpleasant itself depends on pleasant to exist. Therefore,
neither one truly exists, as Nagarjuna teaches beginning with the tenth verse:

We imagine something to be pleasant
Based on our idea of what is unpleasant.
But unpleasant too does not exist independent of pleasant.
Therefore, for pleasant to truly exist would be impossible.

Pleasant does not truly exist because the concept of unpleasant that it must depend upon for its existence in turn depends upon it—pleasant—for its existence. The very thing pleasant exists in dependence upon must depend upon pleasant itself in order to exist. Therefore, pleasant is not real.

The eleventh verse demonstrates the lack of inherent existence of unpleasant:

We imagine something to be unpleasant
Based on our idea of what is pleasant.
But pleasant too does not exist independent of unpleasant.
Therefore, for unpleasant to truly exist would be impossible.

Unpleasant has no nature of its own because the concept of pleasant that it must depend upon for its existence in turn depends upon it in order to exist. So the very thing that unpleasant depends on in fact depends upon it. Therefore, unpleasant is not real either.

We can examine clean and unclean in the same way. Clean exists only in dependence upon unclean. Unclean exists only in dependence on clean. So they exist only in dependence upon each other, and therefore they cannot truly exist. If one thing depends upon something else, but that other thing must depend upon it, then neither one can really exist. Long and short, hot and cold, good and bad, happiness and unhappiness are all exactly the same. They are dependently existent and therefore they are not truly existent (In For another analysis of how it is that things existing in mutual dependence cannot truly exist, see chapter 10, “An Examination of Fire &Firewood.”).

In the twelfth verse, Nagarjuna describes how it is that since neither pleasant nor unpleasant exists, neither do the affective emotions of desire and aversion that appear to arise from contact with pleasant and unpleasant things:

Since pleasant does not exist, how could desire exist?
Since unpleasant does not exist, how could aversion exist?

To put this in the form of a logical reasoning: Desire and aversion have no inherent existence because their reference points, pleasant and unpleasant, do not truly exist, just as is the case with the desire and aversion that appear in dreams.

The chapter goes on to look at what are commonly known as the four mistaken views in the twenty-second verse:

If, however, self, clean,
Permanence, and happiness do not exist,
Then their opposites—selfless, unclean,
Impermanent, and suffering do not exist either!

The four mistaken views are: to look at the five aggregates, which are empty of self, and see them as the self; to look at the unclean body and take it to be clean; to look at things that arise due to causes and conditions, which are impermanent, and see them as permanent; and to look at samsara, which is of the nature of suffering, and take any part of it to be happiness. Their opposites—the views of selflessness, unclean, impermanence, and suffering—are called the four correct views.

When Nagarjuna analyzes, however, he finds that neither mistaken nor correct views truly exist. For if self, clean, permanent, and happiness existed, then the views of these four would not be mistaken views after all, because when one had these views one would be focusing on things that existed, so there would not be any mistake in that. On the other hand, if these four do not exist—and their nonexistence is said to be what makes the views of them mistaken—then in fact their opposites (selfless, unclean, impermanent, and suffering) could not exist either, because they would have no reference point to depend upon for their existence. If there is no self, there can be no selflessness, because they are dependency existent; if there is no clean, there can be no unclean, because they are dependently existent; if there is no permanence, there can be no impermanence, because they are dependency existent; and if there is no happiness, there can be no suffering, because they are dependently existent. Thus, since the “correct” views’ objects do not exist, the views themselves do not exist either.

Therefore, all eight of these views need to be abandoned. If we are going to posit some views as mistaken, then we have to posit all eight of these as equally mistaken. This is the ultimate view of the Middle Way, which points out that the true nature of reality transcends self, selflessness, both, and neither; transcends clean, unclean, both, and neither; transcends permanence, impermanence, both, and neither; and transcends happiness, suffering, both, and neither. That is how genuine reality is.

It is important to analyze what the true nature of mistakes really is. If we can gain certainty that essential reality transcends both being mistaken and being unmistaken, transcends both being right and being wrong, we will be able to realize that all phenomena that are opposites are really of the nature of equality. Resting within that equality, free from any mental fabrications about it, is the practice of meditative equipoise: rising up from that meditation, to view all appearances of opposites as appearance-emptiness, illusory and dreamlike, is the practice of postmeditative awareness.

Relation of affliction and misbelief

Some argue that the round of birth and death (bhavasamti - a synonym for saṃsāra) exists in fact because its cause exists in fact. They argue, that is, that action (karma) proceeds from the basic afflictions, and that the unbroken succession of birth and death follows as the effect of action which arises from the basic afflictions. This unbroken succession of birth and death is what is meant by the round of birth and death. The basic afflictions are the factual, material cause (pradhanam karanam) of this because the round of birth and death ceases when they have been eradicated. But the basic afflictions desire and the rest — are fact. Therefore the unbroken succession of birth and death, the round of birth and death, being the factual effect (karyabhuta), will, by virtue of the necessary connection, exist also.

We reply. There would be the round of birth and death if the basic afflictions, as its cause, existed. But they do not. How is that? The illustrious Buddhas, who destroy their enemy, the afflictions of beings in all the three worlds, and who emerge triumphant from the struggle with their adversaries, the four Maras,

KALUPAHANA COMMENTARY

Chapter Twenty Three Examination of Perversions (Viparyasa-pariksa)

GARFIELD COMMENTARY

Chapter XXIII Examination of Errors

This chapter continues the investigation of the relation between cyclic existence and nirvāṇa by asking whether the fundamental defilements and the four basic cognitive errors, which according to orthodox Buddhist doctrine bind us to saṃsāra, themselves inherently exist and by asking how it is possible to abandon them and enter nirvāṇa. The fundamental defilements are desire, hatred, and confusion: the desire for things that are not desirable, the aversion to things to which it is not reasonable to be averse, confusion about the actual nature of entities. These, according to most strains of Buddhist philosophy, are the bases of afflicted action, which in turn leads to further grasping and error. The four basic errors or erroneous philosophical theses are: (I) There is a permanent self among the five personal aggregates. (2) There is real happiness in saṃsāra. (3) The body is pure - that is, that it is a real source of happiness. (4) There is a permanent self distinct from the aggregates.

If these defilements and errors were inherent properties of the self, that might serve as a ground for the inherent existence of saṃsāra and its phenomena, to the extent that saṃsāra is grounded in these phenomena. Moreover, though, if these defilements and errors were inherently existent, it is hard to see how nirvāṇa is possible since it requires their elimination. But on the other hand, if these defilements do not exist, it is hard to see why there is saṃsāra at all and why we are not already in nirvāṇa. And if they are merely illusions, why isn’t the distinction between saṃsāra and nirvāṇa merely an illusion; why isn’t suffering merely an illusion? In short, why isn’t illusion merely an illusion? This chapter is devoted to answering these fundamental questions in Buddhist soteriological theory.

From false ideation or conceptualization. Indeed, they come about in virtue of the perverse relational play of purity and impurity.

**ENGLISH TRANSLATIONS**

**INADA (Skt):**
Verse 1 - Covetousness, enmity, and delusion are said to arise from false ideation or conceptualization. Indeed, they come about in virtue of the perverse relational play of purity and impurity.

**JONES (Skt):**
[1] It is said that desire, hatred, and delusion - the three roots of unskillful action - arise from thought, for they arise respectively from the pleasant, the unpleasant, and errors.

**KALUPAHANA (Skt):**
Lust, hatred, and confusion are said have thought as their source. Perversions regarding the pleasant and the unpleasant arise depending upon these.

**MCCAGNEY (Skt):**
Desire, hatred, and delusion are said to rise from false discrimination. They develop depending on errors of purity and impurity.

**NISHIJIMA (Skt?):**
1. What has been born from desire is violent emotion, hatred and charm, are actually talked.
Because both good omens and bad omens are manifesting themselves together, It seems clear that both are going to occur clearly.

**SPRUNG (Skt):**
1 Explain that desire, aversion and illusion are born of volitive thought and that they arise in dependence on the ‘good’, the ‘bad’ and misbelief.

**STRENG (Skt):**
1. It is said that desire (raṣa), hate, and delusion are derived from mental fabrication (samkalpa), Because they come into existence presupposing errors as to what is salutary and un-salutary.

**BOCKING (Ch):**
23v1 As a result of conceptual discrimination Lust, anger and delusion arise Perverted conceptions of purity and impurity Are all produced from conditions.

**BATCHELOR (Tb):**
It is said that desire, hatred, stupidity arise from conceptuality; they arise in dependence on the pleasant, the unpleasant and confusion. [they arise in dependence on confusion about the pleasant and unpleasant]

**DOCTOR (Tb):**
It is taught that desire, anger, and stupor-Originate in dependence on thought. Their arising depends On the attractive, unattractive, and mistaken. [XXIII.1]

**GARFIELD (Tb):**
1. Desire, hatred and confusion all Arise from thought, it is said. They all depend on The pleasant, the unpleasant, and errors.

**GARFIELD-SAMTEN (Tb):**
1. Desire, hatred, and confusion Arise completely from conceptualization, it is said. They all arise in dependence on The pleasant, the unpleasant, and errors.

**HAGEN (paraphrase):**
23.1 [axiomatic] It is said that desire, aversion, and confusion arise from thought. Errors regarding what is good and bad arise depending upon these.

**PINGALA COMMENTARY**

23/1 The sutras say that because of the conceptualized discrimination of the perverted ideas of purity and impurity, lust, anger and delusion arise. Therefore we know that lust, anger and delusion must exist. Reply.

**CANDRAKĪRTI COMMENTARY**

1124
Volitive thought (samkalpa) means conceptual activity (vitarka); ‘born of means arising directly from. As the verse expresses it, ‘O desire I know thy roots, thou art born of volitive thought. I will not will thee in my thought and thou wilt exist no more for me.’

‘Desire (raga), aversion (dvesa) and illusion (moha) are said to be born of volitive thought.’ Only these three afflictions are named because they are the roots of the others and are primary. ‘And these three basic afflictions arise in dependence on the “good” (subha) the “bad” (asubha) [the “bad” is the ‘not-good’] and misbelief (viparyasa).’ That is, desire arises in direct dependence on what takes the form of the ‘good’; aversion is dependent on the ‘bad’; and illusion arises in direct dependence on misbelief. However, volitive thought is the common cause of these three arising.

How is it that illusion is born of volitive thought? We explain. The illustrious one said in the Pratityasamutpada Sutra, ‘Even primal ignorance, o monks, has its reason, its conditions, its cause. What is the cause of ignorance? A groundless act of consciousness, o monks, is the cause of ignorance. A confused act of consciousness, born of illusion, is the cause of ignorance.’ Thus ignorance comes into being born of volitive thought (fn 2 This is not quite lucid. It appears that the ‘good’, the ‘bad’ and the four misbeliefs are posited and that conceptual activity carried by volition then results in desire, aversion and illusion or ignorance, respectively. In Buddhist thought, however, good, bad and misbelief themselves presuppose ignorance. The circle is obvious and quite acceptable to Madhyamika which abjures lineal explanation.)

KALUPAHANA COMMENTARY

Following upon a discussion of the tathagata in relation to the world, a discussion that avoided absolute identity and absolute difference, Nagarjuna takes up the question regarding perversions (viparyasa) which makes a difference between a person in bondage and one who is freed.

The four perversions are discussed by the Buddha at Anguttara 2.52. They pertain to perceptions (sanna), thoughts (citta), and views (dittbi). Perversion (vipallasa) of perception or thought or view occurs with the identification of

i. the impermanent with the permanent (anicce niccan ti),
ii. the not unsatisfactory with the unsatisfactory (adukkhe dukkhan ti),
iii. the non-substantial with the substantial (anattani atta ti), and
iv. the unpleasant with the pleasant (asubhe subhan ti).

It is important to note that perversion ii is based upon perversion i, and perversion iv is based upon perversion iii. While perversions ii and iv relate to subjective attitudes, perversions i and iii are cognitive in nature. The recognition of subjective perversions (i.e. ii and iv) does not mean that those experiences relating to which perversions arise do not exist. Indeed, experiences of the pleasant (subha = manapa) and unpleasant (asubha = amanapa) sensations occur even in the enlightened ones (Itivuttaka 38). Perversion is the wrong identification of these experiences. However, the same cannot be said of the cognitive perversions, for the Buddha would be reluctant to assume that there is an experience corresponding to something that is either permanent or substantial.

For Nagarjuna, perversions ii and iv are not due to purely intellectual or cognitive incapacity on the part of the individual. They are due more to the subjective elements dominating thoughts such as lust and hatred, which arise along with thoughts (samkalpa-prabhavo), even though these latter are not part of the world of experience. This explanation of Nagarjuna is based upon a passage in the Samyutta wherein the Buddha identifies desire (kama) with thoughts of lust (samkappa-raga) without confusing it with whatever is beautiful (citroni) in the world (see S 2.22; Tsa 48.20 [Taisho 2.345b]).

As such, it is not surprizing to see Nagarjuna beginning his analysis with the last of the perversions, namely, the identification of the pleasant with the unpleasant (asubhe subhan ti), a subjective perversion that is based upon the cognitive confusion (i.e., anattani atta ti). Nagarjuna was probably interested in beginning his analysis with the subjective perversion because the metaphysicians, who carried the analytical process beyond its limit, had difficulty in accounting for the emergence of sensations such as the pleasant and the unpleasant.

GARFIELD COMMENTARY

1. Without reifying entities, a cognitive operation, there is no basis for desire for those entities, of aversion from them, and no confusion regarding their mode of existence. Seeing things as pleasant or unpleasant in themselves depends upon confusing our desire or aversion with respect to them with properties they have in themselves. The desire and aversion in turn depend upon our attributing pleasantness and unpleasantness to the entities. It is a tight and vicious circle of attribution and emotional reaction, all depending upon reification.
Kārikā XXIII.2

शुभाशुभविपय्यासान् संभवन्ति प्रतीत्य ये।
ते स्वभावान्न विदिंयन्ते तत्समात् कलेशा न तत्त्वतः।॥२॥

若因淨不淨 頭倒生三毒
三毒即無性 故煩惱無實

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 2 - That which comes about in virtue of the perverse relational play of purity and impurity cannot possibly have self-existence or self-nature. Therefore, defilements are not in the nature of thatness or truth. - Note: Defilements (klesa) take on two aspects, i.e., physical and mental, and the verse makes reference to them in the inclusive sense.

JONES (Skt):
[2] Things that arise dependent upon errors about what is auspicious and what is inauspicious are not found existing from self-existence. Therefore, from the point of view of reality, there are no afflictions.

KALUPAHANA (Skt):
Whatever perversions of the pleasant and the unpleasant that occur dependently are not evident in terms of self-nature. Therefore, the defilements are not in themselves.

MCCAGNEY (Skt):
Whichever develop depending on errors of purity and impurity, they do not occur as self-natures. Therefore, in truth, the defilements do not exist.

NISHIJIMA (Skt?):
2. A good omen and a bad omen are producing miscellaneous delusions.
But miscellaneous things and phenomena are manifesting themselves clearly together. And so they do not manifest their subjective existence, Therefore miscellaneous pains are never Real Facts.

SPRUNG (Skt):
2 What arises in dependence on the ‘good’, the ‘bad’ and misbelief cannot be self-existent; therefore the basic afflictions do not exist in truth.

STRENG (Skt):
2. Those things which come into existence presupposing errors as to what is salutary and un-salutary Do not exist by their own nature (svabhava); therefore the impurities (klesa) do not exist in reality.

ROBINSON (Skt):
Those that come into being in dependence on the pure, on the impure, and on misconception do not occur by own-being; therefore the passions (klesas) do not [occur] in reality (tattvatas).

BOCKING (Ch):
23v2 If you say that perverted views of purity and impurity Produce the three poisons. Then the three poisons are without self-nature. Consequently, the defilements have no reality.

BATCHELOR (Tb):
Whatever arises in dependence upon the pleasant, the unpleasant and confusion, (whatever arises in dependence on confusion about the pleasant and unpleasant) they have no own-nature, therefore, afflictions do not really exist (do not exist in themselves).

DOCTOR (Tb):
That which originates in dependence
On the attractive, unattractive, and mistaken
Cannot be due to its own nature.
Hence, the afflictions are not real. [XXIII.2]

GARFIELD (Tb):
2. Since whatever depends on the pleasant and the unpleasant
Does not exist through an essence,
The defilements
Do not really exist.

GARFIELD-SAMTEN (Tb):
2. Since whatever arises in dependence on the pleasant, the unpleasant,
Or error does not exist through an essence,
The afflictions
Do not exist in reality.

HAGEN (paraphrase):
23.2 What arises due to errors regarding what is good and bad occurs dependency and is not evident in terms of self-nature. Therefore, defilements are not such in themselves.
PINGALA COMMENTARY

23/2 If the defilements arise on account of the conceptualization of perverted views of purity and impurity, then they have no self-nature. Consequently, the defilements are unreal.

Further:

CANDRAKĪRTI COMMENTARY

If desire and the other afflictions were, indeed, self-existent they would not arise in dependence on the ‘good’, the ‘bad’ and misbelief, because what is self-existent is neither created nor related to anything other than itself. But they do arise in dependence on the ‘good’, the ‘bad’ and misbelief; they are therefore wholly lacking in self-existence and are not real in truth (tattvatah). That is, they do not exist in the higher sense (paramarthatah), in the sense of self-existence.

Afflictions of a self are unintelligible What is more,

KALUPAHANA COMMENTARY

The perversions of the pleasant and the unpleasant are dependently arisen. As mentioned before, they are the products of lust and hatred; they arise within the individual. For this reason, they are not found in themselves (na svabhavatah). Whatever defilements (klesa) occur as a result of such perversions cannot be part of the experienced world. Rather they related to the way in which the world is perceived by the individual. It is only in this sense that they are looked upon as being unreal (na tattvatah).

GARFIELD COMMENTARY

2. But it follows from this that the defilements, in virtue of depending on these attributions and upon our relation to pleasant and unpleasant things, all of which are themselves empty, are empty of inherent existence. Indeed, they are not only dependently arisen, but depend upon things or features of those things already shown to be empty.
INADA (Skt):
Verse 3 - The existence and non-existence of atman can never be established. How then could the existence and non-existence of defilements be established apart from the atman?

JONES (Skt):
[3] The existence and nonexistence (i.e., “is-ness” and “is-not-ness”) of the self are in no way established. Without the existence and nonexistence of the self, how are the existence and nonexistence of the afflictions established?

KALUPAHANA (Skt):
The existence or the non-existence of the self is not established in any way. Without that, how can the existence or the non-existence of defilements be established?

MCCAGNEY (Skt):
Where the existence or nonexistence of the self is not in any way even established, without it in existence or not in existence, how are the defilements established?

NISHIJIMA (Skt?):
3. Souls do not belong to the problems, whether they really exist, or not.
Therefore how is it possible for Souls to be the perfectly realized as Things, or Phenomena.
The Souls are never included in the problem, whether they really exist, or not.
And so how is it possible for miscellaneous pains actually to be concrete things, or substance at all?

SPRUNG (Skt):
3 The existence or non-existence of the personal self has not been established in any way at all; but, without a self, how can the existence or nonexistence of the basic affictions be established?

STRENG (Skt):
3. The existence or non-existence of the individual self (atma) is not proved at all. Without that individual self, how can the existence or non-existence of the impurities be proved?
23/3 Whether the self does or does not exist in causes and conditions cannot be established. Now, if there is no self, how can the existence or nonexistence of the defilements be established? Why is this?

In what way the existence or non-existence of a personal self (atman) is not established has been explained in detail. That being so, how can there be existence or non-existence of a putative element of existence which presupposes a self?

If someone says: Let it be agreed that the existence and non-existence of a personal self are not established, what is the consequence for the afflictions, as their existence or nonexistence have not been established?

Nagarjuna’s reply:

The perversion regarding what is pleasant and unpleasant has been traced back to the perversion where the non-substantial (anatman) is identified with the substantial (atman). The substantial and the non-substantial, in the eyes of the metaphysician, pertain to existence (astitva) and non-existence (nastitva) respectively (see V.8; XV.7, 11). The discourse to Katyayana rejects both these views as being metaphysical.

Nagarjuna is here insisting that neither the existence nor the non-existence of a metaphysical self can be proved. If there were to be no such self, then the defilements associated with such a self also cannot exist. In the absence of a substantial self, if only the defilements were to exist, then they should have self-existence, which was an idea denied at XXIII.2. Thus, neither the substantial existence of a self nor the substantial existence of defilements can be established.

Moreover, the defilements are meant to be defilements of the self. But the self - the putative basis of those defilements - cannot exist inherently. So the defilements, being attributes of an empty phenomenon, cannot be nonempty. The following verse reiterates that position:
Kārikā XXIII.4

कस्यचिद्विभक्तीमेक्लेशाः स च न सिद्धति।
कस्तिष्ठाद्विषियोऽन्तःक्लेशा न कस्तिष्ठित॥४॥

INADA (Skt):
Verse 4 - These defilements are said to exist with someone but such a person cannot be established. That is to say, separated from a person these defilements seem to exist independently without belonging to anyone.

JONES (Skt):
[4] Afflictions are afflictions of someone, but no “someone” can be established to exist - without a “someone,” the afflictions are nobody’s.

KALUPAHANA (Skt):
These defilements, indeed, belong to someone. Yet, such a person is not established. In other words, in the absence of anyone, these defilements seem to exist without belonging to anyone.

MCCAGNEY (Skt):
Indeed, whose are these defilements since he is not established?
Who says, without anyone, defilements exist that belong to no one?

NISHIJIMA (Skt?):
4. Something, which can be acceptable as some kind of receptacle, is this world,
But pain can never be accepted as some kind of real entity.
Something, aha, it might be as if it is nothing.
Therefore even something, which is so severely painful, can never be anything at all.

SPRUNG (Skt):
4 The afflictions must afflict someone, but this someone has not been proved to exist. Without someone as subject surely the afflictions cannot afflict anyone.

STRENG (Skt):
4. For impurities exist of somebody, and that person is not proved at all. Is it not so that without someone the impurities do not exist of anybody?

BOCKING (Ch):
23v4 Who has these defilements?
Such a one cannot be established.
If the defilements exist apart from this (self) Then they are not part of it.

BATCHelor (Tb):
These afflictions are someone’s. But that [someone] is not established. Without [someone], the afflictions are not anyone’s.

DOCTOR (Tb):
The one to which the afflictions belong
Is not in any way established.
When they do not pertain to anything at all, The afflictions cannot exist in any way either. [XXIII.4]

GARFIELD (Tb):
4. The defilements are somebody’s.
But that one has not been established.
Without that possessor, The defilements are nobody’s.

GARFIELD-SAMTEN (Tb):
4. The one to whom the afflictions belong Has not been established as existent.
Without anyone to whom they belong, There are no afflictions of anyone.

HAGEN (paraphrase):
23.4  The defilements must belong to someone, though such a one has not been established. Without a possessor, the defilements belong to no one.
PINGALA COMMENTARY

23/4 'Defilement' means a thing which can afflict someone. The afflicted one must be a sentient being, but such a sentient being cannot be discovered, no matter where you search for him. If you say that the defilements exist separately from the living being, then there is no entity to which the defilements belong. If you assert that, although there is no self, the defilements are located in the mind, then this is also wrong, and why?

CANDRAKĪRTI COMMENTARY

It is commonly thought that desire and the other basic afflictions arise in dependence on a substrate, as a mural painting depends on a wall or ripeness and such qualities depend on a fruit. That is, they are the afflictions of someone and cannot be without someone as a substrate. This substrate is conjectured to be either a personal self or consciousness (citta). There is no such substrate of the afflictions, however, as it was rejected earlier. Without a substrate, personal or impersonal, who or what would the afflictions afflict? They belong to no one, because no one exists in fact. As the kārikā put it, 'Without someone as subject, surely the afflictions cannot afflict anyone.'

Some may object: We do not suppose there is any preexisting substrate of the afflictions. There is nothing called a personal self which can be determined as the substrate because such is without causal efficacy like a mango tree in the sky. Nevertheless the afflictions supervene in dependence on an afflicted consciousness; that consciousness is born simultaneously with the afflictions.

Nagarjuna says that that does not make sense either.

KALUPAHANA COMMENTARY

Not only are the defilements not established as substantial elements, they cannot be proved to exist even as attributes. If defilements are considered as belonging to someone (kascid) who is substantially existing, the absence of such a substantial entity would mean the absence of defilements as attributes.

GARFIELD COMMENTARY

4. In the first line, an interlocutor points out that if there are defilements at all there must be somebody whose defilements they are. Nāgārjuna replies that we have already shown that there is no subject for personal attributes in the many discussions of the relation between the self and its states previous to this (Chapters III, IV, VIII, IX, XII, XIII, XVI, XVII, and XVIII). So whatever analysis of defilement we develop, it will have to be one according to which they presuppose no defiled individual.
Kārikā XXIII.5

स्वकायदृष्टिवत् कलेशा: क्लिष्टे सन्ति न पञ्चवा।
स्वकायदृष्टिवत् क्लिष्ट वेयेचैविपि न पञ्चवा॥५॥

如身見五種 求之不可得
煩惱於垢心 五求亦不得

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 5 - As in falsely viewing one's own body, the defilements do not exist in a fivefold manner with respect to the defiled person. As in falsely viewing one's own body, conversely, the defiled person does not exist in a fivefold manner with respect to the defilements. - Note: Reference is made to the five skandhas with their respective defilements.

JONES (Skt):
[5] As with the view of one's body, the afflictions are not in the afflicted, as analyzed in the fivefold way of Chapter 22. So too, the afflicted are not in the afflictions.

KALUPAHANA (Skt):
The defilements are like the view of one's own personality. Within the defiled, they are not found in the fivefold way. The defiled is like the view of one's own personality, for even within the defilements it is not found in the fivefold way.

MCCAGNEY (Skt):
Having demonstrated that one’s own nature is not fivefold, where are the defilements in the afflicted one?
Having demonstrated that one’s own nature is not fivefold, where is the afflicted one in the defilements?

NISHIJIMA (Skt?):
5. Pain is similar to look at our own physical body actually. The five kinds of Matter, ground, water, fire, air, and the space, do not belong to painful situation. Torture is similar to look at our own physical body, Therefore torture does not exist as severe pain at all.

SPRUNG (Skt):
5 As with the problem of the permanent personal self, the basic afflictions cannot exist in what is afflicted in any of the five possible ways (in They cannot be identical with it, nor other than it; they cannot be in it, nor it in them; and they cannot possess it.), nor can what is afflicted exist in the afflictions in any of the five ways.

STRENG (Skt):
5. In reference to the view of having a body of one's own, the impurities do not exist in what is made impure according to the five-fold manner. In reference to the view of having a body of one's own, that which is made impure does not exist in the impurities according to the five-fold manner.

ROBINSON (Skt):
Like the views of own-body, the passions do not exist in any of the five ways in the impassioned. Like the views of own-body, the impassioned does not exist in any of the five ways in the passions.

BOCKING (Ch):
23v5 Just as in the five ways of viewing the body (as self You seek it but cannot find it So with the defilements in the defiled mind, You can seek five ways but cannot find them.

BATCHelor (Tb):
Like [the self apprehended in] the view of one’s own body, the afflictions do not exist in five ways in the afflicted. Like [the self apprehended in] the view of one’s own body, the afflicted does not exist in five ways in the afflictions.

DOCTOR (Tb):
As in the case of the view regarding one’s body, The afflictions are absent in the afflicted in five ways. As in the case of the view of one’s body, The afflicted is absent in the afflictions in five ways. [XXIII.5]

GARFIELD (Tb):
5. View the defilements as you view your self: They are not in the defiled in the fivefold way. View the defiled as you view your self: It is not in the defilements in the fivefold way.

GARFIELD-SAMTEN (Tb):
5. Just as one views one’s own body, the afflictions are Not in the afflicted in the fivefold way. Just as one views one’s own body, the afflicted is Not in the afflictions in the fivefold way.

HAGEN (paraphrase):
23.5 As with the problem of the permanent personal self, the defilements are not found in what is defiled in the fivefold way, nor is the defiled found in the defilements in any of the five ways.
PINGALA COMMENTARY

23/5 Just as with the view of body-as-self – you can look for it in five ways in the five skandhas but cannot find it – so it is with the defilements in the defiled mind. You can look for them in five ways but you will not be able to find them.

Further:

CANDRAKĪRTI COMMENTARY

The designation ‘permanent personal self refers to the factors of personal existence, body, feelings, dispositions and so on. The theory of the permanent personal self is the view that the factors of personal existence are the self; this theory takes the form of the persistent belief in the reality of the ‘mine’. That this personal self, on being thought through in the five ways, is not possible in terms of the factors of personal existence, Nagarjuna said earlier. ‘The perfectly realized one is not identical with the factors of personal existence, nor other than them; he is not in them, nor they in him; and the perfectly realized one is not the possessor of the factors of personal existence. What then is the perfectly realized one?’ (MMK XXII.1)

Similarly, the afflictions, on being examined critically in the fivefold way, cannot exist in the afflicted consciousness, because the afflictions afflict, and the afflicted consciousness is afflicted. In that case the very thing afflicted would be the afflictions. This makes no sense because it involves the identity of the agent of burning and the fuel. That the afflicted consciousness is one thing and the afflictions another makes no sense, because being separate and unrelated to each other, it involves an affliction which does not afflict anything. Therefore, because neither their identity nor their difference holds, and because neither can be subject or attribute to the other, what is afflicted (klista) is not based in the afflictions. Nor are the afflictions based in what is afflicted. Nor is what is afflicted the possessor of the afflictions. Thus, after critical examination of the five possibilities, the afflictions cannot possibly be based in what is afflicted.

Similarly the afflictions cannot possibly be the cause of what is afflicted. And, critically examined in the five ways, what is afflicted, taken as the cause of the afflictions, cannot possibly be based in the afflictions.

What is afflicted cannot be the afflictions, because that would entail the identity of doer and deed; nor can the afflicted be one thing and the afflictions another because that would entail that they were unrelated (nirapeksakatva); nor can what is afflicted be based in the afflictions nor these in that; nor is what is afflicted possessed by the afflictions. Thus, analogously to the personal self, what is afflicted is not based in the afflictions in any of the five ways. From this it follows that neither what is afflicted nor the afflictions can be established by reciprocal reference (parasparapeksa).

(KMK VI)

The afflictions have no objective basis

You may object: Even though you have refuted the afflictions, none the less the ‘good’, the ‘bad’, and the misbeliefs, which cause the afflictions, exist. Our reply is: The afflictions would exist if the ‘good’, the ‘bad’ and the misbeliefs existed. However,

KALUPAHANA COMMENTARY

This is a further criticism of the substantialist notions of “defilements” (klesa) as well as of the “defiled” (klista). Such substantialist perspectives are comparable to the views regarding an "embodied person" (svakaya-drsti), who is not obtainable when that personality is analysed into the five aggregates.

GARFIELD COMMENTARY

5. This verse recalls and applies the fivefold analysis of the self developed in the previous chapter to the analysis of the defilements and the defiled. They are not identical to the aggregates, completely different from the aggregates, present as a basis of the aggregates, contained in the aggregates as a core, or separate from or dependent upon the aggregates. The arguments concerning the relation of the self to the aggregates can simply be applied directly either to the defilements or to the defiled.
Kārikā XXIII.6

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 6 - The perversions of purity and impurity cannot exist from the standpoint of self-existence. In virtue of what type of perverse relational plays of purity and impurity do defilements exist?

JONES (Skt):
[6] The pleasant, the unpleasant, and the errors are not seen to exist through their own self-existence. Upon what pleasant, unpleasant, and erroneous things are the afflictions then dependent?

KALUPAHANA (Skt):
The perversions regarding the pleasant and the unpleasant are not evident from the standpoint of self-nature. Depending upon which perversions of the pleasant and the unpleasant are these defilements?

MCCAGNEY (Skt):
Errors of purity and impurity do not occur naturally. How are defilements dependent on errors of purity and impurity?

NISHIJIMA (Skt?):
6. The real fact of the subjective existence, is not recognized. Facts of the favorable and facts of the unfavorable are not being. The severest pain is usually the strongest one between the two, and the tendencies between the favorable and the unfavorable are changing reciprocally with each other.

SPRUNG (Skt):
6 The ‘good’, the ‘bad’ and the misconceptions are not self-existent; On which ‘good’, ‘bad’ and misbelief could the afflictions be dependent?

STRENG (Skt):
6. The errors as to what is salutary and non-salutary do not exist as self-existent entities (svabhavatas) Depending on which errors as to what is salutary and non-salutary are then impurities?

BOCKING (Ch):
23v6 The perverted views of purity and impurity Therefore have no self-nature How, then, can the defilements arise With these two as their cause?

BATCHelor (Tb):
If confusion about the pleasant and unpleasant does not exist from its own nature, what afflictions can depend on confusion about the pleasant and unpleasant?

DOCTOR (Tb):
If the attractive, unattractive, and mistaken are not due to their own nature, then what are those afflictions that depend on the attractive, unattractive, and mistaken? [XXIII.6]

GARFIELD (Tb):
6. The pleasant, the unpleasant, and the errors Do not exist through essence. Which pleasant, unpleasant, and errors Could the defilements depend upon?

GARFIELD-SAMTEN (Tb):
6. The pleasant, the unpleasant, and the errors Do not exist through essence. What afflictions could depend on the pleasant, unpleasant, or errors?

HAGEN (paraphrase):
23.6 Errors regarding what is good and bad are not evident in terms of self-nature. Depending upon which error regarding good and bad are the defilements?
PINGALA COMMENTARY

23/6 'The perverted views of purity and impurity'; 'perverted' means vain and illusory. Being vain and illusory (such views) have no self-nature, and since they have no nature the perverted views do not exist. If there are no perverted views, how can you assert that the defilements arise on the basis of perverted views? Question.

CANDRAKĪRTI COMMENTARY

6ab The ‘good’, the ‘bad’ and the misbeliefs are not self-existent;

that is because of the dependent arising of all things and because of the refutation to follow. As, however, they are not self-existent,

6cd On which ‘good’, ‘bad’ and misbelief could the afflictions be dependent?

You may object: The afflictions do exist because their objective basis (alambana) is fact. The assumption is that what does not exist has no objective basis, like the son of a barren woman. But the sixfold objective basis — sights, sounds, smells, tastes, touches and mind objects (dharmas) — does exist. So because the objective basis exists the afflictions exist as well.

Our reply is: Your theory is as follows:

KALUPAHANA COMMENTARY

Just as much as both the defilements (klesa) and the defiled (klista) are not evident in substantial form, so are the perversions that give rise to defilements. They too are not found in any substantial way. The question then is: What is the nature of the perversion relating to the pleasant and the unpleasant depending upon which defilements are said to arise? Here there is no denial of perversions nor the defilements. What has been questioned is only the way in which these are conceptualized.

GARFIELD COMMENTARY

6. Nor can we say that the defilements are inherently existent in virtue of being grounded in inherently existent pleasantness, unpleasantness, and error. While it is true that the latter are the basis of the defilements, they, too, Nāgārjuna will argue, are empty.
INADA (Skt):
Verse 7 - Material form, voice, taste, touch, smell, and the various factors of existence are conceptualized as the sixfold objects of covetousness, enmity, and delusion.

JONES (Skt):
[7] Material forms, sounds, tastes, touches, smells, and the basic components of the experienced world - these six are thought to be the foundation of desire, hatred, and delusion.

KALUPAHANA (Skt):
Material form, sound, taste, touch, smell and concepts these are discriminated as the sixfold foundations of lust, hatred, and confusion.

MCCAGNEY (Skt):
Physical form, sound, taste, touch, smell, and events are imagined as six substantially existing things having desire, hatred, and delusion.

NISHIJIMA (Skt?):
7. Color, sound, taste, feeling.
Smell, and the Rule of the Universe, all are the six kinds of sense perceptions.
Matter is much related with desire, and much related with darkness.
What are related with confusion, are actually prone to change their places with other places

SPRUNG (Skt):
7 Sights, sounds, touches, smells, tastes and mind objects are conceived of as the sixfold external reality of the afflictions — desire, aversion and illusion.

STRENG (Skt):
7. Form, sound, taste, touch, smell, and the dharmas:
this six-fold Substance (vastu) of desire, hate, and delusion is imagined.

ROBINSON (Skt):
Form, sound, taste, touch, smell, and dharmas, the sixfold object of lust, hatred, and folly, are [merely] conceived.
PINGALA COMMENTARY

23/7 These six avenues are the root of the three poisons. Perverted views of purity and impurity arise because of these six avenues (of the senses). Desire, anger and delusion arise on account of perverted views of purity and impurity.

CANDRAKĪRTI COMMENTARY

‘External reality’ (vastu) stands for ‘objective basis’, that is, desire and the other afflictions are based in it when they arise. And that objective basis is sixfold, according to the distinctive perceptual judgments of the six senses, namely sights, sounds, tastes, touches, smells and mind objects.

Sight determines ‘here’ and ‘there’ and is a resort in proof. Sound is that by virtue of which things are named and revealed. Smells are smelled or suffered by being perceived elsewhere than where they have come from. Tastes are tasted or savoured immediately. Touch is what is touched; mind objects are so called because based in the putative elements of existence from nirvāṇa on down and because they are self-defining. That is what is meant by the sixfold objective reality or basis.

But the basis of what? Of desire, aversion and illusion. Desire is the act of desiring, it is liking and actualized effort; it is also the desirous state of mind. Aversion is vitiating, it is the annihilation of either creatures or things; again, it is a vitiated state of mind. Illusion is the being deluded, it is befuddlement (sammoha), it is the faulty understanding of the true nature of things; again, illusion is a deluded state of mind.

Thus are sights, sounds, and so on, the sixfold objective basis of the afflictions. Desire supervenes by the gratuitous projection (adhyaropa) of the quality of ‘good’ onto them; aversion by the gratuitous projection of the quality of ‘bad’; the misbeliefs arise from the gratuitous projection of the imperishability of things and of the permanence of the personal self, and so on. This sixfold objective basis is considered by the simple-minded to be reality (satyam). Its true nature (svabhava satta) is that it is non-self-existent (avidyamana); but it is erroneously considered by you to be the objective basis of desire and the other afflictions, as those with an optical defect erroneously imagine hairs, mosquitoes, flies, double moons, and so on.

Nagarjuna expounds:

KALUPAHANA COMMENTARY

Analysing lust, hatred, and confusion in terms of the four perversions, it may be maintained that lust and hatred are subjective attitudes, while confusion refers to the cognitive aspect of understanding (see comments on XXIII. 1), even though the cognitive and attitudinal aspects are dependent upon one another. The present statement of Nagarjuna implies the dependence of the attitudinal as well as the cognitive aspects of experience upon the sixfold objects of sense experience.
Kārikā XXIII.8

रुपशब्दरस्पर्शगंधथाधमौशचकेवला:।
गन्धवानगराकरामरीचिस्वप्नसनिम्भतो॥

色聲香味觸及法體六種
皆空如炎夢如乾闥婆城

INADA (Skt):
Verse 8 - Material form, voice, taste, touch, smell, and the various factors of existence are all merely like an imaginary city in the sky, a mirage, or a dream.

JONES (Skt):
[8] Material forms, sounds, tastes, touches, smells, and the basic components - these are entirely like the castle in the sky of the Gandharvas, a mirage, or a dream.

KALUPAHANA (Skt):
Material form, sound, taste, touch smell as well as concepts all are comparable to the city of the gandharvas and resemble mirages and dreams.

MCCAGNEY (Skt):
Physical form, sound, taste, touch, smell, and events are made-up imaginary cities in the sky, like dreams and mirages.

NISHIJIMA (Skt?):
8. Color, sound, taste, feeling,
Smell, and the Rule of the Universe, each is individually independent from matter or phenomena.
And they are very similar to a fantastic city called Gandharva, which is not necessary in having jail.
Those are corpuscles of light, a mirage, or a sleep, and the similarities.

SPRUNG (Skt):
8 Sights, sounds, tastes, touches, smells and mind objects are abstractions; They manifest themselves as does a fabled city, they are like a mirage, a dream.

STRENG (Skt):
8. Form, sound, taste, touch, smell, and the dharmas are Merely the form of a fairy castle, like a mirage, a dream.

ROBINSON (Skt):
Form, sound, taste, touch, smell, and dharmas are all nothing but appearances like fairy castles, resembling a mirage or a dream.

ENGLISH TRANSLATIONS

BOCKING (Ch):
23v8 Form, sound, scent, taste and touch
And dharmas; these six kinds
Are all empty, like flames or dreams
Or like a magic Gandharva-city.

BATCHelor (Tb):
Colour/shape, sound, taste, tactile sensation, smell and dharmas: these are like gandharva-cities and similar to mirages, dreams.

DOCTOR (Tb):
Form, sound, taste, tactility, smell,
And phenomena are all without exception
Like a city of scent-eaters,
Like an optical illusion, like a dream. [XXIII.8]

GARFIELD (Tb):
8. Form, sound, taste, touch,
Smell, and concepts of things: These six
Should be seen as only like a city of the Gandharvas and Like a mirage or a dream.

GARFIELD-SAMTEN (Tb):
8. Material form, sound, taste, touch,
Smell, and phenomena: These six
Are only like a city of gandharvas or Like a mirage or a dream.

HAGEN (paraphrase):
23.8 Sights, sounds, tastes, touches, smells, and mind objects - these are all comparable to a city of the Gandharvas. They are like a mirage, or a dream.
CANDRAKĪRTI COMMENTARY

8ab Sights, sounds, tastes, touches, smells and mind objects are abstractions;

by ‘abstractions’ (kevala) he means they are mere thought constructs, lacking self-existence. But if they lack self-existence, how is it they are taken to be objects (upalabhyante). He answers:

8cd They manifest themselves as does a fabled city, they are like a mirage, a dream.

They are perceived as objects; yet only in misbelief (viparyasa), as is a fabled city and so on.

Desire and aversion are not based in good and bad

So,

KALUPAHANA COMMENTARY

The similes of the "dream" (svapna) and the "city of the gandharvas" (gandharva-nagara) have already been employed, along with "illusion" (maya), to refute the substantialist explanation of the dispositionally conditioned phenomena (samskṛta)(see VII.34). The six objects of experience referred to at XXIII.7 are indeed dispositionally conditioned. They are not objects that are found in themselves (svabhavatah). Nor are they absolutely nonexistent.

GARFIELD COMMENTARY

8. Sensory contact, perception, and cognition are the causal grounds of the defilements. But as was shown in Chapter III, they are empty as well.
Kārikā XXIII.9

How could there be assertions of purity and impurity when, like the conceptions of a deluded mind, they are similar to shadowy representations?

[ENG] - Verse 9 - How could there be assertions of purity and impurity when, like the conceptions of a deluded mind, they are similar to shadowy representations?

INADA (Skt):
Verse 9 - How could there be assertions of purity and impurity when, like the conceptions of a deluded mind, they are similar to shadowy representations?

JONES (Skt):
[9] How could the pleasant or unpleasant arise in those six things that are like an illusory phantasm or a reflection?

KALUPAHANA (Skt):
How can the pleasant and the unpleasant come to be in people who are fabrications of illusion or who are comparable to mirror images?

MCCAGNEY (Skt):
Where will purity or impurity be in these people equal to illusions and like shadows?

NISHIJIMA (Skt?):
9. Even in a bad case of omen, or even in a good case of omen, How is it possible for what kind of place to exist for the first time? How is it possible for a human being, who has super power over than human beings, to have actually? And even the images of the Sun or the Moon on the surface of water, are just the same as the Sun or the Moon themselves.

SPRUNG (Skt):
9 How can ‘good’ or ‘bad’ be based in such, which are analogous to a man created by magical power or are like a reflection?

STRENG (Skt):
9. How will "that which is salutary" or "that which is non-salutary" come into existence in a formation of a magical man, or in things like a reflection?

ROBINSON (Skt):
How can there be purity or impurity among them, since they are like a phantom man and like a reflection?
23/9 The own-substances of form, sound, scent, taste, touch and the dharmas, at the time when they are not yet combined in the mind, are empty; there is nothing which exists. They are like fire, like a dream, like an illusory man or an image in a mirror. They are merely deceptions in the mind and have no fixed characteristics. In six avenues such as these, how can purity and impurity exist?

Further:

From this it follows that, because ‘good’ and ‘bad’ arise from an illusory basis (mithyasraya), they are utterly false (mrsatvam eva) if taken as objective. To quote from the Ratnapali: ‘The factors of personal existence arise from the sense of “I”, but this “I” is, in truth, false. If the seed of something is false how can the resulting thing itself be true? Having seen that the factors of personal existence are unreal the sense of “I” is expelled. When the sense of “I” has been abandoned the factors of personal existence are no longer possible.’

Not only because ‘good’ and ‘bad’ have an illusory basis are they illusory taken as objective, but they are illusory for the following reason, as Nagarjuna expounds it:

What Nagarjuna has been criticizing so far is a substantialist theory of the pleasant and the unpleasant (svabhavato . . . subhasubhaviparyayan XXIII.6). His argument in the present verse is directed against the belief that such substantial experiences can occur in thoughts of human beings who are themselves nonsubstantial, and who are comparable to mirror images or reflections (see commentary on XVII.31-32).

Since the self and others have been demonstrated to be empty and pleasantness and unpleasantness must be properties of one, the other, or both, there can be no inherently existent basis for pleasantness or unpleasantness. They themselves must also therefore be empty.
Kārikā XXIII.10

anapekṣya śubhaṃ nāsty aśubhaṃ prajñapayemahi |
yat pratītya śubhaṃ tasmāc chubhaṃ naivopapadyate ||10||

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 10 - We provisionally assert that impurity cannot exist
without being mutually dependent on purity and that, in
turn, purity exists only as related to impurity. Therefore,
purity per se is not possible.

JONES (Skt):
[10] We make known that the unpleasant is dependent upon
the pleasant, and that the pleasant is in turn dependent
upon that. Therefore, the pleasant does not arise.

KALUPAHANA (Skt):
We make known that the unpleasant does not exist without
being contingent upon the pleasant, and that the
pleasant, in its turn, is dependent upon that [i.e. the
unpleasant]. Therefore, the pleasant [in itself] is not
appropriate.

MCCAGNEY (Skt):
Indeed, we teach that purity is to depend on impurity not
existing
and purity depends on that. Therefore, purity does not
happen.

NISHIJIMA (Skt?):
10. Without directing our care to the object, there is no good omen.
Because in such situations, even a bad omen can’t be recognized
intuitively.
Such a kind of fact is just clear as a good omen,
And so if it were in the case of good omen, nothing can’t be
recognized at all.

SPRUNG (Skt):
10 Without relation to ‘good’ there is no ‘bad’, in
dependence on which we form the idea of ‘good’.
Therefore ‘good’ is unintelligible.

STRENG (Skt):
10. We submit that there is no non-salutary thing
unrelated to a salutary thing. And in turn depending
on which, there is a salutary thing; therefore, a
salutary thing does not obtain.

BOCKING (Ch):
23v10 No impurity can exist
Independently of the characteristic of purity.
Impurity depends on purity
Therefore, there is no impurity.

BATCHelor (Tb):
Something is called “pleasant” in dependence on the
unpleasant. Since that would not exist without
relation to the pleasant, therefore, the pleasant is not
tenable.

DOCTOR (Tb):
The unattractive upon which
The designation “attractive” depends
Does not exist independently of the attractive.
Hence, the attractive does not make sense. [XXIII.10]

GARFIELD (Tb):
10. We say that the unpleasant
Is dependent upon the pleasant,
Since without depending on the pleasant there is none.
It follows that the pleasant is not tenable.

GARFIELD-SAMTEN (Tb):
10. The unpleasant, depending on which
The pleasant is imputed,
Cannot exist without depending on the pleasant.
Therefore, the pleasant is not tenable.

GOLDFIELD (Tb):
We imagine something to be pleasant
Based on our idea of what is unpleasant.
But unpleasant too does not exist independent of pleasant.
Therefore, for pleasant to truly exist would be impossible.
(10)

HAGEN (paraphrase):
23.10  We provisionally assert that “bad” is not found
without reference to “good,” nor “good” without
reference to “bad.” Therefore goodness, in and of
itself, is not evident.
PINGALA COMMENTARY

23/10 Independent of purity, there can be no pre-existing impurity, for on what basis could one speak of impurity? Therefore impurity does not exist.

Further:

CANDRAKĪRTI COMMENTARY

That is, if there were anything called 'good' (subha), 'bad' (asubha) would necessarily be related to it. It is like the near and the far, the seed and the seedling or the long and the short. Because 'good' is dependent on a relation to something outside itself, and as that on which it is to be dependent, the 'not-good' - the 'bad' - does not exist apart from it, there is no 'not-good' unrelated to 'good'. The thought is that 'not-good' cannot stand outside of all relationship to 'good'. The good we conceive of and determine is dependent on and related to what is not-good. In the kārikā the word 'which' refers to the word 'not-good' which precedes it; the expression 'form the idea of refers to 'good' which follows it. It follows that there is no other category of thing, the not-good, to which the idea of good would have to relate, as a relation to something other than itself. The good, therefore, is unintelligible, even as the long and the farther shore are unintelligible because of the impossibility of the short and the near shore. This is the idea.

And now Nagarjuna expounds how the not-good — the bad — as well, is not possible:
Kārikā XXIII.11

anapekṣyāśubhaṃ nāsti śubhaṃ prajñapayemahi |
yat prātītyāśubhaṃ tasmād asubhaṃ naiva vidyate ||11||

MCCAGNEY (Skt):
Indeed, we teach that impurity is to depend on purity not existing and Impurity depends on that. Therefore, impurity does not occur.

NISHIJIMA (Skt?):
11. A bad omen, which is not cared by people, does never exist at all.
Because in the case of good omen, people are usually expecting so much to notice it with intuition.
Such a kind of situations are also clear even in the case of bad omen too.
Therefore the actual situations of bad omens do not have even a scarce chance to be recognised at all.

SPRUNG (Skt):
11 There is no ‘good’ unrelated to ‘bad’; yet we form our idea of ‘bad’ in dependence on it. There is therefore, no ‘bad’.

STRENG (Skt):
11. We submit that there is no salutary thing unrelated to a non-salutary thing. And in turn depending on which, there is a non-salutary thing; therefore a non-salutary thing does not obtain.

BOCKING (Ch):
23v11 There is no purity
Except in relation to impurity
Purity exists on account of impurity
Therefore purity does not exist.

BATCHelor (Tb):
Something is called “unpleasant” in dependence on the pleasant. Since that would not exist without relation to the unpleasant, therefore, the unpleasant is not tenable.

DOCTOR (Tb):
The attractive upon which
The designation “unattractive” depends
Does not exist independently of the unattractive.
Hence, the unattractive does not make sense. [XXIII.11]

GARFIELD (Tb):
11. We say that the pleasant
Is dependent upon the unpleasant.
Without the unpleasant there wouldn't be any.
It follows that the unpleasant is not tenable.

GARFIELD-SAMTEN (Tb):
11. The pleasant, depending on which
The unpleasant is imputed,
Cannot exist without depending on the unpleasant,
Therefore, the unpleasant is not tenable.

GOLDFIELD (Tb):
We imagine something to be unpleasant
Based on our idea of what is pleasant.
But pleasant too does not exist independent of unpleasant.
Therefore, for unpleasant to truly exist would be impossible.
(11)

HAGEN (paraphrase):
23.11  We provisionally assert that “good” is not found without reference to “bad,” nor “bad” without reference to “good.” Therefore evil, in and of itself, is not evident.
There can be no pre-existent purity, independent of impurity. How can you assert (the existence of) purity? Therefore, there is no purity.

Further:

That is, if there were something called ‘bad’ - ‘not-good’ it would necessarily be correlated to the good, as the far shore is correlated to the near shore and the long to the short. It is because the not-good is dependent on a correlation with a different category of thing. And that, too, the good on which it is to be dependent, would not exist in the absence of the not-good. The good does not exist unrelated to the not-good. The idea is that the good is not possible out of all relationship to the not-good. We form our idea of the not-good and define it in correlation with and dependence on what is good. In the kārikā the word ‘it’ designates the word ‘good’ in the first line; the verb ‘form an idea’ is connected with the following word, ‘bad’. It follows that there is no other category of thing, the good, to which the idea of not-good would have to relate, as a relation to something other than itself. It follows that the not-good cannot exist. Thus neither good nor not-good is possible.

So:

This is a clear refutation of the substantialist views of both the pleasant and the unpleasant. Nagarjuna insists that they are dependent upon one another. They are not independent experiences where one is replaced by another, as in the case of the theory of "attainment" (prapti) and "non-attainment" (aprapti)(see comments on XVI. 10, XXIV.32).

Moreover, pleasant and unpleasant are mutually dependent. Nāgārjuna here claims that “pleasant” and “unpleasant” are not absolute but rather comparative terms and, hence, essentially interdefined. If this is SO, then since their referents depend upon each other for their satisfaction of these descriptions, neither property can exist inherently.

INADA (Skt):
Verse 12 - When there is no purity per se, how could covetousness arise? Also, when there is no impurity per se, how could enmity arise?

JONES (Skt):
[12] When the pleasant is not found, how can these be desire? When the unpleasant is not found, how can there be hatred.

KALUPAHANA (Skt):
When the pleasant is not evident, whence can there be lust? When the unpleasant is not evident, whence can there be hatred?

MCCAGNEY (Skt):
Where purity is present, from where will passion arise? Where impurity is not present, from where will hatred arise?

NISHIJIMA (Skt?):
12. Without noticing the actual Reality, and in the case of only recognizing the good omens, Where does it possible for life to exist even in future? When a bad omen hasn't been noticed, Where is it possible for deep malice to be maintained even in future?

SPRUNG (Skt):
12 As 'good' is non-existent how can there be desire? As 'bad' is non-existent how can there be aversion?

STRENG (Skt):
12. If "what is salutary" does not exist, how will there be desire for it? And if "what is non-salutary" does not exist, how will there be hatred for it?

BOCKING (Ch):
23v12 If there is no purity How can there be lust? If there is no impurity How can there be anger?

BATCHELOR (Tb):
If the pleasant does not exist, how can desire exist? If the unpleasant does not exist, how can hatred exist?

DOCTOR (Tb):
When there is nothing attractive, How could there possibly be desire? When there is nothing unattractive, How could there possibly be anger? [XXIII.12]

GARFIELD (Tb):
12. Where there is no pleasant, How can there be desire? Where there is no unpleasant, How can there be anger?

GARFIELD-SAMTEN (Tb):
12. If there is no pleasant, How could there be desire? If there is no unpleasant, How could there be aversion?

GOLDFIELD (Tb):
Since pleasant does not exist, how could desire exist? Since unpleasant does not exist, how could aversion exist? (12)

HAGEN (paraphrase):
23.12 When "good" is not evident, how can there be desire for it? Where "bad" is not found, how is there aversion to it?
23/12 Where there is no purity and impurity, lust and anger do not arise.

Question: The Sutras teach that there are four perverted views of permanence, etc. If we see permanence within impermanence, this is called a perverted view. If we see impermanence in impermanence, this is not a perverted view, and the same goes for the other three perverted views. Since the perverted views exist, the one who has perverted views must exist. Why do you say that none of this exists?

Reply:

The thought is that desire and aversion, which are evoked by the good and the not-good, are not possible if the good and the not-good as what evokes them, do not exist, because then they would be without cause.

The four misbeliefs are unintelligible

Even as the non-existence of desire and aversion is established by the non-existence of what evokes them — the good and the bad - so now Nagarjuna expounds that illusion (moha) too is non-existent as such (svabhavabhava) by showing that misbelief (viparyasa) does not exist as such.

In addition to being mutually dependent, the pleasant and the unpleasant provide a foundation for the subjective tendencies such as lust and hatred. Thus, lust would be non-existent if the pleasant were not evident. Similarly, hatred would be non-existent, if the unpleasant were not evident. This, indeed, is the conclusion of the Samyutta passage referred to at XXIII.1. In that context, the Buddha was not denying the pleasant and the unpleasant experiences in the world. He was simply insisting that when such experiences occur a wise man restraints his yearning (chanda) for it.

12. And since these are the bases for desire and anger, desire and anger, arising from empty phenomena, must themselves be seen as empty.
Kārikā XXIII.13

**ENGLISH TRANSLATIONS**

**INADA (Skt):**
Verse 13 - If perception is a perversion such that permanence is in impermanence, then it is not possible for impermanence to be in sunya. How then could that perception be a perversion? - Note: graha is translated as perception in the sense of a static grasp of an object in an otherwise dynamic function. This is the basis of all ills or duhkhā.

**JONES (Skt):**
[Objection:] But since the impermanent is not found in what is empty, how is holding the claim “The permanent is in the impermanent” an error?

**KALUPAHANA (Skt):**
If there were to be grasping on to the view, “What is impermanent is permanent,” then there is perversion. The impermanent is not evident in the context of the empty. How can there be grasping or perversion?

**MCCAGNEY (Skt):**
If the error “there is permanence in impermanence” is so seized impermanence does not occur. Where is error seized in what is open?

**NISHIJIMA (Skt?):**
13. A fact, that a moment is just the eternity, exists in such a manner.
What we are always keeping, has also the character to change its direction reversely at once.
What is perfectly eternal, can be seen in the state of balanced autonomic nervous system.
Where can we find any existence of the situation, which are having the tendency to separate to the two opposite directions in separation?

**SPRUNG (Skt):**
13 If the belief that the imperishable is immanent in the perishable is held to be a misbelief, but there is nothing perishable in the absence of being, how can this belief be a misbelief?

**STRENG (Skt):**
13. Even if the notion "What is permanent is in something impermanent" is in error, How can this notion be in error since "what is impermanent" does not exist in emptiness?

**BOCKING (Ch):**
23v13 To cling to permanence in impermanence is called perverted perception.
There is no permanence in emptiness. So where can the perverted perception of permanence exist?

**BATCHelor (Tb):**
If such an apprehension as “the impermanent is permanent” is confused, since impermanence does not exist in the empty, how can such an apprehension be confused?

**DOCTOR (Tb):**
If thinking the impermanent To be permanent is an error, Then why, since the empty is not impermanent, Would that thought be in error? [XXIII.13]

**GARFIELD (Tb):**
13. If to grasp onto the view "The impermanent is permanent" were an error, Since in emptiness there is nothing impermanent, How could that grasping be an error?

**GARFIELD-SAMTEN (Tb):**
13. If to grasp onto the view "The impermanent is permanent" were an error, Since that which is empty is not impermanent, How could that grasping be an error?

**HAGEN (paraphrase):**
23.13 If the notion "the permanent is in the impermanent" is in error, since the impermanent is not evident in Emptiness, where is the error?
PINGALA COMMENTARY
23/13 If you cling to permanence in impermanence, this constitutes perverted perception. But in the emptiness of dharmas' natures, there is no permanence. What place is there in this for a perverted view of permanence? The other three (views) are also like this.

CANDRAKĪRTI COMMENTARY

The assumption here is that there are four misbeliefs. First, the belief that there is something imperishable (nitya) in the five perishable (anitya) factors of personal existence which undergo destruction in every moment, is a misbelief.

Second, ‘The very nature of whatever is perishable is suffering: that is not happiness; so everything that is perishable is afflicted existence.’ (Catuhsatāka, II, 25) According to this argument what is perishable is afflicted existence and all compounded things as such are perishable. So the perverted belief (viparitagraha) in happiness (sukham) within the five factors of personal existence whose very nature is afflicted existence, is another misbelief.

461.3 Further, ‘You, who know well that the seed of the body is blood and sperm, that it grows by voiding urine and excrement, that it is like faeces, how could desire attract you to it?’ The body is, in its ownmost nature, and in every respect, the quintessence of impurity. It is the idea, born of illusion, that the body is pure (suchi) and the persistent belief in this, that constitutes the third misbelief.

Again, one distinguishes an enduring self among the five factors of personal existence, which are lacking in substance and are devoid of a person who exists as such because they are in constant change and because it is their nature to arise and to vanish. In this case it is the idea of an enduring self (atman) and the persistent belief in it — that is the persistent belief in an enduring self in what does not endure - that is the fourth misbelief.

These four misbeliefs are the root causes of complete illusion (fn 2 Thus far the orthodox view of the four misbeliefs.).

And now an analysis of this. If we define the theory or the belief (graha) that the imperishable exists in what is devoid of self-existence, as a misbelief, it is equally true that there can be nothing perishable in the factors of personal existence, which are devoid of self-existence, either. ‘There is nothing perishable in the absence of being; how can this view be a misbelief.’ Imperishability is defined as a misbelief in relation to its opposite, the perishable; however, the perishable does not exist in the absence of being. But if there is no imperishability how could its opposite, perishability, exist and how could the theory of the imperishable exist as a perverted belief? It follows that this is not a misbelief.

As the perishable is not possible in the absence of being, that is, where self-existence is lacking, where nothing arises as self-existent, so afflicted existence is not possible either, nor is there impurity nor absence of self. If these, lacking self-existence, do not exist, how can there be misbeliefs in imperishability, happiness, purity and enduring self, as they are the counter-concepts to these? It follows that misbeliefs do not truly exist (svarupatāh). But if they do not exist how can there be primal ignorance, as it will have no cause?

As the illustrious one said: ‘There has never been primal ignorance nor anything dependent on it; it does not exist as such anywhere in the world; and for this reason I have called it primal ignorance.’ Again Manjusri asks, ‘What, o illustrious one, is illusion in the mystical verse?’ The illustrious one answered: ‘Illusion, Manjusri, is to be utterly lost; which is why it is called illusion.’ In this and the following passages misbelief is defined.

Let it be so, you may say, that it is not tenable that what is perishable can be in something which is not self-existent; but why is that not just what is meant by misbelief? Nagarjuna expounds:
KALUPAHANA COMMENTARY

So far Nagarjuna has endeavored to show that the perversion regarding the pleasant and the unpleasant is the result of a cognitive confusion which led to the belief in a substance or self (atman). With the present statement, Nagarjuna begins to analyse the conception of impermanence (anitya) in order to explain the tathagata's cognitive understanding of the world of experience. This understanding enables the tathagata to eliminate the perversion relating to happiness and suffering.

Here, the perversion pertains to grasping of the impermanent as the permanent. If so, the perspective in which the tathagata looks at the world should be one of impermanence. Unfortunately, the notion of impermanence that dominated the Buddhist tradition during Nagarjuna's day was more a metaphysical one (see commentaries on Chapter VII) than an empirical one. For the metaphysician, the absence of permanence implied the reality of the momentary. Nagarjuna rightly believes that as much as grasping after permanence is a perversion, so is grasping after the reality of the momentary (= ksanika). The denial of permanence does not commit oneself to the other extreme of momentary destruction (ksana-bhana). Emptiness (sunyata) does not imply any such momentariness.

GARFIELD COMMENTARY

13. This verse adverts to the first of the four principal errors - that one of the five aggregates, typically consciousness, is permanent. The reason that it is held by Buddhists to be an error, of course, is that all of the aggregates are analyzed as impermanent - hence the formulation in the second line, whose definite description must be read de re. But, Nāgārjuna argues, since there are no actual impermanent phenomena from the ultimate point of view, this can’t actually be seen as the false attribution of a property (permanence) to a real entity that actually has a contrary property (impermanence). The point here is simply that in calling this an error, one must be very careful not to commit a corresponding error - to suggest that calling the impermanent impermanent constitutes the assertion of an ultimate truth or of the presupposition of the ultimate reality of impermanent phenomena. That is at best a true conventional assertion that indicates the ultimate nature of things. This claim is made explicit in XXIII: 14:
Kārikā XXIII.14

अनित्ये नित्यमित्येवं यदि ग्राहो विपर्ययः।
अनित्यमित्यपि ग्राहः: शून्ये कि न विपर्ययः। ||१४||

ruò yù;yú; wù wú chāng zhòng zhū;zhú; wú chāng fēi dào;dǎo

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 14 - If perception is a perversion such that permanence
is in impermanence, then again, how is it that the
perception of impermanence with respect to sunya is not a
perversion?

JONES (Skt):
[14] If the claim “The permanent is in the impermanent” is an
error, why is holding the claim “The impermanent is in the
empty” not also an error?

KALUPAHANA (Skt):
If grasping on to the view, "What is impermanent is
permanent," is perversion, how is it that even the
grasping after the view, "What is empty is
impermanent," does not constitute a perversion?

MCCAGNEY (Skt):
If the error “there is permanence in impermanence” is so
seized,
“impermanence” is also grasped. What is without error in
what is open?

NISHIJIMA (Skt?):
14. The insistence that what is innate is never lasting, might be
connected with concrete fact.
And at that time the grasp might be the contradiction.
If the idea that there is nothing, which is eternal, has been
maintained completely,
How is it possible for the balanced state of autonomic nervous
system not to unbalanced state at all?,

SPRUNG (Skt):
14 If the view that the imperishable is in the perishable
is held to be a misbelief; why is the view that the
perishable exists in what is devoid of being not also
a misbelief? (In This, of course, confounds the orthodox
view.)

STRENG (Skt):
14. Even if the notion "what is permanent is in
something impermanent" is in error, Is not then the
notion concerning emptiness, i.e., that it is
impermanent, in error?

BOCKING (Ch):
23v14 If clinging to impermanence
Within impermanence is not a perverted view.
Since there is no impermanence in emptiness.
Why is this not a perverted view?

BATCHelor (Tb):
If such an apprehension as “the impermanent is
permanent” is confused, how would the apprehension
"there is impermanence in the empty” also not be
confused?

DOCTOR (Tb):
If thinking that which is not permanent
To be permanent is an error,
Then why would thinking the empty
To be impermanent not also be in error? [XXIII.14]

GARFIELD (Tb):
14. If to grasp onto the view
"The impermanent is permanent" were an error,
Why isn't grasping onto the view
"In emptiness there is nothing impermanent" an error?

GARFIELD-SAMTEN (Tb):
14. If to grasp onto the view
"The impermanent is permanent" were an error,
Why is grasping onto the view
"That which is empty is impermanent" not an error?

HAGEN (paraphrase):
23.14  If the notion "the permanent is in
the impermanent" is in error, why isn’t the notion that
"the impermanent is evident in Emptiness" an error?
It is in error because it is still grasping.
PINGALA COMMENTARY

23/14 Suppose that a person clings to impermanence, saying that this impermanence is not to be termed a perverted view; in the emptiness of dharmas' natures, there is no impermanence. Since impermanence does not exist there, who is there to call it a non-perverted view? It is the same with the other three views.

Further.

CANDRAKĪRTI COMMENTARY

As the imperishable and the perishable are exclusive contrary terms, there is no third term, apart from them, which would not be a misbelief. As nothing is free of misbelief, in relation to what would misbelief exist? According to this reasoning as well, then, there can be no misbelief (in 3 If no truth, no falsehood.). Because there is no misbelief there can be, in truth, no primal ignorance. As the misbelief consisting of the view that the imperishable is in the perishable is not possible, it will follow that, in the same sense, the other misbeliefs are not possible either.

That is exactly why the illustrious one said, in the Drdhāsayaparipṛceha, ‘It is thus, worthy youth, for one searching for an end to the birth-death cycle on the Buddhist way. Even though the realized one has abandoned the appropriative elements of existence he does not teach a theory of the annihilation of aversion or illusion. Why does he not? The realized ones, o worthy youth, do not teach the truth for the sake of getting rid of or acquiring any elements of existence at all, nor for the sake of the clear knowledge of afflicted existence, its overcoming, and the final realization, nor for the sake of clear understanding nor for escaping from the birth-death cycle nor for the sake of the way to nirvāṇa, nor for the sake of casting out nor discrimination. Because, o worthy youth, the true nature of a realized one is to be free of the dominance of duality. Those who live in dualities are said not to strive in the correct way, but to strive mistakenly. What, o worthy son, is meant by duality? It is duality when one says, “I will annihilate desire”; it is duality when one says, “I will annihilate aversion”; it is duality when one says, “I will annihilate illusion”. Those who strive in this way, it should be realized, are 463.9 not striving in the correct way, but are striving mistakenly.’

Belief is unintelligible

Someone may object: Although the perverted belief (graha viparyaya) consisting of the belief that the imperishable is in the perishable does not in the end make sense (na sambhavati), none the less the belief itself is a fact. What is called belief is the act of believing and this is an existent thing. There must necessarily be an appropriate element, for example imperishability, which is the effective basis of believing, also an independent agent, either a permanent self or a mind. There must be, further, an act of the agent, and an external or internal object immediately intended. If the object, the agent, the act and the effectuating basis are accepted as facts, then everything we wished to establish is established.

We reply. This is an illusory hope. According to the reasoning we have given,

KALUPAHANA COMMENTARY

It is possible for someone to raise the question as to whether grasping after the empty would itself be a perversion, just as much as grasping after the permanent or the impermanent would constitute perversions. Nagarjuna is here raising this question and then proceeds to answer it in the following verse.
Kārikā XXIII.15

yena grhyāti yo grāho grahītā yac ca grhyate |
upāsāntāni sarvāṇi tasmād grāho na vidyate ||15||

kē zhù;zhūō;zhāo zhù zhē zhū;zhūō;zhāo fā shì jiē ji miē xiāng;xiāng yün hé ēr yōu zhū;zhūō;zhāo
| gaṅ gis 'dzin daṅ 'dzin gaṅ daṅ | | 'dzin pa po daṅ gaṅ gzuṅ ba |
| thams cad źe bar źi ba ste | | de phyir 'dzin pa yod ma yin |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 15 - That which depends on perceiving, the perception, the perceiver, and that which is perceived are all of the nature of quiescence. Therefore, perception in itself does not exist.

JONES (Skt):
[Reply:15] That by which one clings to an idea, the clinging itself, the one who clings, and what is clung to - all of these are pacified by emptiness. Therefore, no clinging is found.

KALUPAHANA (Skt):
That through which there is grasping, whatever grasping there is, the grasper as well as that which is grasped - all these are appeased. Therefore, no grasping is evident.

MCCAGNEY (Skt):
What is grasped by the grasper and whoever is grasped by means of grasping are all calmed. Therefore grasping does not occur.

NISHIJIMA (Skt?):
15. With what kind of method shall we rely upon to do something, is just something to do it actually. Having something accomplished is just the grasping itself. Being perfectly peaceful is just the Real Existence of everything, Therefore the situations of perfectly having been grasped, is difficult to recognize.

SPRUNG (Skt):
15 The effectuating basis, the believing itself, the believer and an external reality are all unreal; therefore belief itself does not exist.

STRENG (Skt):
15. That by which a notion is formed, the notion, those who have notions, and that which is grasped in the notion: All have ceased; therefore, the notion does not exist.

BOCKING (Ch):
23v15 That which is clung to, the clinger and the clinging And also the dharma which clunging employs; All these have the characteristic of calm quiescence. How can clunging possibly exist?

BATCHelor (Tb):
[The means] by which one apprehends, the apprehension [itself], the apprehender and the apprehended: all are completely pacified, therefore there is no apprehending.

DOCTOR (Tb):
The means for apprehending, the apprehension, That which apprehends, and what is apprehended Are all completely pacified. Hence, there is no apprehending. [XXIII.15]

GARFIELD (Tb):
15. That by means of which there is grasping, and the grasping, And the grasper, and all that is grasped: All are being relieved. It follows that there is no grasping.

GARFIELD-SAMTEN (Tb):
15. That by means of which there is grasping, and the grasping, And the grasper, and all that is grasped: All are being alleviated. It follows that there is no grasping.

HAGEN (paraphrase):
23.15 That through which a notion is formed, the notion, the grasper as well as that which is grasped - all these are appeased. Therefore there is no grasping.

PINGALA COMMENTARY

23/15 'That which is clung to' means the object. 'The clinger' means the doer. 'Clinging' means the deed. The dharma is the thing which clunging employs. All these things are empty in nature and have the characteristic of calm quiescence, as explained in the chapter on the Thus-Come, and therefore there is no clunging. Further.
CANDRAKĪRTI COMMENTARY

The assumption here is that there is a believing agent, who believes there is an object of action - an external reality consisting of sights, sounds, and so on; and an effectuating basis of his belief - imperishability and the other misbeliefs.

How this is not possible was expounded earlier in the kārikā beginning ‘If the belief that the imperishable is immanent in the perishable is a misbelief’ (kārikā 13). It was shown that imperishability, and the others as effectuating bases are not possible. And that there is no one who believes was expounded in the kārikā ‘The existence or non-existence of the personal self has not been established in any way at all.’ (kārikā 3) And that the object of belief does not exist was expounded in the kārikā ‘Sights, sounds, tastes, touches, smells and mind objects are abstractions.’ (kārikā 8) If, however, in this way, the believer, the effectuating basis of belief and the object of belief are not established, how can there be belief itself, which would lack all basis in reason (nirhetuka)?

Hence: ‘The effectuating basis of belief, the believing itself, the believer and an external reality are all unreal.’ The meaning is that all these are nought because they do not arise in self-existence. This is exactly why ‘Therefore belief itself does not exist.’

Or again, in the chapter inquiring into causes and those following, it has been expounded that in no respect do means, agent and object arise in time. So, all such things, because they lack existence in their own right, are not real. And so there is no such thing as belief.

You may object: Misbeliefs do exist because of the factual existence of the one who believes amiss. That is, someone named Devadatta who persists in misbelief, exists. One who persists in misbelief is not possible if there are no misbeliefs. Therefore misbeliefs exist because of the factual existence of the one who believes amiss.

Misbelief presupposes right belief which is impossible

We reply. We have explained that there is no belief itself because there is no effectuating basis, no agent and no object. And so,

KALUPAHANA COMMENTARY

The middle path enunciated in the discourse to Katyayana avoided the two extremes relating to philosophical understanding and explanation. This was achieved through the appeasement of dispositions and the elimination of grasping. Because of non-grasping, all the metaphysical questions relating to the faculties (yena grhnati), the process of understanding (graha), the person involved in such understanding (grahita) as well as the object of understanding (yac ca grhyate), come to be appeased. The appeased one (santa) does not continue to raise questions or doubts beyond a certain limit, not because he knows everything nor because he does not care to know, but because he is aware of the conflicts generated by any pursuit of knowledge that goes beyond experience. The fact that grasping for emptiness can constitute a sort of perversion (sunyata drsti) has already been explained by Nagarjuna (XIII.8). This does not mean that the very conception of emptiness is invalidated in the same way as the concepts of permanence and momentariness would be invalidated. The reason for this is that the notions of permanence and substance as well as of momentariness are not empirically grounded compared with dependent arising, non-substantiality, or emptiness. Both the Buddha and Nagarjuna would categorize the former under wrong thoughts (mithyasamkalpa), while they would consider the latter as right or appropriate thoughts (samyak samkalpa, kalpana yatra yojyate, XVII. 13). The verse that follows should be understood in such a context. This indeed is the final conclusion of Nagarjuna in the Karika (see XXVII. 30).

GARFIELD COMMENTARY

15. The argument above addresses the first and fourth of the principal errors directly. This verse hints at the generalization of this argument to the other two. If there is no permanent self, there is nothing to do the grasping that generates the view that there is happiness in samsāra or to grasp onto the body. Since all of these errors are rooted in grasping and since any inherently existent grasping would depend on an inherently existent grasper, these errors cannot be inherently existent. The next two verses emphasize the nonexistence of both the error and the one in error from the ultimate standpoint:
Kārikā XXIII.16

avidyamāne grāhe ca mithyā vā samyag eva vā | 
bhaved viparyayaḥ kasya bhavet kasyāviparyayaḥ ||16||

ruò wú yǒu zhù;zhuo;zhāo fā yán xié shì diān dào;dào 
yán zhèng;zhēng bù diān dào;dào shuí yǒu  rú shì shì
| log pa’am yaṅ dag ñid du ni | | ‘dzin pa yod pa ma yin na | 
| gaṅ la phyin ci log yod ciṅ | (6)gaṅ la phyin ci ma log yod |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 16 - As there is no perception, properly or improperly, who does and who does not have the perversion?

JONES (Skt):
[16] When clinging to an idea, whether rightly or wrongly, is not found, for whom would there be an error and for whom would there be no error?

KALUPAHANA (Skt):
When grasping, wrongly or rightly, is not evident, for whom would there be perversion and for whom would there be non-perversion?

MCCAGNEY (Skt):
And where grasping is present, either rightly or wrongly, whose error would it be, whose nonerror would it be?

NISHIJIMA (Skt?):
16. When everything is not so clear yet, or when everything is just clear, in the either cases of being opposite or being the same, they are not so different from facts.
Something, which is contradictory with each other, can exist, and something, which is going to the same direction with each other, can exist.

SPRUNG (Skt):
16 As there is no belief, whether false or true, whose could be the misbelief, whose could be the nonmisbelief?

STRENG (Skt):
16. If a notion is not existing either as false or true, Whose is the error? Whose is the non-error?
PINGALA COMMENTARY

23/16 'Clinging' means discriminative conceptualizing of this and that, being and non-being, and so on. If none of this clinging exists, who is there to have wrong and perverted views, and who is there to have correct and non-perverted views?

Further.

CANDRAKĪRTI COMMENTARY

If there is no belief, true or false, in anything, by anyone, how could there be perverted belief or non-perverted belief? There are thus, no misbeliefs.

Moreover, these misbeliefs considered to be of a subject would be conceived to be of someone who either is in error or is not in error or who is erring.

Nagarjuna shows that in every respect such ideas are not logically possible, saying

KALUPAHANA COMMENTARY

With grasping gone, whether it be for the right thing or the wrong thing, the enlightened one does not involved himself in any substantialist thinking relating to perversion or non-perversion. This is the state of the saint who has attained freedom from grasping (anupadaya vimukti).
Kārikā XXIII.17

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 17 - Perversions do not come about even in one who
perverses. Again, they do not come about even in one who
does not perverse.

JONES (Skt):
[17] Errors do not arise in one who is already in error, nor do
errors arise in one who is not now in error.

KALUPAHANA (Skt):
Perversions do not occur to one who is already subjected to
perversion. Perversions do not occur to one who has not
been subjected to perversions.

MCCAGNEY (Skt):
The errors of an erring one do not develop.
The errors of a nonerring one also do not develop.

NISHIJIMA (Skt?):
17. It does not exist in the perfectly opposite situations,
But there are cases, in which so many delusions have gathered
together actually.
It does not exist in the perfectly same situations,
But there are cases, in which so many delusions have gathered
together actually.

SPRUNG (Skt):
17 Misbeliefs are not possible for one who is in error,
nor are they possible for one who is not in error.

STRENG (Skt):
17. Nor do errors of someone who has erred come into
existence. Nor do errors of someone who has not
erred come into existence.

BOCKING (Ch):
23v17 Existing perverted views do not produce perverted
views
Nonexistent perverted views do not produce perverted
views.
The perverted viewer does not produce perverted views,
Nor does the non-perverted produce them.

BATCHelor (Tb):
Confusions do not occur for those who are [already]
confused; confusions do not occur for those who are
not [yet] confused;

DOCTOR (Tb):
The mistaken cannot
Become mistaken,
Nor can the unmistaken
Become mistaken. [XXIII.17]

GARFIELD (Tb):
17. Error does not develop
In one who is in error.
Error does not develop
In one who is not in error.

GARFIELD-SAMTEN (Tb):
17. One who is already in error
Cannot commit error.
One who is not in error
Cannot commit error.

GARFIELD COMMENTARY

17. And, Nāgārjuna points out, following the same
pattern used in the analysis of motion and redeployed
numerous times in the text, we can’t think of error
developing in one in whom error is arising. If the error is
already arising in him, an independent error cannot be
developing there. Moreover, as error develops, the person in
whom it is developing changes, and no substrate for the
development of error can be found. It follows that really
existent error, conceive of as an independent phenomenon, is
no more real than its putative subject (but of course no less
real, either):
Kārikā XXIII.18

na viparyasyamānasāya sambhavanti viparyayāḥ
vimṛśasvam svayam kasya sambhavanti viparyayāḥ ||18||

ruò yú;yú;wú diàn dào;dào shí yì bù shēng diàn dào;dào

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 18 - Perversions do not come about even in one who is presently perversing. Consider seriously by yourself.... in whom will the perversions arise?

JONES (Skt):
[18] Errors do not arise in one who is currently erring. Consider your own situation: in whom do errors arise?

KALUPAHANA (Skt):
Perversions do not occur to one who is being subjected to perversions. Reflect on your own! To whom will the perversions occur?

MCCAGNEY (Skt):
The errors of what is presently erring do not develop. Consider for yourself whose errors come about.

NISHIJIMA (Skt?):
18. Even though those delusions are not included into the high-leveled lank, Many delusions are collecting themselves together. Even though it is not so clear for your reflection to be targeted to what kind of your Reflection, Many delusions are collecting themselves together.

SPRUNG (Skt):
18 Misbeliefs are not possible for one who is just erring. Consider it yourself; to whom could misbeliefs possibly belong?

STRENG (Skt):
18. And errors of someone who is at present in error do not come into existence. Now you examine of whom do errors really come into existence!

BOCKING (Ch):
23v18 Since perverted views are not produced In the moment of perversion either. You can see for yourselves; Who is there to produce perverted views?

BATCHelor (Tb):
confusions do not occur for those who are being confused. For whom do confusions occur? Examine this by yourself!

DOCTOR (Tb):
That which is becoming mistaken Cannot become mistaken either. Where is error possible? Investigate that. [XXIII.18]

GARFIELD (Tb):
18. Error does not develop In one in whom error is arising. In whom does error develop? Examine this on your own!

GARFIELD-SAMTEN (Tb):
18. One who is committing error Cannot commit error. Who can commit error? Examine this on your own!

HAGEN (paraphrase):
23.18  Error does not occur in one who is presently erring. To whom do errors occur? Think about it!
PINGALA COMMENTARY

23/18 Someone who already has perverted views does not produce them again, since he already has perverted views. One who does not have perverted views does not produce perverted views either, because he has no perverted views. There are no perverted views in the moment of perverted viewing either, because this involves both errors. You should now abandon your proud and arrogant mind and perceive things properly for yourself. Who is there to have perverted views?

Further.

CANDRAKĪRTI COMMENTARY

In the first place misbeliefs are not possible in one who is in error (viparita). Why not? Liecause the one who is in error has already erred (fn 4 Misbelief is an ‘act’); why would there be, once again, meaningless involvement in error? Nor do misbeliefs make sense attributed to one who has not erred (aviparita). Because it would follow that the Buddhas - those who realize the mind of enlightenment by bringing ignorance and blindness of the mind to an end - could be in error. Similarly, there are no misbeliefs in one who is just erring (viparyasyamanā). Because such a one does not exist. Who would this third category — the one who is just erring — be, utterly other than the one who is in error and the one who is not? Do you say the one just erring is half in error? And that one such believes some things amiss and some things not amiss? In such a case, what constitutes the misbelief is not made into an error by himself because it is already an error; nor is what constitutes the non-misbelief made into an error by him, because it is not error. It follows that misbeliefs are not possible for one who is in the act of erring. In this way, then, neither the man in error nor the man not in error is possible, nor the one who is just erring. Now considering this for oneself, by one’s own insight adopting a middle position: Who could be the subject of the misbeliefs? Thus, because of a lack of any base for them, there are no misbeliefs.

Further.

KALUPAHANA COMMENTARY

Upon reaching such a level of moral and intellectual development (as referred to in the previous verse), one does not get involved in metaphysical speculations such as whether perversions arise in one who is already afflicted by perversions, or not afflicted, or is being afflicted. The speculation that is avoided pertains not only to the past and the future but also the present. As such he avoids the metaphysics discussed in Chapter II. When perversions themselves are not perceived as being substantial, how can one consider a perverse person as a substantial entity.

GARFIELD COMMENTARY

18. The next two verses mobilize a by now familiar general argument against inherent existence specifically against the inherent existence of error: Either error has arisen or it hasn’t. If it has, it depends on something and so is not inherently existent. If it has not, it has not come to be and so is either nonexistent or unexplained. Moreover, if error is to be conceived as inherently existent, it must arise from one of the four possible sources: self, other, both, or neither. And all four possibilities have been refuted for inherently existent entities in the general case in Chapter I:
Kārikā XXIII.19

anutpannāḥ kathāḥ nāma bhāvīṣyanti viparyayāḥ |
viparyayeṣv ajāteṣu viparyayagataḥ kutāḥ ||19||

zhū diān dào; dǎo bù shēng yún hé yǒu cǐ yì
wú yǒu diān dào; dǎo gù hé yǒu diān dào; dào zhě
| phyin ci log rams ma skyes na | | ji lta bur na yod par ’gyur |
| phyin ci log rams skye med na | | phyin ci log ga la yod |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 19 - How could there be non-originated perversions?
When perversions have not occurred, how could there possibly be one who perverses?

JONES (Skt):
[19] How could there be errors that have not yet arisen? When errors are as yet unarisen, how could there be one who is subject to error?

KALUPAHANA (Skt):
How could there be non-arisen perversions? When perversions are not born, whence can there be a person who is subjected to perversions?

MCCAGNEY (Skt):
How will whatever is nonarising be called errors? Where error is unborn, where has error gone?

NISHIJIMA (Skt?):
19. How is it adequate for us to put a name to what hasn't been accomplished yet?
There might be many Delusions, which will occur in future. Even before any kind of Delusion hasn't been born yet, Where is it possible for the arrival of Delusions to come at all?

SPRUNG (Skt):
19 How can there be misbeliefs if they do not arise? If misbeliefs are unborn how can one commit them?

STRENG (Skt):
19. How in all the world will errors which have not originated come into existence? And if errors are not originated, how can there be someone involved in error?
PINGALA COMMENTARY

23/19 Because we have refuted perverted views on various grounds, you fall into non-production. Clinging to non-production you assert that 'non-production' is the true characteristic of perverted views. Therefore the verse says, how can you term perverted views non-produced? Not even non-outflowing dharmas are regarded as having the characteristic of non-arising; how much less are the perverted views non-arising? And since the perverted views do not exist, how can the perverted viewer exist? The perverted viewer only exists by virtue of perverted views.

Further.

CANDRAKĪRTI COMMENTARY

And,

KALUPAHANA COMMENTARY

Picking up the argument from the previous verse, Nagarjuna is here specifically rejecting the substantialist notions of perversions as well as persons who are perverse. If perversions are substantial or having self-nature (svabhava), they cannot be considered as arisen (utpanna). When they are non-arisen or unborn (ajata), there cannot be a person in whom these would arise, for they cannot serve as attributes.
ENGLISH TRANSLATIONS

INADA (Skt):
Verse 20 - Existence does not come about by itself or by another. Nor does it come about by both self and other. How could there possibly be one who perverses?

JONES (Skt):
[20] An entity does not arise from itself, nor does it arise from another, nor from both itself and another - how could there be one who has come into error?

KALUPAHANA (Skt):
An existent does not arise from itself, nor does it arise from another, nor both itself and other. If so, whence can there be a person who is subject to perversions?

MCCAGNEY (Skt):
A being is “not born from itself, not born from another, nor from both itself and another.” Where has error gone?

NISHIJIMA (Skt?):
20. The fact, that the subjectivity is never be born, is the existence. And then the objectivity does never be born too. If the subjectivity and the objectivity are not like that, Where is it possible for the arrival of Delusions to exist actually?

SPRUNG (Skt):
20 A thing arises neither from itself nor from another; not arising either from himself nor from another, how can there be one who believes amiss?

STRENG (Skt):
20. Since no being is produced by itself, nor by something different, Nor by itself and something different at the same time, how can there be someone involved in error?
CANDRAKĪRTI COMMENTARY

The meaning is, how could there be one in error? And so, as stated, it does not make sense to say that the misbeliefs exist because the one who misbelieves is a fact.

Further, even for the one who accepts the existence of the four misbeliefs it is impossible to determine the nature of misbelief. Why is that? Because:

KALUPAHANA COMMENTARY

This verse, which is not available in Kumarajiva's translation, represents an application of the analysis of substantial existence (bhava) in Chapter I to the problems of a substantial person or entity. It is almost identical with XXI.13.

GARFIELD COMMENTARY

20. Nāgārjuna now returns to the objects of the four principal errors and points out that if they existed inherently, as the proponent of inherently existent error would have it, they would be truly existent and, hence, would be nondeceptive ultimate truths.
Kārikā XXIII.21

ātma ca śuci nityaṃ ca sukhaṃ ca yadi vidyate |
ātma ca śuci nityaṃ ca sukhaṃ ca na viparyayaḥ ||21||

ruò cháng wò lè jìng ér shì shí yǒu zhè
shi cháng wò lè jìng zé fēi shì diān dào;dào

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 21 - If atman, purity, permanence, and bliss are to be admitted (i.e., exist), then they are not to be considered as perversions.

JONES (Skt):
[21] If the self, the pure, the permanent, and the blissful are found, then the self, the pure, the permanent, and the blissful are not erroneous.

KALUPAHANA (Skt):
If either the self, the pleasant, the permanent, or the happy is evident, then neither the self, the pleasant, the permanent, nor the happy constitutes a perversion.

MCCAGNEY (Skt):
If the self, purity, permanence, and happiness occur, the self, purity, permanence, and happiness are not errors.

NISHIJIMA (Skt?):
21. Ourselves, the innate brilliance of ourselves, Or our comfortable situations, can be recognized actually, and then, Ourselves, the innate brilliance of ourselves, Or our comfortable situations, can never be Delusion at all.

SPRUNG (Skt):
21 If there is self, purity, imperishability and happiness, then self, purity, imperishability and happiness are not misbeliefs.

STRENG (Skt):
21. If the individual self, "what is pure," "what is eternal," and happiness really exist, Then the individual self, "what is pure," "what is eternal," and happiness are not errors.
PINGALA COMMENTARY

23/20 If these four permanence, self, bliss, and purity, have real and existent natures, then permanence, self, bliss and purity are not perverted views, and why? Because they are fixed, existent, real things, so how could you call them perverted views? If you say that these four – permanence, self, bliss and purity – do not exist, then impermanence, suffering, non-self and impurity – these four will exist as realities, and will not be termed perverted views; since they are the opposites of perverted views they will be called non-perverted views. But this is not correct, and why?

CANDRAKĪRTI COMMENTARY

If self, purity, imperishability and happiness are defined as misbeliefs do they exist or not? If they exist, they are hardly misbeliefs, as they are factually true in the same way that the absence of self, perishability, and so on are. If they do not exist, then, not only is there no misbelief, because they are not factual, but the non-misbeliefs — absence of self, perishability and the others — are not factual because their opposites, the misbeliefs, do not exist. Nagaijuna expounds:

KALUPAHANA COMMENTARY

Nagarjuna began his examination of perversions (viparyasa) utilizing the same terms used by the Buddha at A 2.52. In the present verse, he adopts a slightly different terminology in referring to the perversions. Instead of subha and asubha, he uses the pair of terms suci and asuci, and instead of adukkha he has sukha. This latter terminology was indeed utilized by the interpreters of Abhidharma when discussing the perversions (see Akb). As such, it is a clear indication that Nagarjuna was conversant with the early discourses as much as he was familiar with the Abhidharma commentarial literature. Nagarjuna's argument in the present verse could lead to misunderstanding unless it is seen in the context of his previous statements about the perversions, especially at XXIII. 20. If the self, the pleasant, the permanent, and the happy are evident as self-existent entities, then, indeed, they do not constitute perversions. Unfortunately, Inada's translation does not seem to bring out this strong sense of "exist" that Nagarjuna is implying here.

GARFIELD COMMENTARY

21. But why is the opponent forced to think of the objects of inherently existent error as inherently existent? That is, of course, an obviously incoherent position. But the view characterized as an error must have some ontological basis. And the self that is putatively in error has already been ruled out. So the only remaining possibility is that the error is the perception of an inherently real but at the same time deceptive object: a real but nonexistent object. It is this that Nagarjuna claims is incoherent. Error then can neither be an objectless but inherently existent mental phenomenon, (fn 106. For one thing, Nagarjuna has argued that there is no inherently existent mind in which it could be located. For another, the idea of error, per se, though not error about anything, is patently incoherent.) nor can it be a subjectless perception of an inherently real but nonexistent object. So in no way can error be grounded in anything substantial.
Kārikā XXIII.22

INADA (Skt):
Verse 22 - If atman, purity, permanence, and bliss are not to be admitted (i.e., non-existent), then likewise anatman, impurity, impermanence, and suffering are not to be admitted.

ROBINSON (Skt):
If self, purity, permanence, and felicity do not occur, then non-self, impurity, impermanence, and suffering do not occur either.

JONES (Skt):
[22] If the self, the pure, the permanent, and the blissful are not found, then what is the non-self, the non-pure, the impermanent, and suffering would not be found either.

BOCKING (Ch):
23v21 If permanence, self, bliss and purity in reality do not exist, Impermanence, suffering and impurity should also not exist.

KALUPAHANA (Skt):
If neither the self, the pleasant, the permanent, nor the happy is not evident, then neither the non-self, the unpleasant, the impermanent, nor the suffering would also be evident.

STRENG (Skt):
22. But if individual self, "what is pure," "what is eternal," and happiness do not exist, Then non-individual self, "what is impure," "what is impermanent" and sorrow (dukkha) do not exist.

MCCAGNEY (Skt):
If the self, purity, permanence, and happiness do not occur, neither the nonself, impurity, impermanence, or suffering occur.

DOCTOR (Tb):
If there is no self nothing clean, Nothing permanent, and nothing delightful, There cannot be any absence of self, anything unclean, Impermanent, and painful, [XXIII.22]

GARFIELD (Tb):
22. If the self and the pure, The permanent and the blissful did not exist, The nonself, the impure, the permanent, And suffering would not exist.

GARFIELD-SAMTEN (Tb):
22. If the self and the pure, The permanent and happiness did not exist, The nonself, the impure, the impermanent, And suffering would not exist.

GOLDFIELD (Tb):
If, however, self, clean, Permanence, and happiness do not exist, Then their opposites—selfless, unclean, Impermanent, and suffering do not exist either! (22)

HAGEN (paraphrase):
23.22 If neither the self, the pure, the permanent, or the happy are evident, then neither would the non-self, the impure, the impermanent, nor dukkha be evident.
PINGALA COMMENTARY

23/21 If these four - permanence, self, bliss, and purity - are in reality nonexistent, then because they do not exist the other four, impermanence etc., ought not to exist either, and why? Because there is no reciprocal dependence.

Further.

CANDRAKĪRTI COMMENTARY

If you think self, purity and imperishability do not exist because of the impossibility of holding something to be false if it exists and that non-self, impurity and so on are not to be understood as misbeliefs because they are true; this should be rejected as, there being no opposite, there is nothing to be negated. As, thus, non-self and so on are not possible, why should non-self not be a misbelief, because it does not exist as such even as self and the others do not exist as such?

Therefore all these eight misbeliefs (fn 5 To label four key beliefs, misbelief, i.e. heresy, is a stinging challenge to Buddhist orthodoxy.) are to be rejected by those desiring freedom from their fetters in the prison of endless coursing through birth, old age and death. Nagarjuna expounds the great value of the analysis of misbelief given as a means of destroying ignorance and the afflictions.

Banishing misbelief eliminates the afflictions

KALUPAHANA COMMENTARY

Having rejected the substantial existence of the four perversions, Nagarjuna is here emphasizing their relativity. However, relativity in this context need not be understood as applying in an identical way to all the four perversions. As pointed out earlier (see comments on XXIII. 1), the four perversions deal with two different categories, the cognitive and the attitudinal. The fact that anatman and anitya are conceptually related to atman and nitya does not mean that the latter are cognitively based. They are relative only at the conceptual level. On the contrary, suci and asuci as well as sukha and duhkha are part of experience, even though there could be confusion regarding their identification.

GARFIELD COMMENTARY

22. But at this point Nāgārjuna draws quite a surprising conclusion. These observations apply not only to the putative objects of the errors, but also to those of Buddhist doctrine, at least when it is given a substantialist reading. Continuing his critique of the idea that assertions made from the standpoint of conventional truth about the ultimate nature of things are literally true from the ultimate standpoint, Nāgārjuna points out that the fact that there is no permanent self, no happiness in saṃsāra, and no pure body does not entail that an impermanent self, suffering, or an impure body are in any way inherently existent. That is, the objects of correct conventional understanding are no more inherently existent than those of incorrect understanding. The truth of even Nāgārjuna’s own philosophical theory is not grounded in its reference to independently existent, substantially real entities.
Kārikā XXIII.23

INADA (Skt):
Verse 23 - Consequently, ignorance is destroyed by the cessation of perversions. And by the destruction of ignorance, mental conformations, etc., are also destroyed.

JONES (Skt):
[23] Thus, from the cessation of error, the fundamental root-ignorance ceases. When this ignorance ceases, then dispositions, and so forth, cease.

KALUPAHANA (Skt):
Thus, with the cessation of perversions, ignorance ceases. When ignorance has ceased, the dispositions, etc. come to cease.

MCCAGNEY (Skt):
Thus from the cessation of errors, ignorance is stopped. Where ignorance has ceased, disposition, etc., is stopped.

NISHIJIMA (Skt?):
23. Following like this, what is not recognized, is excluded. And so Delusion has been emancipated from the attitude of denying Delusion. Relying upon ignorance might be the same as relying upon suppression. And utilizing demonstrative vanity, and so forth, they want to suppress everything.

SPRUNG (Skt):
23 Thus by eliminating misbelief, ignorance is destroyed; ignorance being destroyed, personal dispositions and the other causes are destroyed.

STRENG (Skt):
23. From the cessation of error ignorance ceases; When ignorance has ceased, conditioning forces (samskara) and everything else cease.
PINGALA COMMENTARY

23/22 'In this way' means by this kind of interpretation. When perverted views are extinguished, ignorance which is at the root of the twelve causes and conditions is also extinguished. Through the extinction of ignorance the three kinds of predispositions and actions etc. up to old age and death and so forth are all extinguished.

CANDRAKĪRTI COMMENTARY

When the wise one does not hold to the misbeliefs in the sense we have explained, then, no longer believing amiss, ignorance, which is caused by misbelief, is got rid of and because of the destruction of ignorance all the putative causal factors (dharma) (fn 6 The twelvefold cycle of birth and death: samsāra.) which result from ignorance, from personal dispositions to old age and death which are accompanied by sorrow, lamentation and despair, are done away with. For ignorance is the root cause of afflicted existence, of the entire conglomerate of afflictions from birth on. Even as all sense organs derive from a central awareness, and the central awareness being eliminated they too are removed; so all the causes in the round of existence from personal dispositions on, function with ignorance as root cause; necessarily then, if ignorance is removed they are eliminated. Nagarjuna expounds this, when he says, 'Ignorance being destroyed, personal dispositions and the other causes are destroyed.'

Someone may object: If, from the elimination of the misbeliefs, primal ignorance is removed, then, in that case, the removal of this primal ignorance, which follows from the elimination of the misbeliefs, really happens; for one does not search for the effective ways to remove a non-existent dryad in the sky. Therefore primal ignorance is, in fact, real; because, in fact, one does search for effective ways of removing it. It follows that the basic afflictions, desire and the rest, which spring from primal ignorance, are fact. Because the basic afflictions are fact, the round of existence, the coursing through births and deaths, is indeed real.

We reply. This is, in truth, the utmost in perverse learning. There are saintly persons who gird up their loins and, with their whole heart, for the sake of others, issue forth into the unredeemed world of passions, afflictions and infinite sorrows that poisonous growth so rich and thick with fruit; and they attempt to uproot it by the power of their wisdom, their skill in means and their secret knowledge. But you not only do not support them but are stolidly opposed to them as one ensconced on the rock of realism. You oppose those who, by the power of secret knowledge, are uprooting that tree which is poisonous with afflictions, whose sole fruits are ill — a flood of grief, birth, old age and death. You, in your obduracy, are devoting yourself to making that tree flourish by your stubborn belief in the reality of things.

What is more, if it were possible to eliminate primal ignorance and the other afflictions then there could be a search for a way to eliminate them. But their elimination (prahana) is not possible. If it were, then it would be the elimination of afflictions whose nature it was either to exist in very truth or not to so exist. What follows from that?

In the first alternative, if one thinks of eliminating afflictions whose nature it is to exist in very truth, that would not be logically possible. Why? Because,

KALUPAHANA COMMENTARY

The distinction between the two kinds of perversions mentioned earlier (XXIII. 1.22) seems to be justified by the present statement. When the perversions cease, the immediate result would be the cessation of ignorance (avidya). This would pertain to the more cognitive perversions (I and iii). The cessation of ignorance would also mean the cessation of the perversions relating to dispositions, that is, perversions ii and iv.

GARFIELD COMMENTARY

23. When all error is abandoned and we see the world aright, we are no longer ignorant of the true nature of things. But this is not because we then apprehend things and their true nature. Rather we apprehend that there are no things, per se, and that those posited from our side have no nature to understand.

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 24 - If the defilements really exist in someone in virtue of self-nature, how could they be abandoned and who could abandon the self-nature?

JONES (Skt):
[24] Indeed, if someone’s afflictions existed through their own self-existence, how could they be eliminated? Who could ever eliminate self-existence?

KALUPAHANA (Skt):
If, indeed, certain defilements of someone have come to be on the basis of self-nature, how could they be relinquished? Who ever could relinquish self-nature?

MCCAGNEY (Skt):
If any beings are defiled by their own nature, whose [defilements] are they?
How would they be called abandoned? Who will abandon self-nature?

NISHIJIMA (Skt?):
24. When real accidents are relying upon subjective ideas, Miscellaneous strong pains exist in something obscure, and the receptacle exists at the same place.
How is it possible for only a title to make the serious problems?
What kinds of thing will produce such kinds of miscellaneous subjective ideas?

SPRUNG (Skt):
24 If there were self-existent afflictions of someone, how could they be overcome? Who can vanquish the self-existent?

STRENG (Skt):
24. If any kind of self-existent impurities belong to somebody, How in all the world would they be eliminated? Who can eliminate that which is self-existent?

ROBINSON (Skt):
For if any passions belonging to anyone were real by their own-being, how could they be abandoned? Who will abandon own-being?
**PINGALA COMMENTARY**

23/23 If the defilements are perverted views, and have a real, existent nature, how can they be cut off?, and who can cut off that nature? If you say that the afflictions are false deceptions and have no nature, and can nevertheless be cut off, this is also wrong and why?

**CANDRAKĪRTI COMMENTARY**

It is not possible to bring to nought the self-existence of things whose self-nature it is to exist. The self-nature of earth solidity — and of the other elements is not nullified. So, if there were afflictions — ignorance and the rest — whose self-nature it was to exist, and they belong to some person, how could they be overcome? They will not be overcome by anyone, in any way at all. Why are they not overcome? Nagarjuna says, ‘Who can vanquish the self-existent?’ It is because it is impossible to bring what is self-existent to nought. The openness of space, for example, cannot be nullified.

In the second alternative the afflictions are conceived to be by nature non-existent. Nagarjuna says the elimination of afflictions is impossible in this way as well.

**GARFIELD COMMENTARY**

24. Nāgārjuna reminds the substantialist at the end that if the defilements or errors were inherent in the person and, hence, were part of his/her essence, they would be permanent and, hence, could not be relinquished. This would constitute a direct rejection of one of the most fundamental tenets of the Buddhist outlook - the possibility of liberation.
Kārikā XXIII.25

INADA (Skt):
Verse 25 - If the defilements do not really exist in someone in virtue of self-nature, how could they be abandoned and who is able to abandon non-realities?

JONES (Skt):
[25] But if someone’s afflictions did not exist through their own self-existence, how could they be eliminated? Who could ever eliminate what does not really exist?

KALUPAHANA (Skt):
If, indeed, certain defilements of someone have not come to be on the basis of self-nature, how could they be relinquished? Who ever could relinquish non-existence?

MCCAGNEY (Skt):
If not any beings are defiled by their own nature, whose [defilements] are they? How would they be called abandoned? Who will abandon what does not really exist?

NISHIJIMA (Skt?):
25. When subjective accidents are relying upon subjective ideas, Miscellaneous strong pains exist in something obscure, and the receptacle exists in it. How is it possible for only a title to make the serious problems? What kinds of thing will produce such kinds of miscellaneous abstract beings?

SPRUNG (Skt):
25 If there were non-self-existent afflictions of someone how could they be overcome? Who can vanquish the non-existent?

STRENG (Skt):
25. If any kind of self-existent impurities do not belong to somebody, How in all the world would they be eliminated? Who can eliminate that which is non-self-existent?

ROBINSON (Skt):
If any passions belonging to anyone were unreal by own-being, how could they be abandoned? Who will abandon an unreal being?
23/24 If all the afflictions are false deceptions with no nature, then there is no-one to whom they belong. How can they possibly be cut off? For who can cut off a dharma without a nature?

CANDRAKĪRTI COMMENTARY

It is equally impossible to vanquish non-existent afflictions whose very nature it is not to exist. It is not possible to nullify the non-existent coldness of fire. Who can vanquish afflictions which by their very nature do not exist? No one at all can vanquish them.

In sum, as in neither alternative is there a possibility of elimination, afflictions cannot be eliminated. As there is no elimination, how can there be a search for the effective means of eliminating the afflictions?

Therefore the claim that the afflictions - ignorance and the others do exist in fact because of the endeavour to find a means of removing them, does not make sense.

As is said in the Samadhīrāja Sutra, ‘An existential element “desire” would be roused by something in someone; an existential element “aversion” would be aversion in someone to something; an existential element “illusion” would be illusion in someone concerning something.’ Such an element of existence one cannot discover in thought nor perceive in fact. One who does not discover such an existential element in thought nor perceive it in fact is said to be free of desire, aversion and illusion, to have a mind free of misbelief, to be composed in spirit. He is said to have crossed to the other side, to have penetrated deeply, to have attained peace.

KALUPAHANA COMMENTARY

Nagarjuna's conclusion in this chapter is that the defilements (klesa), which are the results of the perversions discussed above, cannot be eliminated, and, therefore, there could be no tathāgata, if these defilements are looked upon as being either substantial, i.e., something that has come to be (bhuta) having self-nature (svabhava) or non-substantial, i.e., something that has not come to be (abhuta) because of its having no real nature (asadbhava). In either case, there can be no abandoning of defilements and hence the achievement of the state of tathāgata.

GARFIELD COMMENTARY

25. On the other hand, he reminds those who may have followed the argument this far, but who may be tempted either to nihilism about the defilements or to the subtler error of asserting that their dependence and emptiness is literally their ultimate nature, that the defilements must be conventionally real in order to be relinquished. They are, from the ultimate point of view, completely unreal; from that point of view, there is no relinquishment of anything at all. This, as we shall see, is an important harbinger of the doctrines of the identity of the two truths and of saṃsāra and nirvāṇa to be developed in the next two chapters, which represent the climax of the text.
Chapter XXIV

आर्यसत्यपरीक्षा चतुर्विंशतितिमं प्रकरणम्।

中論觀四諦品第二十四(四十偈)

āryasatyaparīksā nāma caturviṃśatitamāḥ prakaraṇam ||

Chapter XXIV: Examination of the Four Noble Truths
We have now completed the second and final part of the presentation of the main point of the demonstration that the dependently originated is empty by nature: the detailed explanation of selflessness. We now begin the second part of the demonstration that the dependently originated is empty by nature: the rebuttal of refutations. This section has two parts: the examination of the Four Noble Truths and the examination of nirvana. This chapter constitutes the first section.

TSONG-KHA-PA (Outline, Explanation, Summary)

EXPLANATION:

This section has two parts: the objection and the reply.

SUMMARY:

When the madhyamika shows that not even the slightest phenomenon related to samsara or nirvana exists essentially, our opponents argue that according to our system the entire framework of mundane and transcendental
phenomena makes no sense. In response to this, the present chapter explains things as follows: There is not even the slightest particle that withstands analysis through the arguments that examine and reject true existence. Therefore, while the opponent's system contains errors that make it impossible for him to assert \[438\] “this exists and this does not,” not only do we not commit those errors in our own system, but this entire framework makes perfect sense.

The main point is that the meaning of “emptiness” is dependent origination, but emptiness does not mean the negation of things such as action and agent. Thus, one who is discerning and aspires to subscribe to the Madhyamaka system should think in that manner.

The reificationists press us hard, saying, “According to your system, the entire framework of the mundane and the transcendental makes no sense.” One should not rush into a place in advance before the other one pushes, by saying that according to our system we cannot say that we cannot set out any framework within which one could say “this exists and this does not exist.”

INADA (Chapter Introductions)

CHAPTER XXIV - Examination of the Four-fold Noble Truth

In this chapter we are treated to glimpses of a real genius at work. The chapter together with Chapters I & XXV explore the crucial ideas of sunyata, pratityasamutpada, and madhyama pratipada.

The chapter begins by first listening to the opponent's view (verses 1-6) that if everything is sunya or Sunyata (voidness) then all that is of the mundane world will be destroyed. Nagarjuna quickly reminds him that he does not know the real import of Sunyata or its meaning. The various Buddhas have, after all, taught us about the dharma (Buddhist truth) by way of the twofold truths, i.e., samvrti-satyata (relative or worldly truth) and paramartha-satyata (absolute or supreme truth). The subtle distinction between the two truths must be clearly understood and, moreover, the absolute truth cannot be arrived at without first going through or experiencing the mundane, relative truths in everyday living. Sunyata is, after all, the basis of all dharmas (factors of experience) or of all truths. In the famous Verse 18, Nagarjuna equates sunyata with pratityasamutpada. It is also the madhyama pratipada (the middle path) and only a provisional name for the expression of truth itself. Incidentally, this verse will become the basis for the philosophical development of the Chinese T’ien-t’ai School. Moreover, Nagarjuna argues that Sunyata is not to be equated with asunya (“non-void”), for in asunya the same view held by the opponent, i.e., that everything in the mundane world will be non-existent or destroyed, will then become valid.

In exhibiting the real purpose of the chapter, i.e., the examination of the Aryan fourfold truths, he is highly critical of the opponent's adherence to the notion of a self-sustaining, self-abiding entity. Since sunyata is not amenable to any abiding or enduring treatment it therefore is the basis of all beings. Thus the Aryan truths of suffering, its extinction, the way, and final nirvana become intelligible only by and in sunyata. Indeed, sunyata is a central concept in Nagarjuna.

KALUPAHANA (CHAPTER OVERVIEWS)

24. Truth (satya). Thus we are led to the most important discussions in Nagarjuna, namely, the conception of the four noble truths (arya satya). The contents of this chapters have generated much discussion as well as controversy during the centuries that followed its compilation. At the same time, this chapter, more than any other, will serve as a glowing testimony to the fact that Nagarjuna was simply restating the ideas expressed by the Buddha in the early discourses, rather than bringing about a Copernican revolution in Buddhist thought. In the early discourses, the four noble truths were meant to explain the nature of human existence, both in bondage and in freedom, avoiding the extremes of permanent existence (atthita) and nihilistic non-existence (n’atthita). The difficulties encountered by the Buddha in making this view of existence intelligible to the substantialist thinkers of India are evident from the kind of criticism they levelled against the Buddha. Very often they criticized him as a nihilist (n ‘atthikavada, uchedavadava), insisting that he advocated the annihilation and destruction of the conscious being (sato sattassa uchedam vinasam paññapei).119 This was not because the Buddha denied the existence of conscious human beings, but because he was not willing to accept an eternal and immutable self (atman) in them. For he often insisted that a conscious human being is empty (suñña) of a permanent and eternal self (atta) as well as anything pertaining to or belonging to a self (attaniya).120 The denial of such a self or substantiality was not only in relation to a human personality but also in connection with any experienced phenomena (sabbe dhamma anatta).121

Nagarjuna was placed in an identical situation as a result of his rejection of the Sarvastivada conception of self-nature (svabhava) and the Sautrانتika theory of other-nature (parabhava). The theory of nonsubstantiality (anatman) or emptiness (sunyata) that he attempted to explain in the previous chapters was not palatable to the substantialist philosophers who raised the objection discussed in the first six verse of the present chapter.
In the first instance, these substantialists, who understood emptiness as “nothingness,” assumed that emptiness leads to a denial of the four noble truths, including a denial of the noble fruits (arya-phala). These noble fruits are elsewhere referred to as fruits of the ascetic life (samanathasa = sramanyartha,122 samannaphala 123). Secondly, they felt that it also leads to a denial of the four noble truths, including a denial of the noble fruits (phala) of ordinary human life (laukika), including fruits of all the ordinary moral and social conventions (samvyavahara) such as good and bad (dharma-adharma) (XXIV.6).

Underlying this two-fold criticism there seems to be a basic assumption. Whereas in the early discourses the four noble truths could account for the fruits of ordinary human existence (i.e., of the path, magga) as well as the fruits of the higher life (i.e., freedom or nibbana), it seems that when the above criticism of emptiness by the substantialists of the Buddhist tradition was presented, the four noble truths were looked upon as referring primarily to the higher life. Hence the need to present an additional criticism that emptiness contradicts even the worldly (laukikan).

Nagarjuna’s attempt here is to collapse these two issues into one and treat them under one rubric, namely dependent arising (prati tyasamutpada) (XXIV.40), which is the central philosophy of Buddhism. For this reason, having made the initial remark that his critics were not conversant with the use or purpose of emptiness and, therefore, are troubled by both emptiness and its meaning (XXIV.7), Nagarjuna immediately proceeds to explain the two truths, instead of the four truths.

Nagarjuna sees the Buddha as expounding two truths:
1. the truth of worldly convention (loka-samvrti), and
2. the truth in terms of ultimate fruit (paramarthathata).

Nagarjuna had already devoted twenty one chapters (I-XXII) to the explication of the first of these truths. Causality, space, time, motion, the human personality, action, consequence, good and bad all of these have been dealt with at length. Explanations of these in terms of absolute existence or nihilistic nonexistence were rejected in favor of dependence (prati tyasamutpada) and, therefore, of emptiness (suniyata). Artha or fruit of existence, whether that be good or bad, was recognized. Attempts on the part of the metaphysicians who wanted to perceive with absolute certainty how a cause produces an effect were abandoned, since such attempts led to the recognition of unacceptable entities such as self (atman) or substance (svabhava). The abandoning of such attempts did not lead Nagarjuna on to the other extreme of denying any connection between cause and effect, action and consequence. The element of uncertainty involved in the cause-effect relationship made him more cautious than either the Sarvastivadins or the Sautrantikas, and hence he was more defensive and negative in his descriptions. Yet in no way did he want to abandon that principle of explanation, Chapter XVII on “The Examination of Action and Consequence” (Karna-phala-pariksa) being the most illustrative example. The fact that a human being, having understood the nature and functioning of phenomena (dharma), attempts to achieve various desired results (artha) by manipulating such phenomena, was well known to Nagarjuna when he spoke of both samskaras and samkalpas. However, the possibility of achieving ultimate freedom (nirvana) or the ultimate fruit of existence (paramartha) (sometimes referred to by the Theravada tradition as agga-phala, Sk. agra-phalas24), has now been questioned by his opponents. Again, without falling into the extremes of existence and non-existence and recognizing the emptiness of all dependently arisen phenomena, Nagarjuna had to explain the fruits (artha) as well as the ultimate fruit (paramartha) of existence. In speaking of these two truths, if he had assumed that the latter transcended the former, he would be presenting the ideas attributed to the so-called Mahayana, rather than quoting the early discourses or referring to the teachings of the Buddhas, Pratyeka-buddhas and the Sravakas. This, however, is not the case, for his explanation of artha as well as paramartha is couched in the same language, and that was the language of dependence and emptiness. Hence his famous dictum: “Without relying upon convention, the ultimate fruit is not taught. Without understanding the ultimate fruit, freedom is not attained” (XXIV.10). Artha as well as paramartha are truths (satya). The former is not presented as an un-truth (a-satya) in relation to the latter, as it would be in an absolutistic tradition. Neither is the former sublated by the latter. There is no indication whatsoever that these are two truths with different standing as higher and lower.

The fruits of ordinary human existence (artha), understood in terms of permanent existence (svabhava) conflicted with everything in experience: “If you perceive the existence of the existence in terms of self-nature, then you will also perceive these a non-conditions” (XXIV.16). This would lead to a denial of all phenomena such as effect (karya), cause (karana), agent (kartr), doing (karana), action (kriya) as well as arising (utpada), ceasing (nirodha), and fruit (phala) (XXIV.17). This compelled him to make the most famous of his statements: “We state that whatever is dependent arising, that is emptiness. That is dependent upon convention. That itself is the middle path” (XXIV.18). Everything is placed in one basket, the basket of
“dependent arising” (pratityasamutpada). “A thing that is not dependently arisen is not evident. For that reason, a thing that is non-empty is, indeed, not evident (ibid. 19).

With that analysis, Nagarjuna was ready to defend the four noble truths, reconciling it with his conception of emptiness (ibid. 20-21). “Whoever perceives dependent arising also perceives suffering, its arising, its ceasing and the path [leading to its ceasing],” (ibid 40).

Buddha’s statement in the Majjhima-nikaya: “He who perceives dependent arising also perceives the dhamma,” could not have received better confirmation from a disciple who was removed from the Buddha by at least six centuries.

**Batchelor (Poetic “Translation”)**

Awakening

[The first two stanzas are included in a footnote and left out of the main body of the text]

[If everything is empty. 
There would be no rising and passing. 
Ennobling truths would not exist. 
There would be no understanding. 
Letting go, cultivation, realizing. 
Without tasting the fruits of practice, 
There would be no community; 
With no truths, no dharma either. 
With no community and dharma, 
How could you awaken? 
Talk of emptiness maligns what is of value. 
Acts and fruits, good and evil, 
Conventions fall apart.”

Not knowing emptiness, 
The need for it 
Or the point of it, 
You subvert it.
]

The dharma taught by buddhas 
Hinges on two truths: 
Partial truths of the world 
And truths which are sublime. 
Without knowing how they differ, 
You cannot know the deep; 
Without relying on conventions, 
You cannot disclose the sublime; 
Without intuitions the sublime, 
You cannot experience freedom.

Misperceiving emptiness 
Injures the unintelligent 
Like mishandling a snake 
Or miscasting a spell.

The Buddha despaired 
Of teaching the dhamma, 
Knowing it hard 
To intuit its depths.

Your muddled conclusions 
Do not affect emptiness; 
Your denial of emptiness 
Does not affect me.

When emptiness is possible, 
Everything is possible; 
Were emptiness impossible, 
Nothing would be possible.

In projecting your faults onto me, 
You forget the horse you are riding.

To see things existing by nature, 
Is to see them without 
Causes or conditions, 
Thus subverting causality, 
Agents, tools and acts, 
Starting, stopping and ripening.

Contingency is emptiness 
Which, contingently configured, 
Is the middle way. 
Everything is contingent; 
Everything is empty.

Were everything not empty, 
There would be no rising and passing. 
Ennobling truths would not exist. 
Without contingency 
How could I suffer pain?

This shifting anguish 
Has no nature of its own; 
If it did, how could it have a cause? 
Deny emptiness and you deny 
The origins of suffering.
If anguish existed by nature,
How would it ever cease?
Absolute misery could never stop.
How could you cultivate a path
That exists by nature?
How could it lead to the end of pain?
A path on which you tread
Can have no essence of its own.

If confusion existed by nature,
I would always be confused.
How could I know anything?
Letting go and realizing,
Cultivation and fruition
Could never happen.

Who can attain absolute goals
That by nature are unattainable?
Since no one could reach them,
There would be no community;

With no truths, no dharma either.
With no community or dharma
How could I awaken?
I would not depend on awakening
Nor awakening on me.

A naturally unawakened person
Would never awaken
No matter how hard
He practiced for its sake.
He would never do good or evil;
An unempty person would do nothing.
He’d experience fruits of good and evil
Without having done good or evil deeds.
How can fruits of good and evil not be empty
If they are experienced?

To subvert emptiness and contingency
Is to subvert conventions of the world.
It engenders passivity:
Acts without an author,
Authors who do not act.
Beings would not be born or die;
They would be frozen in time,
Alien to variety.

If things were unempty,
You could attain nothing.
Anguish would never end.
You would never let go of compulsive acts.

To see contingency is to see
Anguish, its origins, cessation and the path.

JONES (COMMENTARY)

24. The Four Noble Truths

The four noble truths in Buddhism are that there is suffering, that suffering has a cause (desires based on the root-ignorance), that there is a cure (removing the root-ignorance), and a prescription (the Buddhist eightfold path). (See Dalai Lama 2009: 17-23.) The form of the four noble truths follows ancient Indic medical practice - here the disease in question is the existential “dis-ease” permeating everything in the phenomenal world.

This chapter is the very core of Madhyamaka philosophy. The opponent starts it off by imputing an ontological nihilism to Nagarjuna that would destroy the Buddhist way of life: if everything is empty, then the four noble truths and so forth do not exist. Nagarjuna corrects his opponent by claiming that the Buddha’s teaching is based on two categories of truth: truths from a conventional point of view and truths from the highest point of view (v. 8). Truths from the highest point of view (parama-arthatas) give the ultimate ontological status of something. Conventional truths (lokasamvriti) are about what the unenlightened count as real (i.e., discrete entities), depending on our conceptual conventions. Thus, ultimate truths are stated from the ontologically correct point of view, while conventional truths still involve the idea of self-existent entities for practical purposes. Teaching ultimate truths too depends on our conventions (vyavahara)(v. 10). And without understanding those truths, nirvana cannot be attained (v. 10). This distinction is very important and will be discussed in the Essay.

Nagarjuna can now claim that he accepts all the worldly phenomena in the conventional sense, while denying that they exist from the highest point of view: the phenomena are empty of self-existence and there are no self-existent entities populating the world, but the phenomena still exist in some sense - this is reality as it truly is (tattva). In fact, he can go on to say that only if phenomena are empty do things work - self-existent entities cannot change, and so if the world were nothing but a collection of discrete, self-existent things nothing would occur and suffering could not end (vv. 37-39). (Notice that in verse 38, a self-existent world would also be unarisen and unceasing, like a world empty of self-existence, but in a different manner: if the world is self-existent, it is unchanging and thus does not arise or cease but is static; if the world is empty of self-existence, then it has no real entities that could arise or cease, and thus it is unarisen and unceasing in that sense 120.18], but it is constantly changing.) Thus, verse 4: “For whom emptiness is admissible, everything is admissible. For whom emptiness is inadmissible, everything is inadmissible.” (See also VV 70.) This summarizes how
Nagarjuna sees the world: only if things are empty does anything work; if things were self-existent, everything would be permanent and changeless, and the change we see in the world could not occur. Nothing would exist by causes and conditions (v. 16), and we would have to reject effect, cause, actors, and so forth (v. 17).

One can see emptiness incorrectly (v. 11) by seeing it as a self-existent reality or any type of entity or its absence. Emptiness is not the absence of anything that exists. As long as we are thinking in terms of existent realities or their absence, we are still within a conventional point of view. Verse 12 refers to the Buddha’s doubt about teaching others that he had soon after his enlightenment. (See also Rn18.)

Verse 15 refers to a parable: a king sitting on a horse accuses a horse seller of not delivering all the horses he promised; the king counts the horses, finding one short of the total promised, but the seller points out that the king forgot to count the horse he is seated on.

In verse 18, Nagarjuna equates “emptiness” with “dependent-arising” and with the “middle way” between the dichotomy he sees his opponent committed to: permanent, eternal realities and complete nonexistence. This is more than he sees his opponent committed to: permanent, “dependent-arising” total promised, but the seller points out that the king forgot to count the horse he is seated on.

In verse 18, Nagarjuna equates “emptiness” with “dependent-arising” and with the “middle way” between the dichotomy he sees his opponent committed to: permanent, eternal realities and complete nonexistence. This is more than simply saying that there are no self-existent entities in dependent-arising and that the process itself is empty – emptiness and dependent-arising are synonymous. (Note that Nagarjuna offers no defense of equating “emptiness” with “dependent-arising” either here or elsewhere. He simply states that the two are the same.) This makes emptiness very uncontroversial in his eyes since dependent-arising is central to all schools of Buddhism. In addition, all Buddhists, starting with the Buddha himself, see their position as a middle way between “is” and “is not” – e.g., the Yogacharins see their school as a middle way between eternalism and what they see as the Madhyamaka’s ontological nihilism.

In verse 18, Nagarjuna again calls “emptiness” an indicator (prajnaptir) dependent upon convention (see 22.11). But again, even though it is an ontological term, he does not think it indicates anything real (self-existent) in the world, either ultimately or conventionally, although the unenlightened will be misled by any term into thinking some (real) thing is indicated.

What exists by self-existence is free of suffering, coming-to-be, and ceasing (w. 21-23) and cannot be affected by action (v. 33) - it is permanent and changeless. The religious implications are again pointed out (w. 24-35). Note that the Buddha and his enlightenment are interdependent (v. 31).

In verse 40, Nagarjuna concludes by saying that those who see dependent-arising see the arising and cessation of suffering - this after arguing that nothing real arises or ceases and nothing unreal does either. But from the ultimate point of view that involves the true ontological status of things, there is no real suffering or any real arising or ceasing to be seen. That is, if we see in terms of the concept of “dependent-arising,” then we are still viewing phenomena through a conceptual prism, and that prism must be discarded to reality as it is (tattva).

GYAMTSO (COMMENTARY)

Here the Buddha teaches that the best way to understand the truth of suffering is to know that composite phenomena do not arise and that therefore suffering does not arise either. Suffering does not really happen—it is of the nature of emptiness, as are the other three noble truths as well. To examine the four noble truths and not find anything there, to determine that they do not exist, is the stage of slight analysis. To understand that their nature is beyond all conceptual fabrications is the stage of thorough analysis.

There were people who did not understand this, however, and they criticized Nagarjuna, claiming that he was a nihilist. They said, “If your explanation of the Middle Way that refutes the inherent nature of everything were valid, there would be no four noble truths, no three rare and supreme ones (Buddha, Dharma, and Sangha), no cause and result—in fact, no conventions or expressions would exist at all.” In other words, they equated emptiness with total nonexistence. In order to help them overcome their confusion, Nagarjuna composed this chapter.

Nagarjuna gives a very clear answer to these opponents’ claims in the chapter’s fourteenth verse:

If emptiness is possible,
Then everything is possible,
   But if emptiness is impossible,
Then nothing else is possible either.

"If emptiness is possible" means "if emptiness is the true
nature of things"—but what does that mean? It means that
tings do not truly exist, but rather that they exist in
dependence upon the coming together of causes and
conditions. Emptiness does not mean complete nothingness,

it means dependent origination. Emptiness and dependent
arising have the same meaning. Therefore, when emptiness
is possible, everything is possible. The four noble truths, the
three rare and supreme ones, and everything else in samsara

and nirvana are all perfectly free to arise due to the coming
together of their causes and conditions. If things were not
empty, however, if they were not dependently arisen, then
nothing would be possible. If things truly existed, they
would never change. They would have their own nature that
did not depend on causes and conditions, and therefore
causes and results would not exist. Nothing would ever arise
or cease. There could be no perception or knowledge. This is

why the four noble truths, the three rare and supreme ones,

and so forth are possible only because their nature is
emptiness; they would not be possible if they truly existed.

The eighteenth verse definitively teaches that emptiness,
dependent arising, and the Middle Way all have the same
meaning:

_Whatever is dependently arisen_
_Is explained to be emptiness._

_Its existence is imputed in dependence upon something
else._

_And this is the path of the Middle Way._

The insight of the Middle Way’s teachings is that
whatever is dependently arisen is empty of its own essence.
The reason for this is that whatever thing it may be, its
existence is not inherent but rather is merely imputed in
dependence upon some other basis. For example, when we
look at a collection of parts and give it the name
“automobile,” then “automobile” is a mere name, a mere
imputation, that has no existence other than being merely
that (in For further explanation of how things are imputed to exist in
dependence upon their parts, see chapter 20, “An Examination of

Collections.”). This understanding is the path of the Middle
Way, free from the extremes of existence and nonexistence,
permanence and extinction, realism and nihilism.

From among the sixteen emptinesses that the glorious
Chandrakirti explains in Entering the Middle Way, the
“emptiness of that which is beyond extremes” refers to the
Middle Way, emptiness, and dependent arising. All three of
these share the quality of transcending extremes. They too,
however, are empty of their own nature, and that is the
emptiness of that which is beyond extremes.

The nineteenth verse reads:

_There is not a single phenomenon_
_That is not dependently arisen._

_Therefore, there is not a single phenomenon_
_That is not empty._

This verse describes the union of dependent arising and
emptiness. Emptiness pervades all dependently arisen

phenomena, and from within emptiness, the great variety of
dependently arisen appearances manifest.

Since it is the case that everything included in the four

noble truths is dependently arisen, the four noble truths are

empty. Since it is the case that everything in samsara and

nirvana is dependently arisen, everything in samsara and

nirvana is empty.

Since it is the case that every single thing that appears in

a dream is dependently arisen, everything in the dream is

empty.

Similarly, since it is the case that all inner and outer

phenomena are dependently arisen mere appearances, there

is not a single one of them, either on the inside or on the

outside, that is not empty.

As we saw earlier, Milarepa also sang about the union of
dependent arising and emptiness in his _Song of the Profound
Definitive Meaning Sung on the Snowy Range:_

_When you’re sure that conduct’s work is luminous light,_
_And you’re sure that interdependence is emptiness,_
_A doer and deed refined until they’re gone—_

_This way of working with conduct, it works quite well!_

Thus we can see that the conclusions that the noble

Nagarjuna comes to through logical analysis and those that

the lord of yogis Milarepa realizes with wisdom arising from

meditation are exactly the same. This should help us to gain
certainty in both of these great masters’ teachings.

Chapter Twenty Four Examination of the Noble Truths
(Arya-satya-parikṣa)

GARFIELD COMMENTARY

Chapter XXIV Examination of the Four Noble Truths

While Chapter XXIV ostensibly concerns the Four Buddhist Truths and the way they are to be understood from the vantage point of emptiness, it is really about the nature of emptiness itself and about the relation between emptiness and conventional reality. As such, it is the philosophical heart of Mula-madhyamaka-kārikā. The first six verses of the chapter (XXIV: 1-6) present a reply to Nāgārjuna’s doctrine of emptiness by an opponent charging the doctrine with nihilism. The next eight verses (XXIV: 7-14) are primarily rhetorical, castigating the opponent for his misunderstanding of Madhyamika. The positive philosophical work begins with XXIV: 15. From this point Nāgārjuna offers a theory of the relationship between emptiness, dependent origination, and convention and argues not only that these three can be understood as corelative, but that if conventional things (or emptiness itself) were nonempty, the very nihilism with which the reificationist opponent charges Madhyamika would ensue. This tactic of arguing not only against each extreme but of arguing that the contradictory extremes are in fact mutually entailing is, as we have seen in earlier chapters, a dialectical trademark of Nāgārjuna’s philosophical method. In this chapter, it is deployed with exceptional elegance and acuity.

The opponent opens the chapter by claiming that if the entire phenomenal world were empty, nothing would in fact exist, a conclusion absurd on its face and, more importantly, contradictory to fundamental Buddhist tenets such as the Four Noble Truths (XXIV: 1-6) as well as to conventional wisdom:

_____
Kārikiṃ XXIV.1

INADA (Skt):
Verse 1 (The opponent contends) If everything is sunya there will be neither production nor destruction. According to your assertion it will follow that the Aryan Fourfold Truths are non-existent. - Note: Verses 1 through 6 are views expressed by the opponent. Again, sunya is left untranslated in order to gain currency in Western usage and understanding.

JONES (Skt):
[i] If all this is empty, there is neither arising nor ceasing. And then for you, it follows that the four noble truths - the truth of suffering, its cause, its prescription, and the path to ending it - do not exist.

KALUPAHANA (Skt):
If all this is empty, then there exists no uprising and ceasing. These imply the non-existence of the four noble truths.

MCCAGNEY (Skt):
If all this is open, there is neither arising nor dissolution. The nonexistence of the four noble truths follows for you.

NISHIJIMA (Skt?):
1. When the balanced state of the autonomic nervous system pervades through the whole Universe, The appearance of this world does never exist, and disappearance of this world does never exist.
The Four Philosophies, those are, Idealism, Materialism, Philosophy of Action, and Reality itself, are The Supreme Truth.
Because the insistence that such a Truth does never exist in this world, are the wrong human attitudes, which are attaching to their wrong idea without Reason.

SPRUNG (Skt):
1 If the entire everyday is devoid of self-existence, nothing can come to be nor cease to be. It follows inexorably that, for you, the four Buddhist truths do not hold.

ENGLISH TRANSLATIONS

STRENG (Skt):
1. If everything is empty, there is no origination nor destruction. Then you must incorrectly conclude that there is non-existence of the four holy truths.

BOCKING (Ch):
24v1 If everything is entirely empty
With no arising and no ceasing
Then there will be
No Dharma of the four holy truths.

BATCHELOR (Tb):
"If all were empty, nothing could come about or perish. It would follow for you that the four ennobling truths could not exist

DOCTOR (Tb):
If all of this were empty,
Nothing would arise or be destroyed.
For you it follows that
There are no four noble truths. [XXIV.1]

GARFIELD (Tb):
1. If all of this is empty,
Neither arising nor ceasing,
Then for you, it follows that
The Four Noble Truths do not exist.

GARFIELD-SAMTEN (Tb):
1. If all this is empty,
There would be neither arising nor ceasing,
And for you, it follows that
The Four Noble Truths do not exist.

HAGEN (paraphrase):
[An opponent contends:] If all of this is Empty, then there is neither arising nor ceasing. It follows that the Four Noble Truths do not exist.
If, in point of logical argument the entire everyday (sarvam idam) everything temporal both inner and outer — does not arise, that is lacks being (sunya), and this is your teaching, then many and great are the difficulties which descend upon you. Why? Because if all things were devoid of being then what is so devoid cannot be said to really be and what cannot be said to be can, like the son of a barren woman, neither come to be nor cease to be, because it does not exist (avidya-manatva); so nothing whatsoever would come to be or cease to be. As there is no coming to be nor ceasing to be it follows inexorably for you, who hold that things lack being, that there are no four Buddhist truths (aryasatya) (In 1 These are the founding insights of earliest Buddhism and remain bedrock for all schools. They are: (1) existence is afflicted (duhkha); (2) afflicted existence has an origin; (3) afflicted existence has an end; (4) there is a path leading to the end. These are the aryan truths, often translated as the noble or holy truths. For Nagarjuna they are truths of the wise, i.e. truths for those who have penetrated Buddhism.).

Why? Because it is Buddhist doctrine that the five appropriative factors of personal existence (skandhas), which are interdependent and arise from causes in time are designated afflicted existence (duhkha) in virtue of existence itself being essentially afflicted, because all change is affliction, because all things that come to be in time are afflicted and because of the perversity and essential anguish of existence. Only the wise, whose misbeliefs have been destroyed, fully comprehend afflicted existence. The unwise do not, being in the grip of misbelief: the fixed view that things have self-existent natures even as they appear to have. Just as impaired sense organs, because of old age, sickness or disease perceive sugar and such things as bitter, though their true nature is sweet, and in this cognition bitterness, not sweetness is taken as the truth because the true nature of the object is not perceived, so it is in this matter. Even though the five appropriative factors of personal existence are by nature afflicted, still only those who clearly see the personal factors to be afflicted truly understand existence as afflicted; not those who perceive things otherwise than they are because they are in the grip of misbelief. As it is only for the wise (arya) that the personal factors are afflicted by nature, the truth of afflicted existence (duhkhasatya) is said to be a truth for the wise (aryasatva).

But are not painful feelings defined as afflictions by those who are not wise? How is it then that afflicted existence is a truth only for the wise? Because the truth is that not only painful feelings are afflictions but that all five appropriative personal factors are. As, therefore, only for the wise is that the truth it is called a truth of the wise.

It is said, ‘One does not feel a piece of wool in the palm of the hand but if it gets into the eye it causes discomfort and torment. So the immature man, like the hand, does not know that existence is afflicted; but the wise man, like the eye, alone trembles at the torment.’

Because, that existence is by nature afflicted is the truth only for the wise, it is known as a wise truth.

But if the wise truth of affliction is to make sense, things must come to be and cease to be. If, however, because all things are devoid of self-existence, nothing comes to be nor ceases to be, there can be no affliction. And if there is no affliction how can there be a truth about its origin (samudaya-sayta)? The cause from which afflicted existence issues and springs is called its origin and is understood as the afflictions (klesa) arising from actions which originate in the thirst for existence (trsna) conceived as cause. If, however, there is no affliction which is of the nature of an effect, then there is no origin of it because a cause without an effect is illogical.

When afflicted existence disappears never again to arise, that is known as cessation. If, however, there is no affliction, of what would there be cessation? So the cessation of affliction is not possible either. Thus if there is no affliction (duhkha) there can be no truth of its cessation (nirodhasatya). If there is no cessation of afflicted existence how will there be a way which follows the Buddhist eightfold path leading to the cessation of afflicted existence. Thus the truth of the path (margasatva) does not hold either.

Accordingly, if one declares all things to be devoid of a self-existent nature, it follows inexorably that the four Buddhist truths do not hold. And what harm results from that?

Nagarjuna says (fn 2 Still putting the opponent’s objection),

CANDRAKĪRTI COMMENTARY
Nagarjuna's discussion of the four truths was an inevitable consequence of his analysis of perversions (Chapter XXIII) which, in its turn, was occasioned by a need to explain the perspective of a tathagata (Chapter XXII). The four truths refer to the problem of suffering, the subject matter of two of the perversions, namely, mistaking the unpleasant for the pleasant (asubhe subhan ti) and non-suffering for the suffering (aduhkhe duhkhan ti).

Verses 1-6 in the present chapter pose one major problem faced by the Buddhist (or even by the non-Buddhist) in explaining suffering (duhkha) and, therefore, the four noble truths, when placed in the context of “emptiness” (svabhava). The important questions are: Who are these Buddhists (or non-Buddhists)? Why are they faced with such a problem? The answers to these questions are found in the Abhidharmakosa-bhasya of Vasubandhu.

Vasubandhu refers to a theory proposed by some: "There indeed is no feeling of happiness" (nasty eva sukha vedana) and "Everything is suffering or unsatisfactory" (duhkhaiya tu sarvam)(Akb). There is very little doubt that this interpretation of the Buddha's teaching emerged with and was continued until modern times by thinkers and scholars belonging to the Brahmanical tradition. By ignoring a simple yet extremely important pronoun (namely, idam, “this”), the Brahmanical interpreters transformed the Buddha's teaching from an empirical to an absolutistic system. Thus, the Buddha's statement: sarvam idam duhkham ("all this is suffering") turns out to be an unqualified universal statement: sarvam duhkham ("everything is suffering"). Similarly, a specific statement such as sunyam idam sarvam ("all this is empty") turns out to be another absolutistic one, sunyam sarvam ("everything is empty," a problematic not noticed by Inada.). Threatened by such a problematic situation, the Buddhist metaphysicians were driven to the extreme position of asserting absolute forms of happiness, when they insisted: "Happy feelings do indeed exist in terms of unique character" (asty eva svalakshanatah sukha vedana, Akb). Yet, realizing that the Buddha did not present the world as a "bed of roses," they were compelled to admit that there are come experiences that are inherently unsatisfactory (svabhavenaiva duhkha, ibid.,).

Thus, not realizing that this was all due to a Brahmanical misreading of the Buddha's discourses and assuming that there is a genuine problem, the Buddhist metaphysicians came to admit both suffering or unsatisfactoriness (duhkha) and happiness (sukha) as substantially existing.

Instead of correcting the Brahmanical misreading, they struggled for an explanation:

When [the Buddha] declared: ‘One should perceive happy feelings as suffering,’ [i.e., the perception of one who has eliminated the perversions,] both [happiness and suffering] are available therein. Happiness is inherently so, because there is pleasantness. However, eventually there is suffering, because of its changing and impermanent nature. When that [feeling] is perceived as happiness, it contributes to enlightenment, through its enjoyment. When it is perceived as suffering, it leads to release, by being non-attached to it. (Akb, Yad uktam "sukha vedana duhkhe ti drastavye" ti ubhayam tasyam asti. Sukhatvam ca svabhavatomanapatvat, dukkham ca paryayato viparinamanyadharmatvat, Sa tu sukho dreyamana buddhaya kalpate, tad asvadanat, duhkho dreyamana moksa kalpate, tad vairagyad iti.)

The substance-terminology in the above passage should make it clear as to which Buddhist school was presenting this explanation. There seems to be no question that it was authored by the Sarvastivadins. Thus, it was their desire to uphold the conception of substance that made them uncomfortable with the notion of “the empty” (sunya). The substantialists were prepared to wrestle with the conceptions of substance and causation and, as shown earlier, they produced substantialist theories of causation. However, they could not do the same with the conception of “the empty” (sunya), even though "emptiness" itself may be amenable to such substantialist interpretations (see XXIV.14).

It is in order to highlight this problem that Nagarjuna begins the chapter with a reference to “the empty” (sunya, as in yadi sunyam idam sarvam) rather than to the abstract conception of "emptiness” (sunyata). In Nagarjuna's mind, to preserve the non-substantialist and non-absolutistic standpoint of the Buddha, what needs to be restored is "the empty" rather than "emptiness," because the latter is dependent upon the former, whereas any emphasis on the latter could wipe out the former, as it happened in the case of the absolutists and the substantialists. In presenting the metaphysicians dilemma in this manner, Nagarjuna was more concerned with the mistake of his Buddhist counterparts than with the misreadings of the Buddhist texts by the Brahmanical thinkers. For this reason, he makes no reference to such misreadings as "sarvam sunyam."
1. The Four Noble Truths are: (1) All life in cyclic existence is suffering. (2) There is a cause of this suffering, namely, craving caused by ignorance. (3) There is a release from suffering. (4) The path to that release is the eightfold Buddhist path of right view, right concentration, right mindfulness, right speech, right effort, right action, right morality, right livelihood. The Four Noble Truths, preached by the Buddha in his first teaching after gaining enlightenment, are the fundamental philosophical tenets of Buddhism. If it were a consequence of Nāgārjuna’s doctrine of emptiness that the Four Noble Truths were in fact false or, more radically, nonexistent, that would constitute in this philosophical context an immediate refutation of the position. This is not because these assertions are articles of faith, in the sense of revealed doctrine, but because anyone arguing within this framework has accepted the arguments for them.

INADA (Skt):
Verse 2 - True knowledge, relinquishing (false views), (right) practice, and (right) confirmation will not be possible because of the non-existence of the Aryan Four-fold Truths.

JONES (Skt):
[2] And since the four noble truths do not exist, then the recognition of suffering, the elimination of its cause, the cultivation of ending it through meditation, and the realization of the end of suffering cannot occur.

KALUPAHANA (Skt):
In the absence of the four noble truths, understanding, relinquishing, cultivation, and realization will not be appropriate.

MCCAGNEY (Skt):
Knowledge, abandonment, practice, and realization do not take place by the nonexistence of the four noble truths.

NISHIJIMA (Skt?):
2. Knowledge, abandonment, Action, and results,
Those factors are the Four Sacred Truths,
Leaving from no existence, everything exists really.

SPRUNG (Skt):
2 Because the four Buddhist truths do not hold, the clear knowledge of afflicted existence becomes unintelligible as do its overcoming, the inner acceptance of the way to its overcoming and the final intuitive realization.

STRENG (Skt):
2. If there is non-existence of the four holy truths, the saving knowledge, the elimination of illusion, The "becoming" enlightened (bhāvanā), and the "realization" of the goal are impossible.

BOCKING (Ch):
24v2 And since there are no four truths, Perception of suffering, cutting-off of the accumulation of Karma Realizing cessation and practicing the Way; Such things will not exist.

BATCHelor (Tb):
Since the four ennobling truths would not exist, understanding, letting go, cultivating and realizing would no longer be valid.

DOCTOR (Tb):
Since there are no four noble truths, Complete understanding and elimination, As well as familiarization and actualization, Do not make any sense. [XXIV.2]

GARFIELD (Tb):
2. If the Four Noble Truths do not exist, Then knowledge, abandonment, Meditation and manifestation Will be completely impossible.

GARFIELD-SAMTEN (Tb):
2. If the Four Noble Truths did not exist, Then understanding, abandonment, Meditation, and realization Would not be tenable.

HAGEN (paraphrase):
In the absence of the Four Noble Truths, understanding, relinquishing, cultivation, and realization are impossible.
CANDRAKĪRTI COMMENTARY

Given the consequence that the four Buddhist truths do not hold it becomes logically impossible that there should be (1) clear knowledge (parijnana) of the truth of afflicted existence as the transience, substancelessness and ill of all things, or (2) overcoming (prahana) of the source of affliction, or (3) the inner acceptance of a way (bhavana) leading to the cessation of affliction, or (4) the final realization (saksatkarana) of its cessation (fn 3 These four stages constitute the structure of the Buddhist path.).

And if, because the four Buddhist truths do not hold, there is no clear knowledge of affliction and the other stages, what follows from that?

Nagarjuna says (fn 4 Still putting the opponent's objection.),

KALUPAHANA COMMENTARY

Understanding (parijna) pertains to the first of the four noble truths, namely, that suffering exists. Relinquishing (prahana) refers to the second, namely, the cause of suffering, which is explained as craving (trsna). Realization (saksikar-ma) applies to the third, namely, the state of freedom from suffering, which is nirvana. Cultivation or practice (bhavana) involves the fourth, namely, the path leading to the cessation of suffering.

GARFIELD COMMENTARY

2. Once we reject the Four Noble Truths, the essential ingredients of Buddhist practice become unintelligible. Knowledge of the ultimate nature of things becomes impossible since all of the knowledge gained in this tradition is knowledge of things that accords with the truths. Abandonment of error and craving, and eventually of cyclic existence, becomes unintelligible without the context of the analysis contained in the truths. Meditation loses its point. The eightfold path becomes a path to nowhere. This all amounts to a rejection of the entire Buddhist Dharma, one of the three jewels in which Buddhists take refuge, the others being the Buddha (fn 107. Not only the historical Buddha, but also the possibility of buddhahood in general and one’s own future buddhahood in particular, a point emphasized by the Most Yen. Prof. Sandhong Rinpoche in oral comments.) and the Sangha, or the spiritual community of Buddhist practitioners and teachers.
Kārikā XXIV.3

INADA (Skt):
Verse 3 - As these are non-existent, the Aryan four-fold fruits i.e., spiritual attainments, are also non-existent. As the fruits are non-existent, there will be no one who enjoys the fruits or their fruition. - Note: This verse makes reference to the four paths and fruits of attainment by the one who takes up the Buddhist principles once returner to the empirical level, the non-returner, and the enlightened worthy one (arhat).

JONES (Skt):
[3] If these four things do not exist, then the four noble fruits of the Buddhist way of life - "entering the stream" leading to nirvana, “once returning” for a final rebirth, “never returning,” and attaining nirvana in this life - are not found.

KALUPAHANA (Skt):
In the absence of this [fourfold activity], the four noble fruits would not be evident. In the absence of the fruits, neither those who have attained the fruits nor those who have reached the way [to such attainment] exist.

MCCAGNEY (Skt):
With that nonexistence, the four noble fruits do not occur. Where the fruit is nonexistent, the stage in which the fruits are enjoyed and those who have arrived at the goal do not exist.

NISHIJIMA (Skt?):
3. No existence of the Four Sacred Truths are never recognized, And no existence of the Four Kinds of Sacred Results does never exist at all.
When Result does not exist at all, the Facts of Result does not also exist.
Therefore it is difficult for the Arrival of Reality to be recognized actually.

SPRUNG (Skt):
3 If these are nothing, then the four Buddhist spiritual attainments (in The categories of Buddhist initiates; these are (a) the 'stream-winner', (b) the 'once-returner', (c) the 'non-returner', (d) the arhat (saint.) are nothing; if they are nothing, then no one can either exist in any attainment nor be on the way to it.
The non-absolutistic standpoint of early Buddhism is clearly embodied in the doctrine of the four fruits (arya-phala). Even though freedom without grasping (anupada vimukti) is sometimes referred to as the one goal (ekayana), yet a deliberate attempt to assert degrees of attainments where some are considered to be inferior to others is conspicuously absent. Like the relay of chariots (rathavinita), one segment of the path is as important as the other, "dispassion" (vairagya) being one dominant attitude permeating all segments. This has an important bearing on the conception of truth to be discussed soon.
INADA (Skt):
Verse 4 - If the eight aspirations of men do not exist, there will be no Sangha (i.e., Buddhist order). From the non-existence of the Aryan Truths, the true Dharma also does not exist. - Note: The eight refer to the four matured states and the four arrived states mentioned in the previous.

JONES (Skt):
[4] If the eight types of practitioners connected to the four fruits (i.e., those who aspire for one of the four fruits and those who have attained one) do not exist, so too the community of monks and nuns does not exist. In addition, because the four noble truths do not exist, there is no true doctrine.

KALUPAHANA (Skt):
If the eight types of individuals do not exist, there will be no congregation. From the non-existence of the noble truths, the true doctrine would also not be evident.

MCCAGNEY (Skt):
If the above eight kinds of persons or human beings do not exist, the Buddhist community does not exist. From the non-existence of the Noble Truths, the true Teaching does not occur.

NISHIJIMA (Skt?):
4. When the Buddhist Sangha does not exist, this world does not exist.
And then, they, the eight kinds of people and personalities, are also too.
And the four kinds of Sacred Truths transcend the existence, Even the Real Universe itself is never recognized at all.

SPRUNG (Skt):
4 If the eight spiritual categories (fr The four attainments and the four states of being on the way to them.) do not exist, there can be no Buddhist community of monks. Because the four Buddhist truths are nothing there can be no Buddhist Truth.

STRENG (Skt):
4. When the community of Buddhists does not exist, then those eight "kinds of persons" i.e., four abiding in the fruit and four who are obtaining do not exist. Because there is non-existence of the four holy truths, the real dharma does not exist.

BOCKING (Ch):
24v4 If there are not the eight (types of) holy person
Then there will be no Sangha--jewel.
And because there are no four truths
There will be no Dharma--jewel either.

BATCHelor (Tb):
"If those eight beings did not exist, the Community would not exist. Since there would be no ennobling truths, the sublime Dharma could also not exist.

DOCTOR (Tb):
If the eight persons do not exist,
Then there is no Sangha.
Because there are no noble truths,
There is no sacred Dharma. [XXIV.4]

GARFIELD (Tb):
4. If so, the spiritual community will not exist.
Nor will the eight kinds of person.
If the Four Noble Truths do not exist,
There will be no true Dharma.

GARFIELD-SAMTEN (Tb):
4. If so, without the eight kinds of person,
There would be no sangha.
If the Four Noble Truths do not exist,
There can be no exalted Dharma.

HAGEN (paraphrase):
If the eight types of individuals do not exist, there is no Sangha. If the Four Noble Truths do not exist, there is no True Dharma.
Inada was probably assuming that cet refers to thought (citta) when he translated part of the first line as "the eight aspirations of men do not exist," whereas it could be more appropriately read as a conditional particle. The association of the true doctrine (sad-dharma) with the four noble truths (arya-satya) to a point where the absence of the latter implies the non-existence of the former should naturally raise questions regarding the more popular assignment of doctrines to the various schools where the four noble truths are assigned to the so-called Hinayana with the superior Mahayana having something more to offer. Such an assignment becomes really questionable when a great Mahayana thinker like Nagarjuna himself admits of such a correlation (XXIV.30). This equation is also significant for another very important reason. Dharma, as "teaching" also means a "statement" of doctrine. Some modern linguistic philosophers would prefer to use the term "truth" primarily in referring to statements rather than to facts. Sad-dharma, identified with truth, seems to accommodate such a perspective.

GARFIELD COMMENTARY

4. These verses highlight these implications regarding the Dharma, but also point out that the rejection of the Four Noble Truths entails the nonexistence of the Sangha. For absent practice and the fruits of the path - that is, realization and accomplishment - there will be no practitioners and realizers.
**Kārikā XXIV.5**

**INADA (Skt):**
Verse 5 - Without Dharma and Sangha, how could there be Buddha? Consequently, what you assert also destroys the Three Treasures. - Note: The implication here is that since all is sunya, there are no grounds for asserting the Three Treasures, i.e., the Buddha, the Dharma, and the Sangha.

**JONES (Skt):**
[5] With no true doctrine and no religious community, how can there be the Buddha? Thus, speaking in this way you indeed reject the three Jewels of Buddhism.

**KALUPAHANA (Skt):**
(not translated)

**MCCAGNEY (Skt):**
Where the Teaching and the Buddhist community do not exist, how will the Buddha exist? Thus speaking, the three jewels are denied by you.

**NISHIJIMA (Skt?):**
5. If there were nothing in the Universe, and there were nothing in the Buddhist Organization, How is it possible for a Person, who has realized the Truth, to exist even in future? Similarly the three kinds of Buddhist Values, Buddha, Dharma, and Sangha, are just jewels. But your insistences are attacking and making Buddhism retreat.

**SPRUNG (Skt):**
5 If neither the community of monks exists nor the Buddhist Truth, how can there be an enlightened one? By declaring that all things lack self-existence you reject the three jewels.

**STRENG (Skt):**
5. And if there are no dharma and community, how will the Buddha exist? By speaking thus, that everything is empty certainly you deny the three jewels i.e., the Buddha, the dharma, and the community.

**BOCKING (Ch):**
24v5 With no Dharma - or Sangha-jewels
There will also be no Buddha-jewel.
Thus, one who teaches emptiness Destroys the three jewels.

**BATCHelor (Tib):**
“If the Community and the Dharma did not exist, how could Buddha exist? When you talk of emptiness, the three Jewels are maligned.

**DOCTOR (Tib):**
If there is no Dharma and no Sangha, How could there be any Buddha?
This teaching of emptiness Invalidates the three jewels. [XXIV.5]

**GARFIELD (Tib):**
5. If there is no doctrine and spiritual community, How can there be a Buddha?
If emptiness is conceived in this way, The three jewels are contradicted.

**GARFIELD-SAMTEN (Tib):**
5. If there is no Dharma and sangha, How can there be a Buddha?
If emptiness is construed in this way, The existence of the three jewels is undermined.

**HAGEN (paraphrase):**
If the Dharma and the Sangha did not exist, how can there be the Buddha? By saying that everything is empty, you deny the Three Treasures, as well as the fruit of attainment, good and bad, and all conventional truths.
PINGALA COMMENTARY

24/5 If everything in the world was entirely empty with nothing existing, there would be no arising and no ceasing, and because of no arising and no ceasing there would be no four holy truths. Why is this? The truth of suffering arises from the truth of accumulation (of karma), the truth of accumulation being the cause, and the truth of suffering the effect. The truth of the cessation of suffering and accumulation is called the truth of cessation, and that which enables one to arrive at the truth of cessation is called the truth of the Way, the truth of the Way being the cause, and the truth of cessation the effect.

(32b27) Thus the four truths involve cause and effect. If there were no arising and no ceasing there would be no four truths, and if there were no four truths, there would be no perception of suffering, cutting-off of accumulation, realization of cessation or cultivation of the Way, and without perception of suffering, cutting-off of accumulation, realization of cessation and cultivation of the Way there would not be the four sramana-fruits.

(32c1) Without the four sramana-fruits there could not be the four types of aspirants and the four types of attainers, and if these eight categories of holy people did not exist there would be no jewel of the Sangha. Also, if the four holy truths did not exist there would be no jewel of the Dharma, and if the jewels of the Dharma and the jewel of the Sangha did not exist, how could there possibly be a Buddha? 'Buddha' means to have obtained the Dharma, so if there is no Dharma, how can there be a Buddha? Your (Nagarjuna's) teaching that all dharmas are entirely empty, consequently destroys the three jewels. Moreover:

CANDRAKĪRTI COMMENTARY

5ab If neither the community of monks exists nor the Buddhist Truth, how can there be an enlightened one?

As, in this way, there is no clear knowledge of afflicted existence, no overcoming of it, and so, these being nonexistent, the four categories: stream-winner, once-returner, non-returner and arhat are unintelligible. Why? It is the removal of the afflictions which are considered to be the index of these categories.

The four categories with their correlated attainments and fruits are defined precisely in terms of the progressive elimination of affective attachments (klesa) in all three worlds - the world of desire, the world of form and the world of the formless. There are exactly fifteen moments of realization on the way. But the pre-requisite for this process is the possibility of the four achievements — clear knowledge that existence is afflicted, overcoming the origin of afflicted existence, inner realization of the way to overcome it and the final realization. Without these there can be no wise one secure in any of the four attainments or on the way to them.

If neither the four Buddhist truths hold nor the four achievements - clear knowledge and so on - then, because the attainments in which, by inner acceptance and direct vision, these truths are to be grasped, do not obtain, the persons who would be progressing through these stages and realizing them, do not exist; so the Buddhist community of monks does not exist. The community of monks, which exists by virtue of realization of cessation or cultivation of the Way, and penenetrating to the truth, and by virtue of the immediate experience of the ultimate truth due to not being sundered from the illustrious Buddha even by all the demons, and by virtue of its enjoying utterly clarified knowledge, would not exist if the eight spiritual categories of person did not exist.

If the four Buddhist truths are nothing, there can be no Buddhist Truth (saddharma) either. What is true for the truly wise Buddhists constitutes the Buddhist Truth.

The truth of the cessation of affliction is the doctrine of the attainments, whereas the truth of the path to end affliction is the doctrine of the conduct leading to the attainments; this is the doctrine of final attainment; the explanation which clarifies it perfectly is the doctrine of the scriptures. If the four Buddhist truths are nothing, all this is nothing, 'If the Buddhist truths are nothing, all this is nothing.' 'If the Buddhist truths are nothing there will be no Buddhist Truth; if the Truth and the community of monks do not exist how can there be an enlightened one?'

If the doctrine as expounded here (fn 5 That is, the orthodox view opposed to Nagarjuna.) is true, then it is reasonable that there could be one who was utterly enlightened concerning every mode of every aspect of things because he had realized both the basic truth and its applications. And if the community of monks is real then by its teachings there will be an accumulated store of knowledge, and by taking refuge in it and by reverence toward it and generosity there will be an
accumulated store of merit and so, step by step, one can become enlightened.

Further, if there were no community of monks there would be no candidate for the attainments of stream-winner, once-returner, and so on. And if no one progresses through the various attainments no one can achieve enlightenment. For a revered one must necessarily have achieved the prior stage. Having attained the prior stage, which is by definition to be within the community, a revered one comes to be. If there is no community it follows that there will be no revered Buddha. Again, even a revered one belongs to the community, because he is no longer a learner. And there are those who explain that a revered one belongs to the community because of the saying ‘the community of monks with a Buddha at its head’. In the opinion of these it is clarity itself to say, if the Buddhist Truth and the community do not exist, how can there be an enlightened one?

The Madhyadesikas, because of the system of stages (fn 6 The ten stages of the bodhisattva, who becomes the ideal realized saint of Mahayana Buddhism; he is analogous to the earlier ideal of the arhat.) given in the Mahavastu, maintain that a bodhisattva, as one who is secure in the first stage, having achieved the way of insight, is held to be included in the community of monks. But if the community does not exist there is no bodhisattva either. How then will there be an enlightened one? This is clarity itself. So,

5cd By declaring that all things lack self-existence you reject the three jewels.

That is, by arguing for the absence of being in things you are rejecting Buddha, the Buddhist Truth and the community, which are called the three jewels, because they are difficult to attain, arise only seldom, are not fully realized by those of lesser worth and because they are of great value. Further,

5. The whole point of the Dharma and the Sangha is to make it possible to attain buddhahood. The Dharma provides the philosophical insight and knowledge necessary for enlightenment; and the Sangha provides the teachers, the encouragement, the models, the opportunity for practice, and other support necessary for the strenuous and perseverant practice of the path. The attainment of Buddhahood requires reliance on these two. So, if they are rejected, so is the possibility of Buddhahood. So, the opponent charges, Nāgārjuna’s doctrine of emptiness, in virtue of undermining the Four Noble Truths, denies the existence of the three refuges and makes Buddhism itself impossible.
Kārikā XXIV.6

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 6 - Delving in Sunyata, you will destroy the reality of the fruit or attainment, the proper and improper acts, and all the everyday practices relative to the empirical world.

JONES (Skt):
[6] Speaking in this way about “emptiness.” you reject the true existence of the fruits, of true and untrue doctrines, and of all worldly convent ions.

KALUPAHANA (Skt):
When the doctrine and the congregation are non-existent, how can there be an enlightened one? Speaking in this manner about emptiness, you contradict the three jewels, as well as the reality of the fruits, both good and bad, and all such worldly conventions.

MCCAGNEY (Skt):
Openness, good or bad results, the Teaching, and all worldly everyday activities are denied by you.

NISHIJIMA (Skt?):
6. The balanced states of the autonomic nervous system are the results in the real world,
And both the Subjective Universe and the real Universe are the results in the real world.
All jobs are secular jobs,
And all occurrences in our daily lives are attacked and evaded by Non-Buddhists.

SPRUNG (Skt):
6 Through the lack of self-existence in things you reject the reality of the attainments, the distinction between truth and untruth, and even transactions in the everyday world.

STRENG (Skt):
6. You deny the real existence of a product, of right and wrong, And all the practical behavior of the world as being empty.
PINGALA COMMENTARY

24/6 If you accept the doctrine of emptiness, then you deny sin and merit, and the retributions and rewards of sin and merit. You also negate all conventional worldly dharmas. Since all these kinds of errors ensue, dharmas cannot be empty.

Reply:

CANDRAKĪRTI COMMENTARY

The words ‘arguing for’ should be understood before ‘lack of self-existence’. If all things are devoid of self-existent natures (sunya), if, that is, literally everything does not exist (nasti) (fn 7 The equation of sunya and non-existence is the cardinal error of the opponent.), then right and wrong action, together with the resulting fruits, desired or undesired, will not be possible as they are included in ‘all things’. All those everyday action expressions such as ‘do it’, ‘cook’, ‘eat’, ‘stay’, ‘go’, ‘come’, are included in ‘all things’, and, as all the putative elements of existence are devoid of self-existent natures, they do not make any sense at all. It follows that the argument for the absence of being in things, as given, cannot stand (fn 8 Failing to make sense out of the everyday must be the most serious charge against any philosophy.).

The Madhyamika rejoinder

KALUPAHANA COMMENTARY

At this point the metaphysician brings up the notion of “emptiness” (sunyata). For him, emptiness is a problem, not because of any other reason, but because it implies “the empty” (sunya), and this latter leaves no room for substantial existence (sad-bhava) of the fruits (artha) of both good and bad as well as all the worldly conventions.

Inada's translation of dharma and adharma as proper and improper acts is a corrective to his earlier rendering of these two terms as factor and non-factor at VIII. 5.

However, his translation of samvyavahara as something additional to dharma and adharma can be questioned in the light of the use of vyavahara at XVII.24, where a similar, but not identical, set of categories (punya-papa, “merit and demerit”) is referred to as vyavahara. Indeed, this particular use of the term vyavahara (= samvrti) will throw much light on an understanding of the distinction between the two truths discussed at XXIV.8.

GARFIELD COMMENTARY

6. The implicit dilemma with which Nāgārjuna here confronts himself is elegant. For as we have seen, the distinction between the two truths or two vantage points - the ultimate and the conventional is fundamental to his own method. So when the opponent charges that the assertion of the nonexistence of such things as the Four Noble Truths and of the arising, abiding, and ceasing of entities is contradictory both to conventional wisdom and to the ultimate truth (viz., that all phenomena are dependent, impermanent, merely arising, abiding momentarily and ceasing, and only existing conventionally, empty of inherent existence), Nāgārjuna is forced to defend himself on both fronts and to comment on the connection between these standpoints. Nāgārjuna launches the reply by charging the opponent with foisting the opponent’s own understanding of emptiness on Nāgārjuna. Though this is not made as explicit in the text as one might like, it is important to note that the understanding Nāgārjuna has in mind is one that, in the terms of Madhyamika, reifies emptiness itself. This will be made more explicit in XXIV: 16:
Kārikā XXIV.7

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 7 - (Nagarjuna asserts) Let us interrupt here to point out that you do not know the real purpose of sunyata, its nature and meaning. Therefore, there is only frustration and hindrance (of understanding).

JONES (Skt):
[Reply: 7] We say here that you do not comprehend the purpose of emptiness. Therefore, emptiness and the significance of emptiness distress you.

KALUPAHANA (Skt):
We say that you do not comprehend the purpose of emptiness. As such, you are tormented by emptiness and the meaning of emptiness.

MCCAGNEY (Skt):
We reply that here you have not experienced the purpose in openness, and thus the use of openness is severed from openness by you.

NISHIJIMA (Skt?):
7. In that situation, what are talked are relying upon the balanced autonomic nervous system, But you do not know clearly the ultimate conclusion. Even though it is true that the serene state of the balanced autonomic nervous system is just the aim of the balanced autonomic nervous system, But actually you are totally making your efforts to break down everything without any exception.

SPRUNG (Skt):
7 In our turn we declare that you do not know the purpose of devoidness, nor devoidness itself, nor its meaning. And so you torment yourself in this way.

STRENG (Skt):
7. We reply that you do not comprehend the point of emptiness; You eliminate both "emptiness" itself and its purpose from it.
You do not clearly understand what the characteristics of this 'emptiness' are, or for what reasons it is taught, and you do not understand the meaning of emptiness. Since you lack the capacity to know it for what it really is, you create these doubts and difficulties. Moreover.

You, solely by your own speculations, mistakenly foist onto us the view that the meaning of the absence of being (sunya-tartha) is unreality (nastitva), you calumniate us with such arguments as if all things are devoid of self-existence, there is no coming to be and no ceasing to be' (kārikā 1); you fall into great distress and torment yourself excessively. You torment yourself by diverse unfounded speculations, is what is meant.

However, the meaning of the absence of being which we carefully delineate in this treatise is not the meaning you adopt. Not understanding the meaning of absence of being, you do not understand this absence itself; nor do you understand its purpose (prayojana). Because you have not comprehended the true nature of things as they are in themselves (yathavasthitavastusvarupa) your account makes no sense at all and is unrelated to our own explanation.

Well, what is the purpose of the absence of being or self-existence, in things? It is given in the Chapter on ‘Self and the Way Things Really Are’. ‘From the wasting away of the afflictions and karmic action there is freedom; the afflictions and karmic action arise from hypostatizing thought and this from the manifold of named things. Named things come to an end in the absence of being.’ (MMK XV.5)

This means that the absence of being is taught for the purpose of bringing the manifold of named things (prapanca), without exception, to perfect rest (upasama). That is, the purpose of the absence of self-existence in things is to bring the entire manifold of named things to perfect rest (fn 9 The philosophy of the Prasannapada turns on this thought.). You, however, in erroneously speculating that the meaning of absence is unreality, actually strengthen entanglement in the world of named things; you do not understand the purpose of the absence of being.

And now, what is the absence of being itself? This too was expounded in the Chapter on ‘Self and the Way Things Really Are’. ‘Not dependent on anything other than itself, at peace, not manifested as named things, beyond thought construction, not of varying form thus is the way things are really spoken of.’ (MMK XVIII.9) How can absence of being, whose very nature is the repose of named things, be unreal? You do not understand the absence of being itself either. We expound later in this very Chapter from what base of meaning the expression ‘absence of being’ derives its validity. ‘It is the dependent arising of things which we interpret as the absence of being in them. Absence of being is a non-cognitive, guiding notion presupposing the everyday. It is the middle way itself.’ (MMK XXIV.18)

As is said in the verse by the illustrious one, ‘Whatever is born of conditions, that is not born; it does not come to be in self-existence. Whatever is dependent on conditions is said to be devoid of a self-existent nature. Whoever understands the absence of self-existence is wise.’

Thus the meaning of the term ‘dependent arising’ is the same as the meaning of the term ‘absence of being’. But the meaning of the term ‘non-existence’ is not the meaning of the term ‘absence of being’. By foisting on us the view that the meaning of the term ‘absence of being’ is the meaning of the term ‘non-existence’, you calumniate us. It is clear that you do not understand the meaning of the absence of being either. Not understanding and calumniating us in this way, you necessarily torment yourself.

The two truths

And who is it who calumniates us in this way? Whoever does not understand the incontrovertible distinction between the two truths (satyadvaya) as taught in the sayings of the illustrious one, but who is given to reading the traditional texts literally. That is why Nagarjuna, out of compassion for his adversary and with a view to refuting the false exposition of the doctrine, said, in clarification of the incontrovertible two truths as taught in the sayings of the illustrious one,
Looking at the nature of the objections raised by the Buddhist metaphysicians against the notion of "emptiness," Nagarjuna is insisting that they do not understand "the purpose of emptiness," (suniyatam prayojanam). Does this mean that "emptiness" has a functional or pragmatic value, rather than being an absolute concept? Does it need to be substantiated by "the empty," rather than merely substantiating "the empty." Which is more important, "the empty" or "emptiness," or are they of equal importance? If "the empty" is considered to be important, "emptiness" would be a mere idea with no grounding in experience. If the "emptiness" is looked upon as being important, the empty would turn out to be a fabrication. If both are considered to be equally important, there could be circularity in reasoning based upon them. However, if the empty is considered to be the basis of experience, and emptiness is derived from that experience, this latter could be provisional and remain to be corrected in terms of future experience. In such a case, the circularity involved in arguing about them could be easily eliminated. In the next three verses, Nagarjuna proceeds to provide very specific answers to most of these questions.
Kārikā XXIV.8

INADA (Skt):
Verse 8 - The teaching of the Dharma by the various Buddhas is based on the two truths; namely, the relative (worldly) truth and the absolute (supreme) truth.

JONES (Skt):
[8] The buddhas' teaching of the doctrine rests upon two categories of truths: truth based on worldly conventions, and truth from the highest point of view.

KALUPAHANA (Skt):
The teaching of the doctrine by the Buddhas is based upon two truths: truth relating to worldly convention and truth in terms of ultimate fruit.

MCCAGNEY (Skt):
The instruction of the teachings of the buddhas are based on two truths: the truth of common sense conventions about the world and truth in the higher sense of the word.

NISHIJIMA (Skt?):
8. In the two kinds of Truths, there is one, which is enjoyed as similar to running.
Which are belonging to Buddha, and the teachings in the Rule of the Universe.
The true guidance in the Universe, that is the Truth,
And it is just the Truth without exception, at the same time it is just the Highest Truth.

SPRUNG (Skt):
8 The teaching of the Buddhas is wholly based on there being two truths: that of a personal everyday world and a higher truth which surpasses it.

STRENG (Skt):
8. The teaching by the Buddhas of the dharma has recourse to two truths: The world-ensconced truth and the truth which is the highest sense.

ROBINSON (Skt):
The Buddhas’ Dharma-explanation relies on two truths: the worldly, conventional truth, and the absolute truth.
That is, the teaching of the illustrious Buddha in this world is effective and valid only as based on the twofoldness of truth. Which twofoldness? The truth of a personal everyday world (lokasamvrtisatya) and a higher truth which surpasses it (paramarthasatya).

There is the saying, ‘A permanent self among the factors of personal existence is known as a “world” (loka) because world is founded on such a belief.’ The ordinary person is called a ‘world’ in so far as he is understood to be based on the five factors of personal existence.

‘The everyday’ (samvrti) means being utterly obscured. Again, ignorance arising from the utter obscuring of the true nature of things is called the everyday. Again, to be reciprocally dependent in existence, that is, for things to be based on each other in utter reciprocity, is to be everyday. Again, the everyday means social convention, that is, the world of ordinary language and of transactions between individuals which is characterized by the distinction between knowing and the thing known, naming and the thing named, and so on.

It is everyday convention and obscurement for a person which is the personal everyday (lokasamvrti). What would a non-worldly or non-personal everyday be from which we distinguish the personal or worldly everyday? This question is superfluous at this juncture and a reply would be a repetition of what has already been settled. Those who persistently perceive things mistakenly because of impaired senses, defective vision or jaundice for example, are without a world (aloka), or are non-persons. What they take to hold for the world holds for a non-world. The truth of the everyday world is distinguished from this. The

Madhyamakavatara deals with this in some detail and it can be studied there. What is true in and for a personal everyday world is personal everyday truth (loka-samvrtisatya). The exhaustive totality of words and transactions which are based on the distinction between knowing and the thing known, naming and the thing named and so on, is what is meant by the truth of the everyday personal world. Such a world could not exist in a higher or surpassing sense (paramartha). Because ‘When the object of thought is no more, there is nothing for language to refer to. The true nature of things neither arises nor perishes, as nirvāṇa does not.’ (MMK XVIII.7) This being so how could verbal utterances (vac) or acts of knowledge (jnana) be effective and valid (pravrtti) in the higher or surpassing sense? Because what is higher or surpassing is not dependent on anything other than itself, it is at peace, it is known in and through itself by the wise; it is beyond the world of named things as such; it cannot be demonstrated nor even cognized. As was said earlier, ‘Not dependent on anything other than itself, at peace, not manifested as named things, beyond thought construction, not of varying form thus is the way things really are spoken of.’ (MMK XVIII.9)

What both makes sense (artha) and is surpassing (parama) is the higher or surpassing sense. That alone, taken as the truth, is truth in the higher or surpassing sense (paramarthasatya).

The due distinction between these two truths can be understood in detail from the Madhyamakavatara. The teaching of the Truth by the illustrious Buddhas is effective and valid in so far as it is based on this twofoldness of truth. The structure of the teaching being determined in this way, it follows:

**KALUPAHANA COMMENTARY**

This has turned out to be one of two most discussed verses in Nagarjuna's Karika. Modern disquisitions on the conception of two truths could perhaps fill several substantial volumes. Instead of plodding over trodden ground, the present discussion will be confined to a comparison of the conception of two truths in early Buddhism and the metaphysical version presented by the interpreters of the Abhidharma, with a view to clarifying Nagarjuna's position. Nagarjuna's version will be examined in the light of the problems posed at the beginning of the present chapter, as well as his reference to worldly conventions in the previous chapters. In the Sutta-nipata, the Buddha condemned any attempt to uphold a view (ditthi) as the ultimate (paramam)(Sn 796ff.). Refusing to recognize any knowledge of “things as they really are,” and making a more sober claim to knowledge of “things as they have come to be” (yathabhuta), the Buddha was reluctant to accept any notion of paramattha as “ultimate reality.” Instead, he claimed to know “the dependently arisen” (paticcasamuppada) and, on that basis, formulated the conception of “dependent arising” (paticcasamppada). In such a context, it was more meaningful for him to speak of attha (Sk. artha) and paramattha (Sk. paramartha) in the sense of fruit, consequence, or result ( = phala, as in
Buddhist metaphysicians were faced with the problem of reconciling the four truths with their conception of substance (svabhava), they were compelled to fall back on the conception of two truths (Akb). However, their interpretation of the two truths is totally different from the Buddha's and, in fact, seems to be contrary to it. Here again, Vasubandhu is our source.

As a Sautrantika metaphysician, Vasubandhu refers to the two truths (satya) and surreptitiously moves on to a discussion of existents (sat): samvrti-sat and paramartha-sat (Akb). He then provides two examples to illustrate the nature of samvrti-sat. The first is a 'pot' (ghata). There cannot be knowledge of a pot when it is broken into pieces. The second is water (ambu). Water is not known independent of the knowledge of "form" (rupa). Contrasted with these two is knowledge of the paramartha-sat.

Material form (rupa) is an example of such existence. In this case, when an object is broken down into its ultimately irreducible elements, namely, atoms (paramanu), there is knowledge of the "unique nature" (svabhava = svalaksana?) of such atoms. For the metaphysician, that unique nature, whether it is called svabhava or svalaksana, has always remained an epistemological enigma.

This interpretation of the two truths is totally absent either in the early discourses or in the canonical Abhidharma. In the so-called Theravada tradition, it appears for the first time in the non-canonical texts (Miln 160), contributing, as it did in the case of the Sarvastivada and Sautrantika schools, to insoluble problems such as the duality of mind and matter. Vasubandhu's statement of the two truths-samvrti and paramartha in the above context, where he was recording the interpretation of the Sautrantika view, remains in sharp contrast to the spirit of the Buddha's teaching on "non-substantialism." This should certainly provide an interesting background to the analysis of Nagarjuna's own version of the two truths.

GARFIELD COMMENTARY

8. This is the first explicit announcement of the two truths in the text. It is important to note that they are introduced as two truths, and that they are introduced as distinct. This will be important to bear in mind later. For it is tempting, since one of the truths is characterized as an ultimate truth, to think of the conventional as "less true." (fn 108. See, for instance, the comments of Murti (1985) on this verse: The paramārtha, however, can be understood and realized only negatively, only as we remove the samvrti, the forms which thought has already, unconsciously and beginninglessly, ascribed to the real. The real is to be uncovered, discovered and realized as the reality of appearances. In the order of our discovery, the removal of Samvrti must precede our knowledge of the paramārtha. (p.xxvi [emphasis in the original]). As we shall see, this analysis of the distinction between the two truths as an appearance/reality distinction is explicitly rejected by Nāgārjuna in XXIV: 18, 19. I agree with Kalupahana (1986), who notes that “artha as well as paramartha are truths (satya). The former is not presented as an un-truth (a-satya) in relation to the latter, as it would be in an absolutistic tradition. Neither is the former sublated by the latter.” But Kalupahana goes a bit too far when he continues, “There is no indication whatsoever that these are two truths with different standing as higher and lower” (p. 69). For there is clearly an important sense in which, despite their ontic unity, the ultimate truth is epistemologically and soteriologically more significant than the conventional. Kalupahana also errs in my view when he characterizes the two truths as “two fruits” and, hence, as different but complementary moral ideals (p. 332). In his zeal to see Nāgārjuna as a non-Mahayana philosopher and as a Jamesian pragmatist, I fear that he distorts the central epistemological and metaphysical themes of the text.) Moreover, we will see later that while the truths are introduced as quite distinct here, they are in another sense identified later. It will be important to be very clear about the respective senses in
which they are distinct and one. The term translated here as “truth of worldly convention” (Tib: kun-rdzob bden-pa, Skt: samvrti-satya) denotes a truth dependent upon tacit agreement, an everyday truth, a truth about things as they appear to accurate ordinary investigation, as judged by appropriate human standards. (fn 109. It should be noted that both Sanskrit and Tibetan offer two terms, each of which in turn is often translated “conventional truth.” Sanskrit presents “Saṃvṛtisatya” and “vyavahāra-satya.” The former is delightfully ambiguous. “Saṃvṛti” can mean conventional in all of its normal senses - everyday, by agreement, ordinary, etc. But it can also mean concealing, or occluding. This ambiguity is exploited by Madhyamika philosophers, who emphasize that the conventional, in occluding its conventional character, covers up its own emptiness. Candrakīrti’s commentary to this verse distinguishes three readings, reflecting three distinct etymologies: “Saṃvṛti” can mean concealing; it can mean mutually dependent; it can mean transactional, or dependent on linguistic convention. The latter is captured exactly by the second term “vyavahāra,” which simply means transactional - determined by convention. Tibetan presents not only “kun-rdzob bden-pa,” which literally means costumed, or disguised, picking up one of the meanings of “saṃvṛti,” but “tha-snyed bden-pa,” which means nominal, or by agreement, picking up the other meaning. Because these two Tibetan terms are, according to most Tibetan interpretations of Madhyamika, identical in extension, they are often treated as synonymous. This is a bit unfortunate for when we come to the parallel pair of terms for conventional existents, “kun-rdzob yod-pa” and “thasnyed yod-pa,” this coextension breaks down in an important case: emptiness is a nominal (tha snyed) existent, but not a concealing (kun-rdzob) existent. See Nagao (1989), pp. 40-59, and (1991), pp. 13-16, for additional discussion of the Sanskrit etymologies and of the sense in which the conventional truth is a truth. Kalupahana (1986), however, argues (p. 88) that whenever Nāgārjuna uses the terms “saṃvṛti” or “vyavahāra,” he “was referring to moral conventions of good or bad.” He argues that the relation between the two truths is a relation between an ideal life and conventional morality. This claim about usage, however, seems just plain erroneous.)

The term “ultimate truth” (Tib: dam-pa ’i don gyi bden-pa, Skt paramārtha-satya) denotes the way things are independent of convention, or to put it another way, the way things turn out to be when we subject them to analysis with the intention of discovering the nature they have from their own side, as opposed to the characteristics we impute to them.
Kārikā XXIV.9

Bocking (Ch): 24v9 If a person is unable to perceive
The distinction between these two truths
Then he will not know the real meaning
Of the profound Buddha-Dharma.

Doctor (Tib): Those who do not understand
The distinction between these two truths,
Fail to comprehend the profound reality
Of the Buddha’s teaching. [XXIV.9]

Garfield (Tib): 9. Those who do not understand
The distinction drawn between these two truths
Do not understand
The Buddha’s profound truth.

Garfield-Samtén (Tib): 9. Those who do not understand
The distinction between these two truths
Do not understand
The Buddha’s profound teaching.

Hagen (paraphrase): [axiomatic] Those who do not understand the
distinction between these two truths do not
understand the profound Truth in Buddha’s teaching.
PINGALA COMMENTARY

24/9 As for ‘conventional worldly truth’: all dharmas are empty in their nature, but because of our worldly perverted perceptions we produce false and illusory dharmas, and this is worldly reality. Since the saints and sages know the true nature of these perverted perceptions, they know that all dharmas are utterly empty and that there is no arising, and this is the truth of the ultimate meaning which constitutes reality for the saints.

(32c23) All the Buddhas rely on these two truths in order to teach the dharma to living beings. A person who is unable to distinguish properly between these two truths does not know the real meaning of the extremely profound Buddha-Dharma. To say that ‘dharmas are non-arising’ is the truth of the ultimate meaning and that the other conventional truth is not necessary, is not correct, and why?

CANDRAKĪRTI COMMENTARY

Some may object: Let it be that the surpassing sense is inherently not of the nature of named things. What then is the purpose of the inferior teaching which has to do with the factors of personal existence, the elements, the senses and sense fields, the Buddhist truths, dependent arising and so on, and which has nothing to do with a higher sense? Surely what is untrue should be rejected; and why should that which is to be rejected, be taught?

We reply. That is indeed true. However, unless the everyday world of verbalized transactions (laukika vyavahara) — that is, the realm of naming and the thing named, knowing and the thing known, and so on — has been accepted as a base (abhyu-pagamyā) it is impossible to point out, or to teach (desayitum) the surpassing sense. And if it is not pointed out, it cannot be comprehended; if the surpassing sense is not realized nirvāṇa cannot be attained. Nagarjuna expounds it this way:

KALUPAHANA COMMENTARY

Nagarjuna is, of course, criticizing his opponents for not understanding the Buddha's message. If so, Nagarjuna's own explanation of these two truths should not come anywhere close to the one discussed by Vasubandhu, according to which the samvṛti represents a mere designation, not an ultimate reality or paramartha. It is an ontological speculation which is not supported by the Buddha's own conception of dependent arising.
 Vyavahāram anāśritya paramārtho na deśyate
paramārtham anāgamya nirvāṇam nādhigamyate ||10||

ruò bù yì sú dì bù dé dì yì yì
bù dé dì yì yì zé bù dé niè pán

(2)tha sñad la ni ma brten par || dam pa’i don ni bstan mi nus ||
dam pa’i don ni ma rtogs par || mya ‘nan ‘das pa thob mi ’gyur ||

INADA (Skt):
Verse 10 - Without relying on everyday common practices (i.e.,
relative truths), the absolute truth cannot be expressed.
Without approaching the absolute truth, nirvana cannot be
attained.

JONES (Skt):
[10] Without relying upon worldly convention, the truth from
the highest point of view cannot be taught. And without
reaching the truth from the highest point of view, nirvana
cannot be achieved.

KALUPAHANA (Skt):
Without relying upon convention, the ultimate fruit is not
taught. Without understanding the ultimate fruit,
freedom is not attained.

MCCAGNEY (Skt):
Higher truth is not taught independently of common practice.
Liberation is not accomplished by the unattainable higher
truth.

NISHIJIMA (Skt?):
10. What to do something usually have some kind of unreliable
characters.
It is rather difficult for us to indicate the perfect Truth.
It is impossible for us to arrive at the highest Truth to arrive at it.
The perfectly arrive at the state of balanced autonomic nervous
system is rather actually impossible for us.

SPRUNG (Skt):
10 Unless the transactional realm is accepted as a base,
the surpassing sense cannot be pointed out; if the
surpassing sense is not comprehended nirvāṇa
cannot be attained.

STRENG (Skt):
10. The highest sense of the truth is not taught apart
from practical behavior, And without having
understood the highest sense one cannot understand
nirvana.

ROBINSON (Skt):
Without reliance on the expressionnal [truth], the absolute Is
not taught; without arriving at the absolute, nirvana is not
reached.

ENGLISH TRANSLATIONS

BOCKING (Ch):
24v10 Unless you rely on the conventional truth
You will not attain the ultimate meaning.
Unless you attain the ultimate meaning
You will not attain nirvana.

BATCHelor (Tb):
Without relying on conventions, the sublime meaning
cannot be taught. Without understanding the sublime
meaning, one will not attain nirvana.

DOCTOR (Tb):
Without relying on convention,
The ultimate cannot be shown.
Without realizing the ultimate,
Suffering cannot be transcended. [XXIV.10]

GARFIELD (Tb):
10. Without a foundation in the conventional truth,
The significance of the ultimate cannot be taught.
Without understanding the significance of the ultimate,
Liberation is not achieved.

GARFIELD-SAMTEN (Tb):
10. Without depending on the conventional truth,
The meaning of the ultimate cannot be taught.
Without understanding the meaning of the ultimate,
Nirvana is not achieved.

HAGEN (paraphrase):
[axiomatic] Without relying upon convention, the
ultimate fruit is not taught. Without understanding the
ultimate fruit, freedom is not attained.
24/10 The ultimate meaning is entirely dependent on words and expressions, and words and expressions are mundane and conventional. Therefore, without reliance on the conventional and the mundane, the ultimate meaning cannot be expounded. Unless one attains to the ultimate meaning, how can one attain nirvana? Therefore, although dharmas are non-arising, there are these two (levels of) truth.

Further.

This is why the everyday world (samvrti), as we have defined it, because it is the means to the attainment of nirvana, must, at the outset, necessarily be accepted. It is like a container for someone who wants water. This being so, whoever gives an account of the absence of being in things, ignoring our definition of the twofoldness of truth as that of the personal everyday world and that of the higher sense, such a man,

Unless one is committed to upholding a theory of linguistic or conceptual transcendence of ultimate truth or reality, there seems to be no reason to restrict the use of the terms samvrti, vyavahara, or prajnapti to refer primarily to linguistic convention. These terms could and did stand for any kind of convention, whether it be linguistic, social, political, moral, or religious. As mentioned earlier (see comments on XXIV. 8), all such conventions are pragmatic and contextual. As such, truth relating to them would also be pragmatic and contextual.

The fact that in the two previous instances when Nagarjuna used the term vyavahara (XVII.24; XXIV.6), he used it in the context of a discussion of morality, is of utmost significance. It is in this same context that the Buddha used the term vohara (D 3.232 anariya-vohara = musavada, etc., and ariya-vohara = musavada veramani, etc.) as well as the term sammuti (= samvrti, Sn 897, 911). These, therefore, are the moral conventions of the world (loka, laukika, see XXIV.6) that are pragmatic, yet contextual. However, an ideal moral truth cannot be strictly confined to a particular context. It needs to be more universal and comprehensive. This, indeed, was the Kantian problem. If Nagarjuna was following the Buddha's solution to this problem (see comments on XXIV. 7), he could not have ignored the pragmatic component in the universal moral principle formulated by the Buddha. A moral law that is incapable of accommodating any exceptions can be utterly useless and even harmful. As William James once remarked, "There is always a pinch between the ideal and the actual which can only be got through by leaving part of the ideal behind" ("Moral Philosophies and Moral Philosophers," in Essays in Pragmatism, ed. Albury Castell, New York: Hafner, 1948, p. 78). This is because the ideal is an abstraction out of the concrete and, therefore, needs to be modified in the light of new concrete situations.

Nagarjuna's statement "Without relying upon the conventional, the ultimate fruit is not expressed" (vyavaharam anäsrita-paramartha na desyate), explains only a one-way relation, not a one-one relationship. He is not saying: "Without relying upon the ultimate fruit, the conventional is not expressed." Thus, he was rejecting a deontological moral principle that provides an absolute source of all moral ideas with no concessions made for individual or concrete situations.

The second line emphasizes the need to have some understanding of that moral principle before one could think of attaining freedom (nirvana). However, it is possible to argue that this moral principle issued out of the Buddha's attainment of nirvana, and that without attaining nirvana one will not be in a position to understand what that principle means. Neither the Buddha nor Nagarjuna would advocate such a position. If one were to fast attain freedom and then look for a moral principle to account for it, one could sometimes end up in wayward fancies, utopias, and hallucinations. For this reason, an understanding of samvrti ("worldly fruit, laukika artha) and, depending upon that, gaining some knowledge of paramartha ("ultimate fruit," lokuttara artha) could serve as a guide for the attainment of freedom (nirvana). In the Therigatha we come across an instance where a disciple claimed that he perceived the faultless dhamma (addasam virajam dhammam) and the path to freedom, while she was still leading a household life (agarasmim vasanti ham). Subsequently, she left the household life and attained freedom from all defilements (Thig 97 ff.). It is true that the Buddha attained
enlightenment and freedom by sheer accident. This is why he was reluctant to recognize any teacher (see M 1.171). Yet, before preaching about it to the world, he spent much time reflecting upon it, as a scientist continues to verify a discovery he has made before making it public.

Nagarjuna probably assumed that people could have the benefit of the Buddha's experience and not waste time experimenting with practices that the Buddha himself found to be fruitless (an-artha).

GARFIELD COMMENTARY

10. The goal of Madhyamika philosophy is liberation from suffering. But that liberation, on Nāgārjuna's view, can only be achieved by insight into the ultimate nature of things - their emptiness - and indeed into the ultimate nature of emptiness, which we shall see to be emptiness again. But this insight can only be gained through reasoning and hence through language and thought. And the truth that is to be grasped can only be indicated through language and thought, which are thoroughly conventional and which can only be interpreted literally at the conventional level. It is important to see here that Nāgārjuna is not disparaging the conventional by contrast to the ultimate, but is arguing that understanding the ultimate nature of things is completely dependent upon understanding conventional truth. This is true in several senses: First, as we shall see, understanding the ultimate nature of things just is understanding that their conventional nature is merely conventional. But second, and perhaps less obscurely, in order to explain emptiness - the ultimate nature of all phenomena - one must use words and concepts and explain such things as interdependence, impermanence, and so forth. And all of these are conventional phenomena. So both in the end, where the understanding of ultimate truth is in an important sense the understanding of the nature of the conventional, and on the path, where the cultivation of such understanding requires the use of conventions, conventional truth must be affirmed and understood. (fn 110. See Streng (1973), pp. 92-98, and Huntington (1989), pp. 48-50, for a similar analysis. (But Huntington places a bit too much emphasis on specifically social convention in his analysis of the conventional truth, neglecting the role of what the Madhyamikas call “primal ignorance;” or the “innate disposition to reify,” embodied in our ordinary cognitive tendencies, which may, in fact, be ontogenetically more fundamental than the specifically social conventions to which they give rise and that then reinforce them. See esp. pp. 52-54.) This analysis contrasts sharply with Murti's (1973) assertion that “the Absolute [ultimate truth] is transcendent to thought ... phenomena in their essential form” (p. 9). This view of the ultimate truth as an absolute standing behind, or in opposition to, a relative truth of the conventional, as a Kantian noumenal world stands to a phenomenal world, is quite contrary to Nāgārjuna's doctrine of the emptiness of emptiness. See also Murti (1955) for an extended defense of this reading and Sprung (1973), esp. pp. 43-46, for another argument for a radical discontinuity between the two truths. Tola and Dragonetti (1981) agree with this view of Madhyamika as nihilistic with regard to the conventional truth: “As a consequence of their argumentation and analysis, the Madhyamikas deny the existence of the empirical reality, of all of its manifestations.... As a result ... there remains (we are obliged to say) ‘something’ completely different.... That ‘something’ is the true reality” (p. 276). Crittenden (1981) is in substantial agreement with this view. Curiously, even Nagao seems to succumb to this temptation to absolutize emptiness when he turns to his analysis of the ultimate truth, despite his emphasis on the identity of the two truths when he is elucidating the conventional. See Nagao (1989), pp. 71-72, 75-76.)

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 11 - A wrongly conceived sunyata can ruin a slow-witted person. It is like a badly seized snake or a wrongly executed incantation.

JONES (Skt):
[11] Seeing emptiness incorrectly destroys a person of little intelligence, just as does a snake incorrectly grasped or a spell incorrectly cast.

KALUPAHANA (Skt):
A wrongly perceived emptiness ruins a person of meager intelligence. It is like a snake that is wrongly grasped or knowledge that is wrongly cultivated.

MCCAGNEY (Skt):
Openness wrongly conceived destroys the dimly witted. It is like a snake grasped by the head or a garbled incantation.

NISHIJIMA (Skt?):
11. When we have to receive a wrong judicial decision, The state of being in the balanced autonomic nervous system, might be seen as if we had become perfectly stupid. There, an animal, which is creeping on the ground like a snake, exists as a bad prize. And sometimes the wickedness of the snake might be too much bad capture.

SPRUNG (Skt):
11 Being feeble-minded is destroyed by the misunderstood doctrine of the absence of being in things, as by a snake ineptly seized or some secret knowledge wrongly applied.

STRENG (Skt):
11. Emptiness, having been dimly perceived, utterly destroys the slow-witted. It is like a snake wrongly grasped or magical knowledge incorrectly applied.

ROBINSON (Skt):
Emptiness wrongly seen destroys the slow-witted, like a serpent wrongly grasped or magic wrongly performed.

BOCKING (Ch):
24v11 If he is unable to perceive emptiness correctly, A dull-witted man will injure himself. It is like a spell unskillfully-invoked Or a poisonous snake unskillfully-grasped.

BATCHELOR (Tb):
If their view of emptiness is wrong, those of little intelligence will be hurt. Like handling a snake in the wrong way, or casting a spell in the wrong way.

DOCTOR (Tb):
When viewing emptiness incorrectly, Those with little insight will be ruined, As when a snake is caught in the wrong way, Or a knowledge mantra is used incorrectly. [XXIV.11]

GARFIELD (Tb):
11. By a misperception of emptiness A person of little intelligence is destroyed, Like a snake incorrectly seized Or like a spell incorrectly cast.

GARFIELD-SAMTEN (Tb):
11. By a misperception of emptiness A person of little intelligence is destroyed: Like a snake incorrectly seized, Or like a spell incorrectly cast.

HAGEN (paraphrase):
[axiomatic] A wrongly conceived emptiness destroys the dimwitted. It is like a snake wrongly grasped, or knowledge wrongly cultivated.
PINGALA COMMENTARY

24/11 If a man is dull-witted and does not clearly understand the doctrine of emptiness, there will be errors in (his understanding of) emptiness and he will produce wrong views. It is like cleverly catching hold of a poisonous snake: if you are unable to hold it skillfully it will turn on you, and you will be hurt. Or it is like a spell. If you want it to be performed but lack the capacity to accomplish it skillfully you will injure yourself instead. It is the same with a dull-witted man contemplating the doctrine of emptiness.

Further:

CANDRAKĪRTI COMMENTARY

The wise one on the way (yogi), having awakened to the fact that the personal world of the everyday arises solely from ignorance and is devoid of self-existence, and who understands that devoidness of self-existence is the higher truth of the everyday, does not fall into the extremes of dualism. He does not recoil to the belief that things are unreal because he has found no self-existence in them, thinking ‘what once was, now is not’. He does not reject (na badhate) the personal everyday world, which assumes the form of a reflection, outright, and so he does not reject outright actions and their moral consequences, the distinction between right and wrong, and so on. Nor, on the other hand, does he wrongly impute self-existence to everyday things in the higher sense; because he experiences such things as actions and their moral consequences as not self-existent; and because he does not experience them as self-existent.

However, one who, not seeing the due distinction between the two truths in this way, grasps at the lack of self-existence in all composite things and dwells on it, eager for liberation, either he imagines that all composite things do not truly exist or that the absence of self-existence in them itself exists like a thing (kamcid bhavatā), in which case he imagines a self-existent reality of the nature of devoidness. In either case the doctrine of devoidness, wrongly understood, would inevitably destroy such a one. Why? Because if he imagines that just because the entire realm of things is devoid of self-existence it does not exist in any sense, then a serious heresy has taken hold of him.

The dangers of misconceiving the absence of being

To quote: ‘This teaching, wrongly grasped, destroys the unwise man; he drowns in the quagmire of the view that all things are unreal.’ (Ratnavali, II, 19.) On the other hand, if one does not wish to deny the reality of all things one must reject the absence of being in things. How can things be devoid of self-existence when they are perceived by all the world of gods, demons and men? Therefore, having rejected the view that devoidness means only that everyday things are not self-existent, he will inevitably proceed to calamities as a result of inauspicious deeds tending to undermine the true doctrine.

It is said in the Ratnavali: ‘A foolish and intellectually conceited person, because he misunderstands devoidness, destroys his own person by rejecting it and plunges headfirst into the hell of Avici.’ (II.20)

Thus, devoidness destroys the one who takes it to mean the non-existence of things. However, if one wrongly conceives devoidness itself to be an ontic existent (bhavendra) and imagines that the reality of everyday things is based on it, then the absence of being in things, being ill-suited to the way leading to nirvāṇa, becomes fruitless. This is why devoidness destroys the one taking it to be something of the nature of an ontic existent (bhavarupena).

You may object that something which is beneficial will be useless if ineptly applied; but how could it destroy? Seed, improperly sown, does not destroy the one seeding. Nagarjuna gives an example to clarify his point: ‘like a snake ineptly seized or some secret knowledge wrongly applied’. A snake, aptly seized, brings a great treasure of riches from taking possession of the crest jewel because it conduces to the livelihood of the snake charmers. But the snake destroys one who seizes him not observing the prescribed rules. Secret knowledge, too, treated according to the rules, favours the magician but destroys him if it is put into practice in neglect of the rules. So in this matter. The absence of being as taught here is a great esoteric wisdom, and realized in practice and fully grasped, that is, without recourse to the ideas of existence and nonexistence, but as the middle way (madhyama pratipad), can lead to full enlightenment. It does this by extinguishing the sacrificial fire of existence consisting of birth, old age and death and in virtue of the bliss of bathing in the flowing ocean of nirvāṇa without conditions or residue. However, devoidness will, for the reason given,
inevitably destroy anyone who conceives of it contrary to the special interpretation given. That is why devoidness destroys anyone who wrongly grasps it and why those of feeble insight are incapable of grasping it at all.

KALUPAHANA COMMENTARY

Having explained the two truths, and establishing an important relationship between the conventional and the ideal, the particular and the universal, Nagarjuna returns to the conception of "emptiness" (sunyata) that gave rise to the metaphysicians' problems. The abstract conception of emptiness (sunyata, representing an abstract noun), derived from the experience of "the empty" (sunya), could be as destructive and fatal as a wrongly grasped snake. How the emphasis on the ideal and the universal to the utter neglect of the particular or the situational has wrought havoc can be known through a careful and unbiased study of human history.

GARFIELD COMMENTARY

11. The Madhyamika doctrine of emptiness is subtle and is easily misinterpreted. In particular, it is often misinterpreted as a thoroughgoing nihilism about phenomena. This is so not only among classical Indian critics of Madhyamika, in both Buddhist and non-Buddhist philosophical schools, but also among Western critics, who have sometimes regarded it as completely negative. (fn 111. E.g., Stcherbatsky (1930), Robinson (1967), and Wood (1994).) In this respect, Madhyamika philosophy has suffered from the same fate as much Western skeptical philosophy, including that of the Pyrrhonians and of Hume and Wittgenstein, all of whom were at considerable pains to warn readers against interpreting them as denying the existence of ordinary entities, but all of whom have been repeatedly read as doing so. Nāgārjuna is here charging the opponent represented in the opening verses with interpreting, the assertion that a phenomenon is empty as the assertion that it is nonexistent. Nothing, Nāgārjuna will argue, could be further from the truth. (fn 112. Wood (1994) on p. 202 says that he is unable to find anything in MK 24 to support [the non-nihilistic] interpretation of MK 24.7-11. ... According to [the non-nihilistic interpretation], we would have to read MMK 24 as follows. According to Nāgārjuna, the doctrine that everything is void does not mean that everything is unreal or nonexistent; it only means that everything is empty in the sense that everything arises and perishes through a process of dependent co-origination (pratītya-samutpāda); and the critic must be taken as criticizing this position. Wood then argues correctly that no Buddhist opponent would criticize the doctrine of dependent co-origination. This is in fact the cornerstone of Wood's nihilistic reading of the text, as it must be. For this chapter clinches the non-nihilistic interpretation. So, a few things deserve note: While Wood cannot find anything in this chapter to support such a reading, commentators including both Buddhapalita and Bhavaviveka, as well as Candrakīrti and Tsong Khapa, not to mention a host of modern Western and Tibetan scholars, have found quite a bit there. Nāgārjuna's disciple Aryadeva also insists in Catussataka on a non-nihilistic reading of emptiness. In fact Wood does have the necessary gloss on the verses in question just right. But he misses the position attributed to the opponent entirely. The opponent need not be represented as denying that phenomena are codependently originated. Rather the opponent is failing to see that that dependent co-origination is emptiness. He hence sees the attribution of emptiness as the denial, rather than the assertion, of codependent origination. Hence the entire remainder of the chapter is devoted not to arguing for emptiness, nor to arguing for the reality of codependent origination, but rather to arguing for their identity. To miss this is to miss the entire point of the text.)

**ENGLISH TRANSLATIONS**

INADA (Skt):
Verse 12 - Thus the wise one (i.e., the Buddha) once resolved not to teach about the Dharma, thinking that the slow-witted might wrongly conceive it.

JONES (Skt): [12] Thus, when the Buddha considered how difficult it would be for those of little intelligence to comprehend the doctrine, his mind turned away from teaching.

KALUPAHANA (Skt):
Thus, the Sage’s (the Buddha’s) thought recoiled from teaching the doctrine having reflected upon the difficulty of understanding the doctrine by people of meager intelligence.

MCCAGNEY (Skt):
And hence the Sage’s thought was turned against causing the Truth to be taught.
The purpose of the Teaching is difficult to fathom for the lazy.

NISHIJIMA (Skt?):
12. Just because of such a clear reason, there is a case that a snake’s knowledge is too much excellent as it is. Therefore it is clear that the existence of such situations belongs to the Saint. The Rule of the Universe belongs to ourselves, and to the Rule of the Universe.
And so something, which is a soft motion, and not so clear to be found, is difficult to be found, or recognized clearly.

SPRUNG (Skt):
12 For this reason the mind of the enlightened one was averse to teaching the Truth, realizing how difficult it would be for those of feeble insight to fathom it.

STRENG (Skt):
12. Therefore the mind of the ascetic Gautama was diverted from teaching the dharma, Having thought about the incomprehensibility of the dharma by the stupid.

BOCKING (Ch):
24v12 The World-Honored One knew that this Dharma, Extremely profound and subtle in character. Could not be approached by the dull-witted. This is why he was unwilling to teach.

BATCHELOR (Tb):
Therefore, knowing how difficult it is for the weak to understand the depths of this Dharma, the heart of the Muni strongly turned away from teaching the Dharma.

DOCTOR (Tb):
Hence, knowing that the depth of this Dharma Would be hard for the feebleminded to understand, The realized mind of the Able One Turned entirely away from teaching the Dharma. [XXIV.12]

GARFIELD (Tb):
12. For that reason - that the Dharma is Deep and difficult to understand and to learn - The Buddha’s mind despaired of Being able to teach it.

GARFIELD-SAMTEN (Tb):
12. Knowing that the Dharma is Deep and difficult for simpletons to understand, The Buddha’s mind despaired of Being able to teach it.

HAGEN (paraphrase):
Thus the Buddha recoiled from teaching the Dharma when he considered the difficulty many people would have in attempting to understand it.
PINGALA COMMENTARY

24/12 Because the dharma was extremely profound and subtle and would not be clearly understood by the dull-witted, the Buddha was reluctant to teach.

Further.

CANDRAKIRTI COMMENTARY

For this reason the Truth, understood as the absence of being in things, destroys the person of feeble insight and small mind because he grasps it falsely. So it is that, having realized how difficult it would be for those of feeble insight to fathom the Truth, the mind of the enlightened one, of the illustrious Buddha, after awakening to supreme and perfect enlightenment and after beholding the realm of all beings and the surpassing depth of the Truth, was averse to teaching the Truth, though gifted with special knowledge of the great means to do so.

As is said in the sutra, ‘It occurred to the illustrious one in the very moment of his perfect enlightenment: I have attained the deep, hidden Truth, radiant even in its depth, unreasoned, beyond the reach of reason, subtle, to be known only by one wise and learned. If I were to reveal its radiance to others and they were not to understand it, that would be fruitless and the end of me; my thought would be still-born. As I achieved the joy of seeing the sweet Truth alone in a remote forest I should remain to savour it.’ And so on.

The interpretation of the four truths

So, in this manner lacking insight into the incontrovertible nature of the two truths,

KALUPAHANA COMMENTARY

This is a reference to the incident related in the "Discourse on the Noble Quest" (Ariyapariyesana-sutta, M 1.167-168) where the Buddha explains the nature of his enlightenment as well as the events immediately preceding and succeeding his attainment of enlightenment.

Nagarjuna could not have been unaware of the nature of the Buddha's enlightenment as described in this discourse and also the reasons for the Buddha's reluctance to preach the doctrine. The Buddha's statement reads thus:

It occurred to me monks: "This dhamma won by me is deep, difficult to see, difficult to understand, tranquil, excellent, beyond a priori reasoning, subtle, intelligible to the learned. But these human beings are delighting in obsessions (alaya), delighted by obsessions, rejoicing in obsessions. So that for the human beings who are rejoicing in obsessions, delighted by obsessions and rejoicing in obsessions, this were a matter difficult to see, that is to say, dependent arising. This too were a matter difficult to see, that is to say, the appeasement of all dispositions, the renunciation of all attachment, the waning of craving, the absence of lust, cessation, freedom. But if I were to teach the dhamma and others were not to understand me, that would be a weariness to me, that would be a vexation to me.' (M 1.167)

This passage should dispel any doubts regarding the nature of the Buddha's reasons for his initial reluctance to preach. It was not because of any intellectual incapacity on the part of the human beings, but mostly because of the emotional difficulties they would have in breaking away from the accepted theories in which they have found safety and comfort, a sort of 'mooring' (alaya), especially in accepting a less absolutistic and fundamentally non-substantialist (anatta) philosophy and a way of life. As indicated above, the phrase used by the Buddha to refer to the attitude of the human beings is alaya-rata ("delighting in alaya," where alaya is derived from a + li implying some sort of mooring or obsession). Alaya represents an obsession for not only the pleasures of sense, but also ideas, dogmas, theories, etc.
INADA (Skt):
Verse 13 - You have repeatedly refuted Sunyata but we do not fall into any error. The refutation does not apply to sunya.

JONES (Skt):
[13] In addition, the error accompanying the objections to emptiness that you make is not ours - it is not applicable to what is empty.

KALUPAHANA (Skt):
Furthermore, if you were to generate any obsession with regard to emptiness, the accompanying error is not ours. That [obsession] is not appropriate in the context of the empty.

MCCAGNEY (Skt):
But what objection to openness is made by the twelfold causal chain of becoming?
The condemnation is not ours. It does not apply in what is open.

NISHIJIMA (Skt?):
13. Relying upon the balanced autonomic nervous system, to make the mind more inactive,
The balanced states are much more accomplished into miscellaneous existences.
Worrying about such criticism does never belong to our problems,
And so such problems do never appear into the balanced state of the autonomic nervous system at all.

SPRUNG (Skt):
13 You again perpetrate falsities concerning devoidness. The dire consequences you allege do not apply to us, nor do they make sense of devoidness.

STRENG (Skt):
13. Time and again you have made a condemnation of emptiness, But that refutation does not apply to our emptiness.
PINGALA COMMENTARY

24/13 Because you say that we are attached to emptiness, you produce errors and attribute them to us. But the emptiness of natures of which we speak There – this emptiness is itself empty. are no such errors. Moreover.

CANDRAKĪRTI COMMENTARY

The dire consequence you cast at us was: ‘If the entire everyday is devoid of self-existence, nothing can come to be or cease to be. It follows inexorably that, for you, the four Buddhist truths do not hold.’ (MMK XXIV.1) Such an allegation, hurled because of a lack of due insight into the nature of the two truths, and because of ignorance of the nature of devoidness, and of its meaning and purpose, it does not make sense applied to our understanding of devoidness.

It does not, therefore, make sense at all. In the way you allege this dire consequence of devoidness, you make a charge against and calumniate, you attack and repudiate devoidness, but your accusation is not logically relevant to our position. Your allegation derives from wrongly foisting the meaning of non-existence onto the idea of the absence of being. But we do not declare the meaning of non-existence and of absence of being to be the same; rather absence of being has the same meaning as dependent arising (pratityasamutpada) (in 10 This permits the translation of pratityasamutpada as ‘the truth of things’); so this fault in the idea of devoidness does not make sense.

It is not merely that these dire consequences, as stated, are not relevant to our view, but more than that, the entire structure (vyavasthana) of Buddhist doctrines becomes more intelligible. Expounding this Nagārjuna said,

KALUPAHANA COMMENTARY

Adhilaya has been rendered as “repeatedly refuted” (Inada,). However, the term is more closely related to alaya (see commentary on XXIV.12) utilized by the Buddha to refer to emotional attachment or obsession for views. Nagārjuna seems to be saying that the metaphysicians are generally fascinated by clear-cut and wellformed theories, abstract concepts, which they revere as divine, while the concrete percepts are looked upon as belonging to the brute (see William James, Some Problems of Philosophy, p. 34). This paves the way for an extremely important statement by Nagārjuna regarding śunyata and śunya.

GARFIELD COMMENTARY

13. Nagārjuna here simply denies that his view sustains the nihilistic reading, while granting that if one treats emptiness as nonexistence, all of the absurd conclusions that the opponent enumerates’ indeed follow. But, Nagārjuna continues in XXIV: 14, the interpretation of the entire Madhyamika system depends directly on how one understands the concept of emptiness. If that is understood correctly, everything else falls into place. If it is misunderstood, nothing in the system makes any sense:

_____
INADA (Skt):  
Verse 14 - Whatever is in correspondence with Sunyata, all is in correspondence (i.e., possible). Again, whatever is not in correspondence with sunyata, all is not in correspondence. - Note: The meaning conveyed here is that sunyata is the basis of all existence. Thus, without it, nothing is possible.

JONES (Skt):  
[14] For whom emptiness is admissible, everything is admissible. For whom emptiness is inadmissible, everything is inadmissible.

KALUPAHANA (Skt):  
Everything is pertinent for whom emptiness is proper. Everything is not pertinent for whom the empty is not proper.

MCCAGNEY (Skt):  
Because openness works, therefore everything works. If openness does not work, then everything does not work.

NISHIJIMA (Skt?):  
14. If everything is bound by the concrete facts totally, Even the state of the balanced autonomic nervous system must be also bound by the real facts. And if everything is not bound by the concrete facts, Even the state of the balanced autonomic nervous system must not be also bound at all.

SPRUNG (Skt):  
14 All things make sense for him for whom the absence of being makes sense. Nothing makes sense for him for whom the absence of being does not make sense.

STRENG (Skt):  
14. When emptiness "works", then everything in existence "works". (A) If emptiness "does not work", then all existence "does not work". (B)

ROBINSON (Skt):  
Everything is valid for that of which emptiness is valid; nothing is valid for that of which emptiness is not valid.
By virtue of the principle of emptiness, all dharmas within the world and outside the world are established. If there were no principle of emptiness, then nothing at all would be established.

Further:

For the one for whom the devoidness of self-existence in all things makes sense, for him everything (sarvam etad), in the sense in which we have explained it, makes sense. Why? Because we elucidate dependent arising as devoidness of self-existence.

As the Anavataptahradapasarhkramana Sutra has it: ‘Whatever is born of conditions is not truly born; and it does not arise as self-existent. Whatever depends on conditions is said to be devoid of self-existence. Whoever comprehends the absence of self-existence is free of delusion.’ As the Prajnaparamita-sutra puts it: ‘All putative elements of existence are devoid, because they lack self-existence.’

It follows that our devoidness makes sense, is luminous and relevant for him for whom dependent arising makes sense. And the four Buddhist truths make sense for him for whom dependent arising makes sense. Why is this? Because it is precisely what arises in dependence that constitutes unregenerate existence (duhkha), not what does not arise in dependence. What arises in dependence, because not self-existent, is devoid of being. Given afflicted or unregenerate existence, it makes sense that it comes to be and ceases to be and that there is a way leading to its cessation. And so the clear grasp of unregenerate existence, the elimination of its arising, the intuitive experience of its cessation and the inner realization of the way, all make sense.

If the truths about unregenerate existence and the clear grasp, and so on, of them obtain, then the spiritual attainments (phala)(MMK XXIV.3) make sense. Given spiritual attainments it makes sense that there are those who are on the way. Given those who are on the way abiding in the spiritual attainments, the Buddhist community makes sense. If the Buddhist truths truly obtain then the Buddhist Truth (dharma) makes sense. Given the Buddhist Truth and the Buddhist community, the idea of an enlightened one makes sense too. Therefore the three jewels (in 11 i.e. the Buddhist Truth, the community of monks, and the Buddha) make sense. All things whatsoever (padarthah sarve), whether of this world or of the realm beyond which are realized in the Buddhist discipline, will make sense. Moral and immoral conduct and their consequences, spiritual well-being and downfall and all everyday practical transactions will make sense.

So it is that ‘Everything makes sense for him for whom the absence of being makes sense.’ For him for whom the devoidness of self-existence in all things makes sense, for him everything in the world, as we have explained it, makes sense (yujyate), that is, coheres in living sense (sampadyate). However, for one for whom devoidness, as we expound it, does not make sense, because he does not understand the dependent arising of all things, the entire world makes no sense. In what way it does not make sense Nagarjuna will demonstrate in detail.

In sum, our case is flawless and is established without contradicting any principles. Your view is very unsubtle and shortsighted, contradicts principles and is full of difficulties. You are too obtuse to discern clear faults and merits.

The unintelligibility of the opponent’s concept

This terse statement of Nagarjuna, representing an extremely valuable assessment of the two concepts of “emptiness” (sunyata) and “the empty” (sunyam), can be comprehended only in the background of his previous statement (XX-IV. 13). It is a criticism of the absolutistic and substantialist enterprise wherein abstract concepts like “emptiness” receive a divine status thereby becoming compatible with anything and everything in human experience, like the Platonic “forms”, whereas any emphasis on the concrete leaves everything hanging in the air. Plato’s “forms”, Spinoza’s “substance”, Vedanta “Brahman” and Lao-tzu’s “Tao” all these are fascinating abstract concepts that fit in with everything. Even if one does not have to move on to the other extreme, as did
Hume with his "impressions", and the Sautrantikas with their "atoms" (paramanu), any recognition given to the concrete, to plurality, to the flux tends to disrupt the sense of security one enjoys in a world of abstractions. The Sarvastivadins raised objections against "the empty" (sunya)(XXIV. 1-6) not because there is an actual conflict between the notion of "the empty" and the theory of four truths, but because the conception of "the empty" conflicted with their notion of substance (svabhava) which they were holding on to with great enthusiasm. The fault, as Nagarjuna points out in the following verse, is theirs.

**GARFIELD COMMENTARY**

14. ("Nothing becomes clear" fn 113. The Tibetan term translated as "clear" here is "rung-ba" which literally means suitable, or appropriate. But while that makes sense in Tibetan, it clearly doesn’t in English, and the context indicates “clear” as the word that best captures the meaning.)

儒家自有過 而以迴向我
如人乘馬者 自忘於所乘

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 15 - You level your own errors at us. It is as if you are
mounted on your horse but forget about it.

JONES (Skt):
[15] In attributing your errors to us, you have forgotten the
horse you yourself are mounted upon.

KALUPAHANA (Skt):
You, attributing your own errors to us, are like one who has
mounted his horse and [who is] confused about it.

MCCAGNEY (Skt):
You have projected your errors on us.
You are like one who mounts a horse forgetting the saddle.

NISHIJIMA (Skt?):
15. Actually you are a man, who is prone to commit many errors,
subjectively or objectively, at this place.
Therefore you must have a tendency to guard yourself in every
case.
But even though you were actually riding a horse,
You are just riding as if you were sitting on a dog.

SPRUNG (Skt):
15 You, who bring down your own errors on us,
though mounted on a horse, forget that you are.

STRENG (Skt):
15. You, while projecting your own faults on us, (i.e.
objectifying emptiness) Are like a person who, having
mounted his horse, forgot the horse! (i.e. a tool)

BOCKING (Ch):
24v15 You yourselves are in error
Yet you turn these errors against us.
Like a man riding a horse
Who forgets what he himself is mounted on.

BATCHelor (Tb):
You are transferring your own mistakes onto me. This is
like mounting a horse but forgetting about the horse
itself.

DOCTOR (Tb):
All your own faults
You project onto me,
As if, while riding your horse,
You had forgotten all about it. [XXIV.15]

GARFIELD (Tb):
15. When you foist on us
All of your errors
You are like a man who has mounted his horse
And has forgotten that very horse.

GARFIELD-SAMTEN (Tb):
15. When you foist on us
All of your errors,
You are like a man who has mounted his horse
And has forgotten that very horse.

HAGEN (paraphrase):
In attributing your own errors to us you are like the
one who mounts his own horse but forgets that he
has done so.
PINGALA COMMENTARY

24/15 You are wrong about the existence of dharmas but are not conscious of it yourselves, yet you can see faults in emptiness. It is like a man riding a horse who forgets that which he is riding on. Why is this.

CANDRAKĪRTI COMMENTARY

It is as if someone mounted on a horse, but forgetting that he is, falsely accuses others of the crime of stealing it. Similarly, you, though mounted on the horse of the theory of devoidness understood as the dependent arising of all things — do not perceive this because of your overhasty repudiation, and revile us.

Nagarjuna explains what these faults of the opponent are, which he does not recognize in himself but accuses the proponent of devoidness of:

KALUPAHANA COMMENTARY

As mentioned previously (see comments on XXIV. 14), the problem faced by the Buddhist metaphysicians was in regard to reconciling "the empty" (sunya) with the four noble truths. This was because they were explaining the four truths in relation to the notion of substance (svabhava) and the notion of substance clearly conflicted with the concept of "the empty." If Nagarjuna had merely relied upon the abstract concept of "emptiness" (sunyata), ignoring "the empty" (sunya), the Buddhist metaphysicians would not have run into difficulties, for "emptiness," being the abstract concept could easily be reconciled with the notion of substance. As such, the problem was created by the metaphysicians when they emphasized the non-empirical "substance" to the neglect of the empirical phenomena, as is clearly evident from Nagarjuna’s statement that follows. Nagarjuna was, therefore, reminding them that they were riding their own horse without realizing it.

GARFIELD COMMENTARY

15. Here is the idea behind this image, a standard trope in classical Indian rhetoric: A man with a herd of horses thinks that he is missing one and accuses you of having stolen it. As he rides around and counts his horses, he always comes up one short. But you point out to him that the one he is accusing you of stealing is in fact the very one he is riding but has forgotten to count. Likewise, Nāgārjuna is saying, the opponent who confuses the Madhyamika analysis in terms of emptiness with nihilism is charging Nāgārjuna with a nihilism that is in fact his own. Nāgārjuna will argue, that is, that while the opponent claims to preserve the reality of the three jewels, the Four Noble Truths, and dependently arisen phenomena against Nāgārjuna’s nihilism, Nāgārjuna himself can explain the reality of these things, though it will turn out that on the opponent’s view they must be nonexistent! (fn 114. But see Wood (1994), pp. 115-16, for a dramatically different reading (of the parallel verse in Vigrāhavyavartani - but the points all go over) of this verse. Wood interprets emptiness as complete nonexistence and reads Nāgārjuna as a thoroughgoing nihilist. So he interprets Nāgārjuna as asserting that if one sees conventional phenomena as real in any way, one is in trouble and that philosophical problems vanish only if one sees all apparent phenomena as illusions. In offering this interpretation, Wood notes that Nāgārjuna often characterizes phenomena as like dreams or mirages. That is indeed so, but his interpretation of that simile is itself problematic. For a thing to be like a mirage or a dream is for it to exist in one way (as, e.g., a mirage), but to not exist in the way that it appears (as water). To put the point another way: Mirages really are mirages, but are not really water, though they might appear to be. So conventional phenomena, according to the simile, really are empty, dependently-arisen, nominally real phenomena, but are not substantial, inherently existent phenomena, though they might appear to be. So, pace Wood, it is not Nāgārjuna, but his opponent who is the nihilist here. See also Padhye (1988), esp. pp. 61-66, for a good critical discussion of the nihilistic reading.) At this point the positive philosophical program of this chapter begins.
Kārikā XXIV.16

svabhāvād yadi bhāvānāṃ sadbhāvam anupaśyasi |
ahetupratyayān bhāvāms tvam evaṃ sati paśyasi ||16||

| de lta yin na dṅos po rnams || rgyu rkyen med par khyod lta’o |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 16 - If you perceive the various existences as true beings
from the standpoint of self-nature, then you will perceive
them as non-causal conditions.

JONES (Skt):
[16] If you perceive entities as having true being because of
their self-existence, then you will perceive entities as being
without causes and conditions.

KALUPAHANA (Skt):
If you perceive the existence of the existents in terms of
self-nature, then you will also perceive these existents
as non-causal conditions.

MCCAGNEY (Skt):
If you consider that the existence of beings is from self-
nature,
you see beings existing without cause or conditions.

NISHIJIMA (Skt?):
16. When you have left from the subjective ideas, you are
belonging to existences,
Then you will notice Real Existences.
Unreasonable Real Truths are existences,
And you will look at the Real Existence in future.

SPRUNG (Skt):
16 If you discern the true being of things as their self-
existence, then you must regard things as having no
causes or conditions.

STRENG (Skt):
16. If you recognize real existence on account of the self-
existence of things, You perceive that there are
uncaused and unconditioned things.

BOCKING (Ch):
24v16 If you perceive all dharmas
As having fixed, existent natures.
Then you will see all dharmas
As without causes and without conditions.

BATCHELOR (Tb):
If you view all things as existing from their own nature,
then you would view all things as not having causes
and conditions.

DOCTOR (Tb):
If you view things
As existent by nature,
Then for you there are
No causes and conditions. [XXIV.16]

GARFIELD (Tb):
16. If you perceive the existence of all things
In terms of their essence,
Then this perception of all things
Will be without the perception of causes and conditions.

GARFIELD-SAMTEN (Tb):
16. If you regard all things
As existing in virtue of their essence,
Then you will regard all things
As being without causes and conditions.

HAGEN (paraphrase):
If you recognize the existence of things in terms of
self-nature, then you must regard things as having
no causes or conditions.
24/16 You teach that all dharmas have fixed natures. This being the case, you will see all dharmas as being without causes and without conditions, and why? If dharmas have fixed, existent natures, then they must be non-arising and non-ceasing, and what use would such dharmas have for causes and conditions? If you say that dharmas arise from causes and conditions, then they will have no nature. Therefore, dharmas with fixed, existent natures have no causes and conditions. If you say that dharmas abide, fixed and settled in their own-nature, this is not correct, and why?

CANDRAKĪRTI COMMENTARY

("True being of things" – fn 12 Sadbhava. Candrakīrti glosses this as factual or ontic (vidyamana).

If you consider that things are, ontically (vidyamana), self-existent, you ignore their causal conditions. You regard things, however differentiated into inner and outer, as having no causal conditions, as having ontically no causal conditions, as being beyond cause (nirhetuka). But if you suppose anything can be beyond causality,

KALUPAHANA COMMENTARY

For Nagarjuna, any existent is a causally conditioned existent. Such an existent is clearly incompatible with a self-nature or substance, the latter being permanent and eternal by definition. This would mean that Nagarjuna's conception of "emptiness" (sunyata) does not partake of any such characteristics. Even though "emptiness" and "serf-nature" are both abstractions from concrete experiences, Nagarjuna would continue to maintain the primacy of such concrete experiences, which are "the empty," and insist that "emptiness" is dependent upon "the empty," while the metaphysicians would consider self-nature to be independent, thereby divorcing it from the concrete.

GARFIELD COMMENTARY

16. There are two related assertions contained in this critical verse: First, at the conventional level, the opponent, in virtue of thinking that to exist is to exist inherently, will be unable to account for dependent arising and hence for anything that must be dependently arisen. As Nāgārjuna will make explicit later on, this will include such things as suffering, its causes, nirvāṇa, the path thereto, the Dharma, the Sangha, and the Buddha, as well as more mundane phenomena.

But secondly and more subtly, since the opponent is seeing actual existence as existence as a discrete entity with an essence, it would follow that for the opponent the reality of emptiness would entail that emptiness itself is an entity, an inherently existing entity at that. To see emptiness in this way is to see it as radically different from conventional, phenomenal reality. It is to see the conventional as illusory and emptiness as the reality standing behind it. If Nāgārjuna were to adopt this view of emptiness, he would indeed have to deny the reality of the entire phenomenal, conventional world. This would also be to ascribe a special, nonconventional, nondependent hyperreality to emptiness itself. Ordinary things would be viewed as nonexistent, emptiness as substantially existent. (It is important and central to the Madhyamika dialectic to see that these go together - that nihilism about one kind of entity is typically paired with reification of another.) This view is not uncommon in Buddhist philosophy, and Nāgārjuna is clearly aware that it might be suggested by his own position. SQ Nāgārjuna’s reply must begin by distancing himself from this reified view of emptiness itself and hence from the dualism it entails. Only then can he show that to reify emptiness in this way would indeed entail the difficulties his imaginary opponent adumbrates, difficulties not attaching to Nāgārjuna’s own view. (fn 115. So, for instance, when Wood (1994) writes on p. 161 that “[he does] not think that there is a non-nihilistic sense of the phrase ‘does not exist,’ “ he is succumbing to the very view that Nāgārjuna criticizes here - the view that to exist is to exist inherently and that to not exist inherently is not to exist at all. The nonnihilistic sense of “does not exist” is in play when Nāgārjuna, in providing a reductio on the opponent’s view, is taking inherent existence as the meaning of “existence.” Given that understanding, Nāgārjuna can quite easily say that, e.g., the self does not exist while retaining his commitment to its conventional existence. He can also say that no inherently existent phenomena exist at all without denying the conventional existence of conventional phenomena.) This brings us to the central verses of this chapter:
Kārikā XXIV.17

Verse 17 - You will then destroy (all notions of) cause, effect, doer, means of doing, doing, origination, extinction, and fruit (of action).

INADA (Skt):
Verse 17 - You will then destroy (all notions of) cause, effect, doer, means of doing, doing, origination, extinction, and fruit (of action).

JONES (Skt):
[17] You will also reject effect, cause, actor, the means of acting, action, arising, ceasing, and fruit.

KALUPAHANA (Skt):
You will also contradict [the notions of] effect, cause, agent, performance of action, activity, arising, ceasing, as well as fruit.

MCCAGNEY (Skt):
You deny effect, cause, agent, action, and activity as well as arising, cessation, and the fruit [of action].

NISHIJIMA (Skt?):
17. What is really accomplished, and what is the cause of the accomplishment, are originally the same.

What to produce something, is just the Real Efforts of production, a production is just production, the Real Action itself.

Production is also a kind of suppressive control too, And the Result is just your torture called production.

SPRUNG (Skt):
17 You must reject the notions of cause and effect, of agent, means and act, of coming to be and ceasing to be and of spiritual attainment.

STRENG (Skt):
17. You deny "what is to be produced," cause, the producer, the instrument of production, and the producing action, And the origination, destruction, and "fruit."

ENGLISH TRANSLATIONS

BOCKING (Ch):
24v17 This constitutes a negation of cause and effect, Of doing, doer and thing done.

And moreover it denies The arising, and ceasing of all the myriad things.

BATCHelor (Tb):
Cause and effect itself, agents, tools and acts, production and cessation, the effects too would be undermined.

DOCTOR (Tb):
Effect and cause;
Agent, means, and action;
Arising, cessation, and result—
These are invalidated as well. [XXIV.17]

GARFIELD (Tb):
17. Effects and causes And agent and action And conditions and arising and ceasing And effects will be rendered impossible.

GARFIELD-SAMTEN (Tb):
17. Effects and causes; And agent, instrument and action; And arising and ceasing; And the effects will be undermined.

HAGEN (paraphrase):
You must also reject notions of cause and effect, agent and action, arising and ceasing, as well as attainment.
PINGALA COMMENTARY

24/17 If dharmas have fixed natures then there will be no such things as cause and effect etc. As the verse says:

CANDRAKĪRTI COMMENTARY

Why is that? If you suppose a water jug to be self-existent, what would be the function of the clay and the other causal conditions of such an ontic self-existent, as they would not be causal conditions. It is unintelligible for an effect like a water jug to have no cause (hetu). If there were no cause, then, as the potter’s wheel and the other tools, the making of the water jug, the potter himself and the actual creation of a vessel in the shape of a water jug would be non-existent, coming to be and ceasing to be would be non-existent. But if nothing comes to be nor ceases to be how can there be spiritual attainment? If you suppose that things are self-existent you discard the entire set of notions having to do with cause and effect; thus, supposing things are self-existent, this entire set of notions can make no sense for you. For us, however, who hold the view that things are devoid of self-existence, this entire set of notions is logically intelligible. Why is that? Because

Absence of being as the middle way

KALUPAHANA COMMENTARY

How the recognition of self-nature (svabhava) contradicts all forms of empirical knowledge, knowledge recognized by the Buddha relating to dependent arising, moral behavior (karma), and responsibility (karmaphala), has already been explained in detail in the numerous chapters that precede. Here Nagarjuna is simply summarizing all his conclusions.

GARFIELD COMMENTARY

17. Again, this verse is to be read at two levels: At the conventional level, the opponent, through reifying phenomena in order to preserve their conventional reality, will deny the possibility of any kind of dependence, impermanence, or action. But more importantly, if Nāgārjuna’s analysis of these things as empty meant that they were nonexistent and that only emptiness exists, then Nāgārjuna himself would be denying the empirical reality of these phenomena. That is, not only would an inherently existent phenomenal world be devoid of change, dependency, and so forth, but inherently existent emptiness would render the phenomenal world completely nonexistent.

This defines the straits between which the middle path must be found, as well as the presupposition that generates both extremes: The extreme of reification of the phenomenal world depends upon viewing emptiness nihilistically; the extreme of reification of emptiness requires us to be nihilistic about the phenomenal world. A middle path must reify neither and hence must regard emptiness, as well as all empty phenomena, as empty. Both extremes presuppose that to exist is to exist inherently. They only disagree about whether this inherent existence is properly ascribed to conventional phenomena or to their ultimate nature. Nāgārjuna will deny exactly that presupposition, arguing that to exist is to exist conventionally and that both conventional phenomena and their ultimate natures exist in exactly that way. The next verse is the climax of the entire text and can truly be said to contain the entire Madhyamika system in embryo. It is perhaps the most often quoted and extensively commented on verse in all of Mahayana philosophy:
INADA (Skt):
Verse 18 - We declare that whatever is relational origination is sunyata. It is a provisional name (i.e., thought construction) for the mutuality (of being) and, indeed, it is the middle path.

JONES (Skt):
[18] Whatever is dependently arisen, we call that "emptiness." This indicator, once comprehended, is in fact itself the "middle way."

KALUPAHANA (Skt):
We state that whatever is dependent arising, that is emptiness. That is dependent upon convention. That itself is the middle path.

MCCAGNEY (Skt):
What is interdependent origination, that is called openness by us.
It [openness] makes use of convention and is the practice of the middle way.

NISHIJIMA (Skt?):
18. That is just the very clear Total Occurrence. The totally balanced autonomic nervous systems, are indicating the situations of the Present Moment itself. Those Realities just might be what have been grasped as information. And so our rather anti-historical tendency might be called the Middle Way.

SPRUNG (Skt):
18 We interpret the dependent arising of all things as the absence of being in them. Absence of being is a guiding, not a cognitive, notion, presupposing the everyday. It is itself the middle way.

STRENG (Skt):
18. The "originating dependently" we call "emptiness"; This apprehension, i.e., taking into account all other things, is the understanding of the middle way.

ROBINSON (Skt):
It is dependent co-arising that we term emptiness; this is a designation overlaid [on emptiness]; it alone is the Middle Path.

NG (Skt): We declare that whatever is of dependent arising is emptiness. Because this Emptiness is a Provisional Name, therefore it [Emptiness] is indeed the Middle Way.

NG (Ch):
I declare that whatever is of Dependent Origination is Emptiness (nothingness); it is also a Provisional Name; it is also the meaning of the Middle Way.

BOCKING (Ch):
24v18 Dharmas produced by causes and conditions We say are nonexistent. And constitute conventional names And this is the meaning of the Middle Way.

BATCHELOR (Tb):
Whatever is contingently related, that is explained as emptiness. That is contingently configured; it is the central path.

DOCTOR (Tb):
Float which originates in dependence Is taught to be emptiness. This itself is dependent imputation And so the path of the Middle Way. [XXIV.18]

GARFIELD (Tb):
18. Whatever is dependently co-arisen That is explained to be emptiness. That, being a dependent designation, Is itself the middle way.

GARFIELD-SAMTEN (Tb):
18. That which is dependent origination Is explained to be emptiness. That, being a dependent designation, Is itself the middle way.

HAGEN (paraphrase):
We declare that whatever is dependent arising is Emptiness—a provisional name presupposing the everyday, and is in itself the middle way.
GOLDFIELD (Tb):
Whatever is dependently arisen
Is explained to be emptiness.

Its existence is imputed in dependence upon something else,
And this is the path of the Middle Way. (18)

CANDRAKĪRTI COMMENTARY

This dependent arising, which is the manifestation of seeds, consciousness and all such things in dependence on causal conditions, is the non-arising of things in the self-existent sense. And the non-arising of things in the self-existent sense is the absence of being in things. As the illustrious one said: ‘Whatever is born of conditions is not truly born; it does not arise as self-existent. Whatever depends on conditions is said to be devoid of self-existence. Whoever comprehends the absence of self existence is free of delusion.’ And in the Lankavatara Sutra, ‘It being accepted, o Mahamati, that nothing comes to be of itself, it is my teaching that all the putative elements of existence are devoid of self-existence’, and so on. In the Dvyardhasatika, ‘All putative elements of existence are devoid because, ontically, they are without self-existence.’

This very absence of self-existence is a guiding, not a cognitive, notion presupposing the everyday (prajnapti-upadaya) (fn 13 ‘Everyday’ is not in the text, but by analogy with the chariot, it is the everyday (samvrti) world which the term sunyata must presuppose if it is to function effectively, as ‘chariot’ presupposes wheels, axle, and so on.). Absence of self-existence itself, as it presupposes the everyday, is a guiding, not a cognitive notion. It is the components wheels and so on which, being presupposed, are, for practical purposes, referred to as ‘a chariot’ (rathah prajnapyate). That to which the guiding expression refers, as it presupposes its own component parts, does not come to be self-existently. It is this not coming to be (anuttpatti) self-existently (svabhavena) which is absence of being. This absence, characterized as not coming to be self-existently, is known as the middle way. What does not come to be self-existently does not exist. But because what does not come to be self-existently cannot cease to be, it is not non-existent. Therefore, because it avoids the dual dogmas of existence and non-existence, the absence of being in things, understood to mean that all things without exception do not arise self-existently, is said to be the middle way or the middle path. It follows that the absence of being as a guiding, not a cognitive, notion which presupposes the everyday and which is the middle way, is the preferred interpretation of the dependent arising of all things (fn 14 That is, of the way things truly are).

All elements of existence are devoid

Considering this in all its aspects:

KALUPAHANA COMMENTARY

There seems to be no other statement of Nagarjuna more controversial than this one. An entire school of Chinese Buddhism emerged as a result of the interpretation (or misinterpretation) of this verse, [see Hajime Nakamura, "The Middle Way and the Emptiness View," Journal of Buddhist Philosophy, ed. Richard S. Y. Chi, (Indiana University, Bloomington, Indiana,) 1 (1984):81-111].

In the first line, Nagarjuna is presenting an equation: Dependent arising (pratityasamutpada) is "emptiness" (sunyata). Inada's rendering of this line is an improvement on Nakamura's, since the latter assumes that here there is a reference to the events (op. cit.), rather than the principle in terms of which the events are explained. As emphasized earlier, "dependent arising" and "emptiness" are abstract concepts derived from concrete empirical events, "the dependently arisen" (pratityasamutpanna) and "the empty" (sunya) respectively. Unless this relationship between the abstract and the concrete is clearly observed, the interpretation of the second line of the verse will remain forever obscure, as seems to have happened since Nagarjuna composed this treatise.

The second line refers to the middle path (madhyama pratipat). The question is: In what way can dependent arising and emptiness, which are synonymous, represent a middle path? The answer to this question is in the statement, sa prajnaptir upadaya. If this phrase were to be translated as, "It is a provisional name" (Inada,) or as "That is a temporary designation" (Nakamura,), which are standard translations offered by most scholars, then in the explanation of dependent arising and emptiness one will be committed either to an extreme form of nominalism or a similarly extremist absolutism. In such a case, dependent
arising or emptiness would either be a mere description with no basis in cognitive experience or it would be an experience that is ineffable. The former alternative would conflict with everything Nagarjuna was trying to establish, namely, the reality of arising and ceasing, of human behavior, etc. (XXIV 16-17). The latter alternative would render any philosophical enterprise meaningless and would undermine Nagarjuna's assertion at XXIV. 10.

Taking samvrti, vyavahara, and prajñāpāramitā as synonyms, as was intended by the Buddha himself (D 3.202), and considering the contexts in which Nagarjuna was using the terms samvrti and vyavahara (XVII.24; XVIV.6,8) namely, in relation to discussions of worldly conventions, the most important among them being good and bad, dharma/adharma (and this sense is captured by Inada's own translation of samvrti and vyavahara, see) it would be more appropriate to characterize both "dependent arising" and "emptiness" as being the universal truths rather than absolute truths. This would mean that both samvrti (and, therefore, vyavahara and prajñāpāramitā) and paramartha are "thought constructions" founded on experience. As such, they are not absolutely real or absolutely unreal. This, then, would be the middle position (madhyama pratipat). This middle path could be adopted in understanding all forms of experience, whether they be linguistic, social, political, moral, or religious. While all conventions, whether they be situational (samvrti) or ideal (paramartha), are explained in terms of dependent arising, the conception of "the empty" (sunya) eliminates the absolutistic sting at the level of the situational, and "emptiness" does so at the level of the universal. (See comments on XXIV. 19 that follows.)
Kārikā XXIV.19

apratītya samutpanno dharmaḥ kaścin na vidyate
yasmāt tasmād aśūnyo hi dharmaḥ kaścin na vidyate

wèi céng yǒu yī fā bù cóng yīn yuán shēng
shí gǔ yī qié fā wú bù shì kōng zhé

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 19 - Any factor of experience which does not participate
in relational origination cannot exist. Therefore, any factor
of experience not in the nature of sunya cannot exist.

JONES (Skt):
[19] Any basic phenomenon (i.e., any ultimate “factor of the
experienced world”) that is not dependently arisen is not
seen. Thus, a thing that is not empty is not seen.

KALUPAHANA (Skt):
A thing that is not dependently arisen is not evident. For
that reason, a thing that is non-empty is indeed not
evident.

MCCAGNEY (Skt):
Not any event not interdependently originated occurs.
Indeed, not any event that is not open occurs.

NISHIJIMA (Skt?):
19. When some kinds of accidental facts are not so
understandable,
The Rule of the Universe can never be recognized at all.
Because according to that facts, or according to this facts,
everything is lacking the balanced state of the autonomic
nervous system,
The system of the Universe hasn't been recognized at all.

SPRUNG (Skt):
19 There is no element of existence whatsoever which
does not arise dependently; and so there is no
element of existence whatsoever which is not
devoid of self-existence.

STRENG (Skt):
19. Since there is no dharma whatever originating
independently, No dharma whatever exists which is
not empty.

ROBINSON (Skt):
No dharma occurs that is not dependently co-arisen; hence
no non-empty dharma occurs.
PINGALI COMMENTARY

24/19 Causes and conditions produce dharmas, and we say that they are empty. Why is this? It is entirely through the combination of causes that things are produced. Since these things depend upon causes and conditions they have no own–nature and since they have no own–nature, they are empty.

(33b17) Emptiness moreover is itself empty. But in order to guide all beings, it is taught by means of conventional designations. Because it is separate from the extremes of both existence and nonexistence, it is called the middle path. Since dharmas have no own–nature we cannot say that they exist, and since they are not vacuous, we cannot say that they are nonexistent. If dharmas possessed the characteristics of natures then they would exist independently of causes and conditions, but then if they did not depend on causes and conditions they would not be dharmas. Therefore, there are no non–empty dharmas. As for the errors which you discoursed on above in regard to the doctrine of emptiness, these errors now rebound on you, and why?

CANDRAKĪRTI COMMENTARY

There is absolutely no putative element of existence whatsoever which arises free of conditions. As is said in the Catuhsataka: ‘There is never non-dependent existence of anything whatsoever under any circumstances; again, there is never eternal existence of anything whatsoever under any circumstances. Infinite space and other non-composite elements are thought to be imperishable by ordinary people. Thoughtful people do not discern objects for such expressions as they are used ordinarily.’ And the illustrious one said, ‘The wise man comprehends the elements of existence as dependent; he does not take refuge in ultimate dogmas. He knows the elements of existence have causes and conditions; it is not the nature of the elements to be uncaused and without conditions.’ That is to say, ‘There is no element of existence whatsoever which does not arise dependently.’

As what arises in dependence is devoid of self-existence, there is no element of existence which is not devoid. Therefore our thought, that all elements of existence are devoid, is not open to the fault charged by our opponent. But he is the proponent of the view that things have self-existence.

Devoidness essential to the intelligibility of the four truths

KALUPAHANA COMMENTARY

After clarifying the nature of the universal conventions, Nagarjuna returns to the situational, for it was this latter that caused problems for the metaphysicians. The metaphysicians realized that “the dependently arisen” (pratityasamutpanna), so long as it is considered to be “the empty” (sunya), conflicted with their notion of substance (svabhava). Therefore, they were looking for “the dependently arisen” that is not empty of substance.

However, for Nagarjuna, substance (svabhava) is not dependently arisen (XV.2). A thing that is not dependently arisen is not evident. Therefore, a substance is also not evident. A substance being non-empty, the absence of a substance would mean the absence of the non-empty (asunya). This is a clear and unequivocal denial of substance (svabhava), of the non-empty (a-sunya) and of the independent (a-pratityasamtpanna), and the assertion of the non-substantial (nih-svabhava), the empty (sunya) and the dependently arisen (pratityasamutpanna). In the hope of being an absolute non-absolutist, if someone were to propose that both alternatives svabhava and nihsvabhava, asunya and sunya, apratityasamutpanna and pratityasamutpannaare true (or false), the empiricist Nagarjuna, following the Buddha (Sn 884) would insist that only one of these alternatives is true (ekam hi saccam), and not the second (na dutiyam). This means that neither the Buddha nor Nagarjuna could be characterized as absolutists. However, if the two alternatives were to be two metaphysical alternatives, then both the Buddha and Nagarjuna would be compelled to negate them. Taken out of context, svabhava and nihsvabhava could appear as metaphysical alternatives. So could asunya and sunya. Yet, apratityasamutpanna and pratityasamutpanna, as understood by the Buddha and Nagarjuna, could not be easily converted to metaphysical alternatives. The reason for this is that the term pratityasamutpanna, being a past participle, does not refer strictly to any one temporal experience, whether it belongs to the past, present or future, nor does it transcend temporality altogether. While it has a present connotation, it is not divorced from the past. It is, therefore, a term most appropriately used to describe the events perceived by the Buddha through his
"knowledge of things as they have come to be" (yathabhuta-nana). It refers to the events experienced in the so-called "specious present" (see comments on XIX.4).

It is this empiricist prajnapati that serves as a corrective to any proposal which would turn either pratityasamutpada or sunyata into an absolute truth, ineffable and a-temporal. It is, indeed, the philosophical middle path referred to at XXIV. 18 and the Buddha's discourse to Katyayana.

GARFIELD COMMENTARY

19. These two verses demand careful scrutiny and are best discussed together. In XXIV: 18, Nāgārjuna establishes a critical three-way relation between emptiness, dependent origination and verbal convention, and asserts that this relation itself is the Middle Way toward which his entire philosophical system is aimed. As we shall see, this is the basis for understanding the emptiness of emptiness itself. Nāgārjuna is asserting that the dependently arisen is emptiness. Emptiness and the phenomenal world are not two distinct things. They are, rather, two characterizations of the same thing. To say of something that it is dependently co-arisen is to say that it is empty. To say of something that it is empty is another way of saying that it arises dependently. (In 116. Padhye (1988), pp. 66-67, also emphasizes this corelativity of emptiness and dependent arising.)

Moreover, whatever is dependently co-arisen is verbally established. That is, the identity of any dependently arisen thing depends upon verbal conventions. To say of a thing that it is dependently arisen is to say that its identity as a single entity is nothing more than its being the referent of a word. The thing itself, apart from conventions of individuation, has no identity. To say of a thing that its identity is a merely verbal fact about it is to say that it is empty. To view emptiness in this way is to see it neither as an entity nor as unreal - it is to see it as conventionally real. (fn 117. His Holiness the Dalai Lama, in oral remarks (Columbia University 1994), says: Since dependent co-origination is used as a premise to argue for the lack of inherent existence of things, it can’t be independent of it. Lack of inherent existence must always be understood as negative and as a feature of conventional reality. ... In Mula-madhyamaka-kārikā these two truths - dependent co-origination and emptiness - are taught as two perspectives on the same reality.)

Moreover, "emptiness" itself is asserted to be a dependent designation (Tib: brten nos gdags-pa, Skt: prajñapti-uptidtiya). (fn 118. See Nagao (1991), pp. 190-94, for a useful discussion of alternative renderings of this compound and of the interpretive issues raised in translating it. Nagao himself opts for "8 designation based upon (some material)."

I find this both awkward and misleading; it commits Nāgārjuna univocally to "some material" as the designative basis for emptiness, submerging the metalinguistic reading. Both seem to me to be clearly intended by the text.) Its referent, emptiness itself, is thereby asserted to be merely dependent and nominal - conventionally existent but ultimately empty. This is hence a middle path with regard to emptiness. (fn 119. Compare to Murti (1973):

Relativity or mutual dependence is a mark of the unreal. ... For the Madhyamika, reciprocity, dependence, is the lack of inner essence'. Tattva, or the Real, is something in itself, self-evident, and self-existent.

Reason, which understands things through distinction and relation is a principle of falsity, as it distorts and thereby hides the Real. Only the Absolute as the unconditioned is real. ... (p. 16)

This represents as clear a statement as one would like of the position that the conventional/ultimate distinction is a version of an appearance/reality or phenomenon/ noumenon distinction, a position I read Nāgārjuna as at pains to refute. As Murti says later in this essay (p. 22), “I have interpreted sunyata and the doctrine of the Two Truths as a kind of Absolutism, not Nihilism. Nāgārjuna’s ‘no views about reality’ should not be taken as advocating a ‘no-reality view.’”

Nagao (1991) concurs with Murti on this point: “The twofold Truth is composed of paramārtha (superworldly or absolute) and saqūrti (worldly or conventional). These two lie sharply contrasted, the former as the real truth, and the latter as the truth concealed by the veil of falsehood and ignorance” (p. 46). Now while Nagao, to be sure, is less disparaging of the conventional truth than is Murti, noting the alternative etymologies of ‘sāmṛti-satya’ and allowing that “... the twofold Truth opens a channel by which language recovers itself in spite of its falsehood and ignorance,” he emphasizes that “the ‘silence’ of paramārtha is true ‘Wisdom’” (p. 46) Hence in the end, he agrees with Murti on the critical interpretive claim that the two truths are radically distinct from one another and that the conventional truth is not in fact a truth in any straightforward sense. See also Napper [1993] and Hopkins [1983] for a similar interpretation.

There are two things to say about this interpretation: First, as Nāgārjuna would be quick to point out, absolutism is not the only alternative to nihilism. Madhyamika is an attempt to forge a middle path between precisely those two extremes. And second, to say that a rejection of absolutism is a rejection of the reality of the world tout court is to presuppose exactly the equation of existence with inherent existence that is the target of Nāgārjuna’s critique. To the extent that “reality” is interpreted to be absolute reality, Nāgārjuna indeed advocates a ‘no-reality view.’ But to the extent that we accept the Madhyamika reinterpretation of “reality” as conventional reality, no such consequence follows. Streng (1973) agrees:

Because Nāgārjuna’s ultimate affirmation is pratītya-samutpāda, any conventional affirmation that might suggest an absolute, in the form of a dogma or doctrine, is avoided. Even sunya, avabhāva, Tatthāgata or pratītaya cannot be transformed into absolutes....

... The highest awareness, which is needed for release from svabhāva, is not the result of moving from the finite to the infinite, but the release from ignorance about the dependent co-origination of anything at all. Paramartha-satyā, then, is living in full awareness of dependent co-origination.... (p. 36)

To view the dependently originated world in this way is to see it neither as nonempty nor as completely nonexistent. It is, viewed in this way, conventionally existent, but empty. So we have a middle path with regard to dependent origination. (fn 120. Nagao (1989) puts this point nicely: When the birth-death cycle itself is empty, when there is nothing that exists permanently as its own essence; when, without self-identity all the functions of beings depend upon others, then dependent co-arising is emptiness and emptiness is dependent co-arising.... . . . The real is
suchness where there is an identification of emptiness and dependent co-arising whereby empty non-being “hollows out” every trace of inner selfhood. (p. 15) See also Ng (1993), esp. pp. 16-18.) To view convention in this way is to view it neither as ontologically insignificant - it determines the character of the phenomenal world - nor as ontologically efficacious - it is empty. And so we also have a middle way with regard to convention. Finally, given the nice ambiguity in the reference of “that,” (de ni), not only are “dependent arising” and “emptiness” asserted to be dependent designations, and their referents hence merely nominal, but the very relation between them is asserted to be so dependent and hence to be empty.

This last fact, the emptiness of the relation between the conventional world of dependently arisen phenomena and emptiness itself, is of extreme importance at another stage of the Madhyamika dialectic and comes to salience in Nāgārjuna’s Vigrahavyāvitānī and in Candrakīrti’s Prasannapada. For this amounts to the emptiness of the central ontological tenet of Nāgārjuna’s system and is what allows him to claim, despite all appearances, that he is positionless. That is, Nāgārjuna thereby has a ready reply to the following apparent reductio argument (reminiscent of classical Greek and subsequent Western challenges to Pyrrhonian skepticism): You say that all things are, from the ultimate standpoint, nonexistent. That must then apply to your own thesis. It therefore is really nonexistent, and your words, only nominally true. Your own thesis, therefore, denies its own ground and is self-defeating. This objection would be a sound one against a view that in fact asserted its own inherent existence, or grounded its truth on an inherently existing ontological basis. But, Nāgārjuna suggests here, that is not the case for his account. Rather everything, including this very thesis, has only’ nominal truth, and nothing is either inherently existent or true in virtue of designating an inherently existent fact. This is hence one more point at which ladders must be kicked away. (fn 121. See Garfield (unpublished) and Streng (1973), chap., 4 for a similar interpretation of these verses and the correlative arguments.)

These morals are driven home in XXIV: 19, where Nāgārjuna emphasizes that everything - and this must include emptiness - is dependently arisen. So everything - including emptiness - lacks inherent existence. So nothing lacks the three coextensive properties of emptiness, dependent-origination, and conventional identity. With this in hand, Nāgārjuna can reply to the critic: He points out (XXIV: 20-35) that, in virtue of the identity of dependent origination and emptiness on the one hand and of ontological independence and intrinsic reality on the other, such phenomena as arising, ceasing, suffering, change, enlightenment, and so on - the very phenomena the opponent charges Nāgārjuna with denying are possible only if they are empty. The tables are thus turned: It appeared that Nāgārjuna, in virtue of arguing for the emptiness of these phenomena, was arguing that in reality they do not exist precisely because for the reifier of emptiness, existence and emptiness are opposites. But, in fact, because of the identity of emptiness and conventional existence, it is the reifier who, in virtue of denying the emptiness of these phenomena, denies their existence. And it is hence the reifier of emptiness who is impaled on both horns of the dilemma he presented to Nāgārjuna: Contradicting the ultimate truth, the opponent denies that these phenomena are empty; contradicting the conventional, he is forced to deny that they even exist! And so Nāgārjuna can conclude:
Kārikā XXIV.20

yady aśūnyam idam sarvam udayo nästi na vyayah |
caturṇām āryasatyānām abhāvas te prasajyate ||20||

ruò yī qiè bù kōng zé wú yǒu shēng miè |
rú shì zé wú yǒu sì shèng di zhī fā |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 20 - If everything were of the nature of non-sunya, then there would be neither production nor destruction. Then also the non-existence of the Aryan Fourfold Truths would accordingly follow.

JONES (Skt):
[20] If, as you say, everything were not empty, then there would be neither arising nor ceasing, and the nonexistence of the four noble truths follows.

KALUPAHANA (Skt):
If all this is non-empty, there exists no uprising and ceasing. These imply the non-existence of the four noble truths.

MCCAGNEY (Skt):
If all this is not open, arising and dissolution do not exist. For you, the nonexistence of the four noble truths follows.

NISHIJIMA (Skt?):
20. When the unbalanced situations of the autonomic nervous system hasn't become pervaded through the world, The appearance of an accident does not exist, and the ending of changes does not exist. The Four Sacred Truths, The non-existence of Them are attached by the too much strong prejudice.

SPRUNG (Skt):
20 If all things are not devoid, nothing can come to be nor cease to be; It follows that, for you, the four Buddhist truths do not obtain.

STRENG (Skt):
20. If all existence is not empty, there is neither origination nor destruction. You must wrongly conclude then that the four holy truths do not exist.

BOCKING (Ch):
24v20 If everything were not empty There would be no arising or ceasing And thus there would not be The dharma of the four holy truths.

BATCHelor (Tb):
If all were not empty, nothing could come about or perish. It would follow for you that the four ennobling truths could not exist.

DOCTOR (Tb):
If all of this were not empty, Nothing would arise or be destroyed. For you it follows that There are no four noble truths. [XXIV.20]

GARFIELD (Tb):
20. If all this were nonempty, as in your view, There would be no arising and ceasing. Then the Four Noble Truths Would become nonexistent.

GARFIELD-SAMTEN (Tb):
20. If all this were nonempty, as in your view, Then there would be no arising and ceasing. It would follow that the Four Noble Truths Would not exist.

HAGEN (paraphrase):
If all this were non-Empty, as you say, there would be neither arising nor ceasing. Such would imply the nonexistence of the Four Noble Truths.
PINGALA COMMENTARY

24/20 If every dharma each had its own individual existent nature and was not empty, then there would be no arising or ceasing, and because of no arising or ceasing there would be no dharma of the four holy truths. Why is this?

CANDRAKĪRTI COMMENTARY

20ab If all things are not devoid, nothing can come to be nor cease to be;

And, then, if there is neither coming to be nor ceasing to be, necessarily

20cd It follows that, for you, the four Buddhist truths do not obtain. (fn 15 Cf. MMK XXIV.1. Nagarjuna turns the opponent’s own objection into an argument against him.)

Why? Because,

KALUPAHANA COMMENTARY

By rescuing the philosophical middle path from any absolutistic or substantialist interpretation, Nagarjuna has set the foundation for the explanation of the Buddha’s doctrine of the four noble truths. The facts of arising and ceasing are central to the four noble truths. If there ever has been a permanent entity, an entity that is not empty of a substance, then dependence as well as the four noble truths would have been falsified. No such entity has been discovered so far. Hence the four truths have remained valid.

GARFIELD COMMENTARY

20. The argument for this surprising turnabout reductio is straightforwardly presented in the subsequent verses:
Kārikā XXIV.21

apratītya samutpannaṃ kuto duḥkhaṃ bhaviṣyati
anityam uktaṃ duḥkhaṃ hi tat svābhāvye na vidyate ||21||

苦不從緣生 云何當有苦
無常是苦義 定性無無常

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 21 - Where could suffering in the nature of non-relational origination arise? For, indeed, what is impermanent is said to be in the nature of suffering and the impermanent cannot exist in something with self-nature.

JONES (Skt):
[21] How could suffering come to be if it is not dependently arisen? It is said that suffering is impermanent - indeed, it is not seen in what is self-existent.

KALUPAHANA (Skt):
How can there be suffering that is not dependently arisen? Suffering has, indeed, been described as impermanent. As such, it is not evident in terms of self-nature.

MCCAGNEY (Skt):
How will there be suffering that is not interdependently originated? Suffering is said to be impermanent. Indeed, it does not occur in what is imagined to have self-nature.

NISHIJIMA (Skt?):
21. When the synthetic universal phenomena are not clear, It is not clear where a serious pain will exist in future? And unreliable talks really produce very severe pain, Because even a concrete fact, which does not exist in the subjective image, is not recognized.

SPRUNG (Skt):
21 How will unregenerate existence come to be if it is not dependent on conditions? Unregenerate existence is said to be perishable and what is perishable cannot have its being in itself.

STRENG (Skt):
21. Having originated without being conditioned, how will sorrow (dukkha) come into existence? It is said that sorrow (dukkha) is not eternal; therefore, certainly it does not exist by its own nature (svabhava).

ROBINSON (Skt):
How would there be suffering that is not arisen in dependence? Since suffering is termed impermanent, it does not occur in own-beingness.
PINGALA COMMENTARY

24/21 Suffering which does not arise from conditions is not suffering. Why is this? The sutras say that the meaning of suffering is impermanence. If suffering had a fixed nature, how could it be impermanent, since it would not forsake its own nature? Moreover.

CANDRAKĪRTI COMMENTARY

If something is self-existent it cannot arise dependently; what does not arise dependently cannot be perishable. After all, a sky-flower, which does not exist ontically, is not perishable. The illustrious one said that unregenerate existence (duhkha) was perishable. ‘Whatever is perishable, is unregenerate existence.’ And from the Catuhsataka: ‘Suffering, certain suffering is born of the perishable and there is no happiness in it. Therefore the perishable as such is known as unregenerate existence.’

If it is supposed that things are self-existent, there can be nothing perishable. Which is to say, on the supposition that there is self-existence in things, unregenerate existence makes no sense. Nor is it merely unregenerate existence that makes no sense; on the supposition that things are self-existent, its arising (samudaya) as well makes no sense. Nagarjuna expounds this:

KALUPAHANA COMMENTARY

Nagarjuna is here returning to the interpretation of suffering by the substantialist metaphysicians (see comments on XXIV. 1), who held that suffering exists in terms of self-nature. He is reminding the metaphysicians that the Buddha's conception of suffering is founded not only on the idea of dependent arising but also the notion of impermanence. In fact, the perversion regarding the notion of impermanence is also the cause of the perversion regarding the conception of suffering (see comments on XXIII. 1).

GARFIELD COMMENTARY

21. The first noble truth is the truth of the existence of suffering. The opponent charges Nāgārjuna with denying the existence of suffering through asserting its emptiness. But, Nāgārjuna points out, since emptiness is dependent origination, when the opponent denies its emptiness, he denies that suffering is dependently originated. But he agrees that all phenomena are dependently originated. He thus is forced to deny the existence of suffering. But for Nāgārjuna, since existence amounts to emptiness, the assertion of the emptiness of suffering affirms, rather than denies, its existence.
Kārikā XXIV.22

svabhāvato vidyamāṇaṃ kim punaḥ samuḍdeṣyate

| tasmāt samudayo nāsti śūnyatāṃ pratibādhataḥ ||22||

ruò kū yòu dìng xìng hé gù cóng jí shēng
shi gù wú yòu jí yì pò kōng yì gū

| raṅ bźin las ni yod yin na | | ci žig kun tu 'byuṅ bar 'gyur | | de phyir stoṅ ŋid gnod byed la | | kun 'byuṅ yod pa ma yin no |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 22 - How could that which has self -nature arise again?
Therefore, there is no arising in that which disaffirms (i.e., destroys)

JONES (Skt):
[22] In addition, if something exists by self-existence, how could it come to be? For one who rejects emptiness, there can be no "coming to be."

KALUPAHANA (Skt):
How can that which is evident in terms of self-nature rise again? Therefore, for one who contradicts emptiness, there exists no [conception of] arising.

MCCAGNEY (Skt):
Again, why will what is presently existing as a consequence of self-nature rise again?
Therefore, from the denial of openness, there is the nonexistence of arising.

NISHIJIMA (Skt?):
22. The subjective ideas, which we are considering in our brain now,
How they are possible to be considered in our brain again?
Therefore it is impossible for the past and the present will be combined together.
And then the two states of the balanced autonomic nervous system might fight with each other.

SPRUNG (Skt):
22 Why should something which exists in itself already be brought into existence once again? If devoidness of self-existence is repudiated unregenerate existence cannot come to be.

STRENG (Skt):
22. How can that which is existing by its own nature originate again? For him who denies emptiness there is no production.

ROBINSON (Skt):
Why would something occurring by its own-being arise again? Therefore when you deny emptiness, there is no arising [of suffering].

BOCKING (Ch):
24v22 If suffering had a fixed nature
How could it arise from accumulation?
Therefore there is no accumulation
Through denial of the principle of emptiness.

BATCHELOR (Tb):
If it did exist from its own nature, why would it have an origin? Therefore, for those who undermine emptiness, it can have no origin.

DOCTOR (Tb):
Given natural existence,
What could originate?
Hence, for those who deny emptiness,
There cannot be any origin. [XXIV.22]

GARFIELD (Tb):
22. If something comes from its own essence, How could it ever be arisen?
It follows that if one denies emptiness
There can be no arising (of suffering).

GARFIELD-SAMTEN (Tb):
22. If something exists through its essence, How could it ever be arisen?
It follows that for one who denies emptiness
There could be no sources of suffering.

HAGEN (paraphrase):
How could that which exists in terms of self-nature come into existence again? For those who deny Emptiness, there can be no arising of dukkha.
PINGALA COMMENTARY

24/22 If suffering had a fixed nature, then it would not arise, being already existent. If this were so, there would be no truth of accumulation, because of the denial of the principle of emptiness.

Further.

CANDRAKÎRTI COMMENTARY

The thought is that unregenerate existence does arise, and therefore there is unregenerate existence, and, as is said, there is a cause of its arising. Therefore, if one repudiates the devoidness of unregenerate existence and supposes that it is self-existent, the idea of a cause of unregenerate existence is meaningless because there would be no purpose in its coming to be a second time. And so for one repudiating devoidness, arising does not make sense either.

Further, an end (nirodha) to unregenerate existence is not comprehensible either for one who supposes that unregenerate existence is self-existent.

Nagarjuna expounds:

KALUPAHANA COMMENTARY

Throughout the treatise, Nagarjuna was refusing to recognize that the conception of self-nature or substance leaves any room for the recognition of arising and ceasing. This was contrary to the attempt on the part of the metaphysicians. Nagarjuna is here insisting that the conception of arising (samudaya) makes no sense at all when applied to self-nature.

Self-nature is not something that comes and goes. It is not an occurrence. It is there for ever. As such, it contradicts the theory of emptiness which is intended to explain the occurrence of events. Emptiness, as mentioned earlier (XXIV. 18), is synonymous with "dependent arising."

GARFIELD COMMENTARY

22. The second noble truth is that suffering has a cause. But, again, if the opponent asserts the nonemptiness of suffering, he asserts that it does not arise from causes and conditions. Yet Nāgārjuna’s analysis shows that it must, in virtue of its emptiness, be so arisen and thus accords with the second truth.
ENGLISH TRANSLATIONS

INADA (Skt):
Verse 23 - The extinction of suffering in terms of self-nature does not happen. For, you deny extinction itself by adhering to the notion of self-nature.

JONES (Skt):
[23] Thus, there can be no cessation of suffering that exists though self-existence. You deny cessation by being obsessed with self-existence.

KALUPAHANA (Skt):
The cessation of suffering that exists in terms of self-nature is not evident. You contradict cessation by adhering to a notion of self-nature.

MCCAGNEY (Skt):
The cessation of suffering existing by means of self-nature does not occur. Cessation by contradictions in self-nature is denied by you.

NISHIJIMA (Skt?):
23. The States of Self-Regulation are not related with the subjective existence. Therefore, the Real State of the Painful Situations can be recognized only by the pain itself. Subjective situations are prone to be contradictory. However the Self-Regulation is always painful against you.

SPRUNG (Skt):
23 There is no end to unregenerate existence which is self-existent. Because of your obsession with self-existence you preclude the possibility of cessation.

STRENG (Skt):
23. There is no destruction of sorrow (dukkha) if it exists by its own nature. By trying to establish "self-existence" you deny destruction.

ROBINSON (Skt):
Cessation of suffering that exists by own-being is non-occurrent; because you persistently maintain own-being, you deny cessation.
PINGALA COMMENTARY

24/23 If suffering had a fixed nature, it would not cease. Further.
Why? Because natures do not cease.

CANDRAKĪRTI COMMENTARY

If unregenerate existence were self-existent, how could there be an end to it as self-existence does not terminate? Thus, because of your obsession with self-existence, having seized on the idea and persisting in it stubbornly, you preclude the possibility of an end to unregenerate existence.

Now Nagarjuna expounds how the Buddhist path (marga) as well is unintelligible for the exponent of the self-existence view.

KALUPAHANA COMMENTARY

Just as the notion of selfnature contradicts the idea of arising, it also renders the conception of cessation meaningless. Note the emphasis on the present participle, santa (left untranslated by Inada,), used in relation to duhkha, implying "suffering that exists" in terms of selfnature. The notion of existence defined in this manner has already been criticized by Nagarjuna (I.6). In effect Nagarjuna is saying that the notion of existence (sat) may be compatible with the conception of self-nature, but it is not appropriate in the context of "that which has come to be" (bhuta).

GARFIELD COMMENTARY

23. Similarly, the third noble truth is the truth of cessation. But inherently existent things cannot cease. Empty ones can. Nāgārjuna’s analysis thus explains the third truth; the reifier contradicts it.
Kārikā XXIV.24

svābhāvye sati mārgasya bhāvanā nopapadyate |

| ci ste lam de bsgom bya na | | khyod kyi rǎn bźin yod ma (3)yin |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 24 - If the way to enlightenment possesses self-nature, then its practice will not be possible. But if the way is practiced, your assertion of a way involving self-nature is inadmissible (i.e., cannot exist).

JONES (Skt):
[24] If the path were self-existent, the cultivation of the path could not occur. But since the path is in fact cultivated, self-existence is not seen in it.

KALUPAHANA (Skt):
When self-nature exists, the cultivation of the path is not appropriate. And if the path were to be cultivated, then no self-nature associated with it [i.e., the path] would be evident.

MCCAGNEY (Skt):
In what is conceived to be existing by self-nature, practice of the path does not take place.
But were this path caused to exist by you, what is imagined to be self-nature does not occur.

NISHIJIMA (Skt?):
24. Relying upon our own will actually belong to the True Way. And what kind of reason does such a result occur, is not clear. Fortunately the symbol of the True Way exists actually, And so no existence of selfishness can be recognized from the facts.

SPRUNG (Skt):
24 The realizing of a path which exists in itself, is not intelligible. Again, a path which is to be realized cannot exist in itself as you think.

STRENG (Skt):
24. If the path of release is self-existent, then there is no way of bringing it into existence (bhāvanā); If that path is brought into existence, then "self-existence," which you claim does not exist.

ROBINSON (Skt):
If own-being existed, cultivation of the path would not be a fact; if the path is cultivated, then your “own-being” does not occur.
PINGALA COMMENTARY

24/24 If dharmas had a fixed existence, then there would be no cultivation of the Way, and why? If dharmas had reality, then they would be permanent, and what is permanent cannot be augmented. If the Way can be cultivated, then the Way does not have a fixed nature.

Further.

CANDRAKĪRTI COMMENTARY

If all things were self-existent then the path too would be self-existent in the same sense; but a path is by definition unrealized. Why would one realize it a second time? As Nagarjuna puts it, ‘The realizing (bhavana) of a path which exists in itself is not intelligible.’

If you concede that a path is to be realized then indeed the Buddhist path could not be self-existent.

KALUPAHANA COMMENTARY

The principle of self-nature (svabhavya, note the use of the abstract noun instead of svabhava) explains the way in which self-nature functions. Thus, if somethings are assumed to have self-nature, what is assumed is that things happen on their own (svo bhavo) without the support of anything else. In this sense, they are independent. If the path (marga) leading to the cessation of suffering (duhkha) were to be explained in terms of self-nature, it means that the way will work out on its own, without any effort on the part of one who is expected to cultivate it. If one is expected to cultivate the path, it means that one has to make an effort. It does not happen automatically.

1243
Kārikā XXIV.25

yadā duḥkhaṃ samudayo nirodhaś ca na vidyate
mārgo duḥkhanirodhatvāt katamaḥ prāpayiṣyati ||25||

ruò wú yǒu kǔ dì jǐ wú jí miè dì
suǒ ké miè kǔ dào jīng wèi hé suǒ zhì

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 25 - When suffering, arising, and extinction cannot be admitted to exist, what path is achieved in virtue of the extinction of suffering?

JONES (Skt):
[25] If no suffering, arising, and ceasing are seen, what path for the cessation of suffering could there be?

KALUPAHANA (Skt):
When suffering as well as its arising and ceasing are not evident, through the cessation of suffering where will the path lead to?

MCCAGNEY (Skt):
If suffering, arising, and cessation does not occur which path will result in the cessation of suffering?

NISHIJIMA (Skt?):
25. At every time, when Pains are accumulated, Self-regulation is never recognized at all. The True Way seems to be the negation of Pain. And how is it possible for something to be found in future?

SPRUNG (Skt):
25 If there is no unregenerate existence and no origin or nor end to it, what way can there be leading to its cessation?

STRENG (Skt):
25. When anguish (dukkha), origination, and destruction do not exist, What kind of path will obtain the destruction of sorrow (dukkha)?

ROBINSON (Skt):
When suffering, arising and cessation do not occur, what path is supposed to be attained through the cessation of suffering?
PINGALA COMMENTARY

24/25 If all dharmas had a pre-existent fixed nature, there would be no truths of suffering, accumulation or cessation. Then what state of extinction of suffering could the Way to the extinction of suffering achieve?

CANDRAKĪRTI COMMENTARY

There can be no cessation of unregenerate existence because of whose cessation the way, as what is attained, is realized. It follows that the Buddhist path is not intelligible. In sum, the four Buddhist truths cease to exist for those who hold that things are self-existent. Now Nagarjuna expounds how, for such, there can be no clear knowledge, no overcoming, no inner acceptance, and no final realization of the Buddhist truths.

Devoidness essential to intelligibility of enlightenment

KALUPAHANA COMMENTARY

Insisting upon the recognition of self-nature, the metaphysicians were compelled to deny the fact of suffering as well as its arming and ceasing. It would, therefore, be meaningless to speak of a path leading to the cessation of suffering. Substantivist speculation leaves only two alternatives: either there is cessation of suffering or there is no cessation of suffering. If the fact is that there is cessation of suffering (duhkha-nirodhatva), there is no room for a path. It happens in any case. If the fact is that there is no cessation of suffering, then it is meaningless to think of a path. Fatalism being the consequence of both standpoints, the notion of a path leading to any goal is rendered utterly meaningless.

GARFIELD COMMENTARY

25. The fourth truth is the truth of the path. Again, the path only makes sense, and cultivation of the path is only possible, if suffering is impermanent and alleviable and if the nature of mind is empty and hence malleable. The path, after all, is a path from suffering and to awakening. If the former cannot cease and the latter does not depend on cultivation, the path is nonexistent. But it is the analysis in terms of emptiness that makes this coherent. An analysis on which either the phenomena were inherently existent or on which emptiness was and the phenomena were therefore nonexistent would, make nonsense of the Four Noble Truths. Nāgārjuna now turns to the implications for this line of argument for the three jewels, the Sangha, the Buddha, and the Dharma:
**Kārikā XXIV.26**

svabhāvenāparijñānaṃ yadi tasya punaḥ katham | ।
parijñānaṃ nanu kila svabhāvah samavasthitah ||26|| ।

rùò kù díng yòu xìng xiàn lái suò bù jiàn ।
yù;yù;wù jìn yùn hé jiàn qì xìng bù yì gù ।
| gal te raṅ bźin ŋid kyis ni | | yoṅs su śes pa ma yin na | ।
| de ni ji ltar yoṅs ses 'gyur | | (4)raṅ bźin gnas pa ma yin nam | ।

**ENGLISH TRANSLATIONS**

INADA (Skt):  
Verse 26 - If (suffering) cannot be known in virtue of self-nature, how does it become an object of knowledge again? Self-nature, indeed, never remains fixed.

JONES (Skt):  
[26] If non-understanding exists by self-existence, how will understanding ever arise? Is not self-existence fixed?

KALUPAHANA (Skt):  
If non-understanding is due to self-nature, how can one come to possess understanding subsequently? Is it not the case that self-nature is fixed?

MCCAGNEY (Skt):  
There is no thesis by means of self-nature. How is there a thesis or proposition about it if self-nature is never assuredly established?

NISHIJIMA (Skt?):  
26. Relying upon subjective existence is never relying upon perfect knowledge. At that time, what is included into the concrete facts is what again? How is it possible for the problem to be included into Reality actually? Therefore, the subjective existences are perfectly maintained stable.

SPRUNG (Skt):  
26 If the lack of clear knowledge is self-existent how can there ever be knowledge? Surely what is self-existent is unchanging.

STRENG (Skt):  
26. If there is no complete knowledge as to self-existence, how can there be any knowledge of it? Indeed, is it not true that self-existence is that which endures?

BOCKING (Ch):  
24v26 If suffering had a fixed nature ।
Which was not previously perceived ।
How could it be perceived now ।
Since its nature would not have changed?

BATCHELOR (Tb):  
If non-understanding existed by its very own nature, how could one ever understand? Doesn’t it abides by nature?

DOCTOR (Tb):  
If complete understanding Were absent by nature, ।
How could complete understanding occur? ।
Does nature not remain? [XXIV.26]

GARFIELD (Tb):  
26. If nonunderstanding comes to be Through its essence, ।
How will understanding arise? ।
Isn’t essence stable?

GARFIELD-SAMTEN (Tb):  
26. If it is not understood Through its essence, ।
How could it come to be understood? ।
Does essence not endure?

HAGEN (paraphrase):  
If non-understanding is self-existent, how can there be understanding? Whatever is self-existent does not change.
PINGALA COMMENTARY

24/26 If previously, when you were unenlightened, you were unable to perceive the nature of suffering then you ought not to be able to perceive it now either, and why? Because its nature would be fixed as 'not perceived'.

Further.

CANDRAKIRTI COMMENTARY

If it is supposed that at one time there is self-existent ignorance of unregenerate existence but that later there is perfect comprehension (parijnayate) of it, that does not make sense. Why not? Because surely the self-existent is unchanging. Surely it is common experience that the self-existent is immutable and is not subject to change, like the heat of fire. As there can be no change in what is self-existent it is not logically possible that there can be knowledge of unregenerate existence of which there was, earlier, self-existent ignorance. Thus, perfect comprehension of unregenerate existence is not possible either.

And as the perfect comprehension of unregenerate existence is not possible, so:

KALUPAHANA COMMENTARY

Inada’s rendering of nanu kila svabhavah samavastbitah as "self-nature, indeed, never remains fixed," seems to be based upon a misunderstanding of the import of the particle nanu which simply means: "is it not the case that," rather than a simple negation. If self-nature is something that "never re-maint fixed," what we are presented here is the so-called Spinozan solution to the problem of substance. Nagarjuna was not willing to accept such an interpretation of self-nature, for if self-nature were understood as changing, the whole purpose of formulating the notion of self-nature by the substantialists would be defeated. Therefore, he was simply asking the question: "Is it not the case that self-nature is fixed?" He is, in fact, insisting that if it is not fixed, it is not a self-nature. A change of substance was, in the eyes of Nagarjuna, a self-contradiction.

Hence he argues: If there is any inability to understand suffering because such inability is inherent, is through self-nature, then there can never be its understanding. Something that is inherently unknowable can never be subsequently known. This is the most telling criticism of self-nature (svabhava) as it is employed in the explanation of the path to freedom (nirvana).

GARFIELD COMMENTARY

26. If ignorance is real and thus for the opponent inherently existent, there is no possibility of replacing it with insight. Therefore the cultivation of Buddhist practice is impossible, or at least pointless.
Kārikā XXIV.27

prahāṇasākṣātkaraṇe bhāvanā caivam eva te |
parijñāvan na yujyante catvāry api phalāni ca ||27||

rú jiàn kǔ bù rán duàn jí jí zhēng miè 
xiū dào jí sì guò shì yì jiē bù rán

de bźin du ni khyod ŋid kyi | | spaṅ daṅ mṅon du bya ba daṅ | 
spaṅ daṅ 'bras bu bźi dag kyaṅ | | yoṅs śes bźin du mi ruṅ ŋo |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 27 - Just as in the case of knowledge (of suffering), therefore, your knowledge of abandoning, perceptual confirmation, practice, and the four fruits (i.e., religious attainments) cannot be possible.

JONES (Skt):
[27] Like understanding, elimination, realization, and meditative development are not possible if you accept self-existence, nor are their four noble fruits.

KALUPAHANA (Skt):
As in the case of understanding, this [i.e., the explanation in terms of self-nature] is not proper in relation to the activities of relinquishing, realizing as well as cultivating. And so would the four fruits be [improper.]

MCCAGNEY (Skt):
Practice in the intuitive perception of letting go and thus possession of a thesis and also the four noble fruits do not occur for you.

NISHIJIMA (Skt?):
27. Considerations are just Intuitions.
What are manifested themselves in front of us are just the same as what we are looking at them.
What are similar to knowledge are never fixed like a harness.
The Four Sacred Truths are like that, and the Four Kinds of Results are also similar to.

SPRUNG (Skt):
27 Overcoming, final realization and inner realization of the path make as little sense for you as did perfect comprehension and the four spiritual attainments.

STRENG (Skt):
27. As in the case of complete knowledge, neither destruction, realization, "bringing into existence," Nor are the four holy fruits possible for you.

BOCKING (Ch):
24v27 Just as perception of suffering would not occur, So cutting-off accumulation, realizing cessation, Cultivation of the Way, and the four fruits Would also not occur

BATCHELOR (Tb):
In the same way, your letting go, realizing, cultivating and the four fruits too are as impossible as understanding.

DOCTOR (Tb):
The same with your elimination, Actualization, familiarization, Cultivation, and [our fruitions— They are as impossible as complete understanding.

GARFIELD (Tb):
27. In the same way, the activities of Relinquishing, realizing, and meditating And the four fruits Would not be possible.

GARFIELD-SAMTEN (Tb):
27. Just like complete understanding, The activities of relinquishing, realizing, Meditating, and the four fruits Would not make sense.

HAGEN (paraphrase):
As with understanding, neither relinquishing, realizing, cultivation, nor the four fruits are possible for you.
PINGALA COMMENTARY

24/27 Just as, if the nature of the truth of suffering was not perceived previously it would not be perceived subsequently, so in the same way there would be no cutting-off of accumulation, realization of cessation or cultivation of the Way, and why? If accumulation's nature was not cut-off before, it could not be cut off now either, because a nature cannot be cut off. If cessation was not realized previously, it could not be realized now either, because it was not realized before. If the Way was not previously cultivated, it could not be cultivated now, because it was not cultivated before. Therefore none of the four holy truths or the four activities of perceiving, cutting-off, realizing and cultivating would exist, and if these four activities did not exist, the four fruits of the Way would not exist either. Why is this?

CANDRAKĪRTI COMMENTARY

Overcoming (prahana) of the origin of unregenerate existence and final realization (saksatkarana) of its cessation are meant by the dual expression ‘overcoming and realization’. ‘Inner realization’ (bhavana) is of the Buddhist path. It makes no sense because perfect comprehension of unregenerate existence is not possible for you. The eradication of an origin, which, because the self-existent is indestructible, is indestructibly self-existent, is not intelligible. Realization and attainment are to be understood in the same way.

It is not only perfect comprehension and so on which is not possible according to the theory of self-existence. For, ‘the four spiritual attainments make as little sense as did perfect comprehension’.

As a self-existent perfect comprehension of an uncomprehended unregenerative existence does not make sense, so the attainment of having entered the stream, which earlier did not exist, cannot possibly exist later. As for the attainment of entering the stream, so, it should be recognized, there can be no attainments of once-returning, not-returning and enlightenment.

It is not merely that, like perfect comprehension, these spiritual attainments make no sense, but the realization (adhigama) of them makes no sense either.

KALUPAHANA COMMENTARY

An understanding (parijna) of the nature of suffering (duhkha) is a necessary prerequisite for its relinquishing, the realization of freedom, and the cultivation of the path leading to freedom. In the previous verse, Nagarjuna explained how a belief in self-nature would create difficulties in explaining understanding (parijna) or its absence (aparijna). The same difficulties are associated with the explanation of the relinquishing (prahana) of suffering, the realization (saksatkarana) of freedom and the cultivation (bhavana) of the path. To highlight these difficulties, Nagarjuna concentrates on the fruits or consequences (phala).
Kārikā XXIV.28

svabhāvenānadhigataṁ yat phalam tat punaḥ katham |
śakyaṃ samadhigantuṃ syāt svabhāvaṃ parigṛhṇataḥ ||28||

| raṅ bźin yoṅs su ’dzin pa yis | | ’bras bu raṅ bźin ŋid kyis ni |
| thob pa min (5)pa gaṅ yin de | | ji ltar ’thob par nus par ’gyur |

INADA (Skt):
Verse 28 - To one who adheres to the notion of self-existence, how could the (four) fruits which are unattainable in virtue of self-existence be ever attainable?

JONES (Skt):
[28] For one who accepts self-existence, how is it possible to obtain a fruit that is not already obtained through its self-existence?

KALUPAHANA (Skt):
How could it be possible for a person, who upholds a theory of self-nature, to realize a fruit that has already been realized through self-nature?

MCCAGNEY (Skt):
Again, how is which fruit attained by means of self-nature? Self-nature would be able to encompass and completely grasp it.

NISHIJIMA (Skt?):
28. What are not grasped relying upon our subjectivity, That is just the Result, but what is just it is? What will be well realized, might be what has been realized already. But in such situations, there might be perhaps subjective existence, has been realized abundantly already.

SPRUNG (Skt):
28 How could it be possible, for one who holds to the self-existence of things, to realize a certain attainment which exists in itself as unrealized?

STRENG (Skt):
28. If you accept "self-existence," and a "fruit" is not known by its self-existence, How can it be known at all?

ENGLISH TRANSLATIONS

BOCKING (Ch):
24v28 The natures of these four fruits of the Way Being formerly unattainable, If all dharmas had fixed natures, How could they possibly be attained?

BATCHelor (Tb):
How can any fruits, which totally hold their own nature and by their own nature are unattained, be attained?

DOCTOR (Tb):
Since they retain their own nature, How could fruitions that are By nature unachieved Ever be achieved? [XXIV.28]

GARFIELD (Tb):
28. For an essentialist, Since the fruits through their essence Are already unrealized, In what way could one attain them?

GARFIELD-SAMTEN (Tb):
28. For an essentialist, How could it be possible To attain those fruits That are already essentially unattained?

HAGEN (paraphrase):
How could one who holds the notion of self-nature realize the four fruits which are yet unrealized?
PINGALA COMMENTARY

24/28 If all dharmas had fixed natures, and the four sramana-fruits had not yet been attained, how could they be attained now? If they can be attained, their natures are not fixed.

Further:

CANDRAKĪRTI COMMENTARY

Because it is the nature of the self-existent not to be born nor to perish, it is not logically possible, if one assumes self-existence, that there should be subsequent realization of things whose inherent nature it was earlier to be unrealized.

KALUPAHANA COMMENTARY

A person believing in self-nature also admits that a fruit is obtained by that means. If a fruit has not been achieved through self-nature it can never be achieved in any other way. It is an either/or situation. Accept it as occurring on its own or it will never occur. This is a substantialist view of freedom (nirvana, which will be taken up for detailed treatment by Nagarjuna later on). This, indeed, is a fatalistic or a deterministic explanation of causality. Either the effect exists in the cause or it does not (see discussion of artha [= phala] at I.6).

GARFIELD COMMENTARY

28. So the essentialist has a dilemma if he wants to maintain the possibility of a community of practitioners (the Sangha) and of a path for them to practice: Either the ignorance in which they find themselves and that serves as the impetus to practice is inherently existent, in which case practice is bound to be inefficacious, or the understanding they hope to achieve is inherently existent, in which case there is no need to practice since it is already present and no use in practicing since its existence is independent of practice.
Kārikā XXIV.29

phalābhāve phalasthā no na santi pratipannakāḥ |
samgho nāsti na cet santi te ’ṣṭau puruṣapudgalāḥ ||29||

gal te skyes bu gaṅ zag brgyad | | de dag med na dge ’dun med |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 29 - Without the (four) fruits, there can be no matured 
states and arrived (i.e., completed) states. If these eight 
states of men do not exist, there will also be no realization 
of the Sangha. - Note: Refer to verses 3 and 4 for the fruits 
and states of men.

JONES (Skt):
[29] In the absence of the fruits, there are none who have 
attained the fruits, nor any who have entered the way to 
attaining them. If these eight types of people do not exist, 
there is no community of monks and nuns.

KALUPAHANA (Skt):
In the absence of the fruits, there are neither those who 
have attained the fruits nor those who have reached the 
way [to such attainment]. If the eight types of 
individuals do not exist, there will be no congregation.

MCCAGNEY (Skt):
Where the fruits do not exist, the stage in which the fruits are 
enjoyed and those who have arrived at a goal do not exist. 
If the eight kinds of persons or human beings do not exist, 
the Buddhist community does not exist.

NISHIJIMA (Skt?):
29. Without the existence of Result, there is no establishment of the 
Result.
And there might be no arrival of the Realizing the Truth.
The Buddhist Organizations do not exist, and their real entities do not 
exist really.
There is impossible for the eight kinds of officers, and other 
personal members of the Buddhist Organizations do not exists 
actually.

SPRUNG (Skt):
29 If the attainments do not exist, those who strive for 
and exist in them do not exist. If the eight spiritual 
categories do not exist, the Buddhist community 
does not exist.

STRENG (Skt):
29. In the non-existence of "fruit," there is no "residing in 
fruit" nor obtaining the "fruit"; When the community 
of Buddhists does not exist, then those eight "kinds of 
persons" do not exist.

BOCKING (Ch):
24v29 If there were no four fruits 
There would be none who attained or aspired 
And without the eight kinds of holy person 
There would be no jewel of the Sangha.

BATCHelor (Tb):
If the fruits did not exist, there could be no abiding in the 
fruits. Experiencing them would also not exist. If those 
eight beings did not exist, the Community would not 
exist.

DOCTOR (Tb):
Without fruition, there is no one abiding in it, 
Nor anyone who has gained entry. 
If the eight persons do not exist, 
Then there is no Sangha. [XXIV.29]

GARFIELD (Tb):
29. Without the fruits, there are no attainers of the fruits, 
Or enterers. From this it follows that 
The eight kinds of persons do not exist. 
If these don't exist, there is no spiritual community.

GARFIELD-SAMTEN (Tb):
29. Without the fruits, there would be no 
Enjoyers of the fruits or practitioners. 
If the eight kinds of beings and persons did not exist, 
There would be no sangha.

HAGEN (paraphrase):
In the absence of the fruits, there are neither those 
who have arrived nor those who have attained the 
path. If the eight types of individuals do not exist, 
there is no Sangha.
PINGALA COMMENTARY

24/29 If the four sramana-fruits did not exist, there would be none who attained the fruits and none who aspired to them. Without the eight types of saints and holy people there would be no jewel of the Sangha. But the sutras say that these eight types of saints and holy people constitute the Sangha-jewel.

Further:

CANDRAKĪRTI COMMENTARY

(“Eight spiritual categories”: fn 16 Cf MMK XXIV.4.)

GARFIELD COMMENTARY

29. The consequence of this is that there is no Sangha. The existence of the Sangha is entirely dependent upon the existence of the path and of the possibility of the fruits of the path - increasing degrees of realization since the Sangha is, by definition, the community of practitioners of the path.
Kārikā XXIV.30

abhāvāc cāryasatyānāṃ saddharmo ’pi na vidyate |
dharme cāsati samghe ca kathāṃ buddho bhaviṣyati ||30||

wú sì shèng dì gù yì wú yǒu fà bāo
wú fà bāo sēng bāo yùn hé yǒu fú fó bāo

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 30 - Without the Aryan Truths the true Dharma does not exist. Without the Dharma and Sangha, how could there be the Buddha?

JONES (Skt):
[30] Because of the nonexistence of the four noble truths, the true doctrine also is not seen. And if there is no doctrine or religious community, how could a buddha arise?

KALUPAHANA (Skt):
From the non-existence of the noble truths, the true doctrine would also not be evident. In the absence of the doctrine and the congregation, how can there be an enlightened one?

MCCAGNEY (Skt):
From the nonexistence of the noble truths, the true Teaching does not occur.
Where the Teaching and the Buddhist community do not exist, how will the Buddha exist?

NISHIJIMA (Skt?):
30. Without leaving the non-existence of the Sacred Truths, Even the Real Universe can never be recognized.
If He were not existing both in the Universe, or in the Buddhist Organization, Where shall it be possible for Buddha to exist even in future?

SPRUNG (Skt):
30 If the four Buddhist truths do not hold there is no Buddhist Truth. If the Buddhist Truth and community do not exist, how can there be an enlightened one?

STRENG (Skt):
30. Because there is non-existence of the four holy truths, the real dharma does not exist. And if there is no dharma and community, how will the Buddha exist?
PINGALA COMMENTARY

24/30 Putting into practice the four holy truths one attains the dharma of nirvana. If there were no four truths there would be no jewel of the Dharma. If these two jewels did not exist, how could the jewel of the Buddha possibly exist? By such reasonings as these, asserting that dharmas have fixed natures, you destroy the three jewels.

Question: Although you have refuted all dharmas, surely the ultimate state (Tao) of anuttara-samyak-sambodhi exists, since it is by virtue of this state that we call someone 'Buddha'.

Reply:

CANDRAKĪRTI COMMENTARY

The meaning of these two verses is as explained previously.

Further, on the assumption of self-existence in things,

KALUPAHANA COMMENTARY

Having shown that the explanation of the attainment of the fruits (phala) of life is rendered impossible or meaningless by the adherence to the notion of self-nature, Nagarjuna turns the table on the metaphysicians, showing them how the denial of emptiness (sunyata), rather than its assertion, leads to a denial of all that they were trying to explain.

GARFIELD COMMENTARY

30. But it would also follow that there is no Dharma - no true Buddhist doctrine since that is grounded on the existence of the Four Noble Truths. And finally, as Nāgārjuna emphasizes in XXIV: 31, 32, since the attainment of buddhahood depends upon the study and practice of the Dharma within the context of the spiritual community, the opponent’s view, unlike Nāgārjuna’s, has the consequence that no buddha can arise. Moreover, if the Buddha and enlightenment were each inherently existent, they would be independent and could hence arise independently, which is absurd. To be a buddha is to be enlightened, and vice versa:
Kārikā XXIV.31

apratītyāpi bodhiṃ ca tava buddhaḥ prasajyate |
apratītyāpi buddhaṃ ca tava bodhiḥ prasajyate ||31||

rù shuí zé bù yǐn pú tí ér yòu fú;fó 
yì fú bù yǐn fú;fó ér yòu yú;yú;wū  pú tí

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 31 - According to your assertion there is a fallacy of becoming the Buddha without relationship to enlightenment. Also, conversely, there is enlightenment without relationship to the Buddha.

JONES (Skt):
[31] It also follows for you that an enlightened one is not dependent upon enlightenment. It also follows for you that enlightenment is not dependent upon the enlightened.

KALUPAHANA (Skt):
Your [conception of the] enlightened one implies an independent enlightenment. Also, your [conception of] enlightenment implies an independent enlightened one.

MCCAGNEY (Skt):
It follows for you that the Buddha is independent of enlightenment.
And it follows for you that enlightenment is independent of the Buddha.

NISHIJIMA (Skt?):
31. Even though the Truth is not confirmed so well yet, Your Gautama Buddha is compassionate toward you.
Even though you have not arrived at Gautama Buddha’s personality well,
You have attached to your own Buddhist Truth preferably.

SPRUNG (Skt):
31 It follows for you that the enlightened person is not dependent on enlightenment. It follows for you that enlightenment is not dependent on an enlightened person.

STRENG (Skt):
31. For you, either the one who is enlightened (Buddha) comes into being independent of enlightenment, Or enlightenment comes into being independent of the one who is enlightened.

ROBINSON (Skt):
According to you, the Buddha would not be dependent on bodhi, which is absurd, and bodhi would not be dependent on the Buddha, which is absurd.
PINGALA COMMENTARY

24/31 If, as you say, all dharmas have a fixed nature, then there should be Buddhahood independently of bodhi, and bodhi independently of Buddhahood, since the nature of these two will be permanent and fixed.

CANDRAKĪRTI COMMENTARY

If there were an ontic existent (bhava) called a self-existent enlightened person, a buddha, he would not be dependent on enlightenment (bodhi), on awareness that is omniscient; he would not even be related to it. As was said, ‘The self-existent is not created nor is it dependent on anything other than itself.’ That is, there would be enlightenment without anyone being enlightened; enlightenment would have no basis and be unrelated to anyone becoming enlightened.

KALUPAHANA COMMENTARY

Explained in terms of self-nature, the enlightened one would be so irrespective of conditions (apratyaya). Similarly, enlightenment would be achieved irrespective of whether it is a person who makes an effort or not. This substantialist explanation of enlightenment and the enlightened one, in terms that are strictly naturalistic or deterministic, would render the activities of the one seeking enlightenment and freedom utterly meaningless.
Kārikā XXIV.32

INADA (Skt):
Verse 32 - According to your assertion, anyone who is not a Buddha in virtue of self-existence cannot hope to attain enlightenment even by serious endeavor or by practice of the Bodhisattva way.

JONES (Skt):
[32] One who by his self-existent nature is unenlightened would not attain enlightenment even while striving toward enlightenment by leading the way of life of a bodhisattva.

KALUPAHANA (Skt):
Whosoever is by self-nature unenlightened, even though he were to contend with enlightenment, would not attain enlightenment through a career of a bodhisattava.

MCCAGNEY (Skt):
Whoever is not a buddha by means of self-nature, he is striving after enlightenment.
For you, he will not attain enlightenment in the practices of bodhisattvas.

NISHIJIMA (Skt?):
32. Even a person, who hasn't become to the same state as Gautama Buddha relying upon his own personality yet, Such kinds of Enlightenment can be got relying upon what is occupied.
Relying upon keeping the same state of balanced autonomic nervous system as Gautama Buddha actually, Such kinds of people will arrive at the Real Truth actually in future..

SPRUNG (Skt):
32 One whose inherent nature is to be unenlightened, can never, according to you, even though he strives to be awakened, achieve enlightenment in the career of the bodhisattva.

STRENG (Skt):
32. For you, some one who is a non-Buddha by his own nature (svabhava) but strives for enlightenment (i.e. a Bodhisattva) Will not attain the enlightenment though the "way of life of becoming fully enlightened."

ROBINSON (Skt):
For you, he who is non-Buddha by his own-being, even though he strives for bodhi, will not realize bodhi in the bodhisattva course.

BOCKING (Ch):
24v32 Although one diligently and single-mindedly sets forth Cultivating and practicing the bodhi-path If he previously has the nature of a non-Buddha, He cannot accomplish Buddhahood. ...

BATCHelor (Tb):
For you, someone who by his very nature is not Buddha could not attain awakening however much he strove in the practice of awakening for the sake of awakening.

DOCTOR (Tb):
For you, the one who by nature is no Buddha. May pursue the conduct of enlightenment In order to attain enlightenment, Yet all such efforts will be in vain. [XXIV.32]

GARFIELD (Tb):
32. For you, one who through his essence Was unenlightened, Even by practicing the path to enlightenment Could not achieve enlightenment.

GARFIELD-SAMTEN (Tb):
32. For you, one who is Essentially unenlightened, Even by practicing the path to enlightenment, Could not achieve enlightenment.

HAGEN (paraphrase):
For you, one who is by self-nature, unenlightened, would not attain enlightenment even though he practiced the Bodhisattva Way.
PINGALA COMMENTARY

24/32 .. e because he does not already have that nature. It is like iron which does not have the nature of gold. Even though you repeatedly refine it in various ways, it will never become gold.

Further.

CANDRAKĪRTI COMMENTARY

(fat 17 Cf MMK XXIV.5 commentary)

This means that because being enlightened is self-existent, there could be no enlightenment for one whose nature is to be unenlightened, even though he strives for enlightenment in the true career of the bodhisattva, because it is impossible for one whose nature is unenlightened to alter fundamentally.

Devoidness essential to the intelligibility of moral action
Further,

KALUPAHANA COMMENTARY

This is the one and only time Nagarjuna, the so-called patron of Mahayana, refers to the way (carya) of a bodhisattva. Yet, the kind of criticism he is presenting here offers no consolation to those who accept certain doctrines of popular Mahayana. Any substantialist theory, according to Nagarjuna's view, militates against the career of a bodhisattva.

To uphold the view that a person is by nature unenlightened is tantamount to saying that he can never attain the fruit of enlightenment and freedom by exerting himself. Similarly, to assert the view that a person is by nature enlightened, b a potential buddha, or possesses a bodhi-citta, makes the attainment of enlightenment meaningless (XXIV.28) or impossible.

This, indeed, is reminiscent of the long drawn controversy between the Sarvastivadins and the Sautrantikas regarding the nature as well as the functioning of good (kusala = dharma) or bad (akusala = adharma) thoughts (citta). The metaphysical problems generated by an extremist analysis in relation to phenomena in general have been explained in Chapters I and II. The selfsame metaphysical problems appeared in the explanation of moral phenomena. The Sarvastivada-Sautrantika controversy relating to the "seeds that are of good nature" (kusala-dharma-bija) reflects their involvement in such metaphysical issues. The atomistic (and, therefore, non-empirical) analysis of thought (citta) led the metaphysicians to assume a sharp distinction not only between good thoughts (kusala-citta) and bad thoughts (akusala-citta), but also between individual moments of thought in each series, whether they be of good thoughts or bad thoughts. As such, several questions came to be raised: How does one good thought moment give rise to another similar thought moment? How can two different thought moments, one which is good and the other which is bad, coexist in one moment, especially when they are distinct as light and darkness (aloka-tamas ,see Adv)? If they cannot co-exist, how can a bad thought moment give rise to or be followed by a good thought? While the Sarvastivadins utilized the conceptions of prapti and aprapti to explain the manner of their occurrence, the Sautrantikas employed the notion of seed (bij) to elucidate these problems.

The substantialist Sarvastivadins, who adhered to a notion of self-nature (svabhava) were compelled to maintain that each variety of thought has its own-nature. Yet, when they were called upon to explain the occurrence or non-occurrence of good or bad thoughts in an individual person's stream of thought (samtana), they assumed that the non-attainment (aprapti) of one kind of thought could make room for the attainment (prapti) of another kind. The Sautrantikas, rejecting the notion of self-nature, emphasized the idea of potentiality (sakti) existing in the form of seed (bij). Thus, when a good thought moment occurs, the bad thought moment can remain latent without manifesting itself. Thus, we are left with two potentialities, one manifesting itself when the other is not. The terms sakti, bija, andvasana were all employed to refer to such potentiality.

A distinction came to be admitted not only between good (kusala) and bad (akusala), but also among the good seeds themselves. Thus, there are defiled good seeds (sasrava-kusala-bija) and non-defiled good seeds (anasrava-kusala-bija), the former accounting for worldly goodness and the latter leading to freedom (nirvana). These seeds were considered to be extremely subtle (susuksma) and remain uncorrupted or undestroyed (na samudghata). They were compared to gold (kancana). A popular statement runs thus: I perceive his extremely subtle seed of release.
like a seam of gold concealed in a cleft of elemental rocks. (Moksa-bijam aham hy asya susuksmam upalaksaye, dhatu-pasana-vivare niliam iva kancanam, Sakv, see also Jaini, Adv Introduction, )

Even though this substantialist view is attributed to the Buddha himself (see Jaini, loc cit.) on the basis of the Buddha's statement regarding the "luminous thought" (pabhassaram cittam), we have already provided evidence to the contrary (see Introduction), where thought is compared with "gold-ore" (jata-rupa) rather than with gold (suvanna). As such, neither the theory of the "seeds of release" (moksa-bija) nor of the "originally pure mind" (prakrti-prabhasvaracitta), which is a predecessor, the Mahayana notion of a bodhi-citta, can be reconciled with the Buddha's conception of non-substantiality (anatta) or Nagarjuna's view of "emptiness (sunyata). The present statement of Nagarjuna is a clear rejection of the substantialist standpoint of the later interpreters, which represents a recurrent desire to go back to a primordial source.

**GARFIELD COMMENTARY**

32. Nāgārjuna has hence demonstrated that any reification, whether of the conventional or of the ultimate, ends up, paradoxically, denying the existence of the very things it reifies. And any reification renders the most fundamental Buddhist philosophical insights and practices incoherent. A thoroughgoing analysis in terms of emptiness, on the other hand - one that includes the understanding of the emptiness of emptiness - renders the entire phenomenal world as well as emptiness itself comprehensible as nominally existent, empirically actual, and dependently arisen - real but essenceless. At this stage, Nāgārjuna shifts to the charge leveled by the opponent in XXIV: 2 that no practice is intelligible in the context of emptiness and argues that, on the contrary, practice is intelligible only in that context. The argument is a reprise of earlier moves, and so is rather straightforward:
Kārikā XXIV.33

na ca dhammam adharmam vā kaścij jātu karisyati
kim aśūnyasya kartavyam svabhāvah kriyate na hi ||33||

ruò zhū fā bū kōng wū zuò zuì fú zhē
bū kōng hé suō zuò yī qǐ xīng dìng gū

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 33 - No one would ever be able to create factors or non-factors of experience. For, what is there to create in non-sunyata? Self-existence, after all, cannot be created. - Note: The word, create, may well be substituted by manipulate.

JONES (Skt):
[33] And no one will ever perform correct or incorrect actions - what can be done to what is not empty since what is self-existent cannot be affected by action?

KALUPAHANA (Skt):
No one will, indeed, do good or bad. What could the non-empty do? For, self-nature does not perform.

MCCAGNEY (Skt):
Not anyone at all will do good or bad deeds. Indeed, self-nature is not made by what is to be made of what is not open.

NISHIJIMA (Skt?):
33. Even the Rule of the Universe, or even Not the Rule of the Universe, Both those are never produced by Human Beings even in future. How is it possible for what does not belong to the balanced autonomic nervous system to be what should be done? Because it is completely impossible for any subjective idea to be able to produce any kinds of Something Real at all.

SPRUNG (Skt):
33 No one will ever achieve good or ill: what can be attained if things are not devoid of self-existence? The self-existent is not produced by action.

STRENG (Skt):
33. Neither the dharma nor non-dharma will be done anywhere. What is produced which is non-empty? Certainly self-existence is not produced.
24/33 If dharmas were not empty, there would never be people doing good and bad (deeds), and why? Because the natures of good and bad (deeds) would be already fixed, and also because there would be no doing or doer.

Further.

On the assumption of the self-existence of things, bringing about good or ill is not intelligible. What can be attained in the non-devoid? It is not logically possible to bring about anything which, by nature, is not devoid of self-existence, because the non-devoid is factually in existence.

Further,

Inada, once again, renders the terms dharma and adharma as factors and non-factors of experience, thereby reading more ontology than axiology into the statement of Nagarjuna. A substantialist interpretation of good and bad allows no room for their cultivation or performance. If someone is good in terms of self-nature, he does not have to perform the good; it is simply there. Similarly with bad. Self-nature (svabhava) implies absolute existence (sad-bhava), not occurrence (sambhava, XXIV.22).

33. Nāgārjuna now turns to the moral dimensions of the extreme positions and their consequences for the Buddhist doctrine of karma, specifically with regard to the consequences for one’s own life of one’s actions. Nonempty phenomena, such as the opponent wishes to posit, are seen, on analysis, to be static. But practice and action require dependence, change, and a regular relation between one’s actions and one’s future state. So in the preceding verse, Nāgārjuna notes that in a static, nonempty world, we can’t even make sense of the possibility of action. He then points out (XXIV: 34) that even were action possible, in virtue of the impossibility of change and dependence in an essentialist universe, there would be no consequences of those actions. For to be a consequence is to be dependent, hence to be empty, hence from the standpoint of the essentialist - whether reificationist or nihilist-nonexistent.
Kārikā XXIV.34

vinā dharmam adharmam ca phalaṃ hi tava vidyate |
dharmādharmāni mittaṃ ca phalaṃ tava na vidyate ||34||

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 34 - According to your assertion, the fruit could exist
separated from factors and non-factors of experience.
Again, according to your assertion, the fruit could not have
arisen by the factors and non-factors of experience.

JONES (Skt):
[34] Indeed, for you karmic fruit is found without any correct
or incorrect action. Conversely, the fruit of correct and
incorrect actions is not found.

KALUPAHANA (Skt):
As for you, the fruit would be evident even without good or
bad. This means that for you a fruit occasioned by good
and bad would not be evident.

MCCAGNEY (Skt):
Indeed, for you the fruit occurs without good and bad deeds.
But for you the fruit does not occur without being caused by
good or bad deeds.

NISHIJIMA (Skt?):
34. Both the Universe and the neglecting the Universe, do not exist.
Because the affirmation of Result is impossible for you to confirm
the existence of Result.
Both the affirmation and the negation of the Universe are just a kind
of marks,
Therefore it might be impossible for you to recognize the Result.

SPRUNG (Skt):
34. For you, from neither right nor wrong actions
Would the fruit arise.
If the fruit arose from right or wrong actions,
According to you, it wouldn't exist.

STRENG (Skt):
34. Certainly, for you, there is a product without the
distinction of dharma or non-dharma. Since, for you,
the product caused by dharma or non-dharma does
not exist.
24/34 If, as you claim, there are no rewards and retributions inherent in the good and bad deeds which are their causes and conditions, then the rewards and retributions must exist separately from the good and bad actions which are their causes and conditions. Why is this? Because the rewards and retributions do not rely on causes to emerge.

Question: Good and evil rewards and retributions cannot exist apart from sin and merit. Good and evil rewards and retributions simply arise out of sin and merit.

Reply:

If a moral consequence (phala), whether desirable or undesirable, not deriving from a good or ill act, is self-existent, then it would exist regardless of good or ill. In so far as for you there are moral consequences without good or ill, then, for you moral consequences born of good or ill are not possible; the accumulation of good or ill merit would be meaningless. ‘For you there are no moral consequences deriving from a good or ill act.’

However, if you imagine that moral consequences exist deriving from good or ill acts, Nagarjuna explains that these cannot be non-devoid of self-existence (asunya) (In 18 i.e. having their being in themselves, or, existing apart from cause in time).

The consequence of upholding a notion of self-nature in moral philosophy are explicated here. If good and bad were to be explained in terms of self-nature or substance, then there would be goodness and badness "in themselves." These would always be existent. A fruit, if it were to arise at all, from a good action will always be good and, as such, there would be identity of cause and effect (see Chapter I). If a good action were to lead to a bad consequence, it would not matter at all, as it is assumed to be the case with, for example, "good-will." This notion of intrinsic good or bad would render the concept of a cause (nimitta) almost meaningless.
Kārikā XXIV.35

धर्माधर्मनिमित्तं वा यदि ते विद्यते फलम्।
धर्माधर्मसमुपपर्नमशृंगं ते कथं फलम्॥3॥

若謂從罪福而生果報者
果從罪福生云何言不空

| chos daṅ chos min las byun ba’i | ʼbras bu ci phyir ston mā yin |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 35 - If you are to admit the fruit based on the factors and non-factors of experience, how could the fruit arising from them be of the nature of non-sunya?

JONES (Skt):
[35] Or, if for you there is the fruit of correct and incorrect actions, how can this fruit be non-empty since it has arisen from correct and incorrect actions?

KALUPAHANA (Skt):
If, on the contrary, a fruit occasioned by good or bad is evident to you, how can you maintain the fruit that has arisen from good or bad to be [at the same time] non-empty?

MCCAGNEY (Skt):
If the fruit occurs for you without being caused by good or bad deeds, how is the fruit produced by good or bad deeds not open?

NISHIJIMA (Skt?):
35. Both the affirmation and the negation of the Universe are just a kind of marks,
Then they also recognize the Result too.
Just the Universe and the not the Universe are both the miscellaneous phenomena,
And how is it possible for those, which are not the balanced state of the autonomic nervous system, to be Result.

SPRUNG (Skt):
35 If, for you, moral consequences derive from good or ill acts, how can they, being produced from good or ill, be non-devoid?

STRENG (Skt):
35. If, for you, the product is caused by dharma or non-dharma, be non-empty? How can that product, being originated by dharma or non-dharma empty?

BOCKING (Ch):
24v35 If you say that reward and retribution arise out of sin and merit;
If rewards arise from sin and merit
How can you say they are not empty?

BATCHelor (Tb):
If you have the fruits which have arisen from the causes of Dharma and not-Dharma, why are the fruits which have arisen from the Dharma and not-Dharma not empty?

DOCTOR (Tb):
If for you, there are effects
That arise from Dharma and non-Dharma, Why, then, would these effects Of Dharma and non-Dharma not be empty? [XXIV.35]

GARFIELD (Tb):
35. If, for you, a fruit arose From right or Wrong actions,
Then, having arisen from right or wrong actions, How could that fruit be nonempty?

GARFIELD-SAMTEN (Tb):
35. If for you, an effect arose From virtuous or nonvirtuous causes, Then, having arisen from virtuous or nonvirtuous causes, How could that effect be nonempty?

HAGEN (paraphrase):
If, for you, fruit arose from good or bad actions, how can you, at the same time, claim that it is non-Empty?
PINGALA COMMENTARY

24/35 If there are no good and evil rewards apart from sin and merit, how can you say that rewards are not empty? If they are so then there will be no sin and merit apart from the doer. Your previous assertion that dharmas are not empty is not correct.

Further.

CANDRAKĪRTI COMMENTARY

The meaning is that they will be devoid of self-existence because produced in dependence, ‘like a reflection’.

What is more, all personal everyday transactions (samvyaya-hara) without exception, like going, doing, cooking, reading, standing, originate in dependence. If you consider them to exist in themselves then you repudiate the dependent arising of things; if you repudiate that then you preclude the possibility of all personal everyday transactions. Nagarjuna expounds:

KALUPAHANA COMMENTARY

Thus, Nagarjuna insists that moral discourse and a substantialist world-view are incompatible. If something is good by nature, good in terms of self-nature, good in itself, then it must be always good. It cannot be otherwise. Such an absolutistic theory will fail to accommodate some individual or particular situations that are in conflict with the theory, but which would certainly be valid in certain contexts. This was a serious defect in the absolutistic theory, as explained by Nagarjuna in the following verse.

GARFIELD COMMENTARY

35. The reificationist develops a strict dichotomy between things that exist inherently and things that are completely nonexistent. That dichotomy exhausts the ontological domain. But neither possibility for understanding the nature of practice, the practitioner, or the fruits of practice makes sense of action. If the relevant phenomena are granted inherent existence, their essence precludes development and change. If, on the other hand, they lack essence and hence, for the reifier, are completely nonexistent, there literally is no practice, in any sense: But if they are conceived of as empty and hence empirically and conventionally real, yet essenceless and dependent, the possibility and purpose of practice fall out straightforwardly. So it is the reifier, not Nāgārjuna, who makes action and soteriology impossible, and Nāgārjuna and not the reifier who rescue them from ontological oblivion.
Kārikā XXIV.36

sarvasaṃvyvahārāṃ ca laukikān pratibādhase
yat pratiṣṭhitasamutpādasūnyatāṃ pratibādhase ||36||

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 36 - You will thus destroy all the everyday practices relative to the empirical world because you will have destroyed the sunyata of relational origination.

JONES (Skt):
[36] You reject all worldly conventions since you reject the emptiness of “dependent-arising.”

KALUPAHANA (Skt):
You will contradict all the worldly conventions when you contradict the emptiness associated with dependent arising.

MCCAGNEY (Skt):
All worldly everyday activites are denied by you. That openness is what is interdependently originated is denied by you.

NISHIJIMA (Skt?):
36. Everything is done as the works actually, which are done in cooperation. However you are making your efforts to stop all kinds of such secular jobs. Such kind of very conspicuous synthetic phenomena, The state of the balanced autonomic nervous system, you are going to stop it.

SPRUNG (Skt):
36 By precluding all personal everyday transactions, you preclude the absence of being in the dependent arising of things.

STRENG (Skt):
36. You deny all mundane and customary activities When you deny emptiness in the sense of dependent co-origination (patytya-samutpada).

BOCKING (Ch):
24v36 Your denial of the idea of emptiness, Of the causality of all dharmas Is a denial of all worldly conventions And all other dharmas that exist.

BATCHELOR (Tb):
Whoever undermines emptiness which is contingent emergence also undermines all the conventions of the world.

DOCTOR (Tb):
The one who denies The emptiness of dependent origination Will, likewise, be denying All conventions of the world. [XXIV.36]

GARFIELD (Tb):
36. If dependent arising is denied, Emptiness itself is rejected. This would contradict All of the worldly conventions.

GARFIELD-SAMTEN (Tb):
36. Those who deny emptiness, Which is dependent origination, Undermine all of The mundane conventions.

HAGEN (paraphrase):
You contradict all worldly conventions by denying the Emptiness of dependent arising.
PINGALA COMMENTARY

24/36 If you deny the doctrine of causality, (and) the highest meaning of emptiness, then you deny all worldly dharmas, and why?

CANDRAKĪRTI COMMENTARY

The word ‘by’ is adverbial, related to the verb ‘preclude’.

KALUPAHANA COMMENTARY

This, once again, highlights the significant relationship between worldly conventions, that are situational or contextual and the principle of dependent arising which, as explained earlier, is a universal. The only way the universal can accommodate the situational is when the universal is not looked upon as corresponding to an "ultimate reality."

GARFIELD COMMENTARY

36. Recall the other horn of the dilemma in XXIV: 6. The opponent charged Nāgārjuna not only with contradicting fundamental Buddhist tenets, but with contradicting the conventional truth as well. Nāgārjuna has responded up to this point to the first charge, turning it back on the opponent. He now does the same with the second. Nāgārjuna suggests that to assert the nonemptiness of phenomena and of their interrelations when emptiness is properly understood is not only philosophically deeply confused, but is contradictory to common sense. We can make sense of this argument in the following way: Common sense neither posits nor requires intrinsic reality in phenomena or a real causal nexus. Common sense holds the world to be a network of dependently arisen phenomena. So common sense only makes sense if the world is asserted to be empty. Hence it is the opponent, not Nāgārjuna, who disagrees with the conventional truth.

The standpoint of emptiness is hence not at odds with the conventional standpoint, only with a particular philosophical understanding of it - that which takes the conventional to be more than merely conventional. What is curious - and, from the Buddhist standpoint, sad - about the human condition, on this view, is the naturalness and seductiveness of that philosophical perspective. (fn 122. This point requires emphasis. For Nāgārjuna is not merely speaking to and correcting philosophers. He is no Berkeley, suggesting that his own position is that of common sense and that only a philosopher would reify. In fact, it is fundamental to any Buddhist outlook, and certainly to Nāgārjuna’s view, that one of the root delusions that afflicts all non-buddhas is the innate tendency to reify. But that tendency is raised to high art by metaphysics. Nāgārjuna intends his attack to strike both at the prereflective delusion and at its more sophisticated philosophical counterpart. But in doing so, he is not denying, and is in fact explaining, the nonmetaphysical part of our commonsense framework - that part that enables us to act and to communicate and, especially for Nāgārjuna, to practice the Buddhist path.) This, of course, is the key to the soteriological character of the text: Reification is the root of grasping and craving and hence of all suffering. And it is perfectly natural, despite its incoherence. By understanding emptiness, Nāgārjuna intends one to break this habit and extirpate the root of suffering. But if in doing so one falls into the abyss of nihilism, nothing is achieved. For then action itself is impossible and senseless, and one’s realization amounts to nothing. Or again, if one relinquishes the reification of phenomena but reifies emptiness, that issues in a new grasping and craving the grasping of emptiness and the craving for Nirvāṇa - and a new round of suffering. Only with the simultaneous realization of the emptiness, but conventional reality, of phenomena and of the emptiness of emptiness, argues Nāgārjuna, can suffering be wholly uprooted.

Let us consider now more carefully what it is to say that emptiness itself is empty. The claim, even in the context of Buddhist philosophy, does have a somewhat paradoxical air. For emptiness is, in Mahayana philosophical thought, the ultimate nature of all phenomena. And the distinction between the merely conventional nature of things and their ultimate nature would seem to mark the distinction between the apparent and the real. While it is plausible to say that what is merely apparent is empty of reality, it seems nihilistic to say that what is ultimately real is empty of reality, and as we have seen, the Madhyamika are quite consciously antinihilistic. But again, when we say that a phenomenon is empty, we say, inter alia, that it is impermanent. (fn 123. To be sure, both in the Abhidharma literature
and in most Mahayana metaphysical literature, space is regarded as permanent, despite being a conventional phenomenon. There are two things to say about this apparent counterexample: First, on general metaphysical grounds the claim is suspect. Whether one argues along Kantian lines, or from general relativity theory, space apparently shares, from the transcendental point of view, the impermanence of all other phenomena. But second, and for the purposes of understanding this text, more importantly, Nāgārjuna never asserts the permanence of space and repeatedly associates emptiness with impermanence. I would thus argue that other Mahayana literature to the contrary notwithstanding, nothing in Nāgārjuna’s presentation of Madhyamika entails the permanence of space or indeed of any other entity.

Do we really want to say of each phenomenon that its emptiness - the fact that it is empty - is itself impermanent; itself dependent on something else; itself dependent upon conventions? It might at least appear that even if all other properties of conventional entities were so, their emptiness would be an eternal, independent, essential fact.

It may be useful to approach the emptiness of emptiness by first asking what it would be to treat emptiness as nonempty. When we say that a phenomenon is empty, we mean that when we try to specify its essence, we come up with nothing. When we look for the substance that underlies the properties, or the bearer of the parts, we find none. When we ask what it is that gives a thing its identity, we stumble not upon ontological facts but upon conventions. For a thing to be nonempty would be for it to have an essence discoverable upon analysis, for it to be a substance independent of its attributes, or a bearer of parts, for its identity to be self-determined by its essence. A nonempty entity can be fully characterized nonreationally.

For emptiness to be nonempty would be for it to be a substantial entity, an independent existent, a nonconventional phenomenon. On such a view, emptiness would be entirely distinct from any conventional phenomenon. It would, on such a view, be the object of correct perception, while conventional phenomena would be the objects of delusive perception. While conventional phenomena would be dependent upon conventions, conditions, or the ignorance of obstructed minds, emptiness, on such a view, would be apparent precisely when one sees through those conventions, dispels that ignorance, and overcomes those obstructions. Though such a position might appear metaphysically extravagant, it is hardly unmotivated. For one thing, it seems that emptiness does have an identifiable essence - namely the lack of inherent existence. So if to be empty is to be empty of essence, emptiness fails on that count to be empty. Moreover, since all phenomena, on the Madhyamika view, are empty, emptiness would appear to be eternal and independent of any particular conventions and, hence, not dependently arisen. The two truths, on such an ontological vision, are indeed radically distinct from one another.

But this position is, from Nāgārjuna’s perspective, untenable. The best way to see that is this: Suppose that we take a conventional entity, such as a table. We analyze it to demonstrate its emptiness, finding that there is no table apart from its parts, that it cannot be distinguished in a principled way from its antecedent and subsequent histories, and so forth. So we conclude that it is empty. But now let us analyze that emptiness - the emptiness of the table - to see what we find. What do we find? Nothing at all but the table’s lack of inherent existence. No conventional table, no emptiness of the table. The emptiness is dependent upon the table and is, therefore, itself empty of inherent existence, as is the emptiness of that emptiness, and so on, ad infinitum. To see the table as empty, for Nāgārjuna, is not to somehow see “beyond” the illusion of the table to some other, more real entity. It is to see the table as conventional; as dependent. But the table that we see when we see its emptiness is the very same table, seen not as the substantial thing we instinctively posit, but rather as it is. Emptiness is hence not different from conventional reality - it is the fact that conventional reality is conventional. Hence it must be dependently arisen since it depends upon the existence of empty phenomena. Hence emptiness itself is empty. This is perhaps the most radical and deep step in the Madhyamika dialectic, but it is also, as we shall see, the step that saves it from falling into metaphysical extravagance and brings it back to sober pragmatic skepticism. (fn 124. That is, skepticism in the Pyrrhonian. or Humean sense: See Garfield (1990).)
Kārikā XXIV.37

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 37 - For one who destroys Sunyata, it will be like a doer without an action, a non-activating action, or with nothing to act upon.

JONES (Skt):
[37] For one who rejects emptiness, there would be nothing whatsoever that could be done; there would be uninitiated actions' there would be an actor with no action.

KALUPAHANA (Skt):
For one who contradicts emptiness there would be nothing that ought to be done; activity would be uninitiated and an agent would be non-acting.

MCCAGNEY (Skt):
From the denial of openness, there would be nothing to be done. activity would not be a bit commenced, and the doer would not be doing.

NISHIJIMA (Skt?):
37. Anything, which has been accomplished, does not exist at all. There are the states, which have begun to be produced already, And at that time what we should do carefully to begin with, might not be to produce a concrete thing directly, But it might be sure that we should guard our balanced autonomic nervous system stable.

SPRUNG (Skt):
37 For one repudiating the absence of being in things, nothing whatsoever could be achieved through action; an act would not need to be actually carried out and an agent would exist without effecting anything.

STRENG (Skt):
37. If you deny emptiness, there would be action which is un-activated. There would be nothing whatever acted upon, and a producing action would be something not begun.

BOCKING (Ch): 24v37 If you reject the idea of emptiness Then there will be nothing which is done, There will be doing without doing And a non-doer will be called a doer.

BATCHelor (Tb):
If one undermines emptiness, there would be no actions at all and actions without an author and agents who do not act.

DOCTOR (Tb):
I denial of emptiness Will preclude all action. There will be actions without initiation, As well as agents without anything done. [XXIV.37]

GARFIELD (Tb):
37. If emptiness itself is rejected, No action will be appropriate. There would be action which did not begin, And there would be agent without action.

GARFIELD-SAMTEN (Tb):
37. To deny emptiness is to assert that No action is possible; That there can be action without effort; And that there can be an agent who performs no action.

HAGEN (paraphrase):
If you deny Emptiness, there would be actions that are uninitiated and agents without action.
PINGALA COMMENTARY

24/37 If you reject the idea of emptiness, then all (karmic) effects will be without a doer and without a cause. There would be doing without an doing, and there would be doers but nothing which was done. There would also be actions, rewards and retributions and reception without any doer. But this is not correct, and therefore one should not deny emptiness.

Further,

CANDRAKĪRTI COMMENTARY

If things were not devoid of an inherent nature they would have to be self-existent. In that case nothing can be achieved by anyone, in any way, on behalf of what is self-existent, because it already exists. No one makes the openness of space. An act would not enact anything. There would be an act, the agent of which did not effect anything. But this is not the way things are; therefore things are not non-devoid of self-existence.

Further,

KALUPAHANA COMMENTARY

The unfortunate consequences of upholding a substantialist theory and denying emptiness are listed here. Interestingly, all of them pertain to human behavior and moral responsibility. This says much about the concerns of Nagarjuna, who by popular acclaim is more a logician primarily concerned with language and truth and therefore with ultimate reality, rather than a moral philosopher interested in axiology and, for that reason, emphasizing the conception of “ultimate fruit.” He is supposed to have scorned any speculation about human behavior (karma), what human behavior ought to be (kartavya), and who a responsible human agent (kurvana) is.

In brief, a substantialist view leads to a denial of the human element functional in this world, an element that is generally described as “disposition” (samskara). Not only does it negate the world conditioned by human dispositions (i.e., the samskṛta), it also denies any activity and creativity in the natural world (see XXIV. 38 that follows).

GARFIELD COMMENTARY

37. Without viewing the world as empty, we can make no sense of any human activity. Action would be pointless since nothing could be accomplished. Any existent action would have to have been eternal, and anyone who is an agent would be so independently of any action since agency would be an essential attribute.
Kārikā XXIV.38

ajātam aniruddhaṃ ca kūṭaśthaṃ ca bhaviṣyati |
vicitrābhir avasthābhīḥ svabhāve rahitaṃ jagat ||38||

ruò yǒu jué dìng xìng shì jiān zhòng zhòng xiàng; xiàng |
zé bù shēng bù miè cháng zhù ī ēr bù huài |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 38 - From the standpoint of self-existence, the world will be removed from the various conditions and it will be non-originative, non-destructive, and immovable.

JONES (Skt):
[38] The world would then be unarisen, unceased, and immutable since it would be devoid of varying conditions in its self-existent state.

KALUPAHANA (Skt):
In a substantialist view, the universe will be unborn, unceased, remaining immutable and devoid of variegated states.

MCCAGNEY (Skt):
In the self-nature doctrine, the world, void of a state of diversity, will be unborn, unceasing, and unchanging.

NISHIJIMA (Skt?):
38. The state, which has not been born, has been kept by our own will,
The possibility for me to stand at the highest lank, can also be realized in future.
Being decorated with miscellaneous colors, and being kept with stabilities,
It might be the common vulgar habits in the secular societies to left the world as the object for giving up.

SPRUNG (Skt):
38 On the thesis of self-existence all things will be unborn, immutable and imperishable; they will be without diversity of states.

STRENG (Skt):
38. According to the doctrine of "self-existence" the world is free from different conditions; Then it will exist as un-produced, undestroyed and immutable.

WESTERHOFF (Skt):
XXIV.38 If svabhāva existed, the world would be without origination or cessation, it would be static and devoid of its manifold states.
24/38 If dharmas had fixed natures, then all the various characteristics in the world, (of) gods and men, animals, and all things, would neither arise nor cease, and would abide eternally without perishing, and why? Because that which has a real nature cannot be altered. But we can manifestly see that all things have the characteristic of change, arising, ceasing, and undergoing transformations. Therefore, they cannot have fixed natures.

Further.

CANDRAKīRTI COMMENTARY

If things were self-existent, then, because the self-existent is uncreated and ineluctable, the totality of creation would be unborn and imperishable; being unborn and imperishable all things would be unchanging. For the proponents of non-devoidness all things do not arise in dependence, are without a diversity of states and are unrelated to causal conditions.

It is said in the Pitaputrasamagama Sutra: ‘If anything were non-devoid, Buddha would make no statement about it; for it is certain that whatever exists of and through itself is immutable and unvarying and neither grows nor diminishes.’ And the Hastikaksya Sutra says: ‘If there were a self-existent reality at all the Buddha and his followers would dwell there; but an immutable reality is not achieved and a wise man does not exist beyond all phenomena.’

For the theory of self-existence it is not only personal everyday transactions which are unintelligible, but also moral and religious striving. Nagarjuna expounds:

KALUPAHANA COMMENTARY

The assumption of a substance (svabhava) would deprive the natural world, the world of dependent arising, of all the variety (vicitra) and freshness and leave it sterile and unproductive. This, indeed, is the Buddha’s criticism of eternalism (sasssta-ditthi) when he maintained that according to this view the self and the world are sterile, immovable, and remaining stable like a pillar," (D 1.14; S 3.202, 211, etc., yatha sassato atta ca vanjho kutattho esikathayithito).

GARFIELD COMMENTARY

38. Without viewing the world as empty, we can make no sense of impermanence or dependent origination and hence no sense of change.
Kārikā XXIV.39

asamprāptasya ca prāptir duḥkhaparyantakarma ca |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 39 - If everything is non-sunya, then the attainment of a person who aspires, the actions leading to the cessation of suffering, and the destruction of all defilements will not exist (i.e., be possible).

JONES (Skt):
[39] If the world is non-empty, there is no attaining what has not already been attained - the act of ending suffering and eliminating of the afflictions would not be found.

KALUPAHANA (Skt):
If the non-empty [is evident], then reaching up to what has not been reached, the act of terminating suffering as well as the relinquishing of all defilements would not be evident.

MCCAGNEY (Skt):
If what is not open does not occur, there is abandonment of a defilements and action that is the end of suffering and attainment of the unattained.

NISHIJIMA (Skt?):
39. The problem might belong to the stage of accomplishment, or the stage of unsuccessful situations.
Pain, a boundary line, and Action itself.
All are pains, or giving up, and then, Inadequate state of the autonomic nervous system isn’t recognized.

SPRUNG (Skt):
39 If things are non-devoid there can be no eradication of the afflictions, no action to end unregenerate existence and no attainment of the unattained.

STRENG (Skt):
39. If non-emptiness does not exist, then something is attained which is not attained; There is cessation of sorrow (dukkha) and actions, and all evil is destroyed.

BOCKING (Ch):
24v39 If there is not emptiness
One who has not yet attained will never attain
Nor will the defilements be cut off, Nor will there be termination of suffering.

BATCHelor (Tb):
If [things] were not empty, there could be no attainment of what had not been attained, no ending of anguish and no letting go of all actions and afflictions.

DOCTOR (Tb):
Were it not for emptiness,
The unattained could not be attained,
There would be no liberation from suffering,
And no elimination of action and affliction. [XXIV.39]

GARFIELD (Tb):
39. If it (the world) were not empty, Then action would be without profit.
The act of ending suffering and Abandoning misery and defilement would not exist.

GARFIELD-SAMTEN (Tb):
39. If they were nonempty,
Then there would be neither achievement of that which has not been achieved;
Nor the act of ending suffering;
Nor the abandonment of all of the afflictions.

HAGEN (paraphrase):
If things are non-Empty, there can be no attainment of the unattained, no eradication of the defilements, no ending of dukkha.
PINGALA COMMENTARY

24/39 If there were no dharma of emptiness, then those of merit and virtue, both in this world and in the worlds beyond, who had not yet attained (nirvana) would all be unable to attain it, and there could be none who cut off the defilements, and no termination of suffering, and why? Because of fixed natures.

CANDRAKĪRTI COMMENTARY

That is, if the totality of things is non-devoid — self-existent — then what is unattained is purely and simply unattained and no unattained moral fruition could ever be attained; any action to end unregenerate existence which had not existed previously could not exist now; an eradication of the afflictions which did not exist earlier could not exist later. All this being so it follows that, on the theory that each thing has its being in itself, everything in this world (sarvam etad) fails to make sense. So:

KALUPAHANA COMMENTARY

The substantialist view would not only negate the world determined by human dispositions (samskrta) and the natural world of dependent arising (pratitysamutpanna), but also the ideal world, the world of freedom. Nirvana would remain inexplicable in the context of a substantialist world-view. This is the subject matter of the next chapter. Before proceeding to explain freedom, Nagarjuna has a quotation from the Buddha (XXIV.40).

GARFIELD COMMENTARY

39. Perhaps most important from the standpoint of Buddhist phenomenology and, though not hard to see, easy to overlook: We are driven to reify ourselves, the objects in the world around us, and in more abstract philosophical moods - theoretical constructs, values, and so on because of an instinctual feeling that without an intrinsically real self, an intrinsically real world, and intrinsically real values, life has no real meaning and is utterly hopeless. Nāgārjuna emphasizes at the close of this chapter that this gets things exactly backward: If we seriously and carefully examine what such a reified world would be like, it would indeed be hopeless. But if instead we treat ourselves, others, and our values as empty, there is hope and a purpose to life. For then, in the context of impermanence and dependence, human action and knowledge make sense, and moral and spiritual progress become possible. It is only in the context of ultimate nonexistence that actual existence makes any sense at all.
Kārikā XXIV.40

yaḥ pratītyasamutpādaṃ paśyatīdaṃ sa paśyati |
duḥkham samudayaṃ caiva nirodhaṃ mārgam eva ca ||40||

shi gù jīng zhōng shuì ruò jiàn yín yuán fā

| gāṅ gis rten ciṅ ’brel par ’byuṅ || mthoṅ ba de ni sdug bsṅal (5)daṅ
| | kun ’byuṅ daṅ ni ’gog pa daṅ | | lam ñid de dag mthoṅ ba yin |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 40 - One who rightly discerns relational origination will, indeed, rightly discern universal suffering, its origination, its extinction, and the way to enlightenment.

JONES (Skt):
[40] But whoever sees dependent-arising sees this and also sees suffering, its arising, its cessation, and the path leading to its cessation.

KALUPAHANA (Skt):
Whoever perceives dependent arising also perceives suffering, its arising, its ceasing and the path [leading to its ceasing].

MCCAGNEY (Skt):
He who sees interdependent origination sees this; suffering, arising and ceasing, and also the path.

NISHIJIMA (Skt?):
40. A person, who clearly look at the conspicuous and synthetic existing world as the Real World, Might be a person, who can look at the things and phenomena as the Real World really. To such a kind of person, pain and the synthetic Real World are perfectly as they are, And the Self-Regulations and Morals are also perfectly the same as they are.

SPRUNG (Skt):
40 One who sees all things as arising in dependence, sees unregenerate existence and its origin, its cessation and the path to its cessation as they truly are.

STRENG (Skt):
40. He who perceives dependent co-origination (patītyasamutpada) Also understands sorrow (dukkha), origination, and destruction as well as the path of release.

ROBINSON (Skt):
He who sees this dependent co-arising sees suffering, arising, cessation, and path.
PINGALA COMMENTARY

24/40 If a person perceives that all dharmas arise from causes and conditions, such a person can perceive the Buddha's dharma-body and augment his insight. He can perceive the four holy truths of suffering, accumulation, cessation and the Way, and perceiving the four holy truths he can attain the four fruits and extinguish all the afflictions. Therefore, you should not deny the principle of emptiness. If you deny the principle of emptiness then you deny the doctrine of causality, and if you deny the doctrine of causality you deny the three jewels. And if you deny the three jewels, you deny yourself.

CANDRAKĪRTI COMMENTARY

That is, one who, with perfect clarity, sees absence of self-existence as the mark of the dependent arising of all the putative elements of existence, he sees the four Buddhist truths as they really are in truth (yathabhuta, tattvatah).

KALUPAHANA COMMENTARY

The Buddha maintained that he who perceives dependent arising perceives the dhamma (M 1.190-191; Chung 7.2 [Taisho 1.467a). Perceiving dependent arising is not merely perceiving "things as they have come to be" (yathabhuta), but also seeing how a human being placed in such a context of dependent arising experiences suffering (duhkha); what causes such suffering; what kind of freedom can be attained and what the path is that leads to the attainment of freedom and emancipation. Dependent arising and the four noble truths are, therefore, the foundations on which the whole edifice called Buddhism is built. Any school of Buddhism that refuses to recognize the centrality of these doctrines would loose its claim to be a legitimate part of that tradition. These constitute the truths that Nagarjuna was attempting to explicate in the present chapter.

GARFIELD COMMENTARY

40. Nāgārjuna closes as he opens, with the Four Noble Truths, this time connecting them not negatively, as in the beginning, to emptiness, but positively, to dependent arising. Understanding the nature of dependent arising is itself understanding emptiness and is itself the understanding of the Four Noble Truths. It is absolutely critical to understanding the dialectical structure not only of this chapter but of the entire text to see that this doctrine of the emptiness of emptiness that is the central thesis of Madhyamika philosophy emerges directly from XXIV: 18. For the emptiness of emptiness, as we have just seen, simply amounts to the identification of emptiness with the property of being dependently arisen and with the property of having an identity just in virtue of conventional, verbal designation. It is the fact that emptiness is no more than this that makes it empty, just as it is the fact that conventional phenomena in general are no more than conventional and no more than their parts and status in the causal nexus that makes them empty.

Paradox may appear to loom at this point. For, one might argue, if emptiness is empty, and to be empty is to be merely conventional, then the emptiness of any phenomenon is a merely conventional fact. Moreover, to say that entities are merely conventional is merely conventional. Hence it would appear optional, as all conventions are. Hence it would seem to be open to say that things are in fact nonconventional and therefore nonempty. This would be a deep incoherence indeed at the heart of Nāgārjuna’s system. But the paradox is merely apparent. The appearance of paradox derives from seeing “conventional” as functioning logically like a negation operator - a subtle version of the nihilistic reading Nāgārjuna is at pains to avoid, with a metalinguistic twist. For then, each iteration of “conventional” would cancel the previous occurrence, and the conventional character of the fact that things are conventional would amount to the claim that really they are not, or at least that they might not be. But in Nāgārjuna’s philosophical approach, the sense of the term is more ontological than logical: To say of a phenomenon or of a fact that it is conventional is to characterize its mode of subsistence. It is to say that it is without an independent nature. The fact that a phenomenon is without independent nature is, to be sure, a further phenomenon - a higher order fact. But that fact, too, is without an independent nature. It, too, is merely conventional. This is another way of putting the strongly nominalistic character of Madhyamika philosophy. So a Platonist, for instance, might urge (and the Madhyamika would agree) that a perceptible phenomenon is ultimately unreal. But the Platonist would assert that its properties are ultimately real. And if some Buddhist-influenced Platonist would note that among the properties of a perceptible phenomenon is its emptiness and its
conventional reality, s/he would assert that these, as properties, are ultimately real. This is exactly where Nāgārjuna parts company with all forms of realism. For he gives the properties a nominalistic construal and asserts that they, including the properties of emptiness and conventionality, are, like all phenomena, merely nominal, merely empty, and merely conventional. And so on for their emptiness and conventionality. The nominalism undercuts the negative interpretation of “conventional” and thereby renders the regress harmless.

So the doctrine of the emptiness of emptiness can be seen as inextricably linked with Nāgārjuna’s distinctive account of the relation between the two truths. For Nāgārjuna, as is also evident in this crucial verse, it is a mistake to distinguish conventional from ultimate reality - the dependently arisen from emptiness - at an ontological level. Emptiness just is the emptiness of conventional phenomena. To perceive conventional phenomena as empty is just to see them as conventional and as dependently arisen. The difference - such as it is - between the conventional and the ultimate is a difference in the way phenomena are conceived/perceived. The point must be formulated with some delicacy and cannot be formulated without a hint of the paradoxical about it: Conventional phenomena are typically represented as inherently existent. We typically perceive and conceive of external phenomena, ourselves, causal powers, moral truths, and so forth as independently existing, intrinsically identifiable, and substantial. But though this is, in one sense, the conventional character of conventional phenomena - the manner in which they are ordinarily experienced - to see them this way is precisely not to see them as conventional. To see that - they are merely conventional, in the sense adumbrated above and defended by Nāgārjuna and his followers, is thereby to see them as empty, and this is their ultimate mode of existence. These are the two truths about phenomena: On the one hand, they are conventionally existent and the things we ordinarily say about them are in fact true, to the extent that we get it right on the terms of the everyday. Snow is indeed white, and there are indeed tables and chairs in this room. On the other hand, they are ultimately nonexistent. These two truths seem as different as night and day - being and nonbeing. But the import of this chapter and the doctrine we have been explicating is that their ultimate nonexistence and their conventional existence are the same thing. Hence the deep identity of the two truths. And this is because emptiness is not other than dependent arising and, hence, because emptiness is empty.

Finally, at this stage we can see why Chapter I opens the text. The discussion of the emptiness of conditions and their relation to their effects is not only essential groundwork for this central argument, but in fact anticipates it and brings its conclusion to bear implicitly on the whole remainder of the text, allowing us, once we see that, to read the entire text as asserting not only the emptiness of phenomena, but that emptiness understood as empty. To see this, note that this entire account depends upon the emptiness of dependent origination itself. Suppose for a moment that one had the view that dependent arising were nonempty (not a crazy view and not obviously incompatible with, and arguably entailed by, certain Buddhist doctrines). Then from the identification of emptiness with dependent arising would follow - the nonemptiness of emptiness. Moreover, if conventional phenomena are empty, and dependent arising itself is nonempty and is identified with emptiness, then the two truths are indeed two in every sense. Emptiness-dependent arising is self-existent, while ordinary phenomena are not, and one gets a strongly dualistic, ontological version of an appearance-reality distinction. So the argument for the emptiness of emptiness in Chapter XXIV and the identity of the two truths with which it is bound up depend critically on the argument for the emptiness of dependent origination developed in Chapter I. Having developed this surprising and deep thesis regarding the identity of the two truths, Nāgārjuna turns in the next chapter to the nature of the relation between saṃsāra and nirvāṇa and the nature of nirvāṇa itself.
Chapter XXV

निर्वाणपरीक्षा पञ्चविंशतितिम प्रकरणम्।

中論觀涅槃品第二十五(二十四偈)

निर्वाणपरीक्षा नाम पञ्चविंशतितीम प्रकरणम्\

Chapter XXXV: Examination of Nirvana
We have now completed the first of the two parts of the section on the rebuttal of refutations—the examination of the Four Noble Truths. This chapter constitutes the second part—the examination of nirvana.

EXPLANATION:

This section has two parts: the objection and the reply.

SUMMARY:

One should ascertain that if things existed essentially, such things as the abandonment of that which is to be abandoned and the attainment of nirvana would not be possible, but they are completely tenable according to the position that everything is empty of essential existence.
CHAPTER XXV - Examination of Nirvana

This chapter then discusses the central concept of nirvana which has attracted so much attention from all quarters of the world. Nagarjuna, first of all, presents the opponent’s view on the problem of nirvana, i.e., if everything is granted as ether sunya or asunya. Stcherbatsky, incidentally, employs the English word, "relative", for Sunya but despite his expressed proclivity for scientific correlation and understanding the translation is inaccurate and even misleading. At any rate, Nagarjuna is quick to assert that nirvana is not the idea of existence known by worldly characterization. It admits of nothing to be cast off, gained, broken off or remaining constant, extinguished or produced, for it, in reality, belongs to the uncreated realm (asamskrta). In Verses 17 & 18, the patent questions on Buddha's existence, before and after nirodha, are discussed but these are disposed of immediately in view of their conceptual un-tenability. Then in Verses 19 & 20, the essence of the chapter and indeed the crux of the Mahayana or Buddhism in general is stated, i.e., that there is no distinction between nirvana and samsara, and also no difference in their spheres of action. With this identity Nagarjuna, in a broad sweep, destroys any adherence to false polar or contrasting distinctions, such as, natural and supernatural, mundane and supermundane, and normal and supernormal.

KALUPAHANA (CHAPTER OVERVIEWS)

25. Freedom (nirvana). This is undoubtedly the most significant chapter in the book. The interpretation of the contents of this chapter by Stcherbatsky125 has dominated the Western understanding of Madhyamika thought for a considerable period of time. Elsewhere, we have disagreed with Stcherbatsky's interpretation of early Buddhism, allowing him his interpretation of Madhyamika philosophy. Since Stcherbatsky's perception of Nagarjuna was colored by his understanding of early Buddhism, the rejection of the latter should mean the rejection of the former too, if we are to consider Nagarjuna's philosophy as a continuation of the ideas of early Buddhism. Without devoting much time to an examination of Stcherbatsky's views at this point, we will present the contents of Chapter XXV in the light of the analysis of Nagarjuna's ideas that we have already presented. Other modern scholars have rejected Stcherbatsky's ideas and have presented views about nirvana that do not appear to accord with what Nagarjuna has said in the previous chapterse. One of these is the view presented by Inada that nirvana represents the "uncreated realm" (asamskrta).126 The view that nirvana, as asamskrta, belongs to the "uncreated realm," a view which is popular with both the so-called Theravada and Mahayana interpreters (especially of the modern world), may lose its tenability if the contents of this chapter are analysed in the light of what went before rather than in isolation.

The attempt to explain Nagarjuna's conception as one that is found in the Mahayana tradition is based upon a complete misreading of Chapters XVI-XXI of the Karikas that deal with the notion of the human personality, human behavior, and moral responsibility. Such a misreading compels Inada to reject the value of the two chapters (XXVI-XXVII) that follow the chapter on nirvana (XXV), saying: "With the discussion of Nirvana in the last chapter the treatment from the standpoint of Mahayana had basically come to a close. In this chapter and the final one to follow, Nagarjuna goes into the analysis of the Hinayana doctrines."127

Our analysis of the Karikas so far did not reveal any specific Mahayana doctrine presented by Nagarjuna that may be contrasted with the so-called Hinayana, and we have therefore no reason to look at Nagarjuna's conception of nirvana as that of Mahayana or reject the last two chapters of the treatise as being representative of the Hinayana doctrines. In fact, to assume that such an outstanding philosopher as Nagarjuna, who presented the world with such a beautifully executed philosophical classic, could simply add two chapters utterly irrelevant to the basic theme of his work does not contribute either to the understanding of his philosophy or an appreciation of his genius.

Nagarjuna begins his analysis of nirvana anticipating the same kind of objection that the substantialist raised against reconciling "emptiness" with the four noble truths. "If all this is empty, there exists neither arising nor ceasing. [As such] through the relinquishing or ceasing of what does one expect freedom?" (XXV.1). It is necessary to keep in mind here the conception of a thing (dharma) that the substantialist envisaged, which was the main subject of scrutiny on the part of Nagarjuna. The substantialist had difficulty with the conception of emptiness (sunyata) primarily because an existent or phenomena (dharma) for him was one that posse d self-nature (svabhava). As emphasized earlier, if not for that assertion of the substantialist, Nagarjuna had no reason or provocation to compose the present treatise. This is clearly evident from Nagarjuna's immediate response to the substantialist: "If all this is non-empty, there exists neither arising nor ceasing. Through the relinquishing and ceasing of what does one expect freedom?" (ibid. 2).
For Nagarjuna, to say that something is not empty (asunya) means that it has substantial existence (svabhava) during the past, present and future, and if so it would be meaningless to speak of its arising and ceasing. This would certainly render “freedom” impossible.

Once again, keeping the substantialist view in mind, would it be possible to speak of “freedom” (nirvana) as the relinquishing of something that is substantial and the attainment of something completely new or different. This was another important assertion of the substantialist. For him, “freedom” represented a totally different state of existence (astitva), an existence that is not only permanent and eternal but also perfectly blissful and happy. Freedom or nirvana thus turns out to be a metaphysical notion, like the Hindu brahman, uncaused, uncreated and, therefore, beyond all spatial and temporal determination. Considering these two views, namely,

1. the substantialist conception of ordinary existence, and
2. the substantialist notion of freedom,
Nagarjuna proceeds to define freedom (nirvana). “Unabandoned and unachieved, uninterrupted and impermanent, unextinguished and non-arisen this is called freedom” (ibid. 3).

Here are three sets of negations, and unless we are careful in analysing these three as sets, it is possible to arrive at conclusions not intended by Nagarjuna himself. The following analysis of the sets will be made not only on the basis of the conception of nirvana presented in early Buddhism but also in the light of the substantialist views that Nagarjuna was confronted with.

1. Unabandoned and unachieved (aprahinam asam-praptam): It (nirvana) is neither casting off nor reaching. These two activities are complementary, and hence to be taken together. Casting off something and reaching for something completely different represents the substantialist or absolutist way of explaining freedom (XVI.10). The attainment of freedom from the three poisons of lust (raga), hatred (dvesa), and confusion (moha) by a person who is understood as “being in a process of becoming” (bhava) conditioned by various factors (not merely the three poisons) need not be explained in terms of the dual function of casting off and reaching. While on the one hand, one may be casting off the three poisons and not everything, on the other hand there is nothing that is reached for. If there were to be something to be reached for, that would again be a source of bondage rather than freedom.

2. Uninterrupted and impermanent (anucchinnam asa svatam): It is neither interrupted nor eternal. These again are complementary. Cutting off something completely and attaining a state of permanent existence is once again part of the substantialist conception of freedom. As explained in relation to the previous characteristics, a person who has attained freedom certainly cuts off the three poisons. However, this does not mean that “what is distinguishable is also separable” (Humean explanation of distinction). In the Buddhist context, a human being who has eliminated the three poisons, that is, the Buddha or the arhat, still continues to be a human being with a body as well as the associated feelings, perceptions, dispositions, and consciousness, and this continuation is on the basis of “dependent arising” (paticcasamuppada). Separation of “buddhahood” from that psychophysical personality led to all the metaphysical issues that the Buddha as well as Nagarjuna were trying to deal with (see Chapter XXII on “The Examination of Tathagata”). Hence the state of Buddhahood, if such a terminology can be used in any meaningful sense, did not signify either a complete interruption or eternality.

3. Non-ceased and non-arisen (aniruddham anutpannam): It is neither ceased nor arisen. Considering this pair of complementary characteristics independently and in isolation from everything that has so far been said by Nagarjuna, it would be very easy to assume that nirvana, in his view, transcends all descriptions and characterization. However, if what has been said about arising and ceasing, especially in the chapters on “The Examination of Causality” (Chapter I) as well as in “The Examination of Dispositions” (Chapter VII) were to be taken seriously, one would refrain from such generalizations. Instead, the conceptions of arising and ceasing, as well as the arisen and the ceased, would be placed in the context of a substantialist view of either existence (astitva) or non-existence (nastitva).

Just as much as ordinary existence (bhava) and its fruits (artha) cannot be defined utilizing the substantialist conceptions of arising and ceasing, even so existence (bhava) and its ultimate fruit (pararatha) cannot be explained on the basis of a similar conceptual framework.

This, indeed is what Nagarjuna wants to emphasize in the verse that follows (XXV.4) where he takes up the notion of bhava (svabhava): “Freedom is not an existent. [If it were,] it would follow that it has the characteristics of old age and death. Indeed, there is no existent without old age and death.”

A substantialist speaking about the characteristics of the existent will have to maintain that the existent, by its own nature, is invariably associated with old age and death. This would mean that no one will be able to attain freedom,
unless he becomes a different sort of existent, an existent that is totally different from what he is. This, indeed, is the absolutist’s notion of freedom. It is a total freedom that has nothing to do with ordinary human existence characterized by old age and death. And for the Buddha as well as for Nagarjuna freedom makes no sense in such a context.

On the contrary, if the existent (bhava) is defined as freedom (nirvana), and an existent by definition is “dispositional” (samskrtam bhavet), freedom itself would be “dispositional” (nirvanam abhava). However, there is no existent that is not dispositional (na asamskrtah bhavah). Therefore, freedom could not be an existent.

Having expressed his view that nirvana cannot be understood as an existent (bhava), the Buddha, in a substantialistic sense, Nagarjuna, utilizing the argument from relativity he used in Chapter I to refute “other-nature” (parabhava), proceeds to reject the view that nirvana is a non-existent (abhava).

Most of the confusion regarding the contents of this chapter can be cleared up and the relationship between early Buddhist and Nagarjunaan conceptions of freedom can be established by a careful examination of the following two verses:

Whatever is of the nature of coming and going, that occurs contingently or dependently. However, freedom is indicated as non-contingent and independent.

The teacher has spoken of relinquishing of both becoming and other-becoming. Therefore, it is proper to assume that freedom is neither existence nor non-existence (XXV.9-10).

Nagarjuna is here reiterating the extremely important distinction made by the Buddha between bhava and bhava. Discussing the contents of Chapter XXI (“The Examination of Evolution and Dissolution”), it was pointed out that in the early discourses the term bhava (becoming) was utilized by the Buddha to explain the human life process. Human life as a wandering (samsara) was characterized by two motivations or cravings (tanha), the first of which is craving for continued becoming (bhava-tanha) or survival (punabbhava). This is one of the most dominant motivations for action. When continued becoming, with its attendant suffering or frustrations, fails to satisfy a man, he desires to “become something else” (vi-bhava), the attainment of permanent and eternal happiness in heaven or in the state of brahman being only one of them. According to the Buddha this process of becoming something else, i.e., the dissolution of the present existence and the attainment of a permanent state of existence is another form of craving (vibhava-tanha).

which, instead of leading on to the desired form of existence, contributes to further becoming (punabbhava).

After having rejected the conception of self (atman) understood as permanent existence (atthita. astitva), the Buddha used the term bhava to explain the process of becoming. The metaphysicians, as pointed out before, immediately brought back the notion of atman or astitva into the Buddhist doctrine when they began speculating on bhava, two species of which were “self-nature” (svabhava) and “other-nature” (parabhava). Nagarjuna seems to have been well aware of the Buddha’s discourse on becoming (bhava) and other-becoming (vibhava). He realized that this was the life-process or the wandering (samsara) that the Buddha spoke of. In addition, he was also aware that, while encouraging the people to abandon both becoming and other-becoming, the Buddha did not present a permanent and eternal life (bhava, astitva) or complete annihilation (abhava, nasiitva) as “freedom” (nirvana). This awareness is succinctly presented in XXV.10 quoted above. If Nagarjuna’s analysis of bhava-vibhava and bhava-abhava is compatible with the Buddha’s own analysis of bhava-vibhava and atthita-n’ atthita (astitva-nastiitva), Nagarjuna will be confronted with the same set of problems that the Buddha faced in explaining freedom. Thus, after rejecting the explanation of freedom in terms of bhava-abhava or a combination or denial of both (XXIV.11-16), in the next two verses Nagarjuna refuses to use such terminology to explain the freedom attained by the enlightened one, either while he is still alive (tisthamana = sopadisesa-nibbana) or when he passes away (param nirodham = anupadisesa-nibbana) (XXV.17-18). This leads Nagarjuna to make a remark which elicited two polar interpretations:

The life-process has nothing that distinguishes it from freedom. Freedom has nothing that distinguishes it from the life-process.

Whatever is the extremity of freedom and the extremity of the life-process, between them not even the subtlest something is evident (XXV.19-20).

The two polar interpretations to which these statements led are as follows: The adherents and sympathizers of Mahayana has interpreted these statements as implying essential identity of samsara and nirvana, which they recognize as a uniquely Mahayana view of nirvana that goes beyond even the Buddha’s own explanations. The so-called Theravadins for whom such identification is rather unpalatable have condemned it by saying that this represents a complete aberration of the salient teachings of the Buddha as represented in the early discourses. However, a careful and sympathetic examination of these two statements, placing them specifically in the context in
which they were made, would certainly eliminate such conflicting views and lead to a better understanding of both the Buddha and Nagarjuna. In order to do so, it would be necessary to examine two of the key terms that occur in these two verses, namely, *visesana* and *koti*.

These two terms are better understood in the philosophical background in which Nagarjuna was writing. Though the background in which the Buddha presented his views about nirvana was not as sophistaced, it was not different. The distinction made by the essentialists of the pre-Buddhist tradition between ordinary human existence (*samsara*) and the state of freedom (*nirvana*) led them to two contradictory conclusions. First, a person has to completely abandon one in order to reach the other. It was not only attachment to the senses or the objects of sense that had to be abandoned, but the senses or the objects of sense themselves. Freedom was thus reached on the basis of a non-sensuous insight, and the “freed one” (*nibbuta*) is one who has developed a form of knowing that transcends all forms of sensory perception, including the duality of subject and object. This was the state of *nirvana* enjoyed by the “freed one” as long as his body, together with the senses lasted. However, when that psychophysical personality is destroyed at death, the “freed one” enters into the state of eternal and blissful life (*brahman*).

Secondly, since such an absolute distinction between *samsara* and *nirvana* could not explain how one could reach a state that is qualitatively distinct, the essentialists also had to believe that underlying *samsara* is the reality (*atman*) that reaches *nirvana*.

On the one hand, there is a point at which a transition is made from bondage to freedom, a transition from one state of existence to something that is completely and absolutely different, so much so that the one has nothing to do with the other. On the other hand, there is a subtle personality (*atman*) that continued from the time of the origin of existence and which lay concealed within the psychophysical personality.

With the development of metaphysical speculations in Buddhism, it was not surprising to see two similar conclusions reached by these metaphysicians, especially the Sautrantikas. On the one hand, the Sautrantikas emphasized distinctions (*visesana*) in order to reject a permanent and eternal substance (*svabhava*). Yet, when the need arose for an explanation of the identity of bondage and freedom, they insisted upon a “seed of release” (*moksa-bija*) (see annotation of XXV.19-20). Thus, the first of these two verses (19) is intended to reject the Sautrantika notion of distinction (*visesana*), while the second (20) purports to deny their conception of “the seed of release”, which is not at all different from the Sarvastivada conception of substance (*svabhava*).

Before and during Nagarjuna’s day, traditional Indian philosophy was also dominated by two similar essentialist enterprises, namely, determining identity (*sarupya*) and differences (*visesana*). The speculations of the Sankhya school concentrated on the problem of identity. The possible influence of this school on the Sarvastivada theories has already been noted elsewhere. The Vaisesika school, as its name implies, focussed on the distinctions (*visesana*) in the hope that such a process would eventually lead to the discovery of the nature of ultimate reality. Some of the speculations of the Sautrantika school reflect this trend. The notions of self-nature (*svabhava*) and other-nature (*parabhava*) were the direct results of such an essentialist search.

Thus, when Nagarjuna says: “The life-process has nothing that distinguishes it from freedom. Freedom has nothing that distinguishes it from the life-process” (XXV.19), to assume that he was presenting an identity of *samsara* and *nirvana* would be too hasty a conclusion. In fact, such an assumption would undermine all the attempts he made to refute the notion of identity in the preceding chapters. Instead, Nagarjuna’s attempt in this chapter is focussed on a denial of any ultimate substance, a *dharma*, that would make either *samsara* or *nirvana*, either bondage or freedom a unique entity and this, indeed, is what is emphasized in the concluding verse: “The Buddha did not teach the appeasement of all objects, the appeasement of obsessions and the peaceful as something to someone at some place,” (XXV.24).

The method of criticism adopted here is in no way different from that he utilized in Chapter I in his rejection of the metaphysical theories of causality. In that chapter, there was no denial of a cause (*pratyaya*) or an effect (*artha*) and the arising of the latter depending upon the former, so long as these two events and their mutual dependence is not explained on the basis of a theory of self-nature or other-nature. Similarly, in the present chapter, there is no denial of the four noble truths that include the fruit and the ultimate fruit (*paramartha*), so long as these are not conceived of in the form of unique entities (*bhava*, *svabhava*), which indeed was the way in which the Sarvastivadins and the Sautrantikas defined *dharma*. The concluding verse of this chapter is not properly explained except in the background of these two definitions, namely, the Sarvastivada definition of *dharma* as “that which upholds the unique and general characteristics” (*sva-samanya-laksanadarhanat dharma*), and the Sautrantika definition that refers only to “unique characteristics” (*svalaksana*).
Nirvana

[The first stanza is included in a footnote and left out of the main body of the text]

[Were everything empty,
Nothing would happen.
Nirvana would be a letting go
And stopping of what?]

Were everything not empty,
Nothing would happen.
Nirvana would be a letting go
And stopping of what?

Nothing let go of, nothing attained,
Nothing annihilated, nothing eternal,
Unceasing and unborn
That is nirvana.

If it were something,
Nirvana would be contingent
And would wither and die
Like all other things.

Can nirvana be nothing?
Not to be something
Does not mean to be nothing.
Were nirvana nothing,
It would be contingent
Like all other nothings.

Things are created and contingent;
Nirvana is neither:

The letting go of what rises and passes
Is neither something nor nothing.

Were nirvana both something and nothing,
Things and nothings would be free
Or nirvana would be as contingent as they:
Darkness and light cannot be one.

Can I experience nirvana
As neither something nor nothing?
This would be possible
Only if something or nothing were.

After the Buddha died,
He was not seen as existing or not.
Even when he lived
He was not seen as such.

Life is no different from nirvana,
Nirvana no different than life.
Life’s horizons are nirvana’s:
The two are exactly the same.

Visions of the beyond,
Of eternity, annihilation
Depend on how you see
Nirvana, the past and the future.

What finitude in empty things?
What infinity?
What this? What else?
What stays? What changes?

The dissolving of objects
And easing of fixations is peace.
The Buddha never taught
Anyone anything.

JONES (COMMENTARY)

25. Nirvana

Nirvana in Buddhism is not an entity acquired or a place gone to after death. Rather it is the state of a person in which the “fires” of hatred, greed, and delusion have been extinguished; the enlightened - the “nirvanized” - then see things as they really are. *Samsara* is the cycle of rebirths that depends on those “fires” to keep going. So when Nagarjuna is saying nirvana and *samsara* are not different, he is making a bold claim. Note that Nagarjuna does not say that *samsara* and nirvana are the *same* but only that they are *not different*:

only entities that exist by self-existence can be the same or different, and thus things empty of self-existence cannot be related that way. (This will be discussed in the Essay.)

More generally, once we see that there are no discrete, self-existent entities and stop projecting such entities onto reality, then we also see that there is no real (self-existent) doctrine taught by the Buddha and no real (self-existent) people to hear it (25.24). Thus, the Buddha is the “silent one (muni)” - he did speak but not any real entities, and thus from the ultimate point of view he was silent. (See 22.3-4.) Indeed,
from the ultimate point of view, there is no real (self-existent) 
Buddha to teach the equally unreal doctrine. (See also SS 70.)

Also note that Nagarjuna strives to show that nirvana 
cannot be portrayed as anything positive, including an entity 
(bhava). (See also SS 25.) And since nirvana was never an 
entity, it cannot be a non-entity (v. 7) since a non-entity 
(abhava) involves a change in an entity (15.5); and a change is 
dependent, so whatever is not dependent cannot be a non- 
entity (v. 8). Nirvana is not dependent and not conditioned 
(v. 9, but see 24.31), while dharmas (the basic factors of the 
phenomenal world) all rise dependently (24.19). The four 
options of “exist,” “not exist,” “both exist and not exist”, and 
“neither exist nor not exist” are shown not to apply to nirvana 
(vv. 6-18) in order to show in the strongest terms that to think 
“nirvana” in terms of “exists” in any fashion is wrongheaded.

In verses 22-23, Nagarjuna’s expands that claim that “There is 
not the slightest difference of nirvana from cyclical 
existence” (v. 19) to all the basic phenomena of Buddhist 
onontology: since all basic factors of experience (dharmas) are 
empty, what can be the same or different?

GYAMTSO (COMMENTARY)

25

An Examination of Nirvana

In the Prajnaparamita Sutras, the Buddha taught:

Nirvana, too, is just like a dream.

NAGARJUNA COMPOSED THIS CHAPTER in answer 
to those who argued, “If everything is empty, how could 
there be any nirvana, the ‘transcendence of suffering’? If the 
things that compose samsara—the aggregates, mental 
afflictions, and karmic actions—do not exist in the first 
place, how could there be any transcendence of them? In 
fact, nirvana does exist, and therefore the samsara that it 
transcends must also exist. The aggregates, mental 
afflictions, and karmic actions all exist, because the arhats 
who achieve their cessation exist, and the arhats exist 
because the nirvana they attain exists.” Thus, in order to help 
these people correct their mistaken belief in the true 
existence of things, Nagarjuna presents an analysis of 
nirvana and proves that it too is empty of its own essence.

The Buddha taught about nirvana in different ways, 
depending on the needs of his disciples. To those who were 
weary of samsara’s suffering, who were depressed by it, the 
Buddha taught about nirvana as if it truly existed. To them 
he described nirvana as the genuine and irreversible 
liberation from samsara, the peace that was the cessation of 
samsara’s suffering. Now that those people had hope that 
there was in fact a way they could gain freedom from 
samsara’s misery, they were filled with longing to attain it, 
so they renounced samsara and became eager entrants into 
the path of Dharma. Then, however, to his disciples who 
were fixated on the idea that nirvana was real, the Buddha 
taught that nirvana does not inherently exist after all, that it 
too is just like a dream. Finally, to his most apt disciples, the 
Buddha described the true nature of nirvana, which, like the 
nature of all other phenomena, cannot be described as being 
existent or nonexistent because it is beyond all conceptual 
fabrications.

Thus, the way that the stages of the teachings proceed is 
as follows: First, it must be explained that samsara is of the 
nature of suffering, because if one is still distracted by the 
thought that one can get some happiness out of this 
existence, one will not think about the Dharma. Therefore, it 
first must be taught that everything in existence is of the 
nature of suffering. Then, when that thought of everything in 
existence being of the nature of suffering gets really 
depressing, one is introduced to the concept of nirvana and is 
taught that the possibility of liberation from this suffering 
exists. This eases one’s sadness and gives one great 
incentive to practice the Dharma with the goal of attaining 
nirvana’s peace. However, there is still this thought that 
nirvana is something real, and if one does not free oneself 
from that, one will never be able to attain nirvana. Therefore, 
one is then taught that nirvana does not truly exist, that it has 
no inherent nature. Finally, what remains is this clinging to 
nirvana being nonexistent, which also is an obscuration to 
one’s wisdom. In order to be free from that, one is taught 
that the nature of nirvana transcends both existence and 
nonexistence, and that this is the ultimate description of 
genuine reality.

Since Nagarjuna is responding to criticism from those 
who believe that nirvana truly exists, he must begin with the 
second stage and demonstrate that nirvana is empty of 
inherent nature. One way he does this is by asking, “If 
nirvana exists, then does it exist before the suffering of 
samsara that it transcends, or after it? Which one of these 
comes first?”

Nirvana could not exist before samsara’s suffering, 
because if it did, what suffering would it transcend? There 
would be no meaning to nirvana’s defining characteristics of 
being the transcendence of suffering if that were the case.

Samsara could not exist before nirvana either, because if 
it did, then the transcendence of suffering would be a newly 
created thing, a fabricated entity, subject to the same decay 
as every other thing that arises anew. Attaining nirvana 
would not guarantee permanent liberation from samsara, 
because nirvana would eventually decay just like everything 
else. The naturally present nirvana would not be the basic 
nature of reality that the Buddha described it to be (in 
“Naturally present nirvana” is a synonym for the dharmakaya of natural 
purity.). Furthermore, if samsara existed before nirvana, and 
thus nirvana arose after samsara ceased, what would there be
in between the two? Samsara’s suffering would stop, then there would be a gap that would be neither samsara nor nirvana, then nirvana would arise from out of that nothingness without a cause.

Samsara and nirvana cannot exist simultaneously either, for all the reasons presented in earlier chapters that negate the possibility that two dependent phenomena could truly exist simultaneously. Furthermore, if you think about it from the perspective of the continuum of one individual’s existence, how could samsara and nirvana both be present in one individual’s mindstream at the same time? It would be impossible for one individual to both suffer and transcend suffering simultaneously.

Thus runs the logical proof of nirvana’s emptiness of true existence. If one asks, “Well, then what is the nature of nirvana after all?” Nagarjuna describes it in the third verse:

*Nothing to abandon, nothing to attain,*
*Nothing extinct, nothing permanent,
No cessation, no arising—
This is how nirvana is taught to be.*

In the abiding nature of reality, there are no mental afflictions to begin with, and therefore there is nothing to abandon—there is nothing flawed that needs to be gotten rid of or removed. There are also no qualities of nirvana that somehow first do not exist and then later need to be created or attained. Furthermore, the continuum of an individual’s aggregates does not become extinct at the point of nirvana, nor does it remain in a permanent, unchanging state. Finally, nothing existent ceases and nothing nonexistent arises. This is essential reality, dharmata, and this is precisely how nirvana is taught to be. In short, it is dharmadhatus, the expanse of genuine reality, beyond abandonement and attainment, extinction and permanence, and arising and ceasing. This is the natural nirvana, the nirvana that is the true nature of reality, the essence of all the infinite phenomena that appear. This natural nirvana is different from the nirvana that one achieves at the time of enlightenment, when even one’s most subtle obscurations are purified and one’s realization of the natural nirvana becomes completely perfect. That is called “nirvana free of fleeting stains.” At the time of enlightenment, the Buddha is said to be endowed with two types of purity: naturally present purity and the purity of being free from fleeting stains. In this verse, it is the first of these two that is emphasized (fn For a similar discussion of the two types of dharmakaya that parallel the two types of nirvana, see note above.).

The Heart of Wisdom Sutra teaches:

*All phenomena are emptiness: They have no characteristics, no birth, no cessation, no stains, no freedom from stains, no decrease, and no increase.*

The meaning of this third verse and that of this passage from the sutra are the same. Furthermore, Nagarjuna’s verse describes how nirvana is free from all extremes, and so it is very important. You should definitely memorize it.

In his song Eight Ornaments of the Profound Meaning, Milarepa sang:

*To bring one’s thoughts to the point of their exhaustion,
Is this not buddhahood gained in a single life?*

This is also in harmony with what Nagarjuna is teaching here. Perfect realization of reality beyond extremes means that all concepts of those extremes utterly cease. That is how it is described, but at the same time, since thoughts have no inherent nature in the first place, there is no real cessation of them either.

The nineteenth verse describes how samsara and nirvana are actually undifferentiable:

*Samsara is not the slightest bit different from nirvana.
Nirvana is not the slightest bit different from samsara.*

From the perspective of precise knowledge analyzing the nature of genuine reality, once the true existence of nirvana is refuted, then one realizes that there is no samsara that is even the slightest bit different from nirvana, and no nirvana that is even the slightest bit different from samsara. In short, samsara and nirvana are of the nature of equality, because both have a nature beyond all conceptual fabrications about what it might be, and because both in their true nature are originally pure.

As the Fifth Karmapa Deshin Shekpa states:

*Whatever is the suchness of samsara, that is nirvana.*

Thus, there is no difference between the suchness of samsara and the suchness of nirvana. Samsara and nirvana are therefore equality. There is no difference between them in the true nature of reality.

In the Mahayana sutras, the Buddha taught the ten types of equality—the ten ways in which all things are essentially the same. The ultimate meaning of all of them, what they all point to, is the equality of samsara and nirvana.

For this reason, the twentieth verse states:

*The true nature of nirvana
Is the true nature of samsara,
And between these two
There is not even the tiniest, subtlest difference.*

The essential reality of samsara is the essential reality of nirvana, and in this essential reality, there is not even the slightest difference between them. Samsara and nirvana are equality.

The great siddha Dombi Heruka sang:

*Existence and peace are equality.*
Free from all conceptuality, 
So striving and straining to accomplish some goal—
Oh, what a tiring thing to do!

Body and mind, nonduality—
Spacious and relaxed transparency.
To think that body and mind are two different things
Is a neurotic, crazy, afflicted thing to do!

Self and other not two in dharmakaya,
To cling to good and bad—I pity the fool!

These verses teach of the equality of samsaric existence and nirvanic peace, the equality of body and mind, and the equality of self and other.

You can have a dream of being bound in iron chains and then being set free. When you do not know you are dreaming, these two states seem to be different: Being bound in chains is bad, being set free from them is good, and they both seem to be real. When you know that you are dreaming, you know that both are mere appearances. In the abiding nature of reality, the bondage and the liberation are equality—between the true nature of bondage and the true nature of liberation, there is not the slightest difference. This is how you should understand it.

Therefore, happiness and suffering are just the way things appear to be. The way things really are is that happiness and suffering are equality. In his vajra song of realization, The Eight Types of Nonduality, Gyalwa Gotsangpa sang:

Complete happiness and comfort and
Overwhelming pain and suffering
These distinctions don’t exist in the pure expanse—
So! How joyful! How happy! Sudden victory!

The equality of samsara and nirvana is also an integral part of the view of Dzogchen. In his commentary, Ju Mipham Rinpoche describes from his own personal experience how it is that one must rely on Nagarjuna’s reasonings in order to realize Dzogchen’s view:

In the infinite expanse of equality without reference point,
all the phenomena of samsara and nirvana are perfectly complete—this is the supreme vehicle’s profound view of Dzogchen. Thanks to the noble Nagarjuna’s king of reasonings, the light of wisdom’s brilliant flame shone upon me, dispelling the darkness of doubts and causing profound certainty to arise. Ema! A la la! How wonderful! How blissful!

Furthermore, since one must rely on Nagarjuna’s reasonings in order to realize the essence of Dzogchen, it is the same for Mahamudra. Those who studied at the shedras (philosophical universities) in Tibet studied The Fundamental Wisdom of the Middle Way and Chandrakirti’s Entering the Middle Way and other similar texts over the course of many years. Mahamudra and Dzogchen were not studied, however, because it is the Middle Way texts that are filled with such a vast array of different arguments and logical reasonings that one can pursue the study of them in a manner that is both subtle and profound.

In the Mahamudra teachings as well, we find statements such as this one from Karmapa Rangjung Dorje’s Mahamudra Aspiration Prayer:

As for mind, there is no mind! Mind is empty of essence.

If you gain certainty in mind’s emptiness of essence by analyzing it with the reasoning that refutes arising from the four extremes and with others as well, then your understanding of Mahamudra will become profound. Otherwise, you could recite this line, but in your mind it would be nothing more than an opinion or a guess. The eleventh verse in the Mahamudra Aspiration Prayer reads:

It is not existent—even the Victorious Ones do not see it,
It is not nonexistent—it is the basis of all samsara and nirvana,
It is not the contradiction of being both—it is the Middle Way path of union—
May we realize mind’s essential reality, free from extremes.

Here as well, to understand this refutation of the extremes of existence and nonexistence with regard to the mind, one needs to have a good understanding of Nagarjuna’s reasonings, for example, the reasonings behind this verse from chapter 22, “An Examination of the Tathagata” (verse 11):

The Tathagata cannot be called “empty,” nor “not empty,” nor both, nor neither.
Use these terms as conventional designations.

Once one has analyzed using logical reasoning, it is impossible to assert anything about the true nature of reality. When we describe conventional appearances, however, the use of terms and designations is appropriate.

If you study these reasonings presented in The Fundamental Wisdom of the Middle Way, when you receive Mahamudra and Dzogchen explanations of emptiness and lack of inherent reality, you will already be familiar with what is being taught and so you will not need to learn anything new.

Mipham Rinpoche composed a brief text called The Beacon of Certainty, in which he states:

In order to have perfect certainty in alpha-purity,
One must have perfect understanding of the view of the Consequence school.

Alpha-purity, or original, primordial purity, is the view of Dzogchen, and in order to perfect that view, one must perfect one’s understanding of the Middle Way Consequence school’s view. What this implies is that the view of alpha-purity and the view of the Consequence school are the same.

Chapter Twenty Five Examination of Freedom (Nirvana-parikṣa)

Chapter XXV Examination of Nirvāṇa

This chapter continues the study of the nature of what are often thought of as ultimate realities and that of their relation to the conventional world. It follows quite naturally on the preceding chapter, which considered the relation between emptiness and the conventional world. For insight into emptiness is, from the standpoint of Madhyamika philosophy, an important precondition for entry into nirvāṇa. And just as the ultimate truth is related to the conventional as an understanding of the way things really are as opposed to the way they appear to be, nirvāṇa is related to saṃsāra as a state of awareness of things as they are as opposed to a state of awareness of things as they appear to be. But given the results of Chapter XXIV, and the surprising identification in entity of the conventional with the ultimate and the doctrine of the emptiness of emptiness, one might well wonder about the status of nirvāṇa. Is it no different from saṃsāra? If it is, how, and how is it related to saṃsāra? If not, why pursue it, or better, why aren’t we already there? Is nirvāṇa empty? If not, how does it escape the Madhyamika dialectic? If it is, can it really be different from saṃsāra? Nāgārjuna begins the examination with a challenge from the reificationist, raised by the previous chapter:
INADA (Skt):
Verse 1 (The opponent contends) If all is sunya and there is neither production nor destruction, then from whose abandonment (of defilements) or from whose extinction (of suffering) can nirvana be attributed? - Note: Once again, sunya is left untranslated.

JONES (Skt):
[Objection: i] If all this is empty, then there is neither the arising nor the ceasing of things. So, by the removal or cessation of what is nirvana sought?

KALUPAHANA (Skt):
If all this is empty, there exists neither arising nor ceasing. [As such,] through the relinquishing and ceasing of what does one expect freedom?

MCCAGNEY (Skt):
If all this is open, there is neither arising nor passing away. Whose liberation is presupposed either through abandonment or through cessation?

NISHIJIMA (Skt?):
1. When the Serene State of the Balanced Autonomic Nervous System is this world totally, There might be no appearance actually, and there is no disappearance at all.
If we are free from escape and free in self-regulation, What kinds of balanced situations of the Autonomic Nervous System can manifest itself even in future?

SPRUNG (Skt):
1 If everything is devoid of self-existence, nothing can come to be or cease to be; from the total extinction or cessation of what, then, is nirvāṇa thought to result?

STCHERBATSKY (Skt):
I. If every thing is relative. No (real) origination, no (real) annihilation. How is Nirvana then conceived? Through what deliverance, through what annihilation?

BOCKING (Ch).
25v1 If all dharmas are empty With no arising and no ceasing What is cut off, what extinguished Which could be called nirvana?

BATCHelor (Tb):
If everything were empty, there would be no arising and perishing. From the letting go of and ceasing of what could one assert nirvana(-ing)?

DOCTOR (Tb):
If all of this were empty, Nothing would arise or be destroyed. Which elimination and cessation is it That you assert leads to the transcendence of suffering? [XXV.1]

GARFIELD (Tb):
1. If all this is empty, Then there is no arising or passing away. By the relinquishing or ceasing of what Does one wish nirvana to arise?

GARFIELD-SAMTEN (Tb):
1. If all this is empty, Then there is neither arising nor passing away. Through the abandonment or cessation of what Does one aspire to nirvana?

HAGEN (paraphrase):
[An opponent contends:] If all this is empty, there exists neither arising nor ceasing. By the relinquishing and ceasing of what does one expect Nirvana?
PINGALA COMMENTARY

25/1 If all dharmas are empty, then there is neither arising nor ceasing. Since there is nothing which arises and ceases, what is it that is cut off, or what is it that is extinguished, that would be called nirvana? Therefore, dharmas cannot be empty. Because dharmas are not empty, cutting-off of the afflictions and extinction of the five skandhas is called nirvana.

Reply:

CANDRAKIRTI COMMENTARY

Nirvāṇa has been described by the illustrious one as twofold for those persons who lead a chaste life, who are practising the discipline leading to perfect realization, and who are committed to living according to the Truth: namely, a nirvāṇa with a residual base and a nirvāṇa without a residual base.

On the one hand, nirvāṇa with residual base (sopadhisesa) is conceived as resulting from the total extinction (prahana) of the basic afflictions ignorance, desire and the rest. What is called the base is adherence to personal existence, is being based in that. By the term base is meant the five possessive factors of personal existence which give rise to the existential fiction (atmaprajhapti) of the personal self. The base is the residue. Only a base which is residual is a ‘residual base’. Nirvāṇa with a residual base means continuing to exist conjoined with a residual base. What kind of nirvāṇa is this? It consists of nothing more than the bare factors of personal existence freed from the deceptive afflictions such as the belief in a substantial personal self; it is like a town from which all criminal gangs have been purged. That is nirvāṇa with a residual base.

In the second case, the nirvāṇa in which there are not even the bare factors of personal existence is nirvāṇa without a residual base (nirupadhisesa). Where the residual base has vanished, it is comparable to a town from which all criminal gangs have been purged and which is itself destroyed.

In this connection it is said, ‘The body has collapsed, ideas and perceptions gone. All feeling vanished, all dispositions quiescent and consciousness itself non-existent.’ And thus, ‘Through a body even to which one does not cling, one still has some feelings; nirvāṇa is the coming to an end of the discursive mind as of a light.’

So it is that nirvāṇa without residual base is attained by the cessation (nirodha) of the factors of personal existence.

How can this twofold nirvāṇa be made comprehensible? If there is to be nirvāṇa, both afflictions and the factors of personal existence must cease to be. However, if everything in the world is devoid of being (sunya), nothing whatever can either come to be or cease to be. How then can afflictions and the factors of personal existence come to be, whose ceasing to be would constitute nirvāṇa? Hence things are self-existent (vidyate svabhava).’

To this we reply: If we assume that things are self-existent, then

KALUPAHANA COMMENTARY

Even though some of the problems relating to freedom (nirvana) have already been discussed in the context of a tathagata (Chapter XXII) and the four noble truths (Chapter XXIV), Nagarjuna singles out this topic for further analysis, especially in view of certain grave misconceptions that emerged as a result of a substantialist world-view. Without making any attempt to determine what these metaphysical views were, many a scholar has plunged himself into assertions about Nagarjuna's conception of freedom and produced views that are no less metaphysical than those rejected by Nagarjuna.

The present verse explains the difficulties the metaphysicians, who accepted substantial phenomena, experienced when they attempted to elucidate freedom. While the previous chapter dealt with the problems the substantialists faced when they accepted a notion of self-nature and tried to account for the four noble truths, especially the empirical fact of suffering (duhkha), the present context Nagarjuna is primarily concerned with the question of freedom from suffering. The substantialist dilemma here would be: How can freedom (nirvana) be explained, if the conception of emptiness is utilized not only to explain the empirical fact of suffering but also to elucidate nirvana) which, even though described as the cessation of suffering (dahkhanirodha), was also the ultimate or absolute reality.
After denying any substance (svabhava) in the conventional or the contextual (vyavahara), if Nagarjuna had not proceeded to extend that denial to the ideal (paramartha), the substantialist could have remained silent. However, when Nagarjuna universalized "the empty" (sunya) by saying "all this is empty" (sar-vam idam sunyam) and that included the substantialists' conception of "ultimate reality" (paramartha) understood in various ways, either as "atomic reality" (paramanu) or the "seed of release" (moksa-bija) or the "originally pure thought" (prakrti-prabhasvara-citta) (see XXIV. 32)—he was threatening the very foundation of substantialist metaphysics. In the next twenty-three verses, Nagarjuna proceeds to demolish that foundation.

GARFIELD COMMENTARY

1. Nirvāṇa is defined as a state one achieves when delusion and grasping cease, and when one relinquishes samsāra and its entities. But if there is neither self, nor object, nor delusion, nor grasping, who relinquishes what, and in what manner? Moreover, if there is no arising or passing away from the ultimate point of view, how can nirvāṇa arise or samsāra pass away? Nāgārjuna replies, using the same dialectical strategy deployed in the previous chapter:
Kārikā XXV.2

yady aśūnyam idaṃ sarvam udayo nāsti na vyayaḥ |
prahāṇād vā nirodhād vā kasya nirvāṇam iṣyate ||2||

ENGLISH TRANSLATIONS

INADA (Skt): Verse 2 (Nagarjuna asserts) If all is asunya and there is neither production nor destruction, then from whose abandonment (of defilements) or from whose extinction (of suffering) can nirvana be attributed? - Note: Nagarjuna, in the previous chapter, has stated that the critic of sunya does not really know its meaning and thus cannot understand sunya with respect to ordinary activities. Nagarjuna reveals the fallacy of understanding sunya in terms of self-existence (svabhava) and, analogously, demonstrates the absurdity of premising even the concept of asunya, as it is done in this verse.

JONES (Skt): Reply: 2] If everything is not empty, then there is neither the arising nor the ceasing of things. So, by the removal or cessation of what is nirvana sought?

KALUPAHANA (Skt): If all this is non-empty, there exists neither arising nor ceasing. [As such,] through the relinquishing and ceasing of what does one expect freedom?

MCCAGNEY (Skt): If all this is not open, there is neither arising nor passing away. Whose freedom is presupposed either through abandonment or cessation?

NISHIJIMA (Skt?): 2. When the Troubled State of the unbalanced Autonomic Nervous System is the Universe itself, There might be no appearance actually, and there is no disappearance at all. If we are free from escape and free in self-regulation, What kinds of balanced situations of the Autonomic Nervous System can manifest themselves even in future?

SPRUNG (Skt): 2 If everything in the world is not devoid of being, nothing can come to be or cease to be. From the total extinction or cessation of what, then, is nirvāna thought to result?
PINGALA COMMENTARY

25/2 If everything in the world were not empty, there would be neither arising nor ceasing. What would be cut off, and what extinguished, which could be called nirvana? Therefore neither existence nor nonexistence is the gate that leads to nirvana. That which is called nirvana ...

CANDRAKĪRTI COMMENTARY

As the self-existent is ineluctable (anapayitva), if the factors of personal existence and the afflictions are self-existent, how could there be cessation of them, a cessation which must precede nirvāṇa (fn 1 Thus far the orthodox Buddhist opponent). For this reason it is the proponents of the reality of things (svabhavavadinah) for whom nirvāṇa is not logically possible. The proponents of the absence of being in things, however, do not argue for a nirvāṇa characterized as the cessation of the afflictions and the factors of personal existence and so they are not guilty of this error; it does not constitute a reproach for them.

Statement of the Madhyamika position

But, if the proponents of the absence of being do not accept a nirvāṇa understood as the cessation of the afflictions and the factors of personal existence, how do they conceive the nature of nirvāṇa?

Nagarjuna says,

KALUPAHANA COMMENTARY

As in the previous chapter, it is because of his preference for an empirical explanation of things in terms of arising and ceasing (udaya-vyaya) that Nagarjuna is not willing to accept a metaphysical substance. Hence his argument that relinquishing (prahana) and ceasing (nirodha) are meaningless in the context of the “nonempty” (asunya). Thus, for Nagarjuna, the non-empirical view is the one expressed in the form, "All this is non-empty (sarvama idam asunyam), rather than the view presented as "All this is empty" (sarvam idam sunyam). If, on the contrary, the substantialists were to accept the empirical phenomena to be empty, but not nirvana, still Nagarjuna could ask the question: If nirvana is a permanent and eternal substance, why talk of arising and ceasing, relinquishing and abandoning, for suffering (duhkha) or defilements (klesa) that need to be relinquished actually do not affect the originally pure existence?

For Nagarjuna and the Buddha, neither the empirical events nor the ultimate fruit were substantial. Neither samsara nor nirvana were absolute in any sense. As such, what Nagarjuna is presenting is not different from the empirical view of bondage and freedom explained in the Buddha’s discourse to Katyayana.

GARFIELD COMMENTARY

2. Nirvāṇa would be precluded not by the emptiness of samsāra, but rather by its inherent existence. For then it could not pass away. Nor could an inherently grasping grasper relinquish grasping, or an inherently existent delusion be alleviated. The achievement of nirvāṇa requires dependence, impermanence, and the possibility of change, all of which are grounded in emptiness.
Kārikā XXV.3

INADA (Skt):
Verse 3 - What is never cast off, seized, interrupted, constant, extinguished, and produced... this is called nirvana.

JONES (Skt):
[3] Unrelinquished, unattained, unannihilated, non-eternal, unarisen, and unceased - this describes nirvana.

KALUPAHANA (Skt):
Unrelinquished, not reached, unannihilated, non-eternal, non-ceased and non-arisen—this is called freedom.

MCCAGNEY (Skt):
What is not abandoned and not attained, not interrupted and not permanent, not destroyed and not produced, this is called nirvāṇa.

NISHIJIMA (Skt?):
3. What is not isolated, what has not arrived at the end still, What hasn’t stopped on the way, what is not having no end, What is impossible to regulate, what is not accomplished, That is called the Quiet and Serene State, Nirvana.

SPRUNG (Skt):
3 Nirvāṇa is said to be what can neither be made extinct, nor realized, through action, what neither terminates nor is everlasting, what neither ceases to be nor comes to be.

STRENG (Skt):
3. Nirvana has been said to be neither eliminated nor attained, neither annihilated nor eternal, Neither disappeared nor originated.

STCHERBATSKY (Skt):
III. What neither is released, nor is it ever reached, What neither is annihilation, nor is it eternity, What never disappears, nor has it been created. This is Nirvana. It escapes precision.

ROBINSON (Skt):
Nirvana is defined as unabandoned, unattained, unannihilated, non-eternal, unextinguished, and unarisen.

BOCKING (Ch):
25v3 ... Is neither attained nor arrived at Neither cut off nor permanent Neither arisen nor ceased This is what is called nirvana

BATCHelor (Tb):
No letting go, no attainment, no annihilation, no permanence, no cessation, no birth: that is spoken of as nirvana.

DOCTOR (Tb):
No elimination and no attainment. No annihilation and no permanence, No cessation and no arising— This is termed the transcendence of suffering. [XXV.3]

GARFIELD (Tb):
3. Unrelinquished, unattained, Unannihilated, not permanent, Unarisen, unceased: This is how nirvana is described.

GARFIELD-SAMTEN (Tb):
3. Unrelinquished, unattained, Unannihilated, imperfect, Unarisen, unceased: This is how nirvana is described.

HAGEN (paraphrase):
Nirvana is spoken of as always thus yet never acquired, neither permanent nor terminable, neither coming nor going.

GOLDFIELD (Tb):
Nothing to abandon, nothing to attain, Nothing extinct, nothing permanent, No cessation, no arising— This is how nirvana is taught to be. (3)
PINGALA COMMENTARY

25/3 'Not attained' means that there is nothing in terms of either action or reward, which is attained. 'Not arrived at' means that it is not a place which can be arrived at; 'not cut off' means that since the five skandhas have been utterly empty from the beginning, when one attains the 'day and enters nirvana without residue there is nothing which is cut off. As for 'not permanent'; if there were dharmas that could be distinguished from each other these would be termed permanent, but since in the calm quiescence of nirvana there are no separately distinguishable dharmas, they are not termed permanent, and it is the same with arising and ceasing. Something which has characteristics such as these is called nirvana. Moreover, the sutras say that nirvana is neither existent, nor nonexistent, nor both existent and non-existent, nor neither existent nor nonexistent.

Nirvana means non-reception of all dharmas and inner peace and quiescence. Why is this?

CANDRAKIRTI COMMENTARY

That is, nirvāṇa is neither something which can be extirpated, like desire, nor something which can be realized through action, like the fruit of moral striving; nor again something which terminates, like such things as the factors of personal existence, nor is it something imperishable like what is not devoid of being. Nirvāṇa is said to be what, in its own nature, neither comes to be nor ceases to be; its nature is the coming to repose, the stilling of all named things (sarvaprapancopasama).

If nirvāṇa is not of the nature of a named thing (nisprapanca), what of the concept of the afflictions, whose elimination is supposed to constitute nirvāṇa? What again, of the concept of the factors of personal existence, whose cessation is supposed to constitute nirvāṇa? So long as these conceptions (kalpana) prevail, there is no attainment of nirvāṇa. It is only by the dissipation of all named things that it is attained.

Let it be, one might object, that in nirvāṇa there are no afflictions and no factors of personal existence; but then they exist prior to nirvāṇa, and from their dissipation there is nirvāṇa.

Our rejoinder to that is: This way of taking the problem should be abandoned because things which are real in themselves prior to nirvāṇa cannot be, at a later time, non-existent. For this reason this conception must be given up by those seeking nirvāṇa. Nagarjuna will say (MMK XXV.20), ‘The ontic range of nirvāṇa is the ontic range of the everyday world. There is not even the subtest difference between the two.’ This being so, it should be realized that in nirvāṇa there is no extinction of anything whatsoever, nor any cessation of anything whatsoever. Nirvāṇa is of the nature of the utter dissipation of reifying thought (kalpana) (in 2 This is often taken to mean ‘imaginings’. Throughout this passage it means attributing real existence to what words like klesa and skandha refer to: it means reification. This is, in the Madhyamika view, the aboriginal error.). As it has been said by the revered one, ‘There is no annihilation of the elements of existence; elements of existence which do not exist can never exist; if one reifies, thinking “this exists” or “this does not exist”, coursing so, afflicted existence will not come to rest.’

The meaning of this verse is this: In the perfected state (nirvrti) of nirvāṇa without residual base, there are none of the putative elements of existence, understood as individual life, actions and afflictions, nor any factors of personal existence, because they have totally disappeared. This is agreed to by proponents of all schools. That is to say, the putative elements of existence of-the everyday world do not exist in the perfected state. They are like such things as the fear of snakes, as which rope is mistakenly perceived in the dark, but which vanish when there is light. Such things are never real. Nor do the putative elements of existence, understood as individual life, act, afflictions and such things, at any time whatsoever truly exist in the everyday world of birth and death (samsārarāsah). The rope as it is in the darkness, is not, in reality (svarupatah), a snake, because its factual, real (sadbhuta) snakeness is not apprehended by sight and touch either in darkness or in the light of day.

If it is asked, ‘How, then, can there be an everyday world of birth and death (samsāra)?’ The answer is: Things which do not really exist appear in fact to do so to ordinary, immature people who are in the grip of the illusory notions of ‘me’ and ‘mine’, just as non-existing hair, flies and so on do to those with diseased eyes. Buddha said, if one reifies, thinking “this exists” or “this does not exist” coursing so, afflicted existence will not come to rest.’

The assertion of being, the ontological thought that true being is found in individual things, is the view of the school of Jaimini, of Kanada, of Kapila and of all
the others right down to the Vaibhasikas. The assertion of non-being is the view of the cynics who are rooted in a way leading to calamity. There are the others (fn 3 The Sautrantika school of Buddhism.), the proponents of the non-existence of the states of past and future and of innate dispositions which are meaningfully related and intelligible, but who for the rest are proponents of being; and there are proponents of non-being who deny the ultimate reality of the empirical contents of the mind but who assert their contingent reality and who assert also an ultimate reality, and so are proponents both of being and of non-being (fn 4 The Yogacara school of Buddhism: briefly, external objects are unreal, but consciousness is real.). For those coursing so, afflicted existence and the cycle of birth and death will not come to rest (fn 5 In this paragraph Candrakirti discounts all the major philosophical views current in the Indian tradition at his time with respect to the problem of being and non-being.). There is the verse: ‘A man suspecting he has taken poison faints even when there is no poison in his stomach. Swayed by the care of me and mine, eternally he comes and dies without real knowledge of his self.’ In this sense it should be understood that in nirvāṇa there is no cessation nor extinction of anything whatever. And therefore nirvāṇa is nothing but the ending of all reifying thought (sarvakalpanaksarupam eva). To quote the Ratnavali: ‘Nirvāṇa is not utterly non-existent, for then how could it be the guide and substance of a way (bhavana)? Nirvāṇa is said to be the end of the distinction between existence and non-existence.’ To those who, not effectively understanding that nirvāṇa is the achievement of ending all reifying thought, falsely imagine nirvāṇa to be something which positively exists, or does not, or does both, or neither (fn 6 These four possibilities are discussed, and rejected one after the other in Kārikās 4 to 16.), the following kārikās are addressed.

The first theory: nirvāṇa is ontic

Having rejected a permanent and eternal substance which, as explained earlier (XXIV.38), “is unborn, unceased, remaining immovable and devoid of variegated situations,” if Nagarjuna were to explain freedom in almost identical terms, his philosophy would not be any different from those of his substantialist opponents. Furthermore, it is the substantialists themselves who considered freedom (nirvana) as well as the non-defiled good seeds (anāsravakusala-bija) or the seeds of release (moksa-bija) to be subtle (susus̄ka) and uncorrupted or undestroyed (na samudghata)(see XXIV.32). This leaves the interpreter of the present verse with only one escape-route, namely, to consider the six negations presented here to be simple negations of metaphysical existence (sat) or its associate, non-existence (asat).

How relinquishing (prahana) becomes problematic if one were to accept a self-nature (svabhava) has been explained at XXIV.27. The substantialists, as mentioned in the discussion of XXIV.32, were left with two distinct self-natures: the good (kusala) and the bad (akusala). The problem was how any one of them, being permanent and eternal, could be relinquished.

If it is assumed that the “seed of release” (moksa-bija) is subtle and incorruptible and produces freedom (nirvana) as the “ultimate fruit” (parama artha or phala), Nagarjuna’s refutation of it is clearly stated at XXIV,28. He explained how the reaching (samprapti = samadbigamana) of a fruit (phala) is made impossible by the recognition of a permanent and incorruptible self-nature. Thus, when freedom (nirvana) is explained as relinquishing (prahana) and reaching (samprapti), these should not be understood in a substantialist way. If they were so understood, the only way to explain the empirical conception of freedom is by negating them. Thus, in freedom there is “no thing” (na kasci)(XXV.24)a thing understood as being substantial or having self-nature—that is either relinquished (prahana) or reached (Sampraptā).

The other four negations were discussed in relation to the Dedicatory Verses (as part of the eight negations). There too, it was pointed out that the fight negations were intended to eliminate the metaphysical notions of existence (astitva) and non-existence (nastitva). The same could be said of the two couplets in the present verse: anucchinnam/anasravakusala-bija and aniruddbam/aniruddbam.

Thus, the sixfold activityrelinquishing, reaching, interruption, remaining constant, ceasing and arising explained by the metaphysicians need to be negated before an empiricist theory could emerge. Such metaphysical explanations can easily be abandoned if their foundations, namely, the metaphysical concepts of substantial existence (sat or astitva, bhava or svabhava) and nihilistic non-existence (asat or nastitva, abhava or parabhava), were to be given up. This, indeed, is the task that Nagarjuna sets up for himself in the following verses.
3. It is important that these predicates are all negative in character, and that they are all expressed, both in Sanskrit and in the Tibetan translation, with explicitly negative particles (Skt: a, Tib: med-pa). The point is that no ascription of any predicate to nirvāṇa, for Nāgārjuna, can be literally true. For such a predication would purport to be an assertion that nirvāṇa is an ultimately existent phenomenon with a determinate property, and there are no ultimately existent phenomena, not even nirvāṇa. Because nirvāṇa can only be spoken of by contrasting it in some sense with samsāra and because there is no conventionally existent perceptible entity that could serve as a referent for the term, there is the terrible temptation when speaking of nirvāṇa to think that, to the extent that one is saying anything true of it in any sense, one is literally asserting an ultimate truth about an inherently existent thing or state. One forgets that once one transcends the bounds of convention, there is no possibility of assertion. (fn 125. See Streng (1973), chap. 5.)

The discussion in XXV: 4-18 is framed by the tetralemma that would follow from considering nirvāṇa to be something independent about which something could be said; or as a proper subject for a theory; or as a genuine alternative to samsāra, from which it is inherently different. If it were so, it would have to either be existent, nonexistent, both, or neither. (Note that here Nāgārjuna uses the terms “existent”/“non-existent” in both their adjectival and nominal forms [Tib: dngos/dngos-min/dngos-po/dngos-med, Skt: bhāva/bhāvo/abhāva/abhāvo] deliberately calling attention to their correlation. I have generally translated the Tibetan “dngospo” as “entity” throughout this text. But for the purposes of this discussion in order to highlight the structure of the text, I switch in the next few verses to “existent.”) Nāgārjuna will now argue that none of these alternatives is possible.
Kārikā XXV.4

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 4 - Indeed, nirvana is not strictly in the nature of ordinary existence for, if it were, there would wrongly follow the characteristics of old age-death. For, such an existence cannot be without those characteristics.

JONES (Skt):
[4] To begin with, nirvana is not an entity. If it were, it would be characterized by aging and death, for indeed there is no entity without aging and death.

KALUPAHANA (Skt):
Freedom, as a matter of fact, is not existence, for if it were, it would follow that it has the characteristics of decay and death. Indeed, there is no existence without decay and death.

MCCAGNEY (Skt):
Firstly, nirvāṇa is not an existent characterized by old age and death. Indeed, no being is without old age and death.

NISHIJIMA (Skt?):
4. The existence, which is great, can never be Nirvana. And the expressions of "aging" or "death" can never be so direct expressions. The expressions of "aging" and "death" exist as the adequate expressions. And so it might be impossible for us to deny the adequacy of using the words of aging and death.

SPRUNG (Skt):
4 Nirvāṇa is not ontic (bhava), for then it would follow that it was characterized by decay and dissolution. For there is no ontic existent not subject to decay and dissolution.

STRENG (Skt):
4. Nirvana is certainly not an existing thing, for then it would be characterized by old age and death. In consequence it would involve the error that an existing thing would not become old and be without death.
PINGALA COMMENTARY

25/4 Since, as we see with our eyes, all the myriad things arise and cease, these have the characteristics of old age and death. If nirvana were an existence, then it would have the characteristics of old age and death, but this is not the case, and this is why nirvana is not termed 'existent'. Also, we do not see any distinct fixed dharmas, free from arising and ceasing and old age and death, which could be called nirvana. If nirvana is an existence then it ought to have the characteristics of arising and ceasing, old age and death, but it is because it is free of the characteristics of old age and death, that we call it 'nirvana'. Further;

CANDRAKĪRTI COMMENTARY

In this matter there are some who are committed to the idea that nirvāṇa exists ontically (bhavatah). They argue in this way. There is a real something (padartha), which is of the very nature of cessation. It is the definite termination to a personal flow of consciousness (sarhtana) which arose from actions deriving from the afflictions. It is analogous to a real dam in a stream of water. That is nirvāṇa. An element of existence which by nature is non-ontic is never observed to be an effective agent of this kind. But it is merely the end of the thirst to attain the experience of joy, that is called dispassion, cessation, or nirvāṇa (in 7 An interjection by the Sautrantika school.). A mere termination is not capable of being an ontic existent. As it has been said, 'Nirvāṇa is release from the everyday mind, like the going out of a light.' But it is logically impossible that the going out of a light could be a real thing.

There is this reply to that (in 8 Another Buddhist school, the Vaibhasika.): It should not be thought that the termination of thirst is thirst-termination. Rather the end of thirst came about in something called nirvāṇa which is a real element of existence (dharma) and it is this that is properly thirst-termination. The light is merely a simile. This example should be understood to mean that the release from the everyday mind takes place in something which exists.

Nagarjuna now investigates the theory that nirvāṇa can be determined as an ontic existent. Nirvāṇa is not an ontic existent. Why not? Because it would follow that it would be subject to decay and death, decay and death being invariably the character of ontic existence. Therefore, such could not be nirvāṇa. He means that that would make nirvāṇa like consciousness and the other factors of personal existence which are subject to decay and death. Explaining the impropriety of the attributes, decay and death, he said: 'no ontic existent is not subject to decay and dissolution'. Anything not subject to decay and dissolution is something which cannot possibly exist ontically for example the ‘sky-flower’, which is not subject to decay and dissolution.

Further:

KALUPAHANA COMMENTARY

Inada takes bhava in the present context as the nature of ordinary existence. Instead, the term is better explained as a reference to metaphysical existence (astitva), as has been the case with Nagarjuna (see especially, XXI.15-16; also XXV. 10). The metaphysicians who admitted bhava or svabhava as eternal and permanent entities never attempted an empirical justification of these entities. They seem to have assumed that these are known through "omniscience" (sarvajnatva). Nagarjuna, realizing the Buddha's attitude toward such knowledge-claims (see discussion of Sabba-sutta at IX.3) and, therefore, making no reference to such knowledge at all in the present text, simply noted the implications of this metaphysical speculation and insisted that such existence (bhava, svabhava) is invariably associated with characteristics (laksana), like decay and death (jara-marana). Thus, freedom will not include freedom from decay and death and this would contradict the Buddha's claim that he is freed from the recurrent cycle of births and deaths. On the contrary, if the metaphysicians insisted that there is no invariable connection between existence (bhava) and characteristics (laksana), then they could claim that after parinirvana a freed person can retain the eternal existence and drop the characteristics. Nagarjuna was quite certain that this is an extension of the metaphysical position and is in conflict with the non-substantialist teachings of the Buddha (see XXV. 17).
4. Nirvāṇa is negatively characterized as release from samsāra and the constant flux, aging, death, and rebirth it comprises. But that means that since all entities have these characteristics, nirvāṇa cannot be thought of as an existent entity. And here we must be very careful: The point isn’t that nirvāṇa can’t be thought of as inherently existent. For inherently existent entities, if there were such things, would not have these characteristics. In this discussion, Nāgārjuna is rejecting the notion that nirvāṇa can be thought of as existent in any sense at all - even as a conventional entity. That is why we must be so careful in our discourse - very careful indeed - for, as we shall see in a moment, neither do we want to say that nirvāṇa is nonexistent. But moreover, Nāgārjuna will want in another sense to identify nirvāṇa and saṃsāra (see XXV: 19,20 below), and there is clearly a sense in which we can say that samsaric phenomena exist and a sense in which we can say that they do not. (Again, see the discussion of the positive tetralemma in XVIII: 8 above.)

The point here is that though things seen from the standpoint of saṃsāra and from the standpoint of nirvāṇa are not different in entity, from the standpoint of saṃsāra they can be characterized and appear as entities. But from the standpoint of nirvāṇa, no characterization is possible since that involves the dualities and dichotomies introduced by language, including the positing of entities and characteristics, as well as their contraries and complements. These have only conventional and nominal existence, and no existence at all from the standpoint of nirvāṇa. (See also the discussion of XXVII: 30 below.) In a sense this discussion can be seen as a useful commentary on chapter IX of the Vimalakīrti-nirdesa-sutra and, in particular, on the dramatic concluding remarks by Manjusri and nonremarks by Vimalakīrti on the subject of nonduality and insight into emptiness: Manjusri indicates that the distinction between the conventional and ultimate is itself dualistic and hence merely conventional. To realize it is hence to enter into nondual awareness of emptiness. He then asks Vimalakīrti to comment on nonduality. Vimalakīrti remains silent. (In 126.

His Holiness the Dalai Lama in oral remarks (Columbia University 1994) notes that “The ultimate nature of things - emptiness - is also unknowable, in that one cannot comprehend it as it is known in direct apprehension in meditation.” Nayak (1979) writes: Being firmly entrenched in sunyātā and realizing that language has only a conventional use, an ārya or a philosopher regards silence or noncommitment as the highest good or paramārtha. And the attainment of paramārtha in this sense, not in the sense of a transcendent reality, constitutes an essential feature of nirvāṇa or liberation. (p. 478))
Kārikā XXV.5

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 5 - If nirvana is strictly in the nature of ordinary existence, it will be of the created realm. For, no ordinary existence of the uncreated realm ever exists anywhere at all.

JONES (Skt):
[5] If nirvana were an entity, nirvana would be compounded, for an uncompounded entity is not seen anywhere.

KALUPAHANA (Skt):
Moreover, if freedom were to be existence, then freedom would be conditioned. Yet, an existence that is unconditioned is not evident anywhere.

MCCAGNEY (Skt):
If nirvāṇa is an existent, nirvāṇa would be conditioned.
Not any unconditioned existent occurs anywhere.

NISHIJIMA (Skt?):
5. When the existences are just Nirvana, The State of Quiet and Serene can exist as the Created World as it is.
And it is impossible for what is not the Created World to be recognized,
And so what is really existing is something, which are rear the word "Nirvana," which is something to exist somewhere, and which is something itself.

SPRUNG (Skt):
5 If nirvāṇa were an ontic existent it would be compound, because no ontic existence whatsoever exists anywhere which is not compound.

STRENG (Skt):
5. And if nirvana is an existing thing, nirvana would be a constructed product (samskṛta), Since never ever has an existing thing been found to be a non-constructed-product (asamskṛta).

STCHERBATSKY (Skt):
V. If Nirvana, is Ens, It is produced by causes,
Nowhere and none the entity exists Which would not be produced by causes,

BOCKING (Ch):
25v5 If nirvana were existent Then nirvana would be active Not one dharma ever exists Which is an inactive one.

BATCHelor (Tb):
If nirvana were a thing, nirvana would be a conditioned phenomenon. There does not exist any thing anywhere that is not a conditioned phenomenon.

DOCTOR (Tb):
If the transcendence of suffering were an entity, The transcendence of suffering would be conditioned. An entity that is not conditioned Does not exist anywhere at all. [XXV.5]

GARFIELD (Tb):
5. If nirvana were existent, Nirvana would be compounded. A non-compounded existent Does not exist anywhere.

GARFIELD-SAMTEN (Tb):
5. If nirvana were a thing, Nirvana would be compounded. A non-compounded thing Does not exist anywhere.

HAGEN (paraphrase):
If Nirvana were existence it would be conditioned since an unconditioned is not evident anywhere.
PINGALA COMMENTARY

25/5 Nirvana is not an existence, and why? All the myriad things arise from conditions; they are all active. There is not a single dharma which may be termed an inactive one. Although permanent dharmas are conventionally designated 'inactive', if we investigate their reality, we find that even impermanent dharmas do not exist; how much less permanent dharmas which are neither visible nor conceivable?

Further.

CANDRAKĪRTI COMMENTARY

If nirvāṇa were an ontic existent it would be compound (samskrta) (in 9 Literally 'co-effected'. All phenomena are co-effected or arise conjointly. It was agreed among all Buddhist schools that nirvāṇa was not samskrta.) like consciousness and the other factors of personal existence because these are ontically existent. Whatever is not compound cannot be an ontic existent as for example the horns of a donkey. Formulating this contrary proposition Nagarjuna says: ‘No ontic existent whatsoever exists anywhere which is not compound.’ The expression ‘anywhere’ refers to place, time, or philosophical argument. The expression ‘no ontic existent whatsoever’ refers both to the subject realm and the object realm. This is his meaning.

Further:

KALUPAHANA COMMENTARY

In rendering the terms samskrta and asamskrta as "conditioned" and the "unconditioned" respectively, we have, in the present context, tried to retain the interpretation of the metaphysicians, for it is this particular interpretation that is being questioned by Nagarjuna. Undoubtedly, it is the Sarvastivada theory which equated samskrta and pratityasamutpanna that Nagarjuna has in mind (see comments on VII. 1). The implication of this equation is that "the unconditioned" (asamskrta) is also the "independent" or "uncaused" (apratityasamutpanna), an implication not acceptable to both Nagarjuna and the Buddha.

In fact, XXV.4-6 highlight the sharp distinction the metaphysicians assumed between freedom and bondage (see Chapter XVI, Examination of Bondage and Release). It is this sharp distinction, which is the foundation of the substantialist explanation of freedom and bondage, that is being analysed by Nagarjuna. Unless this metaphysical explanation is kept in view, speculations about Nagarjuna's own conception of freedom can turn out to be as weird as those of the metaphysicians.

GARFIELD COMMENTARY

5. All empirical phenomena are compounded. But being compounded involves phenomena in the round of saṃsāra. For since the recognition of compounds as unitary phenomena demands conventions of aggregation, to be compounded is, ipso facto, to have a merely -conventional existence. And it is the treatment of merely conventional, nominally existent phenomena as inherently existent entities that generates saṃsāra. That is because from the standpoint of Buddhist soteriological theory, the foundation of suffering - the basic condition of saṃsāra - is craving and the foundation of craving is the root delusion of taking to be inherently existent - and so worthy of being craved - that which is merely conventionally, or nominally existent. We are hence trapped in saṃsāra exactly to the extent that we mistake the conventionally existent as inherently existent. So given the contrast between nirvāṇa' and saṃsāra and the fact that everything in saṃsāra is compounded, nirvāṇa cannot be compounded. So it is not existent, even conventionally.
Kārikā XXV.6

भावश्च यदि निर्वाणमनुपादय तत्कथम्।
निर्वाणं नानुपादयं कश्चिद् भावो हि विद्यते॥६॥

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 6 - If nirvana is strictly in the nature of ordinary 
existence, why is it non-appropriating? For, no ordinary 
existence that is non-appropriating ever exists.

JONES (Skt):
[6] If nirvana were an entity, how could it be non-dependent? 
A non-dependent entity is not seen anywhere.

KALUPAHANA (Skt):
Furthermore, if freedom were to be existence, how can that 
freedom be independent, for an independent existence 
is certainly not evident?

MCCAGNEY (Skt):
If nirvāṇa is existent, how is it non-grasping?
For not any non-grasping nirvāṇa occurs as existent.

NISHIJIMA (Skt?):
6. When the existence is just "Nirvana" to exist, 
The concrete thing, which has not been received "Nirvana", is 
what?
The word "Nirvana," which suggests the serenity of the Balanced 
Autonomic Nervous System, does not include the meaning to 
get something actually.
Because it is perfectly impossible for us to find a concrete fact "to 
be" at any place at all.

SPRUNG (Skt):
6 If nirvāṇa is an ontic existent how then could it be 
beyond all dependence? No ontic existent 
whatsoever exists which is beyond all dependence.

STRENG (Skt):
6. But if nirvana is an existing thing, how could nirvana 
exist without dependence on something else? 
Certainly nirvana does not exist as something without 
dependence.

STCHERBATSKY (Skt):
VI. If Nirvana is Ens,
How can it lack substratum,
There whatsoever is no Ens
Without any substratum,
PINGALA COMMENTARY

25/6 If, as you say, nirvana is an existent dharma, then the sutras ought not to state that nirvana is non-receiving, and why? There are no dharmas which are non-receiving and yet exist. Therefore, nirvana is not existent.

Question: If nirvana is not existent, then surely nirvana is nonexistent?

CANDRAKÎRTI COMMENTARY

(“Beyond all dependence”: in 10 Anupadaya - literally ‘non-dependent’. Upadaya is a key term in the Madhyamika vocabulary. It covers all of the forms of relatedness, but emphasizes dependence. Often, as here, it means both causal dependence and logical dependence (a distinction Indian philosophers do not regard as essential); at times it probably means logical dependence only, in contrast to the term pratayaya which often means causal, or at least some form of real, temporal, dependence. The use of these two technical terms is not, however, in our sense, precisely consistent.)

If, as our opponent thinks, nirvāṇa is an ontic existent then it would be dependent, that is, it would be based on its own set of causes. But nimnīa is not considered to be dependent in this way; rather it is considered to be beyond all dependence. If nirvāṇa is an ontic existent, how could it be beyond all dependence? Beyond all dependence is precisely what it would not be, because of its being an ontic existent as in the case of consciousness and the other factors of personal existence. Nagarjuna puts this into the form of the contrary proposition, saying: ‘No ontic existent whatsoever exists which is beyond all dependence.’

The second theory: nirvāṇa is ontically non-existent

In this matter one might argue: If indeed nirvāṇa cannot be an ontic existent because of the unacceptable consequence which has been urged, then nirvāṇa can only be non-existent because it is merely the end of personal existence (janma) which arises from the afflictions. We reply that this too is illogical:

KALUPAHANA COMMENTARY

Here again we have a metaphysical interpretation of upadaya (see IV.1-2) where existence (bhava), as the permanent and the eternal, becomes not only the “unconditioned” (XXV.5), but also the absolutely “independent” (anupadaya)(see also XXII. 5). Nagarjuna is not prepared to equate freedom with such nonempirical existence.

GARFIELD COMMENTARY

6. Saṃsāra and dependent arising go hand in hand. For a phenomenon to be dependent is for it to be impermanent and for it to be subject to destruction. (See the discussion in Chapter XV.) Nirvāṇa is supposed to be beyond all this. It is, by definition, liberation from all that characterizes saṃsāra. So again, nirvāṇa cannot be a conventionally existent entity. (It is important to see that there is a sense in which nirvāṇa is dependent and a sense in which it is independent, and these are not contradictory: Nirvāṇa is achieved in dependence upon the practice of the path and the accumulation of wisdom and merit. But once attained, inasmuch as from the standpoint of nirvāṇa there are no entities at all, there is nothing on which nirvāṇa can be said to depend. In this sense it is nondependent.) But all of this raises the obvious possibility that nirvāṇa is simply not real at all - that it is completely nonexistent. This possibility is considered and rejected in the next two verses:
Kārikā XXV.7

yadi bhāvo na nirvāṇam abhāvaḥ kim bhaviṣyati |
  nirvāṇam yatra bhāvo na nābhāvas tatra vidyate ||7||

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 7 - If nirvana is not strictly in the nature of ordinary existence, how could what is in the nature of non-existence be nirvana? Where there is no existence, equally so, there can be no non-existence.

JONES (Skt):
[7] If nirvana were not an entity, how could it become the absence of an entity (i.e., a “non-entity”)? Where nirvana is not an entity, no nonentity is seen.

KALUPAHANA (Skt):
If freedom is not existent, will freedom be non-existence? Wherein there is no existence, therein non-existence is not evident.

MCCAGNEY (Skt):
If nirvāṇa is not existent, will nirvāṇa be nonexistent? Where there is no existent, there is no nonexistent.

NISHIJIMA (Skt?):
7. When the existence is not “Nirvana”, How is it possible for something, which does not exist now, to exist in future?
When “Nirvana” does not exists anywhere, Then it will become clear that non-existence is not recognized anywhere at all.

SPRUNG (Skt):
7 If nirvāṇa is not an ontic existent will it be an ontic nonexistent? But if there is no ontic existent, there is no ontic non-existent either.

STRENG (Skt):
7. If nirvana is not an existing thing, will nirvana become a non-existing thing? Wherever there is no existing thing, neither is there a non-existing thing.

STCHERBATSKY (Skt):
VII. If Nirvana is not an Ens, Will it he then a non-Ens? Wherever there is found no Ens, There neither is a (corresponding) non-Ens.

ROBINSON (Skt):
Where there is no entity, there is no non-entity.
Pingala Commentary

25/7 If nirvana is not an existence, how could nonexistence be nirvana? Why is this? Nonexistence exists because of existence. Where there is no existence, how can there be nonexistence? As the sutras tell us, nonexistent means something formerly existent that is now nonexistent.

Nirvana is not like this, and why? Because it is not an existent dharma changing and becoming nonexistent. Therefore, nonexistence does not constitute nirvana either. Moreover:

Candrakīrти Commentary

If nirvāṇa is not accepted as an ontic existent, that is, if ‘Nirvāṇa is an ontic existent’ is repudiated, does nirvāṇa then become an ontic non-existent? The meaning is that nirvāṇa will not be an ontic non-existent. To say nirvāṇa is the nonexistence of the afflictions and personal existence would mean however that nirvāṇa was merely the perishability of personal existence and the afflictions. Therefore, to say, ‘It is merely perishability and nothing else which is the non-existence of personal existence and the afflictions’ would entail that nirvāṇa would be mere perishability. But this is not commonly accepted. To say, ‘Liberation follows naturally without effort’ does not make sense (fn 11 Nirvāṇa is not merely the natural termination of a natural process). Further:

Kalupahan Commentary

The metaphysical notions of existence and non-existence expressed in such terms as astitva and nastitva are here referred to as bhava and abhava. They bring back the problems of identity and differences (see I. 3). Nagārjuna’s argument, as at I.3, is that these two are relative concepts.

Garfield Commentary

7. To say that nirvāṇa possesses the positive property of nonexistence is not coherent either. For then there would be nothing to which the predicate “nonexistent” could in fact apply. Note the difference between saying, in the sense relevant here, “nirvāṇa is nonexistent” and “Santa Claus does not exist.” The latter, Nāgārjuna would certainly agree, is not only coherent but true. But in explaining the semantics of the latter, we can posit a concept of Santa Claus and interpret the sentence as asserting that that concept is not instantiated. But when, in trying to characterize nirvāṇa, one is tempted to say that it is a nonexistent, this is in response to the difficulty we have just noted in asserting that nirvāṇa in fact exists. The temptation is to assert then that it is real, but has some kind of ghostly reality as a substratum of the property “nonexistent.” But that is simply incoherent - an attempt to have it both ways. So the predicate “does not exist” cannot, in this case, even be applied. If there is no nirvāṇa at all, there is no such basis of predication. Even this apparently negative discourse about nirvāṇa is then blocked, to the degree that it is taken literally as positive attribution of a negative predicate.
Kārikā XXV.8

If nirvana is in the nature of non-existence, why is it non-appropriating? For, indeed, a non-appropriating non-existence does not prevail.

INADA (Skt): Verse 8 - If nirvana is in the nature of non-existence, why is it non-appropriating? For, indeed, a non-appropriating non-existence does not prevail.

JONES (Skt): [8] And if nirvana were a non-entity, how can it be nondependent? No non-dependent non-entity that could be nirvana is seen.

KALUPAHANA (Skt): If freedom is non-existence, how can freedom be independent? For there exists no non-existence which evidently is independent.

MCCAGNEY (Skt): If nirvāṇa is nonexistent, how is nirvāṇa not grasping it [existence]?

Indeed, no non-grasping nonexistent occurs.

NISHIJIMA (Skt?): 8. If it is true that something, which does not exist, is Nirvana, What is the concrete fact, which has not been accepted, is what? Because the “Nirvana” does not exist as non-existence, And so such a something, which has been accepted, does never be recognized at all.

SPRUNG (Skt): 8 If nirvāṇa is an ontic non-existent, how could nirvāṇa in that case be beyond all dependence? Because what is ontically non-existent is not beyond all dependence.

STRENG (Skt): 8. But if nirvana is a non-existing thing, how could nirvana exist without dependence on something else? Certainly nirvana is not a non-existing thing, which exists without dependence.

STCHERBATSKY (Skt): VIII. Now, if Nirvana is a non-Ens, How can It then he independent? For sure, an independent non-Ens Is nowhere to be found.
PINGALA COMMENTARY

25/8 If you say that nirvana is nonexistence then the sutras ought not to teach that nirvana means non-receiving, and why? There is no nonexistent dharma which is termed non-receiving. Therefore we know that nirvana is not nonexistence.

CANDRAKĪRTI COMMENTARY

Here ‘ontic non-existence’ or ‘perishability’ convey meaning (prajñapya) only by their logical dependence (upadaya) on the ontically existent; because donkeys’ horns and such things are not perceived to be perishable. A subject of predication (laksya) has meaning only in dependence on its predicates (laksana), and predicates have meaning only as based in a subject of predication. That is, predicates and the subject of predication are meaningful only in so far as they are reciprocally dependent. How could there be perishability without something ontically existent as the subject of predication? Therefore ‘ontically non-existent’ too conveys meaning only in logical dependence. And so, if nirvāṇa is ontically non-existent, how could it, in that case, be beyond all dependence? Dependent is exactly what nirvāṇa would be, if it is ontically nonexistent; it is like the argument concerning perishability. Elucidating this very point clearly, Nagarjuna said, ‘Because what is ontically non-existent is not beyond all dependence.’

But if the ontically non-existent is not beyond all dependence, how can such ontically non-existent things as the son of a barren woman be dependent? Who said that such things as the son of a barren woman are ontically non-existent? It was said earlier: ‘If something is not established as ontically existing, the ontically non-existent cannot be established. It is being predicatively other than an ontic existent which

people call ontic non-existence.’ (MMK XV.5) And so there is no ontic nonexistence of such things as the son of a barren woman.

There is a verse about this: ‘Space, rabbits’ horns and the son of a barren woman are spoken of as unreal, as phantasies concerning ontic existents.’ Here too, it is to be understood that these are merely imagined contradictions (kalpana prati-sedhamatra) of ontic existence but are not conceptions of the ontically non-existent because nothing real corresponds to them. ‘The son of a barren woman’ is literally nothing but mere words (sabdamatra). The object of this expression is never perceived as something which could be either ontically existent or non-existent. How could it make sense to think in terms of ontic existence and non-existence for something which by its very nature cannot be experienced (upalabhyate) (fn 12 A self-evident principle in Madhyamika; from it the profoundest consequences follow)? Therefore the son of a barren woman is not to be thought of as ontically non-existent. And so it has been established that there is no ontic non-existent which exists beyond all dependence.

The Madhyamika principle re-stated

Here one might interject: If nirvāṇa is neither an ontic existent nor an ontic non-existent what then is it? The reply of the revered, perfected ones runs:

KALUPAHANA COMMENTARY

If there were to be no permanent existence, there could be no permanent nonexistence. If there were to be no absolute existence, there could be no nihilistic nonexistence. Just as much as freedom is not absolute existence, it is also not nihilistic non-existence. Nagarjuna’s attempt in the present chapter is directly aimed at getting rid of such a metaphysical explanation of freedom. The Buddhists, throughout history, were prone to make such distinctions, sometimes ignoring the empirical middle position advocated by the Buddha. This is what Nagarjuna intends to explain in the next verse.
8. Moreover, Nāgārjuna reminds us, one of the reasons that we rejected the view that nirvāṇa is an entity in the first place is that it is nondependent. The latter assertion is, of course, intended in a merely negative sense - a denial of the possibility of characterizing nirvāṇa as dependent, or of recognizing dependent phenomena or dependency from the standpoint of nirvāṇa. But to the extent that we can make sense of nonexistence as a positive attribute, it would have to be the attribute of something. And as we have seen especially in Chapters VII, XXII, and XXIV - entities can only be conceived as dependent. So if something is nondependent, it can’t also be a real nonexistent! In the next two verses, Nāgārjuna reframes the problem about the ontological status of nirvāṇa in preparation for consideration of the final two tetralemma possibilities for nirvāṇa - that it is both existent and nonexistent and that it is neither existent nor nonexistent:
Kārikā XXV.9

ya ājaṃjavībhāva upādāya praṇītya vā
so ’praṇītyānupādāya nirvāṇaṃ upadiśyate ||9||

shòu zhū yīn yuán gū lūn zhùān shèng sī zhōng
bù shòu zhū yīn yuán shǐ míng wéi niè pán

INADA (Skt):
Verse 9 - The status of the birth-death cycle is due to existential grasping (of the skandhas) and relational condition (of the being). That which is non-grasping and non-relational is taught as nirvana.

JONES (Skt):
[9] An entity that comes and goes is conditioned and dependent. What is without conditions and is non-dependent is taught to be nirvana.

KALUPAHANA (Skt):
Whatever is of the nature of coming and going that occurs contingently or dependently. Freedom is, therefore, indicated as being non-contingent and independent.

MCCAGNEY (Skt):
That state of moving restlessly to and fro [samsāra] is grasping and dependent. But nirvāṇa is taught as without grasping and without dependence.

NISHIJIMA (Skt?):
9. When a speed of appearance is a little slower, The appearance itself is also clear too. And so the Real Appearances are accepted as a little vague, But the balanced state of the autonomic nervous system, Nirvana, will appear.

SPRUNG (Skt):
9. That which, taken as causal or dependent, is the process of being born and passing on, is, taken non-causally and beyond all dependence, declared to be nirvāṇa.

STRENG (Skt):
9. That state which is the rushing in and out of existence when dependent or conditioned—This state, when not dependent or not conditioned, is seen to be nirvana.

STCHERBATSKY (Skt):
IX. Coordinated here or caused are (separate things), We call this world Phenomenal; But just the same is called Nirvana, When from Causality abstracted.
PINGALA COMMENTARY

25/9 Because we do not know our perverted views for what they really are, we wander in samsara, on account of the five receptive skandhas. When we recognize our perverted views for what they really are, then we no longer wander in samsara on account of the five receptive skandhas. When there is no longer any succession of the nature-less five skandhas, this is said to be nirvana.

Further:

CANDRAKĪRTI COMMENTARY

The expression ‘process of being born and passing on’ means either merely arising and passing away, or the succession of birth and death. This process of being born and passing on may be understood as based on a complex of causes and conditions (hetupratyaya) as the long and the short; or may be understood as things being dependent on what is outside themselves, like light from a lamp or a sprout from a seed. In any case it is certain that whether understood as dependent on something outside itself (upadaya) or as originating from causes (pratitya) it is the ceasing to function (apravṛtti) of this continuous round of birth and death, due to its being taken as uncaused or as beyond dependence, that is said to be nirvāṇa. However, what is nothing more than a ceasing to function cannot be conceived of as either ontically existent or non-existent. Thus nirvāṇa is neither ontically existent nor ontically nonexistent (fn 13 As this definition fits all fictions - sky-flowers, and so on - equally well, how tell them from nirvāṇa? In Madhyamika thought fictions are ‘mere words’, inefficacious in striving for enlightenment, whereas nirvāṇa is efficacious, being the notion which conduces to enlightenment.).

Again there are those for whom character dispositions (samskaras) continue through successive lives. Their view is that origination and destruction are rigidly dependent on causes and that the absence of cause, that is, of these character dispositions, is said to be nirvāṇa.

Or there are those for whom it is the person (pudgala) which persists through successive lives. For these the person is indefinable either as perishable or imperishable. Being born and passing on is based on the person as substratum and it functions only as so dependent. This being born and passing on, which functions only in dependence as a substratum, in the moment it no longer so functions, being no longer dependent, is known as nirvāṇa.

As the mere ceasing to function of either the person or the character dispositions cannot be conceived as either existent or as non-existent, it follows that it makes sense that nirvāṇa is neither existent nor non-existent.

Further:

KALUPAHANA COMMENTARY

Even though the Buddha emphasized the avoidance of metaphysical extremes, there was indeed a tendency to distinguish samsara and nirvana. The cycle of births and deaths, "comings and goings" (ajavam-javim), was looked upon as having its own nature (bhava) which is dependence. This is contrasted with the nature (bhava) of freedom which is independent. The intrusion of the substantialist notions in the form of samvṛti (convention) paramartha ("ultimate reality") into the Buddhist doctrine during the scholastic period has already been referred to (see comments on XXIV.8). Even though most Buddhist thinkers were able to avoid such ontological speculations in explaining the nature of the world and freedom, the Buddhist metaphysicians had difficulty in avoiding such a dichotomy. Therefore, in the next verse, Nagarjuna proceeds to remind the Buddhists of the Buddha's teaching on becoming and other-becoming (bhava-vibhava).
Kārikā XXV.10

प्रहाण प्रहाणीचास्ता भवस्य विभवस्य च।
तस्मानं भावो नाभावो निर्विभावानिमित्य युज्यते॥१०॥

如佛經中說 斷有斷非有

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 10 - The teacher (Buddha) has taught the abandonment of the concepts of being and non-being. Therefore, nirvana is properly neither (in the realm of) existence nor non-existence.

JONES (Skt):
[10] The Buddha has spoken of relinquishing both becoming and ceasing. Therefore, it is admissible to say that nirvana is neither an entity nor a non-entity.

KALUPAHANA (Skt):
The teacher has spoken of relinquishing both becoming and other-becoming. Therefore, it is proper to assume that freedom is neither existence nor non-existence.

MCCAGNEY (Skt):
The Teacher [Buddha] taught the abandonment of becoming and nonbecoming. Therefore, the assertion ‘nirvāṇa is neither existent nor nonexistent’ is reasonable.

NISHIJIMA (Skt?):
10. Our action to give up something, or a taboo to speak to others, Exists really, and exists everywhere really. Therefore, existence does not exist, and non-existence does not exist. What is called the balanced state of the Autonomic Nervous System, Nirvana, is similar to shackles.

SPRUNG (Skt):
10 The teacher [Buddha] enjoined the abandonment of both existence and non-existence. Therefore it makes sense that nirvāṇa is neither existent nor non-existent.

STCHERBATSKY (Skt):
X. The Buddha has declared That Ens and non-Ens should be both rejected, Neither as Ens nor as a non-Ens Nirvana therefore is conceived.

BOCKING (Ch):
25v10 As the Buddha tells us in the sutras; 'Cut off from existence, cut off from nonexistence'. Therefore we know that nirvana Is neither existent nor nonexistent.

BATCHelor (Tb):
The teacher taught [it] to be the letting go of arising and perishing. Therefore, it is correct that nirvana is not a thing or nothing.

DOCTOR (Tb):
The Teacher has declared The abandonment of arising and disintegration. Thus, it makes sense that the transcendence of suffering Is not an entity or a nonentity. [XXV.10]

GARFIELD (Tb):
10. The teacher has spoken of relinquishing Becoming and dissolution. Therefore, it makes sense that Nirvana is neither existent nor nonexistent.

GARFIELD-SAMTEN (Tb):
10. The teacher has spoken of relinquishing Becoming and passing away. Therefore it makes sense that Nirvana is neither a thing nor a non-thing.

HAGEN (paraphrase):
The teacher has taught the relinquishing of both existence and non-existence. Therefore Nirvana cannot be thought of as either existence or non-existence.
PINGALA COMMENTARY

25/10 'Existence' means the three existences, and 'nonexistence' means the cutting off and cessation of the three existences. Because the Buddha teaches that both of these things should be cut off, we know that nirvana is neither existent nor nonexistent.

Question. If nirvana is neither existent nor nonexistent, is nirvana not a combination of existence and nonexistence?

Reply.

CANDRAKĪRTI COMMENTARY

Concerning this the sutra [possibly Udana, iii, 10] says: 'All those, o monks, who long for deliverance from what is real by means of something which is itself either real or unreal, they lack perfect insight. Both these are to be renounced: a longing for something real or existent and a longing for mere non-existence.' But it is not nirvana that the illustrious one urged should be given up; it is rather not to be given up. 'Therefore, it makes sense that nirvana is neither existent nor non-existent.'

The third theory: nirvana is both an ontic existent and an ontic non-existent

Then there are those [The Vaibhasika school presumably, which provided the first theory also] for whom nirvana is of the nature of the ontically non-existent because personal existence and the afflictions do not exist in nirvana. Yet nirvana itself has the formal character of an existent because of the nature of such. Therefore it is both existent and non-existent. For those for whom it is of the nature of both, nirvana is not logically possible. Expounding this Nagarjuna said,

KALUPAHANA COMMENTARY

In addition to the two concepts of sambhava and vibhava, discussed previously (Chapter XXI), Nagarjuna introduces another pair: bhava and vibhava. It is significant to note that when Nagarjuna rejected astitva and nastitva he was quoting the Buddha (XV. 7). He does the same when he refers to bhava and vibhava (XXV.10). Yet, when he rejects bhava and adhava, two concepts that do not appear in the early discourses, except as suffixes, Nagarjuna merely indicates that the Buddha realized their implications (bhavabhava-vibhavina, XV. 7) and does not present it as a statement of the Buddha. This supports our previous contention that bhava and abhava represent an attempt to reintroduce astitva and nastitva into philosophical discussions by the Brahmanical and Buddhist metaphysicians.

One significant difference between the concepts of bhava and abhava (astitva and nastitva), on the one hand, and bhava and vibhava, on the other, is that the former are metaphysical assumptions and the latter describe empirical events. As such, the reasons for their rejection would be different. Bhava and abhava are rejected because they are metaphysical and, as such, unverifiable in terms of the epistemological standpoint adopted by the Buddha. On the contrary, bhava and vibhava are experienced processes of life, namely, becoming and other-becoming, and the reason for their being rejected is that they lead to suffering (duhkha). Bhava is the process of becoming conditioned by dispositions. Hence the Buddha spoke of "craving for becoming" (bhava-tanha), a constant thirsting to become this or that. Vibhava could mean either "becoming something different" or annihilation of this process of becoming (namely, suicide). This was also referred to as a form of craving (vibhava-tanha). However, the process of becoming and becoming otherwise could be explained in terms of metaphysical and, therefore, wrong beliefs (mithya-drsti) in absolute existence (bhava) and nihilistic non-existence (abhava), respectively, instead of dependent arising (prati tyasamutpada). Neither of the metaphysical explanations, according to the Buddha, could serve as the basis for freedom.

GARFIELD COMMENTARY

10. Nirvāṇa is here again explicitly characterized only by contrast with samsāra. While it therefore cannot be an entity of the kind with which samsāra is populated, it is, as the release from samsāra, not completely nonexistent. So it can neither be conceived of conventionally or ultimately as a thing, nor coherently asserted to not exist. In fact, as XXV: 9 emphasizes with eloquence, the very same world is samsāra or nirvāṇa, dependent upon one’s perspective. When one perceives the constant arising and ceasing of phenomena, one perceives samsāra. When all reification is abandoned, that world and one’s mode of living in it, becomes nirvāṇa. (fn 127. See Yuktatika 11 for another presentation of this view.)

Nāgārjuna now considers the possibility that nirvāṇa is both existent and nonexistent:
Kārikā XXV.11

bhaved abhāvo bhāvaś ca nirvāṇam ubhayaṃ yadi |
 bhaved abhāvo bhāvaś ca mokṣas tac ca na yujyate ||11||

ruò wèi yù;yù;wù yòu wú hé;gé wèi niè pán zhě 
yòu wú jì jiè tuō shì shì zé bù rán
| gal te mya ńān 'das pa ni || dṅos daṅ dṅos med gñis yin na |
| dṅos daṅ dṅos po med pa dag | thal bar 'gyur na de mi rigs |

ENGLISH TRANSLATIONS

INADA (Skt):  
Verse 11 - If nirvana is (in the realm of) both existence and non-existence, then moksa (liberation) will also be both. But that is not proper.

JONES (Skt):  
[u] If nirvana were both an entity and the absence of an entity (i.e., a “non-entity”), then liberation would be both an entity and a non-entity, and this is not admissible.

KALUPAHANA (Skt):  
If freedom were to be both existence and non-existence, then release would also be both existence and non-existence. This too is not proper.

MCCAGNEY (Skt):  
If nirvāṇa would be both existent and nonexistent, liberation would be both existent and nonexistent. But that is not reasonable.

NISHIJIMA (Skt?):  
11. When non-existence and existence both might exist in the co-existence form, then the balance of the autonomic nervous system, Nirvana, might exist in the doubled bindings. When non-existence and existence both might exist in the co-existence form, concrete fact of emancipation can never be bound at all.

SPRUNG (Skt):  
11 If nirvāṇa were both existent and non-existent then final release would be both existent and non-existent, and that does not make sense.

STRENG (Skt):  
11. If nirvana were both an existent and a non-existent thing, final release (moksa) would be both an existent and a non-existent thing; but that is not possible.

STCHERBATSKY (Skt):  
XI. If Nirvana were both Ens and non-Ens, Final Deliverance would be also both, Reality and unreality together. This never could be possible!
PINGALA COMMENTARY

25/11 If you say that nirvana consists of a combination of existence and non existence, then these two elements of existence and nonexistence in combination will constitute liberation, but this is not correct, and why? Because the two elements, existence and nonexistence are opposite to each other. How can they exist in the same place?

Further:

CANDRAKIRTI COMMENTARY

If nirvana were of the nature of both the ontically existent and non-existent then final release (moksa) would be both ontically existent and non-existent. Hence both the reality of character dispositions in a personal existence and their disappearance would constitute final release. But it is not intelligible that character dispositions as such are the final release; and that is why Nagarjuna says, ‘that does not make sense’.

Further:

KALUPAHANA COMMENTARY

It is possible for someone to assume that “freedom” represents a special kind of existence which combines both existence and non-existence. If it is understood as some mysterious existence beyond existence and nonexistence, Nagarjuna reminds his opponents that it is no more than simple “release” (moksa), and this latter need not be described as both existence and non-existence. Release is no more than the release from suffering and there is nothing transcendental about it.

GARFIELD COMMENTARY

11. This would entail that it is contradictory. And it is absurd to assign anything contradictory properties. Moreover, having seen that each of the conjuncts is individually impossible, their conjunction, even were it not a conjunction of contradictories, could certainly not be coherent. In particular, we don’t want to say that one does and does not pass into nirvana upon release from saṃsāra.
Kārikā XXV.12

 bhaved abhāvo bhāvaś ca nirvāṇam ubhayaṁ yadi |
 nānupādāya nirvāṇam upādāyobhayāṁ hi tat ||12||

 ruò wèi yú;yú;wū yǒu wú hé;gé wéi niè pán zhē
nié pán fēi wú shòu shì èr cóng shòu shēng

 (5)gal te mya ņan ‘das pa ni | | dṅos daṅ dṅos med gñis yin na |
 | mya ņan ‘das pa ma brten min | | de gñis brten nas yin phyir ro |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 12 - If nirvana is (in the realm of) both existence and non-existence, it will not be non-appropriating. For, both realms are (always in the process of) appropriating.

JONES (Skt):
[12] If nirvana were both an entity and a non-entity, nirvana would not be non-dependent for it would dependent upon both of these.

KALUPAHANA (Skt):
If freedom were to be both existence and non-existence, freedom could not be independent, for existence and non-existence are, indeed, dependent upon one another.

MCCAGNEY (Skt):
If nirvāṇa would be both existent and nonexistent, nirvāṇa would not be nongrasping for both are grasping.

NISHIJIMA (Skt?):
12. Non-existence, and existence, both can exist actually, But in the case of Nirvana, both to exist or not to exist, can exist at the same moment. The one-sided appearance of Nirvana can never exist, Because the appearance is doubled is the concrete fact of Nirvana.

SPRUNG (Skt):
12 If nirvāṇa were both existent and non-existent then it could not be beyond all dependence because both the existent and the non-existent are dependent.

STRENG (Skt):
12. If nirvana were both an existent and a non-existent thing, There would be no nirvana without conditions, for these both operate with conditions.

STCHERBATSKY (Skt):
XII. If Nirvana were both Ens and non-Ens. Nirvana could not be uncaused. Indeed the Ens and the non-Ens Are both dependent on causation.
PINGALA COMMENTARY

25/12 If, as you say, nirvana consists in a combination of existence and nonexistence, then the sutras ought not to teach that nirvana means 'non-receiving', and why? Because the two elements of existence and nonexistence arise from reception, and exist interdependently. Therefore, nirvana cannot be a combination of these two elements of existence and nonexistence.

Further:

CANDRAKĪRTI COMMENTARY

If nirvāṇa were of the nature of both the ontically existent and non-existent then it would presuppose a dependence on a complex of causal conditions, that is, it would not be beyond all dependence. Why? Because both the ontically existent and non-existent are dependent. If it is agreed that the ontically non-existent is dependent on the ontically existent for its meaning and the ontically existent is dependent on the non-existent for its meaning, then both of these, the existent and non-existent, are clearly dependent and not beyond all dependence. This is the result if nirvāṇa were of the nature both of the existent and non-existent. But neither is this the case nor does it make sense.

Further:

KALUPAHANA COMMENTARY

As pointed out earlier, the substantialist definition of freedom implied independence, rather than non-grasping or non-clinging (see comments on XXII. 5). Thus, if the metaphysicians were to define freedom as both existence and non-existence, it could not be independent as they expect it to be. This is because existence and non-existence are dependent.

GARFIELD COMMENTARY

12. But since both existent and nonexistent entities are dependent, as Nāgārjuna has argued in XXV: 6, 8, if nirvāṇa were both existent and nonexistent it would be doubly dependent. It would depend both on existent and nonexistent phenomena.
bhaved abhāvo bhāvaś ca nirvāṇam ubhayaṃ katham |
asaṃskṛtam hi nirvāṇaṃ bhāvābhāvau ca saṃskṛtau ||13||
yǒu wú gòng hé chéng yún hé míng niè pán
niè pán míng wú wéi yǒu wú shì yǒu wéi
| ji ltar mya Ṉan ’das pa ni || dṅos daṅ dṅos med gñis yin te |
| mya ḃań ’das pa ’dus ma byas | | (6)dṅos daṅ dṅos med ’dus byas yin |

INADA (Skt):
Verse 13 - How could nirvana be (in the realm of) both existence and non-existence? Nirvana is of the uncreated realm while existence and non-existence are of the created realm.

JONES (Skt):
[13] How could nirvana be both an entity and a non-entity? Nirvana is uncompounded, but what is an entity and non-entity is compounded.

KALUPAHANA (Skt):
How could freedom be both existence and non-existence, for freedom is uncompounded while existence and non-existence are conditioned?

MCCAGNEY (Skt):
How could nirvāṇa be both existent and nonexistent? nirvāṇa is uncompounded, and both existent and nonexistent are conditioned.

NISHIJIMA (Skt?):
13. It might be possible that non-existence, or existence, either can exist.
How is it possible for the Nirvana to appear as both non-existence and existence of the one moment?
Because in the case of Nirvana, the word, which hasn't been translated into Sanskrit, might be also Nirvana,
And so the word "to exist" and the word "not to exists," might be both Sanskrit words in facts.

SPRUNG (Skt):
13 If nirvāṇa were both existent and non-existent how could it be uncompounded, as both the existent and non-existent are compounded?

STCHERBATSKY (Skt):
XIII. How can Nirvana represent An Ens and a non-Ens together?
Nirvana is indeed uncaused,
Both Ens and non-Ens are productions.

BOCKING (Ch):
25v13 If established by a combination of existence and nonexistence
How can you call it nirvana?
Nirvana means inactive Existence and nonexistence are active.

BATCHelor (Tb):
How could nirvana be both a thing and nothing? Nirvana is unconditioned; things and nothings are conditioned.

DOCTOR (Tb):
How could the transcendence of suffering Be both entity and nonentity?
The transcendence of suffering is unconditioned, Entity and nonentity are conditioned. [XXV.13]

GARFIELD (Tb):
13. How could nirvana be both existent and nonexistent? Nirvana is uncompounded.
Both existents and nonexistents are compounded.

GARFIELD-SAMTEN (Tb):
13. How could nirvana be both a thing and a non-thing? Nirvana is unconditioned.
Both things and non-things are compounded.

HAGEN (paraphrase):
How could Nirvana be both existence and non-existence? Nirvana is uncompounded while existence and non-existence are compounded.
PINGALA COMMENTARY

25/13 A combination of the two elements of existence and nonexistence cannot be termed nirvana. Nirvana means 'inactive', whereas existence and nonexistence are active. Therefore nirvana is not both–existent–and–nonexistent.

Further.

CANDRAKĪRTI COMMENTARY

That is, the ontically existent is compounded because it is in conjunction with the complex of its own causal conditions; the ontically non-existent is compound because it has its being in conjunction with dependence on the ontically existent and because of the doctrine that death and old age are dependent on birth. And so, if nirvāṇa were to be in its true nature both existent and non-existent then it would not be uncompounded, but would be rather compounded.

And because it cannot be thought of as compounded it is not intelligible that nirvāṇa is, in its true nature (svārupa), both existent and non-existent.

Well, if nirvāṇa itself could not be, in its true nature, both existent and non-existent could the ontically existent and nonexistent both be in nirvāṇa?

But neither is this intelligible. Why? Because:

KALUPAHANA COMMENTARY

As in the previous verse, here too Nagarjuna is taking the definition proffered by the opponent and criticizing his conception of freedom. This is similar to the argument adduced by Nagarjuna at XXV.6, except that in the present case Nagarjuna is insisting that if something is both existence and non-existence, it could not appropriately be called an "unconditioned." The "unconditioned," by the metaphysician's definition, is the "independent" (aprati tyasamutpanna), and an element with two entities as parts of it will always be conditioned by those two parts.

GARFIELD COMMENTARY

13. Moreover, not only are existents compounded - that is made up of parts or given rise to by causes - but genuine nonexistents are compounded as well - their nonexistence is determined by the nature of other things; if real, they would be composed of parts. A nonexistent elephant is composed of a nonexistent trunk, tusks, and so forth.

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 14 - How could nirvana be (in the realm of) both existence and non-existence? Both cannot be together in one place just as the situation is with light and darkness.

JONES (Skt):
[14] How could nirvana be both an entity and a non-entity? There can be no existence of these in one place, just as in the case of light and darkness.

KALUPAHANA (Skt):
How could freedom be both existence and non-existence, for their simultaneous existence in one place is not possible, as in the case of light and darkness?

MCCAGNEY (Skt):
How could nirvāṇa be both existent and nonexistent? There is no existence of both, as with light and darkness, in the same place.

NISHIJIMA (Skt?):
14. Both Non-Existence and Existence can exist together. What is the situation that the Nirvana is the existence of doubled? Therefore the non-existence of dual, suggests the existence of only one, And so what can be seen with eyes, and the darkness of the Hell, are completely the Same.

SPRUNG (Skt):
14 How could nirvāṇa be both existent and nonexistent? Both cannot exist in the identical place and respect simultaneously, as with vision and darkness.

STRENG (Skt):
14. How can nirvana exist as both an existent and a non-existent thing? There is no existence of both at one and the same place, as in the case of both darkness and light.

STCHERBATSKY (Skt):
XIV. How can Nirvana represent (The place) of Ens and of non-Ens together? As light and darkness (in one spot)

They cannot simultaneously be present.

WESTERHOFF (Skt):
XXV.14 How could nīrṇāṇa exist and not exist? Like light and darkness these two [i.e., existence and non-existence] cannot be at the same place.

BOCKING (Ch):
25v14 How can existence and nonexistence in combination, be nirvana These two cannot exist in the same place Just as light and darkness are never together.

BATCHelor (Tb):
How could nirvana exist as both a thing and nothing? Those two do not exist as one. They are like light and dark.

DOCTOR (Tb):
How could the transcendence of suffering possess both entity and nonentity? These two cannot coexist, Just like light and darkness. [XXV.14]

GARFIELD (Tb):
14. How could nirvana be both existent and nonexistent? These two cannot be in the same place. Like light and darkness.

GARFIELD-SAMTEN (Tb):
14. How could nirvana be both a thing and a non-thing? These two cannot be in the same place, Like light and darkness.

HAGEN (paraphrase):
How could Nirvana be both existence and nonexistence? As with vision and darkness, these two cannot be in the same place at once.
25/14 The two elements of existence and nonexistence cannot be termed nirvana, and why? Existence and nonexistence are opposite to each other and cannot exist in the same place, just as light and dharmas are not found together. Therefore, here there is existence there is no nonexistence, and where there is nonexistence there is no existence. How could existence and nonexistence combined be termed nirvana?

Question: If nirvana is not a combination of existence and nonexistence, surely nirvana must be neither existence nor nonexistence?

Reply:

CANDRAKĪRTI COMMENTARY

There is no co-existence in one self-identical nirvāṇa of two mutually incompatibles as the existent and the non-existent. Hence the question: ‘How could nirvāṇa be both existent and non-existent?’ The thought is that it could most emphatically not be.

The fourth theory: nirvāṇa is neither an existent nor a non-existent

How it could make sense to say that nirvāṇa is neither existent nor non-existent, Nagarjuna now proceeds to expound, saying,

KALUPAHANA COMMENTARY

This brings out another aspect of the metaphysicians' conception of freedom, namely, the monistic implication. Nirvana, looked upon as the "ultimate reality" (paramartha), could not accommodate variety and multiplicity. For them, it is the one ultimate truth, everything else being provisional. However, Nagarjuna is insisting that they could not maintain that nirvana is both existence and non-existence.

GARFIELD COMMENTARY

14. This verse simply sums up the results of the previous three: There is simply no way to avoid manifest contradiction if one takes this horn of the tetralemma. Nagarjuna now considers the final possibility - that nirvāṇa is neither existent nor non-existent: (fn 128. See also Padhye (1988), pp. 109-14, for a concise discussion of Nagarjuna’s treatment of the tetralemma of existence/nonexistence with respect to nirvāṇa.)

**ENGLISH TRANSLATIONS**

INADA (Skt):
Verse 15 - The proposition that nirvana is neither existence nor non-existence could only be valid if and when the realms of existence and non-existence are established.

JONES (Skt):
[15] If the proposition “Nirvana is both an entity and a non-entity” were established, the proposition “Nirvana is neither an entity nor a non-entity” could be established.

KALUPAHANA (Skt):
The proposition that freedom is neither existence nor non-existence could be established if and when both existence and non-existence are established.

MCCAGNEY (Skt):
What is clear is the statement “nirvāṇa is not existent and not nonexistent.”
It is demonstrated where being and nonbeing are established as existing.

NISHIJIMA (Skt?):
15. It is never non-existent, and it is never existent, What are called Nirvanas might be similar to a kind of cosmetics, Even though they are not existent, or really existent, They are belonging to the situations of accomplishments, and they have been just accomplished.

SPRUNG (Skt):
15 There is the dictum, ‘Nirvāṇa is neither existent nor non-existent.’ If the existent and the non-existent were established fact, this dictum would be proved.

STRENG (Skt):
15. The assertion: "Nirvana is neither an existent thing nor a non-existent thing" Is proved if the assertion: "It is an existent thing and a non-existent thing" were proved.

STCHERBATSKY (Skt):
XV. If it were clear, indeed, What an Ens means, and what a non-Ens, We could then understand the doctrine About Nirvana being neither Ens nor non-Ens.
PINGALA COMMENTARY

25/15 If nirvana is neither existent nor nonexistent, by what means would we distinguish this 'neither existent nor non-existent'? Therefore, it is not the case that nirvana is neither existent nor nonexistent.

Further:

CANDRAKĪRTI COMMENTARY

If there were something called 'the existent' then, by distinguishing nirvāṇa negatively from it, one could make the claim (kalpana), 'Nirvāṇa is not an existent.' If there were something which was 'the non-existent', then by distinguishing nirvāṇa negatively from it, nirvāṇa would be definitely not non-existent. Where however, there is neither 'an existent' nor 'a non-existent', there can be no negation of them. Therefore the claim that nirvāṇa is neither existent nor non-existent is clearly logically impossible and does not make sense.

Further:

KALUPAHANA COMMENTARY

Anjana from (anj, "to anoint") can mean a symbol. Here Nagarjuna is not speaking of logical proof to decide the validity of a symbolism, or a proposition. Rather, he is interested in the empirical justification. Thus, unless both existence and non-existence, as explained by the metaphysician, can be shown to have empirical validity, their negations too would mean nothing.

GARFIELD COMMENTARY

15. But this can't be so either. For really to assert this as the nature of nirvāṇa would be to suppose that both of these possibilities made sense with respect to it, but that neither happened to be realized. But it makes no sense for nirvāṇa to exist. And it makes no sense for it not to exist. So of each, the negation can't be assigned any coherent meaning. And conjoining two pieces of nonsense only yields further nonsense.
Kārikā XXV.16

naivābhāvo naiva bhāvo nirvāṇaṁ yadi vidyate |
naivābhāvo naiva bhāva iti kena tad ajyate ||16||

fēn bié fēi yòu wú rú shì míng nìè pán |
ruò yòu wú chéng zhē fēi yòu fēi wú chéng |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 16 - If indeed nirvana is asserted to be neither existence nor non-existence, then by what means are the assertion to be known?

JONES (Skt):
[16] If nirvana is neither an entity nor a non-entity, by what means is it asserted that it is “neither an entity nor a non-entity”?

KALUPAHANA (Skt):
If freedom as neither existence nor nonexistence is evident, by means of what is it made known as neither existence nor non-existence?

MCCAGNEY (Skt):
If nirvāṇa is known by neither existent nor nonexistent, it can be made clear by whom as “neither existent nor nonexistent”?

NISHIJIMA (Skt?):
16. Never Non-existence, or never existence, When Nirvanas are completely recognized, Never Non-existence, or never existence, Such situations are recognized a little as a concrete fact.

SPRUNG (Skt):
16 If nirvāṇa is emphatically neither existent nor nonexistent, by whom is it claimed, “it is neither existent nor non-existent”?

STRENG (Skt):
16. If nirvana is neither an existent thing nor a non-existent thing, Who can really arrive at the assertion: “neither an existent thing nor a non-existent thing”?

STCHERBATSKY (Skt):
XVI. If Nirvana is neither Ens nor non-Ens. No one can really understand This doctrine which proclaims at once Negation of them both together.
PINGALA COMMENTARY

25/16 If you distinguish 'neither existence nor nonexistence' as Being nirvana, this is not correct, and why? If existence and non-existence are established, then it naturally follows that neither existence nor non-existence is established, but non-existence means the opposite of existence, and existence means the opposite of non-existence and 'both existence and non-existence' has already been refuted in the third proposition. Since there is no 'existence and nonexistence' how can there be 'neither existence nor nonexistence'? Therefore nirvana is not 'neither existence nor nonexistence'.

Further.

CANDRAKĪRTI COMMENTARY

If it is argued that nirvāṇa is neither of the nature of the existent nor of the nature of the non-existent, by whom, in such ease, is it claimed that nirvāṇa is such as to have the nature of neither of these? By whom is it grasped, by whom revealed? Is there someone then in nirvāṇa so constituted that lie can succeed in this? Or is there not? If there is, then one would hold that there is a personal self (atman) even in nirvāṇa. But this one does not accept, because there is no self detached from the factors of personal existence. But if there is not, by whom is it determined that nirvāṇa is of such a nature? And if one says that the one who so determines it is still based in the everyday world (saṃsāra), such a one must determine this either by conceptual or by intuitive knowledge. If it is supposed that lie docs it by conceptual knowledge (vijnana), that is illogical. Why? Because conceptual knowledge is the grasping (alambana) of objects as signs (nimitta), and in nirvāṇa there are no objects as signs whatsoever. So nirvāṇa is not grasped through conceptual knowledge as such.

Nor is it known by intuitive knowledge (jnana). Why? Because nirvāṇa supervenes in virtue of an intuition which becomes aware of the absence of being in things. And it is precisely the nature of such an intuition that it does not arise ontically (anutpadarupa). How can the statement, 'Nirvāṇa is neither existent nor non-existent' be comprehended by what does not, in its essential nature, exist? For intuition of the absence of being, by its very nature, is beyond the world of named things. Therefore that 'Nirvāṇa is neither existent nor non-existent' cannot be claimed by anyone at all. This statement is unintelligible as it cannot be comprehended, nor clarified, nor made.

Rejection of the four theories in principle: the Madhyamika conclusion

Nagarjuna, explaining that, as the four theories do not obtain in any way with respect to nirvāṇa, so they do not obtain with respect to the perfected one who has attained nirvāṇa, said,

KALUPAHANA COMMENTARY

This seems to be a rather devastating criticism of the more popular view that freedom cannot be expressed either as existence or as non-existence. That is, it is linguistically transcendent or is ineffable. If the statement, "Freedom is neither existence nor non-existence," is intended to express the ineffability of nirvana, Nagarjuna is questioning the meaningfulness of that very statement. This means that absolute negation is as metaphysical as absolute assertion, "absolute nothingness" is as meaningless as "absolute thingness," and these are the absolutes that are expressed by terms like bhava and abhava.

GARFIELD COMMENTARY

16. If this could be coherently asserted, it would have to be asserted either by one in nirvāṇa or one not. But, as is emphasized in the next verse, this has never been asserted by anyone certifiably in nirvāṇa. And if it is asserted by someone in saṃsāra, we have no particular reason to believe it.
Kārikā XXV.17

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 17 - It cannot be said that the Blessed One exists after nirodha (i.e. release from worldly desires). Nor can it be said that He does not exist after nirodha, or both, or neither.

JONES (Skt):
[17] It is not to be inferred that the blessed one exists after ceasing (i.e., after the Buddha's death after he attained enlightenment), nor that he does not exist, nor both, nor neither.

KALUPAHANA (Skt):
It is not assumed that the Blessed One exists after death. Neither is it assumed that he does not exist, or both, or neither.

MCCAGNEY (Skt):
It is not maintained that “the Venerable One exists after death”
nor is it maintained “he does not exist” or “both or neither.”

NISHIJIMA (Skt?):
17. When the Result has been leaving from the self-regulation, there might be Happiness Actually.
What is called Existence, is never be born at all. In the case that co-existences do not exist actually,
The denial of co-existence might never be born as the fact at all.

SPRUNG (Skt):
17 One does not conjecture if the illustrious one still exists subsequent to his decease, or does not exist, or both exists and does not exist.

STRENG (Skt):
17. It is not expressed if the Glorious One the Buddha exists (1) after his death, Or does not exist (2), or both (3) or neither (4).

STCHERBATSKY (Skt):
XVII. What is the Buddha after his Nirvana?
Does he exist or does he not exist,
Or both, or neither?
We never will conceive it!

ROBINSON (Skt):
It is not asserted that after his final cessation the Blessed One exists, does not exist, or both, or neither.

BOCKING (Ch):
25v17 The Thus-Come, after his decease
Is neither said to exist, nor not exist
Nor said to be both existent and nonexistent
Nor nonexistent and not nonexistent.

BATCHelor (Tb):
After the Bhagavan has entered nirvana, one cannot perceive [him? it?] as “existing,” likewise as “not existing,” nor can one perceive [him? it?] as “both” or “neither.”

DOCTOR (Tb):
When the Transcendent Conqueror has gone beyond,
He is not perceived as "existent,"
Nor as “nonexistent,”
As “both,” or as “neither.” [XXV.17]

GARFIELD (Tb):
17. Having passed into nirvana, the Victorious Conqueror
Is neither said to be existent
Nor said to be nonexistent.
Neither both nor neither are said.

GARFIELD-SAMTEN (Tb):
17. Having passed into nirvana, the Transcendent Lord
Is neither perceived to be existent
Nor perceived to be nonexistent.
He is neither perceived to be both nor to be neither.

HAGEN (paraphrase):
It cannot be said that the Buddha either exists or does not exist—or both, or neither—upon release.
As was said earlier: ‘One who holds the crude notion that the perfectly realized one “exists” must speculate “he does not exist” after his enlightenment.’ (MMK XXII.13) In this sense one cannot conjecture whether the perfected one exists or does not exist subsequent to his decease; then, because neither of these alternatives obtains one cannot conjecture that both do; and because both do not obtain, one cannot conceive or conjecture that neither obtains.

It is not only concerning the illustrious one after his decease that one does not conjecture in the fourfold way, but as well,
Kārikā XXV.18

如來現在時不言有與無
亦不言有無非有及非無

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 18 - It cannot be said that the Blessed One even exists in the present living process. Nor can it be said that He does not exist in the present living process, or both, or neither.

JONES (Skt):
[18] It is not to be inferred even that a currently living blessed one exists, nor that he does not exist, nor both, nor neither.

KALUPAHANA (Skt):
It is not assumed that even a living Blessed One exists.
Neither is it assumed that he does not exist, or both or neither.

MCCAGNEY (Skt):
It is not maintained that “the Venerable One exists while remaining in the world” nor is it maintained that “he does not exist or both or neither.”

NISHIJIMA (Skt?):
18. Even though our own self-conceit of having established our own stable basis, The idea of a simple fact that we are just existing in the world, does not bear anything at all.
If the co-existence would not exist at all really, No existence of the co-existence actually is never be born at all,

BOCKING (Ch):
25v18 The Thus-Come in the present
Is neither said to exist, nor not exist
Nor said to be both existing and nonexistent
Nor nonexistent and not nonexistent.

BATCHelor (Tb):
Even when the illustrious one is existent during his lifetime or is non-existent, Nor can one perceive [him? it?] as “existing,” likewise as “not existing,” nor can one perceive [him? it?] as “both” or “neither”.

DOCTOR (Tb):
Even as the Transcendent Conqueror remains,
He is not perceived as “existent,”
As “both” or as “neither.”[XXV.18]

GARFIELD (Tb):
18. So, when the victorious one abides, he Is neither said to be existent Nor said to be nonexistent. Neither both nor neither are said.

GARFIELD-SAMTEN (Tb):
18. So, when the Transcendent Lord was alive, he Was neither perceived to be existent Nor perceived to be nonexistent.
He was neither perceived to be both nor to be neither.

HAGEN (paraphrase):
It cannot be said that the Buddha either exists or does not exist—or both, or neither—even while in the world.

ROBINSON (Skt):
It is not asserted that during his lifetime the Blessed One exists, does not exist, or both, or neither.
25/18 Whether after the death of the Thus-Come, or while he is present, an existent Thus-Come does not receive, and a nonexistent Thus-Come does not receive either. A both existent and nonexistent Thus-Come does not receive, nor does a neither existent nor nonexistent Thus-Come receive. Since he does not receive, he does not discriminate nirvana as existent, nonexistent and so forth.

Apart from a Thus-Come, who could possibly attain nirvana? In what time, in what place and by means of what dharma would we speak of nirvana? Therefore, though you may seek for the characteristics of nirvana everywhere and in all kinds of ways, you will not be able to find them.

Further.

Why this is neither to be argued for nor conjectured was expounded in ‘The Perfectly Realized One’.

Precisely for this reason:

These, indeed, are the metaphysical assertions made regarding the tathāgata (XXII) which both Nagarjuna and the Buddha rejected. The foundations of these metaphysical views were the theories of identity and difference. This very important problem is next taken up for examination by Nagarjuna.

18. None of the four tetralemma possibilities can be asserted. Just as in Chapter XXII, we see that when things are plausibly posited by an interlocutor as ultimates, Nāgārjuna resorts to a negative tetralemma. This emphasizes that all discourse is only possible from the conventional point of view. When we try to say something coherent about the nature of things from an ultimate standpoint, we end up talking nonsense. (In 129. See Nagao (1991), pp. 42-43, for a similar account.) But recall the discussion of emptiness and convention in chapter XXIV: We can develop an understanding of emptiness in relation to conventional reality, of emptiness as empty: Emptiness seen that way simply is the lack of essence of the conventional. Its own emptiness is the fact that it itself is no more than that. Seeing the conventional as conventional, we argued, is to see it as it is ultimately. At this point, Nāgārjuna makes a similar move with regard to nirvāṇa and draws one of the most startling conclusions of the Mula-madhyamaka-kārikā: Just as there is no difference in entity between the conventional and the ultimate, there is no difference in entity between nirvāṇa and saṃsāra; nirvāṇa is simply saṃsāra seen without reification, without attachment, without delusion. The reason that we cannot say anything about nirvāṇa as an independent, nonsamsaric entity, then, is not that it is such an entity, but that it is ineffable and unknowable. (In 130. This reading contrasts with that of Inada (1970), who asserts that nirvāṇa, in fact, is transcendent, belonging to a wholly different ontological realm. I find his reading very difficult to reconcile with XXV: 19,20 or indeed, with any of Chapters XXII, XXIV, or XXV.) Rather it is because it is only saṃsāra seen as it is, just as emptiness is just the conventional seen as it is:
Kārikā XXV.19

na samsārasya nirvāṇāt kimcid asti viśeṣaṇam |
na nirvāṇasya samsārāt kimcid asti viśeṣaṇam ||19||

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 19 - Samsara (i.e., the empirical life-death cycle) is nothing essentially different from nirvana. Nirvana is nothing essentially different from samsara.

JONES (Skt):
[19] There is not the slightest difference of cyclical existence from nirvana. There is not the slightest difference of nirvana from cyclical existence.

KALUPAHANA (Skt):
The life-process has no thing that distinguishes it from freedom. Freedom has no thing that distinguishes it from the life-process.

MCCAGNEY (Skt):
There is no distinction whatever between saṃsāra and nirvāṇa. There is no distinction whatever between nirvāṇa and saṃsāra.

NISHIJIMA (Skt?):
19. Without leaving the process of wandering, it will become leaving Nirvana. It does never suggest that we have been given up by Nirvana, Not belonging to Nirvana, is leaving from the wandering. It does never suggest that we have been given up by Nirvana,

SPRUNG (Skt):
19 There is no specifiable difference whatever between nirvāṇa and the everyday world; there is no specifiable difference whatever between the everyday world and nirvāṇa.

STRENG (Skt):
19 There is nothing whatever which differentiates the existence-in-flux (samsara) from nirvana; And there is nothing whatever which differentiates nirvana from existence-in-flux.

STCHERBATSKY (Skt):
XIX. There is no difference at all Between Nirvana and Samsara. There is no difference at all Between Samsara and Nirvana.
PINGALA COMMENTARY

25/19 On account of the succession of the five skandhas, and the causes and conditions of coming and going we refer to 'the 'world', but the nature of the five skandhas is utterly emptiness, non-reception and calm quiescence. This idea has already been expounded earlier. Since all dharmas are non-arising and non-ceasing, there is no distinction between the world and nirvana, and there is no distinction between nirvana and the world.

Further.

CANDRAKĪRTI COMMENTARY

This is why one does not conjecture of the illustrious one that he exists or does not exist, neither while living nor even after achieving ultimate freedom (parinirvṛta). And so there is no specifiable difference at all between the everyday world (samsāra) and nirvāṇa with respect to one another, because, on being thoroughly investigated, they are basically of the same nature. And the illustrious one has said the same thing. ‘The everyday world, o monks, which consists of birth, decay and death, is the highest existence.’ That is comprehensible just because there is no specifiable difference between the everyday world and nirvāṇa.

Thus,

KALUPAHANA COMMENTARY

This statement of Nagarjuna has contributed to a major and wide-spread assertion regarding the uniqueness of Mahayana philosophy, namely, the ultimate identity of samsara and nirvana. This assertion may appear to be correct, if we are to ignore all that has been said by Nagarjuna regarding the metaphysical doctrines of identity (ekatva) and difference (nanatva), especially in the chapters dealing with the tathagata (XXII) and the four truths (XXIV).

Those who upheld the view that this statement is an assertion of the identity of samsara and nirvana do not seem to have paused for one moment to reflect on the question regarding the nature of the identity they were implying; nor have they attempted to place that conception of identity (if there is one) in the historical context. The fact that there was a great urge on the part of the Buddhists, especially after the Buddha's death, to raise him to the level of a supreme being, having no real connections with the ordinary human world, can easily be seen from the more popular Mahayana texts like the Lalitavistara and the Saddharmapunāravali as well as the Theravada treatises like the Jataka-nidanakatha. Through that popular perspective, substantialist views regarding the nature of the Buddha began to emerge among philosophers. These philosophical views were prominent with the early metaphysicians like the Sarvastivadins and the Sautrantikas.

Nirvana, understood as the "ultimate reality" (paramartha), came to be distinguished from samsara, the unreal, the convention, the impermanent. The Buddha's own view that nirvana is the "ultimate fruit" (paramartha), a culmination of the fruit (attha) of everyday life, the highest moral perfection involving the eschewing of all immoral conduct (sabba-papassa akaranam) and the promotion of good (kusalassa upasampada), was gradually being forgotten. Dharma was gradually being distinguished from the dharma in the dharma-adharma context. The inappropriate equation of the punya-papa distinction with the dharmaadharma distinction (see comments on XVII.24) led to the belief in a Dharma that transcends the dharmaadharma distinction.

However, this was not Nagarjuna's understanding.Vyavahara, the contextual or the conventional, is not provisional in a cheap pragmatic sense and, therefore, unreal. It is the concrete without which the ideal (paramartha) makes no sense at all (XXIV. 10). It is the absolute distinction between vyavahara and paramartha that is denied in the present verse.

The fact that the Buddhist metaphysicians were involved in long-drawn philosophical disputes with the Brahmanical schools of thought and, therefore, the possibility of mutual influences should not be discounted. For example, the Sautrantika philosophical standpoint resembles in many ways the standpoint of the Vaisesikas. This latter philosophy is founded on the basic methodology of making "distinctions" (visesana). Nagarjuna's present statement can be properly evaluated in the background of such a methodology.

Indeed, the most significant part of the statement is: na kimcit asti visesanam, i.e., "there is no thing that can be taken as a distinction," or "there is no distinct thing." (see XXV. 20 and 24). The reference to some metaphysical entity as "some thing" (kimcit) is a popular feature in the early discourses as well as in the Prajñaparamita-sutras.
Kārikā XXV.20

निर्वाणस्य च या कोटि: कोटि: संसरणस्य च।
न तयोरन्तरं किंचित्तुमूलकस्मस्मयिद्यते॥२०॥

涅槃之實際 及與世間際
如是二際者 無毫釐差別

rú shì èr jì zhē wú háo lí chā;chā;chāi bié

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 20 - The limits (i.e., realm) of nirvana are the limits of samsara. Between the two, also, there is not the slightest difference whatsoever.

JONES (Skt):
[20] The full extent of nirvana is the full extent of cyclical existence. There is not slightest interval between them.

KALUPAHANA (Skt):
Whatever is the extremity of freedom and the extremity of the life-process, between them not even a subtle something is evident.

MCCAGNEY (Skt):
The limit of nirvāṇa is that of samsāra. The subtest difference is not found between the two.

NISHIJIMA (Skt?):
20. What is included by Nirvana is just Time,
And the Time is also belonging to the wandering life of ups and downs.
The two kinds of substances, that is, Time and the wandering life of ups and downs, Seems to be as if they were nothing.
Then something excellently delicate is recognized very clearly..

SPRUNG (Skt):
20 The ontic range of nirvāṇa is the ontic range of the everyday world. There is not even the subtest difference between the two.

STRENG (Skt):
20. The extreme limit (koti) of nirvana is also the extreme limit of existence-in-flux; There is not the slightest bit of difference between these two.

STCHERBATSKY (Skt):
XX. What makes the limit of Nirvana
Is also then the limit of Samsara.
Between the two we cannot find
The slightest shade of difference.

ROBINSON (Skt):
The limit of nirvana is the limit of samsara; there is not even the subtest something separating the two.
25/20 If one exhaustively investigates the real limit of this world and nirvana and the limit of non-arising of this world and nirvana, you will not find the least difference between them because they are equal and inconceivable. Further.

PINGALA COMMENTARY

20. To distinguish between saṃsāra and nirvāṇa would be to suppose that each had a nature and that they were different natures. But each is empty, and so there can be no inherent difference. Moreover, since nirvāṇa is by definition the cessation of delusion and of grasping and, hence, of the reification of self and other and of confusing imputed phenomena for inherently real phenomena, it is by definition the recognition of the ultimate nature of things. But if, as Nāgārjuna argued in Chapter XXIV, this is simply to see conventional things as empty, not to see some separate emptiness behind them, then nirvāṇa must be ontologically grounded in the conventional. To be in saṃsāra is to see things as they appear to deluded consciousness and to interact with them accordingly. To be in nirvāṇa, then, is to see those things as they are - as merely empty, dependent, impermanent, and nonsubstantial, but not to be somewhere else, seeing something else. (fn 131. Compare Streng (1973): “...[A] problem occurs when we act inappropriately to the empty (non-svabhāva) set of conditions that allow saṃsāra to arise. This inappropriateness is our acting as if we could discern a self-existent thing either in the conditioned ‘thing’ or in some identifiable ‘element’ of our experience.... Contrariwise, the insight that leads to the cessation of these inappropriately acts is an awareness that the conditions and relations by which we define our experience are empty.” (p. 30) Nayak (1979) puts it this way: “Nirvāṇa is thus nondifferent from critical insight par excellence which is free from all essentialist picture-thinking” (p. 489.)

Another way of distinguishing between saṃsāra and nirvāṇa is to think of them somehow as different places, as Earth and Heaven are often conceived in Western religious traditions and then to think that upon attaining nirvāṇa one leaves this place - disappears - and goes there. Of course, if one thinks at all about the career of the historical Buddha Sakyamuni, that would entail that upon attaining enlightenment, he would have disappeared. This would make something of a hash of the Buddhist canon. But Nāgārjuna is emphasizing that nirvāṇa is not someplace else. It is a way of being here. Here is another way to put the somewhat paradoxical point: Nāgārjuna surely thinks that in nirvāṇa, unlike saṃsāra, one perceives emptiness and not entities; one perceives the ultimate truth and not the conventional truth. (fn 132. Though it is standard doctrine that a buddha, in virtue of being omniscient (setting aside the vexed and controversial question of the nature of this omniscience - a matter of considerable debate within Buddhist philosophy), perceives all conventional phenomena and knows all conventional truths, as well as all ultimate truths. But a buddha does not know conventional truths and perceive conventional phenomena in the same way that a nonenlightened being does. A buddha knows them and perceives them as conventional and sees them at the same time as empty, through an immediate knowledge of the unity of the two truths. A non-buddha, by contrast, even if she knows that conventional phenomena are empty, through studying Madhyamika philosophy, perceives them as inherently existent and only reasons her/himself into the knowledge that these phenomena are really empty and that these truths are merely conventional.) But emptiness is only the emptiness of all entities, and the ultimate truth is merely the essenceless essence of those conventional things. So nirvāṇa is only saṃsāra experienced as a buddha experiences it. It is the person who enters nirvāṇa, but as a state of being, not as a place to be. (fn 133. Kalupahanahana (1986) reads this verse differently. He translates it as follows: “Whatever is the extremity of freedom and the extremity of the life-process, between them not even a subtle something is evident.” He then takes the purport to be the denial of any entity such as a “seed of release” mediating between the states of saṃsāra and nirvāṇa (p. 367).
Kārikā XXV.21

INADA (Skt):
Verse 21 - The various views concerning the status of life after nirodha, the limits of the world, the concept of permanence, etc., are all based on (the concepts of) nirvana, posterior and anterior states (of existence).

JONES (Skt):
[21] The views “After cessation, there is an end” and the other three options, and “It is eternal” and the other three options, all depend on the ideas of “nirvana,” a “past limit,” and a “future limit.”

KALUPAHANA (Skt):
Metaphysical views relating to the finite, etc., to the eternal, etc., after death are associated with [the problems of] freedom as well as the posterior and prior extremities.

MCCAGNEY (Skt):
Views, such as pennance, etc., finitude, etc., after death, are associated with a past and future nirvana.

NISHIJIMA (Skt?):
21. Result is, leaving from the self-regulation, the first step of ultimate phase. It is just the Eternity and so forth, and the Real Life, which can be experienced directly. The Nirvana might be just our ultimate scene of human life, And so it might be the supposition of the former line, and it might be taking a rest in the perfect darkness.

SPRUNG (Skt):
21 The theories concerning nirvana as existence after decease have to do with the termination and beginninglessness of existence, and all presuppose the notions of termination and beginning.

STCHERBATSKY (Skt):
XXI. (Insoluble are antinomic) views Regarding what exists beyond Nirvana, Regarding what the end of this world is, Regarding its beginning.

BOCKING (Ch):
25v21 Whether there is existence or nonexistence after death, etc., The boundaries of existence, etc. and permanence etc., All such views depend on ‘nirvana' On 'future' and on ‘past'.

BATCHelor (Tb):
Views about who passes beyond, ends etc. and permanence etc. are contingent upon nirvana and later ends and former ends.

DOCTOR (Tb):
Views of what follows the passing, of the finite and so on, Along with those on permanence and so forth, Are based on the transcendence of suffering, The limit of the future, and the limit of the past. [XXV.21]

GARFIELD (Tb):
21. Views that after cessation there is a limit, etc., And that it is permanent, etc., Depend upon nirvana, the final limit, And the prior limit.

GARFIELD-SAMTEN (Tb):
21. Views regarding his status after his passing; extremes, etc., And views regarding the permanent, etc., Are grounded upon nirvana, the final limit, And the prior limit.

HAGEN (paraphrase):
Metaphysical views concerning the status of life after release, the limits of the world, the concept of permanence, etc., are all based on the notion that Nirvana is limited by a beginning and an end.
25/21 That after the death of the Thus-Come the Thus-Come exists, or the Thus-Come does not exist, or the Thus-Come both exists and does not exist, or the Thus-Come neither exists nor does not exist; that the world is bounded, the world is unbounded, the world is both bounded and unbounded, and the world is neither bounded nor unbounded; that the world is permanent, the world is impermanent, the world is both permanent and impermanent and that the world is neither permanent nor impermanent – these are twelve views of three kinds.

(36a20) The four views about whether or not the Thus-Come exists or does not exist etc, after his death arise as a consequence of (the concept of) nirvana. The four views about whether the world is bounded or unbounded etc. arise as a consequence of (the concept of) the future. The four views about whether the world is permanent or not permanent arise as a consequence of (the concept of) the past.

The existence or nonexistence of the Thus-Come after death is inconceivable, and it is the same with nirvana. Just as in the case of the original and ultimate limits of the world; it is inconceivable whether it is bounded or unbounded, permanent or impermanent, and the same goes for nirvana. This is why it is said that there is no difference in status between nirvana and the world.

Further.

PINGALA COMMENTARY

CANDRAKĪRTI COMMENTARY

These theories are impossible because the everyday world and nirvāṇa are in essence one (ekarasatva), namely, to be, by nature (prakṛti), at peace (santatva). These fourfold views proceed on the analogy of the notion ‘after his decease’ in this way: ‘the perfected one exists after his decease’, ‘the perfected one does not exist after his decease’, ‘the perfected one both exists and does not exist after his decease’, ‘the perfected one neither exists nor does not exist after his decease’. These four views presuppose an analogy between decease and nirvāṇa.

And then there are these views concerning the end of personal existence (loka) (fn 16 Not ‘the’ world, but ‘world’ in the sense of personal existence, i.e. existence interiorized by the assumption of a self): ‘existence has an end’, ‘existence is without end’, ‘existence is both with and without end’, ‘existence neither has nor has not an end’. These views are based on the supposition that there is such a thing as ‘end’. In the first case the theory supports the view that personal existence has an end, supposing existence has an end because of not believing in the future birth of world and of the self. Similarly, believing in future birth, the argument is that existence is without end. Both believing and not believing the argument proceeds in its both-and mode. By double negation the argument then runs ‘existence is not either with or without an end’.

The four arguments which presuppose the notion of a beginning are: ‘existence is without a beginning’ (sasvata), ‘existence has a beginning’, ‘existence both has and has not a beginning’, ‘existence neither has nor has not a beginning’. In this case, believing in a previous birth of personal existence or the self, the argument is that existence is without a beginning; but not believing in this, that existence has a beginning; both believing and not believing, the argument is that it both has and has not a beginning; neither believing nor not believing, that it neither has nor has not a beginning. These arguments are based on the notion of ‘beginning’.

How could these theories be made intelligible? If anything whatsoever were real in itself then, by ontologizing the categories ‘existent’ and ‘not existent’, these theories would apply. As, however, it has been made clear that there is no specifiable difference between nirvāṇa and the everyday world, so:

KALUPAHANA COMMENTARY

Herein, reference is made to eight of the ten "undecided" (avyakṛta) issues. Nagarjuna perceives them to be associated with the question of freedom, a freedom looked at from two of the major concerto of the human being, namely, the first beginning and the ultimate end, the tint cause and the final cause. Human concerto like "Where did I come from?" or "Where would I go after this?" (as will be explained in the final Chapter on "Examination of Views") have influenced human thinking and often led to metaphysical views about freedom and bondage.
21. The kind of metaphysical speculations that the Buddha discouraged in the famous discussion of the unanswerable questions regarding the origins and limits of the world and what lies beyond the universe in space and time, are grounded, Nāgārjuna asserts, in the view that cyclic existence - the entire phenomenal world - can be conceived as an entity against which stand other entities or other regions. This is the same kind of picture that motivates the view that nirvāṇa is someplace or something beyond cyclic existence or that nirvāṇa is bounded or eternal. But there is no vantage point from which the universe is one place among many. That is why talking about what lies beyond it is nonsense and why reifying or characterizing nirvāṇa temporally is one example of that nonsense.

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 22 - Since all factors of existence are in the nature of
sunya, why (assert) the finite, the infinite, both finite and
infinite, and neither finite nor infinite?

JONES (Skt):
[22] If all basic phenomena are empty, what is without a limit
and what has a limit? What has both no limit and a limit?
What has neither?

KALUPAHANA (Skt):
When all things are empty, why [speculate on] the finite,
the infinite, both the finite and the infinite and neither
finite nor the infinite? Why [speculate on] the identical,
the different, the eternal, the non-eternal, both or
neither?

MCCAGNEY (Skt):
Since all events are open, what is infinite? What is finite?
What is infinite and finite and what is neither infinite nor
finite?

NISHIJIMA (Skt?):
22. What is the totally relying upon the balanced autonomic
nervous system, and what is the totally relying upon Nirvana?
What is the Eternity, and what is the having the End?
What is the Eternity, and what is the Destroyable?
What is not the Eternity, and what is not having the End?

SPRUNG (Skt):
22 As elements of existence are, as such, devoid of
being, what is there which can be without an end, or
have an end? What can both have and not have an
end, neither have an end nor not have an end?

STCHERBATSKY (Skt):
XXII. Since everything is relative (we do not know),
What is finite and what is infinite,
What means finite and infinite at once,
What means negation of both issues?

BOCKING (Ch),
25v22 Since all dharmas are empty
What is bounded, and what unbounded,
Both bounded and not bounded,
Or neither bounded nor not bounded?

BATCHelor (Tb):
In the emptiness of all things what ends are there? What
non-ends are there? What ends and non-ends are
there? What of neither are there?

DOCTOR (Tb):
When all things are empty,
What is finite and what is infinite?
What is both finite and infinite?
What is neither finite nor infinite? [XXV.22]

GARFIELD (Tb):
22. Since all existents are empty,
What is finite or infinite?
What is finite and infinite?
What is neither finite nor infinite?

GARFIELD-SAMTEN (Tb):
22. Since all existents are empty,
What is finite or infinite?
What is finite and infinite?
What is neither finite nor infinite?

HAGEN (paraphrase):
When all things are Empty, what is there that is finite,
or infinite, or both, or neither?

[No Commentary on this verse.]

亦常亦無常 非常非無常

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 23 - Why (assert) the identity, difference, permanence, impermanence, both permanence and impermanence, or neither permanence nor impermanence?

JONES (Skt):
[23] Indeed, what is the same or different? What is eternal and what is not? What is both eternal and not? What is neither?

KALUPAHANA (Skt):
(included above)

MCCAGNEY (Skt):
What has gone away? What identity? What difference? What is permanent and impermanent or neither and so forth?

NISHIJIMA (Skt?):
23. What is the Same, and what is not the Same?
What is Eternal, and what is not Eternal?
Being not Eternal, and being Eternal are what altogether both?
In this case also there is no co-existences of the two cases of existence and non-existence together at all.

SPRUNG (Skt):
23 What is self-identical, what is other? What is without beginning, what has beginning? What both has and has not beginning? What has neither beginning nor no beginning?

STRENG (Skt):
23. Is there anything which is this or something else, which is permanent or impermanent, Which is both permanent and impermanent, or which is neither?

STCHERBATSKY (Skt):
XXIII. What is identity, and what is difference?
What is eternity, what non-eternity,
What means eternity and non-eternity together,
What means negation of both issues?

BOCKING (Ch):
25v23 Why regard things as one or different?
What is permanent, impermanent,
Both permanent and impermanent,
Or neither permanent nor impermanent?

BATCHelor (Tb):
Is there this? Is there the other? Is there permanence? Is there impermanence? Is there both permanence and impermanence? Is there neither?

DOCTOR (Tb):
What is identical and what is different
What is permanent, what is impermanent?
What is both permanent and impermanent?
What is neither permanent nor impermanent? [XXV.23]

GARFIELD (Tb):
23. What is identical and what is different?
What is permanent and what is impermanent?
What is both permanent and impermanent?
What is neither?

GARFIELD-SAMTEN (Tb):
23. What is identical and what is different?
What is permanent and what is impermanent?
What is both permanent and impermanent?
What is neither?

HAGEN (paraphrase):
Why speculate on identity, difference, permanence, impermanence, both or neither?
These fourteen insoluble problems (vyakrtavastuni) are not intelligible if you suppose that things have self-existent natures. It should not be forgotten that, one who, having foisted (adhyaropya) on things this notion that they have self-existent natures, affirms or denies it and, having fabricated these theories, insists upon them stubbornly, will be hindered, by this stubborn insistence, on the narrow path which leads to the city of nirvāṇa and will be fettered in the cycle of unregenerate existence.

At this point one might object: If nirvāṇa is as you negatively define it, then the Truth propounded by the illustrious one for the purpose of achieving the liberation of all existence will have, been created to no purpose. This Truth, which is suited as the answer in any walk of life, was created by the illustrious one who, in virtue of his infinite compassion, attends with love all beings of the three worlds as one attends a beloved only son, who incontrovertibly knows the inner disposition of the entire creation as it really is and who follows the mass of creatures in their wanderings.

We rejoin: If there were anything at all called ‘Truth’ (dharma) which in its own nature was absolute (svabhavarupatah), there would be those who were the bearers of this Truth and there would be some ultimate being called the illustrious Buddha, its teacher. This is the way it would be.

As however, attempts to develop a metaphysics of the ultimate are doomed. (fn 134. Padhye (1988) points out (pp. 68-70) that Nāgārjuna should also be read here and in this chapter as a whole as emphasizing that, in virtue of the emptiness of all phenomena in samsāra and of the self that experiences them, nirvāṇa, which is defined simply as that self’s liberation from positing those phenomena, must be equally empty. For it, too, can only be understood as a characteristic of that empty self and of its relation to empty phenomena.)
INADA (Skt):
Verse 24 - All acquisitions (i.e., grasping) as well as play of concepts (i.e., symbolic representation) are basically in the nature of cessation and quiescence. Any factor of experience with regards to anyone at any place was never taught by the Buddha.

JONES (Skt):
[24] The stilling of all conceptual support and the stilling of the projection of concepts onto reality is peace - no doctrine was taught by the Buddha in any place to anyone.

KALUPAHANA (Skt):
The Buddha did not teach the appeasement of all objects, the appeasement of obsession, and the auspicious as something to some one at some place.

MCCAGNEY (Skt):
Liberation is the cessation of all thought, the quieting of phenomena. Not any doctrine anywhere has been taught to anyone by the Buddha.

NISHIJIMA (Skt?):
24. All kinds of our sense perceptions and the mental serenities, Are prone to expand and to make the mind happier. Without having any kinds of distinction between the places, kinds, or the contents of teachings, The Principles of the Universe, which Gautama Buddha has taught us, are the contents of his guidance.

SPRUNG (Skt):
24 Ultimate beatitude is the coming to rest of all ways of taking things, the repose of named things; no Truth has been taught by a Buddha for anyone anywhere.

STCHERBATSKY (Skt):
XXIV. The bliss consists in the cessation of all thought, In the quiescence of Plurality. No (separate) Reality was preached at all, Nowhere and none by Buddha!

BOCKING (Ch):
25v24 All dharmas are inconceivable. Extinguish all futile thoughts. There is no person, and no place And there is nothing taught by the Buddha.

BATCHelor (Tb):
Totally pacifying all referents and totally pacifying fixations is peace. The Buddha nowhere taught any dharma to anyone.

DOCTOR (Tb):
Complete pacification of all observations, The complete pacification of constructs, peace — Nowhere did the Buddha Teach any Dharma to anyone at all. [XXV.24]

GARFIELD (Tb):
24. The pacification of all objectification And the pacification of illusion: No Dharma was taught by the Buddha At any time, in any place, to any person.

GARFIELD-SAMTEN (Tb):
24. The pacification of all objectification And the pacification of all fabrication is peace. No Dharma was taught by the Buddha At any time, in any place, to any person.

HAGEN (paraphrase):
The Buddha did not teach the appeasement of all objects, the appeasement of obsessions, and the auspicious as something to some one at some place.
25/24 Since all dharmas at all times and of all kinds are produced from conditions, and since they are utterly empty, they have no own-nature. Within such dharmas, what is there to be bounded, and who is there to regard boundaries as existing? What could be unbounded, or both bounded and unbounded, or neither bounded nor unbounded? Who is there to regard things as neither bounded nor unbounded? What would be permanent, and who is there to regard things as permanent? What would be impermanent, both permanent and impermanent, or neither permanent nor impermanent? When verbal assertions (vacas) cease, named things are in repose; and the ceasing to function of discursive thought is ultimate beatitude. Again, the coming to rest of named things by the non-functioning of the basic afflictions, so that personal existence ceases, is ultimate beatitude. The coming to rest of named things as a result of abandoning the basic afflictions and hence of totally extirpating innate propensities, perceive the voice of the perfected one as inexpressible, beyond language are the elements of existence, tranquil, pure and devoid of being; one who knows them so is called a Bodhisattva.

PINGALA COMMENTARY

(“taking things” fn 17 Sarvopalambahopasama. It is not merely that ways of thinking about things change in nirvāṇa, but that the everyday way of perceiving, or ‘taking’, things ceases to function.)

How can the above objection affect us? Because here the meaning is that the very coming to rest, the non-functioning, of perceptions as signs of all named things, is itself nirvāṇa. And this coming to rest being, by its very nature, in repose, is the ultimate beatitude (siva). When verbal assertions (vacas) cease, named things are in repose; and the ceasing to function of discursive thought is ultimate beatitude. Again, the coming to rest of named things by the non-functioning of the basic afflictions, so that personal existence ceases, is ultimate beatitude. The coming to rest of named things as a result of abandoning the basic afflictions and hence of totally extirpating innate modes of thought (vasana) is ultimate beatitude. Again the coming to rest of named things through not seizing on objects of knowledge or on knowledge itself, is ultimate beatitude (fn 18 This paragraph, Candrakīrti’s pithiest account of nirvāṇa, turns on the notion of ‘the coming to rest of named things’ (prapancopasama), as though the turmoil of a world in time were a distortion arising from human passions.).

When the illustrious Buddhas are in nirvāṇa, the ultimate beatitude, which is the coming to rest of named things as such, they are like kingly swans in the sky, self-soaring in space or in the nothingness of space on the twin wings of accumulated merit and insight; then, it should be known, that, because they do not perceive objects as signs, no rigid ‘Truth’ whatsoever either concerning bondage or purification has been taught either among or for any gods or men whatsoever.

As it is said in the Tathagataguhya Sutra, ‘During that night, o Santamati, in which the perfected one became perfectly enlightened with the unsurpassed, perfect enlightenment, during the night in which he passed totally into nirvāṇa, not one syllable was uttered nor used by the perfected one, neither did he address anyone, nor will he. Yet all creatures, according to their propensities, perceive the voice of the perfected one as it issues forth in the various dialects of their homelands; for them it takes special forms, “this revered one is teaching this doctrine for our benefit”, or, “we are hearing the doctrine of the perfected one”. But, in truth, the perfected one indulges neither in ontologizing thought nor in phantasies because, o Santamati, a perfected one is freed from all ontologizing thought, all flights of phantasy, all innate thought patterns, and from everything with name.’ To quote, ‘Inexpressible, beyond language are the elements of existence, tranquil, pure and devoid of being; one who knows them so is called a Bodhisattva.’

But, one might object, if the Buddha has taught no truth at all to anyone whatsoever at any time, how is it that the various scriptural admonitions have been taken as meaningful?
We rejoin: This arises only from the imagination of people who are dreaming and who are deep in the slumber of ignorance. ‘This revered one, lord of gods, demons and men in all the three worlds, has taught this doctrine for our sakes’, they think. The illustrious one said, ‘The perfected one has his being as a reflection of the pure, passionless truth; he is not ultimately real in himself nor is he perfected; he is beheld as a reflection in all worlds.’ This is explained in detail in the treatise on The Secret of the Sayings of the Perfected One.

And so, as there is no true doctrine concerning nirvāṇa, how can the existence of nirvāṇa depend on the existence of such a doctrine? Therefore it is established that even nirvāṇa does not exist (nasti). It was said by the illustrious one: ‘Nirvāṇa is no-nirvāṇa the lord of existence taught; a knot tied by infinitude itself and loosed even by the same.’

And again, ‘O illustrious one, an enlightened one cannot arise for those who believe that elements of existence come to be and cease to be. O illustrious one, there is no final triumph over everyday existence for those who search persistently for nirvāṇa as something existent. Why? O illustrious one, nirvāṇa is the cessation of all perceptions as signs, the coming to rest of all activity overt and covert.

‘Therefore they are deluded people who, having taken up the spiritual life in some popular religious order, have fallen into a heretical view and persistently seek for nirvāṇa as existent — as oil of sesame is pressed from sesame seeds or butter churned from milk. Those who strain for a nirvāṇa as the everlasting extinction of all elements of existence, these I say are self-deluded heretics. The saintly wise man, one truly realized, does not bring about either the coming to be or the ceasing to be of any element of existence whatever; nor does he claim to possess or to indubitably cognize any element of existence whatever —’ and so on.

**KALUPAHANA COMMENTARY**

Inada has broken up the above into two distinct statements and thereby lost its significance. The first line contains qualifications of dharma occurring in the second. Nagarjuna's emphasis is on the phrase: kascit dhammah, as it was in the case of the two important statements made previously in the present chapter (XXV.19-20). When the Buddha spoke of freedom (nirvana), which he qualified as the appeasement of all objects (upalambha = alambana = drastavya, cf. drastavyopasama at v.8) or the appeasement of obsessions (prapancopasama) or auspicious (siva, see Dedicated Verses), he was not referring to them as "some thing," that is, some entity having a specific distinction (vizesana) or subtlety (susuksmatva). He was not speaking of freedom in the way the substantialist conceived of it.

All these twenty-five chapters are, therefore, negative in character and tone. They were devoted to a refutation of the two metaphysical but related views of existence and non-existence (astitva-nastitva). Having cleared up the dust that had gathered around all the doctrines preached by the Buddha, Nagarjuna is now ready to go on to the positive description of bondage and freedom as enunciated by the Buddha in the discourse to Katyayana. Nagarjuna's treatment of the metaphysical issues that emerged in relation to all these doctrines pertaining to causation, change, the human personality, survival, karma, moral responsibility, and freedom is so exhaustive and complete that he can proceed to explain the Buddha's conception of bondage and freedom without any fear of any one raising any question. For he has already answered them all. Herein lies the greatness of Nagarjuna as a philosopher.

**GARFIELD COMMENTARY**

24. In many Buddhist teachings many conventional phenomena are described and are subjected to analysis, including the mind, mental phenomena, and a wide range of external phenomena. But this is always a conventional analysis intended to demonstrate the emptiness of these phenomena, their impermanent character, and so forth, for soteriological purposes. The goal is to dispel illusion and to end deluded ontological fabrication and the various epistemological, psychological, and moral ills Nāgārjuna has argued are grounded therein. But it is important, Nāgārjuna concludes, not to reify that doctrine, or any of the entities that appear as prima facie referents of the words used to expound it (the Buddha, the spiritual community, etc.). In fact, it is important to see that nirvāṇa does not, on this account, amount to an entity; it is not achieved or described by entities. Rather it is a way of engagement with nonentities by nonentities.
Chapter XXVI

dvādasāṅgabhāvaparīkṣā nāma śādvimśatitamaṃ prakaraṇaṃ ||
Chapter XXVI

MAJBA (TOPICAL OUTLINE)
We have now completed the first major part of the section on engaging with the meaning of the text—the demonstration that the dependently originated is empty by nature. This chapter constitutes the second part of that section—the presentation of the fact that whether one remains engaged in cyclic existence or frees oneself from it depends on whether or not one realizes that.

Here one might ask: What is that dependent origination to which he refers in these lines? Whatever is dependently arisen. That is explained to be emptiness. [XXIV: 18ab]

And what is that dependent origination by seeing which he says in these lines that the reality of the Four Noble Truths is seen?

Whoever sees dependent arising Also sees suffering. [XXIV: 40ab]

The explanation of this has two parts: the order of dependent origination and the reverse order of dependent origination.

One should ascertain the mode of grasping of the two selves through innate ignorance—that is, the way that they are grasped through two kinds of ignorance, which grasp them as selves when perceiving the dependent origination of the person and phenomena. Thereafter, one should understand that all of these arguments are presented in order to refute the two selves as grasped by the two kinds of ignorance, and in order to develop the view through which one can realize the two kinds of selflessness as their respective antidotes. Having developed a complete understanding of the perfect view through which one can realize the two selflessnesses, through hearing, contemplation, and meditation, one should strive by all means to practice in accordance with the reverse order of dependent origination.

The discussion of the doctrine of causal analysis indicates the strong influence of Hinayanistic or Abhidharmic teachings during this period. But the doctrine must be seen under a new light when Nagarjuna discusses it, i.e., within the backdrop of his doctrine of sunyata and pratityasamutpada as hinted at in the last two verses.

KALUPAHANA (CHAPTER OVERVIEWS)

26. Human personality and its survival (dvadasanga ). Any reader who has ploughed his way through the preceding chapters of Nagarjuna will certainly be baffled by the contents of Chapter XXVI on the “Examination of the Twelve Factors” (Dvadasanga-parrksa ). By the time he completed reading the first twenty-five chapters, wherein the conception of “emptiness” (sunyata ) occurs in almost every other verse, he would be imbued with that concept to such an extent that it would become a dogma, a drsti, rather than a mere method of analysis. Therefore, Chapter XXVI would make no sense at all. Thus he would get the impression that it merely deals with the Hinayana doctrine, having no relevance to the basic teachings of Nagarjuna and, therefore, of Mahayana. This is confirmed by the fact that there is no negative comment made anywhere in the chapter and no mention of the famous doctrine of emptiness. Another person can come to a more drastic conclusion. He may assume that this chapter is like an “illegitimate child” and could not be the work of Nagarjuna.

Contrary to all these widely held opinions, we tend to look upon this and following chapter as the actual conclusion of this most valuable treatise. They are integral parts of the work, and without them one gets only a distorted view of Nagarjuna’s thoughts. It was mentioned earlier that the only discourse that Nagarjuna mentions by name is the Katyayanavavada, and the significance of this fact cannot be over-emphasized. Here the Buddha was responding to the question raised by Kaccayana as to what “right view” (samma-ditthi ) is, compared with “wrong view” (micchaditthi ). Nagarjuna has devoted most of his energy trying to clarify what “wrong views” are and occasionally spoke of “right views” (see analysis of chapter XVII). If he had concluded his treatise with Chapter XXV, he would have read only a section of the Buddha’s discourse to
Kaccayana and ignored the Buddha's own conclusion in that discourse. The two extreme views of existence and non-existence were rejected by the Buddha, not because he had no views to propound, but because he had a better or more appropriate one to offer. And this appropriate view is explained in the conclusion to that discourse.

The appropriate view is the middle position specified as dependent arising, which is intended as an explanation of how a human being, conditioned by various factors, attempts to become this or that and wanders along in a ceaseless process of births and deaths. The theory of personality consisting of the twelve factors explaining such becoming thus turns out to be the philosophical middle position, and the noble eightfold path (magga), avoiding the two extremes of behavior, represents the practical middle path intended to achieve the cessation of that process of becoming (bhava) and suffering (dukkha).

If the Katyayanaavavada served as the foundation of Nagarjuna's philosophy, and there does not seem to be any doubt about it, it would have been impossible for him to overlook the conclusion of that discourse. This indeed is the rationale for a whole chapter on the concept of a person explained in terms of the twelvefold formula of causation.

**BATCHelor (Poetic “TRANSLATION”)**

Contingency

Blocked by confusion,
I forge a destiny through impulsive acts.
Consciously I enter situations
Where personality unfolds
And world impacts on a sensitive soul.

Personality creates consciousness
Just as attention,
The eye and a colorful shape
Trigger vision.

Impact is the meeting
Of consciousness, senses and world.
It leads to experience
I crave to have and avoid.
Craving makes me cling
At senses, opinions, rules and selves.

Clinging is to insist on being someone –
Not to cling is to be free to be no one.

To be someone is to be a conscious,
Impulsive, thinking, feeling body,
Which is born, ages, dies,
Suffers torment, grief, pain,
Depression and anxiety.
Anguish emerges when someone is born.

Impulsive acts are the root of life.
Fools are impulsive;
The wise see things as they are.
When confusion stops through insight,
Impulsive acts cease.
Stop this and that will not happen:
Anguish will end.

**Jones (COMMENTARY)**

26. The Twelve Steps of the Cycle of Rebirth

This chapter is out of character with the rest of the Karikas: it is a straight exposition of the twelve-step dependent-arising of rebirth (pratityasamutpada) that is standard to all of Buddhism (see Dalai Lama 2009: 2963), with no analysis of it in terms of emptiness. This leads some scholars to doubt that this chapter (and the next) were originally part of the Karikas and were written by someone else. (Some scholars also doubt that the Buddha ever taught the full twelve-step cycle – rather, they argue that he taught various steps and later Buddhists assembled them into one series.) Also, in Chapter 23.23, Nagarjuna does give an analysis of the fundamental role of “root-ignorance” (avidya) in this process. If this hypothesis is true, then the original ending of the Karikas is the dramatic declaration of 25.24: no doctrine was taught by the Buddha in any place to anyone.

But perhaps this chapter is genuine and the reason Nagarjuna did not supply an analysis of emptiness is because he equates emptiness with dependent-arising. There is no denial of this type of “arising” here or in any of his works. There are two possible explanations for this. First, he does not affirm a real (self-existent) entity called “arising” - it is a matter of dependency and a process of becoming. Second, calling the process “dependent-arising” may only be a “conventional truth” - seeing the situation from the ultimate point of view would not involve seeing the process in terms of any categories or entities. (See the discussion of 24.40.)

Dependent-arising starts with “root-ignorance (avidya).” Such ignorance is not merely not knowing some fact, but believing the world is populated with discrete, independently real things. In addition, it is not merely not knowing the truth of impermanence and dependency, but seeing the world in
and the master Buddhapalita (fn It is not certain who authored this particular commentary. Some say that it was composed by Nagarjuna himself, but others deny this.) and the master Buddhapalita (fn Buddhapalita wrote one of the first commentaries on The Fundamental Wisdom of the Middle Way, from the perspective of the Middle Way Consequence school’s view.) both assert that the followers of the Shrvakayana asked Nagarjuna, “You have explained how to realize genuine reality according to the Mahayana tradition. Now, please teach us how to enter genuine reality according to the Shrvaka tradition.” In other words, in the first twenty-five chapters, Nagarjuna explained how to follow the Mahayana path, and now, followers of the Shrvakayana asked him for teachings on the path they had chosen to follow.

Bhavaviveka (fn Bhavaviveka followed Buddhapalita and composed a commentary on The Fundamental Wisdom of the Middle Way from the perspective of the Middle Way Autonomy school’s view.) writes that there were those who argued, “Nagarjuna, earlier in the text you wrote, ‘The Buddha did not teach any Dharma to anyone.” (fn Chapter 25, verse 24 (not included here).) Did not the Buddha, though, teach about the twelve dependently arisen links of existence?” In response, Nagarjuna composed this chapter to explain that the Buddha did not give any truly existent teachings, and thus he did not teach that the twelve links exist in essence, but rather that they are mere appearances.

Finally, Chandrakirti explains that there were those who said, “Samsara exists because its cause, the twelve links of existence, exists, and nirvana exists because its cause, the reversal of those twelve links, exists. Furthermore, if samsara and nirvana were not two different things, why would they appear to be so? If existence and peace were not two different things, why would the terms existence and peace exist?” Thus, in order to explain how it is that phenomena do not exist at the same time they appear, how it is that phenomena are only dependently arisen, Nagarjuna composed this chapter.

Indian scholars composed a great number of commentaries on The Fundamental Wisdom of the Middle Way, but from among them all, the four quoted above are the most important. In Tibet, scholars from the four main lineages of Sakya, Gelug, Kagyu, and Nyingma composed their own commentaries to the text. Of all of these, the most extensive is probably Je Tsong-khapa’s Great Commentary on the Fundamental Wisdom of the Middle Way, Called “An Ocean of Reasoning,” which Tsong-khapa composed while residing in a cave in the hills above Sera Monastery (fn Tsong-khapa (1357-1419) was the founder of the Gelugpa lineage of Tibetan Buddhism.).

The twelve links of existence are the stages sentient beings continually pass through, life after life, as they wander without respite through the three higher and three lower realms of samsara. The first nine verses in this chapter
describe the twelve links in their “forward progression”: how one link in this samsaric chain gives rise to the next. The last three verses describe the “reverse progression”: how those who have realized selflessness are able to root out the cause of the twelve links and gain liberation from samsara.

To summarize the forward progression of the twelve links, the first link in the chain and the source of all the others is ignorance of the basic nature of reality. This ignorance obscures the mind and as a result one believes that the self of the individual truly exists. This causes one to perform karmic action (2), either virtuous, unvirtuous, or neutral; and after one’s present life has ended, it causes rebirth in one of the higher or lower realms of samsara.

This samsaric rebirth begins as one’s consciousness (3) finds its way to the place where it will begin its next life; in the case of humans, for example, in the womb of the mother. Immediately upon entering the mother’s womb at the moment of conception, consciousness joins with the very first stages of the material body, and thus begins the stage of name and form (4). “Name” refers to the four mental aggregates that cannot be physically perceived, namely feelings, discriminations, formations, and consciousnesses, and “form” refers to the aggregate of the same name, the sentient being’s new physical body.

Shortly thereafter, the five sense faculties and the mental faculty develop, and this constitutes the stage of the six inner sources of consciousness (5). This enables the stage of contact (6) with the six objects—sights, sounds, odors, tastes, tactile sensations, and phenomena. Contact with different objects gives rise to feelings (7), either pleasant, unpleasant, or neutral, depending on what the particular object is. These feelings give rise to craving (8), which is the desire for pleasant contact to occur and unpleasant contact to remain absent. When this craving intensifies, it becomes grasping (9), which has four specific types: grasping at sense pleasures, at wrong views, at one’s own conduct as supreme, and at the belief in a self, at constant thoughts of “I,” “me,” and “mine.”

Grasping’s intensity causes one to perform defiled karmic actions with body, speech, and mind—this is existence (10). This leads once again to birth (11) in samsara, followed by aging and death (12), and then the process begins all over again, in an uninterrupted cycle of suffering that Nagarjuna describes in the eighth and ninth verses:

“Existence” is karmic action performed with the five aggregates.
From existence comes birth,
And from birth,
Aging, death, agony, bewailing, pain, unhappiness, and agitation come without fail.
Thus, the only thing born
Is a massive heap of suffering.

When one performs karmic actions with body, speech, and mind, that is the cause of future birth. All who are born must experience aging and the agony of being separated from what pleases them, an agony that becomes most intense when they are dying. Wretchedly they cry out, bewailing their torment. “Pain” refers to physical harm experienced by the five sense faculties and “unhappiness” to exclusively mental suffering, both of which continuously agitate the mind. Thus, the only thing that takes birth in samsara is a massive heap of suffering.

Thus is the pathetic state in which sentient beings find themselves. However, when Nagarjuna states, “The only thing born is a massive heap of suffering,” he means that no truly existent self is born along with the suffering. The suffering that is born is therefore only a mere appearance, arisen due to the coming together of causes and conditions. It is not real because no self to experience it actually exists. If the suffering were real, we could never gain liberation from it; it would be our permanent nature. Since it is only a mere appearance, however, it comes to an end when the causes and conditions responsible for it are no longer produced. As the tenth verse explains:

The root of samsara is karmic action.
Therefore, the wise do not perform it.
Therefore, the ones who commit karmic acts are the unwise,
Not the wise, because they see the precise nature.

Those who are endowed with the wisdom that realizes selflessness, the precise nature of reality, do not perform defiled karmic actions, the causes of samsaric rebirth. They are able to refrain from committing karmic actions not simply because they choose to do so, however, but rather because they have completely eradicated the ignorance that is karmic actions’ cause. As the eleventh verse explains:

When ignorance ceases,
Karmic actions cease.
The cessation of ignorance
Is the result of meditating with knowledge of reality’s precise nature.

When ignorance of selflessness ceases, the reverse progression of the twelve links takes effect. As ignorance is the root cause of the next eleven links, when it ceases, so does samsara, never to arise again. This wonderful process is summarized in the twelfth and final verse:

When the earlier links cease,
The later links do not occur,
And that which is only a heap of suffering
Perfectly comes to an end
So the story has a happy ending after all!

By the end of the first twenty-five chapters of the text, Nagarjuna had successfully refuted all the claims of the
followers of the Shravakayana who asserted that things truly exist. At that point, with all of their arguments discredited, some of these followers of the Shravakayana gained enthusiasm for the teachings on emptiness and entered the Mahayana path. Others did not, however, and remained where they were, crestfallen. Seeing the state they were in, Nagarjuna explained the forward and reverse progressions of the twelve links of existence in a manner that was in harmony with their own tradition. This made them happy, and it also better prepared them to understand how extraordinary the Mahayana’s presentation of emptiness actually is.

Chapter Twenty Six Examination of the Twelve Causal Factors (Dvadasanga-parikṣa)

GARFIELD COMMENTARY

Chapter XXVI Examination of the Twelve Links

Given an analysis of the nature of nirvāṇa, one might well ask how to achieve it. In this chapter, Nāgārjuna provides a straightforward answer. The twelve links of dependent origination are regarded by all Buddhist schools as providing an analysis of the nature of interdependence in the context of human existence. The tone of this chapter is decidedly positive, marking the turning of a dialectical corner in the preceding two chapters. Having elucidated the Madhyamika account of the nature of conventional and ultimate reality, Nāgārjuna does not need at this point so much to emphasize the emptiness of the twelve links. Rather he can assume that to provide an account of them as dependently arisen is, ipso facto, to demonstrate that fact. Their emptiness is therefore simply presupposed. This chapter is thus a straightforward exposition of how, in light of the interdependence of the twelve links, to enter into and to exploit the cycle in the service of liberation.

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 1 - Those who are deluded by ignorance create their own threefold mental conformations in order to cause rebirth and by their deeds go through the various forms of life. - Note: The threefold mental conformations refer to those related to the body, speech and mind. The various forms of life refer to the following: hellish beings, hungry spirits, beasts, evil spirits, human beings and heavenly beings.

JONES (Skt):
[1] Shrouded in the root-ignorance, a person forms the dispositions through thought, word, and deed. By the actions based on these dispositions, one goes on to a new state for repeated rebirths.

KALUPAHANA (Skt):
A person enveloped by ignorance forms such dispositions in the threefold ways leading to re-becoming, and through such actions he moves on to his destiny.

MCCAGNEY (Skt):
Three dispositions leading to rebirth are formed by unexplained ignorance which moves by means of those actions.

NISHIJIMA (Skt?):
1. Relying upon new births, many numbers of accomplishments have been produced.
The three factors of original ignorance, the natural energy, and the mental function,
Relying upon those three kinds of processes,
The practice of Action is done concretely relying upon the practice of Action itself.

STRENG (Skt):
1. "What is hidden by ignorance (1)" (avidyanivṛta) has caused the three kinds of conditioned things (2) (samskāra) to be made for rebirth — By those actions it i.e., "what is hidden by ignorance" goes forward.

BOCKING (Ch):
26v1 Living beings, obscured in delusion
Subsequently give rise to the three actions
And through producing these three actions
According to their predispositions they fall into the six destinies.

BATCHelor (Tb):
In order to become again, those obscured by ignorance are moved into destinies by actions which are impelled [by] the three kinds of formative impulses.

DOCTOR (Tb):
Due to the obscuration of ignorance, there occurs, directed at rebirth
The conditioning of the action
Of the three types of formation.
Thus, there is migration between the realms. [XXVI.1]

GARFIELD (Tb):
1. Wrapped in the darkness of ignorance,
One performs the three kinds of actions
Which as dispositions impel one
To continue to future existences.

GARFIELD-SAMTEN (Tb):
1. The three kinds of actions that lead to rebirth,
Performed by one obscured by ignorance,
Are the karma that impel one
To further transmigration.

HAGEN (paraphrase):
26.1 People enveloped by ignorance form dispositions in the threefold ways that lead to re-becoming, and through such action they continue.
KALUPAHANA COMMENTARY

This chapter is of little significance to most Nagarjunian scholars. Inada argues: With the discussion of Nirvana in the last chapter the treatment from the standpoint of the Mahayana had basically come to a close. In this chapter and the final one to follow, Nagarjuna goes into the analysis of the Hinayanistic doctrines.... The discussion is Hinayanistic and it reveals that the source of trouble lies in ignorance which in turn initiates all kinds of mental conformations (samskara) (Nagarjuna).

While disagreeing totally with this interpretation, I propose to show that this chapter represents the most positive explanation by Nagarjuna of the Buddha's teachings on bondage and freedom as enunciated in the vast collection of discourses, with the discourse to Katyayana as the pivotal text. Indeed, without the positive teachings presented here coming after the negative analysis in the last twenty-five chapters, it is rather difficult to see how Nagarjuna could claim to be restating the Buddha-word, as he openly expressed it in several places earlier (see XV.6; XVII.6, 8, 11; XXIV.8-9). It is indeed surprising to see how most interpreters of Nagarjuna are looking for positive statements of the doctrine primarily through negations (XXV.3 and Dedicatory Verses), while ignoring all the positive statements of Nagarjuna. XXVI. 1 is a further explanation of the Buddha's statement: "Depending upon ignorance are dispositions" (avijjapaccaya sankhara). Its elaboration is also the Buddha's and is presented in the Kukkuravatika-sutta (M1.390).

GARFIELD COMMENTARY

1. One is caught in cyclic existence for a reason, Nāgārjuna asserts, because one acts. There are three general kinds of actions distinguished in Buddhist action theory - physical, verbal, and mental.

These actions in turn have immediate psychological consequences for the agent. That is, they give rise to new psychological dispositions. In the framework of Buddhist action theory, these dispositions are themselves conceived of as actions existing in a potential form, and of course when actualized, they emerge as new actions of body, speech, or mind. These in turn lead to a variety of new such consequences and to the continuation of cyclic existence. (fn 135. The term “las” (Skt: karma) hence refers both to action and to the consequences of action for the individual.) Transmigration - the continuation of samsāra - for Nāgārjuna is then simply a dependent consequence of one’s actions.
Kārikā XXVI.2

INADA (Skt):
Verse 2 - The consciousness (vijnana), conditioned by the mental conformations, establishes itself with respect to the various forms of life. When consciousness is established, name (nama) and form (rupa) are infused or become apparent.

JONES (Skt):
[2] With the dispositions as its condition, consciousness enters a new state of rebirth. With consciousness having entered the new state, a psycho-physical body (“name and form”) arises infused with that consciousness.

KALUPAHANA (Skt):
Consciousness, with disposition as its condition, enters [the new] life. When consciousness has entered, the psychophysical personality is infused.

MCCAGNEY (Skt):
Consciousness is connected with past disposition and conditioning.
Wherein consciousness deeply enters, name and form [mind/body] is infused.

NISHIJIMA (Skt?):
2. Relying upon the development of scientific knowledge, The clarification of the Real Truth has begun.
Relying upon the state that both a mother and a baby have become stable,
The Oneness of Name and Substance, which is the combination between name and substance, have been educated gradually.

STRENG (Skt):
2. Consciousness (3), presupposing that which is conditioned (samskara), enters on its course. When consciousness is begun, the "name-and-form"- (namarupa) (4) is instilled.

ENGLISH TRANSLATIONS

BOCKING (Ch):
26v2 Conditioned by the predispositions
Consciousness receives a body of the six ways
When consciousness becomes attached
Name and form develop.

BATCHELOR (Tb):
Consciousness conditioned by formative impulses enters into destinies. When consciousness has entered, name and form develop.

DOCTOR (Tb):
Consciousness, conditioned by formation,
Enterts the realms.
Once consciousness has entered,
Name and form will manifest. [XXVI.2]

GARFIELD (Tb):
2. Having dispositions as its conditions, Consciousness enters transmigration.
Once consciousness has entered transmigration, Name and form come to be.

GARFIELD-SAMTEN (Tb):
2. Having action as its conditions, Consciousness enters transmigration.
Once consciousness has entered transmigration, Name and form come to be.

HAGEN (paraphrase):
26.2 Consciousness, conditioned by dispositions, takes its own course. When consciousness is established, mind and body become apparent.
This represents the explanation of the relationships described in the statement, "Depending upon dispositions is consciousness" (sankharapaccaya vinnanam) and "Depending upon consciousness is the psychophysical personality" (vinnanapaccaya namarupam). The explication of the first of these is found at S 3.87 (Tsa 2.14 [Taisho 2.11c]) where it is said: "Disposition is so called because it processes ... consciousness that has already been dispositionally conditioned, into its present state." The dispositions are thus responsible for providing an individuality to consciousness, and it is this individuated consciousness that comes to be established in a psychophysical personality. This latter event is explained at D 2.63 (Chang 10.2 [Taisho1.61b]), where it is stated that the psychophysical personality formed in the mother's womb will not grow into maturity (na vuddhim virulhim apajjati) if consciousness were not to enter it and get established therein. In fact, the Chinese translation of Kumarajiva refers to such attainment of maturity of the psychophysical personality.

Those who are unwilling to attribute a doctrine of survival to Nagarjuna may interpret the relation between consciousness and the psychophysical personality as no more than the explanation of the act of being conscious during ordinary day to day experiences. If so, it would have been possible for Nagarjuna to say so at this point. Instead, he prefers to speak of a life (gati), generally understood as a future life or destiny, and proceeds to explain the process of perception only after outlining the emergence of the six sensory faculties associated with the psychophysical personality.

GARFIELD COMMENTARY

2. Continuing through the traditional presentation of the twelve links, Nāgārjuna notes that consciousness is a consequence of dispositions and depends upon them and that “name and form” follow as a consequence of consciousness. These, therefore, are obviously also dependent phenomena.

There are two ways to think of the twelve links, generating two parallel circles of explanation: One can approach them from the standpoint of transmigration, which provides a standard Buddhist explanation of the cycle of life. Or one can think of them as providing a phenomenological analysis of the nature of experience. In the former sense, we could say at this point in the story that actions performed in the past and dispositions inherited from one's previous history lead to new actions whose consequences are cyclic existence. In particular, the actions and dispositions from one's prior life, on this view, lead to the generation of a new consciousness, which upon entering the womb, gives rise to a body that will get a particular name.

Or, from a phenomenological perspective, we can see dispositions to attend to or to interpret particular phenomena in certain ways (perceptual or conceptual “sets”) and actions upon them leading to our becoming aware of external or internal phenomena (consciousness), which leads to our representing them as having determinate locations and denominations (name and form). These two levels of analysis are obviously quite compatible, and while the former plays a central role in Buddhist cosmological and soteriological theory, the latter is important in Buddhist psychology and practice.
Kārikā XXVI.3

niṣikte nāmarūpe tu saḍāyatanasambhavaḥ
saḍāyatanam āgamya saṃsparśaḥ sampravartate ||3||

míng sè zēng cháng gù yīn ěr shēng liù rù
qíng chén shí hé hé;gé ér shēng yū;yū;wū liù chū

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 3 - When name and form are infused or become apparent the six ayatanas (i.e., seats of perception) arise. With the rise of the six ayatanas, touch evolves.

JONES (Skt):
[3] With the body infused, the domains of the six senses (the five senses and the mind) arise. The six domains having appeared, contact comes into being.

KALUPAHANA (Skt):
When the psychophysical personality has been infused, the occurrence of the six spheres (of sense) takes place. Depending upon the six spheres proceeds contact.

MCCAGNEY (Skt):
Where name and form is infused, six sense-spheres arise. The six senses having arrived, contact comes forth.

NISHIJIMA (Skt?):
3. When whatever has been supplied sufficiently to what is called the Oneness of Name and Substance, in which name and substance are they combined into one, then the six kinds of sense organs, will work together cooperatively. And the mutual contacts begin with each other.

STRENG (Skt):
3. Once name and form develop, the six domains of sense perceptions (5) (ayatana) are produced. Having arrived at the six domains of sense perceptions, the process of perception begins to function.

BOCKING (Ch):
26v3 Name and form developing
Cause the six avenues to arise
When senses, objects and consciousness combine
There arises six-fold contact.

BATCHELOR (Tb):
When name and form develop, the six senses emerge. In dependence upon the six senses, impact actually occurs.

DOCTOR (Tb):
When name and form have manifested,
The six sense sources will develop.
Dependent on the six sense sources, contact comes into being. [XXVI.3]

GARFIELD (Tb):
3. Once name and form come to be, The six sense spheres come into being. Depending on the six sense spheres, contact comes into being.

GARFIELD-SAMTEN (Tb):
3. Once name and form come to be, The six senses come into being. Depending on the six senses, contact comes into being.

HAGEN (paraphrase):
26.3 Once mind and body become apparent, the six sense spheres become apparent. Depending upon the six sense spheres, contact becomes apparent.
The Buddha’s statement, “Depending upon the psychophysical personality are the six spheres of sense” (namarupapaccaya salayatanam), explains an important pre-requisite for the emergence of human knowledge. If the psychophysical personality is not properly formed or if the sensory faculties were to be defective, the sensory spheres such as material form, sound, smell, taste, touch, and concepts would not provide a foundation for contact. Thus, the visual organ, which is part of the psychophysical personality should be unimpeded (aparibhinna) and should function properly. The external object should come into focus (bahira ca rupa apatham agacchati) and attention (samannahara), which is a function of consciousness, should be available (M 1.190; Chung 7.2 [Taisho 1.467a]). Then only there will emerge consciousness which is a necessary condition for contact. This idea is then elaborated by Nagarjuna in the next verse.

3. From the ontogenetic side, the development of the body gives rise to the development of the sense faculties, which make sensation - contact between sense objects and functioning sense organs - possible. From the phenomenological point of view, we can say that the domain of perceptibles and the structure of perceptual experience and knowledge depends upon our ability to represent and individuate objects, and that sensory contact is sensory contact in the first place only in virtue of its role in experience, which is in turn dependent upon the entire perceptual process. To put the matter crudely, an amputated sense organ in contact with an object is hardly in contact in the appropriate way.
**Kārikā XXVI.4**

(caṅkṣuḥ praṇītya rūpaṃ ca samanvahāram eva ca |
nāmarūpaṃ praṇītyaivaṃ vijñānaṃ sampravartate ||4||)

| miṅ daṅ gzugs daṅ dran byed la | brten nas skye ba kho na ste |
| de ltar miṅ daṅ gzugs brten nas | rnam par (17b1)šes pa skye bar ’gyur |

**ENGLISH TRANSLATIONS**

**INADA (Skt):**
Verse 4 - As in the composite relational nature of the eye and its material form, consciousness arises in a similar relational nature of name and form.

**JONES (Skt):**
[4] Thus, consciousness develops dependent upon sensing, form, sensing and form coming together, and the body.

**KALUPAHANA (Skt):**
Thus, depending upon the eye and material form, and attention too, and depending upon the psychophysical personality proceeds consciousness. Whatever is the harmonious concurrence of the three factors: material form, consciousness, and eye, is contact. Feeling proceeds from such contact.

**MCCAGNEY (Skt):**
Form and attention are dependent on the eye. Name and form is dependent on consciousness coming forth.

**NISHIJIMA (Skt?):**
4. When the Eyes can look at forms, All kinds of phenomena are also can be seen similarly. The Name and the Substance are completely the same as one. The intellectual ability is the very inclusive production.

**STRENG (Skt):**
4. Consciousness begins to function presupposing the eye, the visual forms, and ability of mental association—Presupposing "name-and-form."

**BOCKING (Ch):**
[n/a]

**BATCHelor (Tb):**
Just as [it] only arises in dependence on the eye, [visual] form and attention, so consciousness arises in dependence on name and form.

**DOCTOR (Tb):**
It arises exclusively in dependence On eye, form, and consciousness. Thus, dependent on eye and form, Consciousness will occur. [XXVI.4]

**GARFIELD (Tb):**
4. That is only dependent On eye and form and apprehension. Thus, depending on name and form, And which produces consciousness -

**GARFIELD-SAMTEN (Tb):**
4. That is only dependent On eye and form and retention. Thus depending on name and form, Consciousness arises.

**HAGEN (paraphrase):**
26.4  Thus, depending upon eye and form, and attention, consciousness appears dependent upon mind and body.

**GARFIELD COMMENTARY**

4. The first two lines emphasize that contact — that is, the initial relation between the sense organ and its object — has three necessary and sufficient conditions: sense organ, the object, and the cognitive state to which the sense organ gives rise (apprehension/ dran byed). The last two lines are continuous with the next verse:

---

ENGLISH TRANSLATIONS

INADA (Skt):  
Verse 5 - The harmonious triadic nature of form, consciousness and eye issues forth touch. And from touch arises feeling.

JONES (Skt):  
[5] Contact is the conjunction of three things - sensing, form, and consciousness. From such contact, sensation arises.

KALUPAHANA (Skt): [included in XXVI.4 above]

MCCAGNEY (Skt):  
The conjunction of the three, which are eye, consciousness, and form, is contact. And from contact, feeling comes forth.

NISHIJIMA (Skt?):  
5. What is called the accumulations of the three factors are indicating, Matter, recognition, and the Eyes. Therefore the real perception has transcended the perception as concept already, And so the Real Contact has finished in the first step already.

STRENG (Skt):  
5. That which is the coincidence (6) (saṃnipata) of visual form, consciousness, and the eye: That is sensual perception; and from perception, sensation (7) begins to function.

BOCKING (Ch).  
26v4 On account of the six contacts
The threefold reception arises
On account of the threefold receiving
Craving is produced.

BATCHelor (Tb):  
The gathering of the three: eye and [visual] form and consciousness, that is "impact." From impact feeling totally arises.

DOCTOR (Tb):  
Contact is the meeting
Of eye, form, and consciousness.
Out of this meeting
Arisen sensation. [XXVI.5]

GARFIELD (Tb):  
5. That which is assembled from the three - Eye and form and consciousness, is contact. From contact
Feeling comes to be.

GARFIELD-SAMTEN (Tb):  
5. That which is assembled from the three — Eye and form and consciousness — is contact. From contact
Feeling comes to be.

HAGEN (paraphrase):  
26.5 Whatever is assembled from eye and form and consciousness, is contact. From contact arises feeling.

KALUPAHANA COMMENTARY

The twelvefold formula presents feeling as being conditioned by contact (phassapaccaya vedana). However, Nagarjuna feels the need to explain what contact is all about. He, therefore, inserts the explanation of contact prodded by the Buddha in the Madhupinda-sutta (M 1.111-112; Chung 28.3 [Taisho 1.604b]). Contact is the harmonious concurrence (sangati) of three factors: material form, (visual) consciousness, and eye. It is this harmonious concurrence that provides a foundation for feeling (vedana).

GARFIELD COMMENTARY

5. It is important to note that this occurrence of “consciousness” (rnam-par shes-pa) in fact refers to the apprehension of the previous verse, which is in Buddhist psychology a form of consciousness. But it should not be confused with the consciousness whose condition is contact, on pain of a hopeless explanatory tangle. Contact, as we have seen, is dependent upon the existence of the organ, the object, and the functioning of the sense faculty. Dependent upon that contact is sensation. The exposition here is perfectly traditional. It only derives its punch from the context: In light of the connection that has been developed between the dependence that is central to this model and emptiness, the entire Theravada model of the nature of the phenomenal world comes to look like an analysis in terms of emptiness.
Kārikā XXVI.6

| sred (2)par gyur na ñe bar len | mam pa bźi po ñer len ’gyur |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 6 - Relationally conditioned by feeling, craving arises because it "thirsts after" the object of feeling. In the process of craving, the fourfold clingings are seized. - Note: Reference to clingings of passions, dogmatic views, rigid rules of conduct, and selfhood (kama, drsti, sila, atman).

JONES (Skt):
[6] Craving has sensation as its condition since the object of sensation is craved for. When there is craving, clinging to the four domains of clinging (desires, views, rules, and a sense of self) arise.

KALUPAHANA (Skt):
Conditioned by feeling is craving. Indeed, craving is feeling-directed. The one who craves, grasps on to the fourfold spheres of grasping.

MCCAGNEY (Skt):
Craving is conditioned by feeling, indeed, craves because of feeling. He is laid hold of by grasping a fourfold craving.

NISHIJIMA (Skt?):
6. Proclaiming what is different from the Real Truth, is called Desire. Because the seriously painful efforts are usually esteemed by ordinary people to be so especially exaggerated. The strong Desire is usually seemed to be common efforts for their own profits. Because of the result, they have got the four kinds of so-called human virtues.

STRENG (Skt):
6. "Craving (8)" (trṣna) for existing things is conditioned by sensation. Certainly a person craves for the sake of sensation. The one who craves acquires the four-fold acquisition (9) (upadana) namely sexual pleasure, false views, ascetic morality and vows, and the doctrine of self-existence.

BOCKING (Ch):
[n/a]

BATCHELOR (Tb):
Due to the condition of feeling, there is craving; one craves for what is felt. When one craves, one clings to the four aspects of clinging [sense objects, views, morals and rules, and views of self].

DOCTOR (Tb):
Conditioned by sensation, there is craving, Craving with respect to sensation. When there is craving, there will be grasping, Grasping in the fourfold way. [XXVI.6]

GARFIELD (Tb):
6. Conditioned by feeling is craving. Craving arises because of feeling.

GARFIELD-SAMTEN (Tb):
6. Conditioned by feeling is craving. Craving arises for feeling. When one craves, The four objects of appropriation will be appropriated.

HAGEN (paraphrase):
26.6 Conditioned by feeling is craving. Craving arises with feeling. In one who craves there is grasping of the fourfold spheres.

KALUPAHANA COMMENTARY

Here Nagarjuna has an interesting explanation of craving (trṣna) when he says: vedanartham bi trṣyate, i.e, "it is for feeling that one craves." It is a reference to the pleasant feelings (subha, manapa, or sukha). The fourfold spheres of grasping are: grasping for desires (kama), for views (ditthi), for rules and rights (silabbata), and for theories of self (attavada)(M 1.51).

GARFIELD COMMENTARY

6. Pleasurable sensations lead to craving; painful ones lead to craving for their end. That craving leads to grasping - an attempt to appropriate and make one’s own the source of pleasure or the means for the alleviation of pain, and to excessive valuation of the grasped object. The four spheres probably denote the four realms - the desire, the form, the formless, and the pure, entities in each of which could be the objects of grasping.
Kārikā XXVI.7

upādāne sati bhava upādātuḥ pravartate
syād dhi yady anupādāno mucyeta na bhaved bhavah ||7||

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 7 - When there is clinging perception, the perceiver generates being (bhava). When there is no clinging perception, he will be freed and there will be no being.

JONES (Skt):
[7] When clinging exists, the rebirth (i.e., “becoming”) of the one who clings develops. For if one were without clinging, one would be released and there would be no more becoming.

KALUPAHANA (Skt):
When grasping exist, becoming on the part of the grasper proceeds. If he were to be a non-grasper, he would be released, and there would be no further becoming.

MCCAGNEY (Skt):
Where grasping exists, the being who grasps is set in motion. Indeed, If there would be no grasping, he would be released and there would be no being [who grasps].

NISHIJIMA (Skt?):
7. Living for our own Action is just our existence. Actions of ourselves are going on ahead. In that case the receptacle might not be working for its own purpose. And so Giving Up should never be permissible to exist, might be the existence itself.

STRENG (Skt):
7. When the acquisition exists, the acquirer begins to function (10) (i.e. existence, becoming). If he were someone without acquisition, that being would be released, and would not exist.

BOCKING (Ch):
26v5 On account of craving there are the four graspings And because of grasping there is existence. If the grasper would not grasp There would be liberation, and no existence.

BATCHelor (Tb):
When there is clinging, the becoming of the clinger fully arises. When there is no clinging, one is freed; there is no [more] becoming.

DOCTOR (Tb):
Grasping will initiate The becoming of the grasper. Absence of grasping will result In liberation free from becoming. [XXVI.7]

GARFIELD (Tb):
7. When there is grasping, the grasper Comes into existence. If he did not grasp, Then being freed, he would not come into existence.

GARFIELD-SAMTEN (Tb):
7. When there is appropriation, The existence of the appropriator arises. If he did not appropriate, Then being freed, he would not come into existence.

HAGEN (paraphrase):
26.7 When there is grasping there is a grasper. When there is no grasping, there is release without further becoming.
KALUPAHANA COMMENTARY

It is interesting to note that at this point in the explanation of the twelvefold formula Nagarjuna speaks of freedom or release (moksa). It is a point at which the process of bondage can be interrupted. Nagarjuna is probably emphasizing this because he witnessed how his fellow Buddhists, in spite of their enormous intellectual capacities, constantly adhered to metaphysical views and were caught in "Brahma's Net" (brahma-jala). Some of these intellectual giants, who were able to write commentary after commentary, even though they had abandoned household lives were enamored with their views and involved in ceaseless diatribes. Realizing the emphasis placed by the Buddha upon "nongrasping" (anupadana), Nagarjuna interrupts his exposition of the process of bondage to explain freedom.

GARFIELD COMMENTARY

7. The identity of the individual as a grasper - and hence as a deluded actor in the world and an agent of the continuation of saṃsāra - depends upon this grasping. As Nāgārjuna argued in Chapters VI and XVI, without grasping, there is no grasper.
Kārikā XXVI.8

pañca skandhāḥ sa ca bhavo bhavāj jātiḥ pravartate |

INADA (Skt):
Verse 8 - Being is (always in reference to) the five skandhas and from being birth arises. Old age-death, suffering, etc., misery, grief... (continues on to the next verse.)

JONES (Skt):
[8-9] The five bodily aggregates are the new becoming. From this becoming, birth develops. From birth, aging, death, suffering, and so forth develop, as well as grief, lamentations, dejection, and despair. Such is the arising of the complete aggregate of suffering.

KALUPAHANA (Skt):
The five aggregates constitute this becoming. From becoming proceeds birth. Suffering relating to decay and death, etc., grief, lamentation, dejection, and despair all these proceed from birth. Such is the occurrence of this entire mass of suffering.

MCCAGNEY (Skt):
He, the being, is five skandhOOS and from being, rebirth is set in motion, together with lamentations, afflictions, suffering, etc., old age and death.

NISHIJIMA (Skt?):
8. When the five kinds of Aggregates really exist, Leaving from the existence, the Births are going on to be continued endlessly.
Birth, death, many kinds of pains, and so forth, Are, miscellaneous accumulation of grief, which are mixture of complains.

STRENG (Skt):
8. That being is the five "groups of universal elements" (skandha). Because of a being, birth (11) begins to function. Growing old, dying, sorrow (dukkha) (12), etc., grief and regrets,

ENGLISH TRANSLATIONS

BOCKING (Ch):
26v6 From existence there is birth
From birth comes old age and death
Because of old age and death there are
All the afflictions of sorrow and ill.

BATCHelor (Tb):
Becoming is the five aggregates; from becoming one is born. Aging, death, torment, lamentation, pain,

DOCTOR (Tb):
Becoming is the five aggregates.
From becoming follows birth.
Aging and death, grief,
Lamentation, pain, [XXVI.8]

GARFIELD (Tb):
8. This existence is also the five aggregates.
From existence comes birth,
Old age and death and misery and Suffering and grief and...

GARFIELD-SAMTEN (Tb):
8. This existence is also the five aggregates.
From existence comes birth,
Old age, and death and misery and Suffering and lamentation and. . . .

GOLDFIELD (Tb):
"Existence" is karmic action performed with the five aggregates.
From existence comes birth,
And from birth,
Aging, death, agony, bewailing, pain, (8)

HAGEN (paraphrase):
26.8 & 26.9 Grasping at the five aggregates is being, With being comes birth. Old age and death, grief, lamentation, dejection, and despair all follow. Such is the occurrence of this entire mass of dukkha.

[No commentary on this verse]
Inada (Skt): Verse 9 - Despair and mental disturbance arise from birth. In this manner the simple suffering attached to the skandhas comes into being.

Jones (Skt): [9] [see above]

Kalupahan (Skt): [included in XXVI.8 above]

Mccagney (Skt): Together with despair, all this is set in motion from birth. Thus is the origin of this entire mass of suffering.

Nishijima (Skt?): 9. Discouraged situations usually approach by themselves, Relying upon Birth, the Real Situations of this place are going on. The isolated situations are like those. And Pain, which belongs to miscellaneous things and phenomena, are the Total Existence.

Streng (Skt): 9. Despair and agitation: all this results from birth; That "produced being" is a single mass of sorrows (dukkha).
KALUPAHANA COMMENTARY

The elimination of craving for becoming (bhava-tanha), as mentioned earlier (see XXV. 10), was encouraged by the Buddha. The reason for this is not merely because craving causes suffering in this life, but also because it could lead to birth in another life (jati), which would also involve the repetition of all the unfortunate experiences of the present life. The phrase duhkha-skandha is used in the sense of heap or mass of suffering rather than "suffering attached to the skandhas," (Inada).

GARFIELD COMMENTARY

9. But moreover, the account that emerges so far of the nature of human existence - one involving a body, sensations, perception, dispositions, and consciousness - is just the account of personal existence in terms of the five aggregates into which standard Buddhist psychology analyzes the person. So this account so far is an account of the conditions that give rise to human existence. But human existence gives rise to human births, and these eventually give rise to aging, to pain and suffering, and eventually to death and the consequent grief of one’s loved ones. This part of the story, of course, is central to making the case for the first two noble truths.

We are born with dispositions to reify, to crave, and to grasp, all of which, on this analysis, lead directly to suffering - to the pain of wanting what we cannot have, of not wanting what we do have, of grasping onto permanence in an impermanent world, of cherishing our own existence and interests in a world where they are minor affairs, and of grasping for independence and freedom in a conditioned universe.
Kārikā XXVI.10

saṃsāramūlaṃ saṃskārān avidvān saṃskaroty ataḥ |
avidvān kārakas tasmān na vidvāms tattvadarśanāt ||10||

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 10 - Consequently, the ignorant creates the mental conformations which form the basis of samsaric life. Thus the ignorant is the doer while the wise, seeing the truth (tattva), does not create.

JONES (Skt):
[10] Thus, the one who is subject to the root-ignorance forms the dispositions that are the basis of the cycle of rebirths. Therefore, the one who is ignorant is the one who forms a new rebirth, not the one who knows by seeing reality.

KALUPAHANA (Skt):
Thus, the ignorant forms dispositions that constitute the source of the life process. Therefore, it is the ignorant who is the agent, not the wise one, because of his [the latter's] perception of truth.

MCCAGNEY (Skt):
Hence the ignorant compose dispositions, the roots of samsāra.
Therefore, the ignorant create while the wise, seeing reality, do not.

NISHIJIMA (Skt?):
10. Some kinds of Basis, that is the Basic Wandering, create combinations. And there the artificially produced ignorance is constructed. Therefore even any kind of ignorance is not created anymore. So the clever people will leave the Truth looking at it by Eyes.

STRENG (Skt):
10. Thus the ignorant people construct the conditioned things (samskara); that is the source for existence-in-flux. The one who constructs is ignorant; the wise person is not one who constructs because he perceives true reality.
KALUPAHANA COMMENTARY

The enlightened one who had attained the appeasement of dispositions (samskaropasama) does not contribute to the perpetuation of the life-process (samsara). Hence, he is not an agent (karakah) responsible for such perpetuation. This seems to indicate Nagarjuna's awareness of the Buddha's famous statement that upon attaining enlightenment he perceived the builder of the home (gaha-karaka, Dh 154). Reading too much metaphysics into the phrase tattva-darsana can destroy all that Nagarjuna attempted to do in the preceding twenty-five chapters. Instead of explaining it as “the perception of an absolute reality,” it could be more appropriately understood as the perception of the empirical truth that “all this is empty” (sarvam idam sunyam) of a substance (svabhavatah).

GARFIELD COMMENTARY

10. (“Therefore, the wise one does not act” fn 136. “du byed” (Skt.: samskara). This term is often translated in this text as “disposition.” It can also mean “to compound” or “compounded phenomenon.” Here it must function as a verb. Both Streng (1967) and Inada (1970) prefer the reading “to compound” or “to construct.” But given Nāgārjuna’s theory of action, as we have seen, dispositions and actions are of a kind. And what generates the karma that creates and maintains cyclic existence is action. Hence, I read the term here as denoting action and disposition together, via its primary meaning, “disposition.” This receives further support from the use of the nominal “byed-po, “ which is cognate with the compound “ ‘du byed” and is most naturally translated as “agent.” It is important, however, to bear in mind that Nāgārjuna is discussing actions and dispositions together as a unitary phenomenon and thinking of them - as the translations of Inada and Sprung bring to the fore - as that which constructs or creates our future existence. dGe ‘dun-grub agrees with this reading, as does Je Tsong Khapa. I am indebted to the Yen. Sherab Gyetso for convincing me of this.)

The place to pick up the tangle in order to unravel it, from the standpoint of practice, Nāgārjuna suggests, is with action and disposition, here comprised together under the single term “action” (“du byed), which in this context conveys not only the unity of action and disposition as seen from the soteriological point of view, but also their role in creating or bringing about future existence. These are most easily controlled through philosophical reflection, through meditation, and through assiduous practices of various virtues. By changing the way that we act physically, verbally, and mentally, we thereby change the way that we perceive, think, and act and thereby change what we see and the consequences of our actions.
Kārikā XXVI.11

[Robinson states that this verse in the Sanskrit has no correlate in the Chinese (but also, verses 4 & 6).]

avidyāyāṁ niruddhāyāṁ saṃskārāṇām asaṃbhavaḥ | avidyāyā nirodhas tu jñānasyāśyaiva bhāvanāt ||11||

[ROBINSON (Skt):
When ignorance is extinguished, the dispositions do not arise. The extinction of ignorance by knowledge [takes place] through meditation on [dependent co-arising].]

ROBINSON (Skt):
When ignorance is extinguished, the dispositions do not arise. The extinction of ignorance by knowledge [takes place] through meditation on [dependent co-arising].

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 11 - When ignorance is banished mental conformations do not arise. But the extinction of ignorance is dependent upon the wisdom of practicing (the cessation of the twelvefold causal analysis of being).

JONES (Skt):
[n] With the root-ignorance ceasing, the dispositions do not come together. However, the cessation of the root-ignorance comes through meditative development and through knowledge.

KALUPAHANA (Skt):
When ignorance has ceased, there is no occurrence of dispositions. However, the cessation of that ignorance taken place as a result of the practice of that [non-occurrence of dispositions] through wisdom.

MCCAGNEY (Skt):
Since the destruction of dispositions is the cessation of ignorance, cessation of ignorance is from practice based on knowledge.

NISHIJIMA (Skt?):
11. Following ignorance might be the same as following suppression.
Belonging to the aimless wandering might be the refusal of living together.
Following ignorance might be the same as confinement.
Belonging to the whole knowledge, and following it, is just the leaving from existence.

STRENG (Skt):
11. When ignorance ceases, the constructed phenomena do not come into existence. A person's cessation of ignorance proceeds on the basis of "becoming" enlightened through knowledge.

WESTERHOFF (Skt):
XXVI.11 [W]ith the cessation of ignorance, formations will not arise. Moreover, the cessation of ignorance occurs through right understanding (jnāna).

ROBINSON (Skt):
When ignorance is extinguished, the dispositions do not arise. The extinction of ignorance by knowledge [takes place] through meditation on [dependent co-arising].

BOCKING (Ch),
[n/a]

Batchelor (Tib):
When ignorance stops, formative impulses too do not occur. The stopping of ignorance [comes] through practising that with understanding.

DOCTOR (Tib):
When ignorance has ceased, formation does not arise either. The cessation of ignorance is accomplished by meditating on reality through insight. [XXVI.11]

GARFIELD (Tib):
11. With the cessation of ignorance action will not arise. The cessation of ignorance occurs through meditation and wisdom.

GARFIELD-SAMTEN (Tib):
11. With the cessation of ignorance, action will not arise. The cessation of ignorance occurs through exercising wisdom in meditating on this.

GOLDFIELD (Tib):
When ignorance ceases, karmic actions cease. The cessation of ignorance is the result of meditating with knowledge of reality’s precise nature. (11)

HAGEN (paraphrase):
26.11 When ignorance has ceased, there is no occurrence of constructed phenomena. The cessation of ignorance occurs through the cultivation of Mind and through wisdom.
KALUPAHANA COMMENTARY

The mutual relationship between cessation of ignorance and the non-arising of dispositions is emphasized by Nagarjuna, keeping in mind the distinction between the appeasement of dispositions (samskaropasama) in the present life and their waning (samskara-ksays) at the time of death, thereby not providing another opportunity for rebirth.

GARFIELD COMMENTARY

11. But in order really to modify our actions and dispositions to act, we need wisdom - in this context an understanding of the real nature of things, which for Nāgārjuna means the view of all things as empty. This view, Nāgārjuna asserts, must be internalized through meditation, so that it becomes not merely a philosophical theory that we can reason our way into, but the basic way in which we take up with the world. Accomplishing that, he asserts, leads to the cessation of that activity responsible for the perpetuation of the suffering of saṃsāra.
**Kārikā XXVI.12**

**ENGLISH TRANSLATIONS**

INADA (Skt):
Verse 12 - By the cessation of the various links of the causal analysis, each and every subsequent link will not arise (i.e., become a hindrance). And thus this simple suffering attached to the skandhas is rightfully extinguished.

JONES (Skt):
[12] Through the cessation of each step, the following step does not arise. Thereby, the entire aggregate of suffering is completely ended.

KALUZAHANA (Skt):
With the cessation of these, these other factors [of the twelvefold formula] would not proceed. In this way, this entire mass of suffering ceases completely.

MCCAGNEY (Skt):
With the cessation of [ignorance], which [link on the causal chain] advances to what [next link]?
Thus this entire mass of suffering is rightly ceased.

NISHIJIMA (Skt?):
12. Relying upon self-regulation of each thing,
Each concrete thing does never go ahead by itself.
An aggregate called Pain is isolated from this World,
Similarly the Totality is regulated by itself.

STRENG (Skt):
12. Through cessation of every component none functions; That single mass of sorrow (dukkha) is thus completely destroyed.

DOCTOR (Tib):
As each of them ceases,
None of them will occur.
Thus, this mass of nothing but suffering Will actually come to an end. [XXVI.12]

GARFIELD (Tib):
12. Through the cessation of this and that
This and that will not be manifest.
The entire mass of suffering
Indeed thereby completely ceases.

GARFIELD-SAMTEN (Tib):
12. Through the cessation of this and that,
This and that will not be manifest.
That which is only a mass of suffering
Will thus completely cease.

GOLDFIELD (Tib):
When the earlier links cease,
The later links do not occur,
And that which is only a heap of suffering
Perfectly comes to an end. (12)

HAGEN (paraphrase):
26.12 With the cessation of these, the other factors of the twelvefold chain will not appear. In this way, the entire mass of dukkha completely ceases.
PINGALA COMMENTARY

26/9 Because the ordinary man is deluded by ignorance, he creates by his actions of body, speech and mind his subsequent body, and gives rise to predispositions towards the six destinies. According to the predispositions which he has generated he becomes higher, the same (middle), or lower. His consciousness, entering into the six destinies according to its predispositions receives a body. With the attachment of consciousness as their basis name and form accumulate, and because of the accumulation of name and form there are the six avenues. With the six avenues as their cause, the six contacts ensue, and on account of the six contacts there is threefold reception. With the three receptions as its cause craving arises, and because of craving there are the four graspings. When the four graspings grasp, sin and merit are generated by the actions of body, mind and speech, and these cause the subsequent succession of the three existences.

(36c15) From existence comes birth, from birth come old age and death, and from old age and death come sorrow, grief, suffering and all the various evils, and there simply exists the great accumulation of suffering of the skandhas.

Hence we know it is that the ignorance of the ordinary man generates the foundation of the predispositions to birth and death here. They are not generated by one who has insight, who by seeing things as they really are, puts an end to ignorance.

(36c19) When ignorance ceases, all the predispositions also cease, and because the causes have ceased, the effects also cease. Thus by assiduously cultivating insight which views the arising and ceasing of the twelve causal conditions, these things cease, and because they cease, all of them including birth, old age and death, sorrow, grief, and the great suffering of the skandhas really and completely cease.

'Completely ceased' means utterly ceased. The meaning of the arising and ceasing of these twelve causal conditions is just as explained in detail in the Abhidharma-sutra.

KALUPAHANA COMMENTARY

The emphasis is probably on the cessation of ignorance and the non-arising of dispositions. These two factors are taken to predominate the entire life-process. The attainment of enlightenment and the appeasement of dispositions through non-grasping (anupadana) account for "freedom with substrate" (saupadisesanirvana), while the elimination of dispositions provides for non-re-becoming (a-punar-bhava)(cf. XXVI. 1) and the waning of birth (jati-ksaya), which is freedom "without substrate" (nirupadisesanirvana).

GARFIELD COMMENTARY

12. And this is not only the analysis Nāgārjuna offers of the world and of our experience of it, but his final soteriological recommendation given the doctrine of the emptiness of all phenomena. Human existence and experience are indeed governed by the twelve links of dependent origination. But since they are essentially dependent, they are essentially empty and, hence, are impermanent and subject to change. The twelve links provide an anatomy and an etiology of suffering. But by understanding their impermanence and dependency, we also see the cure for that condition. For by cultivating a clear and accurate philosophical view of the nature of things - the view so explicitly articulated in Chapter XXIV, by internalizing that view, and by taking up with the world in accordance with it, we can cease the reification of the "this" and the "that," grasping for which binds us to suffering. Nāgārjuna argues that if we can achieve that, we can achieve the nirvāṇa characterized in Chapter XXV - a nirvāṇa hot found in an escape from the world but in an enlightened and awakened engagement with it.

1. Arguments based on the existence of other worlds
2. Arguments based on continuous arising and disintegration
3. Arguments based on the combination
TSONG-KHA-PA (Outline, Explanation, Summary)

OUTLINE:

This chapter constitutes the third and final part of the section explaining the meanings of the individual chapters: the demonstration of how, once one understands dependent origination, the erroneous views are abandoned.

EXPLANATION:

Suppose one asked, “Since the Salistambha-sutra says that whoever has seen dependent origination perfectly does not rely on the extreme view that there is a beginning or the extreme view that there is an end [mDo sde tsha 123a], what are the extreme views that there is a beginning and that there is an end, and how is it that one should not rely on these?”

This answer to this has two parts: identifying the sixteen false views and how to show that one who understands dependent origination does not rely on them.

SUMMARY:

All of those who belong to the family of the supreme vehicle, urgently driven by great compassion they have cultivated, are steadfast in this attitude: “I will relieve all suffering sentient beings, who are suffering from any of the three kinds of suffering, and will lead them to complete enlightenment.” [479] For this purpose, they cultivate aspirational bodhicitta—that is, the aspiration to attain unparalleled enlightenment—with firm resolution at the beginning.

Seeing that without the practice of the six perfections of the bodhisattva this resolution cannot be fulfilled, they undertake engaging bodhicitta through the perfect rites, and thus take up the great burden of training in the practices of the sons of the Victor. Seeing that the principal practice for those for whom the training in the six perfections is the heart of their practice is the middle path that abandons the two extremes, they seek the perfect view of the final reality of things—the definitive meaning—just as it has been established by the arguments presented in master’s text, which we have explained above.

Having obtained that, and having seen that without mental quiescence, even though one has developed the view of the way things really are, the afflictions cannot be subdued, they strive to achieve the practice of mental quiescence, and they exert effort in meditation on the perfect view. Therefore, the view that is established in this text should be cultivated through this kind of practice. All of these stages are presented extensively in The Great Exposition of the Stages of the Path to Enlightenment.

The manner of seeking the view in order to find the definitive meaning, referring to the final reality of phenomena, is to be applied not only in the vehicle of the perfection of wisdom, but should also be applied to the tantric vehicle, because with respect to the meaning of reality, there is no difference between the two Mahayana vehicles.

INADA (Chapter Introductions)

CHAPTER XXVII - Examination of (Dogmatic) Views

This final chapter of the Karika again, as in the preceding chapter, treats Hinayanistic doctrines prevalent at the time. As the title indicates, it is an examination of false or dogmatic views which the Hinayana leveled against non-Buddhists but once again we must not lose sight of the principal doctrine of sunyata that Nagarjuna always has in the background. The doctrine of course does finally appear in Verse 29.

He begins the chapter by investigating such pet dogmatic or futile questions as whether or not there is existence in the past, and whether or not the realm of existence or the world is constant. These and other ideas relative to future events are all based on preconceived notions and never applicable to the present dynamic state of thing. Characteristic of the "logic of sunya," as seen in previous chapters, he exhibits the untenability of each and every position. He also goes on to show the absurdity involved in trying to assign partial characterization to one realm and another partial characterization to yet another realm as, for example, speaking of partially limited and partially unlimited worlds. How then, he asks, could one portion of the perceiver be destroyed and another remain undestroyed? Thus we come to the final and foremost teaching of the historical Buddha, i.e., the true law (saddharma), which is beyond all views and valuation in the strictest sense. Indeed, as Nagarjuna reminds us, all existences are of the nature of Sunyata (devoid of characterization).
27. Views (ditthi). Buddha’s denial of a permanent and eternal self (atman) and his explanation of the human personality and its survival of death in terms of the doctrine of dependent arising have remained unpalatable to most philosophers ever since he presented them. Veridical memories of past existences being connected with present experience as a result of meditation, as in the case of the Buddha and many other ascetics, and sometimes without any such practice or effort, have received a two-fold interpretation in the hands of these philosophers. Some have assumed the existence of a permanent and eternal self or substratum to account for such phenomena, even in the absence of so-called empirical evidence (empiricism as understood by the Buddha?) to support the belief in a permanent and eternal self. These are the eternalists (sassata-vadin). Others have rejected not only the belief in a permanent and eternal self but also the veridical, though sporadic, memories as mere hallucinations of deranged minds. These are the annihilationists (ucchedavadin). These two views have prevailed in the world until the present day, just as similar views regarding the relationship between cause and effect have survived. The reasons for the prevalence of such views were explained briefly by the Buddha in the Kaccayanagott-sutta when he spoke of inclinations (upaya), grasping (upadana), and involvement (abhinivesa) on the part of the human beings. More detailed explanations were given in other discourses. Whether there were to be veridical memories of past lives or not, the Buddha recognized that human beings were prone to ask three types of questions regarding existence:132

1. “Did I exist in the past or not?” (Ahosim nu kho ati tam addhanam, na nu kho ahosim ati tam addhanam). This, according to the Buddha, pertains to the prior end of existence (pubbanta), and is prompted by a desire to know the first beginning of things, including oneself.

2. “Will I exist in the future or not?” (Bhavissami nu kho anagatam addhanam, na nu kho bhavissami anagatam addhanam). This pertains to the future and is prompted by a desire to know the final end of things, including one’s own destiny.

3. “Do I exist in the present, or do I not exist in the present?” (Aham nu kho asmi, no nu kho asmi). This pertains to the status of one’s present existence.

The Buddha felt that such speculations led to a wide variety of views (ditthi), sixty-two as specified in the Brahmajala-suttanta,133 of which permanent existence (atthita, sassata-ditthi) and annihilation (n’atthita, uccheda-ditthi) are foremost. Even though the Buddha recognized veridical memories of past existences, yet because of the absence of any empirical evidence to support the hypothesis of a permanent and eternal substratum as well as the difficulties involved in predicting future events with absolute certainty, the Buddha questioned his disciples as to whether it is appropriate for them to “brood over the past” (pubbantam patidhaveyyatha) or long for the future (aparantam adhaeyyatha) or be unnecessarily skeptical about the present (paccuppannam addhanam ajhattama kathamkath esa asatha). He advised them that instead, with the resources available, they should try to understand things as they have come to be (yathabhutam) and work out freedom from suffering. Getting enamoured of any view, whether it is appropriate or inappropriate, would lead to further bondage and suffering. Hence the Buddha’s advice to his disciples: “Without grasping on to a view, being endowed with proper perception and morality, and having restrained one’s greed for pleasures of sense, one avoids a future birth.”134

It is significant to note that Nagarjuna’s final chapter on “Views” (ditthi) deals with the same issues. He begins his chapter with a reference to the three epistemological inquiries of human beings in relation to the past, present, and future, which give rise to various views on the nature of man and the universe. The first three verses present in identical terms the Buddha’s own explanation of these views as stated in the passage from the Majjimata-nikaya quoted above. These inquiries and grasplings (upadana) are then understood as the reason for the variety of views discussed in verses 4-28. As the notes on these verses would indicate, these twenty-five verses deal with the variety of views discussed by the Buddha in the Brahmajala-suttanta, thus providing undeniable evidence that Nagarjuna had access to most of the discourses of the Buddha that came to be preserved in the Nikayas and the Agamas, and that he was merely restating the original message of the Buddha rather than providing a philosophical justification of a sectarian view.

The variety of wrong views (miccha-ditthi) was rejected by the Buddha primarily on pragmatic grounds, that is, because they do not lead to freedom and happiness.135 They neither bring about worldly fruits (attha) nor they contribute to the ultimate fruit (paramattha), i.e., freedom and happiness. Instead they lead to dogmatism, conflict, and suffering. The “middle position” as the right view (samma-ditthi), whether it be dependent arising (paticcasamuppada) or non-substantiality (anatta), or as Nagarjuna puts it, “absence of self-nature” (nihsvabhava) or emptiness (sunnata), leads to worldly fruits as well as the
ultimate fruit. However, if that right view were to become another dogma, it would certainly contribute to conflict and suffering, thereby losing its pragmatic value. In other words, a right view is one for which there cannot be grasping, for if one were to grasp it it would turn out to be a closed view not an open one. This explains why Nagarjuna concludes his chapter on “views,” and along with it his famous treatise, with a salutation to the Buddha, a salutation that clearly reflects his knowledge of the Buddha’s attitude towards dogmative views (as embodied in the verse quoted previously):

I reverently bow to Gautama who, out of compassion, has taught the true doctrine for the relinquishing of all views. (XXVII.30)

**BATCHelor (Poetic “Translation”)**

Opinion

“I was here before.”
“No, you weren’t.”
“This will last forever.”

Horizons of the past.

“I will survive.”
“No, you won’t.”
“This will end.”

Horizons of the future.

What happened in the past
Is not happening any more.
If you think what happened then became you now,
What you grasp would be something else.
What are you but what you grasp?

If you are what you grasp,
You would not be here.
For what you grasp comes and goes;
It cannot be you.
How can the grasped be the grasper?

You’re not different from what happened then.
If you were, you would not need a past.

You could survive without having to die.
The past would be severed, revocable.
Others would experience your acts.
Without a past you would be
Either manufactured or uncaused.

"I was here before.”
“No, you weren’t.”
“I was and I wasn’t.”
“You neither were nor weren’t.”
“I will survive”
“No, you won’t.”

Opinions are absurd.

If the gods were us,
We would be eternal;
For the gods are unborn in eternity.
Were we other than them,
We would be ephemeral.
Were we different,
We would never connect.

If I were half a god and half a man,
I would be eternal and ephemeral.
What can be ephemeral
Without eternity?

If this ends, what world would follow?
If this never ends,
What world would follow?
Like the flame of a lamp
The flow of matter and mind
Neither ends nor never ends.

This would end
If mind and matter failed to flow
From the dying of their past;
It would never end
If mind and matter failed to flow
From a past that never died.

If half this ended and half did not,
I would both end and never end,
Leaving half the grasper
Dead and half undead,
Half the grasped destroyed,
Half undestroyed.

Everything is empty –
In whom? About what?
Do opinions erupt?

*For Gautama.*
In whose embrace
Dharma was shown
And opinions vanished.
27. Views

The word translated here as “views” (drishtis) is a technical term in Nagarjuna’s vocabulary: it does not mean any metaphysical view, but only a view connected in some way to seeing self-existence (svabhava) in oneself or in the phenomena of the world at large. (See Key Terms.)

Verse 3 brings up the philosophical problem of personal identity over time and change. Nagarjuna is denying that the “I” in the past can be the same as the “I” of today since real (self-existent) things do not change, but any rebirth or other development requires change and thus no real entities are involved (vv. 4-5). There is also no self apart from the acquisition involved in new rebirths, and it is not identical to that process either; but, on the other hand, this “self” does not not exist conventionally (vv. 7-8). The “I” that existed in past is not identical to the “I” of today (v. 3), but the past “I” and the present “I” are not completely different either (vv. 9-10); this again entails that no real entities are involved. So, there is no identity or absolute difference, but the self is still a phenomenal reality. The four options of “exist,” “not exist,” “both exist and not exist,” and “neither exist nor not exist” are again shown to not apply (v. 13). A variation involving being human or being divine follows (vv. 15-20).

Verses 17 and 25 rely on the idea that contradictory properties cannot exist together: permanent and impermanent, limited and unlimited. But something could be limited in one physical dimension and unlimited in another - e.g., a line one inch high (and thus finite in one dimension) and infinitely long (and thus infinite in another). Those Hindu traditions that accept a permanent, transcendental self would argue that a person is finite in his or her life on earth but something infinite continues after death. Nagarjuna may be responding to that.

Verse 18 reads: “If ‘It is both permanent and impermanent’ were established, then it is accepted that ‘It is neither permanent nor impermanent’ could be established.” Verse 28 has the same form. Apparently, this is something like the existence of a bhava being necessary to establish an abhava: only if we could establish that something existed with both features could we establish its absence, i.e., something not merely without one of the features but without either one - the opposite of having both features. Verse 20 relates to the four options: if there is nothing permanent, then there is nothing to contrast with it (i.e., nothing impermanent), and therefore there could not be anything both permanent and impermanent (since neither exists) or anything existing apart from those two features; thus, we cannot think in those terms at all to describe what is real.

“Loka” in verses 2 and 21 is usually translated “world,” but it encompasses all there is in this realm - hence, the “cosmos” may be a better translation. If the cosmos is either finite or infinite, obviously there cannot be any more - no other world - to “all there is.” If we found some limit, either it is the true end of the cosmos (and so there is nothing beyond it), or there is something beyond it and so that is not the true limit - either way, there is nothing beyond any true limit to the cosmos. The analogy for rebirth in the next verse of a flame burning is normally used to show that there is no finite entity involved in the process of rebirth but only a series of changes.

The last verse on “views (drishtis)” presents the problem of whether Nagarjuna himself had any views. This will be discussed in the Essay. Also notice that the last verse stating that the Buddha taught a doctrine contradicts verse 25.17 which says that the Buddha did not teach any doctrine. We might say that this verse is from the conventional point of view, but it would be odd for Nagarjuna to end his treatise on that note. If, as some have suggested, the last two chapters were added later, then verse 25.17 would be Nagarjuna’s final word on the subject.
An Examination of Views

In the sutras, the Buddha taught:

The ones who correctly see dependent arising just as it is will not adhere to views of an earlier, present, or future period of time.

IT IS POSSIBLE to have one of several different views about the self and the universe it inhabits. For example, one could believe that the self and the universe always existed in the past, or that at some point in the past they did not exist. One could believe that the self and the universe will always exist in the future, or that at some point they will not. Finally, one could hold the view that they exist now or that they do not.

Those who see dependent arising just as it is, however, do not adhere to any such views. They know that the true nature of the self and the universe transcends all such notions of existence and nonexistence. They know that when things appear either to exist or not to exist, it is only mere appearance manifesting due to the coming together of causes and conditions, with no inherent nature to it at all. This is the meaning of the Buddha’s teaching quoted above, and in this chapter Nagarjuna proves the validity of this teaching with logical reasoning.

Here again, there are different explanations given for why this chapter was written. The commentary entitled Completely Fearless and Buddhapolita both assert that followers of the Shravakayana asked Nagarjuna, “Please explain how it is that all the different permutations of views are impossible from the perspective of the Shravakayana sutras as well,” and that Nagarjuna composed this chapter to fulfill their request.

Bhavaviveka writes that there were those who argued, “The five aggregates exist because they are the support in which views abide,” and that in response Nagarjuna wrote this chapter to explain how it is that views themselves do not exist.

Finally, Chandrakirti states that Nagarjuna composed this chapter in answer to those who asked him, “The Buddha taught, ‘The ones who see dependent arising will not believe in an earlier or later period of time.’ What are these earlier and later periods of time, and how can one come to abandon the belief in their existence?”

By analyzing the true nature of the self and the universe, we can gain certainty that none of the views that hold them to be permanent, impermanent, finite, or infinite are accurate. As Nagarjuna teaches in the twenty-second verse:

The continuum of the aggregates
Is like the continuum of a butter lamp.

Therefore, to say that the aggregates are finite is illogical. And to say that they are infinite is illogical.

Individuals are composed of the five aggregates. The continuum of these five aggregates that spans the course of countless past and future lifetimes is like the continuum of a butter lamp, and therefore it cannot be described as finite or infinite. Like a butter lamp, the past aggregates have all ceased to exist, which eliminates the possibility that anything within them has infinite duration. That the future moments of the aggregates unfailingly occur, however, eliminates the possibility that they are finite, that they have some time limit to their existence.

Here it is also helpful to consider one’s aggregates that appear in a dream: They are neither finite nor infinite, because they are just dependently arisen mere appearances.

The twenty-ninth and final verse of the chapter is a summary of all the refutations of the various views that have been explained up to this point:

Since all things are empty,
Why would anyone, anywhere, at any time,
View things as being permanent or anything else?

The commentary to this verse reads, “The genuine nature of reality transcends all conceptual fabrications. Therefore, all inner and outer things are dependently arisen and empty, like reflections, so why would anyone who knew this, anywhere, at any time, view things as being permanent or anything else? They would not, because they would know everything to be emptiness.”

There is no valid reason for the views that things are permanent, impermanent, finite, or infinite to arise, because all phenomena are dependently arisen, like reflections, and because the nature of reality is the emptiness that transcends conceptual fabrications. Phenomena are of this nature of emptiness because their mode of appearance is that they are dependently arisen mere appearances.

This chapter has demonstrated that these inferior views of permanence and so forth do not truly exist, and therefore the one who holds them does not really exist either. The explanation that some views are inferior can be made only in dependence upon the notion that there are some better views to have—therefore, this is only a presentation from the perspective of apparent reality and the concepts that fabricate it. In the true nature of reality, there are neither good views nor bad ones. Samsara and nirvana are of the nature of perfect equality; they are undifferentiable. As Nagarjuna taught in chapter 25, “An Examination of Nirvana” (verses 19-20):

Samsara is not the slightest bit different from nirvana.
Nirvana is not the slightest bit different from samsara.
The true nature of nirvana
Is the true nature of samsara,
And between these two
There is not even the tiniest, subtlest difference.

Therefore, there are really no inferior views, nor anyone who has inferior views. These things simply do not exist in genuine reality. Nagarjuna described the way that things are imagined and designated in apparent reality in this verse from chapter 7, “An Examination of the Composite” (verse 34):

Like a dream, like an illusion,
Like a city of gandharvas,
That’s how birth and that’s how living,
That’s how dying are taught to be.

Concluding Homage

Holding you in your incredible wisdom and love,
You taught us the genuine Dharma
To help us abandon all views.
I prostrate before you, Gautama.

THIS IS THE HOMAGE with which Nagarjuna concludes the text, offering his prostration to the Buddha in gratitude for the Buddha’s tremendous kindness.

The commentary to this verse reads, “The Protector of Beings taught the genuine Dharma not out of any desire for wealth, respect, or renown, but rather out of his completely pure wisdom and great compassion imbued with nonreferential love (fn The Buddha’s nonreferential love is the perfect union of love and emptiness. It is completely free of the concepts of subject, object, and action; at the same time it spontaneously performs limitless benefit for sentient beings without any notion of some being more worthy of affection than others. It is the very essence of the Buddha’s enlightened mind, and manifesting it within oneself is the ultimate fruition of the Mahayana path.). Holding the beings who wander in samsara close to his heart, he taught the genuine Dharma in order to help them abandon all inferior views that cling to mistaken extremes. His teachings are the cause of attaining the omniscient wisdom that abides neither in the extreme of existence nor in that of peace. . . . They are prajnaparamita, the teachings on dependent arising that completely dissolve all conceptual fabrications. You who taught in this way are the sage called Gautama, the unequaled Lion of the Shakyas. Recalling your great kindness, and with deep respect, I prostrate before you.”

Thus ends The Fundamental Wisdom of the Middle Way.

Chapter Twenty Seven Examination of Views (Drsti-pariksa)

GARFIELD COMMENTARY

Chapter XXVII Examination of Views

The final chapter of the text, like the previous chapter, applies the results of the climactic analyses of Chapters XXIV and XXV. It is noteworthy that all of the classic erroneous views discussed and refuted in this chapter are refuted earlier in the text. Indeed, Chapters XXIV and XXV are immediately preceded by a chapter on errors. One might therefore think that this chapter is otiose, or at least misplaced. For here Nāgārjuna considers a range of alternative metaphysical views conflicting with Nāgārjuna’s analysis in terms of emptiness. These views are all well-known and considered false by all schools of Buddhist philosophy. So why does Nāgārjuna return to them as a collection at the close of the text?

The previous chapter demonstrated the positive payoff of the analysis of emptiness and its relation to conventional phenomena. Nāgārjuna there argued that one can exploit emptiness and an understanding of emptiness in following the path to nirvāṇa. But the pursuit of the path entails the elimination of error. In fact, it can negatively be characterized, as we saw in the nirvāṇa chapter, specifically as the elimination of error. So it is important for Nāgārjuna to show that the analysis developed in XXIV and XXV can not only promote positive movement toward nirvāṇa but also the eradication of the erroneous views that bind us to samsāra. That is the burden of this final chapter. It is also important dialectically to see that Nāgārjuna is demonstrating that the root of all of these erroneous views is the view that the self or the external world exist inherently. If, he will argue, one grants either of those claims, one is stuck with one or more of these errors. It therefore follows that any view, including any view of any other Buddhist school including: all of the schools that castigate these views on independent grounds - that posits inherently existent entities will succumb to these errors. Nāgārjuna thus concludes by arguing not only that his position is capable of leading to nirvāṇa, but that it is the only position capable of doing so.

INADA (Skt):
Verse 1 - Whether or not I existed in the past or whether this world is constant, etc., are (questions) all based upon the views of an anterior state of things.

JONES (Skt):
[1] The views "I existed in the past," "I did not exist in the past," "The cosmos is eternal," and so forth all depend on whether there was a past limit.

KALUPAHANA (Skt):
Whatever views asserting an eternal world, etc. based upon [the perception]: "Did I exist or not exist in the past?" are associated with the prior end [of existence].

MCCAGNEY (Skt):
Wherever views state “I neither existed nor did not exist in the past,” they are supported by those about the past, an eternal world, etc.

NISHIJIMA (Skt?):
1. Sect Future, Sect Past, Sect Secular, And Sect Reality, are the doctrines. They are Belief in Eternity, Belief in the Creator, Belief in Prophets, and Believers in some kinds of doctrines.

STRENG (Skt):
1. Those views relating to the limits of the past reality are: "The world is eternal," etc., And "I have existed in the past," "I have not existed in the past," etc.

BOCKING (Ch):
27v1 Views of self existing or not existing In the past. And of the world being permanent, etc. All depend on the past.

BATCHelor (Tb):
Those views such as “I occurred or did not occur in the past,” the world is permanent, are dependent on the extreme of before.

DOCTOR (Tb):
Past existence and nonexistence, A permanent world, and so forth— These views depend On the extreme of the past. [XXVII.1]

GARFIELD (Tb):
1. The views "in the past I was" or "I was not" And the view that the world is permanent, etc., All of these views Depend on a prior limit.

GARFIELD-SAMTEN (Tb):
1. The views "in the past I was" or "I was not" And the view that the world is permanent, etc., All of these views Depend on a prior limit.

HAGEN (paraphrase):
Views such as “I existed in the past” or “I did not exist in the past,” or “the world is permanent,” etc., all depend on the assumption of a prior limit.
The first line of the verse has been reconstructed by Poussin on the basis of the Tibetan translation. In the Parileyyaka-sutta (S 3.94-99; Tsa 2.25 [Taisho 2.13c-14a]), the Buddha maintained that views such as "The self and the world are eternal" (sassato atta ca loko ca) are metaphysical because they are dispositional answers (sankharo so) to queries about the past such as: "Did I exist in the past or not?" As such, they are not based entirely upon empirical facts. Indeed, they are attempts to go back to the prior end of existence (pubbanta). While the Buddha recognized them as futile attempts, mostly because of the limitations of human knowledge and understanding (see Chapter XI), he was not unwilling to accept whatever evidence available through veridical memories (sadi, pubbenivasanussati). On the basis of such evidence, he characterized the past existences as impermanent (anicca), dispositionally determined (sankhata), and dependently arisen (paticcasamuppanna), and not as permanent (nicca), immutable (dhuva), and eternal (sassata). Nagarjuna's explanation of the metaphysical views of eternalism (sasvata), etc. is, therefore, a vivid representation of the Buddha's attitude regarding such views.

GARFIELD COMMENTARY

1. Nāgārjuna summarizes the diagnosis he will offer of the error underlying these metaphysical views: Any view that the self is permanent or nonexistent or that the world is permanent or nonexistent presupposes that one can think coherently about the beginning of time or of identity. For to think of things as permanent requires us either to posit a beginning of time from which they existed or to assert that time has no beginning. To think that there was a past at which the self did not exist or in which the world did not exist presupposes that we can mark a point at which the world came into existence or at which there is a definite separation between a world without the self and a world with the self - an initial moment of personal existence.
**Kārikā XXVII.2**

"I will not exist in the future," or "I will become someone else in the future," or "the world has limits," etc., all depend on the assumption of a final limit.

---

**INADA (Skt):**
Verse 2 - Whether or not I will exist in the future or whether the (world has) limits, etc., are (questions) all based upon the views of a posterior state of things.

**JONES (Skt):**
[2] The views “Shall I not exist in the future?”, “Shall I become another person in the future?”, “The cosmos has an end,” and so forth, all depend on whether there is a future end to the cosmos.

**KALUPAHANA (Skt):**
Whatever views asserting the finite, etc. based upon [the perception]: “Would I not exist in the future or would I become someone else?” are associated with the posterior end [of existence].

**MCCAGNEY (Skt):**
Wherever views otherwise state “I will exist or I will not exist in the future,” they are supported by the future, an end, etc.

**NISHIJIMA (Skt?):**
2. I think that miscellaneous kinds of Doctrines will not be maintained.

How is it impossible for another Doctrine will not come as the decisive criteria at all?

The reason, why I say so, comes from the fact that the age of disappearance has begun too fast already,

And it is absolutely decisive for us to live in the Western End of the World exactly.

**STRENG (Skt):**
2. The assertion: "I will not become something different in a future time," "I will become something different," and the alternative, etc., are relating to an end in the future.
PINGALA COMMENTARY

27/2 Whether self existed in the past, or did not exist, or both existed and did not exist, or neither existed nor did not exist - these are termed 'views of permanence depending on the past'. Whether self will continue, or will not continue, or will both continue and not continue, or will neither continue nor not continue in the future - these are termed 'views of boundedness or non-boundedness which depend on the future'. On what grounds are such wrong views as these termed 'wrong views'? This we shall now explain.

KALUPAHANA COMMENTARY

The assumptions that the self and the world are finite or infinite are similarly based upon one's dispositions (sankhara). Those who are enamored with life as it is would insist upon the world being infinite. Those who are averse to life would advocate finiteness, insisting that there will be no way in which life could continue. This is tantamount to annihilation (uccheda-ditthi, S 3.99; Tsa 2.25 [Taisho 2.14b]).

GARFIELD COMMENTARY

2. Similarly, such views require us to be able to talk coherently about the end of the world or the end of personal existence - to be able to speak of a future time where nothing exists, or of the end of time, or of an unlimited future existence or of a definite moment when the self ceases to exist, whereas before it had existed. Nāgārjuna begins by discussing arguments regarding the self, opening with a set of arguments for the permanence of the self:
Kārikā XXVII.3

abhūm aśītam adhvānam ity etan nopapadyate |
yo hi janmasu pūrveṣu sa eva na bhavaty ayam ||3||

guò qù shì yǒu wǒ shì shì bù kě dé;di;de 
guò qù shì zhōng wǒ bù zuò jīn shì wǒ

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 3 - It is not possible to assert (categorically) that I existed in the past. For, what had been the case in the anterior state of existence is not the same now.

JONES (Skt):
[3] The view “I existed in the past” is not appropriate, for whoever was in the past is in fact not identical to the one in the present.

KALUPAHANA (Skt):
The view that I existed in the past is not appropriate, for whosoever was in the previous birth, he, indeed, is not identical with his person.

MCCAGNEY (Skt):
The statement “I existed previously” is not said. Indeed, this one does not exist in previous births.

NISHIJIMA (Skt?):
3. Sect Future, Sect Past, and Sect Secular,
Are not manifesting themselves actually in front of us already. Sect Future, Sect Past, and Sect Secular, should be manifesting themselves already in front of us. But actually speaking, such kinds of examples, which should appear exactly, have never appear itself yet at all.

STRENG (Skt):
3. The assertion: "I existed in a past time (1)" does not obtain, Since this present being is not (i.e. "ii" is not the same as "i") that one who was in a former birth.

ROBINSON (Skt):
That I existed in past time is not a fact, because he who was in former live; is not identical with this one.
KALUPAHANA COMMENTARY

This statement may appear, at first sight, to mean a denial of rebirth or survival; that is, it would be inappropriate to say: "I existed in the past." However, if one is careful in observing the emphasis in the second line, namely, sa eva ("he himself"), it will become apparent that what is denied is not any relationship between two lives, but the identity of the two persons in different existences. Therefore, the statement, "I existed in the past," becomes metaphysical only if an absolute identity is posited, which indeed was the proclivity of the metaphysician.

GARFIELD COMMENTARY

3. It is a fundamental confusion to think that because I can say that I or someone or something else existed in the past that there is a real identity between what exists now and what existed then. Identity requires that we share all properties, and that is trivially impossible over time. But any assertion of the permanence of the self requires that we be able to identity it over time.

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 4 - (Granted that) the self-same atman exists (i.e., in the previous and present states) but with a different perceptual clinging (upadana) what kind of an atman is it, then, which is separated from clinging?

JONES (Skt):
[4] If that past self is in fact the present self, then the acquisition of a new rebirth would be distinct from the self. But what self can there be that is free of such acquisition?

KALUPAHANA (Skt):
If it were to occur [to someone]: “He, indeed, is the self,” then grasping is identified. Separated from grasping, what constitute your self?

MCCAGNEY (Skt):
He is defined as “the self” but would be grasping. Again, how is your self exempt from grasping?

NISHIJIMA (Skt?):
4. If it is actually true that the so-called Soul really exists in this world, it might be much more possible for our sense perception to find the so-called Soul exactly. In Sect Future, they are relying upon Soul, which can have ability to flee from our sense limitation. But it is perfectly unclear for such a kind of Soul to exist actually, or not.

STRENG (Skt):
4. Were he in a previous birth, that individual self (atma) which he acquires in coming into existence would be different. Moreover, what kind of individual self is there without acquisition (upadana)?
KALUPAHANA COMMENTARY

The Buddha explained self-consciousness expressed in such statements as "I am..." (asmiti) as dependent upon (upadaya) the five aggregates. It is like seeing one's own reflection on a clean mirror or a pan of clear water. In this case, one cannot perceive one's reflection unless there is a personality that is reflected, and these constitute the five aggregates (S 3.105). However, converting this self-consciousness to a cogito, a "self" that is permanent and eternal, is also the work of upadana, meaning "grasping or clinging." It is sometimes described as thirsting or craving (tanha) and this could be for becoming (bhava) or other-becoming (vibhava) (S 3.26; Tsa 3.23 [Taisho 2.19a]).

Thus, neither self-consciousness nor a "self" would be found independently (upadana-vinirmukta). However, the attainment of freedom, described as anupada vimukti, does not imply the negation of self-consciousness, but only of the "thirsting for becoming," (bhava-tanha), which otherwise could lead to the belief in a permanent and eternal self that is independent of the aggregates, and idea already rejected by Nagarjuna in Chapter XXV.

GARFIELD COMMENTARY

4. Suppose that one through introspection or analysis takes some putative entity - one's body, one's stream of consciousness, or whatever - to be one's self. There will be in that act a duality of appropriator and the thing appropriated as the self or as part of the self. But at different times what is appropriated and what is appropriating differ. Both subject and object will necessarily be distinct. But in order to posit the appropriating entity as the self, it must retain its identity over time. The sequence of appropriators hence fails to provide a candidate for a continuing self. But, Nāgārjuna points out, there is no other candidate.
Kārikā XXVII.5

उपादानविनिर्मक्तो नास्त्यात्मेति कृते सति।
स्यादुपादानेवत्तमा नास्ति चात्मेति ्व: पुनः ||۵||

离有無身我是事為已成
若謂身即我若都無有我

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 5 - If atman cannot exist separated from perceptual clinging, then the clinging itself will be the atman. But, again, according to your assertion, there could be no atman.

JONES (Skt):
[5] If it is maintained that there is no self free of the acquisition of new rebirths, then such acquisition would itself be the self, and again it would follow for you that there is no self.

KALUPAHANA (Skt):
When it is assumed that there is no self separated from grasping, grasping itself would be the self. Yet this is tantamount to saying that there is no self.

MCCAGNEY (Skt):
When a deed is done, “the self does not exist exempt from grasping.”
The self would be grasping and again, for us, that “self” does not exist.

NISHIJIMA (Skt?):
5. Perception does never escape.
But what is called the Individual Soul creates the harvest. Perhaps Perception might be the same as the Individual Soul. And so what is called the Individual Soul does never exist at all.

STRENG (Skt):
5. If it were held that: "There is no individual self without the acquisition," Then the individual self would be only the acquisition or it is not an individual self at all.

BOCKING (Ch):
27v5 No self exists apart from a body
This fact has already been established
If you say that the body is the self.
If it is all, then there is no self.

BATCHELOR (Tb):
Were you [to say] that there exists no self apart from that-which-is-clung-to, if the very that-which-is-clung-to were the self, your self would be non-existent.

DOCTOR (Tb):
When it is held that there is no self Apart from the appropriated,
If the appropriated is itself the self, Your self does not exist. [XXVII.5]

GARFIELD (Tb):
5. Having shown that there is no self Other than the appropriator, The appropriator should be the self. But it is not your self.

GARFIELD-SAMTEN (Tb):
5. Having shown that there is no self Apart from the appropriated,
If the appropriated is the self, Your self does not exist.

HAGEN (paraphrase):
If a self cannot exist separate from grasping, then grasping itself is the self. But this is to say there is no self.
The assertion that there is no self apart from grasping (upadana-vinirmukta) provides the identity theorists with the opportunity of identifying the self with grasping. Thus, when the Buddha, having denied a self, maintained that consciousness (vinnana) provides a link between two lives (D 3.105; Chang 12.2 [Taisho 1.767a]), one of his disciples, Sati, immediately assumed that "this consciousness itself transmigrates, and not another" (idam eva vinnanam sandhavati samsarati anannam, M 1.256; Chung 54.2), thereby attributing an identity theory to the Buddha. The Buddha's immediate response was to deny such identity by asserting that consciousness is dependently arisen (paticcasamuppanna). Then the Buddha proceeded to show how consciousness, when explained in terms of causal dependence, leads to a denial of such identity. This, indeed, is what Nagarjuna endeavors to do in the present context.

The self that is posited by the advocate of a permanent self is a substantial entity capable of grasping, not a mere evanescent activity. So it cannot be the appropriator. Moreover, Nāgārjuna points out in the next verse, the same argument applies, mutatis mutandis, to the act of appropriation. To identify that with the self would be to identify agent and action:
Kārikā XXVII.6

na copādānam evātmā vyeti tat samudeti ca |
kathaṁ hi nāmopādānam upādātā bhaviṣyati ||6||

dăn shēn bù wéi wò shēn xiàng shēng miè gù yún hé dāng yī shòu ér zuò yǔ; wū shòu zhē
| ņe bar len ņìd bdag ma yìn | | de 'byuñ ba dañ 'jig (2)pa yìn |
| ņe bar blañ ba ji lta bur | | ņe bar len po yìn par 'gyur |

ENGLISH TRANSLATIONS

INADA (Skt):  
Verse 6 - Again, clinging per se is not atman because it rises and vanishes. Indeed, how could perceptual clinging be identified with a perceiver?

JONES (Skt):  
[6] And the self is not just acquisition since acquisition arises and ceases. In addition, how indeed could the acquisition become the one who acquires?

KALUPAHANA (Skt):  
Grasping is not identical with the self, for that [i.e., grasping] ceases and arises. Furthermore, how can grasping be the grasper?

MCCAGNEY (Skt):  
As grasping rises and falls, it is not the self. How will grasping be called the grasper?

NISHIJIMA (Skt?):  
6. Perception is perfectly different from the Individual Soul. Something, which can cover other things, can also have ability to make others wet. Because everything can get its name and characteristics, Everything can get its characteristics in future.

STRENG (Skt):  
6. The individual self is not the acquisition, since that acquisition appears and disappears. Now really, how will "he who acquires" become "that which is acquired?"

ROBINSON (Skt):  
The atman is not identical with the appropriation; the latter perishes and arises; how could the appropriated be the appropriation?

BOCKING (Ch):  
27v6 The body alone does not constitute the self, Since the body's characteristics arise and cease How could receiving possibly Constitute the receiver?

BATCHelor (Tb):  
The very that-which-is-clung-to is not the self: it arises and passes away. How can that-which-has-been-clung-to be the one that clings?

DOCTOR (Tb):  
The appropriated is not the self, For it arises and disintegrates. How could the appropriated Ever be the appropriator? [XXVII.6]

GARFIELD (Tb):  
6. Appropriating is not the self. It arises and ceases. How can one accept that Future appropriating is the appropriator?

GARFIELD-SAMTEN (Tb):  
6. The appropriated is not the self. It arises and ceases. How can the appropriated Be the appropriator?

HAGEN (paraphrase):  
Grasping is not the same as the self because grasping arises and ceases. Besides, how can grasping be the same as the one who grasps?
KALUPAHANA COMMENTARY

As was done by the Buddha, (see comments above XXVII. 5), Nagarjuna is rejecting the notion of self (atman) on two grounds. First, it is assumed to be permanent and eternal, whereas grasping that is identified with the self is subject to arising and ceasing. Secondly, the self is also assumed to be the agent behind all human action and, therefore, of grasping. If so, how can it be both action and agent at the same time?

GARFIELD COMMENTARY

6. Two problems are developed in this verse: First of all, the self that the reificationist wishes to posit is a permanent, enduring self. But appropriating is a momentary action that arises and ceases constantly with new objects of appropriation. A sequence of such actions is hardly a substantial subject. This is a straightforwardly Humean argument. Second, Nāgārjuna points out, even if one argued that the self was substantial and also identical to that sequence, there is a further difficulty: The self that is posited by this interlocutor is an enduring subject of these acts of appropriation. But some of the members of the sequence have yet to come into existence. If the self exists entirely at all moments of time, as an unchanging substantial subject, it cannot be identified with a sequence, some of whose members are not presently existent.
Kārikā XXVII.7

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 7 - Again, an atman different from perceptual clinging is not possible. If it were different then, surely, a non-perceptual clinging atman would also be a possibility. But that is not the case.

JONES (Skt):
[7] On the other hand, a self arising apart from acquisition is not admissible. If it were other than acquisition, it could be grasped as distinct, but that is not so grasped.

KALUPAHANA (Skt):
Furthermore, a self that is different from grasping is not appropriate. A person who is without grasping can be observed. However, if he were to be different [from grasping], he could not be observed.

MCCAGNEY (Skt):
Again, a self different from grasping does not happen. Indeed, if he would be grasped by nongraspering, he should not be grasped as different.

NISHIJIMA (Skt?):
7. In another case leaving from the sense perception again, The Individual Soul does never manifest itself. Because, being to be understandable, is perfectly different from acceptable, And so just at the different case, there is a possibility that something can never be acceptable at all.

STRENG (Skt):
7. Moreover, it does not obtain that the individual self is different from the acquisition. If the individual self were different, it would be perceived without the acquisition; but in fact it is not so perceived.

ROBINSON (Skt):
It is not a fact that there is an atman other than the appropriation, for it would then be apprehended without appropriation, and it is not [so] apprehended.

BOCKING (Ch):
27v7 Suppose the self existed apart from the body; This would not be correct. Without receiving, there would be a self. But in reality this is never found.

BATCHelor (Tb):
It is not correct for the self to be other than that-which-is-clung-to. If it were other, with nothing to cling to, then something [i.e. the self] fit to be apprehended would not be apprehended.

DOCTOR (Tb):
It does not make sense for there to be A self that is different from the appropriated. If different, it could reasonably be perceived In the absence of appropriation, yet it cannot. [XXVII.7]

GARFIELD (Tb):
7. A self that is different From the appropriated is not tenable. If it were different, then in a nonappropriator There should be appropriation. But there isn’t.

GARFIELD-SAMTEN (Tb):
7. It is not tenable that the self is different From the appropriated. If it were different, then without the appropriated It should be observed. But it is not.

HAGEN (paraphrase):
Furthermore, a self that is different from grasping is not appropriate. If the self were different, it could be found without grasping, but no such self is ever found.
KALUPAHANA COMMENTARY

For the Buddha as well as for Nagarjuna, the denial of a substantial entity is based upon empirical evidence, namely, the perception of an individuality consisting of the five aggregates. The five aggregates do not appear individually as insulated discrete elements. They appear as a lump (punñja) which retains its individuality (based upon dispositions) and continuity (founded upon consciousness). In such a context he is called a person (hoti satto ti sammuti, S 1.135; Tsa 45.5 [Taisho 2.327a]). In the context of a society, he becomes a social being with relationships to others (as son, father, or daughter, mother, etc.) In the context of moral behavior, he becomes good or bad (see the explanation of empirical serf by William James, The Principles of Psychology, vol. 1, 291-293). However, if the self were to be considered different from the perceived individuality, it would turn out to be a rather mysterious entity and hence unknowable through the available means of knowledge. Candrakīrti, who prefers a transcendentalist interpretation of Nagarjuna, gives a negative explanation of what is very clearly a positive statement of Nagarjuna.

GARFIELD COMMENTARY

7. This is a very obscure argument as it is put in the text, but given the context we can flesh it out: The target position here is one according to which the existence of appropriation as a real, persistent feature of cyclic existence is used as the basis for attributing personal identity to a continuing self. That self is not supposed to be the appropriating itself, but rather a separate entity independent of it. Nāgārjuna points out, though, that it is, and for the proponent of this view, it must be possible not to appropriate otherwise nirvāṇa would be impossible. So, there will be a nonappropriator who once was an appropriator. But if appropriation is the basis of the identity of the one who has been liberated with the one who was not, that appropriation should persist in the nonappropriator, which would be contradictory.

1396
ENGLISH TRANSLATIONS

INADA (Skt):
Verse 8 - Consequently, atman cannot be identical or different from perceptual clinging. It cannot be ascertained further that there is non-perceptual clinging or that the atman does not exist.

JONES (Skt):
[8] Thus, it is neither different from acquisition nor identical to it. There is no self apart from acquisition, nor is it true that it does not exist.

KALUPAHANA (Skt):
Thus, he is neither different from grasping nor identical with it. A self does not exist. Yet, it is not the case that a person who does not grasp does not exist. This much is certain.

MCCAGNEY (Skt):
Thus he is neither grasping nor different than grasping. Nongrasping is not the self nor is he determined in these.

NISHIJIMA (Skt?):
8. Following this way, even the different method does not leave perception.
It is not always perception is just Reality. 
The Individual Soul does never really exist different from perception.
There is nothing other than This Reality at this place, which is the Absolute Reliability in The Universe.

STRENG (Skt):
8. Thus that individual self is not different from nor identical to the acquisition. The individual self is not without acquisition; but there is no certainty that "It does not exist."

BOCKING (Ch):
27v8 Now the self is not separate from receiving
Nor is it the receiving
Neither non-receiving, nor non-existent;
This is its fixed meaning.

BATCHelor (Tb):
In that way, it is not other than that-which-is-clung-to nor is it that-which-is-clung-to. The self is not not that-which-is-clung-to, nor can it be ascertained as nothing.

DOCTOR (Tb):
Thus, it is not other than appropriation, 
Nor are these two the same. 
The self does not exist without appropriation, 
Yet neither can it be ascertained as nonexistent. [XXVII.8]

GARFIELD (Tb):
8. So it is neither different from the appropriating 
Nor identical to the appropriating. 
There is no self without appropriation. 
But it is not true that it does not exist.

GARFIELD-SAMTEN (Tb):
8. So it is neither different from the appropriated 
Nor identical to the appropriated. 
There is no self without appropriation. 
But it is not ascertained that it does not exist.

HAGEN (paraphrase):
Thus, the self is neither identical to nor different from grasping. Though the self is not without grasping, it is not the case that the self does not exist.
PINGALA COMMENTARY

27/8 If you say that the self existed in the past, this is not correct, and why? The self of an earlier period does not constitute the present self, since this would involve the error of permanence. If one admits permanence, then the errors will be countless, and why? Take the case of a man who, on account of his good deeds, becomes a god and then afterwards becomes a man again. If the former self were the same as the self of the present time, then the god would be a man. Or again, it is like a man who, because of evil deeds becomes a candala and subsequently becomes a brahman. If the former self were the same as the present self, the candala would be the brahman.

(37a25) It is like, for example, a brahman from Srvasti called Devadatta, travelling to the City of the King's Residence (Rajagrha). He remains known as Devadatta – he has not been changed by arriving at the City of the King's Residence. If someone who had previously been a god subsequently became a man, then the god would be the same as the man, and a candala would be the same as a brahman, but this is not so, and why? A god is not the same thing as a man, and a candala is not the same thing as a brahman, because this would involve the error of permanence.

(37bl) You may say that the former self is not the present self, in the same way that a man is called a washerman when he is washing clothes, but a reaper when he is reaping. Although there is no difference between the washerman and the reaper, nevertheless the washerman is not the same thing as the reaper, and in the same way, you may say, the self receiving the body of a god is called a god, and the self receiving the body of a man is called a man. The self is not different, only the bodies are different. This however is not correct, and why? Because if it (the individual) is the same, then we ought not to say that the god becomes a man.

(37b6) Is there no difference between the washerman and the reaper, or is there a difference? If there is no difference, then the washerman should be identical with the reaper, and in the same way the former god should be identical with the man, and the candala the same as the brahman, and here again there would be the error of permanence. If there is a difference, then the washerman would not be the same as the reaper, and the god would not be the man, and the self would not be permanent. Being impermanent, it would not have the characteristic of 'self' and therefore it could not be said to be the same.

(37b10) Question. Self is the same; it is merely that we make distinctions, because of reception, between 'being a god', and 'being a man'. 'Reception' means the body of five skandhas. Through our karmic conditioning we distinguish between 'being a god', 'being a man', 'being a candala' and 'being a brahman', but the self in reality is neither god nor man, neither candala nor brahman. Therefore, there are no such errors.

Reply.

(37b14) This is not correct, and why? If the body makes one a god or a man, a candala or a brahman, if it is not the self, then the self must be another distinct self which exists apart from the body. Now, sin and merit, birth and death, going and coming, are all of the body and not of the self. Because of our sins we fall into the three evil paths. Because of our meritorious actions we are reborn in the three good paths. If pain and pleasure, anger and bliss, grief, fear,etc. are entirely of the body and not of the self, what use do they have for a self? It would be like a layman being sentenced for his crimes but as a monk he is exempt. With the causes and conditions of the five skandhas continuing to succeed each other and sin and merit not disappearing, there would nevertheless be liberation. If all this were of the body.

(37b21) (37b29) and not the self, what need would there be for a self?

Question. Sin and merit, etc. are based and rely upon the self, because the self is that which knows, but in the body there is nothing which knows. Surely the knower is the self. It initiates the causes and conditions of action, and sins and merits are the things done. We must recognize that there is a doer, and that doer is the self. The body is what the self employs, and is the place in which the self resides. As an analogy, the master of a house constructs his house using straw, wood, mud and plaster. Because it is for his own body, he builds a good or bad house according to what he uses. It is the same with the self, for one acquires an attractive or ugly body according to whether one performs good or bad deeds. The six paths of samsara are all created by the self, and this is why the body of sin and merit entirely depends upon the self. By way of analogy, it is like a house, which belongs only to the master of the house and not to any other person.

Reply: This analogy does not work, and why? The master of the house can build the house because he has shape, is tangible and has strength. Since the self which you are describing has no form and is intangible, it has no creative power, and having no creative power of its own it cannot cause anything else to act. If there were one single dharma in the world which, though without shape, and intangible, nevertheless had the capacity to do things, then we could
accept and believe this and know that there is a doer, but this is not the case.

(37c4) If the self were the doer then there would be no self-created suffering, for if such a thinker could be attached to pleasurable things then he would never forsake them. If the self does not create suffering and yet suffering inextricably arises, then all other things are also produced automatically, and not created by the self.

(37c7) If the one who sees is the self, then since the eye can see forms, the eye should be the self. If the eye sees and yet is not the self, this contradicts what you said before about the seer being the self. If the seer is the self, then the self ought not to be able to hear or smell objects, such as sounds, etc., and why? Because the eye is that which sees; it cannot hear or smell objects, such as sounds. Therefore, to say that that which sees is the self, is not correct.

(37c11) If you say 'it is like a reaper using a sickle to cut grass; it the same way the self is able to do things using the hands, etc this is not correct, and why? Because the reaper exists quite separately from the sickle, but there is no separate doer apart from the various faculties of body and mind.

(37c14) If you say 'although the doer is not the faculties of eye and ear, etc., the doer does exist', then things could be done by a barren woman's child, for if this were so all the faculties If you say 'the left would be entirely without a self. eye sees things but the right eye cognizes them, and we must accept that there is a separate seer' this is not correct, for the right hand performs actions which the left hand is unable to perform, and therefore there is no separate doer. If a separate doer existed, the left hand could also perform actions carried out by the right hand, but in reality it cannot, and therefore no doer exists.

(37c20) Again, if those who hold that a self exists say that when we see another person eating, saliva is produced in our mouth and this is a mark of self, this is not correct, and why? Because this is power of a thought, not power of a self. Moreover, this denies the causes and conditions of self. A man who is in company may be ashamed to salivate, yet the saliva inexorably comes forth and he cannot control it, so we know that there is no self.

(37c24) Again, there is the evil error of the perverted view that when one who has been a father in a previous life becomes a son in the present life, the self of the father and son is one, on' the bodies are different. It is like moving from one house to another house; since he is a father, a father does not become any different by entering a different house. If there were a self, then these two (father and son) would be one, and thus a great error would be involved.

(37c28) If you say that this error also applies in the case of the continuity of the five skandhas which are without a self, this is not correct, and why? Even though the five skandhas are continuous, they sometimes function, and sometimes do not function. It is like grape juice, which one who holds to the precepts is allowed to drink. He should not drink grape wine, but if it turns and becomes vinegar then he may again drink it. It is the same with the continuity of the five skandhas; they function, and then do not function.

(38a3) If you say that there is only one self from beginning to end this is wrong, for within the continuity of the five skandhas there is no such error, it is me-rely that through the combination of the five skandhas there is a temporary designation of 'self', which however has no fixedness. It is like beams and rafters combining to form a house, where there is no separate house apart from the beams and rafters. In the same way the self exists through the combining of the five skandhas. Since there is in fact no self apart from the five skandhas, 'self' is merely a temporary designation with no fixed reality.

(38a8) You earlier said435 that there is a separate receiver apart from reception, and that we can distinguish the receiver, according to his receiving, as a god or as a man, etc., but that is all wrong. You should know that only receiving exists with no separate receiver. If you say 'a self exists, distinct from receiving' this is incorrect. If there were a self apart from receiving, how could we speak of the characteristics of such a self? Since its characteristics could not be described, there is no self apart from receiving.

(38a1 2) If you say that there is no self apart from the body, and that the self is simply the body, this is not correct either, and why? Because the body has the characteristics, of arising and ceasing, and this is not the, case with the self.

Moreover, how can you call something a receiver by virtue of receiving? If you say that there is a receiver who exists distinct from receiving, this is also incorrect. If the five skandhas were non-receptive and yet a receiver existed, this would have to be a separate receiver apart from the five skandhas and the functions of eye, etc., ought to reach it but in fact they do not reach it. Therefore self is not separate from reception, nor is it the same as reception, nor is it non-reception, nor again is it nonexistent. These are definite principles, so you must recognize them.

To say that self existed in the past is not correct, and why?
KALUPAHANA COMMENTARY

Candrakīrti, who favored a transcendentalist interpretation of Nagarjuna, makes this a negative statement. The positive reading given above is justified on two grounds. First, in the previous instances, Nagarjuna was clearly asserting an empirically known (= grbyeta) anupadanah (that is, a person freed from grasping), while at the same time rejecting an atman different from both grasp-hag and non-grasping. Secondly, the positive reading is clearly justified by Kumarajiva's Chinese rendering of this verse. As such, what Nagarjuna is denying is both identity (upadanam eva sah) and difference (anya upadanam). A rejection of metaphysical identity and difference does not necessarily mean that Nagarjuna was abandoning an empirical personality. For Nagarjuna, language need not be necessarily metaphysical in character.

GARFIELD COMMENTARY

8. Thus we cannot use the existence of appropriation as a basis on which to construct a permanent self. For that self cannot be both permanent and identified with such a constantly changing activity. But still, that is all there is to the self. This raises the possibility that it would be correct to say that the self does not persist at all that there is no existent person in any sense. It is to this view that Nāgārjuna now turns. He first announces the conclusion - that it is not correct to say that the person who now exists did not exist in the past. There is a sense in which that person is identical with his! her past stages:
Kārikā XXVII.9

nābhūm atītam adhvānam ity etan nopapadyate
yo hi janmasu pūrveṣu tato ’nyo na bhavaty ayam ||9||

guò qù wǒ zuò shì shì zé bù rán
guò qù shì zhōng wǒ yì jīn yì bù rán

| 'das pa‘i dus na ma byuṅ žes | | bya ba de yaṅ mi ‘thad do |
| sṅon tshe rnams su gaṅ byuṅ ba | | de las ’di gźan ma yin no |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 9 - It is not possible to assert (categorically) that I did not exist in the past. For, this existence is no different from what had been the case in the anterior state of existence.

JONES (Skt):
[9] The view “I did not exist in the past” does not occur to one who is not different from the one who was in the past.

KALUPAHANA (Skt):
The statement, “I did not exist in the past,” is not appropriate, for this person is not different from whosoever existed in the previous lives.

MCCAGNEY (Skt):
The statement “I did not exist previously” is not said, for this one is not other than whoever was in previous births.

NISHIJIMA (Skt?):
9. The Party, which hasn’t been born, the Party in the Past, and the Party for the Secular Society,
Those concrete parties haven’t appeared actually yet.
Because they have relied upon birth, and so they have been born just in front of us already.
The different example does never exist as a concrete one at all.

STRENG (Skt):
9. The assertion: "I have not existed in a past time (2)" does not obtain. For that one now living is not different (i.e. "ii" is not different than "i") from that one who was in a former birth.

ROBINSON (Skt):
Neither is it a fact that I did not exist in past time, for this one is not other than the one who existed in former lives.

BOCKING (Ch):
27v9 That self did not operate in the past;
This is incorrect.
That the self in the past was different From present self, is also incorrect.

BATCHelor (Tb):
It is incorrect to say: “I did not occur at a time in the past.” Whatever occurred before, this is not other than that.

DOCTOR (Tb):
Saying “It did not exist in the past,” Does not make sense either.
Whatever was there in past lives Is not different from this. [XXVII.9]

GARFIELD (Tb):
9. To say "in the past I wasn’t" Would not be tenable.
This person is not different From whoever existed in previous times.

GARFIELD-SAMTEN (Tb):
9. To say "in the past I did not exist" Would not be tenable.
This person is not different From whoever existed in previous lives.

HAGEN (paraphrase):
It is not appropriate to say “I did not exist in the past,” since this person is no different than that (past) person.

KALUPAHANA COMMENTARY

This, then is a clear denial of absolute difference. Just as much as the statement, “I existed in the past,” is not appropriate so long as it is interpreted to mean absolute identity, even so the statement, "I did not exist in the past," is not appropriate as long as it is taken to mean absolute difference.
ENGLISH TRANSLATIONS

INADA (Skt):  
Verse 10 - If this existence were different (from what had been 
the case in the anterior state) then, surely, it would exist 
independently or detached. It would subsist thus and so, or 
arise to persist eternally.

JONES (Skt):  
[10] If this one is different from that one, it would arise 
regardless of that one. In that case, one would remain so 
and be reborn without first dying.

KALUPAHANA (Skt):  
If this person were to be different [from that person in the 
previous existence], then he would come to be even 
forsaking that person. In that case he would remain the 
same and, in such a context, an immortal would emerge.

MCCAGNEY (Skt):  
If this one would be different [from previous births], he 
would be enumerated one by one. 
If he would endure, then an immortal would be born.

NISHIJIMA (Skt?):  
10. Because the World has always possibility to be different, 
There is possibility for the World even to receive serious refusal 
actually. 
The world always has its possibility to become the objects of such 
kinds of refusal. 
And in such a situation being possible to get the Birth, is just the 
possibility to come back to Death.

STRENG (Skt):  
10. If that present person were different, he would exist 
in exclusion of that former one. Therefore either that 
former person persists, or he would be born eternal!

BOCKING (Ch):  
27v10 If you say that they are different 
The one now should exist separately from the other one. 
Self abiding in the past. 
And the present self being self-produced.

BATCHelor (Tb):  
If this were other, it would arise even without that. 
Likewise, that could remain and be born without 
dying in that [former life].

DOCTOR (Tb):  
If it were something other, 
It could arise even in its absence. 
Likewise, that would remain 
And there could be birth without death there. [XXVII.10]

GARFIELD (Tb):  
10. If this one were different, 
Then if that one did not exist, I would still exist. 
If this were so, 
Without death, one would be born.

GARFIELD-SAMTEN (Tb):  
10. If this one were different, 
Then I would exist even without it having existed. 
If this were so, 
Without that one dying, this one would be born.

HAGEN (paraphrase):  
If this person were different from that person, then this 
would arise separate from that. If this were the 
case, then that person would never die, or this 
person would live eternally.
KALUPAHANA COMMENTARY

Absolute difference implies absolute identity. Nagarjuna has already shown that "other-nature" (para-bhava) means the self-nature (svabhava) of another (XV.3, svabhavah parabhavasya parabhavo hi kathyate). Absolute identity as well as absolute difference, this involves complete independence, and as such it would constitute immortality. Nothing is to be achieved. Kumarajiva renders the phrase tatra jayeta vamrtah as "The atman will be self-caused."

GARFIELD COMMENTARY

10. If there were a genuine difference in entity between the current stage and the previous stages ‘of a person, they would be independent. If that were so, the current stage - since if it depends on anything, depends on the previous stage - would come into existence depending on nothing. That is, it would be possible for none of my previous stages to exist, but for me, as the person with my past, to pop into existence ex nihilo. Or, on the other hand, it would be possible, if the current stage and previous stages were completely different and independent, for the current stage to come into existence without the previous stage having passed out of existence, which is absurd.
Kārikā XXVII.11

[učchedah karmāṇāṁ nāśaḥ kṛtam anyena karma ca |
pratisaṃvedayed anya evam ādi prasajyate ||11||]

[Note: Verse missing in ms.; reconstructed from the Tibetan by LVP.]

=rú shì zé duàn miè shì yǔ;yu;wū yè guǒ bāo |
bǐ zuò ér cī shòu yǒu rú shì děng guò |
| chad daṅ las rnams chud za daṅ || gźan gyis byas pa’i las rnams ni |
| gźan gyis so sor myoṅ ba daṅ || de la sogs par thal bar ’gyur |

**ENGLISH TRANSLATIONS**

**INADA (Skt):**
Verse 11 - If that were the case then such erroneous notions as interruption, destruction of actions, actions done by someone but enjoyed by another, etc., would accordingly follow.

**JONES (Skt):**
[11] If so, there would be the annihilation of actions and the destruction of effects. Another would experience the actions done by oneself, and so forth.

**KALUPAHANA (Skt):**
[If that were the case,] there would be annihilation and destruction of actions. This implies that the fruit of action performed by one will be experienced by another.

**MCCAGNEY (Skt):**
So, the fruit of actions by one would be enjoyed by another. Thus annihilation and destruction of actions follows.

**NISHIJIMA (Skt?):**
11. Relying upon Action, to cut something is not always a benevolence at all.
Even though what is done is perfectly different from what has been planned,
Their attitude for them to do the same work again, can be recognized as if it were different work.
Similarly the first fruits are usually attached so much.

**STRENG (Skt):**
11. – note 4 : Verse 11 is not available in the Sanskrit test, but it is known from the Tibetan translation

**BOCKING (Ch):**
27v11 This would be severance, cessation, Loss of action and reward.
That one acting, this one receiving
And other such errors as these.

**BATCHELOR (Tb):**
Cut off and actions wasted, acts committed by others would be experienced by someone else. Such would be the consequences.

**DOCTOR (Tb):**
There would be annihilation, action would be wasted,
The action done by one
Would be experienced by another—
These and other flaws would ensue. [XXVII.11]

**GARFIELD (Tb):**
11. Annihilation and the exhaustion of action would follow;
Different agents' actions
Would be experienced by each other.
That and other such things would follow.

**GARFIELD-SAMTEN (Tb):**
11. The cutting of the continuum and the nullification of karma would follow;
The karma accumulated by some
Would be experienced by others.
This and other such absurdities would follow.

**HAGEN (paraphrase):**
If this were the case then interrupted or destroyed actions would follow, and the consequences of actions committed by one person would be experienced by another.
KALUPAHANA COMMENTARY

The verse has been reconstructed by Poussin on the basis of the Tibetan translation. How a metaphysical conception of difference would lead not only to a denial of survival but also a repudiation of moral responsibility has been already discussed by Nagarjuna (Chapter XII). There it was shown that he depended upon a discourse of the Buddha to explain this problem. The present is simply a restatement of that argument.

GARFIELD COMMENTARY

11. We could make no sense of the actual empirical fact of conventional personal identity; action done at one moment would be done by one person, and that person would experience none of its consequences. To the extent that we could make sense of them at all, the phenomena of memory and experiencing the consequences of one’s previous actions would become interpersonal affairs, which seems at least a bit odd.
Kārikā XXVII.12

nāpy abhūtvā samudbhūto doṣo hy atra prasajyate |
kṛtako vā bhaved ātmā saṃbhūto vāpy ahetukaḥ ||12||

xiān wú ér jīn yòu cí zhōng yì yǒu guò 
wǒ zé shì wǒ yǐ wéi shì wǒ yīn

| ma byuṅ ba las ’byuṅ min te || ]di la skyon du thal bar (5)’gyur |
| bdag ni byas par ’gyur ba daṅ || ’byuṅ ba’am rgyu med can du ’gyur |

**ENGLISH TRANSLATIONS**

INADA (Skt):
Verse 12 - Again, it is not the case that present existence arose without an anterior existence for, otherwise, an error will result. This would mean that atman will either have a creative nature or be something without a cause.

JONES (Skt):
[12] Nor, having been nonexistent does something come to be. Here an error arises: either the self was something made, or having arisen it arose uncaused.

KALUPAHANA (Skt):
Yet, in that context, the error of assuming an emergent without prior existence does not follow. Either the self would be caused or, if it has occurred, it would be without a cause.

MCCAGNEY (Skt):
No one, having not existed previously, is born. Otherwise an error follows here either the self would be produced spontaneously or the one born is uncaused.

NISHIJIMA (Skt?):
12. God Visnu is never vigor of Dynamic Beauty. Because at that place some kinds of Vice attach to the place. What has been done also, has existed as the Individual Soul. The co-existence of such miscellaneous things and phenomena, are not always recognizable at all.

STRENG (Skt):
12. There is no existing thing which is "that which has not existed prior." Therefore, the error logically follows that Either the individual self is "what is produced" or it originates without a cause.
PINGALA COMMENTARY

27/12 'The self in the past does not constitute the present self' is not correct, and why? The past self is not different from the present self. If the present self were different from the past self then the present self ought to exist quite separately from that other self. Also, the past self, would abide in that (body), and this body would have to produce itself anew, and if so, this would fall into the extreme of severance losing all karmic action and reward.

Also that person would sin, while this person would receive the retribution, and there would be countless other such errors. Also this self, having been inexistent previously would now be existent, and this would also be an error. Self would create dharmas, and this would be causelessness. Therefore it is not correct to say that the past self does not constitute the present self.

Further.

KALUPAHANA COMMENTARY

The concept of self (atman) was posited in order to account for the continuity in the human personality which could also explain moral responsibility. However, the denial of an eternal self led to the opposite view that there is no continuity, but annihilation (uccheda). The denial of an eternal self and the consequent assertion of annihilation do not imply (na prasajyate) the further metaphysical view that something that did not exist before comes to be (abhutva sambhoti), which came to be interpreted as the abhutva bhava utpada in the Sautrantika school (see Kalupahana, Causality, p.-254). In other words, there is no implication here that existence is completely independent, without any prior connections. As such, if there were to be any self (atman), it would be "made" (krtaka, see karaka at XXVI. 10). If it is not, and if it were assumed to arise, the self would be causeless.

GARFIELD COMMENTARY

12. Moreover, since the past, as per the discussion of time in Chapter XIX and the discussion of dependent origination in VII, does not actually exist, we would have the consequence of an existent (the present person) being brought into existence dependent upon something that no longer exists (some past person). Anything that exists has some past.
Kārikā XXVII.13

evam dṛṣṭir atīte yā nābhūm aham abhūm aham |
ubhayaṃ nobhayaṃ ceti naiṣā samupapadyate ||13||

ruò guò qù shì zhōng yǒu wò wú wǒ jiàn
ruò gōng ruò bù gōng shì shì jiē bù rán
| de ltar bdag byuṅ bdag ma byuṅ | | gñis ka gñis ka ma yin par | | 'das la lta ba gaṅ yin pa | | de dag 'thad pa ma yin no |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 13 - Consequently, the (false) views that I existed in the anterior state, I did not exist, both or neither, are all impossible.

JONES (Skt):
[13] Therefore, the view “I existed in the past,” or the view “I did not exist,” or both, or neither is admissible.

KALUPAHANA (Skt):
Thus, whatever view there is such as, “I existed in the past; I did not exist; both or neither,” is not really appropriate.

MCCAGNEY (Skt):
Thus the view “I existed in the past, I did not exist, or both or neither,” does not arise.

NISHIJIMA (Skt?):
13. Relying upon those methods, people, who look at the process, are,
Sometimes people, who believe in Visnu, who they are, and
sometimes people, who do not believe in Visnu, who they are.
It is said that a person, who believe in Visnu, and a person, who does not believe in Visnu, are the same.
The fact, which exists here, as it is, does never come only for passing.

STRENG (Skt):
13. Thus the view concerning the past which asserts "I have existed (1)," or "I have not existed (2)," Both "existed and not existed" (3) or neither (4): this does not obtain at all.

BOCKING (Ch):
27v13 Just like the views of self
As existent, or nonexistent in the past;
Whether it is both, or neither
These are all incorrect.

BATCHELOR (Tb):
Therefore, “the self occurred, did not occur, both or neither:” all those views of the past are invalid.

DOCTOR (Tb):
Thus, that the self existed, did not exist,
That it both existed and did not,
Or neither existed nor did not exist—
These views on the past are untenable. [XXVII.13]

GARFIELD (Tb):
13. So, the views "I existed," "I didn't exist,"
Both or neither,
In the past
Are untenable.

GARFIELD-SAMTEN (Tb):
13. So, the views "I existed," "I didn't exist,"
Both, or neither
In the past
Are untenable.

HAGEN (paraphrase):
Thus, views such as, “I existed in the past,” “I did not exist,” both or neither, are not appropriate.
PINGALA COMMENTARY

27/13 Just as in seeking for self in the past, there are the wrong views that it existed or did not exist, so too the views that it both exists and does not exist, or neither does nor does not exist are also wrong views. These are all wrong, for the same reasons as the errors previously discussed.

KALUPAHANA COMMENTARY

The views (drsti) referred to here are the metaphysical views relating to identity, difference, both or neither. It should be noted that the reasons for rejecting these views are empirical. Empiricism, in the Buddha as well as in Nagarjuna, allows for the recognition of continuity without having to posit absolute identity or absolute difference.

GARFIELD COMMENTARY

13. While Nāgārjuna has not explicitly considered the “both” or “neither” horns of the tetralemma, we have seen enough of these arguments by this stage to know how to complete the picture. Since neither a continually existent nor a discontinuous self makes sense, both can’t make sense since that would just be double non” sense. And the “neither” option is not open since there is no third alternative. Nāgārjuna now points out that the argument applies straightforwardly to the future existence of the self:
Kārikā XXVII.14

adhvany anāgata kim nu bhaviṣyāmīti darśanam |  
na bhaviṣyāmi cety etad aṭṭenādhvanā samam ||14||

wò yù;yú;wǔ wèi lǎi shí wèi zuò wèi bù zuò  
rú shì zhi jiān zhē jìe tóng;tóng guó qù shì  
| ma ’øins dus gzan ’byun ’gyur dá |  | ’byun bar (6)mi ’gyur žes bya bar |  
| lta ba gaṅ yin de dag ni |  | ’das pa’i dus daṅ mtshuṅs pa yin |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 14 - The view, whether or not I will exist in the posterior state, is the same (i.e., analogous) as that discussed with respect to the anterior state of existence.

JONES (Skt):
[14] The view “I shall exist in the future” or “I shall not exist in the future” is the same as the views associated with the past.

KALUPAHANA (Skt):
A view such as “Will I exist in the future?” or “Will I not exist in the future?” is comparable to those associated with the past.

MCCAGNEY (Skt):
The statement “I will exist in the future, I will not exist in the future,” is that doctrine not the same as the statement about this in the past?

NISHIJIMA (Skt?):
14. Relying upon traveling, what is it impossible for us to arrive at? What will have existed clearly, might exist already for us to look at Dharma. Not have I arrived at yet, is the Real Existence of Ourselves at these Real Situations in the Concrete Facts at this place. What have gone, or what has gone a little ahead, are all the same in their situations.

STRENG (Skt):
14. The views: "I will become something in a future time (1')," Or "I will not become (2') something," etc. (3') (4'), should be considered like those views of the past.

PINGALA COMMENTARY

24/14 The four Propositions about whether the self will or will not operate in the future are like the errors relating to the past and should be discussed along with them. Further.

KALUPAHANA COMMENTARY

Here again, the views that are inappropriate are those involving identity and difference, not any explanation of what the future could be based upon one's experience of the process of dependent arising.

GARFIELD COMMENTARY

14. Another possible avenue to a permanent self is the classical Indian view (not unlike certain Judeo-Christian views) that the human soul partakes of the divine, and that its divinity is what engenders its eternality:
Kārikā XXVII.15

sa devaḥ sa manuṣyaś ced evaṃ bhavati śāśvatam |
anutpannaś ca devaḥ syāj jāyate na hi śāśvatam ||15||

ruò tiān jí shì rén zé duò yû;yû;wū cháng biān
tiān zé wéi wú shēng chāng fà bù shēng gù
gal te lha de mi de na | | de lta na ni rtag par ’gyur |
| lha ni ma skyes ŋid ’gyur te | | rtag la skye ba med phyir ro |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 15 - If the heavenly being is a human being, then there will be constancy. For, the heavenly being will be unborn and, moreover, a constant being will not arise.

JONES (Skt):
[15] If a man is a reborn god, there would be permanence (i.e., something unchanging and eternal). The god is unborn, for the permanent is not born.

KALUPAHANA (Skt):
If it is thought that a human is the same as a divine being, then there would be the eternal. If the divine being were to be non-arisen, then he would not be born and that would constitute the eternal.

MCCAGNEY (Skt):
If divine is the same as human, then penannence exists. A god is not born, would not be born, indeed, he is eternal.

NISHIJIMA (Skt?):
15. When Reality is God, and Reality are Human Beings, Similarly Eternity exists like this. What hasn't been born, might be God. Because the Eternity is never be born at all.

STRENG (Skt):
15. If "This is a man, this is a god" obtains, then eternity (i) exists, For god is un-produced, and certainly something eternal would not be born.

ROBINSON (Skt):
If the man is Identical with the god, he is thus eternal; the god would be un-arisen, since the eternal is not born.

BOCKING (Ch):
27v15 If the god were the same as the man
This would fall into the extreme of permanence
The god would be non-arising
Because permanent dharmas do not a-rise.

BATCHelor (Tb):
If the divine were human, then there would be something permanent. The divine is utterly unborn, because there is no birth in permanence.

DOCTOR (Tb):
If the god were the human, It would be permanent. The god would be unborn, For the permanent has no birth. [XXVII.15]

GARFIELD (Tb):
15. If a human were a god, On such a view there would be permanence. The god would be unborn. For any permanent thing is unborn.

GARFIELD-SAMTEN (Tb):
15. If a god were a human, Then it would be permanent. The god would be unborn. For that which is permanent is unborn.

HAGEN (paraphrase):
If a human were a god, there would be permanence since a god is unborn.

PINGALA COMMENTARY

27/15 If you hold that the god is the same as the man, this is permanence, for unless the god is reborn as a man, how can you call him a man? Since permanent dharmas do not arise, permanence is not correct either.

Further,
Kārikā XXVII.16

devād anyo manuṣyaś ced aśāśvatam ato bhavet |
devād anyo manuṣyaś cet saṃtatir nopapadyate ||16||

ruò tiān yì yǔ;yú;wū rén shì jí wéi wú cháng
rúò tiān yì rén zhē shì zé wǔ xiàng;xiāng xù
| gal te lha las mi gźan na | | de lta ni mi rtag ’gyur |
| gal te (7)lha mi gźan yin na | | rgyud ni ’thad par mi ’gyur ro |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 16 - If a human being is different from the heavenly being, then there will be non-constancy. If that is so, there cannot possibly be a continuity (of beings).

JONES (Skt):
[16] If the man is different from the god, then there would be impermanence. If the man is different from the god, a continuity is not admissible.

KALUPAHANA (Skt):
If it is thought that a human is the same as a divine being, then there would be the non-eternal. If it is thought that a human is different from a divine being, then continuity is not appropriate.

MCCAGNEY (Skt):
If a human is different from a god, then interruptedness exists.
If a human is different from a god, then uninterruptedness does not happen.

NISHIJIMA (Skt?):
16. When what are different from God, might be Human Beings, What is not Eternal One, can exist as Idea.
When what is different from God, might belong to human beings, The Relation between Cause and Effect, does never appear at all.

STRENG (Skt):
16. If man is different from god, there would exist something non-eternal (ii). If man is different from god, then a continuity does not obtain. (i.e. they cannot be different)

ROBINSON (Skt):
If the man is different from the god, then he is non-eternal; if the man is different from the god, then succession is not a fact.
PINGALA COMMENTARY

27/16 If the god is different from the man, then this constitutes impermanence, and impermanence implies the errors of severance and cessation, etc. It is like the errors previously discussed; if the god and the man are different, then there is no continuity between them, whereas if there is continuity then they cannot be said to be different.

Further.

KALUPAHANA COMMENTARY

In addition to attainment of the ultimate goal of life (paramartha) which is freedom (nirvana), the Buddha allowed for the possibility of a human being reaching up to the status of a deity or a divine being (deva), assumed to be one who is materially as well as morally superior to ordinary human beings, yet not coming anywhere close to the ultimate goal (see S 1.228; Tsa 40.1 [Taisho 2.290b]). However, the Buddha refused to recognize these divine beings as eternal and permanent entities (D 1.20, see Chang 14.1 (Taisho 1.90b-c)). The recognition of the above possibility could prompt the substantialists to discover "some-thing" (kimcit) in the human being that is identical with the divine. Nagarjuna is here rejecting any such identity, as well as any alternate theory that could make divinity uncaused.

Furthermore, the emphasis on absolute difference would not only lead to the belief in non-eternality (asasvata), which would imply a denial of continuity in or the process of becoming (samtati), the latter being distinguished from the metaphysical process referred to earlier (see XVII.7-10).

GARFIELD COMMENTARY

16. But if the human is at all different from a god, as is eminently plausible (i.e., nobody seriously argues that humans simply are gods), then the permanence of the divine in no way entails the permanence of the person. There is another possibility, however, namely that the person is part divine and part mortal:
Kārikā XXVII.17

divyo yady ekadesaḥ syād ekadesaḥ ca mānuṣaḥ |
| aśāśvataṁ śāśvataṁ ca bhavet tac ca na yujyate ||17||

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 17 - If one portion is heavenly and another human, then there will be both constancy and non-constancy. But that is not possible.

JONES (Skt):
[17] If one part were divine and one part human, there would be permanence and impermanence together, and this is not admissible.

KALUPAHANA (Skt):
If a part were to be divine and the other part to be human, then there would be both the eternal and the non-eternal, and this too would not be proper.

MCCAGNEY (Skt):
If one part would be human and the other part divine, there would be eternal and noneternal, and that does not occur.

NISHIJIMA (Skt?):
17. When the Paradise perhaps were only one place, it might be one Part of the Total, and it might belong to Human Beings. There were both the Two Possibilities, that the One is just that the Paradise is not Eternal, and the Other one is the Paradise is just Eternal. And those two Ideas can never attached to any Fact at all.

STRENG (Skt):
17. If one part were divine and another part human, (i.e. a man with an eternal soul) Then there would be something non-eternal together with that which is eternal (iii); but that is not possible.

ROBINSON (Skt):
If one part is divine and one part is human, then he is both eternal and non-eternal, and that is not valid.

BOCKING (Ch):
27v17 If half-god and half-man, Then you fall into both extremes Of permanence and impermanence And this is not correct.

BATCHelor (Tb):
If one part were divine and one part were human, there would be both permanence and no permanence. But that is not reasonable.

DOCTOR (Tb):
If one part were divine And another part human, It would be permanent and impermanent. That is not reasonable either. [XXVII.17]

GARFIELD (Tb):
17. If one part were divine and One part were human, It would be both permanent and impermanent. That would be irrational.

GARFIELD-SAMTEN (Tb):
17. If he were partly divine And partly human, He would be both permanent and impermanent. That would make no sense.

HAGEN (paraphrase):
If one part were human and one part divine, there would be both permanence and impermanence, but this is not proper.
PINGALA COMMENTARY

27/17 Suppose that half of the body of the living being were divine, and half of the body were human. If this were so, then it would be both permanent and impermanent the god-half being permanent and the human half impermanent, but this would not be right, and why? Because of the error of one body having –two characteristics.

Further:

KALUPAHANA COMMENTARY

The combination of two metaphysical views does not provide for a non-metaphysical one. The Buddha's rejection of such views is clearly stated in the Brahmajala-suttanta (D 1.21). Nagarjuna is simply reiterating that position here.

GARFIELD COMMENTARY

17. The problem with this option is that either we say that the person is both permanent and impermanent, which is contradictory, or that the divine part is permanent and the mortal part impermanent. But if the person is a mereological sum of these two parts, then since there is an impermanent part, the whole is constantly changing and the inherent identity of the person from moment to moment is still lost.
aśāśvataṃ śāśvataṃ ca prasiddham ubhayaṃ yadi |
| siddhe na śāśvataṃ kāmaṃ naivāśāśvatam ity api ||18||

ruò cháng jí wú cháng shì èr jù jù chéng zhě |
| rú shì zé yíng chéng fēi cháng fēi wú cháng |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 18 - If both constancy and non-constancy could be established (concomitantly), then similarly neither constancy nor non-constancy could also be established at will.

JONES (Skt):
[18] If the claim “It is both permanent and impermanent” were established, then it is accepted that the claim “It is neither permanent nor impermanent” could be established.

KALUPAHANA (Skt):
Supposing both the eternal and the non-eternal are established, then it is not possible to either assert the eternal or the non-eternal.

MCCAGNEY (Skt):
If both eternal and noneternal are established, “neither eternal nor noneternal” are intentionally both proved also.

NISHIJIMA (Skt?):
18. Both Something Not Eternal, and Something Eternal, When miscellaneous occurrences manifest themselves in the two kinds together, What have been accomplished are not as eternal joy, But they are never what are eternal at all.

STRENG (Skt):
18. If something both non-eternal and eternal were proved, Then, no doubt, something "neither eternal nor non-eternal (iv)" is proved.

ROBINSON (Skt):
If “both eternal and non-eternal” were established, then “neither eternal nor non-eternal” might be established too.

BOCKING (Ch):
27v18 If both permanence and impermanence Are established together, In this case ‘neither permanence Nor impermanence’ should be established.

BATCHelor (Tb):
If both permanence and impermanence were established, you would have to assert non-permanence and non-impermanence as established.

DOCTOR (Tb):
If permanent and impermanent Were both established, It would be possible to establish The neither permanent nor impermanent. [XXIII.18]

GARFIELD (Tb):
18. If it could be established that It is both permanent and impermanent, Then it could be established That it is neither permanent nor impermanent.

GARFIELD-SAMTEN (Tb):
18. If it could be established that He is both permanent and impermanent, Then one would have to say that He is neither permanent nor impermanent.

HAGEN (paraphrase):
If both permanence and impermanence could be established, then something neither permanent nor impermanent could be established.
PINGALA COMMENTARY

27/18 If both permanence and impermanence can be established together it naturally follows that 'neither permanence nor impermanence' can be established, but since permanence and impermanence are opposites, permanence and impermanence are never in fact established together, and therefore 'neither permanence nor impermanence is not established either.

Moreover, it is also incorrect to say that birth and death (samsara) has no beginning, and why?

KALUPAHANA COMMENTARY

Nagarjuna is here refusing to accept a conclusion which is only a part of a conjunctive proposition.

GARFIELD COMMENTARY

18. That is, the “both” and “neither” horns of the tetralemma stand or fall together. Permanence and impermanence are mutually exclusive and exhaustive alternatives. They can neither be co-present, nor co-absent. (The option of asserting them in different voices conventional and ultimate - is not open to the opponent here, who is trying to defend an inherently existent self.)
Kārikā XXVII.19

INADA (Skt): Verse 19 - If anyone conies from somewhere and again goes (or returns) to somewhere else, then satpsara will indeed be beginningless. However, such a situation does not exist.

JONES (Skt): [19] If someone carne from someplace and then could go somewhere, cyclic existence would be beginningless. But that is not the case.

KALUPAHANA (Skt): If anyone has come from somewhere and again were to go somewhere, then the life-process would be beginningless. Such a situation does not exist.

MCCAGNEY (Skt): If anyone who has come from somewhere would go anywhere else, then satpsara would be beginningless, but that does not exist.

NISHIJIMA (Skt?): 19. From where have I come for whom, or for what? Where shall I go for whom, or for what? From what kind of purpose shall I work from the endlessly past age until now? The so-called Aimless Wandering might be as if it were nothing to exist as Reality.

STRENG (Skt): 19. If someone, having come from somewhere, in some way goes somewhere again. Then there would be existence-in-flux with no beginning; but this is not the case.
PINGALA COMMENTARY

27/19 If dharmas were fixed and there were places from which they came and to which they went, then birth and death would have no beginning but if we investigate these dharmas with prajna-insight we cannot find anywhere whence they came, or anywhere with which they go. It is therefore not correct to say that birth and death have no beginning. Moreover.

KALUPAHANA COMMENTARY

The metaphysics rejected in Chapter II is referred to in the first line. The second line emphasizes the ideas expressed in Chapter XI.

GARFIELD COMMENTARY

19. As Nāgārjuna has argued, if there were to be true identity through time, so that the person who exists now is literally identical to one who existed in the past and to one who will exist in the future, this would have to be in virtue of sharing some essence. But this would make real change impossible. The person, once in saṃsāra, would be there essentially - the state of being in saṃsāra would hence be inherently existent. (Here Nāgārjuna is using the term “beginningless” as a synonym for “inherently existent.”) If saṃsāra were inherently existent, it would have to be eternal and unchanging. Nirvāṇa would be unattainable, and saṃsāra would be utterly hopeless. But given the possibility of transformation, it follows that such literal identity must be abandoned.
śāśvataś ca ābhyāṃ tiraskṛtaḥ ||20||

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 20 - If there is nothing constant, (by the same token)
how could there be anything non-constant, both constant
and non-constant, and separated from both constant and
non-constant?

JONES (Skt):
[20] If there is nothing permanent, what could be
impermanent? Or both "permanent and impermanent"?
Or apart from either permanence or impermanence?

KALUPAHANA (Skt):
If it is thought that there is nothing eternal, what is it that
will be non-eternal, both eternal and non-eternal, and
also what is separated from these two?

MCCAGNEY (Skt):
If nothing eternal exists, what will exist that is noneternal
outside of both or neither eternal and also noneternal?

NISHIJIMA (Skt?):
20. The existence of the Eternity does not exist really at all.
Where can we find the Existence of Having Limitations anywhere at
all?
The Eternity and the Non-Eternity are only the Model of Duality.
What Have Been Concealed might be manifestation of the
sufficiently concealed Expressions.

STRENG (Skt):
20. If someone who is eternal does not exist, who will
exist being non-eternal, Or who being both eternal and
non-eternal, or devoid of these two characteristics?

BOCKING (Ch)
27v20 Now, if there is no permanence
How can there be impermanence
Or both permanence and impermanence
Or neither permanence nor impermanence?

BATCHELOR (Tb):
If there were nothing permanent at all, what thing could
be impermanent, permanent and impermanent, free
of both?

DOCTOR (Tb):
When nothing is permanent,
What could be impermanent!
Permanence, impermanence,
And both have been dismissed. [XXVII.20]

GARFIELD (Tb):
20. If nothing is permanent,
What will be impermanent,
Permanent and impermanent,
Or neither?

GARFIELD-SAMTEN (Tb):
20. If nothing is permanent,
What could be impermanent,
Permanent and impermanent,
Both of these are eliminated?

HAGEN (paraphrase):
If nothing is permanent, what can be impermanent,
both, or neither?
27/20 If it is the case that, if we investigate with prajna-insight, we find no dharma that can possibly be permanent, then what could be impermanent, since impermanence exists only by virtue of permanence? If neither of these two exists, how can there be 'both permanence and impermanence', and if 'both permanence and impermanence' does not exist how can 'neither permanence nor impermanence exist. It is because of 'both permanence and impermanence existing that neither permanence nor impermanence exists.

Therefore, the four propositions regarding permanence, etc. which are based and rely upon the past are untenable. Also untenable are the four propositions based and relying on the future regarding whether the world is bounded or not bounded, etc., which we shall now discuss. Why is this?

Here again, we have Nagarjuna's analysis of "something" (kascit), an entity that he was determined to get rid of on previous occasions (XXV. 19,20,24). The theories of identity, difference, both or neither, are associated with such metaphysical entities. Hence Nagarjuna's refusal to accept such theorizing.

20. Finally, given that there are no permanent entities, no entities, from the ultimate point of view, can serve as inherent bases of predication. That is, the views that Nāgārjuna has been considering regarding the nature of the self, which purport to give its ultimate nature, must all be seen as incoherent on that ground alone - namely, that they propose an ultimate analysis. Nāgārjuna now turns his attention to views not about the self, per se, but about the world as a whole:
Kārikā XXVII.21

antavān yadi lokaḥ syāt paralokaḥ kathaṃ bhavet |
athāpy antavāl lokaḥ paralokaḥ kathaṃ bhavet ||21||

|| gal te 'jig rten mtha' med na || 'jig rten pha rol ji ltar 'gyur |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 21 - If the world has limits, how could there be another world? On the other hand, if the world has no limits, how could there be another world? - Note: Loka is either the world or the realm of existence.

JONES (Skt):
[21] If the cosmos had a limit, how could there be another world beyond it? If the cosmos had no limit, how could there be another world?

KALUPAHANA (Skt):
If the world were to have a limit, how could there be another world? Furthermore, if the world were to have no limit, how could there be another world?

MCCAGNEY (Skt):
If the world has an end, how could there be another world? But if the world has no end, how could there be another world?

MISHIMA (Skt?):
21. When we have the limitation of Time, the Area of Freedom might become open.
Even though it is impossible for us to know the reason, it might be possible for us to expect the Perfectly Different Area of the World exactly.
Just in That Situations, the Fact to have the limited term, are the very Happy Situations.
Therefore it is impossible for us to know the reason, why there is any kind of possibility to experience the Very Happy World actually.

STRENG (Skt):
21. If the world would come to an end, how would another-world come into existence? If the world would not come to an end, how would another-world come into being?

BOCKING (Ch):
27v21 If the world is bounded
How can there be a subsequent world?
If the world is unbounded
How can there be a subsequent world?

BATELOR (Tb):
If this world had an end, how would the next world come to be? If this world had no end, how would the next world come to be?

DOCTOR (Tb):
If the world had an end,
How could there be another world?
If the world had no end,
How could there be another world? [XXVII.21]

GARFIELD (Tb):
21. If the world were limited,
How could there be another world?
If the world were unlimited,
How could there be another world?

GARFIELD-SAMTEN (Tb):
21. If the world had an end,
How could there be a next world?
If the world had no end,
How could there be a next world?

HAGEN (paraphrase):
If the world were limited, how could there be another world? If the world were not limited, how could there be another world?
PINGALA COMMENTARY

27/21 If the world had boundaries there could not be any subsequent world, but in reality there are subsequent worlds and therefore it is not correct to say that the world has boundaries. If the world had no boundaries there would be no subsequent world either, but in fact there are subsequent worlds and it is therefore incorrect to say that the world does not have boundaries. Moreover, both of these extremes is untenable, and why?

KALUPAHANA COMMENTARY

Having discussed the metaphysical views renting to duration, i.e., eternality, etc., of the world and the self, Nagarjuna moves on to a discussion of the theories relating to the extent of the world. The rejection of the metaphysical notions of the finite and the infinite are based upon a recognition of the possibility of a future world (para-loka). According to Nagarjuna’s analysis, a finite (anta) implies absence of continuity (uccheda), and as such militates against any conception of a future world explained in terms of dependent arising (pratityasamutpada). The infinite (ananta) implies permanence or eternality (sasvata) and, as such, it would be meaningless to speak of a future world as an "other world" (para-loka), for it would be identical with the previous world.

GARFIELD COMMENTARY

21. Nāgārjuna begins by questioning the sense of the question regarding the limits of the world: It seems to be like a question about the size of a table. But it is not. It is not, that is, a question about whether there is anything beyond the world. For suppose that the world is limited. That suggests that there is something beyond it. But that just means that we haven’t come to the end of the world. The whole world includes that stuff that lies beyond. Or suppose that the world is unlimited. That suggests that there is nothing beyond the world. But that just means that everything that is in the world is, in fact, in the world, which is trivial. The question ‘regarding the limits of the world, so Nāgārjuna suggests, is nonsensical.
PINGALA COMMENTARY

27/22 Out of the five skandhas again arise the five skandhas. The five skandhas succeed each other in sequence, like the flame of a lamp which exists through the combination of its conditions. If the conditions are not exhausted, the lamp does not go out, but if they are exhausted it goes out. Therefore, it cannot be said that the world either has or does not have boundaries. Moreover.

KALUPAHANA COMMENTARY

The simile of the lamp (padipa) was popular among the Buddha and his disciples, especially in their explanation of freedom (nibbana). As the flame of a lamp is extinguished, because of the absence of the conditions necessary for its continuous burning, so is a person's mind freed when the fuel that feeds its continuous burning with anxiety is exhausted. Explaining this process in terms of dependence, it would be most inappropriate to speak of its finitude or infinitude, independent of any conditions that are involved in its continuity or lack of continuity. This is a clear indication that an absolutistic conception is incompatible with an explanation based upon conditionality.

GARFIELD COMMENTARY

22. In this discussion, Nāgārjuna is focusing on the temporal limits of the world. Again, the question regarding whether the world has temporal limits presupposes that it is a single entity that either exists forever or that passes out of existence. But the world, Nāgārjuna suggests, is more like a flame. It is a series of distinct flickering events. While each event is momentary, the sequence continues. But there is no entity that persists and can be said to be eternal or momentary.
Kārikā XXVII.23

pūrve yadi ca bhajyerrn utpadryan na ārpy amin | skandhaḥ skandhaḥ pratiṣṭhayamanth lokopakāvyaṁ bhavet ||23||

ruò xiān wù yīn huài bù yín shì wù yín | gèng shèng hòu wù yín shì jiān zé yǒu biān | gal te sña ma ’jig ’gyur źiṅ | phuṅ po ’di la brten byas || phuṅ po de ni mi ’byuṅ na | | des na ’jig rten mtha’ yod ’gyur |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 23 - If a skandha is destroyed in the anterior state and the present skandha does not arise by being relationally conditioned by the former, then the realm (of function) will have limits.

JONES (Skt):
[23] If the prior aggregates were destroyed in the past, and the current aggregates did not arise dependent upon them, then this world of rebirths would have a limit.

KALUPAHANA (Skt):
If the prior aggregates were to be destroyed and these aggregates were also not to arise depending upon these other [aggregates], then the world would be finite.

MCCAGNEY (Skt):
If former skandhas are to be destroyed, and these depend on those skandhas which are to be unarisen, then the world would have an end [be finite].

NISHIJIMA (Skt?):
23. Before being to be revered, It is impossible for me to be revered and go ahead at all. Miscellaneous Things and Phenomena are producing the Miscellaneous Things and Phenomena as This World without fail. There the Intermediate Space can exist making a kind of limited Space like the End.

STRENG (Skt):
23. If the former "groups" would disappear, those new "groups" which are dependent on those former "groups" would not arise; Therefore, the world would come to an end (ii).

ROBINSON (Skt):
If former skandhas disintegrated and later skandhas did not arise dependent on the former, then the world would be finite.

GARFIELD COMMENTARY

23. We could say that the world is finite if its current state simply ceased and nothing else arose. But absent that, there is no basis for positing an end, and dependent origination argues against positing an end to the world in time.
Kārikā XXVII.24

若先陰不壞 亦不因是陰 而生後五陰 世間則無邊

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 24 - If a skandha is not destroyed in the anterior state and the present skandha does not arise by being relationally conditioned by the former, then the realm (of function) will not have any limits.

JONES (Skt):
[24] If the prior aggregates were not destroyed in the past, and the current aggregates did not arise dependent upon them, then this world of rebirths would not have a limit.

KALUPAHANA (Skt):
If the prior aggregates were not to be destroyed and these aggregates were also not to arise depending upon these other aggregates, then the world would be infinite.

MCCAGNEY (Skt):
If former skandhas are not to be destroyed, and these also depend on those skandhas which are to be unarisen, then the world would be infinite.

NISHIJIMA (Skt?):
24. Before the time, when the circumstances have not been prepared lovely yet,
I do never like to prepare the preparation well ahead.
When the five kinds of aggregates are just manifesting themselves clearly as the World,
The Space of the Universe will have possibility to exist as the Boundless Space in Reality.

STRENG (Skt):
24. If the former "groups" would not disappear, these new "groups" which are dependent on those former "groups" would not arise; Therefore, the world would be eternal (i).

ROBINSON (Skt):
If former skandhas did not disintegrate and later skandhas did not arise dependent on the former, then the world would be infinite.
PINGALA COMMENTARY

27/24 if, after the previous five skandhas have perished, the subsequent five skandhas arise, independently of the earlier five skandhas, then the world has boundaries. Where no further five skandhas are produced after the previous five skandhas have ceased, this is called a boundary. 'Boundary means the final body.

(39a11) If, the previous five skandhas not yet having perished, the subsequent five skandhas arose independently of these five skandhas, then the world would have no boundaries, and this would be permanence. But in reality this is not so, and therefore to hold that the world does not have boundaries is not correct. Worlds are of two kinds; the worlds of countries and the worlds of living beings. This refers to a world of living beings. Moreover, as is said in the 'Four Hundred Contemplations'

(39a16) "Since the true Dharma, the teacher
And the hearer are difficult to obtain
Thus birth and death
Are neither bounded nor unbounded."

Because we have not attained the true Dharma our birth and death and going and coming are unbounded. Since we may at some time manage to hear the true Dharma and attain the Way, we cannot say that the world is unbounded. We shall now refute 'both bounded and unbounded'.

KALUPAHANA COMMENTARY

The above is a criticism of an explanation of the continuity in the aggregates which does not take into consideration their causal dependence. If the aggregates were looked upon as things that appear and disappear with no causal relations, then only can one speak of a finite world. In other words, the conception of a finite world involves one of the extreme views discussed earlier, namely, annihilation (uccheda). The non-arising of the aggregates dependent upon other aggregates would then imply permanence, and this is what is involved when one speaks of an infinite world.

GARFIELD COMMENTARY

24. On the other hand, the world would be infinite if it reached a stage where its current state became permanent. But again, given the nature of dependent arising, this is not a likely eventuality.
Kārikā XXVII.25

[Robinson states that the Chinese XXVII.25 has no correlate with the Sanskrit?]

antavān ekadeśas ced ekadeśas tv anantavān |

PINGALA COMMENTARY

27/25 If the world were half bounded and half unbounded then it would be 'both bounded and unbounded', but if this were Sol then one dharma would have two characteristics, and this is not correct. Why is this?

KALUPAHANA COMMENTARY

The rejection of both the finite and the infinite, the eternal as well as the non-eternal, as constituting the reality, was prompted by the Buddha’s refusal to recognize two different levels of reality: a changing and finite world contrasted with an eternal and infinite ultimate reality or an Absolute. As such, neither in the Buddha’s philosophy, nor in Nagarjuna’s thinking is there any room for an Absolute of any sort.

GARFIELD COMMENTARY

25. Nāgārjuna now makes use of the argument mobilized at XXVII: 17. The world cannot have these contradictory properties any more than an individual can.
Kārikā XXVII.26

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 26 - How, indeed, could one portion of the perceiver be destroyed and another remain undestroyed? However, this (situation) is not possible. - Note: The perceiver is a collective term for the function of the skandhas.

JONES (Skt):
[26] How could one part of one who clings perish and one part not? This is not admissible.

KALUPAHANA (Skt):
How can it be possible that one part of a grasper is destroyed and the other part is not destroyed? This too is not proper.

MCCAGNEY (Skt):
How will one part of a grasper be destroyed and one part not destroyed? And thus that is not reasonable.

NISHIJIMA (Skt?):
26. Why is it possible for them to get a so lot of money with such a kind of job?
The two arms might work as well as more than two arms. Even in future we should never approach to the works of two arms. Usually The Real Situations of The World, is just This Fact in front of ourselves, which is not bound by anything at all.

STRENG (Skt):
26. Therefore, how can it be that one part of "one who acquires" karma will be destroyed, (i.e. the body – man ?) And one part not destroyed? (i.e. the very subtle mind – the divine part ?) This is not possible.

BOCKING (Ch):
27v26 How could one part of that recipient Of the five skandhas be destroyed While one part is undestroyed This is not correct.

BATCHelor (Tb):
How can one part of the one-who-clings perish while one part does not perish? Likewise, that is unreasonable.

DOCTOR (Tb):
How could one part Of the appropriator be destroyed And another part not be destroyed? This does not make sense. [XXVII.26]

GARFIELD (Tb):
26. How could one think that One part of the appropriator is destroyed And one part is not destroyed? This position makes no sense.

GARFIELD-SAMTEN (Tb):
26. How could one think that The appropriator has partly ceased And has partly non-ceased? This does not make sense either.

HAGEN (paraphrase):
How can one part of a grasper be destroyed while another part is not destroyed? This too is not proper.

[No commentary on this verse]
Kārikā XXVII.27

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 27 - How, indeed, could one portion of the perception be destroyed and another remain undestroyed? This, (situation), again, is not possible. - Note: The perception refers to the clinging or grasping function of the skandhas.

JONES (Skt):
[27] How could one part of the clinging perish and one part not? This too is not admissible.

KALUPAHANA (Skt):
How can it be possible that one part of grasping is destroyed and another part is not destroyed? This too is not appropriate.

MCCAGNEY (Skt):
How will one part of what is called grasping be destroyed and one part not be destroyed? That also does not take place.

NISHIJIMA (Skt?):
27. When our Perceptional Function is just identified into One, How is it necessary for us to approach Names?
We should never necessary to approach only One Spot.
It is absolutely impossible for only one concrete fact manifests itself alone.

STRENG (Skt):
27. How, indeed, can it be that one part of the acquisition of karma (i.e. the learning stored in the body) will be destroyed, And one part not destroyed? (i.e. the learning stored in the mind) That, certainly does not obtain.

BOCKING (Ch):
27v27 Receiving is also like this;
How can one part be destroyed
And one part not destroyed?
This is not correct.

BATCHelor (Tb):
How can one part of that-which-is-clung-to perish while one part does not perish? Likewise, that is unreasonable.

DOCTOR (Tb):
How could one part
Of the appropriated be destroyed
And another part not be destroyed?
That does not make sense either. [XXVII.27]

GARFIELD (Tb):
27. How could one think that
One part of the appropriation is destroyed
And one part is not destroyed?
This position makes no sense.

GARFIELD-SAMTEN (Tb):
27. How could one think that
The appropriated has partly ceased
And partly not ceased?
This does not make sense either.

HAGEN (paraphrase):
How can one part of grasping be destroyed while another part is not destroyed? This is also not appropriate.
PINGALA COMMENTARY

27/27 How could one part of the 'recipient of the five skandhas' be destroyed and the other part not destroyed? One entity cannot be both permanent and impermanent. It is the same with reception; how could one part be destroyed whilst the other part was not destroyed, since this would involve the error of the dual characteristics of permanence and impermanence? Therefore it is not the case that the world is both bounded and unbounded.

We shall now refute the view that the world is neither bounded nor unbounded.

KALUPAHANA COMMENTARY

Nagarjuna leaves no room for the recognition of an eternal and absolute entity either in the person grasping (upadatr) or in grasping (upadana).

GARFIELD COMMENTARY

27. The appropriator here is the self; the appropriation, the existence of the world. Nāgārjuna in these two verses is summing up and drawing together the conclusions of the two main arguments in the chapter. We want to say on the one hand that neither the world nor the self is permanent. Both are thoroughly characterized by impermanence. On the other hand, we want to say of both that they endure in time and of each that there is no fixed boundary to its identity. But it can’t be that either has both of these properties.

| mtha’ yod ma yin mtha’ med min || ’grub par ’gyur bar ’dod la rag |

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 28 - If both the limited and non-limited could be
established (concomitantly), then, similarly, neither the
limited nor non-limited could also be established at will.

JONES (Skt):
[28] If the claim “It is both limited and limitless” were
established, then it is accepted that the claim “It is neither
limited nor limitless” could be established.

KALUPAHANA (Skt):
Supposing both the finite and the infinite are established,
then it is not possible to assert either the finite or the
infinite.

MCCAGNEY (Skt):
If both finite and infinite are established, then
“neither finite nor infinite” are also intentionally proved.

NISHIJIMA (Skt?):
28. To have the End is just the same as to produce the End
positively.
In that case, the accomplishment of preparations, includes the two
kinds of factors, Those are the preparation and
accomplishment.
In the situations of accomplishment, having an End, is never
pleasurable condition.
The situation, which does not having any Eternity might be the
Most Hopeful Situation.

STRENG (Skt):
28. If the view "both finite and infinite" were proved,
Then no doubt, "neither finite nor infinite" (i.e. nothing
at all) could be proved.
PINGALA COMMENTARY

27/28 'Unbounded' exists by virtue of being the opposite of 'bounded', in the same way that short exists as the opposite of long. The opposite of being or not being is 'both being and not being' and the opposite of 'both being and not being' is 'neither being nor not being'. If 'both bounded and unbounded' were definitely established then there would be 'neither bounded nor unbounded', and why? Because they depend upon each other.

In what has gone before we have already refuted the third proposition 'both bounded and unbounded', so how can there possibly be 'neither bounded nor unbounded', since there is no interdependence?

Upon investigation, the four views of the world having boundaries, etc., which rely upon the future are found to be entirely untenable.

Further.

KALUPAHANA COMMENTARY

This rejection of the finite and the infinite is comparable to the rejection of the eternal and the non-eternal (XXVII. 18).

GARFIELD COMMENTARY

28. This verse echoes XXVII: 18. If either the self or the world could be conceived as both finite and infinite, finitude and infinitude would make no sense at all. They are contradictory properties and cannot characterize the same thing at the same time. Moreover, they are exhaustive alternatives.

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 29 - Since all existences are of the nature of sunyata, where, by whom and in what manner could such (false) views on constancy, etc., ever arise?

JONES (Skt):
[29] In addition, because all entities are empty, what views of permanence, and so forth, would arise - and in whom, about what, and how?

KALUPAHANA (Skt):
Thus, because of emptiness of all existents, where, to whom, which and for what reason views such as the eternal could ever occur?

MCCAGNEY (Skt):
Because of the openness of all beings, why, which, of what, and where will views about permanence, etc., develop?

NISHIJIMA (Skt?):
29. There also the Whole Situations of All Existences are the problems again. Leaving from the balanced state of the Autonomic Nervous System, and leaving from the Eternity, there is a only fact just Going on. Where, belonging to what, to whom among many, or from whom, Persons, who are seen, might be many.

STRENG (Skt):
29. Because of the emptiness of all existing things, How will the views about "eternity," etc., come into existence, about what, of whom, and of what kind?

BOCKING (Ch)
27v29 Since all dharmas are empty Views about the permanence, etc. of the world - In what place, and at what time, And by whom, would such views be generated?

BATCHelor (Tb)
And because all things are empty, about what and in whom do views such as that of permanence spring forth?

DOCTOR (Tb):
Alternately, because all things are empty, How could views of permanence and so on, Occur in any form, anywhere, And to anyone at all? [XXVII.29]

GARFIELD (Tb):
29. So, because all entities are empty, Which views of permanence, etc., would occur, And to whom, when, why, and about what Would they occur at all?

GARFIELD-SAMTEN (Tb):
29. Alternatively, because all entities are empty, Which views of permanence, etc., would occur, And by what means, with respect to what, to whom, And why would they occur at all?

HAGEN (paraphrase):
Thus, because all existents are Empty, where, to whom, which and for what reason would views of permanence occur at all?

GOLDFIELD (Tb):
Since all things are empty, Why would anyone, anywhere, at any time, View things as being permanent or anything else? (29)
PINGALA COMMENTARY

27/29 In the above, he (Nagarjuna) has refuted all views in the Sravaka-Dharma, and now he states that in the Great Vehicle Dharma all dharmas have had from the beginning the nature of utter emptiness. Within this empty nature of dharmas there are no persons and no Dharma, so there can be no production of wrong views or right views. 'Place' means location. Time' means a particular day, month or year. 'whom' means a person. 'Such' means the substance of all views.

(39b18) If there are fixed views of permanence, impermanence etc., there must be a person who generates these views. When self is destroyed there is no production of such views by a person. There must be a place for manifestly observed dharmas to be negated; how much more a time? If all these views exist they should have a fixed reality, but if they were fixed they could not be destroyed, and we have already negated them on various grounds in what has gone before; therefore you should know that views have no fixed substance; how can they arise? As the verse says, 'In what place, and at what time, and by whom would such views be generated?'

KALUPAHANA COMMENTARY

The recognition of dependently arisen phenomena (pratityasamutpanna dharma) means the acceptance of the non-substantiality or emptiness of all these things. If things are non-substantial, how can there be views about the eternal and the non-eternal, the finite and the infinite? The answer to this question has been provided by the Buddha and clearly restated by Nagarjuna. It is the result of an urge on the part of human beings to find absolute answers to questions such as "Where did I come from?" or "Where do I go from here?" These questions would be raised and attempts to answer them be made so long as human beings are propelled by a "craving for becoming" (bhava-trsna) or "craving for other-becoming" (vibhava-trsna). This was the riddle of human existence faced by the Buddha. Understanding that riddle of existence, the Buddha attained freedom (nirvana) by spewing out craving (trsna) and abandoning any grasping (upadana).

GARFIELD COMMENTARY

29. But if we bear in mind the emptiness of all phenomena, on the subject and on the object side, these views do not even arise as possibilities. The self and all of the phenomena in the world itself, being empty, are dependently arisen, conventional phenomena. Their emptiness itself is dependently arisen and empty. There is no candidate for permanence. There is no candidate for ultimate impermanence. And to the extent that we grasp and live this truth, there is no one to stand over and against the world as “I” against “it.”

ENGLISH TRANSLATIONS

INADA (Skt):
Verse 30 - I reverently bow to Gautama (the Buddha) who out of compassion has taught the truth of being (saddharm) in order to destroy all (false) views.

JONES (Skt):
[30] I bow to Gautama the Buddha, who through compassion taught the true doctrine for removing all views.

KALUPAHANA (Skt):
I reverently bow to Gautama, who, out of compassion, has taught the true doctrine in order to relinquish all views.

MCCAGNEY (Skt):
I bow to him, Gautama, who, from compassion, taught the true Teaching for the purpose of abandoning all views.

NISHIJIMA (Skt?):
30. All People, who are related with the reverence, might be belong to the people, who have Belief in Morals, The True Righteousness might have been moved to the wrong place for it. The pitiful situations for people, have been accepted to them as they are. But I offer the Whole-Hearted Admire for Gautama Buddha, who accepted those Many kinds of Doctrines as pitiable.

STRENG (Skt):
30. To him, possessing compassion, who taught the real dharma For the destruction of all views—to him, Gautama, I humbly offer reverence.

ROBINSON (Skt):
I bow reverently to Gautama, who, taking compassion, taught the True Dharma, in order to cut off all views.
Great Sage and Master Gautama, has immeasurable, unbounded and inconceivable wisdom and insights and this is why we bow our heads to him in reverence.

**KALUPAHANA COMMENTARY**

This final statement of Nagarjuna referring to the Buddha's preaching of the doctrine (sad-dharma) is to be contrasted with his statement at the end of the chapter on freedom (nirvana)(XXV.24), where he says that the Buddha did not "preach anything as ..." (na ... kascid dharma buddhena desitah), and should open the eyes of those who stick to a completely negative interpretation of Nagarjuna. Nagarjuna's remarks clearly show that he was aware that the Buddha did not speak "metaphysically" but only "empirically."

**GARFIELD COMMENTARY**

30. The most common interpretation of this final verse has the phrase "all views" (Tib: lita-ba thams-cad, Skt: sarva-drsti) referring to all false views, that is, all views according to which things have inherent existence. (fn 137. This, for instance, is the view urged unanimously by Je-Tsong Khapa (pp. 477-84), mKhas-grub-rje (pp. 112-17), and dGe-'dun-grub (p. 237) and by most of the Geluk-pa scholars with whom I have consulted. Whether Candrakīrti or Aryadeva read the text this way is unclear. On the other hand, many Nyingma scholars adopt the alternative reading I suggest here. In conversation, H.H. the Dalai Lama has suggested to me that the Geluk-pa interpretation may make the most sense from the standpoint of philosophy and for the purposes of characterizing an inferential understanding of emptiness, but that the Nyingma understanding may provide a better expression of the nature of the direct understanding of emptiness and may be more useful for guiding meditative practice. The Yen. Prof. Geshe Yeshes Thap-Khas, on the other hand (oral commentary), suggests that the two interpretations are both intended - the first as the teaching regarding the conventional truth, and appropriate for those not yet advanced in meditative practice, and the second as a teaching regarding the nature of the direct realization of emptiness experienced by a buddha at enlightenment, and by advanced practitioners in meditative equipoise directly realizing emptiness. Huntington (1989), pp. 119-22, presents a clear and compelling discussion of such direct realization. He writes of the difference between a dualistic and nondualistic awareness of the world: “The difference is one of attitude, for all else remains as it was. Similarly, when the bodhisattva cultivates non-dualistic knowledge he both sees and sees through the natural interpretations that structure his world. He sees nothing new or different, but he knows, directly and incorrigibly, that all the elements of experience are dependent upon one another and upon the nature of the perceiving consciousness in a very profound and significant way.” (p. 122) These, after all, are the views under examination and refutation in this chapter. And it is the clear purport of this chapter that these views are the principal hindrances to enlightenment and the causes of attachment to cyclic existence. On this reading, Nāgārjuna exempts his own view and therefore the Madhyamika understanding of the Buddhist doctrine, which Nāgārjuna here reminds us was taught compassionately explicitly to enable the rejection of these views. That doctrine, or standpoint, on this reading, is not to be relinquished. Indeed, one might say, it is not even a “view” in the relevant sense since a view must be a view of something, and the analysis in terms of emptiness reveals a world with no entities to view. This interpretation is urged unanimously by all of the commentaries with which I am familiar and by many of the scholars with whom I have consulted.

But there is a second reading available, not instead of, but in addition to, the standard reading. (fn 138. Both the Most Yen. Khamtrul Rinpoche and the Most Yen. Samdhong Rinpoche emphatically support the second reading, as the primary meaning of the verse and as the final expression of the emptiness of emptiness (personal communication). Inada (1970) waffles. In his commentary (p. 164), he endorses the “all views” reading. But in his translation (p. 171), he inserts “false” parenthetically before “views.” These are clearly not consistent moves. Ng (1993) also agrees with the “false view” reading. See pp. 18-20.) There is a startling grammatical and poetic parallel between this closing verse and the dramatic dedicatory verses. Both have the form, if translated literally, almost preserving Tibetan word order, “To him who . . . To that [great one/Gautam] I prostrate” (gang gir ... dam-pa/go-dam de la phyag-'tshallo). The echo at the end of the opening is apparent, and it draws attention to Nāgārjuna’s denial in the dedication of the possibility of any predication from the ultimate point of view of the inability to say anything positive that is literally true about the ultimate nature of things. When this is joined with our reading of such verses as XVIII: 7; XXII: 11, 12, 15; XXIV: 18; and XXV: 23 - all of which emphasize in different ways the impossibility of literal statements about the ultimate and the merely ostensive character of language about it, despite the need for such conventional assertion to enable one to approach ultimate truth - we can see a double entendre in this verse. For, if one reads it not from the conventional point of view as in the previous interpretation, but as an echo of the dedication, one can see Nāgārjuna’s own view and the Buddhist Dharma itself included under “all views” and, hence, necessarily to be relinquished once it is understood and used. And compare especially XIII: 8: “The victorious ones have said That emptiness is the relinquishing of all views. For whomever emptiness is a view, That one has accomplished nothing.”
We can now return to this verse with more of Nāgārjuna’s analysis available: For the practitioner who directly realizes emptiness, nothing is present to consciousness but emptiness itself. For such a consciousness, there literally is no object since there is in such a consciousness no reification of the kind that gives rise to subject-object duality. Moreover, since such a consciousness is directed only upon what can be found ultimately to exist and since nothing can be so found, there is literally nothing toward which such a consciousness can be directed. But this very fact is what is ostended by the dictum that emptiness is itself empty: Emptiness is not the real object as opposed to the unreal objects of ordinary perception, not the object that appears when false appearance is shed. In fact, to the extent that it appears as an object at all, it does so as falsely as any table. If so, the best we can then say is that from such a standpoint the words “emptiness is empty” ascribe no property to any object at all. From that standpoint, there is no view to be expressed, where a view is something that can be given assertoric voice. For a view is possible if, and only if, (1) there is something to view and (2) there is some way in which it is viewed. That is, first, if it were possible to have a (true) view about emptiness, emptiness would have to be a thing - an object of awareness. But if we supposed that it is, a dilemma emerges: Emptiness must then exist either conventionally or ultimately. The latter, as we have seen, is impossible since then it would fail itself to be empty and not only would a central tenet of Madhyamika philosophy be contradicted, but the remainder would be rendered incoherent as well. But positing emptiness as a conventional existent and as the object of a correct view is no better, for things that appear conventionally appear as entities - as phenomena that exist independently and substantially. And all such appearance is, from the standpoint of Madhyamika, in an important sense false appearance. To put this point another way, true predication is always predication from a perspective in which the subject of the predicate exists and within which the predicate can be instantiated. For conventional entities, the conventional standpoint provides such a perspective. But for emptiness, neither the conventional nor the ultimate standpoint can do the job: In the conventional standpoint, there is no emptiness; in the ultimate standpoint there are no entities at all.

Now let us consider the second entailment - that concerning the manner in which emptiness would need to be viewed. Views are views of things under descriptions and, hence, are views of things as having some nature. I view this paper as paper, as white, as a bearer of print, as a product of a tree, and so forth. And again, so long as I am characterizing a conventional entity as it is viewed from the conventional perspective, there is no problem here. But when we attempt to extend this analysis to emptiness itself, problems arise. For the attribution of properties - descriptions under which things can be viewed - again requires the existence of the substrata and the possibility of their serving as property bearers, as well as the dualism between substratum and property this presupposes. The perspective from which this continued existence and this dualism are available is the conventional perspective for it is only conventions that bring ontology into play. But again, in that perspective, we don’t find emptiness; we find all kinds of entities, but we find them as entities and, hence, as nonempty. But from the perspective in which we find emptiness, we don’t find any entities or any characteristics, not even emptiness itself or the fact of its emptiness. Hence again, since we can’t view emptiness even as empty, in view of its very emptiness, we can’t have a view of emptiness. This point is made pitifully in a verse quoted by Nāgārjuna in his autocommentary to the Vigrahavytivartani: “By their nature, the things are not a determinate entity. For they have only one nature, i.e. no nature” (Astawahsrika Prajnaparamita-sutra).

This reading of the concluding verse, and by implication of the related verses we have noted (particularly XIII: 8), would not entail any self-refutation or any denial of the need at the conventional level for the assertion of Buddhist doctrine or the critique articulated by Nāgārjuna in Mulamadhyamaka-kārikā. On the contrary, this interpretation would be consistent with the raft metaphor popular in Buddhist philosophy (one discards the raft after one has crossed the river; it would be foolish to continue to carry it overland; similarly, Buddhist teachings are soteriological in intent and are to be discarded after their goal has been attained) or the laxative metaphor of the Ratnakuta-sutra mobilized by Candrakīrti in his comments on XIII: 8 and Sextus (one wants the medicine to be expelled along with the pathogenic bowel contents) used to discourage grasping even to the Dharma. Hence Nāgārjuna acknowledges that, having announced in the dedication that nothing can be said truly about the final nature of things and having defended this thesis exhaustively in the text, his words and those of the Buddha cannot even be taken as literally true about the final nature of things. Hence in order to realize that nature, one must relinquish even a literal, nonostensive reading of these texts. (In 139. The Yen. Prof. Geshe Yeshe Thap-Khas (oral commentary) points out that emptiness as it appears in direct realization does not appear as an entity (ngos po). From the ultimate point of view there are no entities. Since a view is always a view of an entity, in direct realization of emptiness, there is a necessary relinquishing of all views, including all Buddhist and all Madhyamika views. But, he argues, it does not follow that one not directly realizing emptiness can relinquish all views or, in particular, that one should relinquish true ones. Insofar as direct realization of emptiness is a primary goal of Buddhist practice, he argues, and especially of the practice of Buddhist philosophy, it is hence appropriate to read this verse in this way as well as in the more conventional way.

The Yen. Geshe Yeshe Topden (also in oral commentary) puts this a bit differently: Emptiness, he argues, when it is known inferentially, is known as a positive phenomenon and appears as an inherently existent entity, even though the subject of such a cognition knows that it is not so (compare a mirage that appears as water even to someone who knows that it is merely a mirage). And in order to realize emptiness in this way, one must make use of the Madhyamika view while rejecting all false views.
To one who directly apprehends emptiness, however, he claims, emptiness, while an object of such an awareness, is not a positive phenomenon, but a mere negation of all positive phenomena and is not different in entity from the mind cognizing it. In such an awareness, he claims, since emptiness does not appear as qualified in any way and since such an awareness is nonconceptual, there is no view of emptiness. So, he argues, even the Mādhyamika view is to be relinquished at the stage of direct realization. Nonetheless, the verse indicates first, on his reading, the necessity to relinquish all false views, and then, in direct realization to relinquish the Mādhyamika view. Mukherjee (1985) makes a similar point:

“A significant point that the Mādhyamikas never fail to make out is that reason and concepts have a place in Vyavahāra. It is possible to select a pattern, hold a position without clinging to it, i.e., without being dogmatic. It teaches one to look at a view as something relative and shows that the error of clinging is not essential to reason Did not the Buddha himself use words, concepts without clinging to them?

By being free of clinging one attains a level that is transcendent to all the views, but at the same time he remains fully cognisant of the other levels in their minutest details without losing sight of the undivided reality. He sees these levels as not yet perfect; he sees them as various stages on the way to the perfect.” (pp. 221-22)

See also Kalupahana (1986), p. 80. But Kalupahana also says that these final lines “clearly show that Nāgārjuna was aware that the Buddha did not speak ‘metaphysically’ but only ‘empirically’ “ (p. 391). That conclusion certainly does not follow. I refuse to give a metaphysical theory of the nature of phenomena and to refuse to characterize what cannot be spoken of coherently does not by itself constitute an eschewal of dogmatic. It teaches one to look at a view as something relative and shows that the error of clinging is not essential to reason. Did not the Buddha himself use words, concepts without clinging to them?

One must realize the ultimate truth dependent upon the conventional, but abandon all of these necessarily conventional designations as characterizations of an ultimate nature that is ultimately uncharacterizable. (fn 140. Wood (1994) argues, following his nihilistic interpretation of Nāgārjuna, that here and in Vigrahavyutivartani Nāgārjuna is, in virtue of denying the existence of even his own view, completing a nihilistic program that denies existence of any kind to anything. As should be clear by now, I think that this nihilistic reading is untenable. Nonetheless, it is surely the case that Wood is correct in claiming that Nāgārjuna wishes - to treat emptiness in exactly the way that he treats other phenomena - as empty - and that any theory about it that presupposes it has an essence must be false. I part company with Wood only when he goes on to interpret emptiness as complete nonexistence. A careful reading of Vigrahavyutivartani reveals, as Wood notes, that Nāgārjuna denies that he has a proposition (pratijñā), but not that he utters words. Nāgārjuna is working to show the merely conventional character of his utterance and that its utility does not entail the - existence of any convention - independent reality as its semantic value. But that is a far cry from nihilism. See Garfield (unpublished) for a more sustained discussion of emptiness and positionlessness.)

The anticipation of Wittgenstein’s close of the Tractatus is remarkable:

6.54 My propositions serve as elucidations in the following way: anyone who understands me eventually recognizes them as nonsensical, when he has used them - as steps - to climb beyond them. (He must, so to speak, throwaway the ladder after he has climbed up it.)

7 What we cannot speak about we must pass over in silence.

Nāgārjuna may well have intended (and of course we have no way of knowing what he intended, nor would it make much difference to interpretation at this point) both readings - the standard reading at the conventional level, according to which the truth of his own standpoint contrasts with all other false views, and this latter reading at the ultimate level, at which his own view must itself be seen as a merely conventional ostention of an ineffable ultimate truth. (fn 141. Streng (1973) agrees. See chap. 6.) And if the doctrine of the two truths and their identity is correct, these readings are mutually entailing. To assert from the conventional standpoint that all phenomena are empty and that all views according to which they are not are to be relinquished is to recognize from the ultimate standpoint that there are no phenomena to be empty and that no view attributing any characteristic to anything can be maintained. Even the emptiness of emptiness is empty. . . .

May whatever merit has been achieved through this work and through its study be dedicated to the liberation of all sentient beings from cyclic existence.
Colophon to the Tibetan Translation

DOCTOR (Tb): Colophon to the Tibetan Translation

This completes the root stanzas of the Middle Way, entitled “Insight,” which belong to the Abhidharma of the Great Vehicle and which truly reveal ultimate reality. This elucidation of the way of transcendent insight was composed by the great being and noble Master Nagarjuna, possessor of inalienable knowledge and compassion. Illuminating the way of the supreme vehicle of the Thus-Gone One, he accomplished the ground of great joy and departed for the Realm of Bliss. In the world called Clear Light, he will become a Thus-Gone One, known by the name “Light of the Source of Wakefulness.”

As instructed by the great king, Pal-Iha Tsenpo, Lord of Perfect Majesty, this translation was prepared, revised, and established by the great Indian preceptor and representative of the Middle Way, Jnanagarbha, and the lotsawa and editor, the monk Chokrul Lui Gyaltsen. The twenty-seven chapters and 449 slokas are contained in one and a half bampo.

Subsequently, the translation was revised based on the Clear Words commentary during the reign of Aryadeva, Lord of Men, in the Temple of Hidden Jewels, a monastic college situated in the center of the city of Anupamanagara in Kashmir. This revision was undertaken by the Kashmiri preceptor Hasumati and the Tibetan lotsawa, the translator Patsab Nyima Drakpa. The Indian preceptor Kanaka and the same lotsawa later prepared a final revision in the Temple of Rasa Trulnang.
